

DEPARTMENT OF CITY PLANNING APPEAL RECOMMENDATION REPORT

City Planning Commission

Date: May 12, 2022
Time: After 8:30 a.m.*
Place: In conformance with the Governor's Executive Order N-29-20 (March 17, 2020) and due to concerns over COVID-19, the CPC meeting will be conducted entirely telephonically by Zoom [<https://zoom.us/>].

The meeting's telephone number and access code access number will be provided no later than 72 hours before the meeting on the meeting agenda published at <https://planning.lacity.org/about/commissions-boards-hearings> and/or by contacting cpc@lacity.org

Public Hearing: Required
Appeal Status: Tract Map is appealable to City Council
Expiration Date: N/A

Case No.: VTT-83550-CN-1A
CEQA No.: ENV-2021-6879-SCEA
Incidental Cases: ADM-2021-6878-CPIOC
Related Cases: CPC-2021-6877-DB-SPR-CUB
Council No.: 10
Plan Area: West Adams - Baldwin Hills – Leimert
CPIO Subarea: Jefferson/ La Cienega TOD
Certified NC: West Adams
GPLU: Hybrid Industrial
Zone: CM-2D-CPIO
Applicant/Owner: La Cienega Owner LLC

**PROJECT
LOCATION:** 3401 South La Cienega Boulevard

**PROPOSED
PROJECT:** The proposed project is to subdivide one (1) lot, totaling 153,608 square-feet into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential dwelling units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil in the CM-2D-CPIO zone.

APPEAL: An appeal of the Advisory Agency's March 31, 2022 Determination that:

1. **FOUND**, pursuant to Public Resources Code (PRC) Section 21155.2, after consideration of the whole of the administrative record, including the SB 375 Sustainable Communities Environmental Assessment, No. ENV-2021-6979-SCEA ("SCEA"), and all comments received, after imposition of all mitigation measures, there is no substantial evidence that the project will have a

significant effect on the environment; FOUND that the City Planning Commission held a hearing on and adopted the SCEA on May 12, 2022, pursuant to PRC Section 21155.2(b); FOUND the Project is a transit priority project pursuant to PRC Section 21155 and the Project has incorporated all feasible mitigation measures, performance standards, or criteria set forth in prior EIR(s), including SCAG's 2020-2045 RTP/SCS Program EIR, the West Adams-Baldwin Hills-Leimert Community Plan EIR, and the Community Redevelopment Agency of the City of Los Angeles (CRA/LA) Mid-City Redevelopment Plan EIR; FOUND all potentially significant effects required to be identified in the initial study have been identified and analyzed in the SCEA; FOUND with respect to each significant effect on the environment required to be identified in the initial study for the SCEA that avoid or mitigate the significant effects to a level of insignificance or those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency; FOUND the SCEA reflects the independent judgment and analysis of the City; FOUND the mitigation measures have been made enforceable conditions on the project; and ADOPT the SCEA and the Mitigation Monitoring Program prepared for the SCEA;

2. **Approved with Conditions** a Vesting Tentative Tract Map to subdivide the Property into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential dwelling units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil.
3. **Adopted** the attached Findings and Conditions of Approval.

RECOMMENDED ACTIONS:

1. **FIND**, pursuant to Public Resources Code (PRC) Section 21155.2, after consideration of the whole of the administrative record, including the SB 375 Sustainable Communities Environmental Assessment, No. ENV-2021-6979-SCEA ("SCEA"), and all comments received, after imposition of all mitigation measures, there is no substantial evidence that the project will have a significant effect on the environment; FIND that the City Planning Commission held a hearing on and adopted the SCEA on May 12, 2022, pursuant to PRC Section 21155.2(b); FIND the Project is a transit priority project pursuant to PRC Section 21155 and the Project has incorporated all feasible mitigation measures, performance standards, or criteria set forth in prior EIR(s), including SCAG's 2020-2045 RTP/SCS Program EIR, the West Adams-Baldwin Hills-Leimert Community Plan EIR, and the Community Redevelopment Agency of the City of Los Angeles (CRA/LA) Mid-City Redevelopment Plan EIR; FIND all potentially significant effects required to be identified in the initial study have been identified and analyzed in the SCEA; FIND with respect to each significant effect on the environment required to be identified in the initial study for the SCEA that avoid or mitigate the significant effects to a level of insignificance or those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency; FIND the SCEA reflects the independent judgment and analysis of the City; FIND the mitigation measures have been made enforceable conditions on the project; and ADOPT the SCEA and the Mitigation Monitoring Program prepared for the SCEA;
2. **Deny** the appeal filed by Brian Flynn on behalf of Supporters Alliance for Environmental Responsibility and **sustain** the decision of the Advisory Agency's decision to approve a Vesting Tentative Tract Map to subdivide the Property into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential dwelling units, along with a waiver of the required 2-foot dedication for sidewalk

widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil.;

3. **Adopt** the attached Findings; and
4. **Adopt** the attached Conditions of Approval.

ADVICE TO PUBLIC: *The exact time this report will be considered during the meeting is uncertain since there may be several other items on the agenda. Written communications may be mailed to the City Planning Commission Secretariat, 200 North Spring Street, Room 272, Los Angeles, CA 90012 (Phone No. 213-978-1300). While all written communications are given to the Commission for consideration, the initial packets are sent to the week prior to the Commission's meeting date. If you challenge these agenda items in court, you may be limited to raising only those issues you or someone else raised at the public hearing agendized herein, or in written correspondence on these matters delivered to this agency at or prior to the public hearing. As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability, and upon request, will provide reasonable accommodation to ensure equal access to this programs, services and activities. Sign language interpreters, assistive listening devices, or other auxiliary aids and/or other services may be provided upon request. To ensure availability of services, please make your request not later than three working days (72 hours) prior to the meeting by calling the Commission Secretariat at (213) 978-1300.

PROJECT ANALYSIS

PROJECT SUMMARY

The proposed project is to subdivide one (1) lot, totaling 153,608 square-feet into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential dwelling units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil in the CM-2D-CPIO zone.

APPEAL SCOPE

The appeal, filed by Brian Flynn on behalf of himself and the Supporters Alliance for Environmental Responsibility, challenges the Advisory Agency's approval of a Vesting Tentative Tract Map is to subdivide one (1) lot, totaling 153,608 square-feet into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential dwelling units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil in the CM-2D-CPIO zone.

BACKGROUND

The Property is a flag shaped, single parcel of approximately 153,608 SF (3.526 net acres). The Property has approximately 200 feet of frontage along the west side of S. La Cienega Boulevard and also abuts Corbett St., a private street south of the Property that runs perpendicular to and intersects with south La Cienega Boulevard. The site is zoned CM-2D-CPIO. The property is currently developed with a Public Storage facility proposed to be demolished as a part of the project and is located within the West Adams – Baldwin Hills – Leimert Community Plan, which designates the site for Hybrid Industrial land use.

The proposed project is to subdivide the Property into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential dwelling units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil in the CM-2D-CPIO zone.

There are no existing trees on-site proposed to be removed. The site has not been identified as a historic resource by local or state agencies, and the project site has not been determined to be eligible for listing in the National Register of Historic Places, California Register of Historical Resources, the Los Angeles Historic-Cultural Monuments Register, and/or any local register. Further, the project site was not found to be a potential historic resource based on the City's HistoricPlacesLA website or SurveyLA, the citywide survey of Los Angeles.

SURROUNDING PROPERTIES

The surrounding neighborhood is characterized by office, multi-family residential, single family residential, and a variety of commercial uses. The property adjacent to the north is zoned PF-1 and is developed as the Metro right-of-way for the E (Expo) Line tracks and bicycle path. The property to the east across South La Cienega Blvd. is zoned C2-2D-CPIO and is developed with a five-level parking structure serving as parking for Metro patrons. The property adjacent to the south zoned MR1-1VL-CPIO and is developed with the single-story Sees' Candies factory, identified as a Historic Resource on Survey LA. The property adjacent to the west is zoned [Q]M1-2D-CPIO and being developed with a 16-story office building (currently under construction).

STREETS

La Cienega Boulevard is designated by the Mobility Plan 2035 as a Modified Boulevard II, improved to a Right-of Way width of 104 feet with concrete curb, gutter, and sidewalk.

Jefferson Boulevard is designated by the Mobility Plan 2035 as a Modified Avenue II, improved to a Right-of Way width of 90 feet with concrete curb, gutter, and sidewalk.

Corbett Street is designated by the Mobility Plan 2035 as a Private Street.

ENVIRONMENTAL CLEARANCE

The Project application was filed on September 14, 2021, seeking an Advisory Agency approval of a Vesting Tentative Tract Map. The CEQA clearance, ENV-2021-6879-SCEA determined that the project qualifies for an exemption from CEQA pursuant to California Public Resource Code Section 21155.2, the Sustainable Communities Environmental Assessment prepared for this project (ENV-2021-6879-SCEA) dated January 2022, as well as the whole of the administrative record.

DECISION AND APPEAL

On March 31, 2022, the Advisory Agency issued a determination to approve a Vesting Tentative Tract Map to subdivide the Property into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential dwelling units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil.

On April 11, 2022, an appeal was filed by Brian Flynn on behalf of the Supporters Alliance for Environmental Responsibility (SAFER).

APPEAL ANALYSIS

APPEAL (Brian Flynn, and the Supporters Alliance for Environmental Responsibility)

The following statements are summarized from the appeals submitted by the appellant. The appeal in its entirety is attached for reference (see Exhibit D). The main appeal points raised were related to the following: 1) Need for Mitigation Measures in a SCEA. 2) Air Quality.

1) Need for Mitigation Measures in a SCEA

Appeal point 1:

“The SCEA is not adequate under CEQA because it fails to require all feasible mitigation measures from the 2020-2045 RTP/SCS:.”

- Concerned with air quality and greenhouse gas impacts.

Staff Response 1:

The Appellant has failed to provide substantive evidence to support its allegations that the project did not require all feasible mitigation measures. CEQA only requires, and a SCEA need only incorporate, relevant, applicable mitigation measures from prior EIRs where those measures are needed to mitigate significant or potentially significant impacts identified by the SCEA. (See Public Resources Code §§ 21002, 21155.2(b)(2), 21155.2(b)(5)(i), 21159.28(a); CEQA Guidelines §§ 15002, 15021, 15126(f), 15126.4(a)(3), (4).). Consistent with CEQA, the RTP/SCS EIR mitigation monitoring and reporting program (MMRP) itself states that the Lead Agency should consider imposing the listed mitigation measures when needed “to reduce substantial adverse effects” (emphasis added). The Initial Study and SCEA concluded that the project would not cause significant air quality or greenhouse gas impacts, and therefore, no mitigation was required.

In addition, mitigation can only be incorporated when it is relevant and applicable to a project. Mitigation measures in the RTP/SCS EIR that are within the purview of SCAG (see, e.g., SMM AES-1, SMM AG-3) are neither relevant, nor applicable to the Proposed project. Other measures simply do not apply to this urban, infill location because the subject conditions do not exist on the proposed project site (see, e.g., PMM AG-1, PMM BIO-1(c)).

Nevertheless, although not required by CEQA for the reasons explained above, the SCEA does include mitigation to address the specific concerns raised by the commenters regarding air quality and greenhouse gas impacts. AQ1 and GHG1 from the West Adams-Baldwin Hills-Leimert Community Plan EIR (Community Plan EIR) MMRP (see SCEA, pp. III-79-80, III-85) have been incorporated into the Proposed Project to address the potential air quality and greenhouse gas impacts that may arise from construction and operation. Moreover, these measures, which are similar to PMM AQ-1 and PMM GHG-1 from the RTP/SCS MMRP, are more specifically tailored to the Community Plan area than the measures included in the RTP/SCS. Further, the proposed project already incorporates many of the measures suggested by PMM AQ-1 and PMM GHG-1 as design features, including compliance with the CALGreen Code; implementation of all applicable Southern California Air Quality Management District (SCAQMD) rules; adoption of transportation demand management (TDM) measures; inclusion of bicycle/pedestrian amenities; and a

net increase of 80 trees, all of which are being applied to this transit-oriented, infill development proposed project.

The SCEA fully and adequately analyzed the project's potentially significant impacts, and it included all feasible mitigation measures from prior certified EIRs where mitigation was needed to address a potentially significant impact. The comments, therefore, do not raise any issues that alter the analysis or conclusions of the SCEA and do not involve any new significant impacts or add "significant new information" that would require recirculation of the SCEA. (See Exhibits E & F).

2) Air Quality

Appeal Point 2:

"The SCEA fails to adequately address, analyze, and mitigate the project's significant air quality impacts."

- Concerned with indoor air quality impacts associated with the release of formaldehyde from building materials.
- SCEA should evaluate health risks from diesel particulate matter (DPM).
- Claims health risk analysis (HRA) should have been conducted for the proposed project based on OEHHA 2015 guidance.

Staff Response 2:

The Appellant has failed to provide substantive evidence to support its allegations that the SCEA does not adequately address and mitigate potential air quality impacts. The SCEA properly evaluated all relevant air quality impacts associated with the proposed project's construction and operation in accordance with all California Air Resources Board (CARB), SCAQMD, California Office of Environmental Health Hazard Assessment (OEHHA), and City protocols for the implementation of CEQA for land use development projects. Refer to Chapter IV, Section 3, Air Quality, pages IV-17 through IV-44 of the SCEA as well as SCEA Appendix B Air Quality and Greenhouse Gas Technical Study.

The comment also asserts that the SCEA should have specifically addressed indoor air quality impacts associated with the release of formaldehyde from building materials. There is no requirement from the CARB, OEHHA, or SCAQMD to evaluate indoor formaldehyde emissions from commonly used, and heavily regulated, common building materials and practices, nor have those agencies provided guidance on how to evaluate such emissions or thresholds of significance.

The commenter assumes—without presenting any facts to confirm—that the project's building materials would include composite wood products manufactured with urea-formaldehyde resins that would cause a significant impact on indoor air quality by emissions that would exceed the SCAQMD CEQA significance threshold for airborne cancer risk. The city requires, and the developer is legally obligated to ensure, that all new construction complies with all applicable building code and other legal requirements. Therefore, the developer will ensure that all building materials utilized will comply with all California requirements applicable to formaldehyde in newly constructed buildings including the applicable 2019 California Green Building Standards (CALGreen) Code (California Code of Regulations, Title 24, Part 11) for formaldehyde in composite wood products (as specified in the CARB Air Toxic Control Measure for Composite Wood – 17

CCR 93120 et seq.). CARB, the state's leading authoritative agency on air quality, has stated that the control measures it has approved for reducing emissions, including formaldehyde, from composite wood products provide a level of control that protects health and safety. CARB makes this point by stating directly in its Frequently Asked Questions for Consumers on Reducing Emissions from Composite Wood Products that, from a public health standpoint, the CWP Regulation's emission standards are set at low levels intended to protect public health.

(https://ww2.arb.ca.gov/sites/default/files/classic/toxics/compwood/consumer_faq.pdf)

The study that the commenter relied upon to purport that indoor carcinogenic risks to future residents would exceed the SCAQMD threshold of 10 excess cancers per million does not provide substantial evidence to support the claim. First, the Healthy Efficient New Gas Home (HENGH) study was performed with the intent of evaluating the effects of the 2008 Title 24 Building Standards requirements for ventilation on indoor air quality within single family homes containing natural gas appliances and outfitted with mechanical ventilation systems. The purpose of the study was not to analyze formaldehyde emission rates or resulting concentrations from composite wood products. The single-family homes evaluated in the HENGH study were built between 2011–2017 and only required to meet 2008 Title 24 building standards for mechanical ventilation and building envelope leakage/air infiltration. The Title 24 standards and methodology for residential ventilation requirements were updated in 2016 and refined in 2019, and therefore homes included in the HENGH sample that would not have met the 2019 ventilation standards are not reliable for comparative purposes. Homes evaluated in the original 2007 California New Home Study (CNHS)—which the HENGH study used as a benchmark for pre-2008 ventilation conditions—are also not comparable to the proposed multi-family units that comprise the project with regards to ventilation and infiltration standards, which greatly influence indoor air quality.

Second, the commenter used inappropriate exposure parameters and methodology to calculate the estimated risk to future residents based on the results of the HENGH study and the 2007 CNHS. The 2015 OEHHA risk assessment guidelines recommend a 30-year exposure for residential health risk assessments. The commenter used the obsolete 70-year residential exposure period assuming continuous (100 percent of time spent at home) exposure to arrive at the estimated cancer risk of 120 per million based on the HENGH study and 180 per million based on the CNHS analysis. The 2015 OEHHA guidelines recommend the use of a fraction of time at home value of 0.73 for adults and 0.72 for children. When the exposure duration is reduced from 70 years to 30 years and a time-at-home fraction of 0.75 is applied, the assumed risk based on the median HENGH study formaldehyde concentration of 24.1 $\mu\text{g}/\text{m}^3$ would be 38.6 per million. This estimated risk is less than one-third of the risk claimed by the commenter (120 per million), reflecting some of the flawed methodology employed to estimate possible carcinogenic risks from formaldehyde exposure. However, it is likely that this reduced carcinogenic risk is still a substantial overestimation of potential formaldehyde concentrations and exposures in proposed project dwelling units.

All additional comments that the SCEA must evaluate formaldehyde contributions to existing and future cumulative air quality conditions are unfounded based on the lack of credibility and applicability of the reports cited by the commentator, and the lack of any regulatory guidance or precedence to conduct such an analysis for a development project's CEQA analysis. And such analysis would be highly speculative and beyond the scope of CEQA documentation for an infill development project that will be constructed in accordance with all applicable, current building and safety codes.

The comment alleges that the SCEA failed to evaluate health risks from diesel particulate matter (DPM). Contrary to the assertion, the SCEA appropriately evaluated health risks

from DPM (see SCEA, page IV-44) and concluded the project would not cause significant impacts with regard to DPM.

The comment claims that a health risk analysis (HRA) should have been conducted for the proposed project based on OEHHA 2015 guidance. The intent of the OEHHA 2015 guidance is to provide HRA procedures for use in the Air Toxics Hot Spots Program or for the permitting of existing, new, or modified stationary sources. As the project is not part of the Air Toxics Hot Spots Program and is considered an urban infill mixed-use development consisting primarily of mobile and area sources (i.e., non-stationary sources), the OEHHA 2015 guidance is not directly applicable. OEHHA 2015 offers limited information on conducting a short-term HRA, but the guidance acknowledges the many inherent uncertainties that may occur, and it does not identify the types of short-term projects or non-stationary projects subject thereto. Moreover, OEHHA 2015 does not impose requirements for the proposed project to conduct a HRA nor does OEHHA 2015 indicate a HRA should be conducted for the proposed project. Further, the SCAQMD has not opined on the application of OEHHA 2015 guidance to development projects such as the proposed project, and it would be speculative to conduct an analysis without SCAQMD's necessary oversight. (See Exhibits E & H.)

CONCLUSION

For the reasons stated herein, and per the findings of the Advisory Agency's Determination, the proposed project complies with the applicable provisions of the Small Lot Subdivision Standards, the West Adams - Baldwin Hills - Leimert Community Plan, and the California Environmental Quality Act (CEQA). Planning staff evaluated the proposed project and determined it meets the findings to approve a Small Lot Subdivision and that the project qualifies for an exemption from CEQA pursuant to California Public Resource Code Section 21155.2, the Sustainable Communities Environmental Assessment prepared for this project (ENV-2021-6879-SCEA) dated January 2022, as well as the whole of the administrative record. Based on the complete plans submitted by the applicant and considering the appellant's arguments for appeal, staff has determined that the project meets the required findings.

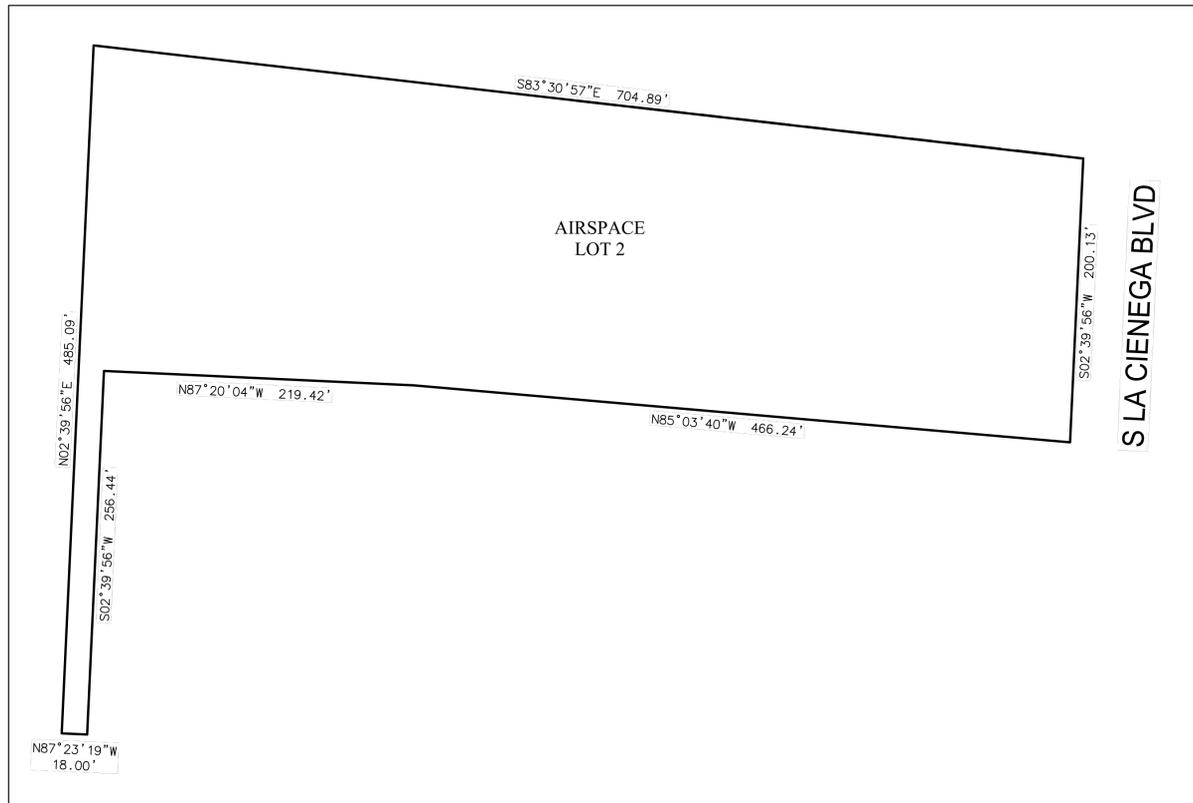

Therefore, staff recommends that the City Planning Commission take the following actions: determine that based on the whole of the administrative record, 1. FOUND, pursuant to Public Resources Code (PRC) Section 21155.2, after consideration of the whole of the administrative record, including the SB 375 Sustainable Communities Environmental Assessment, No. ENV-2021-6979-SCEA ("SCEA"), and all comments received, after imposition of all mitigation measures, there is no substantial evidence that the project will have a significant effect on the environment; FOUND that the City Planning Commission held a hearing on and adopted the SCEA on May 12, 2022, pursuant to PRC Section 21155.2(b); FOUND the Project is a transit priority project pursuant to PRC Section 21155 and the Project has incorporated all feasible mitigation measures, performance standards, or criteria set forth in prior EIR(s), including SCAG's 2020-2045 RTP/SCS Program EIR, the West Adams-Baldwin Hills-Leimert Community Plan EIR, and the Community Redevelopment Agency of the City of Los Angeles (CRA/LA) Mid-City Redevelopment Plan EIR; FOUND all potentially significant effects required to be identified in the initial study have been identified and analyzed in the SCEA; FOUND with respect to each significant effect on the environment required to be identified in the initial study for the SCEA that avoid or mitigate the significant effects to a level of insignificance or those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency; FOUND the SCEA reflects the independent judgment and analysis of the City; FOUND the mitigation measures have been made enforceable conditions on the project; and ADOPT the SCEA and the Mitigation Monitoring Program prepared for the SCEA, deny the appeal filed by Brian Flynn and sustain the decision of the Advisory Agency to a Vesting Tentative Tract Map to subdivide the Property into one (1) ground lot and four (4) airspace

lots with one of the airspace lots to have up to 260 residential dwelling units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil; adopt the attached Findings and adopt the attached Conditions of Approval.

Rincon de los Bueyes

Appeal End Date: April 11, 2022

In accordance with provisions of Section 17.03 and Section 12.22.C.27 of the Los Angeles Municipal Code (LAMC), the Advisory Agency determined based on the whole of the administrative record that the project is exempt from CEQA pursuant to California Public Resource Code Section 21155.2, the Sustainable Communities Environmental Assessment prepared for this project (ENV-2021-6879-SCEA) dated January 2022, as well as the whole of the administrative record, and approved Vesting Tentative Tract No. VTT-83550-CN located at 3401 South La Cienega Boulevard, to subdivide one (1) lot, totaling 153,608 square-feet into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential condominium units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil in the CM-2D-CPIO zone, pursuant to the Los Angeles Municipal Code (LAMC) Sections 17.06 and 17.15, as shown on map stamp-dated September 14, 2021 in the West Adams - Baldwin Hills - Leimert Community Plan. (The subdivider is hereby advised that the LAMC may not permit this maximum approved density. Therefore, verification should be obtained from the Department of Building and Safety which will legally interpret the Zoning Code as it applies to this particular property.) For an appointment with the Development Services Center call (213) 482-7077 or (818) 374-5050. The Advisory Agency's approval is subject to the following conditions:

Note on clearing conditions: When two or more **agencies** must clear a condition, subdivider should follow the sequence indicated in the condition. For the benefit of the applicant, subdivider shall maintain record of all conditions

cleared, including all material supporting clearances and be prepared to present copies of the clearances to each reviewing agency as may be required by its staff at the time of its review.

BUREAU OF ENGINEERING - SPECIFIC CONDITIONS

1. That the existing public sanitary sewer easement along Corbett Street (private street) be properly shown on the final map.
2. That the subdivider make a request to the Central District Office of the Bureau of Engineering to determine the capacity of existing sewers in this area.
3. That all tract boundary lines be properly established in accordance with Section 17.07D of the Los Angeles Municipal Code prior to recordation of the final map satisfactory to the City Engineer.
4. That a set of drawings for airspace lots be submitted to the City Engineer showing the followings:
 - a. Plan view at different elevations.
 - b. Isometric views.
 - c. Elevation views.
 - d. Section cuts at all locations where air space lot boundaries change.
5. That the owners of the property record an agreement satisfactory to the City Engineer stating that they will grant the necessary private easements for ingress and egress purposes to serve proposed airspace lots to use upon the sale of the respective lots and they will maintain the private easements free and clear of obstructions and in safe conditions for use at all times.

DEPARTMENT OF BUILDING AND SAFETY, GRADING DIVISION

6. Provide a complete geotechnical engineering report per the Department requirements and LABC with appropriate design recommendations and supporting engineering analyses. (P/BC 2014-044, P/BC 2014-049, P/BC 2014-068, P/BC 2014-113).
7. Provide liquefaction analysis in conformance with the most recent version of CGS Special Publication 117 (i.e. SP 117 A), Guidelines for Evaluating and Mitigating Seismic Hazards in California (1803. 7), and with Information Bulletin P/BC 2020-151.
8. Provide a copy of the City approval letter for the existing fill, which was placed after April 25, 1963.
9. Provide a complete laboratory testing report prepared by a City of Los Angeles approved testing agency. The report shall be signed and stamped by the engineer in responsible charge of the testing and shall include the testing descriptions and procedures. P/BC 2020-113.
10. Provide design calculations and recommendations for temporary excavations and permanent walls for a minimum factor of safety of 1.25 and 1.5 respectively.

Notes: Calculations shall be determined using the limit equilibrium method (free-body-diagram, and vectors) and with tension cracks. Basement walls and other walls in which horizontal

movement is restricted at the top shall be designed for at-rest pressure in accordance to the Jaky formula and Section 1610.1 of the 2020 LABC. For walls over 6 feet, lateral earth pressure due to earthquake motions shall be considered, as required by section 1803.5.12 of the Los Angeles Building Code. For restrained walls, the higher value obtained for at-rest pressure and using the limit equilibrium method shall be recommended for design.

DEPARTMENT OF BUILDING AND SAFETY, ZONING DIVISION

11. Prior to recordation of the final map, the Department of Building and Safety, Zoning Division, shall issue a clearance letter stating that no Building or Zoning Code violations existing relating to the subdivision on the subject site once the following items have been satisfied:
- a. Obtain permits for the demolition or removal of all existing structures on the site and no building shall straddle over the exiting property line. Accessory structures and uses are not permitted to remain on lots without a main structure or use. Provide copies of the demolition permits and signed inspection cards to show completion of the demolition work.
 - b. Provide a copy of D condition(s). Show compliance with the above condition(s) as applicable or Department of City Planning approval is required.
 - c. Provide a copy of affidavit AFF-55742, AFF-56043 and AFF-58293. Show compliance with all the conditions/requirements of the above affidavit(s) as applicable. Termination of above affidavit(s) may be required after the Map has been recorded. Obtain approval from the Department, on the termination form, prior to recording.
 - d. Provide a copy of CPC case CPC-2021-6877-DB-SPR-CUB. Show compliance with all the conditions/requirements of the CPC case as applicable.
 - e. Show all street dedication(s) as required by Bureau of Engineering and provide net lot area after all dedication. "Area" requirements shall be re-checked as per net lot area after street dedication. Front yard requirements shall be required to comply with current code as measured from new property lines after dedication.
 - f. The submitted Map does not comply with the and maximum density (800 s.f. of lot area/dwelling unit) requirement of the CM-2D-CPIO Zone. Revise the Map to show compliance with the above requirement or obtain approval from the Department of City Planning.
 - g. Record a Covenant and Agreement to treat the buildings and structures located in an Air Space Subdivision as if they were within a single lot.

Note:

Each Air Space lot shall have access to a street by one or more easements or other entitlements to use in a form satisfactory to the Advisory Agency and the City Engineer.

This Proposed Project is subject to Density Bonus Ordinance to increase the maximum allowed density.

This property is located in a Liquefaction Zone.

The submitted Map may not comply with the number of parking spaces required by Section 12.21 A.4(a) based on number of habitable rooms in each unit. If there are insufficient numbers of parking spaces, obtain approval from the Department of City Planning.

The submitted Map may not comply with the number of guest parking spaces required by the Advisory Agency.

The existing or proposed building plans have not been checked for and shall comply with Building and Zoning Code requirements. With the exception of revised health or safety standards, the subdivider shall have a vested right to proceed with the proposed development in substantial compliance with the ordinances, policies, and standards in effect at the time the subdivision application was deemed complete. Plan check will be required before any construction, occupancy or change of use.

If the proposed development does not comply with the current Zoning Code, all zoning violations shall be indicated on the Map.

An appointment is required for the issuance of a clearance letter from the Department of Building and Safety. The applicant is asked to contact Eric Wong at (213) 482-6876 to schedule an appointment.

DEPARTMENT OF TRANSPORTATION

12. A. CEQA-Related Requirements

Per the transportation analysis, the applicant will implement the following TDM measures:

- Ride-Share Program – This strategy involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride share vehicles, and a website or message board to connect riders and coordinate rides in order to increase vehicle occupancy. The Project assumes that every employee would be eligible for the ride-share program.

B. Non-CEQA-Related Requirements and Considerations

To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

1. Transportation Systems Management (TSM) Improvements

LADOT's goal is to improve the efficiency of the study intersections, by optimally allocating green time to different modes and in different directions and provide the capability to remotely monitor and adjust signal timing in real-time to respond to specific traffic conditions or occurrences. The following Automated Traffic Surveillance and Control system (ATSAC) improvements will maximize intersection throughput or manage queues and improve system performance:

The project would contribute up to approximately \$80,000 to \$90,000 toward TSM improvements within the project area that may be considered to better accommodate intersection operations and increase network capacity throughout the study area.

LADOT's ATSAC Section has identified the improvement of approximately 12,000 feet of fiber optic cable from National Boulevard/Jefferson Boulevard to the hub located at La Brea Avenue and Washington Boulevard.

The installation of the fiber optic cables would improve the network capacity and the TSM improvement provides a system wide benefit by reducing delays experienced by motorists within the project area.

Should the project be approved, then a final determination on how to implement the ATSAC improvements listed above will be made by DOT prior to the issuance of the first building permit. These improvements will be implemented either by the applicant through the B-Permit process of the Bureau of Engineering (BOE), or through a direct payment to DOT to fund the cost of the upgrades and improvements. If the upgrades and improvements are implemented by the applicant through the B-Permit process, then these improvements must be guaranteed prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the event of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

All proposed street improvements within the City of Los Angeles must be guaranteed through BOE's B-Permit process, prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy. Prior to setting the bond amount, BOE shall require that the developer's engineer or contractor contact LADOT's B-Permit Coordinator, ladot.planprocessing@lacity.org, to arrange a pre-design meeting to finalize the proposed design.

2. Parking Requirements

The project would provide parking for 785 vehicle parking spaces and 222 bicycle parking spaces (36 short-term spaces and 186 long-term spaces). The applicant should check with the Departments of Building and Safety and City Planning on the number of parking spaces required for this project.

3. Highway Dedication and Street Widening Requirements

Per the new Mobility Element of the General Plan, **La Cienega Boulevard**, has been designated a Modified Boulevard II, which would require a 40-foot half-width roadway within a 52-foot half-width right-of-way and **Jefferson Boulevard**, has been designated a Modified Avenue II, which would require a 30-foot half-width roadway within a 45-foot half-width right-of-way. For all applicable highway dedication, street widening and/or sidewalk requirements of the project, the applicant should check with the Bureau of Engineering's Land Development Group.

4. Highway Dedication and Street Widening Requirements

The conceptual site plan for the project (see **Attachment A**) is acceptable to LADOT. As indicated previously, vehicular access will be provided via one driveway on South La Cienega Boulevard and a secondary, one-way exit, via a 20-foot strip of land connecting the project site to Corbett Street. Review of this study does not constitute approval of the dimensions for any new proposed driveway. Review and approval of a new driveway should be coordinated with LADOT's Citywide Planning Coordination Section (201 North Figueroa Street, 5th Floor, Room 550, at 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact LADOT for driveway width and internal circulation requirements prior to the commencement of building or parking layout design. The applicant should check with City Planning regarding the project's vehicular access and design.

5. Worksite Traffic Control Requirements

LADOT recommends that a construction work site traffic control plan be submitted to LADOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to <http://ladot.lacity.org/businesses/temporary-traffic-control-plans> to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. LADOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

6. Development Review Fees

Section 19.15 of the LAMC identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Kevin Arucan at (213) 972-4970.

DEPARTMENT OF RECREATION AND PARKS

Pursuant to Los Angeles Municipal Code sections 12.33.E and 19.17, Recreation and Parks recommends the following be added as a condition of the approval of AA-2021-1147-PMLA-SL-HCA:

13. That the Park Fee paid to the Department of Recreation and Parks be calculated as a Subdivision (Quimby in-lieu) fee.

DEPARTMENT OF WATER AND POWER

14. Contact LAFD for private fire hydrant requirement.
15. Street/sewer/storm drain plans shall be submitted.

Note: On January 1, 2018, LADWP implemented a new policy regarding water services for multi-unit residential structures. If a development allows LADWP to install an individual meter in front of each house and the water main serving that development fronts the property and is in a public right-of-way, then this is a conventional installation and LADWP will provide

individual meters. However, if the small lot is completely and within private property and the request is for a manifold type installation of consecutive meters in a coffin-type configuration, LADWP can provide up to five meters in that manifold setting. LADWP can provide a master meter if the number of meters required is greater than five.

BUREAU OF STREET LIGHTING

16. The Bureau of Street Lighting's recommended condition of approval for the subject city planning case is as follows: (Improvement condition added to S-3 (c) where applicable.)

Note: The quantity of streetlights identified may be modified slightly during the plan check process based on illumination calculations and equipment selection.

Conditions set: 1) in compliance with a Specific Plan, 2) by LADOT, or 3) by other legal instrument excluding the Bureau of Engineering conditions, requiring an improvement that will change the geometrics of the public roadway or driveway apron may require additional or the reconstruction of street lighting improvements as part of that condition.

BUREAU OF STREET SERVICES – URBAN FORESTRY

17. a. Project shall preserve all healthy mature street trees whenever possible. All feasible alternatives in project design should be considered and implemented to retain healthy mature street trees. A permit is required for the removal of any street tree and shall be replaced 2: 1 as approved by the Board of Public Works and Urban Forestry Division.

b. Plant street trees at all feasible planting locations within dedicated streets as directed and required by the Bureau of Street Services, Urban Forestry Division. All tree plantings shall be installed to current tree planting standards when the City has previously been paid for tree plantings. The sub divider or contractor shall notify the Urban Forestry Division at: (213) 847- 3077 upon completion of construction for tree planting direction and instructions.

Note: Removal of street trees requires approval from the Board of Public Works. All projects must have environmental (CEQA) documents that appropriately address any removal and replacement of street trees. Contact Urban Forestry Division at: (213) 847-3077 for tree removal permit information.

FIRE DEPARTMENT

18. That prior to the recordation of the final map, a suitable arrangement shall be made satisfactory to the Fire Department, binding the subdivider and all successors to the following:

- a. During demolition, the Fire Department access will remain clear and unobstructed.
- b. Access for Fire Department apparatus and personnel to and into all structures shall be required.

- c. One or more Knox Boxes will be required to be installed for LAFD access to the project. Location and number to be determined by LAFD Field Inspector. (Refer to FPB Req # 75).
- d. 505.1 Address identification. New and existing buildings shall have approved building identification placed in a position that is plainly legible and visible from the street or road fronting the property.
- e. Where above ground floors are used for residential purposes, the access requirement shall be interpreted as being the horizontal travel distance from the street, driveway, alley, or designated fire lane to the main entrance of individual units.
- f. No building or portion of a building shall be constructed more than 150 feet from the edge of a roadway of an improved street, access road, or designated fire lane.
- g. The Fire Department may require additional vehicular access where buildings exceed 28 feet in height.
- h. 2014 CITY OF LOS ANGELES FIRE CODE, SECTION 503.1.4 (EXCEPTION)
 - i. When this exception is applied to a fully fire sprinklered residential building equipped with a wet standpipe outlet inside an exit stairway with at least a 2 hour rating the distance from the wet standpipe outlet in the stairway to the entry door of any dwelling unit or guest room shall not exceed 150 feet of horizontal travel AND the distance from the edge of the roadway of an improved street or approved fire lane to the door into the same exit stairway directly from outside the building shall not exceed 150 feet of horizontal travel.
 - ii. It is the intent of this policy that in no case will the maximum travel distance exceed 150 feet inside the structure and 150 feet outside the structure. The term "horizontal travel" refers to the actual path of travel to be taken by a person responding to an emergency in the building.
 - iii. This policy does not apply to single-family dwellings or to non-residential buildings.
- i. Building designs for multi-storied residential buildings shall incorporate at least one access stairwell off the main lobby of the building; But, in no case greater than 150ft horizontal travel distance from the edge of the public street, private street or Fire Lane. This stairwell shall extend onto the roof.
- j. Entrance to the main lobby shall be located off the address side of the building.
- k. Any required Fire Annunciator panel or Fire Control Room shall be located within a 20ft visual line of sight of the main entrance stairwell or to the satisfaction of the Fire Department.
- l. Adequate off-site public and on-site private fire hydrants may be required. Their number and location to be determined after the Fire Department's review of the plot plan.

- m. The Fire Department may require additional roof access via parapet access roof ladders where buildings exceed 28 feet in height, and when overhead wires or other obstructions block aerial ladder access.
- n. **FPB #105**
5101.1 Emergency responder radio coverage in new buildings. All new buildings shall have approved radio coverage for emergency responders within the building based upon the existing coverage levels of the public safety communication systems of the jurisdiction at the exterior of the building. This section shall not require improvement of the existing public safety communication

The applicant is further advised that all subsequent contact regarding these conditions must be with the Hydrant and Access Unit. This would include clarification, verification of condition compliance and plans or building permit applications, etc., and shall be accomplished by appointment only, in order to assure that you receive service with a minimum amount of waiting please email lafdhydrants@lacity.org. You should advise any consultant representing you of this requirement as well.

BUREAU OF SANITATION

- 19. Bureau of Sanitation has reviewed the sewer/storm drain lines serving the subject parcels/areas, and found no potential problems to our structures and/or potential maintenance issues.

Note: This Approval is for the Tract Map only and represents the office of LA Sanitation/CWCDs. The applicant may be required to obtain other necessary Clearances/Permits from LA Sanitation and appropriate District office of the Bureau of Engineering. If you have any questions, please contact Rafael Yanez at (323) 342-1563.

DEPARTMENT OF CITY PLANNING – SITE SPECIFIC CONDITIONS

- 20. Prior to the recordation of the final map, the subdivider shall prepare and execute a Covenant and Agreement (Planning Department General Form CP-6770) in a manner satisfactory to the Planning Department, binding the subdivider and all successors to the following:
 - a. Limit the proposed development to one (1) ground lot and four (4) airspace lots including a maximum of 230,412 square feet of residential space with a maximum of 260 residential units, and 230,412 square feet of commercial space. This density is only allowed per the approval and requirements of Case No. CPC-2021-6877-DB-SPR-CUB. In the event that Case No. CPC-2021-6877-DB-SPR-CUB is not approved, the project shall comply with Ordinance No. 184,794.
 - b. Off-street parking for residential and commercial uses shall comply with the requirements of Case No. CPC-2021-6877-DB-SPR-CUB. In the event that Case No. CPC-2021-6877-DB-SPR-CUB is not approved, the project shall comply with Ordinance No. 184,794 and LAMC Section 12.21-A,4.

Directions to guest parking spaces shall be clearly posted. Tandem parking

spaces shall not be used for guest parking.

In addition, prior to issuance of a building permit, a parking plan showing off-street parking spaces, as required by the Advisory Agency, be submitted for review and approval by the Department of City Planning (221 North Figueroa Street, Suite 1350).

- c. That a solar access report shall be submitted to the satisfaction of the Advisory Agency prior to obtaining a grading permit.
 - d. That the subdivider consider the use of natural gas and/or solar energy and consult with the Department of Water and Power and Southern California Gas Company regarding feasible energy conservation measures.
 - e. Recycling bins shall be provided at appropriate locations to promote recycling of paper, metal, glass, and other recyclable material.
 - f. Outdoor lighting shall be designed and installed with shielding, such that the light source cannot be seen from adjacent properties or the public right-of-way.
 - g. A 2-foot wide private pedestrian walk easement shall be provided along La Cienega Boulevard adjoining the tract and shall be open for public use. This pedestrian walk shall be kept open at all times, from the ground plane up to the first 10 feet of the ground floor, and any structures within the easement walk area shall be reviewed and approved by the Department of Building and Safety. The subdivider shall be responsible for maintenance and security of the private easement. The property's Floor Area, Buildable Area, Lot Area, yards, and other applicable standards in the Municipal Code shall continue to be calculated and determined in the same manner they were prior to granting the easement.
22. Prior to the issuance of a grading permit, the subdivider shall record and execute a Covenant and Agreement (Planning Department General Form CP-6770), binding the subdivider to the following haul route conditions:

Haul Route General Conditions

- a. The owner or contractor shall keep the construction area sufficiently dampened to control dust caused by grading and hauling, and at all times shall provide reasonable control of dust caused by wind, at the sole discretion of the grading inspector.
- b. Hauling and grading equipment shall be kept in good operating condition and muffled as required by law.
- c. The Emergency Operations Division, Specialized Enforcement Section of the Los Angeles Police Department shall be notified at least 24 hours prior to the start of hauling, (213) 486-0777.
- d. Loads shall be secured by trimming or watering or may be covered to prevent the spilling or blowing of the earth material. If the load, where it contacts the sides, front, and back of the truck cargo container area, remains six inches from the upper edge of the container area, and if the load does not extend, at its peak, above any part of the upper edge of the cargo container area, the load is not required to be covered, pursuant to California Vehicle Code Section 23114 (e) (4).
- e. Trucks and loads are to be watered at the import site to prevent blowing dirt and are to be cleaned of loose earth at the import site to prevent spilling.

- f. Streets shall be cleaned of spilled materials during grading and hauling, and at the termination of each workday.
- g. The owner/contractor shall be in conformance with the State of California, Department of Transportation policy regarding movements of reducible loads.
- h. The owner/contractor shall comply with all regulations set forth by the State of California Department of Motor Vehicles pertaining to the hauling of earth.
- i. A copy of the approval letter from the City, the approved haul route and the approved grading plans shall be available on the job site at all times.
- j. The owner/contractor shall notify the Street Services Investigation and Enforcement Division, (213) 847-6000, at least 72 hours prior to the beginning of hauling operations and shall also notify the Division immediately upon completion of hauling operations. Any change to the prescribed routes, staging and/or hours of operation must be approved by the concerned governmental agencies. Contact the Street Services Investigation and Enforcement Division prior to effecting any change.
- k. Hauling vehicles shall not stage on any streets adjacent to the project, unless specifically approved as a special condition in this report.
- l. Hauling vehicles shall be spaced so as to discourage a convoy affect.
- m. This approval pertains only to the City of Los Angeles streets. Those segments of the haul route outside the jurisdiction of the City of Los Angeles may be subject to permit requirements and to the approval of other municipal or governmental agencies and appropriate clearances or permits is the responsibility of the contractor.

Haul Route Specific Conditions

- n. Loaded haul vehicles traveling from the project site shall travel to Hansen Aggregates, exiting the site on La Cienega, head south, right turn onto Obama Blvd, right turn onto Jefferson, stay right on Jefferson Blvd, turn left onto La Cienega, slight right onto Fairfax, right onto Washington, right onto I-10, take CA-60 to I-605 N, take exit 24 for Lower Azusa Rd/Los Angeles St.
- o. Empty haul vehicles traveling to the project site facility shall head east onto Graham Access Road, turn left onto Live Oak Ave, turn left to merge onto I-605 S, right onto I-10 W, take exit 7B for Washington towards Fairfax Ave, turn left onto Washington Blvd, turn left onto Fairfax Ave, turn left onto La Cienega Blvd.
- p. Hauling hours of operation are restricted to the hours between 7:00 A.M. and 6:00 P.M., Monday through Saturday with no hauling on Sundays or holidays.
- q. An average of approximately 130 truck trips per day will occur over an estimated 3 years of hauling.
- r. Haul vehicles are bottom dump trucks with 18 wheels, carrying 14 cubic yards per truck, and a maximum gross weight of 80,000 pounds.
- s. There shall be no staging or parking of construction vehicles, including vehicles to transport workers on any adjacent residential streets.
- t. Total net export of material is approximately 170,000 cubic yards.
- u. "Truck Crossing" warning signs shall be placed 300 feet in advance of the exit in each direction.
- v. A minimum of two flag attendants, each with two-way radios, will be required during hauling hours to assist with staging and getting trucks in and out of the project area. Additional flag attendants may be required by the LADBS Inspector, LADOT, or BOSS to mitigate a hazardous situation (e.g. blind curves, uncontrolled intersections, narrow portions of roads or where obstacles are present). Flag attendants and warning signs shall be in compliance with Part II of the latest Edition of "Work Area Traffic Control Handbook."
- w. A surety or cash bond shall be posted in an amount satisfactory to the City Engineer for maintenance of haul route streets. The forms for the bond will be issued by the

Central District Engineering Office, 100 S. Main Street 9th Floor, Los Angeles, CA, 90012. Further information regarding the bond may be obtained by calling 213-972-4990.

23. Prior to the issuance of the building permit or the recordation of the final map, a copy of CPC-2021-6877-DB-SPR-CUB shall be submitted to the satisfaction of the Advisory Agency. In the event CPC-2021-6877-DB-SPR-CUB is not approved, the subdivider shall submit a tract modification.
24. Paleontological Resources Inadvertent Discovery. In the event an unanticipated paleontological resource is uncovered during earthwork or construction, all work shall cease within a minimum distance of 50 feet from the find until a Qualified Paleontologist (1. Paleontologist who meets the Society of Vertebrate Paleontology standards for a Principal Investigator or Project Paleontologist; 2. Has demonstrated competence in field techniques, preparation, identification, curation, and reporting and/or a graduate degree in paleontology or geology or a publication record in peer reviewed journals; 3. At least two years professional experience with administration and project management experience; 4. Proficiency in recognizing fossils in the field and determining their significance; expertise in local geology, stratigraphy, and biostratigraphy; and 5. Experience collecting vertebrate fossils in the field) has been retained by the applicant to evaluate the find in accordance with the Society of Vertebrate Paleontology's Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources. The Qualified Paleontologist may adjust this avoidance area, ensuring appropriate temporary protection measures of the find are taken while also considering ongoing construction needs in the surrounding area. Temporary staking and delineation of the avoidance area shall be installed around the find in order to avoid any disturbance from construction equipment. Any paleontological materials that are uncovered shall not be moved or collected by anyone other than a Qualified Paleontologist or his/her designated representative such as a Paleontological Monitor (1. A paleontologist who has a minimum of a bachelor's or equivalent degree in geology or paleontology; 2. No less than one year of experience performing paleontological monitoring and salvaging fossil materials in the relevant geologic province; or 3. An equivalent degree in biology or pursuit of a degree in geology or paleontology and no less than two years of comparable experience). If cleared by the Qualified Paleontologist, Ground Disturbance Activities may continue unimpeded on other portions of the site. The found deposit(s) shall be treated in accordance with the Society of Vertebrate Paleontology's Standard Procedures. Ground Disturbance Activities in the area where resource(s) were found may recommence once the identified resources are properly assessed and processed by a Qualified Paleontologist. A report that describes the resource and its disposition, as well as the assessment methodology, shall be prepared by the Qualified Paleontologist according to current professional standards for submittal to the Department of City Planning. If appropriate, the report should also contain the Qualified Paleontologist's recommendations for the preservation, conservation, and curation of the resource at a suitable repository, such as the Natural History Museum of Los Angeles County, with which the Applicant or Owner must comply.
25. Tribal Cultural Resource Inadvertent Discovery. In the event that objects or artifacts that may be tribal cultural resources are encountered during the course of any ground disturbance activities¹, all such activities shall temporarily cease on the project site until the potential tribal cultural resources are properly assessed and addressed pursuant to the process set forth below:

- a. Upon a discovery of a potential tribal cultural resource, the Applicant, or its successor, shall immediately stop all ground disturbance activities and contact the following: (1) all California Native American tribes that have informed the City they are traditionally and culturally affiliated with the geographic area of the proposed project; (2) and OHR.
- b. If OHR determines, pursuant to Public Resources Code Section 21074 (a)(2), that the object or artifact appears to be a tribal cultural resource in its discretion and supported by substantial evidence, the City shall provide any affected tribe a reasonable period of time, not less than 14 days, to conduct a site visit and make recommendations to the Applicant, or its successor, and the City regarding the monitoring of future ground disturbance activities, as well as the treatment and disposition of any discovered tribal cultural resources.
- c. The Applicant, or its successor, shall implement the tribe's recommendations if a qualified archaeologist retained by the City and paid for by the Applicant, or its successor, in consultation with the tribal monitor, reasonably conclude that the tribe's recommendations are reasonable and feasible.
- d. In addition to any recommendations from the applicable tribe(s), a qualified archeologist shall develop a list of actions that shall be taken to avoid or minimize impacts to the identified tribal cultural resources substantially consistent with best practices identified by the Native American Heritage Commission and in compliance with any applicable federal, state or local law, rule or regulation.
- e. If the Applicant, or its successor, does not accept a particular recommendation determined to be reasonable and feasible by the qualified archaeologist or qualified tribal monitor, the Applicant, or its successor, may request mediation by a mediator agreed to by the Applicant, or its successor, and the City. The mediator must have the requisite professional qualifications and experience to mediate such a dispute. The City shall make the determination as to whether the mediator is at least minimally qualified to mediate the dispute. After making a reasonable effort to mediate this particular dispute, the City may (1) require the recommendation be implemented as originally proposed by the archaeologist or tribal monitor; (2) require the recommendation, as modified by the City, be implemented as it is at least as equally effective to mitigate a potentially significant impact; (3) require a substitute recommendation be implemented that is at least as equally effective to mitigate a potentially significant impact to a tribal cultural resource; or (4) not require the recommendation be implemented because it is not necessary to mitigate an significant impacts to tribal cultural resources. The Applicant, or its successor, shall pay all costs and fees associated with the mediation.
- f. The Applicant, or its successor, may recommence ground disturbance activities outside of a specified radius of the discovery site, so long as this radius has been reviewed by both the qualified archaeologist and qualified tribal monitor and determined to be reasonable and appropriate.
- g. The Applicant, or its successor, may recommence ground disturbance activities inside of the specified radius of the discovery site only after it has complied with all of the recommendations developed and approved pursuant to the process set forth in paragraphs 2 through 5 above.
- h. Copies of any subsequent prehistoric archaeological study, tribal cultural resources study or report, detailing the nature of any significant tribal cultural resources, remedial actions taken, and disposition of any significant tribal cultural resources shall be submitted to the South Central Coastal Information Center (SCCIC) at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File.

- i. Notwithstanding paragraph 8 above, any information that the Department of City Planning, in consultation with the City Attorney's Office, determines to be confidential in nature shall be excluded from submission to the SCCIC or provided to the public under the applicable provisions of the California Public Records Act, California Public Resources Code, section 6254(r), and handled in compliance with the City's AB 52 Confidentiality Protocols.

26. INDEMNIFICATION AND REIMBURSEMENT OF LITIGATION COSTS.

Applicant shall do all of the following:

- (i) Defend, indemnify and hold harmless the City from any and all actions against the City relating to or arising out of, in whole or in part, the City's processing and approval of this entitlement, including but not limited to, an action to attack, challenge, set aside, void or otherwise modify or annul the approval of the entitlement, the environmental review of the entitlement, or the approval of subsequent permit decisions, or to claim personal property damage, including from inverse condemnation or any other constitutional claim.
- (ii) Reimburse the City for any and all costs incurred in defense of an action related to or arising out of, in whole or in part, the City's processing and approval of the entitlement, including but not limited to payment of all court costs and attorney's fees, costs of any judgments or awards against the City (including an award of attorney's fees), damages, and/or settlement costs.
- (iii) Submit an initial deposit for the City's litigation costs to the City within 10 days' notice of the City tendering defense to the Applicant and requesting a deposit. The initial deposit shall be in an amount set by the City Attorney's Office, in its sole discretion, based on the nature and scope of action, but in no event shall the initial deposit be less than \$50,000. The City's failure to notice or collect the deposit does not relieve the Applicant from responsibility to reimburse the City pursuant to the requirement in paragraph (ii).
- (iv) Submit supplemental deposits upon notice by the City. Supplemental deposits may be required in an increased amount from the initial deposit if found necessary by the City to protect the City's interests. The City's failure to notice or collect the deposit does not relieve the Applicant from responsibility to reimburse the City pursuant to the requirement in paragraph (ii).
- (v) If the City determines it necessary to protect the City's interest, execute an indemnity and reimbursement agreement with the City under terms consistent with the requirements of this condition.

The City shall notify the applicant within a reasonable period of time of its receipt of any action and the City shall cooperate in the defense. If the City fails to notify the applicant of any claim, action, or proceeding in a reasonable time, or if the City fails to reasonably cooperate in the defense, the applicant shall not thereafter be responsible to defend, indemnify or hold harmless the City.

The City shall have the sole right to choose its counsel, including the City Attorney's office or outside counsel. At its sole discretion, the City may participate

at its own expense in the defense of any action, but such participation shall not relieve the applicant of any obligation imposed by this condition. In the event the Applicant fails to comply with this condition, in whole or in part, the City may withdraw its defense of the action, void its approval of the entitlement, or take any other action. The City retains the right to make all decisions with respect to its representations in any legal proceeding, including its inherent right to abandon or settle litigation.

For purposes of this condition, the following definitions apply:

“City” shall be defined to include the City, its agents, officers, boards, commissions, committees, employees, and volunteers.

“Action” shall be defined to include suits, proceedings (including those held under alternative dispute resolution procedures), claims, or lawsuits. Action includes actions, as defined herein, alleging failure to comply with any federal, state or local law.

Nothing in the definitions included in this paragraph are intended to limit the rights of the City or the obligations of the Applicant otherwise created by this condition.

DEPARTMENT OF CITY PLANNING-ENVIRONMENTAL MITIGATION MEASURES

27. Implementation. The Mitigation Monitoring Program (MMP), that is part of the case file (Exhibit B), shall be enforced throughout all phases of the Project. The Applicant shall be responsible for implementing each Project Design Features (PDF) and Mitigation Measure (MM) and shall be obligated to provide certification, as identified below, to the appropriate monitoring and enforcement agencies that each PDF and MM has been implemented. The Applicant shall maintain records demonstrating compliance with each PDF and MM. Such records shall be made available to the City upon request.

28. Construction Monitor. During the construction phase and prior to the issuance of building permits, the Applicant shall retain an independent Construction Monitor (either via the City or through a third-party consultant), approved by the Department of City Planning, who shall be responsible for monitoring implementation of PDFs and MMs during construction activities consistent with the monitoring phase and frequency set forth in this MMP.

The Construction Monitor shall also prepare documentation of the Applicant's compliance with the PDFs and MMs during construction every 90 days in a form satisfactory to the Department of City Planning. The documentation must be signed by the Applicant and Construction Monitor and be included as part of the Applicant's Compliance Report. The Construction Monitor shall be obligated to immediately report to the Enforcement Agency any non-compliance with the MMs and PDFs within two businesses days if the Applicant does not correct the non-compliance within a reasonable time of notification to the Applicant by the monitor or if the non-compliance is repeated. Such non-compliance shall be appropriately addressed by the Enforcement Agency.

29. Substantial Conformance and Modification. After review and approval of the final MMP by the Lead Agency, minor changes and modifications to the MMP are permitted, but can only be made subject to City approval. The Lead Agency, in conjunction with any appropriate agencies or departments, will determine the adequacy of any proposed

change or modification. This flexibility is necessary in light of the nature of the MMP and the need to protect the environment. No changes will be permitted unless the MMP continues to satisfy the requirements of CEQA, as determined by the Lead Agency.

The Project shall be in substantial conformance with the PDFs and MMs contained in this MMP. The enforcing departments or agencies may determine substantial conformance with PDFs and MMs in the MMP in their reasonable discretion. If the department or agency cannot find substantial conformance, a PDF or MM may be modified or deleted as follows: the enforcing department or agency, or the decision maker for a subsequent discretionary project related approval finds that the modification or deletion complies with CEQA, including CEQA Guidelines Sections 15162 and 15164, which could include the preparation of an addendum or subsequent environmental clearance, if necessary, to analyze the impacts from the modifications to or deletion of the PDFs or MMs. Any addendum or subsequent CEQA clearance shall explain why the PDF or MM is no longer needed, not feasible, or the other basis for modifying or deleting the PDF or MM, and that the modification will not result in a new significant impact consistent with the requirements of CEQA. Under this process, the modification or deletion of a PDF or MM shall not, in and of itself, require a modification to any Project discretionary approval unless the Director of Planning also finds that the change to the PDF or MM results in a substantial change to the Project or the non-environmental conditions of approval.

BUREAU OF ENGINEERING - STANDARD CONDITIONS

- S-1. (a) That the sewerage facilities charge be deposited prior to recordation of the final map over all of the parcel in conformance with Section 64.11.2 of the Los Angeles Municipal Code (LAMC).
- (b) That survey boundary monuments be established in the field in a manner satisfactory to the City Engineer and located within the California Coordinate System prior to recordation of the final map. Any alternative measure approved by the City Engineer would require prior submission of complete field notes in support of the boundary survey.
- (c) That satisfactory arrangements be made with both the Water System and the Power System of the Department of Water and Power with respect to water mains, fire hydrants, service connections and public utility easements.
- (d) That any necessary sewer, street, drainage and street lighting easements be dedicated. In the event it is necessary to obtain off-site easements by separate instruments, records of the Bureau of Right-of-Way and Land shall verify that such easements have been obtained. The above requirements do not apply to easements of off-site sewers to be provided by the City.
- (e) That drainage matters be taken care of satisfactory to the City Engineer.
- (f) That satisfactory street, sewer and drainage plans and profiles as required, together with a lot grading plan of the parcel and any necessary topography of adjoining areas be submitted to the City Engineer.
- (g) That any required slope easements be dedicated by the final map.

- (h) That each lot in the parcel comply with the width and area requirements of the Zoning Ordinance.
 - (i) That 1-foot future streets and/or alleys be shown along the outside of incomplete public dedications and across the termini of all dedications abutting un-subdivided property. The 1-foot dedications on the map shall include a restriction against their use of access purposes until such time as they are accepted for public use.
 - (j) That any 1-foot future street and/or alley adjoining the parcel be dedicated for public use by the parcel, or that a suitable resolution of acceptance be transmitted to the City Council with the final map.
 - (k) That no public street grade exceeds 15%.
 - (l) That any necessary additional street dedications be provided to comply with the Americans with Disabilities Act (ADA) of 1990.
- S-2. That the following provisions be accomplished in conformity with the improvements constructed herein:
- (a) Survey monuments shall be placed and permanently referenced to the satisfaction of the City Engineer. A set of approved field notes shall be furnished, or such work shall be suitably guaranteed, except where the setting of boundary monuments requires that other procedures be followed.
 - (b) Make satisfactory arrangements with the Department of Traffic with respect to street name, warning, regulatory and guide signs.
 - (c) All grading done on private property outside the parcel boundaries in connection with public improvements shall be performed within dedicated slope easements or by grants of satisfactory rights of entry by the affected property owners.
 - (d) All improvements within public streets, private streets, alleys and easements shall be constructed under permit in conformity with plans and specifications approved by the Bureau of Engineering.
 - (e) Any required bonded sewer fees shall be paid prior to recordation of the final map.
- S-3. That the following improvements be either constructed prior to recordation of the final map or that the construction be suitably guaranteed:
- (a) Construct on-site sewers to serve the parcel as determined by the City Engineer.
 - (b) Construct any necessary drainage facilities.
 - (c) No street lighting improvements if no street widening per BOE improvement conditions. Otherwise relocate and upgrade street lights; three (3) on La Cienega Blvd. and two (2) pedestrian lights on La Cienega Blvd.
 - (d) Plant street trees and remove any existing trees within dedicated streets or proposed dedicated streets as required by the Street Tree Division of the Bureau

of Street Maintenance. All street tree plantings shall be brought up to current standards. When the City has previously been paid for tree planting, the subdivider or conparcelor shall notify the Urban Forestry Division ((213) 847-3077) upon completion of construction to expedite tree planting.

- (e) Repair or replace any off-grade or broken curb, gutter and sidewalk satisfactory to the City Engineer.
- (f) Construct access ramps for the handicapped as required by the City Engineer.
- (g) Close any unused driveways satisfactory to the City Engineer.
- (h) Construct any necessary additional street improvements to comply with the Americans with Disabilities Act (ADA) of 1990.
- (i) 1. Construct any necessary on-site mainline and house connection sewers satisfactory to the City Engineer.

Note: This project is located near the Metro Right-of-way Project Area. Consultation with the Los Angeles County Metropolitan Transportation Authority (Metro) may be required prior to the issuance of any building permit for projects within 100 feet of Metro-owned Rail or Bus Rapid Transit (BRT) right-of-way (ROW) to ensure safe access to, and operations of, transportation services and facilities (213) 922-2785. Any questions regarding this report should be directed to Quyen Phan of the Permit Case Management Division located at 201 N. Figueroa Street, Suite 290 or by calling (213) 808-8604.

Notes: The Advisory Agency approval is the maximum number of units permitted under the parcel action. However the existing or proposed zoning may not permit this number of units. This vesting map does not constitute approval of any variations from the Los Angeles Municipal Code (LAMC), unless approved specifically for this project under separate conditions.

Any removal of the existing street trees shall require Board of Public Works approval.

Satisfactory arrangements shall be made with the Los Angeles Department of Water and Power, Power System, to pay for removal, relocation, replacement or adjustment of power facilities due to this development. The subdivider must make arrangements for the underground installation of all new utility lines in conformance with Section 17.05-N of the LAMC.

The final map must be recorded within 36 months of this approval, unless a time extension is granted before the end of such period.

The Advisory Agency hereby finds that this parcel conforms to the California Water Code, as required by the Subdivision Map Act.

The subdivider should consult the Department of Water and Power to obtain energy saving design features which can be incorporated into the final building plans for the subject development. As part of the Total Energy Management Program of the Department of Water and Power, this no-cost consultation service will be provided to the subdivider upon his request.

FINDINGS OF FACT (CEQA)

Introduction

Senate Bill 375 (SB 375) enacted on September 30, 2008, created a Sustainable Communities Environmental Assessment (SCEA) process for environmental review under the California Environmental Quality Act (CEQA) for some transit priority projects meeting rigorous requirements. A transit priority project is defined by Public Resources Code (PRC) Section 21155(b) as a project that (1) contains at least 50 percent residential use, based on total building square footage and a floor area ratio of not less than 0.75; (2) provide a minimum net density of at least 20 dwelling units per acre; and (3) is located within one-half mile of a major transit stop or high-quality transit corridor included in a regional transportation plan. Specifically, when a project in the City of Los Angeles (City) meets the definition of a transit priority project and is consistent with the general use designation, density, building intensity and applicable policies specific for the project area in the Southern California Association of Governments Regional Transportation Plan/Sustainable Communities Strategy, the City may review the environmental impacts of the project with a SCEA. The City prepares an initial study for the SCEA that identifies all potentially significant effects of the project, with the exception of growth-inducing impacts and project-specific or cumulative impacts from cars and light trucks on global warming or the regional transportation network. The initial study must contain mitigation measures that reduce or avoid all the potentially significant impacts identified in the initial study to a level of less than significance and it must incorporate all applicable mitigation measures from prior relevant environmental impacts reports (EIRs).

After circulation for public comments, and a public hearing, the City may approve the SCEA for the project if it finds that all potentially significant effects have been identified and analyzed, and that all potentially significant impacts have been mitigated to a level of insignificance by either the City, as Lead Agency, or another agency with the responsibility and authority to implement the mitigation measure.

Findings

The City, having independently reviewed the SCEA for the 3401 La Cienega Project (Project) including the initial study and technical reports, and considered all public comments and all other matters in the administrative record, hereby determines and finds, that based on the whole of the administrative record:

1. The Project is a mixed-use project including 260 residential units, with approximately 15 percent of the total units (22 units) reserved for Very-Low Income households and seven total units (7 units) reserved for Workforce households. The 260 residential units would consist of 26 studios, 143 one-bedroom units, 78 two-bedroom units, and 13 three-bedroom units, with a range of unit sizes from approximately 440 to 1,436 square feet. The Project also includes 460,824 square feet of floor area with a FAR of 3:1, made up of 230,412 square feet for the residential component and 230,412 square feet for the commercial office and restaurant component.
2. The Project is consistent with the general land use designation, density and building intensity in the Southern California Association of Government's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020-2045 RTP/SCS).
3. The Project is a transit priority project in that it: (a) contains approximately 50 percent residential use, which is equivalent to the minimum requirement of at least 50 percent

residential use; (b) provides a net density of 74 units per acre which is greater than the minimum required at least 20 dwelling units per acre; and, (c) is located less than 500 feet from the Metro E Line Jefferson/La Cienega Station and is, therefore, located less than one-half mile from a major transit stop, and the Project is also located within an existing high quality transit corridor as shown in the 2020-2045 RTP/SCS.

4. Pursuant to PRC Section 21155.2, the Project has incorporated all feasible mitigation measures, performance standards, or criteria set forth in three prior applicable EIRs: the 2020-2045 RTP/SCS Program EIR, the West Adams-Baldwin Hills-Leimert Community Plan EIR, and the Community Redevelopment Agency of the City of Los Angeles (CRA/LA) Mid-City Redevelopment Plan EIR.
5. An initial study has been prepared for the Project that identifies all significant or potentially significant impacts of the Project, other than those that do not need to be reviewed pursuant to PRC Section 21155.2(b), based on substantial evidence in light of the whole record. The initial study identifies cumulative effects that have been adequately addressed and mitigated in the prior applicable certified EIRs. Cumulative effects have been found to be adequately addressed and mitigated in the prior applicable certified EIRs and are not considered cumulatively considerable for the purposes of the SCEA.
6. The SCEA includes measures that either avoid or mitigate to a level of insignificance all potentially significant or significant effects of the Project required to be identified in the initial study.
7. The SCEA was completed, noticed and circulated in accordance with the requirements of the CEQA, the State CEQA Guidelines and the City's procedures as follows:
 - a. On January 20, 2022 a Notice of Availability (NOA) and Notice of Intent to Adopt (NOI) were issued for the Draft SCEA dated January 2022 that was circulated for public comments for 30 days. The NOI was sent to those public agencies that have jurisdiction by law with respect to the Project and to other interested parties and agencies, including property owners within 500 feet of the boundaries of the Project and the comments of such persons and agencies were sought.
 - b. On January 20, 2022 the NOI was published in the Daily Journal, a newspaper of general circulation, and the NOI was posted with the Office of Planning and Research.
8. The City has reviewed and considered the information contained in the SCEA, including the initial study, the mitigation measures and conditions incorporated into the Project, and the comments received during the public review process and the hearing on the Project and, based on that review and consideration, the City has determined that the SCEA constitutes an adequate, accurate, objective and complete review of the environmental effects of the Project.
9. Based on its review of the SCEA and on the basis of the whole record, the City finds that all potentially significant or significant effects required to be identified in the initial study have been identified and analyzed, and with respect to each significant effect on the environment required to be identified in the initial study, changes or alterations,

including mitigation measures, have been required in or incorporated into the Project that avoid or mitigate the significant effects to a level of insignificance.

10. Based on its review of the SCEA and on the basis of the whole record, the City finds that the SCEA reflects the City Council's independent judgment and analysis and that there is no substantial evidence that the Project will have a significant effect on the environment.
11. Based on its review of the SCEA and on the basis of the whole record, the City finds that the Project complies with the requirements of CEQA for using a SCEA as authorized pursuant to PRC Section 21155.2(b).

Based on its review of the SCEA and on the basis of the whole record, the City finds that the Mitigation and Monitoring Program for the Project requires all reasonably feasible mitigation measures, including mitigation measures from the three prior applicable EIRs, as appropriate, and that those mitigation measures will be implemented by means of Project conditions, agreements, or other measures, as set forth in the Mitigation Monitoring Program.

FINDINGS OF FACT (SUBDIVISION MAP ACT)

In connection with the approval of Vesting Tentative Tract Map No. VTT-83550-CN, the Advisory Agency of the City of Los Angeles, pursuant to Sections 66473.1, 66474.60, .61 and .63 of the State of California Government Code (the Subdivision Map Act), makes the prescribed findings as follows:

- (a) **THE PROPOSED MAP IS CONSISTENT WITH APPLICABLE GENERAL AND SPECIFIC PLANS.**

The site is zoned CM-2D-CPIO. The property is currently developed with a Public Storage facility proposed to be demolished as a part of the project and is located within the West Adams - Baldwin Hills - Leimert Community Plan, which designates the site for Hybrid Industrial land uses. The proposed project is to subdivide one (1) lot, totaling 153,720 square-feet into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential condominium units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil. The subdivision will be for the construction, use and maintenance of a new 460,824 square-foot mixed-use residential and commercial development, including one Residential Building and one Commercial Building on a site totaling approximately 3.59 acres. The approximately 230,412 square-foot Residential Building contains 260 residential units for rent; 22 units are reserved for "very low income" households and 7 units are reserved for workforce housing within a 149'-6"-tall Residential Building up to 13 stories high on the western portion of the Project Site. The approximately 230,412 square-foot Commercial Building includes 2,869 square-feet of ground floor retail within a 92-foot-tall Commercial Building (office and ground floor retail) up to six stories high on the eastern end of the Project Site. The Project proposes up to 785 parking spaces, including 130 residential and 242 commercial parking spaces. The 413 remaining spaces would be unassigned and available for residential or commercial uses.

Although designated and zoned for Hybrid Industrial uses, the subject site is located within a unique area of the City known as the Jefferson/ La Cienega TOD. While the Community

Plan encourages the protection of industrially zoned properties, it recognizes that due to the location of the site, there may be more appropriate uses for the site. The Community Plan “advances the creation of an employment destination outside of the City Center where a mix of uses that feature emerging and innovative commercial, office, and other high-tech uses can locate in proximity to existing and future residences within a medium to high intensity transit hub.”

Adjoining the Project Site, South La Cienega Boulevard is a “Modified Boulevard II” per the Mobility Plan 2035. Because it is a “modified” classification, none of the BOE’s Standard Street Dimensions apply to this stretch of La Cienega. BOE’s NavigateLA identifies a “Right-of-Way Width (Designated)” of 104 feet and a “Roadway Width (Designated)” of 80 feet. According to NavigateLA and ZIMAS, the existing roadway is greater than 80-foot wide adjoining the Project Site. Therefore, the existing roadway appears to be over-dedicated per current classification. Also, the existing dedicated right-of-way is already 107 feet, 3 feet wider than required by the Modified Boulevard II classification, along most of the Project Site.

CPIO Section V-2.D.1.a. requires that the project provide no more than a 2-foot setback along the Primary Frontage. The Project has been designed to provide no more than a 2’ setback along La Cienega Blvd, from the 2nd floor and above, to honor this provision. However, the Project is set back 5’ at the ground floor along La Cienega Blvd and the 2nd floor cantilevers out to create a Pedestrian Amenity of a covered pedestrian “arcade” along the Primary Frontage. This is consistent with CPIO Section V-2.D.1.b, which provides that the maximum Primary Frontage setback may be exceeded up to 20 feet if the street facing façade is accessible to the public and incorporates Pedestrian Amenities into that area. This Pedestrian Amenity will be improved as an extension of the publicly accessible sidewalk and further setback near the adjoining Metro transit plaza to provide an expanded plaza and gathering space. The Project design incorporated the intent of the full 52-foot half right-of-way requirements in designing the setback, structure, and improvements. As designed, no portion of the proposed structures would encroach into that 2-foot setback on the ground level. Additionally, pursuant to Condition 21.g of this report, a minimum 2-foot-wide private pedestrian walk easement shall be provided along La Cienega Boulevard adjoining the tract and shall be open for public use. This pedestrian walk shall be kept open at all times and any structures within the easement walk area shall be reviewed and approved by the Department of Building and Safety. The subdivider shall be responsible for maintenance and security of the private easement. Therefore, as designed and conditioned, the project achieves the purpose of the Mobility Plan 2035.

In addition, the southerly adjoining parcel (3431 S. La Cienega Blvd) contains a See’s Candies manufacturing facility dating from 1946. The iconic Southern California candy company was founded in Los Angeles in 1921. The See’s Candies factory is listed as an historic resource on the City of LA’s Historic Places LA. Due to the historic significance of the neighboring site, it is doubtful that portions of La Cienega south of the property will ever be dedicated to the full designated width. Mobility Plan 2035 Policy 2.17 requires staff to “carefully consider the overall implications of widening a street before requiring the widening,” citing the “often unique nature of a street segment where widening could change the character of a street in an undesirable way, proved unnecessarily expensive relative to the resulting benefits, or result in other adverse changes. Dedication at the Project Site would create an occurrence of discontinuous, intermittent dedications that may create a negative impact to the urban form and pedestrian experience of the Project with no identifiable benefit to the City.

As proposed, The Project is consistent with the General Plan, including the General Plan Framework, the West Adams-Baldwin Hills-Leimert Community Plan, the Mobility Plan 2035, and the West Adams-Baldwin Hills-Leimert CPIO. The Property is not located within a Specific Plan. As set forth above in Section IV, the Project complies with the Property's zoning and applicable development standards, including those imposed by the LAMC and CPIO, as permitted to be modified by the State Density Bonus Law and the City's implementing ordinance. The Project's proposed mixed-use residential, creative office, and retail uses are consistent with, and expressly advanced by, the Property's General Plan Hybrid Industrial designation, which calls for "creative industry, office, or mixed use."

While 100-percent residential developments are prohibited by the West Adams – Baldwin Hills – Leimert CPIO, the residential component of Mixed-Use Projects are allowed to occupy a maximum of 50-percent of the Project's total floor area. The proposed Project includes 460,824 total square feet. The residential component is approximately 230,412 square feet, therefore in compliance with the CPIO. The Project also substantially conforms with the objectives, policies and provisions of the General Plan Framework, set forth as follows.

General Plan Framework: Land Use (Chapter 3)

Goal 3A: A physically balanced distribution of land uses that contributes towards and facilitates the City's long-term fiscal and economic viability, revitalization of economically depressed areas, conservation of existing residential neighborhoods, equitable distribution of public resources, conservation of natural resources, provision of adequate infrastructure and public services, reduction of traffic congestion and improvement of air quality, enhancement of recreation and open space opportunities, assurance of environmental justice and a healthful living environment, and achievement of the vision for a more livable city.

The Project's redevelopment of a low-intensity self-storage use into a vibrant mix of residential, commercial and retail uses and verdant landscaped areas that collocate jobs, housing and retail services and the Project's encouragement of public transit and other active modes of transportation will contribute to the City's long-term fiscal and economic viability, facilitate the ongoing transformation of the West Adams and Baldwin Hills neighborhoods, and foster a more livable community for the existing residents and businesses.

The Project's proposed new 227,543 square feet of office use, 2,869 square feet of ground floor retail space, 260 residential units (including 22 units for Very Low-Income households and 7 units for workforce housing), 34,214 square feet of publicly available open space amenities, and pedestrian activated streetscape revitalize a 3.53-acre property that is currently underutilized with aging masonry buildings primarily used for low-intensity storage and warehousing uses. The Project's landscaped, pedestrian-oriented open space, such as the Crossings plaza and tree-lined Cienega Square, and neighborhood-serving retail will improve and beautify the Jefferson/La Cienega Metro station and existing bicycle path, thereby activating the streetscape for pedestrians and further encouraging walking, biking, and use of public transit by the community at large. The existing self-storage use provides no pedestrian amenities or public access and does not utilize the adjacent Metro or other public transportation options. The Property is therefore an infill

opportunity to revitalize this key commercial and transit corridor, providing a healthful living environment.

The Project is centrally and ideally located along La Cienega Boulevard, a designated Modified Boulevard II and transit corridor in West Adams and is adjacent to the La Cienega & Jefferson Metro Station E (Expo) Line and near multiple bus lines. Like the Property, the West Adams neighborhood is undergoing a transformation from light industrial to a thriving mixed use center bringing jobs, housing, and lifestyle together. West of the Property along the Metro E Line rail are the communities of Culver City, West Los Angeles and Santa Monica, containing high population and access to other employment hubs. The Project Site also has convenient access to Downtown Los Angeles and other destinations within the Regional Commercial Center areas of Los Angeles.

This access is facilitated by the Metro E Line which is adjacent to the Property and has a local connection to the Metro B (Red) Line, Metro D (Purple) Line and Metro A (Blue) Line. This mass transit infrastructure enhances connectivity to the Downtown Los Angeles, the Wilshire Center Koreatown and the Long Beach business hubs. These Metro Lines further connect to other points throughout the City and the Greater Los Angeles area.

Additionally, the Los Angeles Metropolitan Authority (MTA) routes a number of bus lines with stops conveniently located near the Property. The Metro Bus system provides local service along S. La Cienega Blvd. and Jefferson Blvd. Route 105 travels north/south along S. La Cienega Blvd. The southeastern bound route begins at Santa Monica Blvd. and San Vicente Blvd., adjacent to the City of West Hollywood, and travels through Beverly Hills, Los Angeles, and Leimert Park, with a final stop at Pacific Blvd. and Santa Fe Ave. in the City of Vernon. The Metro Route 105 runs approximately every 10 minutes, 7 days a week. Route 38 travels east/west along Jefferson Blvd. The westbound route begins at Spring St. and 7th St. in Downtown Los Angeles and travels through the Mid-City area with a loop layover at Jefferson Blvd. and 11th Ave. The Metro Route 38 runs approximately every 30 minutes, 7 days a week. Route 217 travels north/east along S. La Cienega Blvd. The northeastern route begins at the La Cienega Station Terminal near the project site and travels through Beverly Hills, West Hollywood and Los Angeles, with a final stop at the Hollywood/Vine Station. The Metro Route 217 runs approximately every 20 minutes, 7 days a week.

The Project's introduction of additional first class office space, residential serving retail, hundreds of new units for a variety of income levels, and well-designed open space into this transit rich corridor will foster the growing push in the West Adams area and surrounding communities towards transit, pedestrian travel, and other active modes of transportation, which in turn would reduce vehicle use, vehicles miles traveled, and congestion, and contribute to the goals of improving air quality and creating a healthier, supportive living environment for the Project's future users and community.

Objective 3.1: Accommodate a diversity of uses that support the needs of the City's existing and future residents, businesses, and visitors.

Objective 3.2: Provide for the spatial distribution of development that promotes an improved quality of life by facilitating a reduction of vehicular trips, vehicle miles traveled, and air pollution.

Objective 3.4: Encourage new multi-family residential, retail commercial, and office development in the City's neighborhood districts, community, regional, and downtown centers as well as along primary transit corridors/boulevards, while at the same time conserving existing neighborhoods and related districts.

The Project includes 231 market rate, 22 Very Low Income restricted affordable units, 7 workforce units, approximately 227,543 SF of office, 2,869 SF of retail, most likely food and beverage, and 34,214 SF of publicly accessible landscaped plazas and paseos that will activate the streetscape along Jefferson Blvd. and enhance access to and use of the bicycle path and Metro station. As noted above and below, the mixed-use and mixed-income nature of the Project will promote the ongoing revitalization of West Adams and an improved quality of life for the Project's future residents and tenants and community at large.

The Project's vibrant mix of uses and amenities will provide a supportive, resilient community for the Project's future residents and tenants and will also support the needs of the existing community by introducing new housing for a variety of income levels, job opportunities, and neighborhood-serving retail. The City's need for market rate and affordable housing is identified in the City's Housing Element (adopted by the Los Angeles City Council on December 3, 2013 and approved by the State of California Department of Housing and Community Development on April 2, 2014). The amount of housing needed to accommodate citywide growth is estimated to be 82,002 dwelling units (through 2021) of which 46,590 units (57%) need to be for Very Low Income and Low-Income households. Further, according to Mayor Eric Garcetti's 2015 Sustainable City pLAN (issued April 2015), "if we do not act to increase in supply of housing units, the Department of Planning estimates that Los Angeles could have a backlog of over 100,000 units by 2021."

Project users will also be served by the Project's abundant publicly accessible open space providing seating and extensive shading and landscaping that will provide much needed contrast from the bustle and dense, urban landscape of the Jefferson/La Cienega intersection and Metro station. The mix of residential and retail uses would further facilitate pedestrian activity in this neighborhood on the evenings and weekends, creating a more vibrant and livable community. The Project's landscaped, pedestrian-oriented Crossings plaza and the Project's tree-lined Cienega Square will improve and beautify the Jefferson/La Cienega Metro station and existing bicycle path, encouraging active modes of transportation for the community at large.

The Project is centrally and ideally located at the heart of the transit rich La Cienega/Jefferson corridor, directly adjacent to the La Cienega & Jefferson Metro Station E (Expo) Line, and close to multiple bus lines. By locating jobs, housing, retail and neighborhood amenities at this transit-rich location, the need to travel by car for these opportunities will be reduced, with a corresponding decrease in vehicle miles traveled and air pollution. The Project will also provide hundreds of bicycle parking spaces per LAMC § 12.21-A.16 and end-of-trip facilities to encourage bicycle commuting, including secure bicycle storage with bicycle repair equipment, and showers. The Project's supportive mix of uses and landscaped open spaces will also elevate the pedestrian experience. These bicycle and pedestrian amenities further encourage less reliance on vehicle travel.

Multi-Family Residential (Chapter 3)

Goal 3C: Multi-family neighborhoods that enhance the quality of life for the City's existing and future residents.

Objective 3.7: Provide for the stability and enhancement of multi-family residential neighborhoods and allow for growth in areas where there is sufficient public infrastructure and services, and the residents' quality of life can be maintained or improved.

As discussed above, the Project will improve the quality of life for future and existing West Adams residents and workers by removing a low-intensity self-storage facility completely fenced off from the public to provide in its place new housing for a variety of income levels, job opportunities, and neighborhood-serving retail, as well as ample green open space in an otherwise dense, urban landscape.

The Project is ideally situated for its future residents and tenants to take advantage of the multitude of public transit options in the immediate vicinity, resulting in a reduction in vehicles miles traveled, congestion, and air pollution and corresponding improvement in the quality of life for existing residents. West of the Project Site along the Metro E Line rail are the densely populated communities of Culver City, West Los Angeles, and Santa Monica containing other employment hubs for the Project's future residents. The adjacent Metro will provide the Project convenient access to Downtown Los Angeles and other destinations within the Regional Commercial Center areas of Los Angeles.

The Project's location in the existing and expanding commercial, multifamily residential neighborhood along La Cienega Boulevard is adequately served by public infrastructure and services to meet the Project's demand. The Project would include numerous measures to reduce its demand on infrastructure and services, including measures such as water, energy conservation and security plans.

Housing Element (Chapter 6)

Goal 1: A City where housing production results in an ample supply of housing to create more equitable and affordable options that meet existing and projected needs.

Objective 1.2: Facilitate the production of housing, especially projects that include Affordable Housing and/or meet Citywide Housing Priorities.

Policy 1.3.1 Prioritize housing capacity, resources, policies and incentives to include Affordable Housing in residential development, particularly near transit, jobs, and in Higher Opportunity Areas.

Policy 3.2.2: Promote new multi-family housing, particularly Affordable and mixed-income housing, in areas near transit, jobs and Higher Opportunity Areas, in order to facilitate a better jobs-housing balance, help shorten commutes, and reduce greenhouse gas emissions.

The proposed Project will provide both market rate and affordable housing for Very Low-Income and workforce households, thus offering a range of housing opportunities by type

and cost which would be accessible to City residents of various income levels. In addition, to provide a range of housing opportunities by type and cost, the Project would include a mix of unit types - 26 studio apartments, 143 one-bedroom apartments, 78 two-bedroom apartments and 13 three-bedroom apartments.

The Project would provide needed housing on a major transportation corridor (La Cienega Blvd) in close proximity to entertainment and job opportunities and in an area well-served by public transportation, including Metro E Line and several MTA Bus Lines. According to the City of Los Angeles Housing Element, the population of the City of Los Angeles will grow by over 140,000 persons between 2014 and 2021. The amount of housing needed to accommodate citywide growth is estimated to be 82,002 dwelling units (through 2021) of which 46,590 units (57%) need to be for Very Low- and Low-Income households. The Project's proposed 260 residential apartment dwelling units (including 22 Very Low-Income restricted affordable units and 7 workforce units) would help to alleviate this current severe housing deficit in Los Angeles.

In addition to LAMC Section 17.06 B, Section 17.05 C requires that the Vesting Tentative Tract map be designed in compliance with the zoning regulations applicable to the subject property. The Land Use Element of the General Plan consists of the 35 Community Plans within the City of Los Angeles. The Community Plans establish goals, objectives, and policies for future developments at a neighborhood level. Additionally, through the Land Use Map, the Community Plan designates parcels with a land use designation and zone. The Land Use Element is further implemented through the LAMC. The zoning regulations contained within the LAMC regulates, but is not limited to, the maximum permitted density, height, parking, and the subdivision of land.

The proposed merger and re-subdivision of the Project Site into a ground lot and airspace lots for a mixed-use development with multi-family residential, and commercial uses, would be consistent with these regulations. The project is consistent with the General Plan and demonstrates compliance with Sections 17.06 of the Los Angeles Municipal Code as well as with the intent and purpose of the General Plan, with regard to lot size, height, density and use. Therefore, as conditioned, the proposed parcel map is consistent with the intent and purpose of the applicable General Plan.

The CPIO's Jefferson/La Cienega TOD Subarea is intended to "advance the creation of an employment destination outside of the City Center where a mix of uses that feature emerging and innovative commercial, office, 'clean-tech,' 'information technology,' and other 'high tech' uses can locate in proximity to existing and future residences within a medium to high intensity transit hub." The intent of the Jefferson/La Cienega TOD is to "facilitate revitalization of properties that can capitalize upon proximity to the La Cienega Station of the Metro Expo Line." The Project's proposed creative office, apartments, and retail uses immediately adjacent to the La Cienega/Jefferson Metro station and multiple bus lines squarely align with this intent.

The Project is also consistent with and promotes the following purposes of the West Adams-Baldwin Hills-Leimert CPIO set forth in CPIO Section 3:

Purpose C: To foster revitalization of properties along the commercial corridors and at major intersection nodes throughout the Community Plan Area.

- Purpose D:** To promote and facilitate revitalization of properties that can capitalize upon close proximity to the La Brea, Farmdale, La Cienega and Culver City stations along the MidCity Exposition Light Rail Transit Corridor (Expo Line).
- Purpose I:** To encourage the creation of pedestrian-friendly, multi-modal transit villages where jobs, housing, goods and services, as well as access to open space, are all located within walking distance of the station area.
- Purpose S:** To support transit-oriented business districts outside of the City Center where emerging and innovative commercial, office, and “clean-tech” uses can locate within contextually appropriate medium intensity transit hubs.

The Property’s current low-intensity self-storage use provides no pedestrian amenities, no public access, and does not utilize the adjacent Metro or other public transportation options. The mixed-use, transit-oriented Project is therefore an ideal infill opportunity to revitalize this key commercial and transit corridor.

The Project will promote its central location and proximity to transit, by dominating the Property’s approximately 707-foot length along Jefferson Blvd. with pedestrian, bicycle, and transit activity. The Project’s plazas along Jefferson Blvd. will connect directly to the existing bicycle path, which itself connects to the Ballona Creek Bike Path that runs to the ocean. The Crossings plaza seamlessly transitions into the Jefferson/La Cienega Metro station and light rail system. The Project’s abundant landscaping will include shade trees lining the bicycle path creating a paseo affect. These landscaping, open space and streetscape improvements activate the Project’s ground floor, encourage bicycle and transit use, and celebrate the pedestrian experience, thus reducing the necessity of automobile travel.

The Project will also provide an inclusive development that is consistent with, and will support the needs of, the existing community. The Project will provide much needed affordable housing, including very-low income and workforce, in furtherance of the City’s Housing Element goals, and will provide high quality job opportunities and neighborhood-serving retail. The Project is proposing 22,836 square feet of open space in addition to the 28,925 square feet of open space required by LAMC Section 12.21.G. for a total of 51,761 square feet of open space. The Project’s abundant publicly accessible open space with seating and extensive shading and landscaping will contrast with and provide much needed relief from the bustle and the dense urban landscape of the Jefferson/La Cienega intersection and Metro station. The Project’s plazas, paseos, and ground floor retail will activate the streetscape along Jefferson Blvd. along a stretch that is currently completely fenced off from public access. The mix of residential and retail uses would also increase pedestrian activity in this neighborhood on the evenings and weekends, creating a more vibrant and livable community. The landscaped, pedestrian-oriented Crossings Plaza and the Project’s tree-lined Cienega Square will improve and beautify the Jefferson/La Cienega Metro station and existing bicycle path, encouraging active modes of transportation for the community at large. Bringing jobs, housing, and lifestyle amenities to one site and community will greatly reduce vehicle miles traveled and congestion and improve air quality and promote the overall health and sustainability of the existing West Adams residents.

- (b) THE DESIGN OR IMPROVEMENT OF THE PROPOSED SUBDIVISION IS CONSISTENT WITH APPLICABLE GENERAL AND SPECIFIC PLANS.

For the purposes of a subdivision, “design” and “improvement” is defined by Subdivision Map Act Section 66418, 66427, and LAMC Section 17.02. Pursuant to Section 66418 of the Map Act, “design” of a map refers to street alignments, grades and widths; drainage and sanitary facilities and utilities, including alignments and grades thereof; location and size of all required easements and rights-of-way; fire roads and firebreaks; lot size and configuration; traffic access; grading; land to be dedicated for park or recreational purposes; and other such specific physical requirements in the plan and configuration of the entire subdivision as may be necessary to ensure consistency with, or implementation of, the general plan or any applicable specific plan. In addition, Section 66427 of the Map Act expressly states that the “design and location of buildings are not part of the map review process” for subdivisions. Improvements, as defined by the Map Act and Section 17.02 refers to the infrastructure facilities serving the subdivision.

The subject site is zoned CM-2D-CPIO, which would permit a maximum of 192 dwelling units and a maximum height of 75 feet on the approximately 153,720 square-foot site. The proposed project is for a new 460,824 square-foot mixed-use residential and commercial development, including one Residential Building and one Commercial Building on a site totaling approximately 3.53 acres. The approximately 230,412 square-foot Residential Building contains 260 residential units for rent; 22 units are reserved for “very low income” households and 7 units are reserved for workforce housing within a 149'-6”-tall Residential Building up to 13 stories high on the western portion of the Project Site and the approximately 230,412 square-foot Commercial Building includes 2,869 square-feet of ground floor retail within a 92-foot-tall Commercial Building (office and ground floor retail) up to six stories high on the eastern end of the Project Site, are consistent with the density and height permitted by the Density Bonus Incentives pursuant to LAMC Section 12.22.A.25, and subject to condition 21.a of this report. Access is provided along La Cienega Boulevard through a shared driveway and via the private street Corbett Street, south of the subject site.

In addition, LAMC Section 17.05.C enumerates design standards for subdivisions and requires that each subdivision map be designed in conformance with the Street Design Standards and the General Plan. The design and layout of the tract map are consistent with the design standards established by the Subdivision Map Act and Division of Land Regulations of the LAMC. The Vesting Tentative Tract map was distributed to the various departments and bureaus of the Subdivision Committee for review, and their comments and conditions are included herein.

The Bureau of Engineering has reviewed the proposed subdivision and found the subdivision layout generally satisfactory with existing sewers in the streets adjoining the subdivision and will not result in violation of the California Water Code. The Bureau of Sanitation reviewed the sewer/storm drain lines serving the proposed subdivision and found no potential problems to their structures or potential maintenance problems.

Therefore, as conditioned, the proposed map is substantially consistent with the applicable General and Specific Plans affecting the project site, and demonstrates compliance with LAMC Sections 17.01, 17.05 C, and 12.22.C.27.

- (c) THE SITE IS PHYSICALLY SUITABLE FOR THE TYPE OF DEVELOPMENT.

The project site consists of one lot totaling approximately 153,719 square feet in area. The site has approximately 200 feet of frontage along the west side of South La Cienega Boulevard. The site is zoned CM-2D-CPIO. The property is currently developed with a Public Storage facility proposed to be demolished as a part of the project and is located within the West Adams – Baldwin Hills – Leimert Community Plan, which designates the site for Hybrid Industrial. The existing topography is relatively flat, with slight change in elevation from the front of the property to the rear.

In addition, the environmental analysis conducted for the Project found that the tract map and development of the Project would not result in any significant impacts in terms of geological or seismic impacts, hazards and hazardous materials, and safety. In general, compliance with existing regulations, tract map conditions, and mitigation measures identified in the SCEA ensure that proposed development could be feasibly and safely constructed and operated on the site. Therefore, the Project Site is physically suitable for the proposed type of development.

The Vesting Tentative Tract map was distributed to the various departments and bureaus of the Subdivision Committee for review. Their comments are incorporated into the project's conditions of approval. The Grading Division of the Department of Building and Safety has reviewed the subject Vesting Tentative Tract Map No. VTT-83550-CN and the associated soils report determined the Liquefaction study included as part of the report dated September 23, 2021 demonstrates that the site is located in a designated liquefaction hazard zone as shown on the Seismic Hazard Zones map issued by the State of California. However, the settlement magnitudes are considered by the Department of Building and Safety Grading Division to be within acceptable levels. As such, the requirements of the 2020 City of Los Angeles Building Code have been satisfied per the Department of Building and Safety. The property is located outside of a City of Los Angeles Hillside Area; is exempt or located outside of a fault-rupture hazard zone. A supplemental report shall be submitted to the Grading Division of the Department containing recommendations for shoring, underpinning, and sequence of construction in the event that any excavation would remove lateral support to the public way, adjacent property, or adjacent structures (3307.3). A plot plan and cross-section(s) showing the construction type, number of stories, and location of the structures adjacent to the excavation shall be part of the excavation plans (7006.2).

Therefore, the project site is physically suitable for the proposed type of development.

(d) **THE SITE IS PHYSICALLY SUITABLE FOR THE PROPOSED DENSITY OF DEVELOPMENT.**

The General Plan identifies, through its Community and Specific Plans, geographic locations where planned and anticipated densities are permitted. Zoning standards for density are applied to sites throughout the city and are allocated based on the type of land use, physical suitability, and future population growth expected to occur.

The Vesting Tentative Tract map design includes the merger and re-subdivision of an approximately 3.59-acre (153,719 square feet) project site. The Project site is zoned CM-2D-CPIO, which permits a maximum FAR of 3:1 for mixed-use projects, and a maximum density of 800 square feet per dwelling unit. The Project site is 153,719 square feet which allows for a density of 192 units. The Project is proposing 260 units, which complies with

the maximum permitted density through the Density Bonus Incentives pursuant to LAMC Section 12.22.A.25. The total floor area proposed for both buildings is approximately 460,824 square feet, which results in an FAR for the Project of 3:1, which complies with the 3:1 maximum FAR allowed pursuant to the CPIO.

Upon approval of the entitlement requests, and as conditioned therein per Condition 21.a of this report, the project's proposed density is consistent with the general provisions and area requirements of the Planning and Zoning Code. The area is easily accessible via improved streets, highways, and transit systems. The environmental review conducted by the Department of City Planning (Case No. ENV-2021-6879-SCEA), establishes that the physical characteristics of the site and the proposed density of development are generally consistent with existing development and urban character of the surrounding community. Therefore, the Project Site is physically suitable for the proposed density of development.

- (e) THE DESIGN OF THE SUBDIVISION OR THE PROPOSED IMPROVEMENTS ARE NOT LIKELY TO CAUSE SUBSTANTIAL ENVIRONMENTAL DAMAGE OR SUBSTANTIALLY AND AVOIDABLY INJURE FISH OR WILDLIFE OR THEIR HABITAT.

The Project proposes an infill development within an area designated for Hybrid Industrial land use, which also allows for commercial, medium and high-medium density residential uses within the West Adams-Baldwin Hills-Leimert Community Plan area in the City of Los Angeles. The vesting tentative tract map design includes the merger and re-subdivision of the project site, into one ground lot and 4 airspace lots for a mixed-use development and a haul route for the export of soil, and a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard.

The subdivision design and improvements are consistent with the existing urban development of the area. There are no habitat conservation plans or natural community conservation plans which presently govern any portion of the Project Site or vicinity.

The SCEA prepared for the Project identifies no potential adverse impacts on fish or wildlife resources. The Project Site vicinity is highly urbanized and generally built out and does not contain riparian or other sensitive natural community, and does not provide a natural habitat for either fish or wildlife. No water bodies or federally protected wetlands as defined by Section 404 of the Clean Water Act exist on the Project Site. The Project Site does not contain any natural open spaces, act as a wildlife corridor, contain riparian habitat, wetland habitat, migratory corridors, conflict with a Habitat Conservation Plan, nor possess any areas of significant biological resource value.

Because of the urban nature of the project site and surrounding area, the project would not interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native nursery sites. There are no trees located on the subject site. Therefore, the Project would not have an adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. With regard to nesting birds, the Project would comply with the Migratory Bird Treaty Act, which prohibits the take, possession, import, export, transport, sell, purchase, barter, or offer for sale, purchase, or barter, any migratory bird, or the parts, nests, or eggs of such a bird except under the terms of a valid permit issued pursuant to federal regulations.

The Project would not conflict with any protected tree ordinance or Habitat Conservation Plan, nor possess any areas of significant biological resource value. Therefore, the design of the subdivision would not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

- (f) THE DESIGN OF THE SUBDIVISION OR TYPE OF IMPROVEMENTS IS NOT LIKELY TO CAUSE SERIOUS PUBLIC HEALTH PROBLEMS.

There appear to be no potential public health problems caused by the design or improvement of the proposed subdivision.

The development is required to be connected to the City's sanitary sewer system, where the sewage will be directed to the LA Hyperion Treatment Plant, which has been upgraded to meet statewide ocean discharge standards. The Bureau of Engineering has reported that the proposed subdivision does not violate the existing California Water Code because the subdivision will be connected to the public sewer system and will have only a minor incremental impact on the quality of the effluent from the Hyperion Treatment Plant.

The Department of Water and Power's (LADWP) has stated the parcel can be supplied with water from the municipal system subject to the conditioned requirements.

- (g) THE DESIGN OF THE SUBDIVISION OR THE TYPE OF IMPROVEMENTS WILL NOT CONFLICT WITH EASEMENTS, ACQUIRED BY THE PUBLIC AT LARGE, FOR ACCESS THROUGH OR USE OF PROPERTY WITHIN THE PROPOSED SUBDIVISION.

No such easements are known to exist. Easements will be recorded with the development for community driveways. Needed public access for roads and utilities will be acquired by the City prior to the recordation of the proposed parcel.

- (h) THE DESIGN OF THE PROPOSED SUBDIVISION SHALL PROVIDE, TO THE EXTENT FEASIBLE, FOR FUTURE PASSIVE OR NATURAL HEATING OR COOLING OPPORTUNITIES IN THE SUBDIVISION. (REF. SECTION 66473.1)

In assessing the feasibility of passive or natural heating or cooling opportunities in the proposed subdivision design, the applicant has prepared and submitted materials which consider the local climate, contours, configuration of the parcel(s) to be subdivided and other design and improvement requirements. Providing for passive or natural heating or cooling opportunities will not result in reducing allowable densities or the percentage of a lot which may be occupied by a building or structure under applicable planning and zoning in effect at the time the parcel map was filed.

The lot layout of the subdivision has taken into consideration the maximizing of the north/south orientation. The topography of the site has been considered in the maximization of passive or natural heating and cooling opportunities. In addition, prior to obtaining a building permit, the subdivider shall consider building construction techniques, such as overhanging eaves, location of windows, insulation, exhaust fans; planting of trees for shade purposes and the height of the buildings on the site in relation to adjacent development.

These findings shall apply to both the Vesting Tentative Tract and final maps for VTT-83550-CN.

The time in which a party may seek judicial review of this determination is governed by California Code of Civil Procedure Section 1094.6. Under that provision, a petitioner may seek judicial review of any decision of the City pursuant to California Code of Civil Procedure Section 1094.5, only if the petition for writ of mandate pursuant to that section is filed no later than the 90th day following the date on which the City's decision becomes final.

APPLICATIONS:

APPEAL APPLICATION

Instructions and Checklist

Related Code Section: Refer to the City Planning case determination to identify the Zone Code section for the entitlement and the appeal procedure.

Purpose: This application is for the appeal of Department of City Planning determinations authorized by the Los Angeles Municipal Code (LAMC).

A. APPELLATE BODY/CASE INFORMATION

1. APPELLATE BODY

- Area Planning Commission City Planning Commission City Council Director of Planning
- Zoning Administrator

Regarding Case Number: _____

Project Address: _____

Final Date to Appeal: _____

2. APPELLANT

Appellant Identity:
(check all that apply)

- Representative Property Owner
- Applicant Operator of the Use/Site

Person, other than the Applicant, Owner or Operator claiming to be aggrieved

Person affected by the determination made by the **Department of Building and Safety**

- Representative Owner Aggrieved Party
- Applicant Operator

3. APPELLANT INFORMATION

Appellant's Name: _____

Company/Organization: _____

Mailing Address: _____

City: _____ State: _____ Zip: _____

Telephone: _____ E-mail: _____

a. Is the appeal being filed on your behalf or on behalf of another party, organization or company?

Self Other: _____

b. Is the appeal being filed to support the original applicant's position? Yes No

SPECIFIC CASE TYPES - APPEAL FILING INFORMATION

C. DENSITY BONUS / TRANSIT ORIENTED COMMUNITES (TOC)

1. Density Bonus/TOC

Appeal procedures for Density Bonus/TOC per LAMC Section 12.22.A 25 (g) f.

NOTE:

- Density Bonus/TOC cases, only the *on menu or additional incentives* items can be appealed.
- Appeals of Density Bonus/TOC cases can only be filed by adjacent owners or tenants (must have documentation), and always only appealable to the Citywide Planning Commission.

- Provide documentation to confirm adjacent owner or tenant status, i.e., a lease agreement, rent receipt, utility bill, property tax bill, ZIMAS, drivers license, bill statement etc.

D. WAIVER OF DEDICATION AND OR IMPROVEMENT

Appeal procedure for Waiver of Dedication or Improvement per LAMC Section 12.37 I.

NOTE:

- Waivers for By-Right Projects, can only be appealed by the owner.
- When a Waiver is on appeal and is part of a master land use application request or subdivider's statement for a project, the applicant may appeal pursuant to the procedures that governs the entitlement.

E. TENTATIVE TRACT/VESTING

1. Tentative Tract/Vesting - Appeal procedure for Tentative Tract / Vesting application per LAMC Section 17.54 A.

NOTE: Appeals to the City Council from a determination on a Tentative Tract (TT or VTT) by the Area or City Planning Commission must be filed within 10 days of the date of the written determination of said Commission.

- Provide a copy of the written determination letter from Commission.

F. BUILDING AND SAFETY DETERMINATION

- 1.** Appeal of the *Department of Building and Safety* determination, per LAMC 12.26 K 1, an appellant is considered the **Original Applicant** and must provide noticing and pay mailing fees.

a. Appeal Fee

- Original Applicant - The fee charged shall be in accordance with LAMC Section 19.01B 2, as stated in the Building and Safety determination letter, plus all surcharges. (the fee specified in Table 4-A, Section 98.0403.2 of the City of Los Angeles Building Code)

b. Notice Requirement

- Mailing Fee - The applicant must pay mailing fees to City Planning's mailing contractor (BTC) and submit a copy of receipt as proof of payment.

- 2.** Appeal of the *Director of City Planning* determination per LAMC Section 12.26 K 6, an applicant or any other aggrieved person may file an appeal, and is appealable to the Area Planning Commission or Citywide Planning Commission as noted in the determination.

a. Appeal Fee

- Original Applicant - The fee charged shall be in accordance with the LAMC Section 19.01 B 1 a.

b. Notice Requirement

- Mailing List - The appeal notification requirements per LAMC Section 12.26 K 7 apply.
- Mailing Fees - The appeal notice mailing fee is made to City Planning's mailing contractor (BTC), a copy of receipt must be submitted as proof of payment.

G. NUISANCE ABATEMENT

1. Nuisance Abatement - Appeal procedure for Nuisance Abatement per LAMC Section 12.27.1 C 4

NOTE:

- Nuisance Abatement is only appealable to the City Council.

a. Appeal Fee

Aggrieved Party the fee charged shall be in accordance with the LAMC Section 19.01 B 1.

2. Plan Approval/Compliance Review

Appeal procedure for Nuisance Abatement Plan Approval/Compliance Review per LAMC Section 12.27.1 C 4.

a. Appeal Fee

Compliance Review - The fee charged shall be in accordance with the LAMC Section 19.01 B.

Modification - The fee shall be in accordance with the LAMC Section 19.01 B.

NOTES

A Certified Neighborhood Council (CNC) or a person identified as a member of a CNC or as representing the CNC may not file an appeal on behalf of the Neighborhood Council; persons affiliated with a CNC may only file as an individual on behalf of self.

Please note that the appellate body must act on your appeal within a time period specified in the Section(s) of the Los Angeles Municipal Code (LAMC) pertaining to the type of appeal being filed. The Department of City Planning will make its best efforts to have appeals scheduled prior to the appellate body's last day to act in order to provide due process to the appellant. If the appellate body is unable to come to a consensus or is unable to hear and consider the appeal prior to the last day to act, the appeal is automatically deemed denied, and the original decision will stand. The last day to act as defined in the LAMC may only be extended if formally agreed upon by the applicant.

Justification/Reason for Appeal

3401 South La Cienega Project

VTT-83550-CN; CPC-2021-6877-DB-SPR-CUB; ENV-2021-6879-SCEA

I. REASON FOR THE APPEAL

The Sustainable Communities Environmental Assessment (“SCEA”) prepared for the 3401 South La Cienega Project (VTT-83550-CN; CPC-2021-6877-DB-SPR-CUB; ENV-2021-6879-SCEA) (“Project”) fails to comply with the California Environmental Quality Act (“CEQA”). Furthermore, the approval of the Vesting Tentative Tract Map (VTT-83550-CN) was in error because (1) the City of Los Angeles (“City”) must fully comply with CEQA prior to any approvals in furtherance of the Project and (2) the findings are not supported by substantial evidence. Therefore, the City must set aside the entitlements and circulate a revised SCEA prior to considering approvals for the Project.

II. SPECIFICALLY THE POINTS AT ISSUE

The specific points at issue are set forth in the attached comment letter dated February 22, 2022. A revised SCEA must be prepared to remedy these issues, and proper CEQA review must be complete *before* the City approves the Project’s entitlements. (*Orinda Ass’n. v. Bd. of Supervisors* (1986) 182 Cal.App.3d 1145, 1171 [“No agency may approve a project subject to CEQA until the entire CEQA process is completed and the overall project is lawfully approved.”].) The VTT approval was therefore premature and otherwise unsupported by substantial evidence

III. HOW YOU ARE AGGRIEVED BY THE DECISION

Members of appellant Supporters Alliance for Environmental Responsibility (“SAFER”) live and/or work in the vicinity of the proposed Project. They breathe the air, suffer traffic congestion, and will suffer other environmental impacts of the Project unless it is properly mitigated.

IV. WHY YOU BELIEVE THE DECISION-MAKER ERRED OR ABUSED THEIR DISCRETION

The Advisory Agency adopted the SCEA and approved Vesting Tentative Tract No. VTT-83550-CN for the Project despite substantial evidence in the record that the SCEA fails to incorporate all feasible mitigation measures from prior environmental impact reports and fails to adequately address, analyze, and mitigate the Project’s significant air quality impacts. The Department of City Planning should therefore have prepared a revised SCEA and recirculated the revised document prior to consideration of approvals for the Project. The City is not permitted to approve the Project’s entitlements until the SCEA’s deficiencies are remedied. Additionally, the Advisory Agency erred in determining that the Project was exempt from CEQA pursuant to Public Resources Code section 21155.2. Section 21155.2 does not contain an exemption from CEQA. Section 21155.2 provides an alternate procedure of environmental review through a SCEA rather than an EIR or MND. Lastly, the Advisory Agency’s VTT findings are not supported by substantial evidence due to SCEA’s deficiencies. These findings include all VTT findings that relied on the SCEA, including VTT findings(c) and (e).

**Re: Comment on Sustainable Communities Environmental Assessment (SCEA)
3401 South La Cienega Boulevard Mixed-Use Project
Case No: ENV-2021-6879-SCEA**

Dear Mr. Winston and Mr. Ibarra:

I am writing on behalf of Supporters Alliance for Environmental Responsibility (“SAFER”) regarding the Sustainable Communities Environmental Assessment (“SCEA”) prepared for the 3401 South La Cienega Boulevard Mixed-Use Project (“Project”) located at Assessor’s Parcel Number 4205-032-001 in the City of Los Angeles (“City”).

After reviewing the SCEA with the assistance of Certified Industrial Hygienist, Francis “Bud” Offermann, PE, CIH, and air quality experts Matt Hagemann, P.G., C.Hg., and Paul E. Rosenfeld, Ph.D., of the Soil/Water/Air Protection Enterprise (“SWAPE”), SAFER requests that the City revise the SCEA prior to approval of the Project because (1) the SCEA fails to incorporate all feasible mitigation measures from prior environmental impact reports and (2) fails to adequately address, analyze, and mitigate the Project’s significant air quality impacts.

PROJECT DESCRIPTION

The Project proposes a new 460,824 sf mixed-use residential and commercial development, including one Residential Building and one Commercial Building. The approximately 230,412 square feet (“sf”) Residential Building would contain 260 residential units for rent: 22 units are reserved for “very low income” households and 7 units are reserved for workforce housing. The Residential Building would be 149.5 feet tall and up to 13 stories. The approximately 230,412 sf Commercial Building includes 2,869 sf of ground floor retail. The Commercial Building would be 92 feet tall and up to 6 stories. The Project proposes to demolish nine single-story masonry structures that currently serve as a self-storage facility on the site.

The Project proposes up to 785 parking spaces, including 130 residential and 242 commercial parking spaces. The 413 remaining spaces would be unassigned and available for residential or commercial uses. Most of the spaces would be provided in a two-level subterranean parking structure with the at-grade parking screened from public view.

LEGAL BACKGROUND

I. Sustainable Communities Environmental Assessment under SB 375

CEQA allows for the streamlining of environmental review for “transit priority projects” meeting certain criteria. (Pub. Res. Code §§ 21155, 21155.1, 21155.2.) To qualify as a transit priority project, a project must

- (1) contain at least 50 percent residential use, based on total building square footage and, if the project contains between 26 percent and 50 percent nonresidential uses, a floor area ratio of not less than 0.75;
- (2) provide a minimum net density of at least 20 dwelling units per acre; and
- (3) be within one-half mile of a major transit stop or high-quality transit corridor included in a regional transportation plan.

(Pub. Res. Code § 21155(b).) A transit priority project is eligible for CEQA’s streamlining provisions where,

[The transit priority project] is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy, for which the State Air Resources Board . . . has accepted a metropolitan planning organization’s determination that the sustainable communities strategy or the alternative planning strategy would, if implemented, achieve the greenhouse gas emission reduction targets.

(Pub. Res. Code § 21155(a).) On September 3, 2020, the Regional Council of the Southern California Association of Governments (“SCAG”) adopted the Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (“2020-2045 RTP/SCS”), which was accepted by the California Air Resources Board (“CARB”) on October 30, 2020. The final program EIR for the 2020-2045 RTP/SCS was certified on May 7, 2020.

If “all feasible mitigation measures, performance standards, or criteria set forth in the prior applicable environmental impact reports and adopted in findings made pursuant to Section 21081” are applied to a transit priority project, the project is eligible to conduct environmental review using a sustainable communities environmental assessment (“SCEA”). (Pub. Res. Code § 21155.2.) A SCEA must contain an initial study which “identif[ies] all significant or potentially significant impacts of the transit priority project . . . based on substantial evidence in light of the

whole record.” (Pub. Res. Code § 21155.2(b)(1).) The initial study must also “identify any cumulative effects that have been adequately addressed and mitigated pursuant to the requirements of this division in prior applicable certified environmental impact reports.” (*Id.*) The SCEA must then “contain measures that either avoid or mitigate to a level of insignificance all potentially significant or significant effects of the project required to be identified in the initial study.” (Pub. Res. Code §21155(b)(2).) The SCEA is not required to discuss growth inducing impacts or any project specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network. (Pub. Res. Code § 21159.28(a).)

After circulating the SCEA for public review and considering all comments, a lead agency may approve the SCEA with findings that all potentially significant impacts have been identified and mitigated to a less-than-significant level. (Pub. Res. Code § 21155(b)(3), (b)(4), (b)(5).) A lead agency’s approval of a SCEA must be supported by substantial evidence. (Pub. Res. Code §21155(b)(7).

DISCUSSION

I. The SCEA is not adequate under CEQA because it fails to require all feasible mitigation measures from the 2020-2045 RTP/SCS.

CEQA is clear that a SCEA is only appropriate where “all feasible mitigation measures, performance standards, or criteria set forth in the prior applicable environmental impact reports and adopted in findings made pursuant to Section 21081” are applied to the Project. (Pub. Res. Code § 21155.2.) In 2020, SCAG adopted the Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy Program Environmental Impact Report (“2020-2045 RTP/SCS EIR”), which included a Mitigation Monitoring and Reporting Program (“MMRP”). The MMRP included regional mitigation measures to be implemented by SCAG and project-level mitigation measures to be applied by lead agencies to specific projects (such as the Project here).

Despite CEQA’s clear directive that *all* feasible mitigation measures from prior EIRs must be applied to a project to qualify for a SCEA, numerous feasible mitigation measures from the 2020-2045 RTP/SCS EIR are not being applied to the Project. For example, for mitigation measures to reduce air quality impacts, the SCEA lists mitigation measure PMM AQ-1 from the 2020-2045 RTP/SCS EIR. (SCEA, p. III-18.) However, instead of applying PMM AQ-1, the SCEA claims that the Project will comply with existing regulations that have been identified and required by the Southern California Air Quality Management District (“SCAQMD”) thereby ensuring compliance with PMM AQ-1. The SCEA further claims that because the SCEA did not identify any significant air quality impacts for the *Project*, mitigation measures are not required.

The SCEA fundamentally misconstrues the requirements for an SCEA by not requiring *all* feasible mitigation measures from the 2020-2045 RTP/SCS EIR, regardless of whether the

Project by itself would result in significant impacts. For example, PMM AQ-1 from the 2020-2045 RTP/SCS EIR requires that projects “use Tier 4 Final equipment or better for all engines above 50 horsepower (hp). In the event that construction equipment cannot meet to Tier 4 Final engine certification, the Project representative or contractor must demonstrate through future study with written findings supported by substantial evidence that is approved by SCAG before using other technologies/strategies.” (2020 RTP/SCS EIR, MM-AQ-1.) However, the SCEA makes no mention of requiring Tier 4 Final equipment for the Project. Furthermore, the SCAQMD rules that the SCEA relies on do not require Tier 4 Final. Such inconsistencies between the mitigation measures in the 2020 RTP/SCS EIR and the SCEA must be resolved in a revised SCEA.

Similarly, the SCEA also fails to require all feasible prior mitigation measures to reduce greenhouse gas (“GHG”) impacts. An addendum to the 2020-2045 RTP/SCS in September 2020 included mitigation measure PMM-GHG-1 to reduce GHG impacts. (See Ex. B, p. 13-14.) However, the SCEA makes no mention of PMM-GHG-1. The omission of the GHG mitigation from the 2020-2045 RTP-SCS runs afoul of CEQA’s requirement that all feasible prior mitigation measures be applied to a Project in order to proceed with a SCEA rather than an EIR or MND.

II. The SCEA’s conclusions regarding the Project’s air quality impacts are not supported by substantial evidence.

Indoor air quality expert Francis “Bud” Offermann, PE, CIH, and air quality experts Matt Hagemann, P.G., C.Hg., and Paul E. Rosenfeld, Ph.D., of the Soil/Water/Air Protection Enterprise (“SWAPE”) reviewed the SCEA and found that the SCEA’s conclusions as to the Project’s air quality impacts were not supported by substantial evidence. Mr. Offermann found that the SCEA failed to address and mitigate the human health impacts from indoor emissions of formaldehyde. Mr. Offermann’s comment and CV are attached as Exhibit A. SWAPE found that SCEA failed to properly evaluate the Project’s health risk impacts from emissions of diesel particulate matter. SWAPE’s comment and CVs are attached as Exhibit B.

A. The SCEA failed to discuss or mitigate the Project’s significant indoor air quality impacts.

The SCEA fails to discuss, disclose, analyze, and mitigate the significant health risks posed by the Project from formaldehyde, a toxic air contaminant (“TAC”). Certified Industrial Hygienist, Francis Offermann, PE, CIH, conducted a review of the Project, the SCEA, and relevant documents regarding the Project’s indoor air emissions. Mr. Offermann is one of the world’s leading experts on indoor air quality, in particular emissions of formaldehyde, and has published extensively on the topic. As discussed below and set forth in Mr. Offermann’s comment, the Project’s emissions of formaldehyde to air will result in very significant cancer risks to future residents of the Project’s residential component and employees in the Project’s commercial and office components. Mr. Offermann’s expert opinion demonstrates the Project’s

significant health risk impacts, which the City has a duty to investigate, disclose, and mitigate in the SCEA prior to approval. Mr. Offermann's comment and curriculum vitae are attached as Exhibit A.

Formaldehyde is a known human carcinogen and listed by the State as a TAC. SCAQMD has established a significance threshold of health risks for carcinogenic TACs of 10 in a million and a cumulative health risk threshold of 100 in a million. The SCEA fails to acknowledge the significant indoor air emissions that will result from the Project. Specifically, there is no discussion of impacts or health risks, no analysis, and no identification of mitigations for significant emissions of formaldehyde to air from the Project.

Mr. Offermann explains that many composite wood products typically used in home and apartment building construction contain formaldehyde-based glues which off-gas formaldehyde over a very long time period. He states, "The primary source of formaldehyde indoors is composite wood products manufactured with urea-formaldehyde resins, such as plywood, medium density fiberboard, and particle board. These materials are commonly used in residential, office, and retail building construction for flooring, cabinetry, baseboards, window shades, interior doors, and window and door trims." (Ex. A, pp. 2-3.)

Mr. Offermann found that future residents of the Project's residential units will be exposed to a cancer risk from formaldehyde of approximately 120 per million, *even assuming that* all materials are compliant with the California Air Resources Board's formaldehyde airborne toxics control measure. (Ex. A, pp. 3-4.) This is more than 12 times SCAQMD's CEQA significance threshold of 10 per million. (*Id.* at p. 4.)

Mr. Offermann found that future employees of the Project's commercial spaces will be exposed to a cancer risk from formaldehyde of approximately 17.7 per million, *even assuming that* all materials are compliant with the California Air Resources Board's formaldehyde airborne toxics control measure. (Ex. A, p. 5.) This exceeds SCAQMD's CEQA significance thresholds 10 per million. (*Id.*)

Mr. Offermann concludes that these significant environmental impacts must be analyzed and mitigation measures should be imposed to reduce the risk of formaldehyde exposure. (Ex. A, pp. 5-6, 12-13.) He prescribes a methodology for estimating the Project's formaldehyde emissions in order to do a more project-specific health risk assessment. (*Id.*, pp. 6-10.) Mr. Offermann also suggests several feasible mitigation measures, such as requiring the use of no-added-formaldehyde composite wood products, which are readily available. (*Id.*, pp. 12-13.) Mr. Offermann also suggests requiring air ventilation systems which would reduce formaldehyde levels. (*Id.*) Since the SCEA does not analyze this impact at all, none of these or other mitigation measures have been considered.

When a Project exceeds a duly adopted CEQA significance threshold, as here, this alone establishes substantial evidence that the project will have a significant adverse environmental

impact. Indeed, in many instances, such air quality thresholds are the only criteria reviewed and treated as dispositive in evaluating the significance of a project's air quality impacts. (See, e.g. *Schenck v. County of Sonoma* (2011) 198 Cal.App.4th 949, 960 [County applies Air District's "published CEQA quantitative criteria" and "threshold level of cumulative significance"]; see also *Communities for a Better Environment v. California Resources Agency* (2002) 103 Cal.App.4th 98, 110-11 ["A 'threshold of significance' for a given environmental effect is simply that level at which the lead agency finds the effects of the project to be significant"].)

The California Supreme Court made clear the substantial importance that an air district significance threshold plays in providing substantial evidence of a significant adverse impact. (*Communities for a Better Environment v. South Coast Air Quality Mgmt. Dist.* (2010) 48 Cal.4th 310, 327 ["As the [South Coast Air Quality Management] District's established significance threshold for NOx is 55 pounds per day, these estimates [of NOx emissions of 201 to 456 pounds per day] constitute substantial evidence supporting a fair argument for a significant adverse impact."].) Since expert evidence demonstrates that the Project will exceed the SCAQMD's CEQA significance threshold, there is substantial evidence that an "unstudied, **potentially significant environmental effect**]" exists. (See *Friends of Coll. of San Mateo Gardens v. San Mateo Cty. Cmty. Coll. Dist.* (2016) 1 Cal.5th 937, 958 [emphasis added].) As a result, the City must address this impact and identify enforceable mitigation measures prior to approving the SCEA. (See Pub. Res. Code § 21155.2(b)(5) [SCEA must mitigate all impacts to level of insignificance].)

The failure of the SCEA to address the Project's formaldehyde emissions is contrary to the California Supreme Court's decision in *California Building Industry Ass'n v. Bay Area Air Quality Mgmt. Dist.* (2015) 62 Cal.4th 369, 386 ("CBLA"). In that case, the Supreme Court expressly holds that potential adverse impacts to future users and residents from pollution generated by a proposed project **must be addressed** under CEQA. At issue in CBLA was whether the Air District could enact CEQA guidelines that advised lead agencies that they must analyze the impacts of adjacent environmental conditions on a project. The Supreme Court held that CEQA does not generally require lead agencies to consider the environment's effects on a project. (CBLA, 62 Cal.4th at 800-01.) However, to the extent a project may exacerbate existing environmental conditions at or near a project site, those would still have to be considered pursuant to CEQA. (*Id.* at 801.) In so holding, the Court expressly held that CEQA's statutory language required lead agencies to disclose and analyze "impacts on **a project's users or residents** that arise **from the project's effects** on the environment." (*Id.* at 800 [emphasis added].)

The carcinogenic formaldehyde emissions identified by Mr. Offermann are not an existing environmental condition. Those emissions to the air will be from the Project. People will be residing in and working in the Project's buildings once built and emitting formaldehyde. Once built, the Project will begin to emit formaldehyde at levels that pose significant direct and cumulative health risks. The Supreme Court in CBLA expressly finds that this type of air emission and health impact by the project on the environment and a "project's users and

residents” must be addressed in the CEQA process. The existing TAC sources near the Project site would have to be considered in evaluating the cumulative effect on future residents of both the Project’s TAC emissions as well as those existing off-site emissions.

The Supreme Court’s reasoning is well-grounded in CEQA’s statutory language. CEQA expressly includes a project’s effects on human beings as an effect on the environment that must be addressed in an environmental review. “Section 21083(b)(3)’s express language, for example, requires a finding of a ‘significant effect on the environment’ (§ 21083(b)) whenever the ‘environmental effects of a project will cause substantial adverse effects *on human beings*, either directly or indirectly.” (*CBIA*, 62 Cal.4th at 800.) Likewise, “the Legislature has made clear—in declarations accompanying CEQA’s enactment—that public health and safety are of great importance in the statutory scheme.” (*Id.* [citing e.g., PRC §§ 21000, 21001].) It goes without saying that the future residents and employees at the Project are human beings and their health and safety must be subject to CEQA’s safeguards.

The City has a duty to investigate issues relating to a project’s potential environmental impacts. (See *County Sanitation Dist. No. 2 v. County of Kern*, (2005) 127 Cal.App.4th 1544, 1597-98. [“[U]nder CEQA, the lead agency bears a burden to investigate potential environmental impacts.”].) The proposed buildings will have significant impacts on air quality and health risks by emitting cancer-causing levels of formaldehyde into the air that will expose future residents and employees to cancer risks potentially in excess of SCAQMD’s threshold of significance for cancer health risks of 10 in a million. Currently, outside of Mr. Offermann’s comments, the City does not have any idea what risks will be posed by formaldehyde emissions from the Project or the residences. As a result, the City must include an analysis and discussion in an updated SCEA which discloses and analyzes the health risks that the Project’s formaldehyde emissions may have on future residents and employees and identifies appropriate mitigation measures.

B. The SCEA inadequately analyzed the Project’s impact on human health from emissions of diesel particulate matter.

The SCEA concluded that the Project would result in a less-than-significant health risk impact without conducting a quantified construction or operational health risk analysis (“HRA”). (Ex. B, p. 8.) The SCEA concluded that construction-related TAC impacts would be less than significant because emissions of PM_{2.5} would not exceed localized thresholds. (*Id.*) However, the SCEA’s analysis of the Project’s health risks were inadequate. (Ex. B, pp. 2-3.)

First, the localized significance threshold (“LST”) methodology relied on by the SCEA does not account for TAC pollutants such as diesel particulate matter (“DPM”). Rather, the LST methodology only covers emissions of NO_x, CO, PM₁₀, and PM_{2.5}. and cannot be used to determine whether emissions from TACs, specifically DPM, a known human carcinogen, would result in a significant health risk impact to nearby sensitive receptors. By not analyzing the impacts of DPM emissions, the SCEA failed to provide substantial evidence that the impacts would be less than significant, as claimed.

Second, the SCEA fails to include a quantified HRA to evaluate the Project's health risks to nearby sensitive receptors resulting from construction and operation of the Project. (Ex. B, pp. 2-3.) The Project would generate approximately 1,198 average daily vehicle trips, yet the SCEA vague does not disclose or discuss the concentrations at which such pollutants would trigger adverse health effects. (*Id.* at p. 3) Thus, the SCEA is inconsistent with CEQA's requirement to correlate the increase in emissions generated by the Project with the potential adverse impacts on human health. (*Id.*)

Third, the failure of the SCEA to provide a quantified HRA is inconsistent with the most recent guidance of the Office of Environmental Health Hazard Assessment ("OEHHA"). OEHHA recommends that exposure from projects lasting more than 6 months be evaluated for the duration of the project and recommends that an exposure duration of 30 years be used to estimate individual cancer risk for the maximally exposed individual resident ("MEIR"). (Ex. B, p. 3.) Therefore, the SCEA must be revised to include an analysis of health risks resulting from construction and operation of the Project and to compare the excess health risk to the SCAQMD's specific numeric threshold of 10 in one million.

C. An updated health risk assessment indicates that the Project will result in significant cancer risks from emissions of DPM.

SWAPE prepared a screening-level health risk assessment ("HRA") to evaluate potential DPM impacts from the construction and operation of the Project. (Ex. B, pp. 4-7.) SWAPE used AERSCREEN, the leading screening-level air quality dispersion model. (*Id.* at p. 4.) SWAPE used a sensitive receptor distance of 75 meters and analyzed impacts to individuals at different stages of life based on OEHHA and SCAQMD guidance. (*Id.* at pp. 5-6.)

SWAPE found that the excess cancer risk for infants, children, and adults at the closest sensitive receptor located approximately 75 meters away, over the course of Project construction and operation, is approximately 40.6, 133, and 15.1 in one million, respectively. (Ex. B, p. 6.) Moreover, SWAPE found that the excess cancer risk over the course of a residential lifetime is approximately 191 in one million. (*Id.*) The infants, children, adults, and lifetime cancer risks all exceed the SCAQMD threshold of 10 in one million. Because a SCEA is only appropriate where all impacts have been mitigated to a level of insignificance, the City must prepare a revised SCEA to mitigate this impact or otherwise prepare an EIR.

CONCLUSION

The SCEA for the Project should be revised prior to any further action on the Project. The SCEA's fails to require all feasible mitigation measures from the 2020-2045 RTP/SCS EIR. Furthermore, the SCEA fails to identify and mitigate the Project's air quality impacts to a less-than-significant level. For those reasons, the SCEA must be revised or, in the alternative, the City may prepare an EIR or MND. Thank you for considering these comments.

Los Angeles, CA (IEE File Reference: P-4541)

Pages: 19

Indoor Air Quality Impacts

Indoor air quality (IAQ) directly impacts the comfort and health of building occupants, and the achievement of acceptable IAQ in newly constructed and renovated buildings is a well-recognized design objective. For example, IAQ is addressed by major high-performance building rating systems and building codes (California Building Standards Commission, 2014; USGBC, 2014). Indoor air quality in homes is particularly important because occupants, on average, spend approximately ninety percent of their time indoors with the majority of this time spent at home (EPA, 2011). Some segments of the population that are most susceptible to the effects of poor IAQ, such as the very young and the elderly, occupy their homes almost continuously. Additionally, an increasing number of adults are working from home at least some of the time during the workweek. Indoor air quality also is a serious concern for workers in hotels, offices and other business establishments.

The concentrations of many air pollutants often are elevated in homes and other buildings relative to outdoor air because many of the materials and products used indoors contain

and release a variety of pollutants to air (Hodgson et al., 2002; Offermann and Hodgson, 2011). With respect to indoor air contaminants for which inhalation is the primary route of exposure, the critical design and construction parameters are the provision of adequate ventilation and the reduction of indoor sources of the contaminants.

Indoor Formaldehyde Concentrations Impact. In the California New Home Study (CNHS) of 108 new homes in California (Offermann, 2009), 25 air contaminants were measured, and formaldehyde was identified as the indoor air contaminant with the highest cancer risk as determined by the California Proposition 65 Safe Harbor Levels (OEHHA, 2017a), No Significant Risk Levels (NSRL) for carcinogens. The NSRL is the daily intake level calculated to result in one excess case of cancer in an exposed population of 100,000 (i.e., ten in one million cancer risk) and for formaldehyde is 40 µg/day. The NSRL concentration of formaldehyde that represents a daily dose of 40 µg is 2 µg/m³, assuming a continuous 24-hour exposure, a total daily inhaled air volume of 20 m³, and 100% absorption by the respiratory system. All of the CNHS homes exceeded this NSRL concentration of 2 µg/m³. The median indoor formaldehyde concentration was 36 µg/m³, and ranged from 4.8 to 136 µg/m³, which corresponds to a median exceedance of the 2 µg/m³ NSRL concentration of 18 and a range of 2.3 to 68.

Therefore, the cancer risk of a resident living in a California home with the median indoor formaldehyde concentration of 36 µg/m³, is 180 per million as a result of formaldehyde alone. The CEQA significance threshold for airborne cancer risk is 10 per million, as established by the South Coast Air Quality Management District (SCAQMD, 2015).

Besides being a human carcinogen, formaldehyde is also a potent eye and respiratory irritant. In the CNHS, many homes exceeded the non-cancer reference exposure levels (RELs) prescribed by California Office of Environmental Health Hazard Assessment (OEHHA, 2017b). The percentage of homes exceeding the RELs ranged from 98% for the Chronic REL of 9 µg/m³ to 28% for the Acute REL of 55 µg/m³.

The primary source of formaldehyde indoors is composite wood products manufactured with urea-formaldehyde resins, such as plywood, medium density fiberboard, and

particleboard. These materials are commonly used in building construction for flooring, cabinetry, baseboards, window shades, interior doors, and window and door trims.

In January 2009, the California Air Resources Board (CARB) adopted an airborne toxics control measure (ATCM) to reduce formaldehyde emissions from composite wood products, including hardwood plywood, particleboard, medium density fiberboard, and also furniture and other finished products made with these wood products (California Air Resources Board 2009). While this formaldehyde ATCM has resulted in reduced emissions from composite wood products sold in California, they do not preclude that homes built with composite wood products meeting the CARB ATCM will have indoor formaldehyde concentrations below cancer and non-cancer exposure guidelines.

A follow up study to the California New Home Study (CNHS) was conducted in 2016-2018 (Singer et. al., 2019), and found that the median indoor formaldehyde in new homes built after 2009 with CARB Phase 2 Formaldehyde ATCM materials had lower indoor formaldehyde concentrations, with a median indoor concentrations of $22.4 \mu\text{g}/\text{m}^3$ (18.2 ppb) as compared to a median of $36 \mu\text{g}/\text{m}^3$ found in the 2007 CNHS. Unlike in the CNHS study where formaldehyde concentrations were measured with pumped DNPH samplers, the formaldehyde concentrations in the HENGH study were measured with passive samplers, which were estimated to under-measure the true indoor formaldehyde concentrations by approximately 7.5%. Applying this correction to the HENGH indoor formaldehyde concentrations results in a median indoor concentration of $24.1 \mu\text{g}/\text{m}^3$, which is 33% lower than the $36 \mu\text{g}/\text{m}^3$ found in the 2007 CNHS.

Thus, while new homes built after the 2009 CARB formaldehyde ATCM have a 33% lower median indoor formaldehyde concentration and cancer risk, the median lifetime cancer risk is still 120 per million for homes built with CARB compliant composite wood products. This median lifetime cancer risk is more than 12 times the OEHHA 10 in a million cancer risk threshold (OEHHA, 2017a).

With respect to the 3401 South La Cienega Boulevard Mixed Use Project, Los Angeles, CA, the buildings consist of residential and commercial spaces.

The residential occupants will potentially have continuous exposure (e.g. 24 hours per day, 52 weeks per year). These exposures are anticipated to result in significant cancer risks resulting from exposures to formaldehyde released by the building materials and furnishing commonly found in residential construction.

Because these residences will be constructed with CARB Phase 2 Formaldehyde ATCM materials, and be ventilated with the minimum code required amount of outdoor air, the indoor residential formaldehyde concentrations are likely similar to those concentrations observed in residences built with CARB Phase 2 Formaldehyde ATCM materials, which is a median of 24.1 $\mu\text{g}/\text{m}^3$ (Singer et. al., 2020)

Assuming that the residential occupants inhale 20 m^3 of air per day, the average 70-year lifetime formaldehyde daily dose is 482 $\mu\text{g}/\text{day}$ for continuous exposure in the residences. This exposure represents a cancer risk of 120 per million, which is more than 12 times the CEQA cancer risk of 10 per million. For occupants that do not have continuous exposure, the cancer risk will be proportionally less but still substantially over the CEQA cancer risk of 10 per million (e.g. for 12/hour/day occupancy, more than 6 times the CEQA cancer risk of 10 per million).

The employees of the commercial spaces are expected to experience significant indoor exposures (e.g., 40 hours per week, 50 weeks per year). These exposures for employees are anticipated to result in significant cancer risks resulting from exposures to formaldehyde released by the building materials and furnishing commonly found in offices, warehouses, residences and hotels.

Because the commercial spaces will be constructed with CARB Phase 2 Formaldehyde ATCM materials, and be ventilated with the minimum code required amount of outdoor air, the indoor formaldehyde concentrations are likely similar to those concentrations observed in residences built with CARB Phase 2 Formaldehyde ATCM materials, which is a median of 24.1 $\mu\text{g}/\text{m}^3$ (Singer et. al., 2020)

Assuming that the employees of commercial spaces work 8 hours per day and inhale 20 m³ of air per day, the formaldehyde dose per work-day at the offices is 161 µg/day.

Assuming that these employees work 5 days per week and 50 weeks per year for 45 years (start at age 20 and retire at age 65) the average 70-year lifetime formaldehyde daily dose is 70.9 µg/day.

This is 1.77 times the NSRL (OEHHA, 2017a) of 40 µg/day and represents a cancer risk of 17.7 per million, which exceeds the CEQA cancer risk of 10 per million. This impact should be analyzed in an environmental impact report (“EIR”), and the agency should impose all feasible mitigation measures to reduce this impact. Several feasible mitigation measures are discussed below and these and other measures should be analyzed in an EIR.

Appendix A, Indoor Formaldehyde Concentrations and the CARB Formaldehyde ATCM, provides analyses that show utilization of CARB Phase 2 Formaldehyde ATCM materials will not ensure acceptable cancer risks with respect to formaldehyde emissions from composite wood products.

Even composite wood products manufactured with CARB certified ultra low emitting formaldehyde (ULEF) resins do not insure that the indoor air will have concentrations of formaldehyde that meet the OEHHA cancer risks that substantially exceed 10 per million. The permissible emission rates for ULEF composite wood products are only 11-15% lower than the CARB Phase 2 emission rates. Only use of composite wood products made with no-added formaldehyde resins (NAF), such as resins made from soy, polyvinyl acetate, or methylene diisocyanate can insure that the OEHHA cancer risk of 10 per million is met.

The following describes a method that should be used, prior to construction in the environmental review under CEQA, for determining whether the indoor concentrations resulting from the formaldehyde emissions of specific building materials/furnishings selected exceed cancer and non-cancer guidelines. Such a design analyses can be used to

identify those materials/furnishings prior to the completion of the City's CEQA review and project approval, that have formaldehyde emission rates that contribute to indoor concentrations that exceed cancer and non-cancer guidelines, so that alternative lower emitting materials/furnishings may be selected and/or higher minimum outdoor air ventilation rates can be increased to achieve acceptable indoor concentrations and incorporated as mitigation measures for this project.

Pre-Construction Building Material/Furnishing Formaldehyde Emissions Assessment

This formaldehyde emissions assessment should be used in the environmental review under CEQA to assess the indoor formaldehyde concentrations from the proposed loading of building materials/furnishings, the area-specific formaldehyde emission rate data for building materials/furnishings, and the design minimum outdoor air ventilation rates. This assessment allows the applicant (and the City) to determine, before the conclusion of the environmental review process and the building materials/furnishings are specified, purchased, and installed, if the total chemical emissions will exceed cancer and non-cancer guidelines, and if so, allow for changes in the selection of specific material/furnishings and/or the design minimum outdoor air ventilations rates such that cancer and non-cancer guidelines are not exceeded.

1.) Define Indoor Air Quality Zones. Divide the building into separate indoor air quality zones, (IAQ Zones). IAQ Zones are defined as areas of well-mixed air. Thus, each ventilation system with recirculating air is considered a single zone, and each room or group of rooms where air is not recirculated (e.g. 100% outdoor air) is considered a separate zone. For IAQ Zones with the same construction material/furnishings and design minimum outdoor air ventilation rates. (e.g. hotel rooms, apartments, condominiums, etc.) the formaldehyde emission rates need only be assessed for a single IAQ Zone of that type.

2.) Calculate Material/Furnishing Loading. For each IAQ Zone, determine the building material and furnishing loadings (e.g., m² of material/m² floor area, units of furnishings/m² floor area) from an inventory of all potential indoor formaldehyde sources, including flooring, ceiling tiles, furnishings, finishes, insulation, sealants,

adhesives, and any products constructed with composite wood products containing urea-formaldehyde resins (e.g., plywood, medium density fiberboard, particleboard).

3.) Calculate the Formaldehyde Emission Rate. For each building material, calculate the formaldehyde emission rate ($\mu\text{g}/\text{h}$) from the product of the area-specific formaldehyde emission rate ($\mu\text{g}/\text{m}^2\text{-h}$) and the area (m^2) of material in the IAQ Zone, and from each furnishing (e.g. chairs, desks, etc.) from the unit-specific formaldehyde emission rate ($\mu\text{g}/\text{unit-h}$) and the number of units in the IAQ Zone.

NOTE: As a result of the high-performance building rating systems and building codes (California Building Standards Commission, 2014; USGBC, 2014), most manufacturers of building materials furnishings sold in the United States conduct chemical emission rate tests using the California Department of Health “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers,” (CDPH, 2017), or other equivalent chemical emission rate testing methods. Most manufacturers of building furnishings sold in the United States conduct chemical emission rate tests using ANSI/BIFMA M7.1 Standard Test Method for Determining VOC Emissions (BIFMA, 2018), or other equivalent chemical emission rate testing methods.

CDPH, BIFMA, and other chemical emission rate testing programs, typically certify that a material or furnishing does not create indoor chemical concentrations in excess of the maximum concentrations permitted by their certification. For instance, the CDPH emission rate testing requires that the measured emission rates when input into an office, school, or residential model do not exceed one-half of the OEHHA Chronic Exposure Guidelines (OEHHA, 2017b) for the 35 specific VOCs, including formaldehyde, listed in Table 4-1 of the CDPH test method (CDPH, 2017). These certifications themselves do not provide the actual area-specific formaldehyde emission rate (i.e., $\mu\text{g}/\text{m}^2\text{-h}$) of the product, but rather provide data that the formaldehyde emission rates do not exceed the maximum rate allowed for the certification. Thus, for example, the data for a certification of a specific type of flooring may be used to calculate that the area-specific emission rate of formaldehyde is less than $31 \mu\text{g}/\text{m}^2\text{-h}$, but not the actual measured specific emission rate, which may be 3, 18, or $30 \mu\text{g}/\text{m}^2\text{-h}$. These area-specific emission rates determined

from the product certifications of CDPH, BIFA, and other certification programs can be used as an initial estimate of the formaldehyde emission rate.

If the actual area-specific emission rates of a building material or furnishing is needed (i.e. the initial emission rates estimates from the product certifications are higher than desired), then that data can be acquired by requesting from the manufacturer the complete chemical emission rate test report. For instance if the complete CDPH emission test report is requested for a CDHP certified product, that report will provide the actual area-specific emission rates for not only the 35 specific VOCs, including formaldehyde, listed in Table 4-1 of the CDPH test method (CDPH, 2017), but also all of the cancer and reproductive/developmental chemicals listed in the California Proposition 65 Safe Harbor Levels (OEHHA, 2017a), all of the toxic air contaminants (TACs) in the California Air Resources Board Toxic Air Contamination List (CARB, 2011), and the 10 chemicals with the greatest emission rates.

Alternatively, a sample of the building material or furnishing can be submitted to a chemical emission rate testing laboratory, such as Berkeley Analytical Laboratory (<https://berkeleyanalytical.com>), to measure the formaldehyde emission rate.

4.) Calculate the Total Formaldehyde Emission Rate. For each IAQ Zone, calculate the total formaldehyde emission rate (i.e. $\mu\text{g/h}$) from the individual formaldehyde emission rates from each of the building material/furnishings as determined in Step 3.

5.) Calculate the Indoor Formaldehyde Concentration. For each IAQ Zone, calculate the indoor formaldehyde concentration ($\mu\text{g/m}^3$) from Equation 1 by dividing the total formaldehyde emission rates (i.e. $\mu\text{g/h}$) as determined in Step 4, by the design minimum outdoor air ventilation rate (m^3/h) for the IAQ Zone.

$$C_{in} = \frac{E_{total}}{Q_{oa}} \quad (\text{Equation 1})$$

where:

C_{in} = indoor formaldehyde concentration ($\mu\text{g/m}^3$)

E_{total} = total formaldehyde emission rate ($\mu\text{g/h}$) into the IAQ Zone.

Q_{oa} = design minimum outdoor air ventilation rate to the IAQ Zone (m^3/h)

The above Equation 1 is based upon mass balance theory, and is referenced in Section 3.10.2 “Calculation of Estimated Building Concentrations” of the California Department of Health “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers”, (CDPH, 2017).

6.) Calculate the Indoor Exposure Cancer and Non-Cancer Health Risks. For each IAQ Zone, calculate the cancer and non-cancer health risks from the indoor formaldehyde concentrations determined in Step 5 and as described in the OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines; Guidance Manual for Preparation of Health Risk Assessments (OEHHA, 2015).

7.) Mitigate Indoor Formaldehyde Exposures of exceeding the CEQA Cancer and/or Non-Cancer Health Risks. In each IAQ Zone, provide mitigation for any formaldehyde exposure risk as determined in Step 6, that exceeds the CEQA cancer risk of 10 per million or the CEQA non-cancer Hazard Quotient of 1.0.

Provide the source and/or ventilation mitigation required in all IAQ Zones to reduce the health risks of the chemical exposures below the CEQA cancer and non-cancer health risks.

Source mitigation for formaldehyde may include:

- 1.) reducing the amount materials and/or furnishings that emit formaldehyde
- 2.) substituting a different material with a lower area-specific emission rate of formaldehyde

Ventilation mitigation for formaldehyde emitted from building materials and/or furnishings may include:

- 1.) increasing the design minimum outdoor air ventilation rate to the IAQ Zone.

NOTE: Mitigating the formaldehyde emissions through use of less material/furnishings, or use of lower emitting materials/furnishings, is the preferred mitigation option, as

mitigation with increased outdoor air ventilation increases initial and operating costs associated with the heating/cooling systems.

Further, we are not asking that the builder “speculate” on what and how much composite materials be used, but rather at the design stage to select composite wood materials based on the formaldehyde emission rates that manufacturers routinely conduct using the California Department of Health “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers,” (CDPH, 2017), and use the procedure described earlier above (i.e. Pre-Construction Building Material/Furnishing Formaldehyde Emissions Assessment) to insure that the materials selected achieve acceptable cancer risks from material off gassing of formaldehyde.

Outdoor Air Ventilation Impact. Another important finding of the CNHS, was that the outdoor air ventilation rates in the homes were very low. Outdoor air ventilation is a very important factor influencing the indoor concentrations of air contaminants, as it is the primary removal mechanism of all indoor air generated contaminants. Lower outdoor air exchange rates cause indoor generated air contaminants to accumulate to higher indoor air concentrations. Many homeowners rarely open their windows or doors for ventilation as a result of their concerns for security/safety, noise, dust, and odor concerns (Price, 2007). In the CNHS field study, 32% of the homes did not use their windows during the 24-hour Test Day, and 15% of the homes did not use their windows during the entire preceding week. Most of the homes with no window usage were homes in the winter field session. Thus, a substantial percentage of homeowners never open their windows, especially in the winter season. The median 24-hour measurement was 0.26 air changes per hour (ach), with a range of 0.09 ach to 5.3 ach. A total of 67% of the homes had outdoor air exchange rates below the minimum California Building Code (2001) requirement of 0.35 ach. Thus, the relatively tight envelope construction, combined with the fact that many people never open their windows for ventilation, results in homes with low outdoor air exchange rates and higher indoor air contaminant concentrations.

According to the Sustainable Communities Environmental Assessment, (City of Los Angeles, 2022), the Project is close to roads with moderate to high traffic (e.g., South La Cienega Boulevard, West Jefferson Boulevard, Corbett Street, etc.), as well as the Metro E-Line. Table IV-19 reports that the ambient short-term noise measurements range from 63.0-73.6 dBA Leq. This report also notes the following, “It should be noted that due to the ongoing Coronavirus pandemic, traffic volumes on local roads are likely lower than usual. Therefore, noise measurements that were conducted in February 2021 are likely lower than pre-pandemic conditions and therefore conservative measurements for the existing noise environment.” As a result the Project site is a sound impacted site.

As a result of the high outdoor noise levels, the current project will require a mechanical supply of outdoor air ventilation to allow for a habitable interior environment with closed windows and doors. Such a ventilation system would allow windows and doors to be kept closed at the occupant’s discretion to control exterior noise within building interiors.

PM_{2.5} Outdoor Concentrations Impact. An additional impact of the nearby motor vehicle traffic associated with this project, are the outdoor concentrations of PM_{2.5}. According to the Sustainable Communities Environmental Assessment, (City of Los Angeles, 2022), the Project is located in the South Coast Air Basin, which is a State and Federal non-attainment area for PM_{2.5}.

An air quality analyses should to be conducted to determine the concentrations of PM_{2.5} in the outdoor and indoor air that people inhale each day. This air quality analyses needs to consider the cumulative impacts of the project related emissions, existing and projected future emissions from local PM_{2.5} sources (e.g. stationary sources, motor vehicles, and airport traffic) upon the outdoor air concentrations at the Project site. If the outdoor concentrations are determined to exceed the California and National annual average PM_{2.5} exceedence concentration of 12 µg/m³, or the National 24-hour average exceedence concentration of 35 µg/m³, then the buildings need to have a mechanical supply of outdoor air that has air filtration with sufficient removal efficiency, such that the indoor concentrations of outdoor PM_{2.5} particles is less than the California and National PM_{2.5} annual and 24-hour standards.

It is my experience that based on the projected high traffic noise levels, the annual average concentration of PM_{2.5} will exceed the California and National PM_{2.5} annual and 24-hour standards and warrant installation of high efficiency air filters (i.e. MERV 13 or higher) in all mechanically supplied outdoor air ventilation systems.

Indoor Air Quality Impact Mitigation Measures

The following are recommended mitigation measures to minimize the impacts upon indoor quality:

Indoor Formaldehyde Concentrations Mitigation. Use only composite wood materials (e.g. hardwood plywood, medium density fiberboard, particleboard) for all interior finish systems that are made with CARB approved no-added formaldehyde (NAF) resins (CARB, 2009). CARB Phase 2 certified composite wood products, or ultra-low emitting formaldehyde (ULEF) resins, do not insure indoor formaldehyde concentrations that are below the CEQA cancer risk of 10 per million. Only composite wood products manufactured with CARB approved no-added formaldehyde (NAF) resins, such as resins made from soy, polyvinyl acetate, or methylene diisocyanate can insure that the OEHHA cancer risk of 10 per million is met.

Alternatively, conduct the previously described Pre-Construction Building Material/Furnishing Chemical Emissions Assessment, to determine that the combination of formaldehyde emissions from building materials and furnishings do not create indoor formaldehyde concentrations that exceed the CEQA cancer and non-cancer health risks.

It is important to note that we are not asking that the builder “speculate” on what and how much composite materials be used, but rather at the design stage to select composite wood materials based on the formaldehyde emission rates that manufacturers routinely conduct using the California Department of Health “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers”, (CDPH, 2017), and use the procedure described above (i.e.

Pre-Construction Building Material/Furnishing Formaldehyde Emissions Assessment) to insure that the materials selected achieve acceptable cancer risks from material off gassing of formaldehyde.

Outdoor Air Ventilation Mitigation. Provide each habitable room with a continuous mechanical supply of outdoor air that meets or exceeds the California 2016 Building Energy Efficiency Standards (California Energy Commission, 2015) requirements of the greater of 15 cfm/occupant or 0.15 cfm/ft² of floor area. Following installation of the system conduct testing and balancing to insure that required amount of outdoor air is entering each habitable room and provide a written report documenting the outdoor airflow rates. Do not use exhaust only mechanical outdoor air systems, use only balanced outdoor air supply and exhaust systems or outdoor air supply only systems. Provide a manual for the occupants or maintenance personnel, that describes the purpose of the mechanical outdoor air system and the operation and maintenance requirements of the system.

PM_{2.5} Outdoor Air Concentration Mitigation. Install air filtration with sufficient PM_{2.5} removal efficiency (e.g. MERV 13 or higher) to filter the outdoor air entering the mechanical outdoor air supply systems, such that the indoor concentrations of outdoor PM_{2.5} particles are less than the California and National PM_{2.5} annual and 24-hour standards. Install the air filters in the system such that they are accessible for replacement by the occupants or maintenance personnel. Include in the mechanical outdoor air ventilation system manual instructions on how to replace the air filters and the estimated frequency of replacement.

APPENDIX A

INDOOR FORMALDEHYDE CONCENTRATIONS AND THE CARB FORMALDEHYDE ATCM

With respect to formaldehyde emissions from composite wood products, the CARB ATCM regulations of formaldehyde emissions from composite wood products, do not assure healthful indoor air quality. The following is the stated purpose of the CARB ATCM regulation - *The purpose of this airborne toxic control measure is to “reduce formaldehyde emissions from composite wood products, and finished goods that contain composite wood products, that are sold, offered for sale, supplied, used, or manufactured for sale in California”*. In other words, the CARB ATCM regulations do not “assure healthful indoor air quality”, but rather “reduce formaldehyde emissions from composite wood products”.

Just how much protection do the CARB ATCM regulations provide building occupants from the formaldehyde emissions generated by composite wood products? Definitely some, but certainly the regulations do not “*assure healthful indoor air quality*” when CARB Phase 2 products are utilized. As shown in the Chan 2019 study of new California homes, the median indoor formaldehyde concentration was of 22.4 $\mu\text{g}/\text{m}^3$ (18.2 ppb), which corresponds to a cancer risk of 112 per million for occupants with continuous exposure, which is more than 11 times the CEQA cancer risk of 10 per million.

Another way of looking at how much protection the CARB ATCM regulations provide building occupants from the formaldehyde emissions generated by composite wood products is to calculate the maximum number of square feet of composite wood product that can be in a residence without exceeding the CEQA cancer risk of 10 per million for occupants with continuous occupancy.

For this calculation I utilized the floor area (2,272 ft^2), the ceiling height (8.5 ft), and the number of bedrooms (4) as defined in Appendix B (New Single-Family Residence Scenario) of the Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions for Indoor Sources Using Environmental Chambers, Version 1.1, 2017, California

Department of Public Health, Richmond, CA. <https://www.cdph.ca.gov/Programs/CCDPHP/DEODC/EHLB/IAQ/Pages/VOC.aspx>.

For the outdoor air ventilation rate I used the 2019 Title 24 code required mechanical ventilation rate (ASHRAE 62.2) of 106 cfm (180 m³/h) calculated for this model residence. For the composite wood formaldehyde emission rates I used the CARB ATCM Phase 2 rates.

The calculated maximum number of square feet of composite wood product that can be in a residence, without exceeding the CEQA cancer risk of 10 per million for occupants with continuous occupancy are as follows for the different types of regulated composite wood products.

Medium Density Fiberboard (MDF) – 15 ft² (0.7% of the floor area), or
Particle Board – 30 ft² (1.3% of the floor area), or
Hardwood Plywood – 54 ft² (2.4% of the floor area), or
Thin MDF – 46 ft² (2.0 % of the floor area).

For offices and hotels the calculated maximum amount of composite wood product (% of floor area) that can be used without exceeding the CEQA cancer risk of 10 per million for occupants, assuming 8 hours/day occupancy, and the California Mechanical Code minimum outdoor air ventilation rates are as follows for the different types of regulated composite wood products.

Medium Density Fiberboard (MDF) – 3.6 % (offices) and 4.6% (hotel rooms), or
Particle Board – 7.2 % (offices) and 9.4% (hotel rooms), or
Hardwood Plywood – 13 % (offices) and 17% (hotel rooms), or
Thin MDF – 11 % (offices) and 14 % (hotel rooms)

Clearly the CARB ATCM does not regulate the formaldehyde emissions from composite wood products such that the potentially large areas of these products, such as for flooring, baseboards, interior doors, window and door trims, and kitchen and bathroom cabinetry,

could be used without causing indoor formaldehyde concentrations that result in CEQA cancer risks that substantially exceed 10 per million for occupants with continuous occupancy.

Even composite wood products manufactured with CARB certified ultra low emitting formaldehyde (ULEF) resins do not insure that the indoor air will have concentrations of formaldehyde that meet the OEHHA cancer risks that substantially exceed 10 per million. The permissible emission rates for ULEF composite wood products are only 11-15% lower than the CARB Phase 2 emission rates. Only use of composite wood products made with no-added formaldehyde resins (NAF), such as resins made from soy, polyvinyl acetate, or methylene diisocyanate can insure that the OEHHA cancer risk of 10 per million is met.

If CARB Phase 2 compliant or ULEF composite wood products are utilized in construction, then the resulting indoor formaldehyde concentrations should be determined in the design phase using the specific amounts of each type of composite wood product, the specific formaldehyde emission rates, and the volume and outdoor air ventilation rates of the indoor spaces, and all feasible mitigation measures employed to reduce this impact (e.g. use less formaldehyde containing composite wood products and/or incorporate mechanical systems capable of higher outdoor air ventilation rates). See the procedure described earlier (i.e. Pre-Construction Building Material/Furnishing Formaldehyde Emissions Assessment) to insure that the materials selected achieve acceptable cancer risks from material off gassing of formaldehyde.

Alternatively, and perhaps a simpler approach, is to use only composite wood products (e.g. hardwood plywood, medium density fiberboard, particleboard) for all interior finish systems that are made with CARB approved no-added formaldehyde (NAF) resins.

Work Experience

Mr. Offermann PE, CIH, has 36 years experience as an IAQ researcher, technical author, and workshop instructor. He is president of Indoor Environmental Engineering, a San Francisco based IAQ R&D consulting firm. As president of Indoor Environmental Engineering, Mr. Offermann directs an interdisciplinary team of environmental scientists, chemists, and mechanical engineers in indoor air quality building investigations. Under Mr. Offermann's supervision, IEE has developed both pro-active and reactive IAQ measurement methods and diagnostic protocols. He has supervised over 2,000 IAQ investigations in commercial, residential, and institutional buildings and conducted numerous forensic investigations related to IAQ.

Litigation Experience

Mr. Offermann has been qualified numerous times in court as an expert in the field of indoor air quality and ventilation for both plaintiffs and defendants. He has been deposed over 150 times in cases involving indoor air quality/ventilation issues in commercial, residential, and institutional buildings involving construction defects, and/or operation and maintenance problems. Examples of indoor air quality cases he has worked on are alleged personal injury and/or property damages from mold and bacterial contamination/moisture intrusion, building renovation activities, insufficient outdoor air ventilation, off gassing of volatile organic compounds from building materials and coatings, malfunctioning gas heaters and carbon monoxide poisoning, and applications of pesticides. Mr. Offermann has testified with respect to the scientific admissibility of expert testimony regarding indoor air quality issues via Daubert and Kelly-Frye motions.

Subject: Comments on the 3401 South La Cienega Boulevard Project (SCH No. 2022010321)

Dear Mr. Drury,

We have reviewed the January 2022 Sustainable Communities Environmental Assessment (“SCEA”) for the 3401 South La Cienega Boulevard Mixed-Use Project (“Project”) located in the City of Los Angeles (“City”). The Project proposes to demolish nine existing buildings and construct a 230,412-SF residential building with 260 dwelling units and a 230,412-SF commercial building with 2,869-SF of retail space, as well as 785 parking spaces, on the 3.53-acre site.

Our review concludes that the SCEA fails to adequately evaluate the Project’s health risk and greenhouse gas impacts. As a result, emissions and health risk impacts associated with construction and operation of the proposed Project are underestimated and inadequately addressed. An Environmental Impact Report (“EIR”) should be prepared to adequately assess and mitigate the potential health risk and greenhouse gas impacts that the project may have on the surrounding environment.

Air Quality

Diesel Particulate Matter Health Risk Emissions Inadequately Evaluated

The SCEA concludes that the Project would have a less-than-significant health risk impact without conducting a quantified construction or operational health risk analysis (“HRA”) (p. IV-42 – IV-43).

Regarding the health risk impacts associated with Project construction, the SCEA states:

“The use of diesel-powered construction equipment would be temporary and episodic. The duration of exposure would be short and exhaust from construction equipment dissipates rapidly. Current methodology for conducting health risk assessments are associated with long

term exposure periods (9, 30, and 70 years). Therefore, short-term construction activities would not generate a significant health risk.

Additionally, the Project Site is approximately 3.5-acres. Generally, construction for projects contained in a site of less than 5 acres result in less than significant health risk impacts due: (1) to limitations of the off-road diesel equipment able to operate, which produces a reduced amount of generated DPM; (2) reduced amount of dust-generating ground-disturbance possible compared to larger construction sites, and (3) reduced duration of construction activities compared to the development of larger sites. Furthermore, construction would be subject to and would comply with California regulations, such as CARB's In-Use Off-Road Diesel Rule which limits the idling of heavy-duty construction equipment to no more than 5 minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. For these reasons, DPM generated by construction activities, in and of itself, would not be expected to expose sensitive receptors to substantial amounts of air toxics and the Project would have a less than significant impact" (p. IV-42 – IV-43).

As demonstrated above, the SCEA concludes that the Project would result in a less-than-significant construction-related health risk impact because the Project's short-term construction duration, small acreage, and compliance with CARB regulations would not result in substantial amounts of diesel particulate matter ("DPM") emissions. Furthermore, regarding the health risk impacts associated with Project operation, the SCEA states:

"The greatest potential during long-term operations for exposure to TACs is from the use of heavy-duty diesel trucks and stationary generators that use diesel fuel. Once operational, the majority of vehicle trips to the Project Site would be from residents and employees and, as a result, the Proposed Project would attract very few diesel truck trips. The Proposed Project includes a small coffee shop/ restaurant which would get deliveries by truck, as would some of the commercial uses. However, most of these trucks would be small delivery trucks (i.e., UPS, Amazon). Further, many smaller delivery trucks are electric or natural gas powered. Additionally, the Project does not propose any stationary generators on-site. For these reasons, once operational, the Proposed Project would not expose nearby sensitive receptors to substantial amounts of air toxics and the project would have a less than significant impact" (p. IV-43).

As demonstrated above, the SCEA concludes that the Project would result in a less-than-significant operational health risk impact because the limited amount of diesel truck trips and lack of stationary generators on-site would not result in substantial amounts of toxic air contaminant ("TAC") emissions. However, the SCEA's evaluation of the Project's potential health risk impacts, as well as the subsequent less-than-significant impact conclusion, is incorrect for three reasons.

First, by failing to prepare a quantified construction and operational HRA, the Project is inconsistent with CEQA's requirement to correlate the increase in emissions that the Project would generate to the

adverse impacts on human health caused by those emissions.¹ This is incorrect, as construction of the proposed Project would produce DPM emissions through the exhaust stacks of construction equipment over a potential construction period of approximately 31 months (p. II-16). Furthermore, the SCEA indicates that the Project would generate approximately 3,061 daily vehicle trips, which would generate additional exhaust emissions and continue to expose nearby sensitive receptors to DPM emissions during Project operation (p. IV-144). However, the SCEA fails to evaluate Project-generated TACs or indicate the concentrations at which such pollutants would trigger adverse health effects. Thus, without making a reasonable effort to connect the Project's construction-related and operational TAC emissions to the potential health risks posed to nearby receptors, the SCEA is inconsistent with CEQA's requirement to correlate the increase in emissions generated by the Project with the potential adverse impacts on human health.

Second, the Office of Environmental Health Hazard Assessment ("OEHHA"), the organization responsible for providing guidance on conducting HRAs in California, released its most recent *Risk Assessment Guidelines: Guidance Manual for Preparation of Health Risk Assessments* in February 2015.² This guidance document describes the types of projects that warrant the preparation of an HRA. The OEHHA document recommends that all short-term projects lasting at least two months be evaluated for cancer risks to nearby sensitive receptors. As the Project's construction duration exceeds the 2-month requirement set forth by OEHHA, it is clear that the Project meets the threshold warranting a quantified HRA under OEHHA guidance. Furthermore, the OEHHA document recommends that exposure from projects lasting more than 6 months be evaluated for the duration of the project and recommends that an exposure duration of 30 years be used to estimate individual cancer risk for the maximally exposed individual resident ("MEIR"). Even though we were not provided with the expected lifetime of the Project, we can reasonably assume that the Project will operate for at least 30 years, if not more. Therefore, we recommend that health risk impacts from Project operation also be evaluated, as a 30-year exposure duration vastly exceeds the 6-month requirement set forth by OEHHA. These recommendations reflect the most recent state health risk policies, and as such, we recommend that an analysis of health risk impacts posed to nearby sensitive receptors from Project-generated DPM emissions be included in an EIR for the Project.

Third, by claiming a less than significant impact without conducting a quantified construction or operational HRA for nearby, existing sensitive receptors, the SCEA fails to compare the excess health risk impact to the SCAQMD's specific numeric threshold of 10 in one million.³ Thus, in accordance with the most relevant guidance, an assessment of the health risk posed to nearby, existing receptors from Project construction and operation should have been conducted.

³ "South Coast AQMD Air Quality Significance Thresholds." SCAQMD, April 2019, *available at*: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf>.

Screening-Level Analysis Demonstrates Significant Impacts

In order to conduct our screening-level risk assessment we relied upon AERSCREEN, which is a screening level air quality dispersion model.⁴ The model replaced SCREEN3, and AERSCREEN is included in the OEHHA⁵ and the California Air Pollution Control Officers Associated (“CAPCOA”)⁶ guidance as the appropriate air dispersion model for Level 2 health risk screening assessments (“HRSA”). A Level 2 HRSA utilizes a limited amount of site-specific information to generate maximum reasonable downwind concentrations of air contaminants to which nearby sensitive receptors may be exposed. If an unacceptable air quality hazard is determined to be possible using AERSCREEN, a more refined modeling approach is required prior to approval of the Project.

We prepared a preliminary HRA of the Project’s construction and operational health risk impact to residential sensitive receptors using the annual PM₁₀ exhaust estimates from the SCEA’s CalEEMod output files. Consistent with recommendations set forth by OEHHA, we assumed residential exposure begins during the third trimester stage of life. The SCEA’s CalEEMod model indicates that construction activities will generate approximately 122 pounds of DPM over the 959-day construction period.⁷ The AERSCREEN model relies on a continuous average emission rate to simulate maximum downward concentrations from point, area, and volume emission sources. To account for the variability in equipment usage and truck trips over Project construction, we calculated an average DPM emission rate by the following equation:

$$\text{Emission Rate} \left(\frac{\text{grams}}{\text{second}} \right) = \frac{121.8 \text{ lbs}}{959 \text{ days}} \times \frac{121.8 \text{ grams}}{\text{lbs}} \times \frac{1 \text{ day}}{24 \text{ hours}} \times \frac{1 \text{ hour}}{3,600 \text{ seconds}} = \mathbf{0.000667 \text{ g/s}}$$

Using this equation, we estimated a construction emission rate of 0.000667 grams per second (“g/s”). Subtracting the 959-day construction period from the total residential duration of 30 years, we assumed that after Project construction, the sensitive receptor would be exposed to the Project’s operational DPM for an additional 27.37 years. The SCEA’s operational CalEEMod emissions indicate that operational activities will generate approximately 141 pounds of DPM per year throughout operation. Applying the same equation used to estimate the construction DPM rate, we estimated the following emission rate for Project operation:

$$\text{Emission Rate} \left(\frac{\text{grams}}{\text{second}} \right) = \frac{140.8 \text{ lbs}}{365 \text{ days}} \times \frac{453.6 \text{ grams}}{\text{lbs}} \times \frac{1 \text{ day}}{24 \text{ hours}} \times \frac{1 \text{ hour}}{3,600 \text{ seconds}} = \mathbf{0.00203 \text{ g/s}}$$

Using this equation, we estimated an operational emission rate of 0.00203 g/s. Construction and operation were simulated as a 3.53-acre rectangular area source in AERSCREEN, with approximate dimensions of 169- by 85-meters. A release height of three meters was selected to represent the height

⁷ See Attachment B for calculations.

of stacks of operational equipment and other heavy-duty vehicles, and an initial vertical dimension of one and a half meters was used to simulate instantaneous plume dispersion upon release. An urban meteorological setting was selected with model-default inputs for wind speed and direction distribution. The population of Los Angeles was obtained from U.S. 2020 Census data.⁸

The AERSCREEN model generates maximum reasonable estimates of single-hour DPM concentrations from the Project Site. EPA guidance suggests that in screening procedures, the annualized average concentration of an air pollutant to be estimated by multiplying the single-hour concentration by 10%.⁹ According to the SCEA the nearest sensitive receptor are residents located approximately 175 feet, or 53 meters, from the Project site (p. IV-39). However, review of the AERSCREEN output files demonstrates that the maximally exposed individual resident (“MEIR”) is located approximately 75 meters from the Project site. Thus, the single-hour concentration estimated by AERSCREEN for Project construction is approximately 1.235 $\mu\text{g}/\text{m}^3$ DPM at approximately 75 meters downwind. Multiplying this single-hour concentration by 10%, we get an annualized average concentration of 0.1235 $\mu\text{g}/\text{m}^3$ for Project construction at the MEIR. For Project operation, the single-hour concentration estimated by AERSCREEN is 3.751 $\mu\text{g}/\text{m}^3$ DPM at approximately 75 meters downwind. Multiplying this single-hour concentration by 10%, we get an annualized average concentration of 0.3751 $\mu\text{g}/\text{m}^3$ for Project operation at the MEIR.

We calculated the excess cancer risk to the MEIR using applicable HRA methodologies prescribed by OEHHA, as recommended by SCAQMD.¹⁰ Consistent with the 959-day construction schedule, the annualized average concentration for construction was used for the entire third trimester of pregnancy (0.25 years), infantile stage of life (0 – 2 years), and the first 0.38 years of the child stage of life (2 – 16 years). The annualized average concentration for operation was used for the remainder of the 30-year exposure period, which makes up the latter 13.62 years of the child stage of life and the entire adult stage of life (16 – 30 years).

Consistent with OEHHA guidance, as recommended by SCAQMD, we used Age Sensitivity Factors (“ASF(s)”) to account for the heightened susceptibility of young children to the carcinogenic toxicity of air pollution.¹¹ According to this guidance, the quantified cancer risk should be multiplied by a factor of ten during the third trimester of pregnancy and during the first two years of life (infant) as well as multiplied by a factor of three during the child stage of life (2 – 16 years). Furthermore, in accordance with guidance set forth by OEHHA, we used the 95th percentile breathing rates for children from the 3rd trimester through age 2.¹² Finally, consistent with OEHHA guidance, we used a Fraction of Time At Home

("FAH") Value of 1 for the 3rd trimester, infant, and child receptors.¹³ We used a cancer potency factor of 1.1 (mg/kg-day)⁻¹ and an averaging time of 25,550 days. The results of our calculations are shown in the tables below.

The Maximally Exposed Individual at an Existing Residential Receptor

Age Group	Emissions Source	Duration (years)	Concentration (ug/m3)	Breathing Rate (L/kg-day)	Cancer Risk (without ASFs*)	ASF	Cancer Risk (with ASFs*)
3rd Trimester	Construction	0.25	0.1235	361	1.68E-07	10	1.68E-06
Infant (Age 0 - 2)	Construction	2	0.1235	1090	4.06E-06	10	4.06E-05
	<i>Construction</i>	<i>0.38</i>	<i>0.1235</i>	<i>572</i>	<i>4.02E-07</i>		
	<i>Operation</i>	<i>13.62</i>	<i>0.3751</i>	<i>572</i>	<i>4.40E-05</i>		
Child (Age 2 - 16)	Total	14			4.44E-05	3	1.33E-04
Adult (Age 16 - 30)	Operation	14	0.3751	261	1.51E-05	1	1.51E-05
Lifetime		30			6.37E-05		1.91E-04

* We, along with CARB and SCAQMD, recommend using the more updated and health protective 2015 OEHHA guidance, which includes ASFs.

As demonstrated in the table above, the excess cancer risks for the 3rd trimester of pregnancy, infants, children, and adults at the MEIR located approximately 75 meters away, over the course of Project construction and operation, utilizing ASFs, are approximately 1.68, 40.6, 133, and 15.1 in one million, respectively. The excess cancer risk over the course of a residential lifetime (30 years), utilizing ASFs, is approximately 191 in one million. The infant, child, adult, and lifetime cancer risks exceed the SCAQMD threshold of 10 in one million, thus resulting in a potentially significant impact not previously addressed or identified by the SCEA.

Utilizing ASFs is the most conservative, health-protective analysis according to the most recent guidance by OEHHA and reflects recommendations from the air district. Results without ASFs are presented in the table above, although we do not recommend utilizing these values for health risk analysis. Regardless, the excess cancer risks for the 3rd trimester of pregnancy, infants, children, and adults at the MEIR located approximately 75 meters away, over the course of Project construction and operation, without

OEHHA, February 2015, available at: <https://oehha.ca.gov/media/downloads/crn/2015guidancemanual.pdf>.

¹³ "Risk Assessment Procedures for Rules 1401, 1401.1, and 212." SCAQMD, September 2017, available at: <http://www.aqmd.gov/docs/default-source/permitting/rule-1401-risk-assessment/riskassessproc-v8-1.pdf?sfvrsn=12>, p. 7.

ASFs, are approximately 0.168, 4.06, 44.4, and 15.1 in one million, respectively. The excess cancer risk over the course of a residential lifetime, without ASFs, is approximately 63.7 in one million. The child, adult, and lifetime cancer risks exceed the SCAQMD threshold of 10 in one million, thus resulting in a potentially significant impact not previously addressed or identified by the SCEA. While we recommend the use of ASFs, the Project’s cancer risk without ASFs, as estimated by SWAPE, exceeds the SCAQMD threshold regardless.

An agency must include an analysis of health risks that connects the Project’s air emissions with the health risk posed by those emissions. Our analysis represents a screening-level HRA, which is known to be conservative and tends to err on the side of health protection. The purpose of the screening-level construction and operational HRA shown above is to demonstrate the link between the proposed Project’s emissions and the potential health risk. Our screening-level HRA demonstrates that construction and operation of the Project could result in a potentially significant health risk impact, when correct exposure assumptions and up-to-date, applicable guidance are used. Thus, an EIR should be prepared, including a quantified air pollution model as well as an updated, quantified refined health risk assessment which adequately and accurately evaluates health risk impacts associated with both Project construction and operation.

Greenhouse Gas

Failure to Adequately Evaluate Greenhouse Gas Impacts

The Air Quality and Greenhouse Gas Technical Study (“AQ & GHG Study”), provided as Appendix B to the SCEA, estimates that the Project would generate net annual greenhouse gas (“GHG”) emissions of 9,465 metric tons of carbon dioxide equivalents per year (“MT CO₂e/year”) (p. 42, Table 12).

Table 12
Proposed Project Greenhouse Gas Emissions

Emissions Source	Metric Tons of Carbon Dioxide Equivalent (per year)
Amortized Construction	101.6
Area Sources	4.5
Energy Sources	4,075
Mobile Sources	4,300
Waste Sources	186
Water Sources	798
Total GHG Emissions	9,465

Source: Impact Sciences, 2021.

However, the AQ & GHG Study elects not to compare emissions to a threshold. Rather, the AQ & GHG Study’s analysis relies upon the Project’s consistency with the Final 2017 Scoping Plan Update, Connect SoCal, City’s General Plan Air Quality Element, and the City’s Green New Deal (p. 43-50). However, the AQ & GHG Study’s analysis, as well as the subsequent less-than-significant impact conclusion, is incorrect for two reasons.

- (1) The SCEA’s unsubstantiated air model indicates a potentially significant impact; and
- (2) The SCEA should incorporate project design features as formal mitigation measures.

(1) Failure to Identify a Potentially Significant GHG Impact

In an effort to quantitatively evaluate the Project’s GHG emissions, we compared the Project’s GHG emissions, as estimated by the SCEA, to the SCAQMD 2035 efficiency target of 3.0 metric tons of carbon dioxide equivalents per service population per year (“MT CO₂e/SP/year”), which was calculated by applying a 40% reduction to the 2020 targets.¹⁴ When applying the SCAQMD 2035 efficiency target of 3.0 MT CO₂e/SP/year, the Project’s air model indicates a potentially significant GHG impact.¹⁵ As previously stated, the SCEA estimates that the Project would generate net annual GHG emissions of 9,465 MT CO₂e/year (p. 42, Table 12). Furthermore, according to CAPCOA’s *CEQA & Climate Change* report, service population is defined as “the sum of the number of residents and the number of jobs supported by the project.”¹⁶ The SCEA estimates that the Project would house and employ approximately 744 and 1,284 people, respectively (p. IV-32). As such, we estimate a service population of 2,028 people.¹⁷ When dividing the Project’s GHG emissions, as estimated by the SCEA, by a service population of 2,028 people, we find that the Project would emit approximately 4.7 MT CO₂e/SP/year (see table below).¹⁸

SCEA Greenhouse Gas Emissions	
Annual Emissions (MT CO ₂ e/year)	9,465
Service Population	2,028
Service Population Efficiency (MT CO ₂ e/SP/year)	4.7
SCAQMD 2035 Target (MT CO ₂ e/SP/year)	3.0
<i>Exceeds?</i>	Yes

As demonstrated above, the Project’s net annual GHG emissions, as estimated by the SCEA, exceed the SCAQMD 2035 efficiency target of 3.0 MT CO₂e/SP/year, indicating a potentially significant impact not previously identified or addressed by the SCEA or AQ & GHG study. As a result, the SCEA’s less-than-significant GHG impact conclusion should not be relied upon. An EIR should be prepared, including an updated GHG analysis and incorporating additional mitigation measures to reduce the Project’s GHG emissions to less-than-significant levels.

¹⁴ “Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #15.” SCAQMD, September 2010, available at: [http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-\(ghg\)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-minutes.pdf](http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-minutes.pdf), p. 2.

¹⁵ “Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #15.” SCAQMD, September 2010, available at: [http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-\(ghg\)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-minutes.pdf](http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-minutes.pdf), p. 2.

¹⁶ “CEQA & Climate Change.” CAPCOA, January 2008, available at: <http://www.capcoa.org/wp-content/uploads/2012/03/CAPCOA-White-Paper.pdf>, p. 71-72.

¹⁷ Calculated: 744 residents + 1,284 employees = 2,028 service population.

¹⁸ Calculated: (9,465 MT CO₂e/year) / (2,028 service population) = (4.7 MT CO₂e/SP/year).

(2) Project Design Features Should Be Incorporated as Mitigation Measures

As previously mentioned, the AQ & GHG Study relies upon the Project's consistency with the Final 2017 Scoping Plan Update, Connect SoCal, City's General Plan Air Quality Element, and the City's Green New Deal (p. 43-50). Furthermore, consistent with the emissions reductions strategies within the above-mentioned plans and policies, the SCEA includes applicable green building and sustainability features in the Project design (p. II-15 – II-16). Specifically, the SCEA states:

“Strategies that support these targets and that are proposed for the Proposed Project include:

- Designing for energy and water efficiency as a priority
- Both buildings will be entirely electric buildings (no natural gas in either building)
- ENERGY STAR Appliances
- LED lighting
- Intend to purchase 100% green power from the LADWP grid
- Variable Air Volume — HVAC (heating, ventilation, and air conditioning) system in the commercial building with MERV 15 filter + recycles outdoor air
- 100 Electric Vehicle parking spaces
- Exploring on-site Photovoltaic (PV) & battery storage
- Bike showers, lockers, and storage
- Rain water collection cistern (approximately 80,000 – 90,000 gallons) for stormwater management and reuse of water in landscaping on site
- Use of permeable paving where feasible
- Use of drought tolerant plants for landscaping
- Undertaking a Life Cycle Assessment of embodied carbon in materials to engage supply chain in achieving lower carbon material substitutions
- Construction waste diversion
- Use of low carbon concrete and rebar construction materials where feasible” (p. 11-15 – 11-16).

However, we recommend that the SCEA incorporate the above-mentioned project design features (“PDFs”) as formal mitigation measures. According to the Association of Environmental Professionals’ (“AEP”) *CEQA Portal Topic Paper* on Mitigation Measures:

“While not “mitigation”, a good practice is to include those project design feature(s) that address environmental impacts in the mitigation monitoring and reporting program (MMRP). Often the MMRP is all that accompanies building and construction plans through the permit process. If the design features are not listed as important to addressing an environmental impact, it is easy for someone not involved in the original environmental process to approve a

change to the project that could eliminate one or more of the design features without understanding the resulting environmental impact.”¹⁹

As demonstrated above, PDFs that are not formally included as mitigation measures may be eliminated from the Project’s design altogether. Thus, as the above-mentioned sustainability features are not formally included as mitigation measures, we cannot guarantee that they would be implemented, monitored, and enforced on the Project site. As such, until the PDFs are included as mitigation measures, the Project’s GHG analysis should not be relied upon to determine Project significance.

Feasible Mitigation Measures Available to Reduce Emissions

Our analysis demonstrates that the Project would result in a potentially significant health risk and GHG impact that should be mitigated further. As such, in an effort to reduce the Project’s emissions, we identified several mitigation measures that are applicable to the proposed Project. Therefore, to reduce the Project’s emissions, we recommend consideration of SCAG’s 2020 RTP/SCS PEIR’s Air Quality Project Level Mitigation Measures (“PMM-AQ-1”) and Greenhouse Gas Project Level Mitigation Measures (“PMM-GHG-1”), as described below:²⁰

SCAG RTP/SCS 2020-2045
Air Quality Project Level Mitigation Measures – PMM-AQ-1:
In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i> , a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:
a) Minimize land disturbance.
b) Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes.
c) Cover trucks when hauling dirt.
d) Stabilize the surface of dirt piles if not removed immediately.
e) Limit vehicular paths on unpaved surfaces and stabilize any temporary roads.
f) Minimize unnecessary vehicular and machinery activities.
g) Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.
h) Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities.

¹⁹ “CEQA Portal Topic Paper Mitigation Measures.” AEP, February 2020, available at: <https://ceqaportal.org/tp/CEQA%20Mitigation%202020.pdf>, p. 6.

²⁰ “4.0 Mitigation Measures.” Connect SoCal Program Environmental Impact Report Addendum #1, September 2020, available at: https://scag.ca.gov/sites/main/files/file-attachments/fpeir_connectsocial_addendum_4_mitigationmeasures.pdf?1606004420, p. 4.0-2 – 4.0-10; 4.0-19 – 4.0-23; See also: “Certified Final Connect SoCal Program Environmental Impact Report.” Southern California Association of Governments (SCAG), May 2020, available at: <https://scag.ca.gov/peir>.

j) Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet.
k) Ensure that all construction equipment is properly tuned and maintained.
l) Minimize idling time to 5 minutes—saves fuel and reduces emissions.
m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.
o) Develop a traffic plan to minimize traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites.
p) As appropriate require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site.
q) Require projects within 500 feet of residences, hospitals, or schools to use Tier 4 equipment for all engines above 50 horsepower (hp) unless the individual project can demonstrate that Tier 4 engines would not be required to mitigate emissions below significance thresholds.
r) Projects located within the South Coast Air Basin should consider applying for South Coast AQMD “SOON” funds which provides funds to applicable fleets for the purchase of commercially available low-emission heavy-duty engines to achieve near-term reduction of NOx emissions from in-use off-road diesel vehicles.
s) Projects located within AB 617 communities should review the applicable Community Emissions Reduction Plan (CERP) for additional mitigation that can be applied to individual projects.
t) Where applicable, projects should provide information about air quality related programs to schools, including the Environmental Justice Community Partnerships (EJCP), Clean Air Ranger Education (CARE), and Why Air Quality Matters programs.
u) Projects should work with local cities and counties to install adequate signage that prohibits truck idling in certain locations (e.g., near schools and sensitive receptors).
y) Projects that will introduce sensitive receptors within 500 feet of freeways and other sources should consider installing high efficiency of enhanced filtration units, such as Minimum Efficiency Reporting Value (MERV) 13 or better. Installation of enhanced filtration units can be verified during occupancy inspection prior to the issuance of an occupancy permit.
z) Develop an ongoing monitoring, inspection, and maintenance program for the MERV filters.
aa) Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities.
bb) The following criteria related to diesel emissions shall be implemented on by individual project sponsors as appropriate and feasible: <ul style="list-style-type: none"> - Diesel nonroad vehicles on site for more than 10 total days shall have either (1) engines that meet EPA on road emissions standards or (2) emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85% - Diesel generators on site for more than 10 total days shall be equipped with emission control technology verified by EPA or CARB to reduce PM emissions by a minimum of 85%. - Nonroad diesel engines on site shall be Tier 2 or higher. - Diesel nonroad construction equipment on site for more than 10 total days shall have either (1) engines meeting EPA Tier 4 nonroad emissions standards or (2) emission control technology verified by EPA or CARB for use with nonroad engines to reduce PM emissions by a minimum of 85% for engines for 50 hp and greater and by a minimum of 20% for engines less than 50 hp.

- Emission control technology shall be operated, maintained, and serviced as recommended by the emission control technology manufacturer.
- Diesel vehicles, construction equipment, and generators on site shall be fueled with ultra-low sulfur diesel fuel (ULSD) or a biodiesel blend approved by the original engine manufacturer with sulfur content of 15 ppm or less.
- The construction contractor shall maintain a list of all diesel vehicles, construction equipment, and generators to be used on site. The list shall include the following:
 - i. Contractor and subcontractor name and address, plus contact person responsible for the vehicles or equipment.
 - ii. Equipment type, equipment manufacturer, equipment serial number, engine manufacturer, engine model year, engine certification (Tier rating), horsepower, engine serial number, and expected fuel usage and hours of operation.
 - iii. For the emission control technology installed: technology type, serial number, make, model, manufacturer, EPA/CARB verification number/level, and installation date and hour-meter reading on installation date.
- The contractor shall establish generator sites and truck-staging zones for vehicles waiting to load or unload material on site. Such zones shall be located where diesel emissions have the least impact on abutters, the general public, and especially sensitive receptors such as hospitals, schools, daycare facilities, elderly housing, and convalescent facilities.
- The contractor shall maintain a monthly report that, for each on road diesel vehicle, nonroad construction equipment, or generator onsite, includes:
 - i. Hour-meter readings on arrival on-site, the first and last day of every month, and on off-site date.
 - ii. Any problems with the equipment or emission controls.
 - iii. Certified copies of fuel deliveries for the time period that identify:
 - 1. Source of supply
 - 2. Quantity of fuel
 - 3. Quantity of fuel, including sulfur content (percent by weight)

cc) Project should exceed Title-24 Building Envelope Energy Efficiency Standards (California Building Standards Code). The following measures can be used to increase energy efficiency:

- Provide pedestrian network improvements, such as interconnected street network, narrower roadways and shorter block lengths, sidewalks, accessibility to transit and transit shelters, traffic calming measures, parks and public spaces, minimize pedestrian barriers.
- Provide traffic calming measures, such as:
 - i. Marked crosswalks
 - ii. Count-down signal timers
 - iii. Curb extensions
 - iv. Speed tables
 - v. Raised crosswalks
 - vi. Raised intersections
 - vii. Median islands
 - viii. Tight corner radii
 - ix. Roundabouts or mini-circles
 - x. On-street parking
 - x. Chicanes/chokers
- Create urban non-motorized zones
- Provide bike parking in non-residential and multi-unit residential projects
- Dedicate land for bike trails
- Limit parking supply through:
 - i. Elimination (or reduction) of minimum parking requirements
 - ii. Creation of maximum parking requirements
 - iii. Provision of shared parking
- Require residential area parking permit.
- Provide ride-sharing programs

- i. Designate a certain percentage of parking spacing for ride sharing vehicles
- ii. Designating adequate passenger loading and unloading and waiting areas for ride-sharing vehicles
- iii. Providing a web site or messaging board for coordinating rides
- iv. Permanent transportation management association membership and finding requirement.

Greenhouse Gas Project Level Mitigation Measures – PMM-GHG-1

In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:

b) Reduce emissions resulting from projects through implementation of project features, project design, or other measures, such as those described in Appendix F of the State CEQA Guidelines.

c) Include off-site measures to mitigate a project’s emissions.

e) Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following:

- i. Promote transit-active transportation coordinated strategies;
- ii. Increase bicycle carrying capacity on transit and rail vehicles;
- iii. Improve or increase access to transit;
- iv. Increase access to common goods and services, such as groceries, schools, and day care;
- v. Incorporate affordable housing into the project;
- vi. Incorporate the neighborhood electric vehicle network;
- vii. Orient the project toward transit, bicycle and pedestrian facilities;
- viii. Improve pedestrian or bicycle networks, or transit service;
- ix. Provide traffic calming measures;
- x. Provide bicycle parking;
- xi. Limit or eliminate park supply;
- xii. Unbundle parking costs;
- xiii. Provide parking cash-out programs;
- xiv. Implement or provide access to commute reduction program;

f) Incorporate bicycle and pedestrian facilities into project designs, maintaining these facilities, and providing amenities incentivizing their use; and planning for and building local bicycle projects that connect with the regional network;

g) Improving transit access to rail and bus routes by incentives for construction and transit facilities within developments, and/or providing dedicated shuttle service to transit stations; and

h) Adopting employer trip reduction measures to reduce employee trips such as vanpool and carpool programs, providing end-of-trip facilities, and telecommuting programs including but not limited to measures that:

- i. Provide car-sharing, bike sharing, and ride-sharing programs;
- ii. Provide transit passes;
- iii. Shift single occupancy vehicle trips to carpooling or vanpooling, for example providing ride-matching services;
- iv. Provide incentives or subsidies that increase that use of modes other than single-occupancy vehicle;
- v. Provide on-site amenities at places of work, such as priority parking for carpools and vanpools, secure bike parking, and showers and locker rooms;
- vi. Provide employee transportation coordinators at employment sites;

vii.	Provide a guaranteed ride home service to users of non-auto modes.
i)	Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles, and provide adequate passenger loading and unloading for those vehicles;
j)	Land use siting and design measures that reduce GHG emissions, including: <ul style="list-style-type: none"> i. Developing on infill and brownfields sites; ii. Building compact and mixed-use developments near transit; iii. Retaining on-site mature trees and vegetation, and planting new canopy trees; iv. Measures that increase vehicle efficiency, encourage use of zero and low emissions vehicles, or reduce the carbon content of fuels, including constructing or encouraging construction of electric vehicle charging stations or neighborhood electric vehicle networks, or charging for electric bicycles; and v. Measures to reduce GHG emissions from solid waste management through encouraging solid waste recycling and reuse.
k)	Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities. The measures provided above are also intended to be applied in low income and minority communities as applicable and feasible.
m)	Encourage telecommuting and alternative work schedules, such as: <ul style="list-style-type: none"> i. Staggered starting times ii. Flexible schedules iii. Compressed work weeks
n)	Implement commute trip reduction marketing, such as: <ul style="list-style-type: none"> i. New employee orientation of trip reduction and alternative mode options ii. Event promotions iii. Publications
o)	Implement preferential parking permit program
p)	Implement school pool and bus programs
q)	Price workplace parking, such as: <ul style="list-style-type: none"> i. Explicitly charging for parking for its employees; ii. Implementing above market rate pricing; iii. Validating parking only for invited guests; iv. Not providing employee parking and transportation allowances; and v. Educating employees about available alternatives.

These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently, reduce emissions released during Project construction and operation. An EIR should be prepared to include all feasible mitigation measures, as well as include updated health risk and GHG analyses to ensure that the necessary mitigation measures are implemented to reduce emissions to below thresholds. The EIR should also demonstrate a commitment to the implementation of these measures prior to Project approval, to ensure that the Project's significant emissions are reduced to the maximum extent possible.

Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of

care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

Sincerely,

AERSCREEN 21112

3401 South La Cienega, Operation

3401 South La Cienega, Operation

----- DATA ENTRY VALIDATION -----

METRIC

ENGLISH

** AREADATA **

Emission Rate:	0.203E-02 g/s	0.161E-01 lb/hr
Area Height:	3.00 meters	9.84 feet
Area Source Length:	169.03 meters	554.56 feet
Area Source Width:	84.51 meters	277.26 feet
Vertical Dimension:	1.50 meters	4.92 feet
Model Mode:	URBAN	
Population:	3898747	
Dist to Ambient Air:	1.0 meters	3. feet

** BUILDING DATA **

No Building Downwash Parameters

** TERRAIN DATA **

No Terrain Elevations

Source Base Elevation: 0.0 meters 0.0 feet

Probe distance: 5000. meters 16404. feet

No flagpole receptors

No discrete receptors used

** FUMIGATION DATA **

No fumigation requested

** METEOROLOGY DATA **

Min/Max Temperature: 250.0 / 310.0 K -9.7 / 98.3 Deg F

Minimum Wind Speed: 0.5 m/s

Anemometer Height: 10.000 meters

Dominant Surface Profile: Urban

Dominant Climate Type: Average Moisture

Surface friction velocity (u*): not adjusted

DEBUG OPTION ON

AERSCREEN output file:

2022.02.08_Aerscreen_3401SouthLaCienega_Operations.out

*** AERSCREEN Run is Ready to Begin

No terrain used, AERMAP will not be run

SURFACE CHARACTERISTICS & MAKEMET

Obtaining surface characteristics...

Using AERMET seasonal surface characteristics for Urban with Average Moisture

Season	Albedo	Bo	zo
Winter	0.35	1.50	1.000
Spring	0.14	1.00	1.000
Summer	0.16	2.00	1.000
Autumn	0.18	2.00	1.000

Creating met files aerscreen_01_01.sfc & aerscreen_01_01.pfl

Creating met files aerscreen_02_01.sfc & aerscreen_02_01.pfl

Creating met files aerscreen_03_01.sfc & aerscreen_03_01.pfl

Creating met files aerscreen_04_01.sfc & aerscreen_04_01.pfl

Buildings and/or terrain present or rectangular area source, skipping probe

(949) 887-9013
mhagemann@swape.com

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

**Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nationwide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.

- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Paul Rosenfeld, Ph.D.

Principal Environmental Chemist

Chemical Fate and Transport & Air Dispersion Modeling

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., "The science for Perfluorinated Chemicals (PFAS): What makes remediation so hard?" Law Seminars International, (May 9-10, 2018) 800 Fifth Avenue, Suite 101 Seattle, WA.

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society*. Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P.** (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International*

Conferences on Soils Sediment and Water. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The 23rd *Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting*. Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition*. Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference*. Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference*. Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants..* Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conference*. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation*. Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest*. Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell*. Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest*. Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 5-14-2021
Trial, October 8-4-2021

In the Circuit Court of Cook County Illinois
Joseph Rafferty, Plaintiff vs. Consolidated Rail Corporation and National Railroad Passenger Corporation
d/b/a AMTRAK,
Case No.: No. 18-L-6845
Rosenfeld Deposition, 6-28-2021

In the United States District Court For the Northern District of Illinois
Theresa Romcoe, Plaintiff vs. Northeast Illinois Regional Commuter Railroad Corporation d/b/a METRA
Rail, Defendants
Case No.: No. 17-cv-8517
Rosenfeld Deposition, 5-25-2021

In the Superior Court of the State of Arizona In and For the Cunty of Maricopa
Mary Tryon et al., Plaintiff vs. The City of Pheonix v. Cox Cactus Farm, L.L.C., Utah Shelter Systems, Inc.
Case Number CV20127-094749
Rosenfeld Deposition: 5-7-2021

In the United States District Court for the Eastern District of Texas Beaumont Division
Robinson, Jeremy et al *Plaintiffs*, vs. CNA Insurance Company et al.
Case Number 1:17-cv-000508
Rosenfeld Deposition: 3-25-2021

In the Superior Court of the State of California, County of San Bernardino
Gary Garner, Personal Representative for the Estate of Melvin Garner vs. BNSF Railway Company.
Case No. 1720288
Rosenfeld Deposition 2-23-2021

In the Superior Court of the State of California, County of Los Angeles, Spring Street Courthouse
Benny M Rodriguez vs. Union Pacific Railroad, A Corporation, et al.
Case No. 18STCV01162
Rosenfeld Deposition 12-23-2020

In the Circuit Court of Jackson County, Missouri
Karen Cornwell, *Plaintiff*, vs. Marathon Petroleum, LP, *Defendant*.
Case No.: 1716-CV10006
Rosenfeld Deposition. 8-30-2019

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”
Defendant.
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case No.: 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No.: 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 019-L-2295
Rosenfeld Deposition, 8-23-2017

In United States District Court For The Southern District of Mississippi
Guy Manuel vs. The BP Exploration et al., Defendants
Case: No 1:19-cv-00315-RHW
Rosenfeld Deposition, 4-22-2020

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilbert, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action NO. 14-C-30000
Rosenfeld Deposition, June 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court for the Middle District of Alabama, Northern Division
James K. Benefield, et al., *Plaintiffs*, vs. International Paper Company, *Defendant*.
Civil Action Number 2:09-cv-232-WHA-TFM
Rosenfeld Deposition: July 2010, June 2011

In the Circuit Court of Jefferson County Alabama
Jaeonette Moss Anthony, et al., *Plaintiffs*, vs. Drummond Company Inc., et al., *Defendants*
Civil Action No. CV 2008-2076
Rosenfeld Deposition: September 2010

In the United States District Court, Western District Lafayette Division
Ackle et al., *Plaintiffs*, vs. Citgo Petroleum Corporation, et al., *Defendants*.
Case Number 2:07CV1052
Rosenfeld Deposition: July 2009

I. INTRODUCTION

A. PURPOSE OF A SUSTAINABLE COMMUNITIES ENVIRONMENTAL ASSESSMENT

The purpose of this Sustainable Communities Environmental Assessment (SCEA) is to evaluate the environmental effects of the proposed 3401 South La Cienega Project (Proposed Project) in accordance with the California Environmental Quality Act (CEQA). In addition, the SCEA evaluates the Proposed Project's consistency with the Southern California Association of Government's (SCAG's) Connect SoCal 2020-2045 Regional Transportation Plan / Sustainable Communities Strategy (2020-2045 RTP/SCS) adopted in September 2020, and incorporates the feasible mitigation measures, performance standards, and/or criteria from the West Adams – Baldwin Hills – Leimert Park Community Plan Environmental Impact Report (EIR) into the Proposed Project.

The SCEA form of CEQA documentation was established by Senate Bill 375 (SB 375) to provide streamlined environmental review for certain "Transit Priority Projects." SB 375 (Public Resources Code [PRC] § 21155[b]) defines Transit Priority Projects (TPPs) as projects that shall:

- (1) contain at least 50% residential use, based on total building square footage and, if the project contains between 26% and 50% nonresidential uses, a floor area ratio of not less than 0.75;
- (2) provide a minimum net density of at least 20 dwelling units per acre; and
- (3) be within one-half mile of a major transit stop or high-quality transit corridor included in a regional transportation plan. A major transit stop is defined in § 21064.3, except that, for purposes of this section, it also includes major transit stops that are included in the applicable regional transportation plan. For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours. A project shall be considered to be within one-half mile of a major transit stop or high-quality transit corridor if all parcels within the project have no more than 25% of their area farther than one-half mile from the stop or corridor and if not more than 10% of the residential units or 100 units, whichever is less, in the project are farther than one-half mile from the stop or corridor.

See **Chapter III, SCEA Assessment Eligibility**, for a discussion of the Proposed Project's consistency with the criteria listed above.

The intent of the CEQA streamlining provisions is not to undercut or circumvent CEQA requirements, but rather to reduce documentation and redundancy and to provide an incentive for TPPs that are consistent with a larger effort to reduce greenhouse gas (GHG) emissions by integrating transportation and land use planning.

A SCEA is comparable to an Initial Study / Mitigated Negative Declaration (IS/MND) since the lead agency must find that all potentially significant impacts of a project have been identified, adequately analyzed, and mitigated to a level of insignificance. However, unlike a IS/MND, the SCEA need not consider the cumulative effects of the project that have been adequately addressed and mitigated in prior environmental review, in this case the SCAG Connect SoCal RTP/SCS EIR, certified in May 2020, and the West Adams – Baldwin Hills – Leimert Community Plan EIR, which was certified in May 2016.¹ Also, growth-inducing impacts are not required to be referenced, described, or addressed and project specific or cumulative impacts from cars and light duty truck trips on global warming or the regional transportation network need not be referenced, described, or discussed.

B. PROJECT SUMMARY

La Cienega Owner LLC (Applicant) proposes to develop the Proposed Project on an approximately 153,608 square foot (3.53 acre) site (Project Site) located within the West Adams-Baldwin Hills-Leimert Community Plan Area within the City of Los Angeles. The Proposed Project is located at 3401 South La Cienega Boulevard Assessor's Parcel Number (APN) 420-503-2001.

The Project Site is bound by the Los Angeles County Metropolitan Transportation Authority Metro E Line (Expo) to the north and existing office buildings and open space to the west. South La Cienega Boulevard lies to the east of the Project Site. Corbett Street and the single-story See's Candies factory lies directly to the south. The Project Site is currently improved with a self-storage facility and associated surface parking. The Proposed Project would demolish the existing structures.

1 SCAG Connect SoCal RTP/SCS Program EIR available at: <https://scag.ca.gov/peir>
West Adams – Baldwin Hills – Leimert Community Plan EIR available at:
<https://planning.lacity.org/eir/westadams/westAdamsCoverPg.html>

The Project proposes a new 460,824 square-foot (sf) mixed-use residential and commercial development, including one residential building and one commercial building. The approximately 230,412 sf residential building contains 260 residential rental units; 22 units of which are reserved for very low-income households, and 7 units of which are reserved for workforce housing. The approximately 230,412 sf commercial building includes 2,869 sf of ground floor retail. The Proposed Project's residential building and commercial building would be 149' 6" and 92' in height, respectively. The residential building would include 26 studio units, 143 one-bedroom units, 78 two-bedroom units, and 13 three-bedroom units with affordable units mixed among them.

Up to 785 parking spaces would be provided in two levels of subterranean parking, including EV parking. In accordance with the Los Angeles Municipal Code (LAMC), the Proposed Project would provide 222 bicycle spaces in the structure parking (36 short term bicycle spaces and 186 long-term bicycle spaces).

Open space areas and amenities for residents include an outdoor wellness garden, outdoor lounge and barbeque area, pool, and spa. The Proposed Project also proposes 34,214 sf of publicly accessible open space on the ground.

C. STATUTORY BACKGROUND

The Sustainable Communities and Climate Protection Act of 2008 amended the CEQA regulations to add Chapter 4.2, Implementation of the Sustainable Communities Strategy (PRC § 21155), which provides a CEQA exemption for Sustainable Community Projects and streamlined CEQA analysis for TPPs.

One such streamlining provision is the SCEA, the provisions of which are specified primarily in PRC § 21155.2. Section 21155.2(a) states that if a TPP incorporates all feasible mitigation measures, performance standards, or criteria set forth in prior applicable environmental impact reports and adopted findings made pursuant to PRC § 21081, then a TPP shall be eligible for a SCEA. For a detailed analysis of the Proposed Project's compliance with SCEA statutory requirements, see **Chapter III, SCEA Eligibility**, section of this document.

D. ORGANIZATION OF THE SCEA

This SCEA is organized into seven sections as follows:

- I. **Introduction.** This section (above) provides introductory information summarizing the key elements of the Sustainable Communities and Climate Protection Act and the associated SCEA, as well as information about the Proposed Project.
- II. **Project Description.** This section contains a detailed project description, contact information, existing and proposed general plan land use and zoning information, description of surrounding land uses, project objectives, and a summary of required approvals.
- III. **SCEA Eligibility.** This section analyzes the Proposed Project's consistency with the TPP Criteria and SCAG's Connect SoCal (2020-2045 RTP/SCS) goals and policies and identifies applicable mitigation measures from previously prepared and certified EIRs.
- IV. **SCEA Checklist.** This section contains the completed SCEA Checklist showing the significance level under each environmental impact category. Each environmental issue identified in the SCEA Checklist contains an assessment and discussion of impacts associated with each subject area. When the evaluation identifies potentially significant effects, mitigation measures are provided to reduce such impacts to a less than significant level.
- V. **List of Preparers.** This section provides a list of City personnel, other governmental agencies, and consultant team members that participated in the preparation of the SCEA.
- VI. **References.** This section provides references for the sources of information cited in the SCEA.
- VII. **Appendices.** Includes various documents, technical reports, and information used in the SCEA.

II. PROJECT DESCRIPTION

A. Introduction

La Cienega Owner LLC (Applicant) proposes to develop the approximately 153,608 square-foot (3.53 acre) site (Project Site) located within the West Adams-Baldwin Hills-Leimert Community Plan Area within the City of Los Angeles. The Proposed Project is located at 3401 South La Cienega Boulevard, Los Angeles, California 90016, Assessor's Parcel Number (APN) 4205-032-001.

The Project proposes a new 460,824 sf mixed-use residential and commercial development, including one Residential Building and one Commercial Building. The approximately 230,412 sf Residential Building contains 260 residential units for rent; 22 units are reserved for "very low income" households and 7 units are reserved for workforce housing. The approximately 230,412 sf Commercial Building includes 2,869 sf of ground floor retail. Currently, the Project Site contains nine single-story masonry structures that serve as a self-storage facility, which the Applicant proposes to demolish to construct the Proposed Project.

The Project Site is centrally located in the West Adams neighborhood at the intersection of South La Cienega Boulevard and Jefferson Boulevard, adjacent to the Metro E (Expo) Line tracks along Jefferson Boulevard and the La Cienega / Jefferson Metro Station.

The Project proposes up to 785 parking spaces, including 130 residential and 242 commercial parking spaces. The 413 remaining spaces would be unassigned and available for residential or commercial uses. Most of the spaces would be provided in a two-level subterranean parking structure with the at-grade parking screened from public view. The Proposed Project would provide 222 bicycle spaces in the underground structure (36 short term bicycle spaces and 186 long-term bicycle spaces).

Open space areas and amenities would be provided for residents including an outdoor wellness garden, lounge, barbeque area, pool, and spa. Approximately 34,214 sf of publicly accessible open space would be provided on the ground floor.

B. Project Location And Surrounding Uses

The Project Site is a flag shaped lot bound by a Metro owned right-of-way for the E Line and a bicycle path to the north, South La Cienega Boulevard to the east, Corbett Street

(a private street) and a single-story See's Candies factory to the south. The Project Site is served by a network of regional transportation facilities providing connectivity to the greater Los Angeles County (see **Figure II-1, Regional and Project Vicinity Map**). Regional access to the Project Site is provided by Interstate 10 (I-10), approximately 0.6 mile to the north. South La Cienega Boulevard and West Jefferson Boulevard both serve as major thoroughfares.

The elevated Metro E Line runs directly north of the Project Site parallel to West Jefferson Boulevard, with the La Cienega / Jefferson Metro Station at the south side of the intersection between West Jefferson and South La Cienega Boulevards. The La Cienega / Jefferson Metro Station is located less than 100 feet to the north and provides direct access to the City of Santa Monica to the west and downtown Los Angeles to the east. The E Line also provides a link to Union Station. Union Station provides access to most of the region's rail and bus lines, linking to major job centers throughout Los Angeles County. The E Line connects with both the B Line, which provides access to Hollywood, and the Gold Line which provides access to the City of Pasadena and areas east of the Project Site. The E Line runs approximately every 10 to 20 minutes depending on direction and time of day.

The Metro Bus system provides local service along South La Cienega Boulevard. Bus Route 105 travels north/south along South La Cienega Boulevard with a stop at South La Cienega Boulevard directly in front of the Project Site. Additional bus lines include Bus Route 217 traveling north/south along South La Cienega Boulevard, and Bus Route 38 provides additional service east/west along Jefferson Boulevard. The Project Site's northern property line also abuts an existing bicycle path along Jefferson Boulevard that connects directly to the Ballona Creek Bike Path, which constitutes part of the Los Angeles County Park to Playa Trail that links numerous public recreational opportunities including Kenneth Hahn State Recreational Area, Baldwin Hills Scenic Overlook, Culver Park, and the Pacific Ocean.

As shown in **Figure II-2, Aerial View of the Project Site**, the Project Site is in a highly urbanized location surrounded by a mix of land uses, including commercial, residential, industrial, and office. Immediately north of the Project Site is a Metro right-of-way for the E Line tracks and bicycle path. The Metro property runs along Jefferson Boulevard for the length of the Project Site and the La Cienega / Jefferson Metro Station is located abutting the Project Site's northeast corner. Across Jefferson Boulevard to the north, is the "Cumulus Project" that, once completed, will have a 320-foot-tall high-rise building and a 110-foot-tall podium building with multifamily residential, commercial, and retail uses (with 1,200+ units). To the east of the Project Site across South La Cienega Boulevard is a five-level parking structure serving as parking for Metro patrons. South of the Project Site

along South La Cienega Boulevard is a single-story Sees' Candies factory. To the west of the Property is a 16-story office building (currently under construction) known as the "(W)rapper."

C. Site Background and Existing Site Conditions

Located on the Project Site are nine single-story masonry structures in use as a privately owned Public Storage self-storage facility. Two of the buildings were constructed in 1946, and the remaining seven were constructed approximately in 1977. Photographs of the Project Site are provided in **Figure II-3, Photographs of the Project Site**. As further described in this document, none of the existing buildings on the Project Site constitute a historical resource under CEQA.

Existing landscaping on the Project Site is limited and consists of two non-native and non-protected trees. No street trees are located on the Project Site. The two onsite existing trees are both Pine species with a trunk diameter of less than 8 inches. The Proposed Project would remove the existing trees and replace the trees in accordance with City requirements. The City of Los Angeles requires 1 tree per every 4 units for a total of 65 required trees. The Proposed Project will add 82 trees (an excess of 17 above the requirement) including three street trees for a net increase of 80 trees. Anticipated trees to be planted include *Olea europaea* (Swan Hill Fruitless Olive), *Prosopis* (Phoenix Mesquite), *Acacia willardiana* (Palo Blanco), and *Rhopalostylus sapida* (Nikau Palm). Any street trees will be planted in accordance with Los Angeles Department of Urban Forestry. The street trees will be subject to replacement requirements to the satisfaction of the Department of Public Works, Urban Forestry Division.

D. Planning and Zoning

The Project Site is within the City of Los Angeles West Adams-Baldwin Hills-Leimert Community Plan Area and is designated as Hybrid Industrial which corresponds to the Property's zoning of Commercial Manufacturing within a Community Plan Implementation Overlay [CM-2D-CPIO]. CM permits manufacturing and industrial establishments, while the CPIO allows zoning to implement policy goals and objectives associated with a Community Plan and further regulate different aspects of proposed projects. The CPIO applies to the West Adams–Baldwin Hills–Leimert Community Plan Area as part of the Jefferson/La Cienega-Expo Line Transit Oriented Development (TOD) subarea. This subarea identifies specific blocks surrounding the Metro Expo Line of the La Cienega/Jefferson Station, and provides specific use limitations, development standards, and streetscape guidelines for projects to facilitate TOD. The subarea also identifies

parcels where a range of development heights and intensities are permitted.¹ The Project Site is located within the Council District 10 and the West Adams Neighborhood Council.²

The Proposed Project is located within the Los Angeles State Enterprise Zone (ZI-2374). In 2008, the City of Los Angeles adopted an ordinance amending Sections 12.22, 12.24, 14, and 19.01 of the LAMC to implement a Density Bonus Ordinance as mandated by State law. This ordinance creates affordable housing incentives by allowing developers to build more housing units than is otherwise allowed so long as a project includes affordable or senior housing units.³ This ordinance helps meet the State's goal in providing more affordable housing through California's Density Bonus Law and is consistent with the City's General Plan policies (see **Section IV-11, Land Use and Planning**).

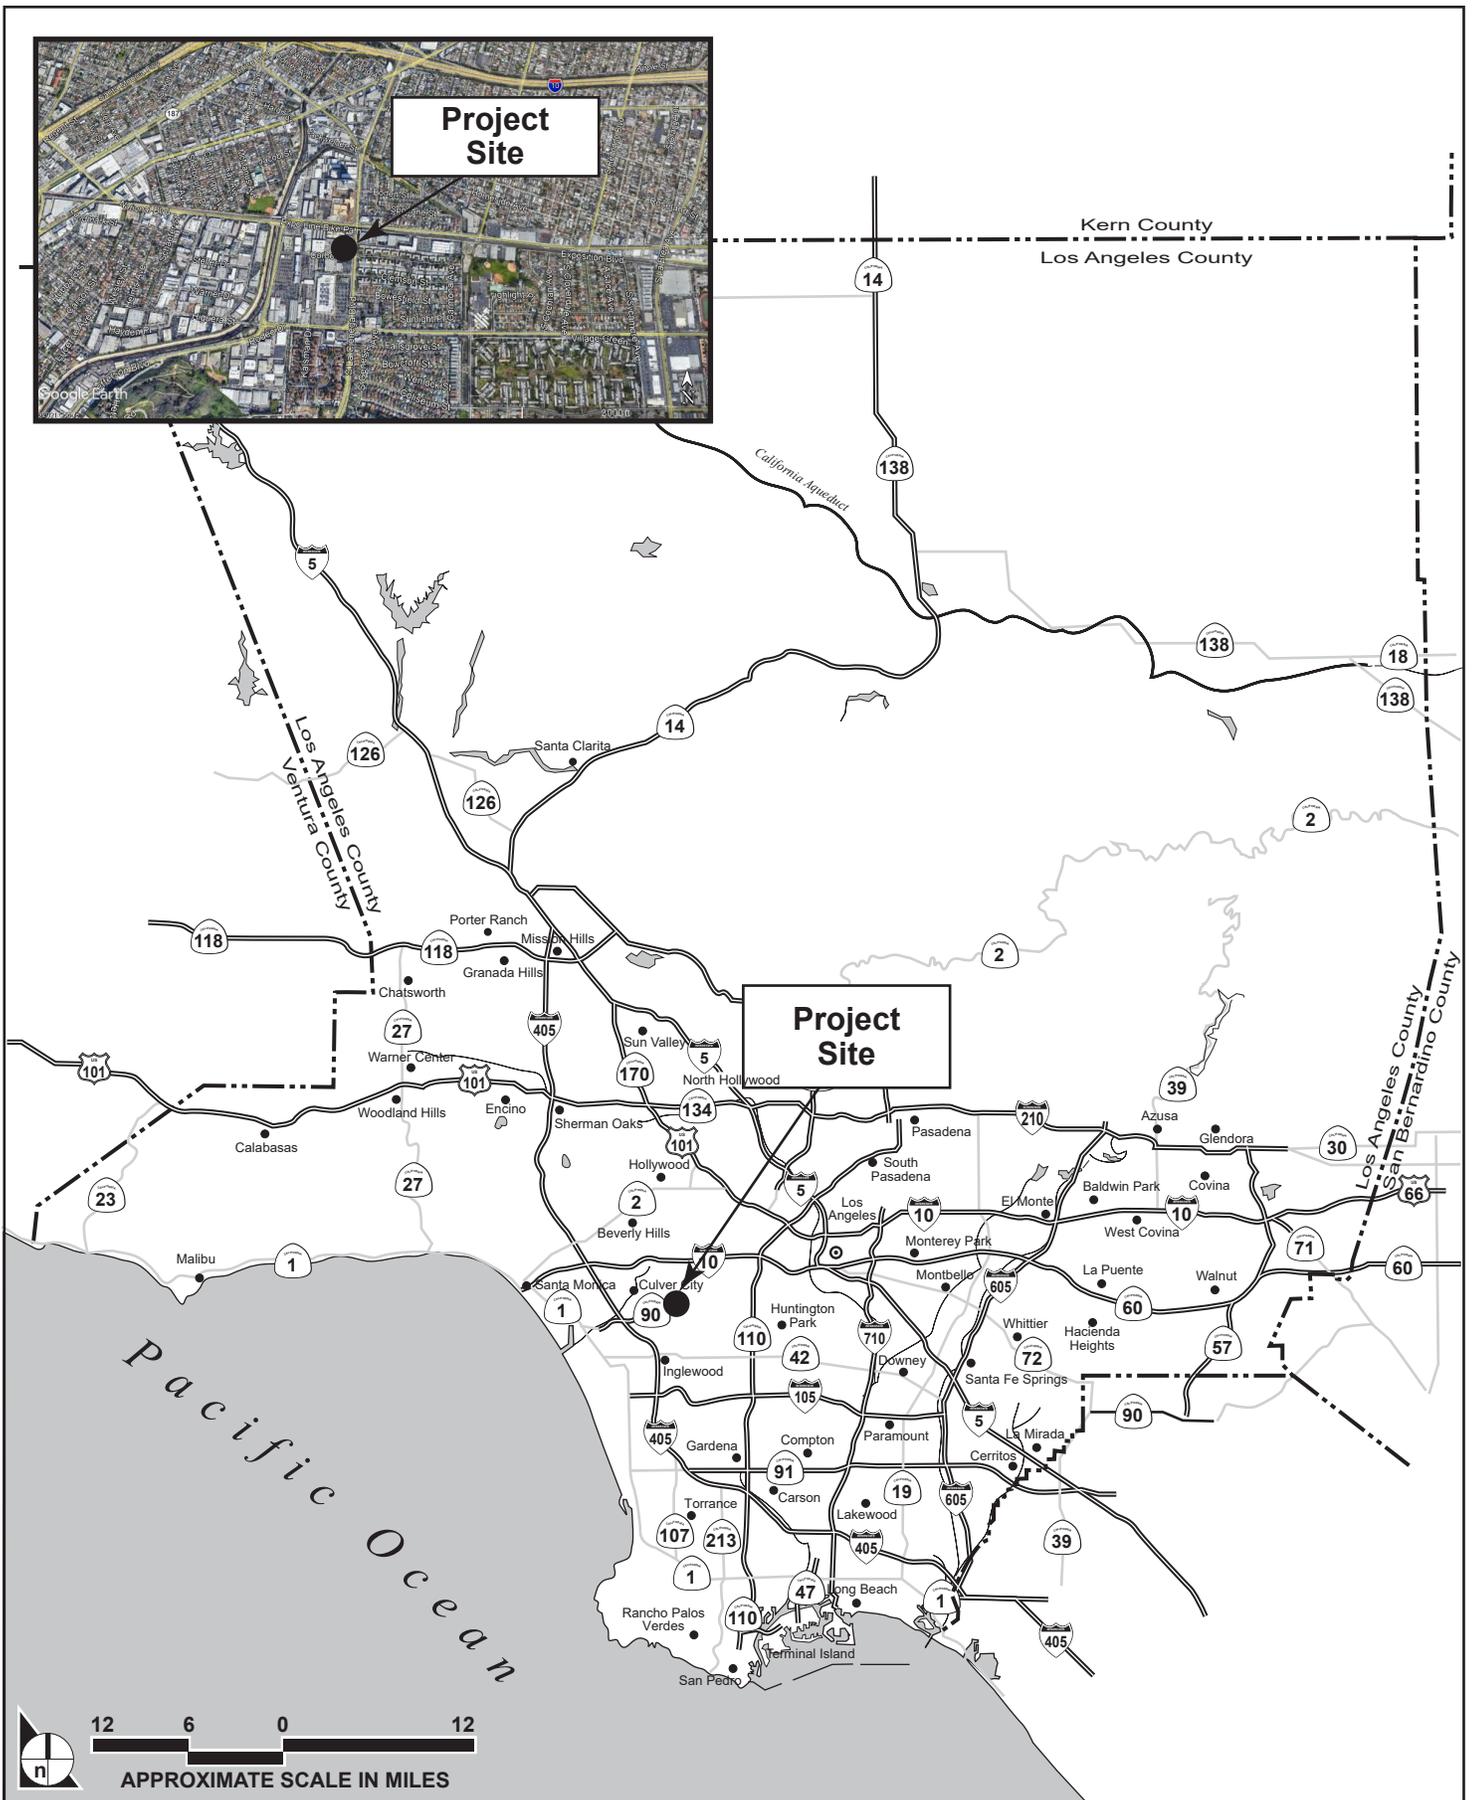

In accordance with the LAMC, the minimum lot area per dwelling unit in the CM zone is 800 sf. Therefore, the maximum permitted residential density is 192 units (153,608 sf/800 sf). The Applicant intends to set aside 11% (22 units) of the base maximum density (192) as "very low income" restricted affordable units. Accordingly, the Proposed Project qualifies for a density bonus of up to 35%, which would allow for the 260 units that the Applicant proposes. The Applicant also proposed to set aside 4% (7 units) of the Proposed Project's base units for workforce housing.⁴

1 West Adams-Baldwin Hills-Leimert Community Plan Implementation Overlay, Ordinance No. 184794, effective April 19, 2017, amended August 25, 2019. <https://planning.lacity.org/odocument/2734c47b-7178-4d3e-b38b-aa56a50cdb2c/wadcpio-TOCversion.pdf>

E. Project Characteristics

The Proposed Project would demolish the nine existing buildings on the Project Site and construct a fully integrated mixed-use development. As described in more detail below, residential uses would include approximately 230,412 sf of floor area and 260 units in a 149'-6"-tall Residential Building up to 13 stories high on the western portion of the Project Site. The 92-foot-tall Commercial Building (office and ground floor retail) would include 230,412 sf of floor area up to six stories high on the eastern end of the Project Site. Both buildings would be adjacent to each other on the same parcel and connected by pedestrian and commercial plazas on the ground floor with a floor area ratio (FAR) of 3:1. The proposed uses are summarized in **Table II-1, Project Summary**. The overall site plan is provided in **Figure II-4, Project Site Plan**. Floor plans for each of the levels are provided in **Figure II-5** through **Figure II-19**. Proposed Project elevations are provided in **Figure II-20** and **Figure II-21**.

**Table II-1
Project Summary**

Total Lot Area	153,608 square feet (sf) (3.53 acres)
Floor Area Ratio (FAR)	3:1
Total Permitted Density	460,824 sf
Required Residential Open Space (Per LAMC 12.21-G.2)	28,925 sf
Total Floor Area	460,824 sf
Residential Floor Area	230,412 sf
Office Floor Area	227,543 sf
Retail Floor Area	2,869 sf
Total Residential	260 units
Studio	26 units
One Bedroom	143 units
Two Bedroom	78 units
Three Bedroom	13 units
Total Publicly Accessible Open Space	34,214 sf
Usable Open Space (Per LAMC 12.21-G)	28,925 sf
Additional Exterior Common Open Space ⁵	22,836 sf
Total Provided Trees	82
Level 1 Trees – Right of Way	3
Level 1 Trees – Onsite, Ground Floor	57
Level 2 Trees – Amenity Deck	22

⁵ Open Space that is provided in addition to the "Usable Open Space," which is the open space required under LAMC.

Residential Uses

The Residential Building will be located on the western portion of the Project Site and contain 260 residential units. 11% (22 units) of the base units (192) will be restricted at “very low income” levels and 4% (7 units) of the base units (192) will be restricted to workforce housing.⁶ This building will have 26 studios, 143 one-bedroom units, 78 two-bedroom units, and 13 three-bedroom units. The Residential Building will contain various residential amenities for the use of the residents and their guests, such as a ground floor lobby, package room, mail room, bicycle storage with bicycle repair equipment, wellness room, lounge, club room, and amenity decks.

The Residential Building’s third level Amenity Deck will offer outdoor activities and spaces, including a lounge space, swimming pool, and communal dining area. The Residential Building will also include a rooftop Amenity Deck with a lounge area and hot tub.

Private open space (800 sf) will be provided in balconies and terraces for various residential units which would comply with the requirements of LAMC § 12.21-G. In addition to the 800 sf of terrace space that qualifies for Private Open Space under LAMC § 12.21-G, the Proposed Project will also feature an additional 14,147 sf of private balcony and terrace space for the residents of the entire building.

Commercial Uses

The Commercial Building will be located on the eastern portion of the Project Site. The 2,869-sf ground floor retail (“Retail Space”), (most likely food and beverage) will be located at the northeast corner of the Commercial Building, visible from the Metro station. The Commercial Building will also include easily accessible ground floor end-of-trip facilities to encourage bicycle and pedestrian commuting which may include lockers, showers, and bicycle storage with bicycle repair equipment.

The Commercial Building will feature a ground floor lobby extending through the center of the building providing a direct physical and visual access to both the Crossings Plaza (discussed below) at the Project Site’s northeast corner and a vehicular drop-off area southwest of the Commercial Building. The Commercial Building will also feature external stairs and pathways to promote walkability and external access between the office levels.

⁶ The rents for the workforce housing shall be restricted at 150% of Area Median Income pursuant to Los Angeles Housing & Community Investment Department’s Land Use Schedule 1.

Ground Level Concept

As shown in **Figure II-22, Composite Plan**, the Proposed Project will have nearly one acre of ground level landscaping, open space, and interactive features to activate the ground floor, encourage bicycle and transit use, and enhance the pedestrian experience. A series of walkways loop through the Project Site to connect building lobbies, landscaping, and plazas throughout the Project Site. The ground floor design aims to connect users to the outdoor plazas and squares as well as the surrounding neighborhood. Due to its ideal location abutting the La Cienega / Jefferson Metro station, and existing bicycle path along Jefferson Boulevard, the Proposed Project capitalizes on this opportunity to enhance the existing Metro station and bicycle path with the addition of a outdoor plaza directly connecting those public features to the Proposed Project and the community.

Key components of the ground level program include:

- **The Crossings Plaza:** A public space will be located on the northeast corner of the Project Site. The plaza's landscaping will screen the Proposed Project from South La Cienega Boulevard while connecting the Proposed Project's open spaces with the bicycle path, Metro station, and surrounding neighborhood.
- **Cienega Square:** A landscaped plaza will be located at the heart of the Proposed Project between the two buildings and stretch parallel to the bicycle path. This area enhances the cyclist and pedestrian experience with opportunities for bicycle and pedestrian infrastructure; landscaping; and public art that leverages the adjacency to the bike path along the north end of the site. It will feature both fixed and moveable seating elements, reinforced turf, and a lawn expanse.
- **Connected Levels:** Each buildings' respective lobbies have direct visual and physical links to the upper-level amenity decks and terraces.
- **Emphasis on Bicycle Travel:** The Proposed Project will have bicycle access and bicycle parking that is highly visible and accessible from the existing bicycle path and other public open spaces. The Proposed Project will also provide end-of-trip facilities to encourage bicycle commuting, including bicycle storage with bicycle repair equipment, lockers, and showers.
- **Neighborhood Serving Retail:** 2,869 sf of ground floor retail, most likely food and beverage, located at the northeast corner of the Commercial Building will welcome residents, Metro users, and passersby into the Crossings Plaza.

- **Primarily Subterranean Parking:** A limited number of parking spaces are at or above grade, minimizing their visibility from the Metro station and the pedestrian areas.

Open Space

Publicly Accessible Open Space

Projects on a lot size equal to or greater than 15,000 sf are encouraged to maintain at least 20% open space as publicly accessible. Twenty percent of the Project Site is 30,721.6 sf. The Project proposes 34,214 sf of publicly accessible open space on the ground floor (as well as 1,350 SF for a dog relief area for residents, and 1,250 SF office amenity cowork patio, but these areas will not be open to the general public), and therefore provides open space in excess of the requirement.

Residential Open Space

The Proposed Project would be required to comply with LAMC § 12.21-G and provide residents with Usable Open Space based on the number and type of units. Usable open space may consist of Private Open Space or Common Open Space, as defined in LAMC § 12.21-G.

To fulfill the open space requirement, the Proposed Project will provide 800 sf of Private Open Space in the form of terraces for various residential units, 14,147 sf of Common Open Space on the 3rd level Amenity Deck, and 13,978 sf of Common Open Space on the ground floor. The 3rd level Amenity Deck will include a lounge space, swimming pool, and communal dining area. This would fulfill the LAMC § 12.21-G requirement and provide 28,925 sf of Usable Open Space for residents.

In addition to the Private and Common Open Space satisfying the requirements of LAMC, the Proposed Project will include an additional 22,836 sf of open space on the ground floor that will be accessible by Proposed Project's residents. The Proposed Project will also include a rooftop amenity deck, the sf of which will be determined later. In addition to the 800 sf of terrace space, the Proposed Project will also include approximately 14,147 sf of other balcony and terrace space for the residents.

Access and Circulation

Vehicular access will be provided via South La Cienega Boulevard on the south side of the Proposed Project's buildings to accommodate above grade parking, access to the subterranean parking structure, pick up and drop areas, and loading spaces. A second point of egress is located along Corbett Street, which is a private street south of the

Project Site that feeds into South La Cienega Boulevard.

Automobile Parking

The Proposed Project proposes to provide up to 785 automobile parking spaces on-site, the majority of which will be within two levels of subterranean parking. The few above grade parking stalls will be screened from the pedestrian and bicycle activated open space areas north of the buildings. Although LAMC would require 907 parking spaces for the Proposed Project, the Proposed Project is within the West Adams CPIO which limits parking to 50% of the LAMC minimum requirement. The Proposed Project's entitlements include a development incentive under the Density Bonus Law that allows the Proposed Project's parking to exceed the West Adams CPIO. The 785 parking stalls proposed for the Proposed Project is under the number of stalls the LAMC would require for the Proposed Project in the absence of the West Adams CPIO's 50% cap. The following outlines the applicable parking standards and policies for the Proposed Project's residential and commercial uses.

- **Residential Parking:** Under the Density Bonus Law, required parking includes 0.5 parking stalls for each residential unit.⁷ As such, 130 spaces of the 785 spaces would be allocated exclusively for residential use.
- **Commercial Parking:** LAMC requires a parking ratio of two spaces per 1,000 gross square feet of retail, restaurant, and other commercial uses. As such, 242 spaces of the 785 spaces would be allocated exclusively for commercial uses.
- **Unbundled Parking:** The remaining 413 spaces of the 785 spaces would be unassigned and could be used for either commercial or residential uses. The intent would be to utilize these spaces to respond to user demand which may fluctuate throughout the day or over the Proposed Project's life, allowing for an efficient timeshare of the spaces. Such uses may include additional parking for the office and retail tenants, for the residential, or for offsite third party uses such as other businesses in the vicinity.

Bicycle Parking

Pursuant to LAMC Section 12.21-A.16, the Proposed Project would be required to provide a minimum of 222 bicycle parking spaces. The Proposed Project would be required to supply 23 short-term and 46 long-term bicycle parking spaces for commercial uses, for a total of 69 bicycle parking spaces. The proposed residential units would require 13 short-

⁷ California Government Code § 65915(p)(2)(A), as modified by Assembly Bill 2345 (Gonzalez)

term bicycle parking spaces and 140 long-term bicycle parking. The Proposed Project would meet these requirements and would provide 222 bicycle parking spaces (153 spaces for residential uses and 69 spaces for commercial uses)

The parking requirements for automobiles and bicycles are summarized in **Table II-2, Parking Summary**.

**Table II-2
Parking Summary**

Residential Parking Summary					
Building Units	No. of Units	Parking Spaces per Unit (Density Bonus Law)	Minimum Required (LAMC)	Required (Density Bonus Law)	Proposed Project Spaces
Studios	26	0.5	26	13	13
1 Bedroom	143	0.5	214.5	71.5	71.5
2 Bedroom	78	0.5	156	39	39
3 Bedroom	13	0.5	26	6.5	6.5
Total Residential Parking Spaces	260	0.5	423 (422.5)	130	130
Commercial Parking Summary					
Commercial Building	Square Feet (SF)	Spaces per 1,000 SF	Minimum Required (LAMC)	Required (CPIO)	Proposed Project Spaces
Office Use	227,543	2	455 min.	228 max (227.5)	228
Retail Use	2,869	10	29 min.	14 max	14
Total	230,412		484 min.	242 max.	242
Additional Unbundled Parking			Required (LAMC)	Required (CPIO)	
Unbundled			-	-	413
Total Overall Parking Spaces					785
Bicycle Parking Summary					
Land Use	Size		Bicycle Spaces		
Residential	260 units		13 Short Term 140 Long Term		
Office/Retail	230,412 SF		23 Short Term 46 Long Term		
Total			36 Short Term 186 Long Term		

Lighting and Signage

New lighting would include building identification, commercial accent lighting, wayfinding, balcony lighting, and security lighting. Pedestrian areas including pathways and entryways into the Project Site would be well-lit for security and ground-mounted. Light fixtures would be shielded and directed towards the areas to be lit and away from adjacent light-sensitive residential land uses.

Building identification signage for the ground level commercial use would be visible from La Cienega Boulevard. The building would also include street address and identification/wayfinding signage for the vehicular and pedestrian entries to the building. Lighting would be designed in conformance with LAMC requirements and would not exceed the footcandle light intensity level required at the property line of the nearest sensitive receptor.

Security

Design Out Crime/Crime Prevention through Environmental Design. Through the City's land use and building permit process, the LAPD's Crime Prevention Unit provides guidance on design techniques for new developments to incorporate crime prevention into the development design. The techniques and process are outlined in the Design Out Crime Guidelines: Crime Prevention Through Environmental Design, and include the following basic concepts:

- **Natural surveillance:** The placement of physical features, activities, and people in a way that maximizes visibility.
- **Natural access control:** Restricting or encouraging people to come into a space through the placement of entrances, exits, fencing, landscaping, and lighting.
- **Territorial reinforcement:** The use of physical attributes to define ownership and separate public and private space.

The Proposed Project would include installation of security and fire sprinkler alarm systems that would be connected to a UL (Underwriters Laboratories Inc.) listed 24-hour monitoring station and local police and/or fire departments.

Closed circuit television (CCTV) cameras would be mounted on the building exteriors, in the various residential lobbies at plaza level and throughout all levels of the parking garage that would record activity on the property at all times. The cameras would also be connected to a computer screen in the main lobby at the daytime concierge desk.

Green Building and Sustainability

Energy saving and sustainable design would be incorporated throughout the Proposed Project. The Proposed Project would be designed to meet Cal Green and Title 24 Building Standards Code (CALGreen Code). The Proposed Project's infill location would promote the concentration of development in an urban location with extensive infrastructure. The Proposed Project's proximity to public transportation and services would aid in reducing vehicle miles traveled (VMT) for residents and employees.

In order to promote sustainability, this Proposed Project would be aligned with Americas Residential Partnership's Responsible Property Investment Strategy & Roadmap to Net Zero Carbon. To achieve that goal, the multifamily building would incorporate:

- Net Zero Carbon from 2020 for Scope 1 & 2 in construction, and Scope 1, 2 & 3 in operation⁸
- Leadership in Energy and Environmental Design (LEED) Gold minimum
- Operational performance rating, such as FitWel

The Commercial Building is targeting:

- Net Zero Carbon from 2025 for Scope 1 & 2
- Absolute Zero by 2040 for Scopes 1, 2 & 3
- Leadership in Energy and Environmental Design (LEED) Gold minimum
- Operational performance rating, such as FitWel

Strategies that support these targets and that are proposed for the Proposed Project include:

- Designing for energy and water efficiency as a priority
- Both buildings will be entirely electric buildings (no natural gas in either building)
- ENERGY STAR Appliances

⁸ Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers.

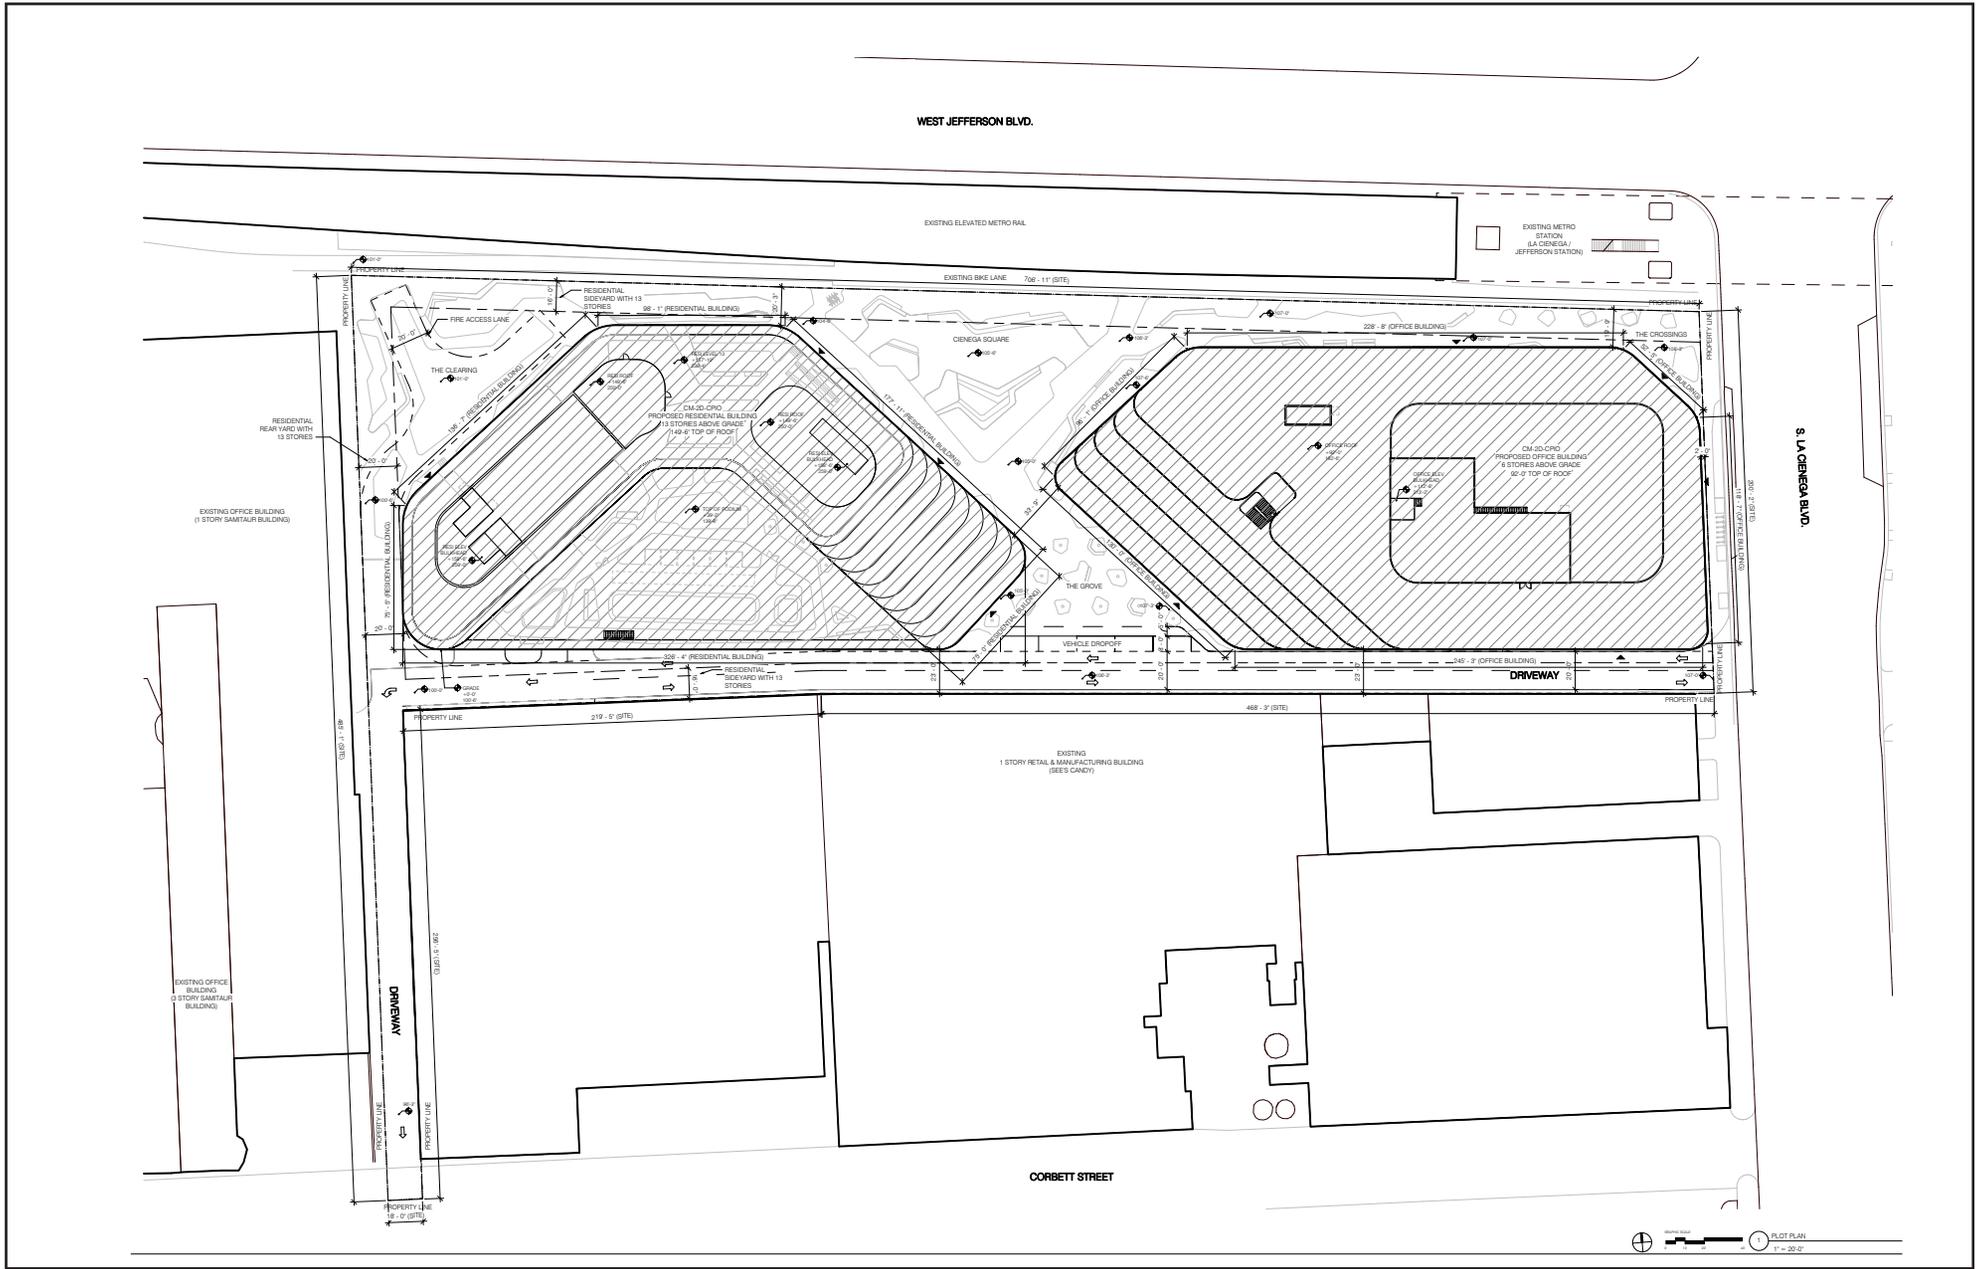

- LED lighting
- Intend to purchase 100% green power from the LADWP grid
- Variable Air Volume — HVAC (heating, ventilation, and air conditioning) system in the commercial building with MERV 15 filter + recycles outdoor air
- 100 Electric Vehicle parking spaces
- Exploring on-site Photovoltaic (PV) & battery storage
- Bike showers, lockers, and storage
- Rain water collection cistern (approximately 80,000 – 90,000 gallons) for stormwater management and reuse of water in landscaping on site
- Use of permeable paving where feasible
- Use of drought tolerant plants for landscaping
- Undertaking a Life Cycle Assessment of embodied carbon in materials to engage supply chain in achieving lower carbon material substitutions
- Construction waste diversion
- Use of low carbon concrete and rebar construction materials where feasible

The buildings will be sustainably designed to meet and/or exceed all City of Los Angeles current building code and Title 24 requirements. As such, the Proposed Project will incorporate eco-friendly building materials, systems, and features wherever feasible, including Energy Star appliances, water saving/low flow fixtures, non-volatile organic compound (VOC) paints/adhesives, drought tolerant planting, and high-performance building envelopment.

Project Construction

The Proposed Project is anticipated to be constructed over a period of approximately 31 months, with completion anticipated in mid-2025. Demolition would begin in January of 2023 for a duration of 2 months. Grading would begin in March of 2023 and last for a period of 6.5 months. Paving would begin in September of 2023 and last 5 months. Building construction would then begin in February of 2024 and last for a period of 12 months. Painting would then begin in February of 2025, finishing in 6 months.

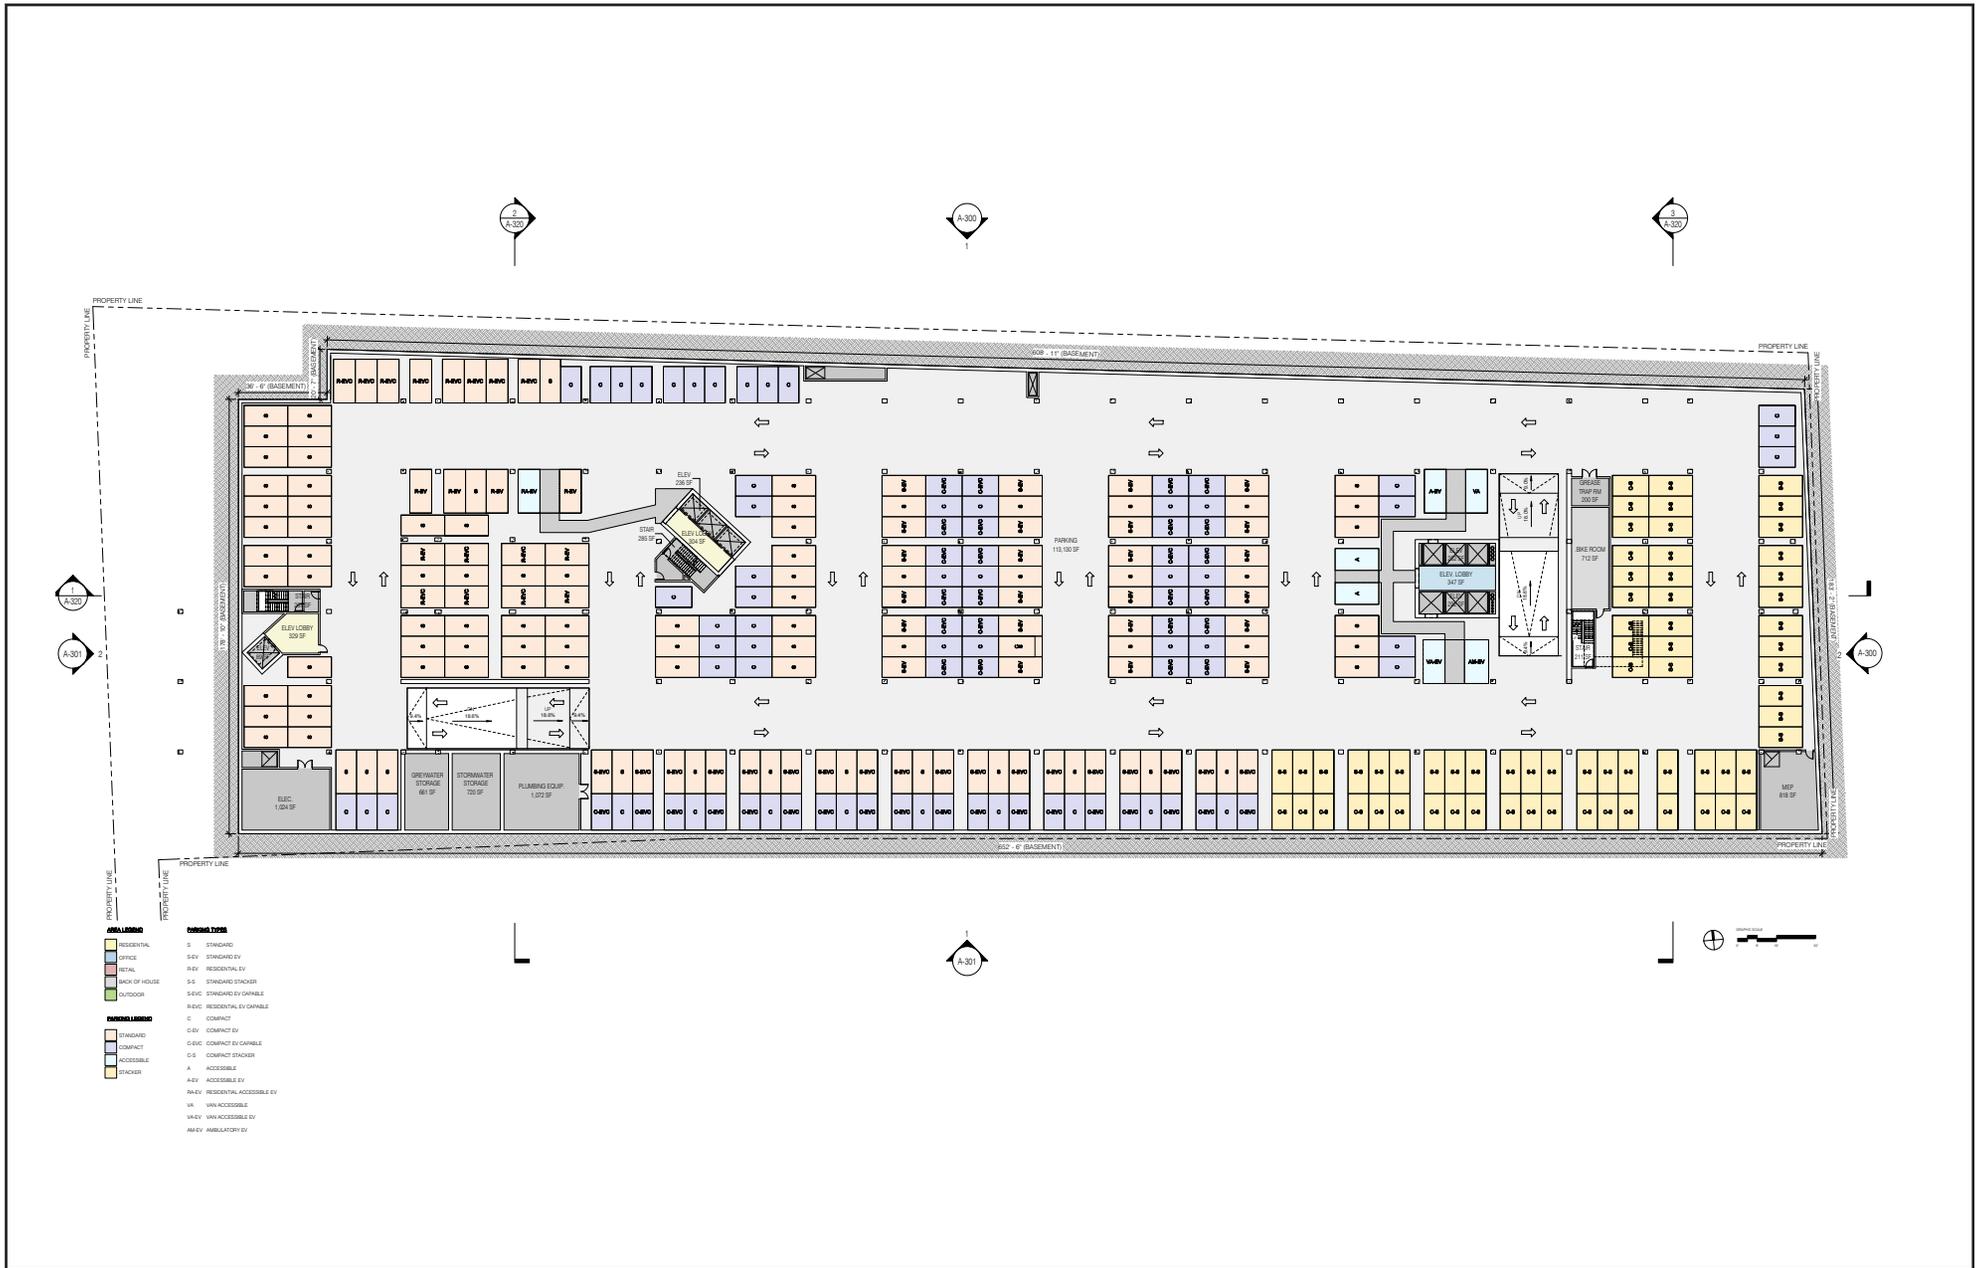

Grading activities would include cut and fill with approximately 161,000 cubic yards being exported from the Project Site. Construction hours would occur in accordance with the LAMC requirements, which prohibit construction between the hours of 9:00 P.M. and 7:00 A.M. Monday through Friday, 6:00 P.M. and 8:00 A.M. on Saturday, and at any time on Sunday. Construction worker parking and building material laydown during construction of the Proposed Project would take place on the Project Site. The proposed haul routes would require review and approval by the City of Los Angeles.

Composite Plan

Discretionary Actions

Discretionary entitlements, reviews, and approvals required for implementation of the Proposed Project would include, but would not necessarily be limited to, the following:

- A **Density Bonus** pursuant to CA Government Code Section 65915(f)(3) and LAMC Section 12.22.A.25 to permit a mixed use (residential and commercial) development project with 260 housing units dedicating 11% (22 units) of the Proposed Project's base units (192) to "very low income" households in exchange for the following incentives:
 - A 35% increase in the permitted residential density,
 - A residential parking ratio of 0.5 parking stalls for each residential unit pursuant California Government Code § 65915(p)(2)(A), as modified by Assembly Bill 2345,
 - One Off Menu Incentive to allow up to 92' feet in height for the commercial building and 149'6" feet for the residential building (excluding architectural features and mechanical solar and other structures), and
 - A second Off-Menu Incentive to exceed the West Adams – Baldwin Hills - Leimert Community Plan Implementation Overlay's (CPIO) cap on parking (limiting parking to 50% of the LAMC minimum parking requirements) to allow up to 785 parking stalls total, 413 of which are to be unassigned.
- A **Vesting Tentative Tract Map** (VTTM) pursuant to LAMC Sections 17.06 and 17.15 to divide the parcel into five lots (four airspace lots and one master ground lot) with one of the airspace lots to have up to 260 residential condominium units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard, and an approval of a Haul Route in conjunction with the VTTM approval.
- A **Site Plan Review** pursuant to LAMC 16.05 C, to permit the construction, use, and maintenance of more than 50 new residential units and more than 50,000 sf of nonresidential floor area.
- A **Conditional Use** to allow one establishment at the Proposed Project to sell and dispense a full line of alcoholic beverages (beer, wine, and liquor) for on-site consumption and the incidental sale of beer and wine for off-site consumption pursuant to LAMC § 12.24-W.1(a).

- A **CPIO Administrative Clearance** under the West Adams – Baldwin Hills – Leimert CPIO Section 6.C.2 for a project in compliance with all applicable provisions of the CPIO, as modified by the DBL and LAMC § 12.22-A.25.
- Adoption of the **SCEA**; and
- Approval of other permits, ministerial or discretionary, may be necessary in order to execute and implement the Proposed Project. Such approvals may include, but are not limited to: construction permits, building permits, landscaping approvals, exterior approvals, storm water discharge permits, grading permits, haul route permits, and installation and hookup approvals for public utilities and related permits.

III. Sustainable Communities Environmental Assessment Eligibility

A. Sustainable Communities Strategy Consistency Analysis

Senate Bill 375 (SB 375) provides CEQA streamlining opportunities for TPPs that are consistent with the use designation, density, building intensity, and applicable policies specified for the project area in either a SCS or an alternative planning strategy (APS), for which CARB has accepted a metropolitan planning organization's determination that the SCS or the APS would, if implemented, achieve the greenhouse gas emission (GHG) reduction targets established by CARB (see PRC, § 21155 [a]).

General Use Designation, Density, and Building Intensity

A qualifying TPP is a project that is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in the SCAG Connect SoCal 2020-2045 RTP/SCS. On May 7, 2020, the SCAG Regional Council approved the Connect SoCal 2020-2045 RTP/SCS for conformity purposes only. On September 3, 2020, the Regional Council formally adopted the Connect SoCal 2020-2045 RTP/SCS in its entirety to provide a roadmap to expand transportation options, improve air quality, and bolster Southern California's long-term economic viability. On October 30, 2020, CARB accepted, via CARB Executive Order G-20-239, SCAG's determination that Connect SoCal would, if implemented, achieve the applicable GHG emissions reduction targets established by CARB for the region.

The Project Site, which is within one-half mile from a major transit stop since it is adjacent to the La Cienega / Jefferson Metro Station, is in an area that is considered by SCAG as a Priority Growth Area (PGA).¹ PGAs include Jobs Centers, Transit Priority Areas (TPA), High Quality Transit Areas (HQTA), Neighborhood Mobility Areas, and Livable Corridors, among other areas. SCAG identifies these areas as most suited for implementation of SCAG's growth strategies. If implemented, PGAs are expected to accommodate 64

¹ Southern California Association of Governments. 2021. Priority Growth Areas (PGA) – SCAG Region. Available at: https://hub.arcgis.com/datasets/0da9bc5fba2d4b409c8f166166bf8888_6/explore?location=33.931017%2C-117.128018%2C8.14, accessed August 17, 2021.

percent of forecasted household growth and 74% of forecasted employment growth between 2016 and 2045.

The Proposed Project would also be consistent with the land use patterns promoted by the 2020-2045 RTP/SCS Forecasted Regional Development Pattern, as shown in **Table III-1**, below. SCAG’s SCS is built on a “bottom up” land use approach with engagement from local jurisdictions, meaning the overall uses are developed in coordination with local jurisdictions. Projects that are generally consistent with the general plan land use (or community or specific plan) would therefore be consistent with SCAG’s use designations, including density and intensity, as the local plan informs the SCS. As discussed in **Section II, Project Description**, the Proposed Project complies with the zoning, land use designations, and development standards of the General Plan, West Adams – Baldwin Hills – Leimert Community Plan Implementation Overlay, and City’s Municipal Code, including density and building intensity, except for those standards modified by the DBL. (*Wollmer v. City of Berkeley*, 193 Cal.App.4th 1329, 1347 [finding that DBL rendered base development standards, which were modified by the DBL, inapplicable to project and thus project’s inconsistency with such standards did not constitute inconsistency with applicable development standards for CEQA purposes].)

Further, the Proposed Project is not in an identified “constrained” area² such as on agricultural land, open space, or tribal lands and is consistent with SCS policies (see policy consistency analysis in **Table III-1**). It is therefore consistent with the general use designations, density, building intensity, and applicable policies specific to the Project Site in the 2020-2045 RTP/SCS, as outlined below in **Table III-1, Consistency Analysis with 2020 – 2045 Regional Transportation Plan / Sustainable Communities Strategy**.

**Table III-1
Consistency Analysis with
2020–2045 Regional Transportation Plan / Sustainable Communities Strategy**

Goals and Strategies	Consistency Assessment
2020-2045 RTP/SCS Goals	
Goal 1: Encourage regional economic prosperity and global competitiveness	Consistent. This Goal is directed at SCAG and the City of Los Angeles and therefore does not directly apply to the Proposed Project. Nevertheless, the Proposed Project would further this Goal by providing new creative office space suitable for tech and innovative uses consistent with the

² Southern California Association of Governments. 2021. Variable Constrained Areas (VCAs) – SCAG Region. Available at: https://hub.arcgis.com/datasets/10938b4b749d4fb9af1b89e51ee8f314_1?geometry=-118.359%2C34.056%2C-118.319%2C34.069, accessed August 17, 2021.

Goals and Strategies	Consistency Assessment
	surrounding area, fostering global competitiveness. The Proposed Project would also further this goal by providing co-working spaces within some of the residential uses to allow for work-life flexibility. The Proposed Project would also provide a variety of housing options affordable for various income levels, including very low income and workforce households, furthering economic prosperity across the City's socioeconomic spectrum.
Goal 2: Improve mobility, accessibility, reliability, and travel safety for people and goods	Consistent. The Proposed Project is in an urbanized area within the City of Los Angeles. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor retail uses within a HQTAs as defined by SCAG and a TPA as defined by SB 743. The Project site is located less than one-quarter mile from the Metro La Cienega/Jefferson, and less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project includes highly visible and accessible bike access and bike parking from the bike lane and would also connect to the existing bike path along Jefferson Boulevard directly north of the site. As such, the Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. The location of the Proposed Project encourages a variety of transportation options and access and is therefore consistent with this Goal.
Goal 3: Enhance the preservation, security, and resilience of the regional transportation system	Consistent. The Proposed Project would further this Goal. The Proposed Project is located immediately adjacent to the Metro E Line and co-locates people and jobs in close proximity to transit, which helps to reduce overall VMT and, as a result, GHG emissions. The Proposed Project includes a landscaped plaza connecting the Proposed Project directly to the Metro E Line station, thereby enhancing the preservation, security, and resilience of the public transit system. The Proposed Project also creates a bicycle path link further enhancing the resilience of the transportation network.

Goals and Strategies	Consistency Assessment
<p>Goal 4: Increase person and goods movement and travel choices within the transportation system</p>	<p>Consistent. The Proposed Project furthers this Goal by providing a variety of transportation options and access thereto. The Project Site is located less than one-quarter mile from the Metro La Cienega/Jefferson light rail station, and less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project includes a landscaped plaza connecting the Proposed Project directly to the Metro E Line station. The Proposed Project also includes highly visible and accessible bike access and bike parking from the bike lane and would also connect to the existing bike path along Jefferson Boulevard directly north of the site. As such, the Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking.</p>
<p>Goal 5: Reduce greenhouse gas emissions and improve air quality</p>	<p>Consistent. The Proposed Project co-locates people and jobs immediately adjacent to a transit station and multiple bus lines, as well as provide bicycle and pedestrian amenities, thereby reducing VMT and, as a result, reducing GHG emissions and improving air quality. The Proposed Project will also implement additional transportation demand management strategies to further reduce GHG emissions, including a ride share program and educational materials regarding site-specific transportation options. In addition, the Proposed Project will implement a project design feature to increase the project's water and energy efficiency, which will further reduce air quality and GHG emissions. The Proposed Project would result in criteria air pollutant and GHG emissions during construction and operation. However, as will be set forth in detail in the SCEA, air pollutant emissions would not exceed SCAQMD significance thresholds and the Proposed Project's GHG emissions would be consistent with SCAG's Connect SoCal Plan and CARB's 2017 Scoping Plan.</p>

Goals and Strategies	Consistency Assessment
<p>Goal 6: Support healthy and equitable communities</p>	<p>Consistent. The Proposed Project meets this Goal by incorporating sustainable design features creating a healthy community for the residents. The low environmental footprint of the Proposed Project also contributes to the overall health of the region by generating fewer GHG emissions and minimizing use of water. Lastly, the Proposed Project enhances bicycle infrastructure through bike parking and access to the Expo Line Bike Path and Ballona Creek Bike Path, further contributing to healthy communities. The Proposed Project also furthers this Goal by providing affordable housing (to very low income and workforce households) immediately adjacent to jobs, transit, and bicycle, pedestrian, and other outdoor opportunities (Kenneth Hahn State Recreation Area and Baldwin Hills Scenic Overlook State Park located within one mile south of the Project Site), thus creating a more livable community for all income levels.</p>
<p>Goal 7: Adapt to a changing climate and support an integrated regional development pattern and transportation network</p>	<p>Consistent. The Proposed Project would be located in proximity to public transit opportunities and would implement a transportation demand management (TDM) program. Further, the Proposed Project includes sustainable features to address climate adaptation, such as entirely electric buildings, ENERGY STAR appliances, LED lighting, purchasing 100% green power from the LADWP grid and constructing 100 electric vehicle (EV) parking spaces. The Proposed Project will also include short- and long-term bicycle parking spots, a rainwater collection cistern, and landscaping with drought tolerant plants.</p>
<p>Goal 8: Leverage new transportation technologies and data-driven solutions that result in more efficient travel</p>	<p>Not Applicable. This strategy calls on SCAG to use new transportation technologies and data-driven solutions to increase travel efficiency. The Proposed Project would advance this Goal with its enhancements to the public transit and bicycle network.</p>
<p>Goal 9: Encourage development of diverse housing types in areas that are supported by multiple transportation options</p>	<p>Consistent. The Proposed Project would construct 260 multi-family residential units of varying sizes. 22 units would be set aside for low-income residents and 7 for workforce households. The Proposed Project site is located less than one-quarter mile from the Metro La Cienega/Jefferson light rail station, and less than one-half mile from</p>

Goals and Strategies	Consistency Assessment
	<p>Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project includes a landscaped plaza connecting the Proposed Project directly to the Metro E Line station. The Proposed Project also includes highly visible and accessible bike access and bike parking from the bike lane and would also connect to the existing bike path along Jefferson Boulevard directly north of the site. As such, the Proposed Project would provide residents with immediate access to a multitude of public transit, pedestrian, and bicycling opportunities.</p>
<p>Goal 10: Promote conservation of natural and agricultural lands and restoration of habitats</p>	<p>Not Applicable. This Goal is directed towards SCAG and does not apply to the Proposed Project. The Proposed Project would not interfere with this Goal as it is not located in an identified “constrained” area such as on agricultural land, open space, or tribal lands.³</p>
2020-2045 RTP/SCS Growth Strategies	
<p>Strategy 1: Focus growth near destinations and mobility options</p>	<p>Consistent. The Proposed Project is consistent with this Strategy in that it adds growth on a site with existing mobility options, including transit and bike and further enhances these options. The Project site is located less than one-quarter mile from the Metro La Cienega/Jefferson light rail station, and less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project includes a landscaped plaza connecting the Proposed Project directly to the Metro E Line station. The Proposed Project also includes highly visible and accessible bike access and bike parking from the bike lane and would also connect to the existing bike path along Jefferson Boulevard directly north of the site and nearby access to the Ballona Creek bike path. The Proposed Project would promote access to public open space destinations with Kenneth Hahn State Recreation Area located within one mile south of the Project Site, as well as the Baldwin Hills Scenic Overlook</p>

³ SCAG Connect SoCal (2020–2045 Regional Transportation Plan/Sustainable Communities Strategy, Adopted September 2020, <https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial-03-plan.pdf?1604533568>)

Goals and Strategies	Consistency Assessment
	State Park. The Project site is also located within a HQTAs and TPAs, which are identified by SCAG as areas most suited for implementation of SCAG's growth strategies in part because they provide greater mobility options than non HQTAs and TPAs.
Strategy 2: Promote diverse housing choices.	Consistent. The Proposed Project would develop 260 multi-family residential units of varying sizes. Furthermore, 22 units would be set aside for low-income residents and 7 for workforce households.
Strategy 3: Leverage technology innovations	Consistent. The Proposed Project will be designed to be a zero-emission community and includes cutting edge sustainable design features including ENERGY STAR appliances, LED lighting, rainwater collection cistern, and the purchase of 100% green power from the LADWP grid. GHG emissions are categorized into three groups (or scopes). Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers. ⁴ The Proposed Project will be designed to reach absolute zero carbon emissions by 2040 for Scope 1, 2 and 3 emissions. The residential and office buildings will be constructed with LEED Gold minimum standards and will meet operational performance ratings, such as FitWel. Therefore, the Proposed Project will exceed CalGreen and Title 24 Building Standards.
Strategy 4: Support implementation of sustainability policies	Consistent. The Proposed Project will be designed to be a zero-emission community and includes cutting edge sustainable design features including ENERGY STAR appliances, LED lighting, rainwater collection cistern, and the purchase of 100% green power from the LADWP grid. GHG emissions are categorized into three groups (or scopes). Scope 1 covers direct

⁴ Carbon Trust. *Briefing: What are Scope 3 Emissions?* Available online at: <https://www.carbontrust.com/resources/briefing-what-are-scope-3-emissions#:~:text=Scope%201%20covers%20direct%20emissions,in%20a%20company's%20value%20chain.,> accessed May 26, 2021.

Goals and Strategies	Consistency Assessment
	<p>emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers.⁵ The Proposed Project will be designed to reach absolute zero carbon emissions by 2040 for Scope 1, 2 and 3 emissions. The residential and office buildings will be constructed with LEED Gold minimum standards and will meet operational performance ratings, such as FitWel. Therefore, the Proposed Project will exceed CalGreen and Title 24 Building Standards.</p>
<p>Strategy 5: Promote a Green Region</p>	<p>Consistent. The Proposed Project would promote access to public open space with Kenneth Hahn State Recreation Area located within one mile south of the Project site, as well as the Baldwin Hills Scenic Overlook State Park. The Proposed Project also includes 34,214 SF of landscaped open space at the ground floor and enhancement of bicycle infrastructure through bike parking and access to the Expo Line Bike Path and Ballona Creek Bike Path, further contributing to healthy, greener communities. Furthermore, the Proposed Project will be designed to be zero emissions and incorporates numerous sustainable design features to achieve this Strategy.</p>

B. Transit Priority Project Criteria Analysis

SB 375 provides CEQA streamlining opportunities for certain TPPs. A TPP is a project that meets the following three criteria (see PRC, § 21155 (b)):

⁵ Carbon Trust. *Briefing: What are Scope 3 Emissions?* Available online at: <https://www.carbontrust.com/resources/briefing-what-are-scope-3-emissions#:~:text=Scope%201%20covers%20direct%20emissions,in%20a%20company's%20value%20chain.,> accessed May 26, 2021.

- 1) Contains at least 50% residential use, based on total building square footage and, if the project contains between 26% and 50% nonresidential uses, a floor area ratio of not less than 0.75;
- 2) Provides a minimum net density of at least 20 units per acre; and
- 3) Is within one-half mile of a major transit stop or high-quality transit corridor included in a regional transportation plan.

As discussed below, the Proposed Project qualifies as a TPP pursuant to the criteria set by PRC § 21155.

Consistency with Criterion #1

The Proposed Project is a mixed-use development consisting of 260 multi-family units of varying types and sizes (26 studios, 143 one-bedroom units, 78 two-bedroom units, and 13 three-bedroom units). The residential building of the Proposed Project encompasses approximately 241,167 gross sf of the Proposed Project's total building sf of 481,408, or 50% of the total building square footage. The Project contains 50% nonresidential uses and the FAR is 3:1 (3.00). As such, the Proposed Project is consistent with this Criterion.

Consistency with Criterion #2

The Project Site is approximately 3.5 acres. With 260 residential dwellings, the Proposed Project would achieve a density of approximately 73 units per acre. As such, the Proposed Project is consistent with this Criterion.

Consistency with Criterion #3

PRC Section 21155 (b) defines a "high-quality transit corridor" as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.

PRC Section 21099 defines a "transit priority area" as an area within one-half mile of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Sections 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." PRC Section 21064.3 defines "major transit stop" as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." PRC Section 21155 (b) states that a "major transit stop" is defined in PRC Section 21064.3, except

that, for purposes of Section 21155 (b), it also includes major transit stops that are included in the applicable regional transportation plan.

The Proposed Project is located within an HQTAs as defined by SCAG and a TPA as defined by SB 743.⁶ The Project Site is located within one-half mile of the La Cienega / Jefferson Station of the Metro E Line light rail. Furthermore, the Proposed Project would be served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekend only). Of these bus lines, Metro Bus Line 105 would have frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. Therefore, the Proposed Project is consistent with this Criterion.

C. Incorporation of Feasible Mitigation Measures, Performance Standards, and Criteria From Prior Applicable EIRs

Public Resources Code Section 21151.2 requires that a TPP incorporate all feasible mitigation measures, performance standards, or criteria from prior applicable EIRs. The City has complied with PRC Section 21151.2 by reviewing all of the suggested mitigation measures in Connect SoCal (2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy) Program EIR⁷ and the West Adams – Baldwin Hills – Leimert Community Plan EIR⁸ for imposition on the Project. The mitigation measures were not imposed if the Project was found to be in substantial compliance with the mitigation measure as proposed or if the mitigation measures were found not to be relevant. If the Project was not found to be in substantial compliance or the mitigation measure was found relevant, the City considered whether to use the mitigation measure or an equally effective City mitigation measure (including the mitigation measures developed for this SCEA). The applicable mitigation measures, performance standards, or criteria from the aforementioned documents are discussed in **Table III-2, Connect SoCal (2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy) Applicable Mitigation Measures**, and **Table III-3, West Adams – Baldwin Hills -Leimert**

Connect SoCal (2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy)
Applicable Mitigation Measures**

Project Level Mitigation Measure	Applicability to the Proposed Project
Aesthetics	
<p>PMM AES-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to address potential aesthetic impacts to scenic vistas, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Use a palette of colors, textures, building materials that are graffiti-resistant, and/or plant materials that complement the surrounding landscape and development. b) Use contour grading to better match surrounding terrain. Contour edges of major cut-and-fill to provide a more natural looking finished profile. c) Design new corridor landscaping to respect existing natural and man-made features and to complement the dominant landscaping of the surrounding areas. d) Replace and renew landscaping along corridors with road widenings, interchange projects, and related improvements. e) Retain or replace trees bordering highways, so that clear-cutting is not evident. f) Provide new corridor landscaping that respects and provides appropriate transition to existing natural and man-made features and is complementary to the dominant landscaping or native habitats of surrounding areas. g) Reduce the visibility of construction staging areas by fencing and screening these areas with low contrast materials consistent with the surrounding environment, and by revegetating graded slopes 	<p>This Mitigation Measure is not relevant to the Proposed Project as Public Resources Code Section 21099, enacted by Senate Bill 743, provides that “aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment.”</p> <p>The Project Site is located in an urbanized area within the City of Los Angeles. The Proposed Project is a transit-oriented mixed-use development that includes residential, office, and retail uses. The Project Site is located less than one-half mile from the Metro La Cienega/Jefferson station. Therefore, the Proposed Project is located in a transit priority area as defined in Public Resources Code Section 21099. The Proposed Project’s aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>and exposed earth surfaces at the earliest opportunity;</p> <p>h) Use see-through safety barrier designs (e.g., railings rather than walls)</p>	
<p>PMM AES-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to address potential aesthetic impacts that substantially degrade visual character, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Minimize contrasts in scale and massing between the projects and surrounding natural forms and development, minimize their intrusion into important viewsheds, and use contour grading to better match surrounding terrain in accordance with county and city hillside ordinances, where applicable. b) Design landscaping along highway corridors to add significant natural elements and visual interest to soften the hard-edged, linear transportation corridors. c) Require development of design guidelines for projects that make elements of proposed buildings/facilities visually compatible or minimize visibility of changes in visual quality or character through use of hardscape and softscape solutions. Specific measures to be addressed include setback buffers, landscaping, color, texture, signage, and lighting criteria. d) Design projects consistent with design guidelines of applicable general plans. e) Require that sites are kept in a blight/nuisance-free condition. Remove blight or nuisances that compromise visual character or visual quality of project areas including graffiti abatement, trash removal, landscape management, maintenance of signage and billboards in good condition, and replace compromised native vegetation and landscape. 	<p>This Mitigation Measure is not relevant to the Proposed Project as Public Resources Code Section 21099, enacted by Senate Bill 743, provides that “aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment.”</p> <p>The Project Site is located in an urbanized area within the City of Los Angeles. The Proposed Project is a transit-oriented mixed-use development that includes residential, office, and retail uses. The Project Site is located less than one-half mile from the Metro La Cienega/Jefferson station. Therefore, the Proposed Project is located in a transit priority area as defined in Public Resources Code Section 21099. The Proposed Project’s aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>f) Where sound walls are proposed, require sound wall construction and design methods that account for visual impacts as follows:</p> <ul style="list-style-type: none"> — use transparent panels to preserve views where sound walls would block views from residences; — use landscaped earth berm or a combination wall and berm to minimize the apparent sound wall height; — construct sound walls of materials whose color and texture complements the surrounding landscape and development; <p>g) Design sound walls to increase visual interest, reduce apparent height, and be visually compatible with the surrounding area; and landscape the sound walls with plants that screen the sound wall, preferably with either native vegetation or landscaping that complements the dominant landscaping of surrounding areas.</p>	
<p>PMM AES-3: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to address potential aesthetic impacts that substantially degrade visual character, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Use lighting fixtures that are adequately shielded to a point below the light bulb and reflector and that prevent unnecessary glare onto adjacent properties. b) Restrict the operation of outdoor lighting for construction and operation activities to the hours of 7:00 a.m. to 10:00 p.m. or as otherwise required by applicable local rules or ordinances. c) Use high pressure sodium and/or cut-off fixtures instead of typical mercury-vapor fixtures for outdoor lighting. d) Use unidirectional lighting to avoid light trespass onto adjacent properties. e) Design exterior lighting to confine illumination to the Project Site, 	<p>This Mitigation Measure is not relevant to the Proposed Project as Public Resources Code Section 21099, enacted by Senate Bill 743, provides that “aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment.”</p> <p>The Project Site is located in an urbanized area within the City of Los Angeles. The Proposed Project is a transit-oriented mixed-use development that includes residential, office, and retail uses. The Project Site is located less than one-half mile from the Metro La Cienega/Jefferson station. Therefore, the Proposed Project is located in a transit priority area as defined in Public Resources Code Section 21099. The Proposed Project’s aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>and/or to areas which do not include light-sensitive uses.</p> <ul style="list-style-type: none"> f) Provide structural and/or vegetative screening from light-sensitive uses. g) Shield and direct all new street and pedestrian lighting away from light-sensitive off-site uses. h) Use non-reflective glass or glass treated with a non-reflective coating for all exterior windows and glass used on building surfaces. i) Architectural lighting shall be directed onto the building surfaces and have low reflectivity to minimize glare and limit light onto adjacent properties. 	
Agriculture and Forestry	
<p>PMM AG-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to address potential adverse effects on agricultural resources, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Require project sponsors to mitigate for loss of farmland by providing permanent protection of in-kind farmland in the form of easements, fees, or elimination of development rights/potential. b) Project relocation or corridor realignment to avoid Prime Farmland, Unique Farmland, or Farmland of Local or Statewide Importance. c) Maintain and expand agricultural land protections such as urban growth boundaries. d) Provide for mitigation fees to support a mitigation bank⁹ that invests in farmer education, agricultural infrastructure, water supply, marketing, etc. that enhance the commercial viability of retained agricultural lands. 	<p>This Mitigation Measure is not relevant to the Proposed Project as no farmland or agricultural activity exists on or in the vicinity of the Project Site. See Section 2, Agricultural Resources, of the SCEA Environmental Checklist, for further information.</p>

⁹ The California Department of Fish and Wildlife provides a definition for conservation or mitigation banks on their website (please see <https://www.wildlife.ca.gov/Conservation/Planning/Banking>).

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>e) Minimize severance and fragmentation of agricultural land by constructing underpasses and overpasses at reasonable intervals to provide property access.</p> <p>f) Use berms, buffer zones, setbacks, and fencing to reduce conflicts between new development and farming uses and protect the functions of farmland.</p>	
<p>PMM AG-2: Project level mitigation measures can and should be considered by Lead Agencies as applicable and feasible. Measures to reduce substantial adverse effects on Williamson Act contracts to the maximum extent practicable, as determined appropriate by each Lead Agency, may include the following, or other comparable measures:</p> <p>a) Project relocation or corridor realignment to avoid lands in Williamson Act contracts.</p> <p>b) Establish conservation easements consistent with the recommendations of the Department of Conservation, or 20-year Farmland Security Zone contracts (Government Code Section 51296 et seq.), 10-year Williamson Act contracts (Government Code Section 51200 et seq.), or use of other conservation tools available from the California Department of Conservation Division of Land Resource Protection.</p>	<p>This Mitigation Measure is not relevant to the Proposed Project as the Project Site is not zoned for agricultural production, there is no farmland at the Project Site, and there are no Williamson Act Contracts in effect for the Project Site. See Section 2, Agricultural Resources, of Chapter IV, SCEA Environmental Checklist, for further information.</p>
<p>PMM AG-3: Project level mitigation measures can and should be considered by Lead Agencies as applicable and feasible. Measures to reduce substantial adverse effects, through the conversion of Farmland to maximum extent practicable, as determined appropriate by each Lead Agency, may include the following, or other comparable measures:</p> <p>a) Minimize construction related impacts to agricultural and forestry resources by locating materials and stationary equipment in such a way as to prevent conflict with agriculture and forestry resources.</p>	<p>This Mitigation Measure is not relevant to the Proposed Project as the Project Site is not zoned for agricultural production and there is no farmland at the Project Site. See Section 2, Agricultural Resources, of Chapter IV, SCEA Environmental Checklist, for further information.</p>
<p>PMM AG-4: Project level mitigation measures can and should be considered by Lead Agencies as applicable and feasible. Measures to reduce substantial adverse effects, through the conversion of Farmland,</p>	<p>This Mitigation Measure is not relevant to the Proposed Project as the Project Site is not zoned for agricultural production and there is no</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>to the maximum extent practicable, as determined appropriate by each Lead Agency, may include the following, or other comparable measures:</p> <ul style="list-style-type: none"> a) Design proposed projects to minimize, to the greatest extent feasible, the loss of the highest valued agricultural land. b) Redesign project features to minimize fragmenting or isolating Farmland. Where a project involves acquiring land or easements, ensure that the remaining non-project area is of a size sufficient to allow economically viable farming operations. The project proponents shall be responsible for acquiring easements, making lot line adjustments, and merging affected land parcels into units suitable for continued commercial agricultural management. c) Reconnect utilities or infrastructure that serve agricultural uses if these are disturbed by project construction. If a project temporarily or permanently cuts off roadway access or removes utility lines, irrigation features, or other infrastructure, the project proponents shall be responsible for restoring access as necessary to ensure that economically viable farming operations are not interrupted. 	<p>farmland at the Project Site. See Section 2, Agricultural Resources, of Chapter IV, SCEA Environmental Checklist, for further information.</p>
<p>PMM AG-5: Project level mitigation measures can and should be considered by Lead Agencies as applicable and feasible. Measures to reduce substantial adverse effects, through the conversion of Farmland, to the maximum extent practicable, as determined appropriate by each Lead Agency, may include the following, or other comparable measures:</p> <ul style="list-style-type: none"> a) Manage project operations to minimize the introduction of invasive species or weeds that may affect agricultural production on adjacent agricultural land. Where a project has the potential to introduce sensitive species or habitats or have other spill-over effects on nearby agricultural lands, the project proponents shall be responsible for acquiring easements on nearby agricultural land and/or financially compensating for indirect effects on nearby agricultural land. Easements (e.g., flowage easements) shall be required for temporary or intermittent interruption in 	<p>This Mitigation Measure is not relevant to the Proposed Project as the Project Site is not zoned for agricultural production and there is no farmland at the Project Site. See Section 2, Agricultural Resources, of Chapter IV, SCEA Environmental Checklist, for further information.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>farming activities (e.g., because of seasonal flooding or groundwater seepage). Acquisition or compensation would be required for permanent or significant loss of economically viable operations.</p>	
Air Quality	
<p>PMM AQ-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Minimize land disturbance. b) Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes. c) Cover trucks when hauling dirt. d) Stabilize the surface of dirt piles if not removed immediately. e) Limit vehicular paths on unpaved surfaces and stabilize any temporary roads. f) Minimize unnecessary vehicular and machinery activities. g) Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway. h) Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities. i) On Caltrans projects, Caltrans Standard Specifications 10-Dust Control, 17-Watering, and 18-Dust Palliative shall be incorporated into project specifications. j) Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for 	<p>The Proposed Project is subject to the South Coast Air Quality Management District (SCAQMD) rules and mentioned in Section 3, Air Quality, of Chapter IV, SCEA Environmental Checklist. Upon compliance, the Project would satisfy the applicable requirements of this mitigation measure.</p> <p>The Projects impacts to Air Quality were analyzed in Section 3, Air Quality, of Chapter IV, SCEA Environmental Checklist, and were found to be less than significant and the Project would not require any mitigation measures for this impact.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet.</p> <p>k) Ensure that all construction equipment is properly tuned and maintained.</p> <p>l) Minimize idling time to 5 minutes—saves fuel and reduces emissions.</p> <p>m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.</p> <p>n) Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators.</p> <p>o) Develop a traffic plan to minimize community impacts as a result of traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites. Project sponsors should consider developing a goal for the minimization of community impacts.</p> <p>p) As appropriate require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site.</p> <p>q) Require projects to use Tier 4 Final equipment or better for all engines above 50 horsepower (hp). In the event that construction equipment cannot meet the Tier 4 Final engine</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>certification, the Project representative or contractor must demonstrate through future study with written findings supported by substantial evidence that is approved by SCAG before using other technologies/strategies. Alternative applicable strategies may include, but would not be limited to, construction equipment with Tier 4 Interim or reduction in the number and/or horsepower rating of construction equipment and/or limiting the number of construction equipment operating at the same time. All equipment must be tuned and maintained in compliance with the manufacturer’s recommended maintenance schedule and specifications. All maintenance records for each equipment and their contractor(s) should make available for inspection and remain on-site for a period of at least two years from completion of construction, unless the individual project can demonstrate that Tier 4 engines would not be required to mitigate emissions below significance thresholds. Project sponsors should also consider including ZE/ZNE technologies where appropriate and feasible.</p> <p>r) Projects located within the South Coast Air Basin should consider applying for South Coast AQMD “SOON” funds which provides funds to applicable fleets for the purchase of commercially available low-emission heavy-duty engines to achieve near-term reduction of NOx emissions from in-use off-road diesel vehicles.</p> <p>s) Projects located within AB 617 communities should review the applicable Community Emissions Reduction Plan (CERP) for additional mitigation that can be applied to individual projects.</p> <p>t) Where applicable, projects should provide information about air quality related programs to schools, including the Environmental Justice Community Partnerships (EJCP), Clean Air Ranger Education (CARE), and Why Air Quality Matters programs.</p> <p>u) Projects should work with local cities and counties to install adequate signage that prohibits truck idling in certain locations</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>(e.g., near schools and sensitive receptors).</p> <p>v) As applicable for airport projects, the following measures should be considered:</p> <ul style="list-style-type: none">a. Considering operational improvements to reduce taxi time and auxiliary power unit usage, where feasible. Additionally, consider single engine taxiing, if feasible as allowed per Federal Aviation Administration guidelines.b. Set goals to achieve a reduction in emissions from aircraft operations over the lifetime of the Proposed Project.c. Require the use of ground service equipment (GSE) that can operate on battery-power. If electric equipment cannot be obtained, require the use of alternative fuel, the cleanest gasoline equipment, or Tier 4, at a minimum. <p>w) As applicable for port projects, the following measures should be considered:</p> <ul style="list-style-type: none">a. Develop specific timelines for transitioning to zero emission cargo handling equipment (CHE).b. Develop interim performance standards with a minimum amount of CHE replacement each year to ensure adequate progress.c. Use short side electric power for ships, which may include tugboats and other ocean-going vessels or develop incentives to gradually ramp up the usage of shore power.d. Install the appropriate infrastructure to provide shore power to operate the ships. Electrical hookups should be appropriately sized.e. Maximize participation in the Port of Los Angeles' Vessel Speed Reduction Program or the Port of Long Beach's Green Flag Initiation Program in order to reduce	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>the speed of vessel transiting within 40 nautical miles of Point Fermin.</p> <ul style="list-style-type: none"> f. Encourage the participation in the Green Ship Incentives. g. Offer incentives to encourage the use of on-dock rail. <p>x) As applicable for rail projects, the following measures should be considered:</p> <ul style="list-style-type: none"> a. Provide the highest incentives for electric locomotives and then locomotives that meet Tier 5 emission standards with a floor on the incentives for locomotives that meet Tier 4 emission standards. <p>y) Projects that will introduce sensitive receptors within 500 feet of freeways and other sources should consider installing high efficiency of enhanced filtration units, such as Minimum Efficiency Reporting Value (MERV) 13 or better. Installation of enhanced filtration units can be verified during occupancy inspection prior to the issuance of an occupancy permit.</p> <p>z) Develop an ongoing monitoring, inspection, and maintenance program for the MERV filters.</p> <ul style="list-style-type: none"> a. Disclose potential health impacts to prospective sensitive receptors from living in close proximity to freeways or other sources of air pollution and the reduced effectiveness of air filtration systems when windows are open or residents are outside. b. Identify the responsible implementing and enforcement agency to ensure that enhanced filtration units are installed on-site before a permit of occupancy is issued. c. Disclose the potential increase in energy costs for running the HVAC system to prospective residents. d. Provide information to residents on where MERV filters can be purchased. 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>e. Provide recommended schedule (e.g., every year or every six months) for replacing the enhanced filtration units.</p> <p>f. Identify the responsible entity such as future residents themselves, Homeowner’s Association, or property managers for ensuring enhanced filtration units are replaced on time.</p> <p>g. Identify, provide, and disclose ongoing cost-sharing strategies, if any, for replacing the enhanced filtration units.</p> <p>h. Set criteria for assessing progress in installing and replacing the enhanced filtration units; and</p> <p>i. Develop a process for evaluating the effectiveness of the enhanced filtration units.</p> <p>aa) Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities.</p>	
Biological Resources	
<p>PMM BIO-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to threatened and endangered species, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Require project design to avoid occupied habitat, potentially suitable habitat, and designated critical habitat, wherever practicable and feasible.</p> <p>b) Where avoidance is determined to be infeasible, provide conservation measures to fulfill the requirements of the applicable authorization for incidental take pursuant to Section 7 or 10(a) of the federal ESA, Section 2081 of the California ESA to support issuance of an incidental take permit, and/or as</p>	<p>This Mitigation Measure is not relevant to the Proposed Project as the Project Site does not contain any critical habitat or support any species identified or designated as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. The Project Site is located in an urbanized area of the City and is not identified as a vegetation zone that could serve as species’ habitat. No mitigation is required for this impact.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>identified in local or regional plans. Conservation strategies to protect the survival and recovery of federally and state-listed endangered and local special status species may include:</p> <ul style="list-style-type: none"> i. Impact minimization strategies ii. Contribution of in-lieu fees for in-kind conservation and mitigation efforts iii. Use of in-kind mitigation bank credits iv. Funding of research and recovery efforts v. Habitat restoration vi. Establishment of conservation easements vii. Permanent dedication of in-kind habitat <p>c) Design projects to avoid desert native plants protected under the California Desert Native Plants Act, salvage and relocate desert native plants, and/or pay in lieu fees to support off-site long-term conservation strategies.</p> <p>d) Temporary access roads and staging areas will not be located within areas containing sensitive plants, wildlife species or native habitat wherever feasible, so as to avoid or minimize impacts to these species.</p> <p>e) Develop and implement a Worker Environmental Awareness Program (environmental education) to inform project workers of their responsibilities to avoid and minimize impacts on sensitive biological resources.</p> <p>f) Retain a qualified botanist to document the presence or absence of special status plants before project implementation.</p> <p>g) Appoint a qualified biologist to monitor construction activities that may occur in or adjacent to occupied sensitive species' habitat to facilitate avoidance of resources not permitted for impact.</p> <p>h) Appoint a qualified biologist to monitor implementation of mitigation measures.</p> <p>i) Schedule construction activities to avoid sensitive times for biological resources (e.g., steelhead spawning periods during</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>the winter and spring, nesting bird season) and to avoid the rainy season when erosion and sediment transport is increased.</p> <p>j) Develop an invasive species control plan associated with project construction.</p> <p>k) If construction occurs during breeding seasons in or adjacent to suitable habitat, include appropriate sound attenuation measures required for sensitive avian species and other best management practices appropriate for potential local sensitive wildlife.</p> <p>l) Conduct pre-construction surveys to delineate occupied sensitive species' habitat to facilitate avoidance.</p> <p>m) Where projects are determined to be within suitable habitat and may impact listed or sensitive species that have specific field survey protocols or guidelines outlined by the USFWS, CDFW, or other local agency, conduct preconstruction surveys that follow applicable protocols and guidelines and are conducted by qualified and/or certified personnel.</p>	
<p>PMM BIO-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to riparian habitats and other sensitive natural communities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Consult with the USFWS and NMFS where such state-designated sensitive or riparian habitats provide potential or occupied habitat for federally listed rare, threatened, and endangered species afforded protection pursuant to the federal ESA.</p> <p>b) Consult with the USFS where such state-designated sensitive or riparian habitats provide potential or occupied habitat for federally listed rare, threatened, and endangered species afforded protection pursuant to the federal ESA and any</p>	<p>This Mitigation Measure is not relevant to the Proposed Project as the Project Site does not contain any state-designated sensitive habitats, including riparian habitats that are in the jurisdiction and responsibility of U.S. Fish and Wildlife Service, the National Marine Fisheries Service, the California Department of Fish and Wildlife; and other public agencies, and/or Lead Agencies. See Section 4, Biological Resources, of Chapter IV, SCEA Environmental Checklist, for more information. No mitigation is required for this impact.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>additional species afforded protection by an adopted Forest Land Management Plan or Resource Management Plan for the four national forests in the six-county area: Angeles, Cleveland, Los Padres, and San Bernardino.</p> <ul style="list-style-type: none"> c) Consult with the CDFW where such state-designated sensitive or riparian habitats provide potential or occupied habitat for state-listed rare, threatened, and endangered species afforded protection pursuant to the California ESA, or Fully Protected Species afforded protection pursuant to the State Fish and Game Code. d) Consult with the CDFW pursuant to the provisions of Section 1600 of the State Fish and Game Code as they relate to Lakes and Streambeds. e) Consult with the USFWS, USFS, CDFW, and counties and cities in the SCAG region, where state-designated sensitive or riparian habitats are occupied by birds afforded protection pursuant to the MBTA during the breeding season. f) Consult with the CDFW for state-designated sensitive or riparian habitats where furbearing mammals, afforded protection pursuant to the provisions of the State Fish and Game Code for fur-beaming mammals, are actively using the areas in conjunction with breeding activities. g) Require project design to avoid sensitive natural communities and riparian habitats, wherever practicable and feasible. h) Where avoidance is determined to be infeasible, develop sufficient conservation measures through coordination with local agencies and the regulatory agency (i.e., USFWS or CDFW) to protect sensitive natural communities and riparian habitats and develop appropriate compensatory mitigation, where required. i) Appoint a qualified wetland biologist to monitor construction activities that may occur in or adjacent to sensitive communities. j) Appoint a qualified wetland biologist to monitor implementation of mitigation measures. 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none"> k) Schedule construction activities to avoid sensitive times for biological resources and to avoid the rainy season when erosion and sediment transport is increased. l) When construction activities require stream crossings, schedule work during dry conditions and use rubber-wheeled vehicles, when feasible. Have a qualified wetland scientist determine if potential project impacts require a Notification of Lake or Streambed Alteration to CDFW during the planning phase of projects. m) Consult with local agencies, jurisdictions, and landowners where such state-designated sensitive or riparian habitats are afforded protection pursuant an adopted regional conservation plan. n) Install fencing and/or mark sensitive habitat to be avoided during construction activities. o) Salvage and stockpile topsoil (the surface material from 6 to 12 inches deep) and perennial native plants, when recommended by the qualified wetland biologist, for use in restoring native vegetation to areas of temporary disturbance within the project area. Salvage of soils containing invasive species, seeds and/or rhizomes will be avoided as identified by the qualified wetland biologist. p) Revegetate with appropriate native vegetation following the completion of construction activities, as identified by the qualified wetland biologist. q) Complete habitat enhancement (e.g., through removal of non-native invasive wetland species and replacement with more ecologically valuable native species). r) Use Best Management Practices (BMPs) at construction sites to minimize erosion and sediment transport from the area. BMPs include encouraging growth of native vegetation in disturbed areas, using straw bales or other silt-catching devices, and using settling basins to minimize soil transport. 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>PMM BIO-3: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to wetlands, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency.</p> <ul style="list-style-type: none"> a) Require project design to avoid federally protected aquatic resources consistent with the provisions of Sections 404 and 401 of the CWA, wherever practicable and feasible. b) Where the lead agency has identified that a project, or other regionally significant project, has the potential to impact other wetlands or waters, such as those considered Waters Of the State of California under the State Wetland Definition and Procedures for Dischargers of Dredged or Fill Material to Waters of the State, not protected under Section 404 or 401 of the CWA, seek comparable coverage for these wetlands and waters in consultation with the SWRCB, applicable RWQCB, and CDFW. c) Where avoidance is determined to be infeasible, develop sufficient conservation measures to fulfill the requirements of the applicable authorization for impacts to federal and state protected aquatic resource to support issuance of a permit under Section 404 of the CWA as administered by the USACE. The use of an authorized Nationwide Permit or issuance of an individual permit requires the project applicant to demonstrate compliance with the USACE’s Final Compensatory Mitigation Rule. The USACE reviews projects to ensure environmental impacts to aquatic resources are avoided or minimized as much as possible. Consistent with the administration’s performance standard of “no net loss of wetlands” a USACE permit may require a project proponent to restore, establish, enhance or preserve other aquatic resources in order to replace those affected by the Proposed Project. This compensatory mitigation process seeks to replace the loss of existing aquatic resource 	<p>This Mitigation Measure is not relevant to the Proposed Project as the Project Site does not contain any state or federally protected wetlands. See Section 4, Biological Resources, of Chapter IV, SCEA Environmental Checklist, for more information. No mitigation is required for this impact.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>functions and area. Project proponents required to complete mitigation are encouraged to use a watershed approach and watershed planning information. The new rule establishes performance standards, sets timeframes for decision making, and to the extent possible, establishes equivalent requirements and standards for the three sources of compensatory mitigation:</p> <ul style="list-style-type: none"> — Permittee-responsible mitigation — Contribution of in-kind in-lieu fees — Use of in-kind mitigation bank credits <p>d) Where avoidance is determined to be infeasible and proposed projects' impacts exceed an existing Nationwide Permit (NWP) and/or California SWRCB-certified NWP, or applicable County Special Area Management Plan (SAMP), the lead agency should provide USACE and SWRCB (where applicable) an alternative analysis consistent with the Least Environmentally Damaging Practicable Alternatives in this order of priorities:</p> <ul style="list-style-type: none"> — Avoidance — Impact Minimization — On-site alternatives — Off-site alternatives <p>e) Require review of construction drawings by a certified wetland delineator as part of each project-specific environmental analysis to determine whether aquatic resources will be affected and, if necessary, perform formal wetland delineation.</p>	
<p>PMM BIO-4: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to wildlife movement, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Consult with the USFS where impacts to migratory wildlife corridors may occur in an area afforded protection by an adopted</p>	<p>This Mitigation Measure is not applicable to the Proposed Project as the Project is located in a developed urban area and does not involve the dispersal of wildlife nor would the project result in a barrier to migration or movement. The Project would also comply with the Migratory Bird Treaty Act which governs the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests. No mitigation is required for this impact.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>Forest Land Management Plan or Resource Management Plan for the four national forests in the six-County area: Angeles, Cleveland, Los Padres, and San Bernardino.</p> <ul style="list-style-type: none"> b) Consult with counties, cities, and other local organizations when impacts may occur to open space areas that have been designated as important for wildlife movement related to local ordinances or conservation plans. c) Prohibit construction activities within 500 feet of occupied breeding areas for wildlife afforded protection pursuant to Title 14 § 460 of the California Code of Regulations protecting fur-bearing mammals, during the breeding season. d) Conduct a survey to identify active raptor and other migratory nongame bird nests by a qualified biologist at least two weeks before the start of construction at project sites from February 1 through August 31. e) Prohibit construction activities with 300 feet of occupied nest of birds afforded protection pursuant to the Migratory Bird Treaty Act, during the breeding season. f) Ensure that suitable nesting sites for migratory nongame native bird species protected under the Migratory Bird Treaty Act and/or trees with unoccupied raptor nests should only be removed prior to February 1, or following the nesting season. g) When feasible and practicable, proposed projects will be designed to minimize impacts to wildlife movement and habitat connectivity and preserve existing and functional wildlife corridors. h) Conduct site-specific analyses of opportunities to preserve or improve habitat linkages with areas on- and off-site. i) Long linear projects with the possibility of impacting wildlife movement should analyze habitat linkages/wildlife movement corridors on a broad scale to avoid critical narrow choke points that could reduce function of recognized movement corridor. j) Require review of construction drawings and habitat connectivity 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>mapping by a qualified biologist to determine the risk of habitat fragmentation.</p> <p>k) Pursue mitigation banking to preserve habitat linkages and corridors (opportunities to purchase, maintain, and/or restore offsite habitat).</p> <p>l) When practicable and feasible design projects to promote wildlife corridor redundancy by including multiple connections between habitat patches.</p> <p>m) Evaluate the potential for installation of overpasses, underpasses, and culverts to create wildlife crossings in cases where a roadway or other transportation project may interrupt the flow of species through their habitat. Retrofitting of existing infrastructure in project areas should also be considered for wildlife crossings for purposes of mitigation.</p> <p>n) Install wildlife fencing where appropriate to minimize the probability of wildlife injury due to direct interaction between wildlife and roads or construction.</p> <p>o) Where avoidance is determined to be infeasible, design sufficient conservation measures through coordination with local agencies and the regulatory agency (i.e., USFWS or CDFW) and in accordance with the respective counties and cities general plans to establish plans to mitigate for the loss of fish and wildlife movement corridors and/or wildlife nursery sites. The consideration of conservation measures may include the following measures, in addition to the measures outlined in MM-BIO-1(b), where applicable:</p> <ul style="list-style-type: none"> — Wildlife movement buffer zones — Corridor realignment — Appropriately spaced breaks in center barriers — Stream rerouting — Culverts 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none"> — Creation of artificial movement corridors such as freeway under- or overpasses — Other comparable measures <p>p) Where the lead agency has identified that a RTP/SCS project, or other regionally significant project, has the potential to impact other open space or nursery site areas, seek comparable coverage for these areas in consultation with the USFWS, CDFW, NMFS, or other local jurisdictions.</p> <p>q) Incorporate applicable and appropriate guidance (e.g., FHWA-HEP-16-059), as well as best management practices, to benefit pollinators with a focus on native plants.</p>	
<p>PMM BIO-5: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce conflicts with local policies and ordinances protecting biological resources, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Consult with the appropriate local agency responsible for the administration of the policy or ordinance protecting biological resources. b) Prioritize retention of trees on-site consistent with local regulations. Provide adequate protection during the construction period for any trees that are to remain standing, as recommended by an International Society of Arboriculture (ISA) certified arborist. c) If specific project area trees are designated as “Protected Trees,” “Landmark Trees,” or “Heritage Trees,” obtain approval for encroachment or removals through the appropriate entity, and develop appropriate mitigation measures at that time, to ensure that the trees are replaced. Mitigation trees shall be locally collected native species, as directed by a qualified biologist. 	<p>Two trees would be removed as part of the Project. Both are pines with a trunk diameter of less than 8 inches. This species is neither native to California nor protected. Both trees would be replaced in accordance with the existing tree replacement requirements of the City’s Division of Urban Forestry.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>d) Appoint an ISA certified arborist to monitor construction activities that may occur in areas with trees are designated as “Protected Trees,” “Landmark Trees,” or “Heritage Trees,” to facilitate avoidance of resources not permitted for impact. Before the start of any clearing, excavation, construction or other work on the site, securely fence off every protected tree deemed to be potentially endangered by said site work. Keep such fences in place for duration of all such work. Clearly mark all trees to be removed.</p> <p>e) Establish a scheme for the removal and disposal of logs, brush, earth and other debris that will avoid injury to any protected tree. Where proposed development or other site work could encroach upon the protected perimeter of any protected tree, incorporate special measures to allow the roots to breathe and obtain water and nutrients. Minimize any excavation, cutting, filing, or compaction of the existing ground surface within the protected perimeter. Require that no change in existing ground level occur from the base of any protected tree at any time. Require that no burning or use of equipment with an open flame occur near or within the protected perimeter of any protected tree.</p> <p>f) Require that no storage or dumping of oil, gas, chemicals, or other substances that may be harmful to trees occur from the base of any protected trees, or any other location on the site from which such substances might enter the protected perimeter. Require that no heavy construction equipment or construction materials be operated or stored within a distance from the base of any protected trees. Require that wires, ropes, or other devices not be attached to any protected tree, except as needed for support of the tree. Require that no sign, other than a tag showing the botanical classification, be attached to any protected tree.</p> <p>g) Thoroughly spray the leaves of protected trees with water periodically during construction to prevent buildup of dust and</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>other pollution that would inhibit leaf transpiration, as directed by the certified arborist.</p> <p>h) If any damage to a protected tree should occur during or as a result of work on the site, the appropriate local agency will be immediately notified of such damage. If, such tree cannot be preserved in a healthy state, as determined by the certified arborist, require replacement of any tree removed with another tree or trees on the same site deemed adequate by the local agency to compensate for the loss of the tree that is removed. Remove all debris created as a result of any tree removal work from the property within two weeks of debris creation, and such debris shall be properly disposed of in accordance with all applicable laws, ordinances, and regulations. Design projects to avoid conflicts with local policies and ordinances protecting biological resources</p> <p>i) Where avoidance is determined to be infeasible, sufficient conservation measures to fulfill the requirements of the applicable policy or ordinance shall be developed, such as to support issuance of a tree removal permit. The consideration of conservation measures may include:</p> <ul style="list-style-type: none"> — Avoidance strategies — Contribution of in-lieu fees — Planting of replacement trees — Re-landscaping areas with native vegetation post-construction — Other comparable measures developed in consultation with local agency and certified arborist. 	
<p>PMM BIO-6: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on HCPs and NCCPs, as applicable and</p>	<p>This Mitigation Measure is not relevant to the Proposed Project as no habitat conservation plan or natural community conservation plans encompass the site and no locally designated natural communities occur on or adjacent to the Project Site. See Section 4, Biological</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Consult with the appropriate federal, state, and/or local agency responsible for the administration of HCPs or NCCPs. b) Wherever practicable and feasible, the project shall be designed to avoid lands preserved under the conditions of an HCP or NCCP. c) Where avoidance is determined to be infeasible, sufficient conservation measures to fulfill the requirements of the HCP and/or NCCP, which would include but not be limited to applicable authorization for incidental take pursuant to Section 7 or 10(a) of the federal Endangered Species Act or Section 2081 of the California ESA, shall be developed to support issuance of an incidental take permit or any other permissions required for development within the HCP/NCCP boundaries. The consideration of additional conservation measures would include the measures outlined in SMM-BIO-2, where applicable. 	<p>Resources, of Chapter IV, SCEA Environmental Checklist, for further information.</p>

Cultural Resources	Historical Resources
<p>PMM CULT-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to historical resources, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Pursuant to <i>CEQA Guidelines</i> Section 15064.5, conduct a record search during the project planning phase at the appropriate Information Center to determine whether the project area has been previously surveyed and whether historical resources were identified. b) During the project planning phase, retain a qualified architectural historian, defined as an individual who meets the Secretary of the Interior's (SOI) Professional Qualification Standards (PQS) 	<p>The Proposed Project is not listed in the California Register of Historical Resources (CRHR), is not a California Point of Historical Interest (CPHI) and is not a California State Historical Landmark (CSHL). It has not been identified as a City of Los Angeles Historic Cultural Monument (HCM), and it is not located in a City Historic Preservation Overlay Zone (HPOZ). Furthermore, it is not listed in the National Register of Historic Places (NRHP). The Property has not previously been recorded by SurveyLA. The Historic Resources Assessment conducted for the Proposed Project did not find the industrial buildings at 3401 S. La Cienega Boulevard individually eligible or eligible as contributors to any historic district or potential historic district under NRHP/CRHR criteria A/1, B/2, C/3, or D/4, or the City's HCM criteria 1-4, nor as a CEQA-defined historical resource. Impacts on historical resources are less</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>in Architectural History, to conduct historic architectural surveys if a built environment resource greater than 45 years in age may be affected by the project or if recommended by the Information Center.</p> <p>c) Comply with Section 106 of the National Historic Preservation Act (NHPA) including, but not limited to, projects for which federal funding or approval is required for the individual project. This law requires federal agencies to evaluate the impact of their actions on resources included in or eligible for listing in the National Register. Federal agencies must coordinate with the State Historic Preservation Officer in evaluating impacts and developing mitigation. These mitigation measures may include, but are not limited to the following:</p> <ul style="list-style-type: none"> — Employ design measures to avoid historical resources and undertake adaptive reuse where appropriate and feasible. If resources are to be preserved, as feasible, carry out the maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction in a manner consistent with the Secretary of the Interior’s Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings. If resources would be impacted, impacts should be minimized to the extent feasible. — Where feasible, noise buffers/walls and/or visual buffers/landscaping should be constructed to preserve the contextual setting of significant built resources. <p>d) If a project requires the relocation, rehabilitation, or alteration of an eligible historical resource, the Secretary of the Interior’s Standards for the Treatment of Historic Properties should be used to the maximum extent possible to ensure the historical significance of the resource is not impaired. The application of the standards should be overseen by an architectural historian</p>	<p>than significant and no mitigation measures are required. See Section 5, Cultural Resources, of Chapter IV, SCEA Environmental Checklist, for further information. No mitigation is required for this impact.</p> <p>Archaeological Resources</p> <p>In compliance with mitigation measure PMM CULT-1:, the Lead Agency has considered mitigation measures consistent with Section 15064.5 of the <i>State CEQA Guidelines</i> and, accordingly, incorporated a comparable mitigation measure CR-7 which provides would mitigate potential archeological impacts. Section 6, Cultural Resources, of Chapter IV, SCEA Environmental Checklist, determined that several prehistoric sites had been previously documented in proximity to the Proposed Project and the NAHC search of the Sacred Lands File returned a positive result. The condition of the parcel and specifically the presence or absence of archaeological materials prior to the initial development and subsequent redevelopment on the Property is unknown. As such, conditions of approval related to archaeological resources have been added to the Proposed Project.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>or historic architect meeting the SOI PQS. Prior to any construction activities that may affect the historical resource, a report, meeting industry standards, should identify and specify the treatment of character-defining features and construction activities and be provided to the Lead Agency for review and approval.</p> <p>e) If a project would result in the demolition or significant alteration of a historical resource eligible for or listed in the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), or local register, recordation should take the form of Historic American Buildings Survey (HABS), Historic American Engineering Record (HAER), or Historic American Landscape Survey (HALS) documentation, and should be performed by an architectural historian or historian who meets the SOI PQS. Recordation should meet the SOI Standards and Guidelines for Architectural and Engineering, which defines the products acceptable for inclusion in the HABS/HAER/HALS collection at the Library of Congress. The specific scope and details of documentation should be developed at the project level in coordination with the Lead Agency.</p> <p>f) During the project planning phase, obtain a qualified archaeologist, defined as one who meets the SOI PQS for archaeology, to conduct a record search at the appropriate Information Center of the California Historical Resources Information System (CHRIS) to determine whether the project area has been previously surveyed and whether resources were identified.</p> <p>g) Contact the Native American Heritage Commission (NAHC) to request a Sacred Lands File search and a list of relevant Native American contacts who may have additional information.</p> <p>h) During the project planning phase, obtain a qualified archaeologist or architectural historian (depending on</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>applicability) to conduct archaeological and/or historic architectural surveys as recommended by the qualified professional, the Lead Agency, or the Information Center. In the event the qualified professional or Information Center will make a recommendation on whether a survey is warranted based on the sensitivity of the project area for archaeological resources. Survey shall be conducted where the records indicate that no previous survey has been conducted, or if survey has not been conducted within the past 10 years. If tribal resources are identified during tribal outreach, consultation, or the record search, a Native American representative traditionally affiliated with the project area, as identified by the NAHC, shall be given the opportunity to provide a representative or monitor to assist with archaeological surveys.</p> <p>i) If potentially significant archaeological resources are identified through survey, and impacts to these resources cannot be avoided, a Phase II Testing and Evaluation investigation should be performed by a qualified archaeologist prior to any construction-related ground-disturbing activities to determine significance. If resources determined significant or unique through Phase II testing, and avoidance is not possible, appropriate resource-specific mitigation measures should be established by the lead agency, in consultation with consulting tribes, where appropriate, and undertaken by qualified personnel. These might include a Phase III data recovery program implemented by a qualified archaeologist and performed in accordance with the OHP's Archaeological Resource Management Reports (ARMR): Recommended Contents and Format and Guidelines for Archaeological Research Designs. Additional options can include 1) interpretative signage, or 2) educational outreach that helps inform the public of the past activities that occurred in this area. Should the project require extended Phase I testing, Phase II</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>evaluation, or Phase III data recovery, a Native American representative traditionally affiliated with the project area, as indicated by the NAHC, shall be given the opportunity to provide a representative or monitor to assist with the archaeological assessments. The long-term disposition of archaeological materials collected from a significant resource should be determined in consultation with the affiliated tribe(s), where relevant; this could include curation with a recognized scientific or educational repository, transfer to the tribe, or respectful reinternment in an area designated by the tribe.</p> <p>j) In cases where the project area is developed and no natural ground surface is exposed, sensitivity for subsurface resources should be assessed based on review of literature, geology, site development history, and consultation with tribal parties. If this archaeological desktop assessment indicates that the project is located in an area sensitive for archaeological resources, as determined by the Lead Agency in consultation with a qualified archaeologist, the project should retain an archaeological monitor and, in the case of sensitivity for tribal resources, a tribal monitor, to observe ground disturbing operations, including but not limited to grading, excavation, trenching, or removal of existing features of the subject property. The archaeological monitor should be supervised by an archaeologist meeting the SOI PQS</p> <p>k) Conduct construction activities and excavation to avoid cultural resources (if identified). If avoidance is not feasible, further work may be needed to determine the importance of a resource. Retain a qualified archaeologist, and/or as appropriate, a qualified architectural historian who should make recommendations regarding the work necessary to assess significance. If the cultural resource is determined to be significant under state or federal guidelines, impacts to the cultural resource will need to be mitigated.</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>l) Stop construction activities and excavation in the area where cultural resources are found until a qualified archaeologist can determine whether these resources are significant, and tribal consultation can be conducted, in the case of tribal resources. If the archaeologist determines that the discovery is significant, its long-term disposition should be determined in consultation with the affiliated tribe(s); this could include curation with a recognized scientific or educational repository, transfer to the tribe, or respectful reinternment in an area designated by the tribe.</p>	
<p>PMM CULT-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to human remains, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) In the event of discovery or recognition of any human remains during construction or excavation activities associated with the project, in any location other than a dedicated cemetery, cease further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the coroner of the county in which the remains are discovered has been informed and has determined that no investigation of the cause of death is required. b) If any discovered remains are of Native American origin, as determined by the county Coroner, an experienced osteologist, or another qualified professional: <ul style="list-style-type: none"> — Contact the County Coroner to contact the NAHC to designate a Native American Most Likely Descendant (MLD). The MLD should make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with 	<p>The Historic Resources Assessment Report did not note any previous use of the Project Site as part of a formal cemetery. The Proposed Project is also not included in the CRHR which includes criteria to determine the potential of the site to include information important to prehistory or history of the local area, California, or the nation such as historic or prehistoric human remains. Therefore, the Project Site is not known to have been used for disposal of historic or prehistoric human remains. Thus, human remains are not expected to be encountered during construction of the Proposed Project. In the unlikely event that human remains are encountered during project construction, State Health and Safety Code Section 7050.5 requires the project to halt until the County Coroner has made the necessary findings as to the origin and disposition of the remains pursuant to Public Resources Code Section 5097.98. Conditions of approval related to buried resources have been added to the Proposed Project. Therefore, impacts would be less than significant.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>appropriate dignity, the human remains and any associated grave goods. This may include obtaining a qualified archaeologist or team of archaeologists to properly excavate the human remains. In some cases, it is necessary for the Lead Agency, qualified archaeologist, or developer to also reach out to the NAHC to coordinate and ensure notification in the event the Coroner is not available.</p> <p>— If the NAHC is unable to identify a MLD, or the MLD fails to make a recommendation within 48 hours after being notified by the commission, or the landowner or his representative rejects the recommendation of the MLD and the mediation by the NAHC fails to provide measures acceptable to the landowner, obtain a culturally affiliated Native American monitor, and an archaeologist, if recommended by the Native American monitor, and rebury the Native American human remains and any associated grave goods, with appropriate dignity, on the property and in a location that is not subject to further subsurface disturbance.</p>	
Geology and Soils	
<p>PMM-GEO-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to geologic hazards, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Consistent with the California Building Code (CBC) and local regulatory agencies with oversight of development associated with the Connect SoCal Plan, ensure that site-specific geotechnical investigations conducted by a qualified geotechnical expert are conducted to ascertain soil types prior</p>	<p>As analyzed and concluded in Section 7, Geology and Soils, of Chapter IV, SCEA Environmental Checklist, the Project does not have the potential for significant effects related to the exposure of people and infrastructure to the effects of earthquakes, seismic related ground-failure, liquefaction, and seismically induced landslides. Further, the Proposed Project already complies with this Mitigation Measure as it is subject to the building construction protocols for reducing seismic hazards as provided in the Los Angeles Municipal Code and applicable regulations. Compliance would help avoid or reduce the potentially significant effects on the potential for projects to result in the exposure of people and infrastructure to the effects of earthquakes, seismic</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>to preparation of project designs. These investigations can and should identify areas of potential failure and recommend remedial geotechnical measures to eliminate any problems.</p> <p>b) Consistent with the requirements of the State Water Resources Control Board (SWRCB) for projects over one acre in size, obtain coverage under the General Construction Activity Storm Water Permit (General Construction Permit) issued by the SWRCB and prepare a stormwater pollution prevention plan (SWPPP) and submit the plan for review and approval by the Regional Water Quality Control Board (RWQCB). At a minimum, the SWPPP should include a description of construction materials, practices, and equipment storage and maintenance; a list of pollutants likely to contact stormwater; site-specific erosion and sedimentation control practices; a list of provisions to eliminate or reduce discharge of materials to stormwater; best management practices (BMPs); and an inspection and monitoring program.</p> <p>c) Consistent with the requirements of the SWRCB and local regulatory agencies with oversight of development associated with the Plan, ensure that project designs provide adequate slope drainage and appropriate landscaping to minimize the occurrence of slope instability and erosion. Design features should include measures to reduce erosion caused by storm water. Road cuts should be designed to maximize the potential for revegetation.</p> <p>d) Consistent with the CBC and local regulatory agencies with oversight of development associated with the Plan, ensure that, prior to preparing project designs, new and abandoned wells are identified within construction areas to ensure the stability of nearby soils.</p>	<p>related ground-failure, liquefaction, and seismically induced landslides, that are in the jurisdiction and responsibility of public agencies, regulatory agencies, and/or Lead Agencies. The Proposed Project would also comply with all seismic standards provided in the California Building Code as approved by the Department of Building and Safety. Impacts would be less than significant and no mitigation is required.</p>
<p>PMM GEO-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce</p>	<p>The Historic Resource Assessment Report did not identify the site as containing or having a potential to contain paleontological resources. Therefore, the Proposed Project is not expected to encounter a unique</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>substantial adverse effects related to paleontological resources. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Ensure compliance with the Paleontological Resources Preservation Act, the Federal Land Policy and Management Act, the Antiquities Act, Section 5097.5 of the Public Resources Code (PRC), adopted county and city general plans, and other federal, state and local regulations, as applicable and feasible, by adhering to and incorporating the performance standards and practices from the 2010 Society for Vertebrate Paleontology (SVP) standard procedures for the assessment and mitigation of adverse impacts to paleontological resources. b) Obtain review by a qualified paleontologist (e.g. who meets the SVP standards for a Principal Investigator or Project Paleontologist or the Bureau of Land Management (BLM) standards for a Principal Investigator), to determine if the project has the potential to require ground disturbance of parent material with potential to contain unique paleontological or resources, or to require the substantial alteration of a unique geologic feature. The assessment should include museum records searches, a review of geologic mapping and the scientific literature, geotechnical studies (if available), and potentially a pedestrian survey, if units with paleontological potential are present at the surface. c) Avoid exposure or displacement of parent material with potential to yield unique paleontological resources. d) Where avoidance of parent material with the potential to yield unique paleontological resources is not feasible: 	<p>paleontological resource or unique geologic feature. Conditions of approval related to the protection of potential paleontological resources or unique geologic features have been added to the Proposed Project Mitigation Measure CR-9 provides procedures to follow in the event of accidental discovery of paleontological resources. As such, this mitigation measure is not applicable to the Project. See Section 7, Geology and Soils, of Chapter IV, SCEA Environmental Checklist, for further information.</p>
<p>PMM-GHG-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to greenhouse gas emissions, as</p>	<p>Impacts regarding the generation of greenhouse gas emissions were analyzed in Section 8, Greenhouse Gas Emissions, in Chapter IV, SCEA Environmental Checklist. The Air Quality and Greenhouse Gas Report provides a detailed analysis demonstrating the Proposed Project's consistency with CARB's 2017 Scoping Plan and SCAG's</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Integrate green building measures consistent with CALGreen (California Building Code Title 24), local building codes and other applicable laws, into project design including: <ul style="list-style-type: none"> i. Use energy efficient materials in building design, construction, rehabilitation, and retrofit. ii. Install energy-efficient lighting, heating, and cooling systems (cogeneration); water heaters; appliances; equipment; and control systems. iii. Reduce lighting, heating, and cooling needs by taking advantage of light-colored roofs, trees for shade, and sunlight. iv. Incorporate passive environmental control systems that account for the characteristics of the natural environment. v. Use high-efficiency lighting and cooking devices. vi. Incorporate passive solar design. vii. Use high-reflectivity building materials and multiple glazing. viii. Prohibit gas-powered landscape maintenance equipment. ix. Install electric vehicle charging stations. x. Reduce wood burning stoves or fireplaces. xi. Provide bike lanes accessibility and parking at residential developments. b) Reduce emissions resulting from projects through implementation of project features, project design, or other measures, such as those described in Appendix F of the State CEQA Guidelines. c) Include off-site measures to mitigate a project's emissions. 	<p>Connect SoCal Plan. The Proposed Project would have a less than significant GHG impact and therefore mitigation is not required. Nevertheless, the Proposed Project will include many of the GHG reduction measures identified in this project level mitigation measure. The Proposed Project is a transit-oriented development which places residences, amenities, and jobs within walking distance (100 feet) to the Jefferson/La Cienega Metro Expo station. The Proposed Project also plans to implement streetscape improvements and provide bicycle parking on-site to promote pedestrians and bicycle travel. In addition, the Proposed Project will implement a series of project design features that will reduce GHG emissions including installing ENERGY STAR appliances, LED lighting, a rainwater collection cistern, and EV parking. In addition, the proposed project intends to purchase 100% green power from the LADWP grid and landscape the site with drought tolerant plants.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>d) Measures that consider incorporation of Best Available Control Technology (BACT) during design, construction and operation of projects to minimize GHG emissions, including but not limited to:</p> <ul style="list-style-type: none"> i. Use energy and fuel-efficient vehicles and equipment; ii. Deployment of zero- and/or near zero emission technologies; iii. Use lighting systems that are energy efficient, such as LED technology; iv. Use the minimum feasible amount of GHG-emitting construction materials; v. Use cement blended with the maximum feasible amount of flash or other materials that reduce GHG emissions from cement production; vi. Incorporate design measures to reduce GHG emissions from solid waste management through encouraging solid waste recycling and reuse; vii. Incorporate design measures to reduce energy consumption and increase use of renewable energy; viii. Incorporate design measures to reduce water consumption; ix. Use lighter-colored pavement where feasible; x. Recycle construction debris to maximum extent feasible; xi. Plant shade trees in or near construction projects where feasible; and xii. Solicit bids that include concepts listed above. <p>e) Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following:</p> <ul style="list-style-type: none"> i. Promote transit-active transportation coordinated strategies; ii. Increase bicycle carrying capacity on transit and rail vehicles; iii. Improve or increase access to transit; 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none"> iv. Increase access to common goods and services, such as groceries, schools, and day care; v. Incorporate affordable housing into the project; vi. Incorporate the neighborhood electric vehicle network; vii. Orient the project toward transit, bicycle and pedestrian facilities; viii. Improve pedestrian or bicycle networks, or transit service; ix. Provide traffic calming measures; x. Provide bicycle parking; xi. Limit or eliminate park supply; xii. Unbundle parking costs; xiii. Provide parking cash-out programs; xiv. Implement or provide access to commute reduction program; f) Incorporate bicycle and pedestrian facilities into project designs, maintaining these facilities, and providing amenities incentivizing their use; and planning for and building local bicycle projects that connect with the regional network; g) Improving transit access to rail and bus routes by incentives for construction of transit facilities within developments, and/or providing dedicated shuttle service to transit stations; and h) Adopting employer trip reduction measures to reduce employee trips such as vanpool and carpool programs, providing end-of-trip facilities, and telecommuting programs including but not limited to measures that: <ul style="list-style-type: none"> i. Provide car-sharing, bike sharing, and ride-sharing programs; ii. Provide transit passes; iii. Shift single occupancy vehicle trips to carpooling or vanpooling, for example providing ride-matching services; 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none"> iv. Provide incentives or subsidies that increase that use of modes other than single-occupancy vehicle; v. Provide on-site amenities at places of work, such as priority parking for carpools and vanpools, secure bike parking, and showers and locker rooms; vi. Provide employee transportation coordinators at employment sites; vii. Provide a guaranteed ride home service to users of non-auto modes. i) Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles, and provide adequate passenger loading and unloading for those vehicles; j) Land use siting and design measures that reduce GHG emissions, including: <ul style="list-style-type: none"> i. Developing on infill and brownfields sites; ii. Building compact and mixed-use developments near transit; iii. Retaining on-site mature trees and vegetation, and planting new canopy trees; iv. Measures that increase vehicle efficiency, encourage use of zero and low emissions vehicles, or reduce the carbon content of fuels, including constructing or encouraging construction of electric vehicle charging stations or neighborhood electric vehicle networks, or charging for electric bicycles; and v. Measures to reduce GHG emissions from solid waste management through encouraging solid waste recycling and reuse. k) Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities. The measures provided above are also intended to be applied in low income and minority communities as applicable and feasible. 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>Hazards and Hazardous Materials</p> <p>PMM HAZ-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to the routine transport, use, or disposal of hazardous materials, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Where the construction or operation of projects involves the transport of hazardous material, provide a written plan of proposed routes of travel demonstrating use of roadways designated for the transport of such materials. b) Specify Project requirements for interim storage and disposal of hazardous materials during construction and operation. Storage and disposal strategies must be consistent with applicable federal, state, and local statutes and regulations. Specify the appropriate procedures for interim storage and disposal of hazardous materials, anticipated to be required in support of operations and maintenance activities, in conformance with applicable federal, state, and local statutes and regulations, in the business plan for projects as applicable and appropriate. c) Submit a Hazardous Materials Business/Operations Plan for review and approval by the appropriate local agency. Once approved, keep the plan on file with the Lead Agency (or other appropriate government agency) and update, as applicable. The purpose of the Hazardous Materials Business/Operations Plan is to ensure that employees are adequately trained to handle the materials and provides information to the local fire protection agency should emergency response be required. The Hazardous Materials Business/Operations Plan should include the following: 	<p>The Project does not involve the use or storage of hazardous substances other than the small amounts of pesticides, fertilizers and cleaning agents required for normal maintenance of the structure and landscaping. The Project must adhere to applicable zoning and fire regulations regarding the use and storage of any hazardous substances. Impacts were found to be less than significant as analyzed in Section 9, Hazards and Hazardous Materials, of Chapter IV, SCEA Environmental Checklist, and mitigation is not required.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none"> — The types of hazardous materials or chemicals stored and/or used on-site, such as petroleum fuel products, lubricants, solvents, and cleaning fluids. — The location of such hazardous materials. — An emergency response plan including employee training information. — A plan that describes the way these materials are handled, transported and disposed. <p>d) Follow manufacturer’s recommendations on use, storage, and disposal of chemical products used in construction.</p> <p>e) Avoid overtopping construction equipment fuel gas tanks.</p> <p>f) Properly contain and remove grease and oils during routine maintenance of construction equipment.</p> <p>g) Properly dispose of discarded containers of fuels and other chemicals.</p> <p>h) Prior to shipment remove the most volatile elements, including flammable natural gas liquids, as feasible.</p> <p>i) Identify and implement more stringent tank car safety standards.</p> <p>j) Improve rail transportation route analysis, and modification of routes based on that analysis.</p> <p>k) Use the best available inspection equipment and protocols and implement positive train control.</p> <p>l) Reduce train car speeds to 40 miles per hour when passing through urbanized areas of any size.</p> <p>m) Limit storage of crude oil tank cars in urbanized areas of any size and provide appropriate security in storage yards for all shipments.</p> <p>n) Notify in advance county and city emergency operations offices of all crude oil shipments, including a contact number that can provide real-time information in the event of an oil train derailment or accident.</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>o) Report quarterly hazardous commodity flow information, including classification and characterization of materials being transported, to all first response agencies (49 Code Fed. Regs. 15.5) along the mainline rail routes used by trains carrying crude oil identified.</p> <p>p) Fund training and outfitting emergency response crews that includes the cost of backfilling personnel while in training.</p> <p>q) Undertake annual emergency responses scenario / field-based training including Emergency Operations Center Training activations with local emergency response agencies.</p>	
<p>PMM HAZ-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce hazards related to the reasonably foreseeable upsets and accidents involving the release of hazardous materials, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Removal of the most volatile elements, including flammable natural gas liquids, prior to shipment; b) More stringent tank car safety standards; c) Improved rail transportation route analysis, and modification of routes based on that analysis; d) Utilization of the best available inspection equipment and protocols, and implementation of positive train control; e) Reduced train car speeds to 40 miles per hour when passing through urbanized areas of any size; f) Limitations on storage of hazardous materials tank cars in urbanized areas of any size and provide appropriate security in storage yards for all shipments; g) Advance notification to county and city emergency operations offices of all crude oil and hazardous materials shipments, including a contact number that can provide real-time information in the event of an oil train derailment or accident; 	<p>The Proposed Project does not involve the use or storage of hazardous substances other than the small amounts of pesticides, fertilizers and cleaning agents required for normal maintenance of the structure and landscaping. The Proposed Project must adhere to applicable zoning and fire regulations regarding the use and storage of any hazardous substances. Therefore, there is no significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions. This mitigation measure is therefore not applicable to the Proposed Project. Impacts were found to be less than significant as analyzed in Section 9, Hazards and Hazardous Materials, of Chapter IV, SCEA Environmental Checklist, and mitigation is not required.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>h) Quarterly hazardous commodity flow information, including classification and characterization of materials being transported, to all first response agencies (49 Code Fed. Regs. 15.5) along the mainline rail routes used by trains carrying hazardous materials.</p>	
<p>PMM HAZ-3: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to the release of hazardous materials within one-quarter mile of schools, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Where the construction and operation of projects involves the transport of hazardous materials, avoid transport of such materials within one-quarter mile of schools, when school is in session, wherever feasible. b) Where it is not feasible to avoid transport of hazardous materials, within one-quarter mile of schools on local streets, provide notifications of the anticipated schedule of transport of such materials. 	<p>Echo Horizon Elementary School is within one-quarter mile from the Proposed Project. However, the Proposed Project does not involve hazardous emissions or the handling of hazardous materials, substance, or waste; Therefore, the Proposed Project would have no hazardous material related impacts to schools. This mitigation measure is not applicable to the Project.</p>
<p>PMM HAZ-4: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to projects that are located on a site which is included on the Cortese List, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) For any listed sites or sites that have the potential for residual hazardous materials as a result of historic land uses, complete a Phase I Environmental Site Assessment, including a review and consideration of data from all known databases of contaminated sites, during the process of planning, 	<p>Searches conducted using the California State Water Resources Control Board Geotracker and the Department of Toxic Substances Control EnviroStor did not reveal any open cases for potentially hazardous sites within 1000 feet of the Project Site. The site is not known or anticipated to have been contaminated with hazardous materials and no hazardous material storage facilities are known to exist onsite. This mitigation measure is not applicable.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>environmental clearance, and construction for projects.</p> <ul style="list-style-type: none">b) Where warranted due to the known presence of contaminated materials, submit to the appropriate agency responsible for hazardous materials/wastes oversight a Phase II Environmental Site Assessment report if warranted by a Phase I report for the Project Site. The reports should make recommendations for remedial action, if appropriate, and be signed by a Registered Environmental Assessor, Professional Geologist, or Professional Engineer.c) Implement the recommendations provided in the Phase II Environmental Site Assessment report, where such a report was determined to be necessary for the construction or operation of the project, for remedial action.d) Submit a copy of all applicable documentation required by local, state, and federal environmental regulatory agencies, including but not limited to: permit applications, Phase I and II Environmental Site Assessments, human health and ecological risk assessments, remedial action plans, risk management plans, soil management plans, and groundwater management plans.e) Conduct soil sampling and chemical analyses of samples, consistent with the protocols established by the U.S. EPA to determine the extent of potential contamination beneath all underground storage tanks (USTs), elevator shafts, clarifiers, and subsurface hydraulic lifts when on-site demolition or construction activities would potentially affect a particular development or building.f) Consult with the appropriate local, state, and federal environmental regulatory agencies to ensure sufficient minimization of risk to human health and environmental resources, both during and after construction, posed by soil contamination, groundwater contamination, or other surface hazards including, but not limited to, underground storage tanks,	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>fuel distribution lines, waste pits and sumps.</p> <p>g) Obtain and submit written evidence of approval for any remedial action if required by a local, state, or federal environmental regulatory agency.</p> <p>h) Cease work if soil, groundwater, or other environmental medium with suspected contamination is encountered unexpectedly during construction activities (e.g., identified by odor or visual staining, or if any underground storage tanks, abandoned drums, or other hazardous materials or wastes are encountered), in the vicinity of the suspect material. Secure the area as necessary and take all appropriate measures to protect human health and the environment, including but not limited to, notification of regulatory agencies and identification of the nature and extent of contamination. Stop work in the areas affected until the measures have been implemented consistent with the guidance of the appropriate regulatory oversight authority.</p> <p>i) Soil generated by construction activities should be stockpiled on-site in a secure and safe manner. All contaminated soils determined to be hazardous or non-hazardous waste must be adequately profiled (sampled) prior to acceptable reuse or disposal at an appropriate off-site facility. Complete sampling and handling and transport procedures for reuse or disposal, in accordance with applicable local, state and federal laws and policies.</p> <p>j) Groundwater pumped from the subsurface should be contained on-site in a secure and safe manner, prior to treatment and disposal, to ensure environmental and health issues are resolved pursuant to applicable laws and policies. Utilize engineering controls, which include impermeable barriers to prohibit groundwater and vapor intrusion into the building.</p> <p>k) As needed and appropriate, prior to issuance of any demolition, grading, or building permit, submit for review and approval by the Lead Agency (or other appropriate government agency) written</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>verification that the appropriate federal, state and/or local oversight authorities, including but not limited to the Regional Water Quality Control Board (RWQCB), have granted all required clearances and confirmed that the all applicable standards, regulations, and conditions have been met for previous contamination at the site.</p> <ul style="list-style-type: none"> l) Develop, train, and implement appropriate worker awareness and protective measures to assure that worker and public exposure is minimized to an acceptable level and to prevent any further environmental contamination as a result of construction. m) If asbestos-containing materials (ACM) are found to be present in building materials to be removed, submit specifications signed by a certified asbestos consultant for the removal, encapsulation, or enclosure of the identified ACM in accordance with all applicable laws and regulations, including but not necessarily limited to: California Code of Regulations, Title 8; Business and Professions Code; Division 3; California Health and Safety Code Section 25915-25919.7; and other local regulations. n) Where projects include the demolitions or modification of buildings constructed prior to 1978, complete an assessment for the potential presence or lack thereof of ACM, lead based paint, and any other building materials or stored materials classified as hazardous waste by state or federal law. o) Where the remediation of lead-based paint has been determined to be required, provide specifications to the appropriate agency, signed by a certified Lead Supervisor, Project Monitor, or Project Designer for the stabilization and/or removal of the identified lead paint in accordance with all applicable laws and regulations, including but not necessarily limited to: California Occupational Safety and Health Administration's (Cal OSHA's) Construction Lead Standard, Title 8 California Code of Regulations (CCR) Section 1532.1 and Department of Health Services (DHS) 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>Regulation 17 CCR Sections 35001–36100, as may be amended. If other materials classified as hazardous waste by state or federal law are present, the project sponsor should submit written confirmation to the appropriate local agency that all state and federal laws and regulations should be followed when profiling, handling, treating, transporting, and/or disposing of such materials.</p>	
<p>PMM HAZ-5: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects which may impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Continue to coordinate locally and regionally based on ongoing review and integration of projected transportation and circulation conditions. b) Develop new methods of conveying projected and real time information to citizens using emerging electronic communication tools including social media and cellular networks; c) Continue to evaluate lifeline routes for movement of emergency supplies and evacuation. 	<p>Demolition, construction and operation of the Proposed Project is not anticipated to significantly impair implementation of, or physically interfere with, any adopted or on-site emergency response or evacuation plans or a local, state, or federal agency’s emergency evacuation plan, and the Proposed Project would have a less than significant impact with respect to these issues. This mitigation measure is not applicable.</p>
Hydrology and Water Quality	
<p>PMM HYD-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects from violation of any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p>	<p>Though the Proposed Project would add typical, urban, nonpoint source pollutants to stormwater runoff, the Proposed Project will comply with local regulations as required by the countywide MS4 permit regarding stormwater runoff. This would ensure the Proposed Project complies with this Mitigation Measure and would help avoid or reduce the potential impacts on water quality or related waste discharge requirements that are within the jurisdiction and authority of the Regional Water Quality Control Boards and other regulatory agencies.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none"> a) Complete, and have approved, a Stormwater Pollution Prevention Plan (SWPPP) prior to initiation of construction. b) Implement Best Management Practices to reduce the peak stormwater runoff from the Project Site to the maximum extent practicable. c) Comply with the Caltrans storm water discharge permit as applicable; and identify and implement Best Management Practices to manage site erosion, wash water runoff, and spill control. d) Complete, and have approved, a Standard Urban Stormwater Management Plan, prior to occupancy of residential or commercial structures. e) Ensure adequate capacity of the surrounding stormwater system to support stormwater runoff from new or rehabilitated structures or buildings. f) Prior to construction within an area subject to Section 404 of the Clean Water Act, obtain all required permit approvals and certifications for construction within the vicinity of a watercourse: g) Where feasible, restore or expand riparian areas such that there is no net loss of impervious surface as a result of the project. h) Install structural water quality control features, such as drainage channels, detention basins, oil and grease traps, filter systems, and vegetated buffers to prevent pollution of adjacent water resources by polluted runoff where required by applicable urban storm water runoff discharge permits, on new facilities. i) Provide operational best management practices for street cleaning, litter control, and catch basin cleaning are implemented to prevent water quality degradation in compliance with applicable storm water runoff discharge permits; and ensure treatment controls are in place as early as possible, such as during the acquisition process for rights-of-way, not just later during the facilities design and construction phase. j) Comply with applicable municipal separate storm sewer system 	<p>As such, the Proposed Project would have a less than significant impact and no mitigation measures would be required. See Section 10, Hydrology and Water Quality, of Chapter IV, SCEA Environmental Checklist, for further information.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>discharge permits as well as Caltrans' storm water discharge permit including long-term sediment control and drainage of roadway runoff.</p> <p>k) Incorporate as appropriate treatment and control features such as detention basins, infiltration strips, and porous paving, other features to control surface runoff and facilitate groundwater recharge into the design of new transportation projects early on in the process to ensure that adequate acreage and elevation contours are provided during the right-of-way acquisition process.</p> <p>l) Upgrade stormwater drainage facilities to accommodate any increased runoff volumes. These upgrades may include the construction of detention basins or structures that will delay peak flows and reduce flow velocities, including expansion and restoration of wetlands and riparian buffer areas. System designs shall be completed to eliminate increases in peak flow rates from current levels.</p> <p>m) Encourage Low Impact Development (LID) and incorporation of natural spaces that reduce, treat, infiltrate and manage stormwater runoff flows in all new developments, where practical and feasible.</p>	
<p>PMM HYD-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects from violation of any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Avoid designs that require continual dewatering where feasible. For projects requiring continual dewatering facilities, implement monitoring systems and long-term administrative procedures to ensure proper water management that prevents degrading of</p>	<p>Though the Proposed Project would add typical, urban, nonpoint source pollutants to stormwater runoff, the Proposed Project will comply with local regulations as required by the countywide MS4 permit regarding stormwater runoff. This would ensure the Proposed Project complies with this Mitigation Measure and would help avoid or reduce the potential impacts on water quality or related waste discharge requirements that are within the jurisdiction and authority of the Regional Water Quality Control Boards and other regulatory agencies. The Proposed Project would have a less than significant impact and no mitigation would be required. See Section 10, Hydrology and Water Quality, of Chapter IV, SCEA Environmental Checklist, for further information.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>surface water and minimizes adverse impacts on groundwater for the life of the project, Construction designs shall comply with appropriate building codes and standard practices including the Uniform Building Code.</p> <p>a) Maximize, where practical and feasible, permeable surface area in existing urbanized areas to protect water quality, reduce flooding, allow for groundwater recharge, and preserve wildlife habitat. Minimize new impervious surfaces, including the use of in-lieu fees and off-site mitigation.</p> <p>b) Avoid construction and siting on groundwater recharge areas, to prevent conversion of those areas to impervious surface.</p> <p>c) Reduce hardscape to the extent feasible to facilitate groundwater recharge as appropriate.</p>	
<p>PMM HYD-4: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures capable of avoiding or reducing the potential impacts of locating structures that would impede or redirect flood flows, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Ensure that all roadbeds for new highway and rail facilities be elevated at least one foot above the 100-year base flood elevation. Since alluvial fan flooding is not often identified on FEMA flood maps, the risk of alluvial fan flooding should be evaluated and projects should be sited to avoid alluvial fan flooding. Delineation of floodplains and alluvial fan boundaries should attempt to account for future hydrologic changes caused by global climate change.</p>	<p>This mitigation measure is not applicable. Nonetheless, the Proposed Project would be required to prepare a SWPPP and implement BMPs to reduce runoff and preserve water quality during construction of the Proposed Project. Further, the Proposed Project would be required to implement a LID Plan (during the Project's operation), which would reduce the amount of surface water runoff leaving the Project Site after a storm event.</p>
Land Use and Planning	
<p>PMM LU-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce</p>	<p>The site is surrounded by other residential development to the east of the Project Site and by existing commercial space to the south, north, and west. Immediately to the north and west of the Project Site are two</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>substantial adverse effects that physically divide a community, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Facilitate good design for land use projects that build upon and improve existing circulation patterns b) Encourage implementing agencies to orient transportation projects to minimize impacts on existing communities by: <ul style="list-style-type: none"> — Selecting alignments within or adjacent to existing public rights of way. — Design sections above or below-grade to maintain viable vehicular, cycling, and pedestrian connections between portions of communities where existing connections are disrupted by the transportation project. — Wherever feasible incorporate direct crossings, overcrossings, or under crossings at regular intervals for multiple modes of travel (e.g., pedestrians, bicyclists, vehicles). c) Where it has been determined that it is infeasible to avoid creating a barrier in an established community, consider other measures to reduce impacts, including but not limited to: <ul style="list-style-type: none"> — Alignment shifts to minimize the area affected. — Reduction of the proposed right-of-way take to minimize the overall area of impact. — Provisions for bicycle, pedestrian, and vehicle access across improved roadways. 	<p>new developments proposing mixed-use and office space, respectively. Accordingly, the site is surrounded by similar development on all sides and would not physically divide an existing community. The Project would in fact unite the surrounding uses by incorporating the existing bicycle path along Jefferson Blvd. into the Project design, providing a plaza directly connecting the Project Site to the Jefferson / La Cienega Metro station, and providing over 30,000 sf of publically accessible ground floor amenities to integrate the Project into the neighborhood. This mitigation measure is not applicable to the Project.</p>
<p>PMM LU-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects that physically divide a community, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p>	<p>This mitigation measure is not applicable to the Project as the Proposed Project would not physically divide an existing community (as explained above) and would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>a) When an inconsistency with the adopted general plan policy or land use regulation (adopted for the purpose of avoiding or mitigating an impact) is identified modify the transportation or land use project to eliminate the conflict; or, determine if the environmental, social, economic, and engineering benefits of the project warrant an amendment to the general plan or land use regulation.</p>	
Mineral Resources	
<p>PMM MIN-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce the use of mineral resources that could be of value to the region, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Provide for the efficient use of known aggregate and mineral resources or locally important mineral resource recovery sites, by ensuring that the consumptive use of aggregate resources is minimized and that access to recoverable sources of aggregate is not precluded, as a result of construction, operation and maintenance of projects.</p> <p>b) Where avoidance is infeasible, minimize impacts to the efficient and effective use of recoverable sources of aggregate through measures that have been identified in county and city general plans, or other comparable measures such as:</p> <ol style="list-style-type: none"> 1) Recycle and reuse building materials resulting from demolition, particularly aggregate resources, to the maximum extent practicable. 2) Identify and use building materials, particularly aggregate materials, resulting from demolition at other construction sites in the SCAG region, or within a reasonable hauling distance of the Project Site. 	<p>The Project Site has not been utilized for mineral extraction and is not located within an oil drilling district, state-designated oil filed or surface mining district, and there are no active mining operations on the Project Site or near the project vicinity. This mitigation measure is not applicable.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>3) Design transportation network improvements in a manner (such as buffer zones or the use of screening) that does not preclude adjacent or nearby extraction of known mineral and aggregate resources following completion of the improvement and during long-term operations.</p> <p>4) Avoid or reduce impacts on known aggregate and mineral resources and mineral resource recovery sites through the evaluation and selection of project sites and design features (e.g., buffers) that minimize impacts on land suitable for aggregate and mineral resource extraction by maintaining portions of MRZ-2 areas in open space or other general plan land use categories and zoning that allow for mining of mineral resources.</p>	
Noise	
<p>PMM NOISE-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Install temporary noise barriers during construction. b) Include permanent noise barriers and sound-attenuating features as part of the project design. Barriers could be in the form of outdoor barriers, sound walls, buildings, or earth berms to attenuate noise at adjacent sensitive uses. c) Schedule construction activities consistent with the allowable hours pursuant to applicable general plan noise element or noise ordinance d) Post procedures and phone numbers at the construction site for notifying the Lead Agency staff, local Police Department, and construction contractor (during regular construction hours and 	<p>In compliance with this mitigation measure, the Lead Agency has considered mitigation measures consistent with Section 15064.5 of the <i>State CEQA Guidelines</i> and, accordingly, incorporated a comparable mitigation measure. The implementation of Mitigation Measure NOI-1, which has been incorporated into the Project, would reduce noise impacts associated with the Proposed Project to a less than significant level. MM NOI-1 is similar in that it requires the installation of sound barriers, noise reduction devices such as improved mufflers, and reduction of construction activity levels. MM NOI-1 also includes a specific 13 decibel Leq minimum reduction level to ensure impacts from the Proposed Project would be less than significant.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>off-hours), along with permitted construction days and hours, complaint procedures, and who to notify in the event of a problem.</p> <p>e) Notify neighbors and occupants within 300 feet of the project construction area at least 30 days in advance of anticipated times when noise levels are expected to exceed limits established in the noise element of the general plan or noise ordinance.</p> <p>f) Designate an on-site construction complaint and enforcement manager for the project.</p> <p>g) Ensure that construction equipment are properly maintained per manufacturers' specifications and fitted with the best available noise suppression devices (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds silencers, wraps). All intake and exhaust ports on power equipment shall be muffled or shielded.</p> <p>h) Use hydraulically or electrically powered tools (e.g., jack hammers, pavement breakers, and rock drills) for project construction to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust should be used; this muffler can lower noise levels from the exhaust by up to about 10 dBA. External jackets on the tools themselves should be used, if such jackets are commercially available, and this could achieve a further reduction of 5 dBA. Quieter procedures should be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures.</p> <p>i) Where feasible, design projects so that they are depressed below the grade of the existing noise-sensitive receptor, creating an effective barrier between the roadway and sensitive receptors.</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none">j) Where feasible, improve the acoustical insulation of dwelling units where setbacks and sound barriers do not provide sufficient noise reduction.k) Using rubberized asphalt or “quiet pavement” to reduce road noise for new roadway segments, roadways in which widening or other modifications require re-pavement, or normal reconstruction of roadways where re-pavement is plannedl) Projects that require pile driving or other construction noise above 90 dBA in proximity to sensitive receptors, should reduce potential pier drilling, pile driving and/or other extreme noise generating construction impacts greater than 90 dBA; a set of site-specific noise attenuation measures should be completed under the supervision of a qualified acoustical consultant.m) Use land use planning measures, such as zoning, restrictions on development, site design, and buffers to ensure that future development is compatible with adjacent transportation facilities and land uses;n) Monitor the effectiveness of noise reduction measures by taking noise measurements and installing adaptive mitigation measures to achieve the standards for ambient noise levels established by the noise element of the general plan or noise ordinance.o) Use equipment and trucks with the best available noise control techniques (e.g., improved mufflers, equipment redesign, use of intake silencers, ducts, engine enclosures, and acoustically attenuating shields or shrouds, wherever feasible) for project construction.p) Stationary noise sources can and should be located as far from adjacent sensitive receptors as possible and they should be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the Lead Agency (or other appropriate government agency) to provide equivalent noise reduction.	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>q) Use of portable barriers in the vicinity of sensitive receptors during construction.</p> <p>r) Implement noise control at the receivers by temporarily improving the noise reduction capability of adjacent buildings (for instance by the use of sound blankets), and implement if such measures are feasible and would noticeably reduce noise impacts.</p> <p>s) Monitor the effectiveness of noise attenuation measures by taking noise measurements.</p> <p>t) Maximize the distance between noise-sensitive land uses and new roadway lanes, roadways, rail lines, transit centers, park-and-ride lots, and other new noise-generating facilities.</p> <p>u) Construct sound reducing barriers between noise sources and noise-sensitive land uses.</p> <p>v) Stationary noise sources can and should be located as far from adjacent sensitive receptors as possible and they should be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the Lead Agency (or other appropriate government agency) to provide equivalent noise reduction.</p> <p>w) Use techniques such as grade separation, buffer zones, landscaped berms, dense plantings, sound walls, reduced-noise paving materials, and traffic calming measures.</p> <p>x) Locate transit-related passenger stations, central maintenance facilities, decentralized maintenance facilities, and electric substations away from sensitive receptors to the maximum extent feasible.</p> <p>y) Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities.</p>	
<p>PMM NOISE-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce</p>	<p>In compliance with this mitigation measure, the Lead Agency has considered mitigation measures consistent with Section 15064.5 of the <i>State CEQA Guidelines</i> and, accordingly, incorporated a comparable</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>substantial adverse effects related to vibration, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the potential vibration impacts to the structural integrity of the adjacent buildings within 50 feet of pile driving locations. b) For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the threshold levels of vibration and cracking that could damage adjacent historic or other structure, and design means and construction methods to not exceed the thresholds. c) For projects where pile driving would be necessary for construction due to geological conditions, utilize quiet pile driving techniques such as predrilling the piles to the maximum feasible depth, where feasible. Predrilling pile holes will reduce the number of blows required to completely seat the pile and will concentrate the pile driving activity closer to the ground where pile driving noise can be shielded more effectively by a noise barrier/curtain. d) Restrict construction activities to permitted hours in accordance with local jurisdiction regulation. e) Properly maintain construction equipment and outfit construction equipment with the best available noise suppression devices (e.g., mufflers, silences, wraps). f) Prohibit idling of construction equipment for extended periods of time in the vicinity of sensitive receptors. 	<p>mitigation measure. The implementation of Mitigation Measure NOI-1, which has been incorporated into the Project, would reduce noise impacts associated with the Proposed Project to a less than significant level. MM NOI-1 is similar in that it requires the installation of sound barriers, noise reduction devices such as improved mufflers, and reduction of construction activity levels. MM NOI-1 also includes a specific 13 decibel Leq minimum reduction level to ensure impacts from the Proposed Project would be less than significant.</p>
Population and Housing	
<p>PMM-POP-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce the</p>	<p>The Project Site does not contain any existing dwelling units. Therefore, the Proposed Project would not displace existing housing and this mitigation measure is not applicable.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>displacement of existing housing, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ol style="list-style-type: none"> a) Evaluate alternate route alignments and transportation facilities that minimize the displacement of homes and businesses. Use an iterative design and impact analysis where impacts to homes or businesses are involved to minimize the potential of impacts on housing and displacement of people. b) Prioritize the use existing ROWs, wherever feasible. c) Develop a construction schedule that minimizes potential neighborhood deterioration from protracted waiting periods between right-of-way acquisition and construction. d) Review capacities of available urban infrastructure and augment capacities as needed to accommodate demand in locations where growth is desirable to the local lead Agency and encouraged by the SCS (primarily TPAs, where applicable). e) When General Plans and other local land use regulations are amended or updated, use the most recent growth projections and RHNA allocation plan. 	
Public Services	
<p>PMM PSP-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects of constructing new emergency response facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> • Coordinate with emergency response agencies to ensure that there are adequate governmental facilities to maintain acceptable service ratios, response times or other performance objectives for emergency response services and that any required additional construction of buildings is incorporated in to the project description. 	<p>This mitigation measure is not applicable to the Project as the Proposed Project would not require the construction or alteration of emergency response facilities. See Section 15, Public Services, of Chapter IV, SCEA Environmental Checklist, for further information.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none"> • Where current levels of services at the Project Site are found to be inadequate, provide fair share contributions towards infrastructure improvements, as appropriate and applicable, to mitigate identified CEQA impacts. • Project sponsors can and should develop traffic control plans for individual projects. Traffic control plans should include information on lane closures and the anticipated flow of traffic during the construction period. The basic objective of each traffic control plan (TCP) is to permit the contractor to work within the public right of way efficiently and effectively while maintaining a safe, uniform flow of traffic. The construction work and the public traveling through the work zone in vehicles, bicycles or as pedestrians must be given equal consideration when developing a traffic control plan. 	
<p>PMM PSS-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects of constructing new or physically altered school facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Where construction or expansion of school facilities is required to meet public school service ratios, require school district fees, as applicable. 	<p>This mitigation measure is addressed as the Project would require fees to reduce impacts as to a less than significant impact. The Applicant would be required to pay applicable school fees in accordance with California Government Code Section 65995, which are deemed by statute to fully mitigate any potentially significant impact on schools.</p>
<p>PMM PSL-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects of construction of new or altered library facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p>	<p>This mitigation measure is not applicable as the Project would not cause a significant impact with regard to library services. As discussed in Section 15, Public Services of Chapter IV, SCEA Environmental Checklist, the addition of residential units at the Project Site would not be substantial enough to create additional impacts to existing services and the Project would not significantly impact library services and no new or expanded library facilities would be needed.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>a) Where construction or expansion of library facilities is required to meet public library service ratios, require library fees, as appropriate and applicable, to mitigate identified CEQA impacts.</p>	
Recreation	
<p>PMM REC-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on the use of existing neighborhood and regional parks or other recreational facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, consider increasing the accessibility to natural areas and lands for outdoor recreation from the Proposed Project area, in coordination with local and regional open space planning and/or responsible management agencies.</p> <p>b) Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, encourage patterns of urban development and land use which reduce costs on infrastructure and make better use of existing facilities, using strategies such as:</p> <ul style="list-style-type: none"> i. Increasing the accessibility to natural areas for outdoor recreation ii. Utilizing “green” development techniques iii. Promoting water-efficient land use and development iv. Encouraging multiple uses, such as the joint use of schools v. Including trail systems and trail segments in General Plan recreation standards. 	<p>Los Angeles Municipal Code Section 12.33 requires all new, non-exempt, residential dwelling units to dedicate land, pay a fee or provide a combination of land dedication and fee payment for the purpose of acquiring, expanding and improving park and recreational facilities for new residents, with an exception made for affordable housing units. The Project will be required to comply with Los Angeles Municipal Code Section 12.33. The Project itself would not lead to substantial physical deterioration of any existing recreational facilities and would have no related significant impacts.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
Transportation	
<p>PMM-TRA-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to transportation-related impacts, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> • Transportation demand management (TDM) strategies should be incorporated into individual land use and transportation projects and plans, as part of the planning process. Local agencies should incorporate strategies identified in the Federal Highway Administration’s publication: <i>Integrating Demand Management into the Transportation Planning Process: A Desk Reference</i> (August 2012) into the planning process (FHWA 2012). For example, the following strategies may be included to encourage use of transit and non-motorized modes of transportation and reduce vehicle miles traveled on the region’s roadways: <ul style="list-style-type: none"> — include TDM mitigation requirements for new developments; — incorporate supporting infrastructure for non-motorized modes, such as, bike lanes, secure bike parking, sidewalks, and crosswalks; — provide incentives to use alternative modes and reduce driving, such as, universal transit passes, road and parking pricing; — implement parking management programs, such as parking cash-out, priority parking for carpools and vanpools; — develop TDM-specific performance measures to evaluate project-specific and system-wide performance; 	<p>As an infill development site, the Project has ready access to community resources, particularly public transportation. The site is serviced by the Metro (Expo) Line, directly abutting the Property, about 100 feet from the Jefferson/La Cienega Metro stop. Additionally, there are several major bus routes running along Jefferson and La Cienega Boulevards. The strategic location of this Project is to lessen VMT to and from the site. The Proposed Project encourages non-motorized travel through provision of short- and long-term bicycle parking and will promote transit usage by complying with the City’s TDM Ordinance. Transportation impacts were concluded to be less than significant and no mitigation measures would be required. See Section 17, Transportation, of Chapter IV, SCEA Environmental Checklist, for further information.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<ul style="list-style-type: none"> — incorporate TDM performance measures in the decision-making process for identifying transportation investments; — implement data collection programs for TDM to determine the effectiveness of certain strategies and to measure success over time; and — set aside funding for TDM initiatives. — The increase in per capita VMT on facilities experiencing LOS F represents a significant impact compared to existing conditions. To assess whether implementation of these specific mitigation strategies would result in measurable traffic congestion reductions, implementing actions may need to be further refined within the overall parameters of the proposed Plan and matched to local conditions in any subsequent project-level environmental analysis. 	
<p>PMM TRA-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects which may substantially impair implementation of an adopted emergency response plan or emergency evacuation plan, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Prior to construction, project implementation agencies can and should ensure that all necessary local and state road and railroad encroachment permits are obtained. The project implementation agency can and should also comply with all applicable conditions of approval. As deemed necessary by the governing jurisdiction, the road encroachment permits may require the contractor to prepare a traffic control plan in accordance with professional engineering standards prior to 	<p>The Project would not include any change in intersection or roadway design. Moreover, the Project would not include unusual or hazardous design features that are atypical to large scale commercial and residential developments. The Proposed Project thus is not anticipated to substantially impair implementation of an adopted emergency response plan or emergency evacuation plan, and therefore this mitigation measure is not applicable to the Proposed Project.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>construction. Traffic control plans can and should include the following requirements:</p> <ul style="list-style-type: none"> — Identification of all roadway locations where special construction techniques (e.g., directional drilling or night construction) would be used to minimize impacts to traffic flow. — Development of circulation and detour plans to minimize impacts to local street circulation. This may include the use of signing and flagging to guide vehicles through and/or around the construction zone. — Scheduling of truck trips outside of peak morning and evening commute hours. — Limiting of lane closures during peak hours to the extent possible. — Usage of haul routes minimizing truck traffic on local roadways to the extent possible. — Inclusion of detours for bicycles and pedestrians in all areas potentially affected by project construction. — Installation of traffic control devices as specified in the California Department of Transportation Manual of Traffic Controls for Construction and Maintenance Work Zones. — Development and implementation of access plans for highly sensitive land uses such as police and fire stations, transit stations, hospitals, and schools. The access plans would be developed with the facility owner or administrator. To minimize disruption of emergency vehicle access, affected jurisdictions can and should be asked to identify detours for emergency vehicles, which will then be posted by the contractor. Notify in advance the facility owner or operator of the timing, location, and 	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>duration of construction activities and the locations of detours and lane closures.</p> <ul style="list-style-type: none"> — Storage of construction materials only in designated areas. — Coordination with local transit agencies for temporary relocation of routes or bus stops in work zones, as necessary. — Ensure the rapid repair of transportation infrastructure in the event of an emergency through cooperation among public agencies and by identifying critical infrastructure needs necessary for: a) emergency responders to enter the region, b) evacuation of affected facilities, and c) restoration of utilities. — Enhance emergency preparedness awareness among public agencies and with the public at large. 	
Tribal Cultural Resources	
<p>PMM TCR-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on tribal cultural resources, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> a) Avoidance and preservation of the resources in place, including, but not limited to, planning and construction to avoid the resources and protect the cultural and natural context, or planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria; b) Treating the resource with culturally appropriate dignity taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following: protecting the cultural character and integrity of the resource; protecting the 	<p>In compliance with this mitigation measure, the Lead Agency has considered mitigation measures consistent with Section 15064.5 of the <i>State CEQA Guidelines</i> and, accordingly, incorporated a comparable mitigation measure. Conditions of Approval, in Section 18, Tribal Cultural Resources, of Chapter IV, SCEA Environmental Checklist, would reduce impacts to tribal cultural resources to a less than significant level.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>traditional use of the resource; and protecting the confidentiality of the resource;</p> <p>c) Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places; and protecting the resource.</p>	
Utilities and Service Systems	
<p>PMM USSW-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce the generation of solid waste, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>Integrate green building measures with CALGreen (California Building Code Title 24) into project design, including but not limited to the following:</p> <ul style="list-style-type: none"> a) Reuse and minimization of construction and demolition (C&D) debris and diversion of C&D waste from landfills to recycling facilities. b) Inclusion of a waste management plan that promotes maximum C&D diversion. c) Source reduction through (1) use of materials that are more durable and easier to repair and maintain, (2) design to generate less scrap material through dimensional planning, (3) increased recycled content, (4) use of reclaimed materials, and (5) use of structural materials in a dual role as finish material (e.g., stained concrete flooring, unfinished ceilings, etc.). d) Reuse of existing structure and shell in renovation projects. e) Development of indoor recycling program and space. f) Discourage the siting of new landfills unless all other waste reduction and prevention actions have been fully explored. If landfill siting or expansion is necessary, site landfills with an 	<p>The Project would generate solid waste that is typical of retail and mixed-use residential buildings and would comply with all federal, state, and local statutes and regulations regarding proper disposal. As concluded in Section 19, Utilities and Service Systems of Chapter IV, SCEA Environmental Checklist, the Proposed Project would have a less than significant impact and no mitigation would be required. Furthermore, the Proposed Project would already incorporate 2019 California Green Building Standards Code (CALGreen) requirements.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>adequate landfill-owned, undeveloped land buffer to minimize the potential adverse impacts of the landfill in neighboring communities.</p> <p>g) Discourage exporting of locally generated waste outside of the SCAG region during the construction and implementation of a project. Encourage disposal within the county where the waste originates as much as possible. Promote green technologies for long-distance transport of waste (e.g., clean engines and clean locomotives or electric rail for waste-by-rail disposal systems) and consistency with SCAQMD and Connect SoCal policies can and should be required.</p> <p>h) Encourage waste reduction goals and practices and look for opportunities for voluntary actions to exceed the 80 percent waste diversion target.</p> <p>i) Encourage the development of local markets for waste prevention, reduction, and recycling practices by supporting recycled content and green procurement policies, as well as other waste prevention, reduction and recycling practices.</p> <p>j) Develop ordinances that promote waste prevention and recycling activities such as: requiring waste prevention and recycling efforts at all large events and venues; implementing recycled content procurement programs; and developing opportunities to divert food waste away from landfills and toward food banks and composting facilities.</p> <p>k) Develop and site composting, recycling, and conversion technology facilities that have minimum environmental and health impacts.</p> <p>l) Integrate reuse and recycling into residential industrial, institutional and commercial projects.</p> <p>m) Provide education and publicity about reducing waste and available recycling services.</p> <p>n) Implement or expand city or county-wide recycling and composting programs for residents and businesses. This could</p>	

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>include extending the types of recycling services offered (e.g., to include food and green waste recycling) and providing public education and publicity about recycling services.</p>	
<p>PMM-USWW-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on utilities and service systems, particularly for construction of wastewater facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ul style="list-style-type: none"> • During the design and CEQA review of individual future projects, implementing agencies and projects sponsors shall determine whether sufficient wastewater capacity exists for the Proposed Projects. There CEQA determinations must ensure that the proposed development can be served by its existing or planned treatment capacity. If adequate capacity does not exist, project sponsors shall coordinate with the relevant service provider to ensure that adequate public services and utilities could accommodate the increased demand, and if not, infrastructure improvements for the appropriate public service or utility shall be identified in each project’s CEQA documentation. The relevant public service provider or utility shall be responsible for undertaking project-level review as necessary to provide CEQA clearance for new facilities. 	<p>Project Applicant shall be required to implement applicable LA Green Building Code requirements. As concluded in Section 19, Utilities and Service Systems, of Chapter IV, SCEA Environmental Checklist, the Project would not require or result in the construction of new wastewater treatment facilities or expansion of existing facilities. Impacts would be less than significant, and this mitigation measure is not applicable.</p>
<p>PMM USWS-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to ensure sufficient water supplies, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <ol style="list-style-type: none"> a) Reduce exterior consumptive uses of water in public areas, and should promote reductions in private homes and businesses, by 	<p>This mitigation measure is not applicable for the Proposed Project. Impacts from the Project on water supply are analyzed in Section 19, Utilities and Service Systems, of Chapter IV, SCEA Environmental Checklist. Impacts were found to be less than significant and therefore, mitigation is not required.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>shifting to drought-tolerant native landscape plantings, using weather-based irrigation systems, educating other public agencies about water use, and installing related water pricing incentives.</p> <p>b) Promote the availability of drought-resistant landscaping options and provide information on where these can be purchased. Use of reclaimed water especially in median landscaping and hillside landscaping can and should be implemented where feasible.</p> <p>c) Implement water conservation best practices such as low-flow toilets, water-efficient clothes washers, water system audits, and leak detection and repair.</p> <p>d) For projects located in an area with existing reclaimed water conveyance infrastructure and excess reclaimed water capacity, use reclaimed water for non-potable uses, especially landscape irrigation. For projects in a location planned for future reclaimed water service, projects should install dual plumbing systems in anticipation of future use. Large developments could treat wastewater onsite to tertiary standards and use it for non-potable uses onsite.</p>	
Wildfire	
<p>PMM WF-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to wildfire risk, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) Launch fire prevention education for local cities and counties such that local fire agencies, homeowners, as well as commercial and industrial businesses are aware of potential sources of fire ignition and the related procedures to curb or lessen any activities that might initiate fire ignition.</p> <p>b) Ensure structures in high fire risk areas are built to current state and federal standards which serve to greatly increase the</p>	<p>The Project Site is not located within a Very High Fire Hazard Severity Zone. As analyzed in Section 20, Wildfire, of Chapter IV, SCEA Environmental Checklist, there would be a less than significant impact and no mitigation is required.</p>

Project Level Mitigation Measure	Applicability to the Proposed Project
<p>chances the structure will survive a wildfire and also allow for people to shelter-in-place.</p> <p>c) Improve road access for emergency response and evacuation so people can evacuate safely and timely when necessary.</p> <p>d) Improve, and educate regarding, local emergency communications and notifications with residents and businesses.</p> <p>e) Enforce defensible space regulations to keep overgrown and unmanaged vegetation, accumulations of trash and other flammable material away from structures.</p> <p>f) Provide public education about wildfire risk and fire prevention measures, and safety procedures and practices to allow for safe evacuation and/or options to shelter-in-place</p>	
<p>PMM WF-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the <i>State CEQA Guidelines</i>, a Lead Agency for a project can and should consider mitigation measures to wildfire risk, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:</p> <p>a) New development or infrastructure activity within very high hazard severity zones or SRAs shall be required to</p> <ul style="list-style-type: none"> — Submit a fire protection plan including the designation of fire watch staff; — Maintain water and other fire suppression equipment designated solely for firefighting on site for any construction and maintenance activities; — Locate construction and maintenance equipment in designated “safe areas” such that they do not discharge combustible materials; and — Designate trained fire watch staff during project construction to reduce risk of fire hazards. 	<p>This mitigation measure is not applicable to the Proposed Project as impacts would be less than significant. Being in a developed urban area, there are several fire protection facilities in the Project vicinity that could respond to an emergency at the site. As analyzed in Section 20, Wildfire, of Chapter IV, SCEA Environmental Checklist, there would be a less than significant impact and no mitigation is required.</p>

**Table III-3
West Adams – Baldwin Hills -Leimert CPA EIR Applicable Mitigation Measures**

Mitigation Measure	Applicability to the Project
Aesthetics	
<p>AE1: As a condition of approval for any Discretionary or “Active Change Area Project,” as defined in Section 3.4 of the Project Description, the City shall require new construction located on commercial or industrial planned land in CPIO subdistricts and the Crenshaw Corridor Specific Plan that directly abuts or is across an alley from residential planned land to transition in the following manner:</p> <ul style="list-style-type: none"> • Where the rear or side property line is contiguous with that of a residential property, the structure shall be set back or “stepped back” one foot for every one foot in height as measured fifteen feet above grade at the shared property line. • Where the properties are separated by an alley, the structure shall be set back or “stepped back” one foot for every one foot in height as measured from grade at the residential property line. • Adjustments and Exceptions (permitted): The height limitation at the residential property line may be increased by not more than 20 percent through adjustment, otherwise, through the exception procedures pursuant to the Los Angeles Municipal Code. 	<p>This Mitigation Measure is not relevant to the Proposed Project as Public Resources Code Section 21099, enacted by Senate Bill 743, provides that “aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment.”</p> <p>The Project Site is located in an urbanized area within the City of Los Angeles. The Proposed Project is a transit-oriented mixed-use development that includes residential, office, and retail uses. The Project Site is located less than one-half mile from the Metro La Cienega/Jefferson station. Therefore, the Proposed Project is located in a transit priority area as defined in Public Resources Code Section 21099. The Proposed Project’s aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.</p> <p>Nonetheless, this mitigation measure is not applicable as the Proposed Project as the Project Site does not abut or site directly across an alley from residential land.</p>
<p>AE2: As a condition of approval for any Discretionary or “Active Change Area Project” as defined in Section 3.4 of the Project Description, the City shall require that all lighting be directed and/or shielded to minimize lighting spillover effects onto adjacent and nearby properties.</p>	<p>This Mitigation Measure is incorporated into the Project as a condition of approval.</p>
<p>AES: As a condition of approval for any Discretionary or “Active Change Area Project”, as defined in Section 3.4 of the Project Description, the City shall require that glare effects be limited by using non-reflective building and construction materials, such as concrete, wood, and stucco.</p>	<p>This Mitigation Measure is incorporated into the Project as a condition of approval.</p>

Mitigation Measure	Applicability to the Project
<p>This shall include, but not be limited to, art installations, fencing material, and recreational equipment.</p>	
Air Quality	
<p>AQ1: As a condition of approval for any Discretionary or “Active Change Area Project”, as defined in Section 3.4 of the Project Description, the City shall require all contractors to include the following best management practices in contract specifications:</p> <ul style="list-style-type: none"> • Use properly tuned and maintained equipment. • Contractors shall enforce the idling limit of five minutes as set forth in the California Code of Regulations. • Use diesel-fueled construction equipment to be retrofitted with after treatment products (e.g., engine catalyts) to the extent they are readily available and feasible. • Use heavy duty diesel-fueled equipment that uses low NOX diesel fuel to the extent it is readily available and feasible. • Use construction equipment that uses low polluting fuels (i.e., compressed natural gas, liquid petroleum gas, and unleaded gasoline) to the extent available and feasible. • Maintain construction equipment in good operating condition to minimize air pollutants. • All off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technologies devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations. • Construction contractors shall use electricity from power poles rather than temporary gasoline or diesel power generators, as feasible. 	<p>This Mitigation Measure is incorporated into the Project as a condition of approval.</p>

Mitigation Measure	Applicability to the Project
<ul style="list-style-type: none"> • Use building materials, paints, sealants, mechanical equipment, and other materials that yield low air pollutants and are nontoxic. • Construction contractors shall utilize super-compliant architectural coatings as defined by the South Coast Air Quality Management District (VOC standard of less than ten grams per liter). • Construction contractors shall utilize materials that do not require painting, as feasible. • Construction contractors shall use pre-painted construction materials, as feasible. • Construction contractors shall provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow. • Construction contractors shall provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, as feasible • Construction contractors shall reroute construction trucks away from congested streets or sensitive receptor areas, as feasible. • Construction contractors shall appoint a construction relations officer to act as a community liaison concerning on-site construction activity including resolution of issues related to PM10 generation. 	
Biological Resources	
<p>BR1: As a condition of approval for any Discretionary or “Active Change Area Project”, as defined in Section 3.4 of the Project Description, the City shall require that in order to prevent the disturbance of nesting native and/or migratory bird species, all clearing of a project site should take place between September 1 and February 14. If construction is scheduled or ongoing during bird nesting season (February 15 to August 31), qualified biologists shall survey the area within 200 feet (or up to 300 feet, depending on topography or other factors, and 500 feet for raptors) of the construction activity to determine if construction would disturb</p>	<p>This Mitigation Measure is incorporated into the Project as a condition of approval.</p>

Mitigation Measure	Applicability to the Project
<p>nesting birds. If nesting activity is being compromised, construction shall be suspended in the vicinity of the nest until fledging is complete. This mitigation measure shall be implemented by a qualified biologist under contract with the project applicant(s). The project biologist should prepare a report detailing the results of the construction monitoring efforts. The report should be submitted to the California Department of Fish and Game (CDFG) within two months of the completion of the monitoring activities.</p>	
<p>BR2: As a condition of approval for any Discretionary or “Active Change Area Project”, as defined in Section 3.4 of the Project Description, the City shall require that during the final design phase of the Proposed Project, and prior to the start of the demolition/construction phase, the project applicant shall submit a final landscape plan to the City of Los Angeles for approval by the City’s Chief Forester and the Director of the Bureau of Street Services. The final landscape plan shall include provisions to either protect in place the existing protected trees in or adjacent to the Project Site, per the requirements of the City of Los Angeles Tree Preservation Ordinance.</p>	<p>The Proposed Project would be subject to the provisions of City’s Protected Tree Ordinance and by complying therewith, would be in compliance with this Mitigation Measure. The two existing trees are both Pine species with a trunk diameter of less than 8 inches. This species is neither native to California nor protected. The two trees would be replaced in accordance with the existing tree replacement requirements of the City’s Division of Urban Forestry. Impacts would be less than significant.</p>
<p>Cultural Resources</p>	
<p>CR1: Before approval of a Discretionary project or “Active Change Area Project” involving properties designated as Historic-Cultural Monuments or listed in or determined eligible for the National Register or California Register, the project shall be reviewed by the Department of City Planning Office of Historic Resources.</p>	<p>The Proposed Project is not listed in the California Register of Historical Resources (CRHR), is not a California Point of Historical Interest (CPHI) and is not a California State Historical Landmark (CSHL). It has not been identified as a City of Los Angeles Historic Cultural Monument (HCM), and it is not located in a City Historic Preservation Overlay Zone (HPOZ). Furthermore, it is not listed in the National Register of Historic Places (NRHP). The Property has not previously been recorded by SurveyLA. The Historic Resources Assessment conducted for the Project did not find the industrial buildings at 3401 S. La Cienega Boulevard are individually eligible or eligible as contributors to any historic district or potential historic district under NRHP/CRHR criteria A/1, B/2, C/3, or D/4, or City of Los Angeles Historic-Cultural Monument (HCM) criteria 1-4, nor as a CEQA-defined historical resource. Impacts</p>

Mitigation Measure	Applicability to the Project
	on historical resources are less than significant and no mitigation measures are required. See Section 5, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , for further information.
CR2: Before approval of any building permits for a Discretionary project or “Active Change Area Project”, developed in a Historic Preservation Overlay Zone, the City shall require written approval from the Department of City Planning Office of Historic Resources	The Proposed Project is not listed in the California Register of Historical Resources (CRHR), is not a California Point of Historical Interest (CPHI) and is not a California State Historical Landmark (CSHL). It has not been identified as a City of Los Angeles Historic Cultural Monument (HCM), and it is not located in a City Historic Preservation Overlay Zone (HPOZ). Furthermore, it is not listed in the National Register of Historic Places (NRHP). The Property has not previously been recorded by SurveyLA. The Historic Resources Assessment conducted for the Project did not find the industrial buildings at 3401 S. La Cienega Boulevard individually eligible or eligible as contributors to any historic district or potential historic district under NRHP/CRHR criteria A/1, B/2, C/3, or D/4, or City of Los Angeles Historic-Cultural Monument (HCM) criteria 1-4, nor as a CEQA-defined historical resource. Impacts on historical resources are less than significant and no mitigation measures are required. See Section 5, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , for further information.
CR3: Before approval of a Discretionary project or “Active Change Area Project”, involving properties identified in the SurveyLA Historic Resources Survey Report: “West Adams – Baldwin Hills - Leimert Community Plan Area” as eligible for listing, the City of Los Angeles Office of Historic Resources (OHR) shall find that the project is consistent with the U.S. Secretary of the Interior’s Standards for Rehabilitation or that upon further review or study, the property is not eligible for designation as a historic resource.	The Proposed Project is not listed in the California Register of Historical Resources (CRHR), is not a California Point of Historical Interest (CPHI) and is not a California State Historical Landmark (CSHL). It has not been identified as a City of Los Angeles Historic Cultural Monument (HCM), and it is not located in a City Historic Preservation Overlay Zone (HPOZ). Furthermore, it is not listed in the National Register of Historic Places (NRHP). The Property has not previously been recorded by SurveyLA. The Historic Resources Assessment conducted for the Project did not find the industrial buildings at 3401 S. La Cienega Boulevard individually eligible or eligible as contributors to any historic district or potential historic district under NRHP/CRHR criteria A/1, B/2, C/3, or D/4, or City of Los Angeles Historic-Cultural Monument (HCM) criteria 1-4, nor as a CEQA-defined historical resource. Impacts on

Mitigation Measure	Applicability to the Project
	historical resources are less than significant and no mitigation measures are required. See Section 5, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , for further information.
CR4: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that prior to excavation and construction on a Proposed Project Site, the project applicant shall perform a cultural resources literature and records search by an institution recognized and approved by the City of Los Angeles Planning Department to assess the potential for the Proposed Project Site to contain sensitive protected cultural resources.	The Proposed Project is not listed in the California Register of Historical Resources (CRHR), is not a California Point of Historical Interest (CPHI) and is not a California State Historical Landmark (CSHL). It has not been identified as a City of Los Angeles Historic Cultural Monument (HCM), and it is not located in a City Historic Preservation Overlay Zone (HPOZ). Furthermore, it is not listed in the National Register of Historic Places (NRHP). The Property has not previously been recorded by SurveyLA. The Historic Resources Assessment conducted for the Project did not find the industrial buildings at 3401 S. La Cienega Boulevard individually eligible or eligible as contributors to any historic district or potential historic district under NRHP/CRHR criteria A/1, B/2, C/3, or D/4, or City of Los Angeles Historic-Cultural Monument (HCM) criteria 1-4, nor as a CEQA-defined historical resource. Impacts on historical resources are less than significant and no mitigation measures are required. See Section 5, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , for further information.
CR5: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that prior to excavation and construction on a proposed Project Site, the prime construction contractor and any subcontractor(s) shall be cautioned on the legal and/or regulatory implications of knowingly destroying cultural resources or removing artifacts, human remains, bottles, and other cultural materials from the Proposed Project Site.	Section 6, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , determined that several prehistoric sites had been previously documented in proximity to the Proposed Project and the NAHC search of the Sacred Lands File returned a positive result. This Mitigation Measure is incorporated into the Proposed Project as a Condition of Approval.
CR6: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that if during any phase of project construction any cultural materials are encountered, construction activities within a 50-meter radius shall be halted immediately, and the project applicant shall notify the City. A qualified prehistoric archaeologist (as approved by the City) shall be retained by the project applicant and shall be allowed to	Section 6, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , determined that several prehistoric sites had been previously documented in proximity to the Proposed Project and the NAHC search of the Sacred Lands File returned a positive result. This Mitigation Measure is incorporated into the Proposed Project as a Condition of Approval.

Mitigation Measure	Applicability to the Project
conduct a more detailed inspection and examination of the exposed cultural materials. During this time, excavation and construction would not be allowed in the immediate vicinity of the find. However, those activities could continue in other areas of the Project Site.	
CR7: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that if any find were determined to be significant by the archaeologist, the City and the archaeologist would meet to determine the appropriate course of action.	Section 6, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , determined that several prehistoric sites had been previously documented in proximity to the Proposed Project and the NAHC search of the Sacred Lands File returned a positive result. This Mitigation Measure is incorporated into the Proposed Project as a Condition of Approval.
CR8: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that all cultural materials recovered from the site would be subject to scientific analysis, professional museum curation, and a report prepared according to current professional standards.	Section 6, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , determined that several prehistoric sites had been previously documented in proximity to the Project and the NAHC search of the Sacred Lands File returned a positive result. This Mitigation Measure is incorporated into the Project as a Condition of Approval.
CR9: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that during excavation and grading, if paleontological resources are uncovered, all work in that area shall cease and be diverted so as to allow for a determination of the value of the resource. Construction activities in that area may commence once the uncovered resources are collected by a paleontologist and properly processed. Any paleontological remains and/or reports and surveys shall be submitted to the Los Angeles County Natural History Museum.	Section 6, Cultural Resources, of Chapter IV, SCEA Environmental Checklist , determined that several prehistoric sites had been previously documented in proximity to the Proposed Project and the NAHC search of the Sacred Lands File returned a positive result. This Mitigation Measure is incorporated into the Proposed Project as a Condition of Approval.
CR10: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that if human remains are unearthed at a project site during construction, work at the specific construction site at which the remains have been uncovered shall be suspended, and the City of Los Angeles Public Works Department and County coroner shall be immediately notified. No further disturbance shall occur until the Los Angeles County Coroner has made the necessary findings as to origin and disposition in accordance with California Health and Safety Code Section 7050.5. If the remains are determined to be those of a Native	As concluded in Section 6 Cultural Resources, of Chapter IV, SCEA Environmental Checklist , there are no known human remains on the site. The Project Site is not part of a formal cemetery and is not known to have been used for disposal of historic or prehistoric human remains. Thus, human remains are not expected to be encountered during construction of the Proposed Project. In the unlikely event that human remains are encountered during project construction, State Health and Safety Code Section 7050.5 requires the Project to halt until the County Coroner has made the necessary findings as to the origin and

Mitigation Measure	Applicability to the Project
American, the Native American Heritage Commission (NAHC) in Sacramento shall be contacted before the remains are removed in accordance with Section 21083.2 of the California Public Resources Code.	disposition of the remains pursuant to Public Resources Code Section 5097.98. Compliance with these regulations, as well as applicable Conditions of Approval would ensure the Proposed Project would not disturb human remains. This Mitigation Measure is incorporated into the Project as a Condition of Approval.
Greenhouse Gas Emissions	
<p>GHG1: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that the following greenhouse gas reduction measures are incorporated into the project design”</p> <ul style="list-style-type: none"> • Install energy efficient lighting (e.g., light emitting diodes), heating and cooling systems, appliances, equipment, and control systems). • Install light colored “cool” roofs and cool pavements. • Create water-efficient landscapes. • Install water-efficient fixtures and appliances. 	Impacts regarding the generation of greenhouse gas emissions were analyzed in Section 8, Greenhouse Gas Emissions, in Chapter IV, SCEA Environmental Checklist. This Mitigation Measure is incorporated into the Proposed Project as a Condition of Approval.
Hazards and Hazardous Materials	
<p>HM1: Any approval of a Discretionary project or “Active Change Area Project” that involves new construction that will involve soil disturbance shall ensure that a Phase I Environmental Site Assessment (ESA) is prepared. The assessment shall be prepared by a Registered Environmental Assessor (REA) in accordance with State standards/guidelines to evaluate whether the site or the surrounding area is contaminated with hazardous substances from the potential past and current uses including storage, transport, generation, and disposal of toxic and hazardous waste or materials. Depending on the results of this study, further investigation and remediation may be required in accordance with local, State, and federal regulations and policies. Any further study found necessary by an REA or relevant federal, state or local agency shall be performed prior to project approval and any remediation found necessary by the REA or any relevant federal, state or local agency shall be performed prior to project approval or made a</p>	In compliance with this mitigation measure, a Phase I ESA and a Phase II ESA were conducted. Two additional mitigation measures have been incorporated into the Project (See Measures HAZ-1 in Hazards and Hazardous Materials). With implementation of HAZ-1 impacts related to hazardous materials would be less than significant.

Mitigation Measure	Applicability to the Project
condition on the project if that is found to be adequate for remediation by an REA or the relevant federal, state or local agency.	
Noise and Vibration	
<p>N1: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that all contractors include the following best management practices in contract specifications:</p> <ul style="list-style-type: none"> • Construction haul truck and materials delivery traffic shall avoid residential areas whenever feasible. If no alternatives are available, truck traffic shall be routed on streets with the fewest residences • The construction contractor shall locate construction staging areas away from sensitive uses • When construction activities are located in close proximity to noise sensitive land uses, noise barriers (e.g., temporary walls or piles of excavated material) shall be constructed between activities and noise sensitive uses. • Impact pile drivers shall be avoided where possible in noise-sensitive areas. Drilled piles or the use of a sonic vibratory pile driver are quieter alternatives that shall be utilized where geological conditions permit their use. Noise shrouds shall be used when necessary to reduce noise of pile drilling/driving. • Construction equipment shall be equipped with mufflers that comply with manufacturers’ requirements. • The construction contractor shall use on-site electrical sources to power equipment rather than diesel generators where feasible. 	<p>In compliance with this mitigation measure, the Lead Agency has considered mitigation measures consistent with Section 15064.5 of the <i>State CEQA Guidelines</i> and, accordingly, incorporated a comparable mitigation measure. The implementation of Mitigation Measure NOI-1, which has been incorporated into the Proposed Project, would reduce noise impacts associated with the Proposed Project to a less than significant level. MM NOI-1 is similar in that it requires the installation of sound barriers, noise reduction devices such as improved mufflers, and reduction of construction activity levels. MM NOI-1 also includes a specific 13 decibel Leq minimum reduction level to ensure impacts from the Proposed Project would be less than significant.</p>
<p>N2: Prior to any approval of a Discretionary project or “Active Change Area Project” that is adjacent to buildings listed or determined eligible for listing in the National Register of Historic Places or the California Register of Historical Resources, designated as a Historic-Cultural Monument by the City of Los Angeles, or within a Historic Preservation</p>	<p>As discussed in Section 13, Noise, of Chapter IV, SCEA Environmental Checklist, the See’s Candies building located to the south of the Project Site is assumed to be a historic resource. As such, this Mitigation Measure is incorporated into the Proposed Project as a Condition of Approval, which would ensure the Proposed Project has a less than significant impact.</p>

Mitigation Measure	Applicability to the Project
<p>Overlay Zone (“historic buildings”), the City shall ensure all of the following requirements are or will be met:</p> <ul style="list-style-type: none"> • Historic buildings adjacent to the project’s construction zones are identified. • A Vibration Control Plan is prepared and approved by the City • The Vibration Control Plan shall be completed by a qualified structural engineer. • The Vibration Control Plan shall include a pre-construction survey letter establishing baseline conditions at potentially affected buildings. The survey letter shall provide a shoring design to protect the identified land uses from potential damage. The structural engineer may recommend alternative procedures that produce lower vibration levels such as sonic pile driving or caisson drilling instead of impact pile driving. <p>At the conclusion of vibration causing activities, the qualified structural engineer shall issue a follow-up letter describing damage, if any, to impacted buildings. The letter shall include recommendations for any repair, as may be necessary, in conformance with the Secretary of the Interior Standards. Repairs shall be undertaken and completed in conformance with all applicable codes including the California Historical Building Code (Part 8 of Title 24).</p>	
<p>N3: Any approval of a Discretionary project or “Active Change Area Project” that includes industrial uses located within 1,000 feet of a residential land use shall ensure that a noise study is completed that uses the significance thresholds established in the City of Los Angeles CEQA Thresholds Guide (including as it may be amended in the future). Identified impacts shall be mitigated per the City’s Noise Ordinance or through any measures identified in the noise study.</p>	<p>The Proposed Project does not include industrial land uses located within 1,000 feet of a residential land use. This mitigation measure is not applicable.</p>
Public Services	
<p>PS1: Discretionary projects in the CPIO or the Crenshaw Corridor Specific Plan shall be reviewed at the discretion of the Los Angeles Police Department (LAPD). Per department standards, the LAPD will</p>	<p>This mitigation measure is included as a condition of approval for the Proposed Project.</p>

Mitigation Measure	Applicability to the Project
determine if any additional crime prevention and security features would be available that are consistent with the development standards as applied to the design of the project. Any additional design features identified by the LAPD shall be incorporated into the project's final design and to the satisfaction of LAPD, prior to issuance of a Certificate of Occupancy for the project.	
PS2: Subject to available resources and funding, the City shall prioritize the implementation of recreation and park projects in parts of the West Adams Community Plan Area with the greatest existing deficiencies.	Los Angeles Municipal Code Section 12.33 requires all new, non-exempt, residential dwelling units to dedicate land, pay a fee or provide a combination of land dedication and fee payment for the purpose of acquiring, expanding and improving park and recreational facilities for new residents, with an exception made for affordable housing units. The Proposed Project will comply with code requirements.
PS3: Subject to available resources and funding, the City shall establish joint-use agreements with the Los Angeles Unified School District and other public and private entities which could contribute to the availability of recreational opportunities in the West Adams Community Plan Area.	This mitigation measure is addressed as the project would require fees to reduce impacts as to a less than significant impact. The Applicant would be required to pay applicable school fees in accordance with California Government Code Section 65995, which are deemed by statute to fully mitigate any potentially significant impact on schools.
Subject to available resources and funding, the City shall monitor appropriate recreation and park statistics and compare with population projections and demand to identify the existing and future recreation and park needs of the West Adams Community Plan Area.	Los Angeles Municipal Code Section 12.33 requires all new, non-exempt, residential dwelling units to dedicate land, pay a fee or provide a combination of land dedication and fee payment for the purpose of acquiring, expanding and improving park and recreational facilities for new residents, with an exception made for affordable housing units. The Proposed Project will comply with these code requirements. The Proposed Project itself would not lead to substantial physical deterioration of any existing recreational facilities and would have no related significant impacts.

IV. SCEA ENVIRONMENTAL CHECKLIST

A. Environmental Factors Potentially Affected

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

	Aesthetics		Agriculture and Forestry Resources		Air Quality
	Biological Resources		Cultural Resources		Energy
	Geology and Soils		Greenhouse Gas Emissions		Hazards and Hazardous Materials
	Hydrology and Water Quality		Land Use and Planning		Mineral Resources
	Noise		Population and Housing		Public Services
	Recreation		Transportation		Tribal Cultural Resources
	Utilities and Service Systems		Wildfire		Mandatory Findings of Significance

DETERMINATION: (to be completed by the Lead Agency)

On the basis of this initial evaluation:

I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	
I find that, although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an attached sheet have been added to the Project. A MITIGATED NEGATIVE DECLARATION will be prepared.	
I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.	
I find that the Proposed Project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment., but at least effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.	

<p>I find that although the Proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the Proposed Project, nothing further is required.</p>	
<p>I find that the Project is a qualified “transit priority project” that satisfies the requirements of Sections 21155 and 21155.2 of the Public Resources Code (PRC), and a qualified “residential or mixed use residential project” that satisfies the requirements of Section 21159.28(d) of the PRC, and although the Project could have a potentially significant effect on the environment as identified in the Initial Study contained herein, there will not be a significant effect in this case, because this Sustainable Communities Environmental Assessment (SCEA) contains measures that either avoid or mitigate to a level of insignificance all potentially significant or significant effects of the Project.</p>	<p>X</p>

B. Evaluation of Environmental Impacts

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect is significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Unless Mitigation Incorporated” to a “Less than Significant Impact.” The Lead Agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from Section 21, “Earlier Analysis,” may be cross-referenced). When all impacts can be reduced to less than significant, a Mitigated Negative Declaration (MND) or Sustainable Communities Environmental Assessment (SCEA) can be prepared.
- 5) Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. See *CEQA Guidelines* Section 15063(c)(3)(D). Earlier analyses are discussed in **Section 21** at the end of the checklist.
 - a) Earlier Analysis Used. Identify and state where they are available for review.

- b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) Mitigation Measures. For effects that are “less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated or refined from the earlier documents and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
- 8) The explanation of each issue should identify:
- a) The significance criteria or threshold, if any, used to evaluate each question; and
 - b) The mitigation measure identified, if any, to reduce the impact to less than significant.

C. Environmental Impacts (explanations of all answers are required):

1. Aesthetics

In January 2016, the City of Los Angeles Planning Department provided guidance in the form of Zoning Information File ZI No. 2451 regarding Transit Priority Areas (TPAs) and analysis of Aesthetics and Parking impacts within TPAs pursuant to CEQA, as established in State Senate Bill 743 (SB 743).

Senate Bill 743, signed into law in September 2013, made several changes to CEQA for projects located in areas served by transit (i.e., TPAs). While the thrust of SB 743 addressed a major overhaul on how transportation impacts are evaluated under CEQA, it also limited the extent to which aesthetics and parking are defined as impacts under CEQA.¹ Specifically, Section 21099 (d)(1) of the Public Resources Code (PRC) states that a project's aesthetic and parking impacts shall not be considered a significant impact on the environment if:

1. The project is a residential, mixed-use residential, or employment center project, and
2. The project is located on an infill site within a transit priority area.

Section 21099 (a) of the PRC defines the following terms:

(1) "Employment center project" (TPAs) means a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a transit priority area.

(4) "Infill site" means a lot located within an urban area that has been previously developed, or on a vacant site where at least 75% of the perimeter of the site adjoins or is separated only by an improved public right-of-way from parcels that are developed with qualified urban uses.

(7) "Transit priority area" means an area within one-half mile of a major transit stop that is existing or planned.

Section 21064.3 of the PRC defines a "major transit stop" as a site containing any of the following: an existing rail or rapid bus transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a

¹ City of Los Angeles Department of City Planning. Zoning Information File No. 2451. Available at: <https://www.alston.com/files/docs/ZI%202451-TPA-Aesthetics-and-Parking.pdf>, accessed August 20, 2021.

frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.

For purposes of Section 21099(a)(7) of the PRC, a “transit priority area” also includes major transit stops in the City of Los Angeles that are scheduled to be completed within the planning horizon of the Southern California Association of Governments (SCAG) 2020- 2045 Regional Transportation Plan / Sustainable Community Strategy (2040-2045 RTP/SCS).

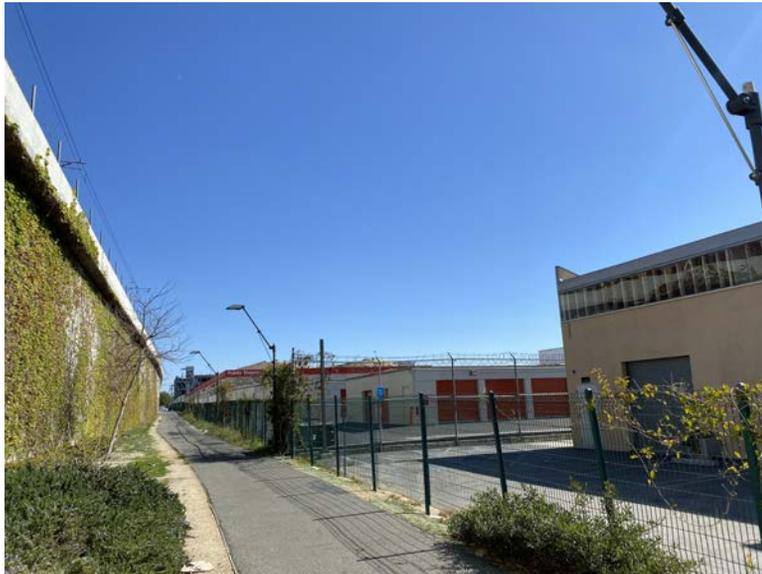

The Project is an infill development in that it is proposed on a previously developed site adjoined to urban uses. The Project contains a mix of uses (residential, office, and retail) and is located within a half-mile of an existing major transit stop, with the La Cienega/Jefferson Metro stop located less than 100 feet from the Project Site. Furthermore, the Project is served by Metro Bus Lines 105 which has a frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. For these reasons, the Project qualifies for this exemption, and the analysis below is provided for **informational purposes only**. For context, photos of the site are presented in **Figure IV-1**.

a. *Would the project have a substantial adverse effect on a scenic vista?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. This discussion is for informational purposes only. The Project is located in a highly urbanized area in the City of Los Angeles. The Project Site is surrounded by a mix of industrial, commercial, retail, and residential uses contained in low-rise (1- to 2-story) structures, which are physically separated from the Project Site by major highways, secondary streets, and arterial roadways.

Public views are those which can be seen from vantage points that are publicly accessible, such as streets, freeways, parks, and vista points. These views are generally available to a greater number of persons than are private views. Private views are those that can be seen from vantage points located on private property. The City of Los Angeles CEQA Thresholds do not protect views available from private vantage points such as private offices or private homes.

The Project Site is bound by West Jefferson Boulevard to the north, existing office buildings to the west, South La Cienega Boulevard on the east, and an existing See's Candy retail/manufacturing building along Corbett Street to the south. The elevated Metro E Line and bicycle path runs directly north of the Project Site parallel to West Jefferson Boulevard, with the La Cienega/Jefferson Metro stop at the south side of the intersection between West Jefferson and La Cienega Boulevards.

The West Adams-Baldwin Hills-Leimert Community Plan lists the nearest prominent vistas and view sheds as coming from the Baldwin Hills, a half-mile south of the Project Site.² The Baldwin Hills Scenic Overlook provides a panoramic view of the Los Angeles Basin, the Pacific Ocean, and surrounding mountains. The Project would be viewable to the north from the Baldwin Hills Scenic Overlook, and as such, there is the possibility that the Project could block a portion of the view of the Los Angeles Basin looking north, as viewed from this location. However, the Project would only block a small portion of this view and the remainder of the northern Los Angeles Basin would still be viewable from the Scenic Overlook. Further, the Baldwin Hills Scenic Overlook is an elevated, aerial view of the Los Angeles Basin and therefore contains a very large viewing area. Due to

² City of Los Angeles Department of City Planning. West Adams-Baldwin Hills-Leimert Community Plan. 2016. Available at: https://planning.lacity.org/odocument/78984e0b-a63d-4533-ba57-4f84b8fd7696/West_Adams-Baldwin_Hills-Leimert_Community_Plan.pdf

the viewpoint's elevation, the Project will not interfere with a view of any portions of the Los Angeles Basin except for minimal portions of the urban landscape including the elevated Metro Line and other development near the Project Site, none of which are considered scenic resources. Therefore, as a person stands at different locations at the Scenic Overlook, different portions of the Los Angeles Basin would be in view, and the majority of the Los Angeles Basin would remain viewable from the Baldwin Hills Scenic Overlook even with development of the Project.

In addition, the Los Angeles Basin, and the area surrounding the Project Site, contain many other buildings significantly taller than the Project will be, including a 320-foot-tall tower currently under construction at the corner of Jefferson and La Cienega Boulevards (the Cumulus project) and the (W)rapper tower, which would be approximately 230 feet in height, currently under construction at the corner of Jefferson and National Boulevards, both of which are also viewable from the Baldwin Hills Scenic Overlook. Accordingly, the Project will not increase the height of the existing skyline and would not affect any scenic vista from this vantagepoint.

Additional publicly available views include views from the existing Metro E Line station and the E Line trains running east-west by the Project Site. From the elevated Metro E Line station and the trains, the Project Site is visible to the south. The Project would alter portions of the view from the station and the trains. The views of the Project Site would improve, as the views would change from the existing Public Storage facility with nine low rise buildings with minimal landscaping to the Proposed Project's architecturally unique buildings and abundant landscaped terraces and ground floor landscaping and open space. Further, the design of the Project includes space between the residential and office building that would continue to allow views of the Baldwin Hills from the station and the train.

The Project's impacts with respect to scenic vistas would be less than significant.

b. Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. This discussion is for informational purposes only. No officially designated or eligible State-designated scenic highways are located adjacent to, or within

view of, the Project Site.³ As stated below under “Biological Resources,” the Project Site does not contain any protected trees. Further, the Project Site does not contain any rock outcroppings. Finally, as discussed below under “Cultural Resources,” the Project would not result in any impacts with respect to historic resources. Therefore, the Project would have no impact to scenic resources.

- c. *Would the project, in non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. This discussion is for informational purposes only. As the Project is located within an urbanized area, a consistency analysis with the West Adams-Baldwin Hills-Leimert Community Plan regarding regulations governing scenic quality was completed. **Table IV-1** shows the Project’s consistency with applicable regulations.

**Table IV-1
Consistency with Regulations Governing Scenic Quality in the
West Adams-Baldwin Hills-Leimert Community Plan**

Community Plan Policy	Consistency Analysis
<p>LU 2-1 Protect Neighborhoods. Strive to protect existing single-family and low-density residential neighborhoods from encroachment by higher density residential and other incompatible uses.</p>	<p>Consistent. The Project would not encroach on existing single-family and low-density residential neighborhoods. The closest low-density residential neighborhoods lie approximately 500 feet northeast of the Project Site and 700 feet southeast of the Project Site. The Project would develop a mixed-use project within a transit priority area adjacent to the La Cienega/Jefferson Metro Station, thereby meeting the policy to encourage higher residential densities near light rail transit stations (Community Plan Policy LU 11-1 Higher Density Residential Near Transit), as outlined</p>

³ California Department of Transportation. State Scenic Highway Map. Available at: <https://dot.ca.gov/programs/design/lap-landscape-architecture-and-community-livability/lap-liv-i-scenic-highways>, accessed February 19, 2021.

Community Plan Policy	Consistency Analysis
	below. In addition, the Project is located within an area with several new, large developments proposed in close proximity, including a 320-foot-tall tower (the Cumulus project) currently under construction at the corner of Jefferson and La Cienega Boulevards and the (W)rapper tower, which would be approximately 230 feet in height. The Project is therefore consistent with, and appropriately placed in relation to, surrounding uses and development.
LU 2-5 Preserve View Corridors. Encourage the preservation of existing prominent public vistas and view corridors throughout the Community Plan Area and especially those from hillside areas.	Consistent. As analyzed above, views from the Baldwin Hills Scenic Overlook would not be adversely affected. As the majority of the Los Angeles Basin would remain viewable from the Baldwin Hills Scenic Overlook even with development of the Project, the Project's impacts with respect to scenic vistas would be less than significant.
LU 11-1 Higher Density Residential Near Transit. Encourage higher residential densities near commercial centers, light rail transit stations and major bus routes where public service facilities, utilities and topography will accommodate this development.	Consistent. The Project would develop a mixed-use, 260-unit, 13-story residential building within a transit priority area directly adjacent to the La Cienega/Jefferson Metro Station consistent with the policy to encourage higher residential densities near light rail stations.
M 13-1 Scenic Highways. Encourage implementation of designated scenic highways and support future designation of both adopted and recommended study corridor scenic highway designations.	Not Applicable. This policy is directed to the City to implement programs and encourage future designation of scenic highways. As noted above, no officially designated or eligible State-designated scenic highways are located adjacent to, or within view of, the Project Site. The Project would not interfere with this policy.
CF 13-1 Street Tree Canopy. Identify protecting and developing tree cover as a priority and encourage setting a target for street tree canopy cover in new developments and/or in areas identified as tree deficient.	Consistent. The Project would add a net increase of 80 trees to the Project Site, including 3 street trees. The street trees will be subject to replacement requirements to the satisfaction of the Department of Public Works, Urban Forestry Division. As such the project would be consistent with and substantially further this policy.

The Project provides for an arrangement of buildings and structures, and other improvements that are compatible with the scale and character of the adjacent properties and the surrounding neighborhood. The Project Site and the surrounding area belongs to a burgeoning creative digital and entertainment community of buildings and users including, Nike, the Tennis Channel, Converse, Blur Studio, WeWork, and others in the

nearby vicinity. Neighboring buildings in the Project vicinity range in height from one to three stories up to 17 and 30 stories (and 230 to 320 feet in height), which are taller than the Proposed Project which is expected to be up to 149'-6".

The Project will also provide development that is consistent with, and will support the needs of, the existing West Adam-Baldwin Hills-Leimert community. The Project will provide much needed affordable housing, including very-low income and workforce, in furtherance of the City's Housing Element goals, and will provide job opportunities and neighborhood-serving retail, all in close proximity to transit. The Project's design will also improve the scenic quality of the existing neighborhood. The Project's abundant publicly accessible open space with seating and extensive shading and landscaping will benefit the community and will be a substantial increase from the current limited landscaping on the Project Site. The Project's plazas, paseos, and ground floor retail aim to activate the streetscape along West Jefferson Boulevard along a stretch that is currently fenced off from public access. The mix of residential and retail uses would increase pedestrian activity in this neighborhood on the evenings and weekends, creating a more vibrant community. The landscaped, pedestrian-oriented plazas and tree-lined squares will improve and beautify the Jefferson/La Cienega Metro station and existing bicycle path, encouraging active modes of transportation for the community at large.

Further, as demonstrated in **Table IV-1**, the Project would be consistent with applicable regulations in the West Adams-Baldwin Hills-Leimert Community Plan. Therefore, impacts would be less than significant.

d. Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. This discussion is for informational purposes only. Light impacts are typically associated with the use of artificial light during the evening and nighttime hours. Glare may be a daytime occurrence caused by the reflection of sunlight or artificial light from highly polished surfaces, such as window glass and reflective cladding materials, and may interfere with the safe operation of a motor vehicle on adjacent streets. Daytime glare is common in urban areas and is typically associated with mid- to high-rise buildings with exterior façades largely or entirely comprised of highly

reflective glass or mirror-like materials. Nighttime glare is primarily associated with bright point-source lighting that contrasts with existing low ambient light conditions.

The Project would include lighting designed to highlight architectural elements of the structures. Security lighting would be installed to deter criminal activity on the Project Site. The lights associated with the Project would be directed toward the interior of the Project Site so as not to create impacts to surrounding land uses or motorists traveling on surrounding roadways. All exterior lighting would be designed with internal and/or external glare control and would also be designed, arranged, directed, or shielded to contain direct illumination on-site, thereby preventing excess illumination and light spillover onto adjacent land uses and/or roadways. Blinking, flashing, or oscillating lights would be prohibited. Due to the anticipated height of the buildings, light generated from the interior of the buildings (one or both) could potentially be seen from outside the immediate vicinity of the Project Site. However, the increase in light that would be generated would not be out of character with the existing light sources in the Project vicinity given the Project is located in a heavily urbanized area and adjacent to properties with taller buildings.

In addition, the Project will be required to incorporate lighting design specifications to meet City standards as outlined in Section 93.0117 of the LAMC.⁴ LAMC Section 93.0117 states that no exterior light source may cause more than two footcandles of lighting intensity or generate direct glare onto exterior glazed windows or glass doors; elevated habitable porch, deck, or balcony; or any ground surface intended for uses such as recreation, barbecue or lawn areas on any other property containing a residential unit or units. Further, the project would incorporate mitigation measures from the West Adams – Baldwin Hills – Leimert Community Plan EIR as conditions of approval.⁵ The full list of applicable mitigation measures is provided in **Table III-3 West Adams – Baldwin Hills - Leimert CPA EIR Applicable Mitigation Measures**. Mitigation Measure AE2 which requires lighting be directed and/or shielded to minimize lighting spillover effects onto adjacent and nearby properties, will be incorporated into the Proposed Project; therefore, all lighting from the Project would be directed and/or shielded to minimize lighting spillover effects onto adjacent and nearby properties. Mitigation Measure AE3 which requires use of non-reflective building materials will be incorporated into the Proposed Project. As such, nighttime views in the Project vicinity would not be affected by the Project and impacts with respect to lighting would be less than significant.

⁴ Los Angeles Municipal Code Section 93.0117. Available at: https://codelibrary.amlegal.com/codes/los_angeles/latest/lamc/0-0-0-183817, accessed August 20, 2021.

⁵ City of Los Angeles Planning Department. West Adams-Baldwin Hills-Leimert New Community Plan EIR. Available at: <https://planning.lacity.org/eir/westadams/westAdamsCoverPg.html>, accessed August 20, 2021.

The Project's architectural features and facades would not be constructed of highly reflective materials, and therefore would not be expected to affect daytime views. Materials used on the façade of the proposed office building would utilize glass on the façade which would not be highly reflective.

Therefore, Project impacts related to light or glare will be less than significant.

2. Agricultural Resources

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

- a. *Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The California Department of Conservation, Division of Land Protection, lists Prime Farmland, Unique Farmland, and Farmland of Statewide Importance under the general category of "Important Farmland." The Farmland Mapping and Monitoring Program (FMMP) indicates that the Project Site is Urban and Built-Up Land and does not have any properties that contain prime or important farmland.⁶ There are no properties within the West Adams – Baldwin Hills - Leimert Community Plan Area that are zoned for important farmland or are considered agriculture land uses. Vegetation within the Project Site consists largely of two non-native ornamental trees, that are typical of urban

⁶ California Department of Conservation. California Important Farmland Finder. Available at: <https://maps.conservation.ca.gov/DLRP/CIFF/>

landscaping. Therefore, implementation of the Project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland) to non-agricultural use. No impact would occur.

b. *Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site is within the City of Los Angeles West Adams-Baldwin Hills-Leimert Community Plan Area and is designated as Hybrid Industrial which corresponds to the Property's zoning of Commercial Manufacturing within a Community Plan Implementation Overlay [CM-2D-CPIO]. The Project Site is not zoned for agricultural uses nor do agricultural uses occur on the Project Site or within the West Adams-Baldwin Hills-Leimert Community Plan Area. Only land located within an agricultural preserve is eligible for enrollment under a Williamson Act contract. Accordingly, the Project Site does not contain any lands covered by a Williamson Act contract. Therefore, implementation of the Project would not conflict with existing agricultural zoning or a Williamson Act Contract. No impact would occur.

c. *Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220 (g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104 (g))?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. As discussed above the Project Site is zoned Commercial Manufacturing within a Community Plan Implementation Overlay [CM-2D-CPIO]. The site and the surrounding area do not contain any forest land or land zoned for timberland production, nor is the Project Site used for such uses. There are no timberlands in the vicinity of the West Adams – Baldwin Hills – Leimert Community Plan Area and there is no forest land defined as timberland or timberland production within the Community Plan Area according

to the West Adams – Baldwin Hills – Leimert Community Plan EIR.⁷ Therefore, implementation of the Project would not conflict with existing zoning for, or cause rezoning of forest land or timberland. No impact would occur.

d. Would the project result in the loss of forest land or conversion of forest land to a non-forest use?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. See response to Section 2(c) above.

Additionally, forest land is defined as “land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits.”⁸ Timberland is defined as “land...which is available for, and capable of, growing a crop of trees of any commercial species used to produce lumber and other forest products, including Christmas trees.”⁹ As there are no agriculture or forestry resources within the Project Site or the entirety of the West Adams-Baldwin Hills-Leimert Community Plan Area, the Proposed Project would not cause a loss of forest land or timberland. No impact would occur.

e. Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

⁷ City of Los Angeles Planning Department. West Adams-Baldwin Hills-Leimert New Community Plan EIR. Available at: <https://planning.lacity.org/eir/westadams/westAdamsCoverPg.html>, accessed August 20, 2021.

⁸ California Public Resources Code Section 12220[g]

⁹ California Public Resources Code Section 4526

No Impact. See responses to Sections 2(a) through 2(d), above. The site is in an urbanized area and there are no agricultural uses or related uses on the site or in the surrounding area. No impact would occur.

3. Air Quality

The analysis provided below is primarily based on technical data prepared in the Air Quality and Greenhouse Gas Technical Study prepared by Impact Sciences, Inc., September 2021 (refer to **Appendix B** of this SCEA).

Introduction

The California Air Resources Board (CARB) divides the state into air basins that share similar meteorological and topographical features. The City of Los Angeles is located within the South Coast Air Basin (SCAB), which incorporates approximately 12,000 square miles consisting of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to the San Gorgonio Pass area in Riverside County. The South Coast Air Quality Management District (SCAQMD) is the agency principally responsible for comprehensive air pollution control in the Basin. Air quality impacts were evaluated in accordance with the methodologies recommended by CARB and the South Coast Air Quality Management District (SCAQMD). Where criteria air pollutant quantification was required, emissions were modeled using the California Emissions Estimator Model version 2016.3.2 (CalEEMod). CalEEMod is a statewide land use emissions computer model designed to quantify criteria pollutant emissions associated with both construction and operations from a variety of land use projects.

Air Pollution Climatology

The SCAB is in an area of high pollution potential due to the climate and topography of the region. The general region lies in the semi-permanent high-pressure zone of the eastern Pacific, resulting in a mild climate tempered by cool sea breezes with light average wind speeds. The area is considered semi-arid and is characterized by warm summers, mild winters, infrequent seasonal rainfall, moderate daytime onshore breezes, and moderate humidity. The annual average temperature varies little throughout the SCAB region, ranging from the low 60s to the high 80s, measured in degrees Fahrenheit (F°).

Wind patterns across the south coastal region are characterized by westerly or southwesterly onshore winds during the day and by easterly or northeasterly breezes at night. Wind speed is higher during the dry summer months than during the rainy winter. Between periods of wind, air stagnation may occur in both the morning and evening hours.

Air stagnation is one of the critical determinants of air quality conditions on any given day. During the winter and fall, surface high-pressure systems over the SCAB, combined with other meteorological conditions, can result in very strong, downslope Santa Ana winds. These winds normally continue a few days before predominant meteorological conditions are reestablished.

In conjunction with the two characteristic wind patterns that affect the rate and orientation of horizontal pollutant transport, two similarly distinct types of temperature inversions control the vertical depth through which pollutants are mixed. These inversions are the marine/subsidence inversion and the radiation inversion. The height of the base of the inversion at any given time is known as the “mixing height.” The combination of winds and inversions is a critical determinant leading to highly degraded air quality in the summer and generally good air quality in the winter in Los Angeles.

Air Pollutants of Concern

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards for outdoor concentrations. The federal and state standards have been set at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons such as children, pregnant women, and the elderly, from illness or discomfort. Criteria air pollutants include ozone (O₃), nitrogen dioxide (NO₂), carbon monoxide (CO), sulfur dioxide (SO₂), particulate matter 2.5 microns or less in diameter (PM_{2.5}), particulate matter ten microns or less in diameter (PM₁₀), and lead (Pb). Note that reactive organic gases (ROGs), which are also known as reactive organic compounds (ROCs) or volatile organic compounds (VOCs), and nitrogen oxide (NO_x) are not classified as criteria pollutants. However, ROGs and NO_x are widely emitted from land development projects and participate in photochemical reactions in the atmosphere to form O₃; therefore, NO_x and ROGs are relevant to the Project and are of concern in the air basin and are listed below along with the criteria pollutants. Sources and health effects commonly associated with criteria pollutants are summarized in **Table IV-2, Criteria Pollutants Summary of Common Sources and Effects**.

**Table IV-2
Criteria Pollutants Summary of Common Sources and Effects**

Pollutant	Major Man-Made Sources	Human Health & Welfare Effects
Carbon Monoxide (CO)	An odorless, colorless gas formed when carbon in fuels is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
Nitrogen Dioxide (NO ₂)	A reddish-brown gas formed during fuel combustion for motor vehicles and industrial sources. Sources include motor vehicles, electric utilities, and other sources that burn fuel.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Contributes to global warming and nutrient overloading which deteriorates water quality. Causes brown discoloration of the atmosphere.
Ozone O ₃)	Formed by a chemical reaction between volatile organic compounds (VOC) and nitrous oxides (NO _x) in the presence of sunlight. VOCs are also commonly referred to as reactive organic gases (ROGs). Common sources of these precursor pollutants include motor vehicle exhaust, industrial emissions, gasoline storage and transport, solvents, paints, and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing, and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield. Damages rubber, some textiles, and dyes.
Particulate Matter (PM ₁₀ & PM _{2.5})	Produced by power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles, and others.	Increased respiratory symptoms, such as irritation of the airways, coughing or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).
Sulfur Dioxide (SO ₂)	A colorless, nonflammable gas formed when fuel containing sulfur is burned; when gasoline is extracted from ore. Examples are petroleum refineries, cement manufacturing, metal processing facilities, locomotives, and ships.	Respiratory irritant; aggravates lung and heart problems. In the presence of moisture and oxygen, sulfur dioxide converts to sulfuric acid which can damage marble, iron, and steel. Damages crops and natural vegetation. Impairs visibility. Precursor to acid rain.

Air Monitoring Data

Ambient air quality in Los Angeles can be inferred from ambient air quality measurements conducted at nearby air quality monitoring stations. Existing levels of ambient air quality and historical trends and projections in the vicinity of Los Angeles are documented by measurements made by the South Coast Air Quality Management District (SCAQMD),

the air pollution regulatory agency in the SCAB regions maintains air quality monitoring stations which process ambient air quality measurements.

The purpose of the monitoring station is to measure ambient concentrations of pollutants and determine whether ambient air quality meets the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS). Ozone and particulate matter (PM10 and PM2.5) are pollutants of particular concern in the SCAB. The monitoring station located closest to the Project Site and most representative of air quality near the Project Site is the Los Angeles – North Main Street station, located at 1630 North Main Street approximately 6.44 miles east of the Project Site. Ambient emission concentrations vary due to localized variations in emissions sources and climate and should be considered “generally” representative of ambient concentrations near the Project Site. The Los Angeles – North Main Street station monitors O₃, PM_{2.5}, PM₁₀, and NO₂, see **Table IV-3, Los Angeles – North Main Street Air Monitoring Station Ambient Pollutant Concentrations**.

**Table IV-3
Los Angeles – North Main Street Air Monitoring Station Ambient Pollutant Concentrations**

Pollutant	Standards ¹	Year		
		2017	2018	2019
OZONE (O₃)²				
Maximum 1-hour concentration monitored (ppm)		0.116	0.098	0.085
Maximum 8-hour concentration monitored (ppm)		0.086	0.073	0.080
Number of days exceeding state 1-hour standard	0.09 ppm	6	2	0
Number of days exceeding federal/state 8-hour standard	0.070 ppm	14	4	2
NITROGEN DIOXIDE (NO₂)				
Maximum 1-hour concentration monitored (ppm)		0.081	0.070	0.069
Annual average concentration monitored (ppm)		0.021	0.018	0.018
Number of days exceeding state 1-hour standard	0.18 ppm	0	0	0
RESPIRABLE PARTICULATE MATTER (PM₁₀)				
Maximum 24-hour concentration monitored (µg/m ³)		64.6	68.2	62.0
Annual average concentration monitored (µg/m ³)		25.7	30.2	25.5
Number of samples exceeding state standard	50 µg/m ³	40	31	3
Number of samples exceeding federal standard	150 µg/m ³	0	0	0
FINE PARTICULATE MATTER (PM_{2.5})				
Maximum 24-hour concentration monitored (µg/m ³)		54.9	61.4	43.5

Pollutant	Standards ¹	Year		
		2017	2018	2019
Annual average concentration monitored ($\mu\text{g}/\text{m}^3$)		12.0	12.8	10.8
Number of samples exceeding federal standard	35 $\mu\text{g}/\text{m}^3$	6	6	1

Source: California Air Resources Board, "Air Quality Data Statistics," <http://www.arb.ca.gov/adam/>. 2020. South Coast Air Quality Management District. 2019. Air Quality South Coast Air Quality Management District. Available online at: <http://www.aqmd.gov/docs/default-source/air-quality/historical-data-by-year/2019-air-quality-data-tables.pdf?sfvrsn=8>. 2020.

¹ Parts by volume per million of air (ppm), micrograms per cubic meter of air ($\mu\text{g}/\text{m}^3$), or annual arithmetic mean (aam).

² The 8-hour federal O₃ standard was revised from 0.075 ppm to 0.070 ppm in 2015. The statistics shown are based on the 2015 standard of 0.070 ppm.

The attainment status for the SCAB region is included in **Table IV-4, Attainment Status of Criteria Pollutants in the South Coast Air Basin**. Areas that meet ambient air quality standards are classified as attainment areas, while areas that do not meet these standards are classified as nonattainment areas. The SCAB region is designated as a nonattainment area for federal ozone, PM_{2.5}, and lead standards and designated as nonattainment for state ozone, PM₁₀, and PM_{2.5} standards.

**Table IV-4
Attainment Status Criteria Pollutants in the South Coast Air Basin**

Pollutant	State	Federal
Ozone (O ₃)	Non-Attainment	Non-Attainment
Particulate Matter (PM ₁₀)	Non-Attainment	Attainment
Particulate Matter (PM _{2.5})	Non-Attainment	Non-Attainment
Carbon Monoxide (CO)	Attainment	Attainment
Nitrogen Dioxide (NO ₂)	Attainment	Attainment
Sulfur Dioxide (SO ₂)	Attainment	Attainment
Lead	Attainment	Non-Attainment (Partial) ¹

Source: South Coast Air Quality Management District. 2016. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) Attainment Status for South Coast Air Basin. [naaqs-caaqs-feb2016.pdf](#), accessed March 2021.

¹ The Los Angeles County portion of the SCAB is designated as a non-attainment area for the federal lead standard on the basis of source-specific monitoring at two locations as determined by U.S. Environmental Protection Agency (EPA) using 2007-2009 data. However, all stations in the SCAB, including the near-source monitoring in Los Angeles County, have remained below the lead NAAQS for the 2012 through 2015 period. The SCAQMD will request that the U.S. EPA re-designate the Los Angeles County portion of the SCAB as attainment for lead.

Regulatory Setting

Federal

Clean Air Act

The Clean Air Act (CAA) of 1970 and the CAA Amendments of 1971 required the U.S. Environmental Protection Agency (EPA) to establish NAAQS, with states retaining the option to adopt more stringent standards or to include other specific pollutants. On April 2, 2007, the Supreme Court found that carbon dioxide is an air pollutant covered by the CAA; however, no NAAQS have been established for carbon dioxide.

These standards are the levels of air quality considered safe, with an adequate margin of safety, to protect the public health and welfare. They are designed to protect those “sensitive receptors” most susceptible to further respiratory distress such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

The EPA has classified air basins (or portions thereof) as being in attainment, nonattainment, or unclassified for each criteria air pollutant, based on whether or not the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for a nonattainment or attainment designations. **Table IV-4** lists the federal attainment status of the SCAB for the criteria pollutants.

National Emissions Standards for Hazardous Air Pollutants Program

Under federal law, 187 substances are currently listed as hazardous air pollutants (HAPs). Major sources of specific HAPs are subject to the requirements of the National Emissions Standards for Hazardous Air Pollutants (NESHAPS) program. The EPA is establishing regulatory schemes for specific source categories and requires implementation of the Maximum Achievable Control Technologies (MACT) for major sources of HAPs in each source category. State law has established the framework for California’s Toxic Air Contaminants (TAC) identification and control program, which is generally more stringent than the federal program and is aimed at HAPs that are a problem in California. The state has formally identified 244 substances as TACs and is adopting appropriate control measures for each. Once adopted at the state level, each air district will be required to adopt a measure that is equally or more stringent.

National Ambient Air Quality Standards

The federal CAA required the U.S. EPA to establish NAAQS. The NAAQS set primary standards and secondary standards for specific air pollutants. Primary standards define limits for the intention of protecting public health, which include sensitive populations such as asthmatics, children, and the elderly. Secondary standards define limits to protect public welfare to include protection against decreased visibility, damage to animals, crops, vegetation, and buildings. A summary of the federal ambient air quality standards is shown in **Table IV-5, National Ambient Air Quality Standards**.

**Table IV-5
National Ambient Air Quality Standards**

Pollutant		Primary/Secondary	Averaging Time	Level
Carbon Monoxide		Primary	8 hours	9 ppm
			1 hour	35 ppm
Lead		Primary and secondary	Rolling 3-month average	0.15 µg/m ³
Nitrogen dioxide		Primary	1 hour	100 ppb
		Primary and secondary	Annual	0.053 ppm
Ozone		Primary and secondary	8 hours	0.070 ppm
Particulate Matter	PM2.5	Primary	Annual	12 µg/m ³
		Secondary	Annual	15 µg/m ³
		Primary and secondary	24 hours	35 µg/m ³
	PM10	Primary and secondary	24 hours	150 µg/m ³
Sulfur dioxide		Primary	1 hour	75 ppb
		Secondary	3 hours	0.5 ppm

State

California Clean Air Act of 1988

Under the Federal Clean Air Act, California is authorized to enforce its own vehicle emissions standards, despite the preemption which prohibits states from enacting emission standards. The emissions standards are established through the California CAA of 1988 (CCAA). The CCAA, through the grant of waivers by the Federal CAA adopts ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. CARB, a part of the California Environmental Protection

Agency (Cal EPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the CAAQS. The CCAA, amended in 1992, requires all air quality management districts (AQMDs) in the state to achieve and maintain the CAAQS. The CAAQS are generally stricter than national standards for the same pollutants and include state standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles, for which there are no national standards. CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB also has primary responsibility for the development of California’s State Implementation Plan (SIP), for which it works closely with the federal government and the local air districts.

California Ambient Air Quality Standards

The federal CAA permits states to adopt additional or more protective air quality standards if needed. California has set standards for certain pollutants, such as particulate matter and ozone, which are more protective of public health than respective federal standards. California has also set standards for some pollutants that are not addressed by federal standards. The state standards for ambient air quality are summarized in **Table IV-6, California Ambient Air Quality Standards**.

**Table IV-6
California Ambient Air Quality Standards**

Pollutant		Averaging Time	Level
Carbon monoxide		8 hours	9 ppm
		1 hour	20 ppm
Lead		30-day average	1.5 µg/m ³
Nitrogen dioxide		1 hour	0.180 ppm
		Annual	0.030 ppm
Ozone		8 hours	0.070 ppm
		1 hour	0.09 ppm
Particulate matter	PM2.5	Annual	12 µg/m ³
	PM10	24 hours	50 µg/m ³
		Annual	20 µg/m ³
Sulfur dioxide		1 hour	0.25 ppm
		24 hours	0.04 ppm
Sulfates		24 hours	25 µg/m ³
Hydrogen sulfide		1 hour	0.03 ppm
Vinyl chloride		24 hours	0.01 ppm

California State Implementation Plan

The federal CAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as a SIP. The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. Amendments to the CAA¹⁰ dictate that states containing areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The U.S. EPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA.

State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the U.S. EPA for approval and publication in the Federal Register. The 2016 Air Quality Management Plan (2016 AQMP) is the SIP for SCAB. The 2016 AQMP is a regional blueprint for achieving air quality standards and healthful air in the SCAB and those portions of the Salton Sea Air Basin (SSAB) that are under the SCAQMD's jurisdictions. The 2016 AQMP represents a new approach, focusing on available, proven, and cost-effective alternatives to traditional strategies, while seeking to achieve multiple goals in partnerships with other entities promoting reductions in greenhouse gases and toxic risk, as well as efficiencies in energy use, transportation, and goods movement. The most effective way to reduce air pollution impacts is to reduce emissions from mobile sources. The AQMP relies on regional and multi-level partnerships of governmental agencies at the federal, state, regional, and local level. Those agencies (EPA, CARB, local governments, Southern California Association of Governments [SCAG] and the SCAQMD) are the primary agencies that implement the AQMP programs. The 2016 AQMP incorporates the latest scientific and technical information and planning assumptions, including SCAG's 2016-2035 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. The 2016 AQMP includes integrated strategies and measures to meet the NAAQS.

¹⁰ The legal authority for federal programs regarding air pollution control is based on the 1990 Clean Air Act Amendments (1990 CAAA). These are the latest in a series of amendments made to the Clean Air Act (CAA). This legislation modified and extended federal legal authority provided by the earlier Clean Air Acts of 1963 and 1970.

On September 3, 2020, SCAG's Regional Council unanimously voted to approve and fully adopt Connect SoCal (2020-2045 RTP/SCS). However, the forecasts and measures in the plan have not been incorporated into any applicable air quality plan for the region.¹¹

Regional

South Coast Air Quality Management District

The SCAQMD is the air pollution control district for Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. The agency's primary responsibility is ensuring that the SCAB region meets attainment for the federal and state air quality standards. The SCAQMD is responsible for preparing an air quality management plan in order to meet federal attainment status. The SCAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, and conducting public education campaigns, as well as many other activities. All projects are subject to SCAQMD rules and regulations in effect at the time of construction.

SCAQMD Rules and Regulations

The following is a list of noteworthy SCAQMD rules that are required of construction activities associated with the Proposed Project:

- **Rule 402 (Nuisance)** – This rule prohibits the discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. This rule does not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.

- **Rule 403 (Fugitive Dust)** – This rule requires fugitive dust sources to implement best available control measures for all sources, and all forms of visible particulate matter are prohibited from crossing any property line. This rule is intended to

¹¹ Southern California Association of Governments. *Adopted Final Connect SoCal* (2020-2045 RTP/SCS). Available online at: <https://scag.ca.gov/read-plan-adopted-final-plan>.

reduce PM10 emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM10 suppression techniques are summarized below.

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
 - All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
 - All material transported off-site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
 - The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
 - Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the work day to remove soil tracked onto the paved surface.
- **Rule 1113 (Architectural Coatings)** – This rule requires manufacturers, distributors, and end-users of architectural and industrial maintenance coatings to reduce ROG emissions from the use of these coatings, primarily by placing limits on the ROG content of various coating categories.
 - **Rule 445 (Wood-Burning Devices)** – The purpose of this rule is to reduce the emission of particulate matter from wood-burning devices and establish contingency measures for applicable ozone standards for the reduction of volatile organic compounds.

The rule requires that any new residential or commercial development that begins construction on or after March 9, 2009, only install gaseous-fueled fireplaces and stoves.¹²

Local

Air Quality Element of the City of Los Angeles General Plan

The *Air Quality Element of the City of Los Angeles General Plan* (Air Quality Element) was adopted on November 24, 1992, and sets forth the goals, objectives, and policies that guide the City in the implementation of its air quality improvement programs and strategies.¹³ The Air Quality Element acknowledges that numerous efforts are underway at the regional, county and city levels addressing clean air concerns and that coordination of these various efforts and the involvement of the area's residents are crucial to the achievement of State and Federal air quality standards.

Relevant to the Proposed Project, the Air Quality Element establishes the following goals and policies aimed to reduce air quality emissions across the City of Los Angeles:

Goal 1. Good air quality and mobility in an environment of continued population growth and healthy economic structure.

Objective 1.1. It is the objective of the City of Los Angeles to reduce air pollutants consistent with the Regional Air Quality Management Plan (AQMP), increase traffic mobility, and sustain economic growth citywide.

Policy 1.1.1. Encourage demonstration projects which involve creative and innovative uses of market incentive mechanisms to achieve air quality objectives.

Objective 1.3. It is the objective of the City of Los Angeles to reduce particulate air pollutants emanating from unpaved areas, parking lots, and construction sites.

Policy 1.3.1. Minimize particulate emissions from construction sites.

Policy 1.3.2. Minimize particulate emissions from unpaved roads and parking lots which are associated with vehicular traffic.

¹³ City of Los Angeles Planning Department. 1992. *Air Quality Element*. Available online at: https://planning.lacity.org/odocument/0ff9a9b0-0adf-49b4-8e07-0c16f6ea70bc/Air_Quality_Element.pdf.

Goal 2. Less reliance on single-occupant vehicles with fewer commute and non-work trips.

Objective 2.2. It is the objective of the City of Los Angeles to increase vehicle occupancy for non-work trips by creating disincentives for single passenger vehicles, and incentives for high occupancy vehicles.

Policy 2.2.1. Discourage single-occupant vehicle use through a variety of measures such as market incentive strategies, mode-shift incentives, trip reduction plans and ridesharing subsidies.

Goal 3. Efficient management of transportation facilities and system infrastructure using cost effective system management and innovative demand management techniques.

Objective 3.2. It is the objective of the City of Los Angeles to reduce vehicular traffic during peak periods.

Policy 3.2.1. Manage traffic congestion during peak periods.

Goal 4. Minimal impact of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation, and air quality.

Objective 4.1. It is the objective of the City of Los Angeles to include the regional attainment of ambient air quality standards as a primary consideration in land use planning.

Policy 4.1.1. Coordinate with all appropriate regional agencies in the implementation of strategies for the integration of land use, transportation, and air quality policies.

Policy 4.1.2. Ensure that project level review and approval of land use development remain at the local level.

Objective 4.2. It is the objective of the City of Los Angeles to reduce vehicle trips and vehicle miles traveled associated with land use patterns.

Policy 4.2.1. Revise the City's General Plan/Community Plans to achieve a more compact, efficient urban form and to promote more transit-oriented development and mixed-use development.

Policy 4.2.2. Improve accessibility for the City's residents to places of employment, shopping centers, and other establishments.

Policy 4.2.3 Ensure that new development is compatible with pedestrians, bicycles, transit, and alternative fuel vehicles.

Policy 4.2.4. Require that air quality impacts to be a consideration in the review and approval of all discretionary projects.

Policy 4.2.5. Emphasize trip reduction, alternative transit and congestion management measures for discretionary projects.

West Adams, Baldwin Hills, Leimert Community Plan

The West Adams – Baldwin – Leimert Community Plan was updated in 2016 and includes the Crenshaw District and the neighborhoods of Leimert Park, Hyde Park, Jefferson Park, Mid-City, West Adams, and Arlington Heights. Through a collaborative effort involving residents, owners, businesses, and developers, a Long-Range Plan was developed to set forth actions to achieve a common vision that encompasses the full spectrum of issues and opportunities regarding the Community Plan Area’s physical evolution. The Community Plan addresses a wide range of topics including jobs and housing, parks and open space, urban design and mobility, as well as arts, culture, history, and health.¹⁴

According to Appendix G of the *State CEQA Guidelines*, impact related to air quality would be considered significant if the project would:

- a. *Would the project conflict with or obstruct implementation of the applicable air quality plan?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. As part of its enforcement responsibilities, the U.S. EPA requires each state with nonattainment areas to prepare and submit a SIP that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the

¹⁴ Los Angeles Department of City Planning. 2016. *West Adams – Baldwin Hills – Leimert Community Plan*. Available online at: https://planning.lacity.org/odocument/78984e0b-a63d-4533-ba57-4f84b8fd7696/West_Adams-Baldwin_Hills-Leimert_Community_Plan.pdf.

federal and state ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

The Project Site is located within the SCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the federal CAA, to reduce emissions of criteria pollutants for which the SCAB is in nonattainment. To reduce such emissions, the SCAQMD drafted the 2016 AQMP.¹⁵ As described above, the 2016 AQMP was developed in coordination with CARB, SCAG, and the U.S. EPA to establish a program of rules and regulations to reduce air pollutant emissions to achieve CAAQS and NAAQS. The plan's pollutant control strategies are based on SCAG's 2016 RTP/SCS. While SCAG adopted the updated 2020 RTP/SCS (Connect SoCal) in September 2020, it has not been incorporated into an applicable air quality plan.¹⁶

Criteria for determining consistency with the 2016 AQMP are defined in Chapter 12, Section 12.2, and Section 12.3 of the SCAQMD's 1993 CEQA Air Quality Handbook, and include the following:

- **Consistency Criterion No. 1:** The proposed project will not result in an increase in the frequency or severity of an existing air quality violation, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.
- **Consistency Criterion No. 2:** The proposed project will not exceed the assumptions in the AQMP or increments based on the years of the project build-out phase.

The violations to which Consistency Criterion No. 1 refers are the CAAQS and the NAAQS. As evaluated under Impacts 2 and 3 below, the Project would not exceed the applicable short-term construction standards or long-term operational standards and therefore would not violate the air quality standards included in **Table IV-2** and **Table IV-3**. Thus, no significant impact would occur, and the Proposed Project would be consistent with first criterion.

¹⁵ South Coast Air Quality Management District. 2016. *Air Quality Management Plan*. Available online at: <http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/final2016aqmp.pdf>.

¹⁶ Southern California Association of Governments. 2020. *Adopted Final Connect SoCal*. Available online at: <https://scag.ca.gov/read-plan-adopted-final-plan>.

Concerning Consistency Criterion No. 2, the 2016 AQMP contains air pollutant reduction strategies based on SCAG's growth forecasts, and SCAG's growth forecasts were defined in consultation with local governments and with reference to local general plans.

The 2016 RTP/SCS estimated that from 2015 to 2040 the City of Los Angeles is expected to increase in population by 763,900 people and add 472,700 jobs.¹⁷ The Department of City Planning refines the City's allocation for each plan area. The West Adams-Baldwin Hills-Leimert Community Plan Area is expected to grow by 214,012 people and add 53,556 jobs by 2040.¹⁸ The Proposed Project, which would increase local population by 744 residents and 1,284 employees, is consistent with the land use designation and development density prepared in the City of Los Angeles' General Plan, specifically the growth projections for the West Adams – Baldwin Hills – Leimert Community Plan. As a result, the Project would be adding less than 1% of the projected population growth and approximately 2.4% of the projected employment growth in the West Adams – Baldwin Hills – Leimert Community Plan Area. Therefore, the Project would not exceed the population or job growth projections used by the SCAMQD to develop the 2016 AQMP.^{19,20} Thus, no significant impact would occur, as the Proposed Project is also consistent with the second criterion.

- b. *Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard ?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A project may have a significant impact if project-related emissions would result in a cumulatively considerable net increase for an criteria pollutant for which the region in nonattainment under applicable federal or state ambient air quality

¹⁹ Estimated population based on CalEEMod modeling, see Air Quality and Greenhouse Gas Technical Report Estimated employment numbers based on the Los Angeles Unified School District 2020 Developer Fee Justification Study for Standard Commercial Office which estimates 4.79 employees per 1,000 square feet.
²⁰ Los Angeles Unified School District. 2020. 2020 Developer Fee Justification Study. Available online at: https://achieve.lausd.net/cms/lib/CA01000043/Centricity/Domain/921/LAUSD%20Dev%20Fee%20Study%202020_Final.pdf.

standards. To determine if a project would have a cumulatively considerable air quality impact on the project's region, emissions are compared to the SCAQMD construction and operational air quality thresholds. A full discussion of criteria pollutants and modeling assumptions is provided in the Air Quality and Greenhouse Gas Technical Study, see **Appendix B, Air Quality and Greenhouse Gas Technical Study**.

Construction Emissions

Construction associated with the Project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the Project area include ozone-precursor pollutants (i.e., ROG and NOx), PM10, and PM2.5. Construction-generated emissions are short term and of temporary duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SCAQMD's thresholds of significance.

The Proposed Project will be required to implement Mitigation Measure AQ1 from the West Adams – Baldwin Hills – Leimert Community Plan EIR. Mitigation Measure AQ1 (See **Table III-3 West Adams – Baldwin Hills -Leimert CPA EIR Applicable Mitigation Measures**) includes the following best management practices:

- Use properly tuned and maintained equipment.
- Contractors shall enforce the idling limit of five minutes as set forth in the California Code of Regulations.
- Use diesel-fueled construction equipment to be retrofitted with after treatment products (e.g., engine catalysts) to the extent they are readily available and feasible.
- Use heavy duty diesel-fueled equipment that uses low NOX diesel fuel to the extent it is readily available and feasible.
- Use construction equipment that uses low polluting fuels (i.e., compressed natural gas, liquid petroleum gas, and unleaded gasoline) to the extent available and feasible.
- Maintain construction equipment in good operating condition to minimize air pollutants.
- All off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards, where available. In addition, all

construction equipment shall be outfitted with Best Available Control Technologies devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.

- Construction contractors shall use electricity from power poles rather than temporary gasoline or diesel power generators, as feasible.

These best management practices are assumed as part of the Proposed Project. Predicted maximum daily construction-generated emissions for the Proposed Project are summarized in **Table IV-7, Construction-Related Criteria Pollutant and Precursor Emissions – Maximum Pounds per Day.**

**Table IV-7
Construction-Related Criteria Pollutant and Precursor Emissions – Maximum Pounds per Day**

Construction						
Year	ROG	NOx	CO	SO2	PM10	PM2.5
2022	3.41	64.02	31.90	0.21	8.90	2.78
2023	3.46	44.00	30.32	0.20	8.81	2.47

Source: Impact Sciences, CalEEMod modeling, 2021. See **Appendix B, Air Quality and Greenhouse Gas Technical Study.**

Note: During construction, contractors are required to comply with SCAQMD Rule 402 (Nuisance) and Rule 403 (Fugitive Dust).

Operational Emissions

Project-generated emissions would be associated with motor vehicle use and area sources, such as the use of landscape maintenance equipment and architectural coatings associated with the Proposed Project. The Proposed Project includes a series of sustainable project design features (PDFs) that focus on increasing the water and energy efficiency of the new development, see **PDF 1.** Long-term operational emissions attributable to the Proposed Project are summarized in **Table IV-8, Long-Term Operational Emissions – Maximum Pounds per Day.**

**Table IV-8
Long-Term Operational Emissions – Maximum Pounds per Day**

Source	ROG	NOx	CO	SO2	PM10	PM2.5
Area Source	11.39	0.25	21.55	0.001	0.12	0.12
Energy Use	0.16	1.40	0.87	0.01	0.11	0.11
Mobile Source	4.76	21.72	61.76	0.25	23.59	6.44
Total	16.32	23.37	84.16	0.26	24.82	6.67

Source: Impact Sciences, CalEEMod modeling, 2021. See **Appendix B, Air Quality and Greenhouse Gas Technical Study**.

As shown in **Table IV-7** and **Table IV-8**, neither the Project’s construction nor operational emissions would exceed the SCAQMD’s thresholds for any criteria air pollutants. Therefore, regional construction and operational emissions would not result in a significant air quality impact. Thus, the Proposed Project would not result in a cumulatively considerable net increase of any criteria air pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard.

Air Quality Health Impacts

The following discussion analyzes the Proposed Project’s potential impacts to inform the public how the impacts’ quantitative results translate to a potential adverse health impact and explains how existing scientific constraints cannot translate the emissions numbers to the potential health impacts.

SCAB is in state non-attainment for PM2.5, PM10, and O₃ and federal non-attainment for PM2.5 and O₃. Therefore, an increase in emissions of particulate matter or ozone precursors (ROG and NOx) has the potential to push the region further from reaching attainment status and, as a result, are the pollutants of greatest concern in the region. As noted in **Table IV-7** and **Table IV-8** above, the Proposed Project will emit criteria air pollutants during construction and operation. However, the Proposed Project will not exceed SCAQMD thresholds for ozone precursors (ROG and NOx), PM2.5, PM10, or any other criteria air pollutants, and will not result in a cumulatively significant impact for which the region is in non-attainment. This discussion focuses on the health effects from the pollutants for which the region is in non-attainment and why it is not feasible to provide an analysis to relate the emissions of ozone precursors from an individual project to likely human health consequences.

Exposure to particulate matter can affect both a person's lungs and heart and has been linked to a variety of health problems including aggravated asthma, decreased lung function, and increased respiratory symptoms. Diesel Particulate Matter (DPM) is a type of particulate that is emitted from diesel engines and is estimated to cause approximately 70% of total known cancer risks related to air toxics in California.²¹ As discussed below, see **Impact C**, the Proposed Project would not result in an increased health risk as a result from exposure to DPM or other TACs. Further, since the Proposed Project will not exceed SCAQMD regional thresholds for particulate matter, the Project will not result in a cumulatively significant impact to particulate matter in the region.

Exposure to O₃ can cause respiratory irritation, lung damage, aggravate asthma, and may worsen existing chronic lung diseases such as emphysema and chronic bronchitis.²² O₃ is formed in the atmosphere when heat and sunlight cause a chemical reaction between NO_x and ROG emissions. NO_x and ROG are referred to as ozone precursors and affect air quality on a regional scale. Health effects related to O₃ are therefore the product of emissions generated by numerous sources throughout a region. Existing models have limited sensitivity to small changes in criteria pollutant concentrations, and, as such, translating project-generated criteria pollutants to specific health effects or additional days of nonattainment would produce meaningless results. In other words, the Proposed Project's less than significant increases in regional air pollution would not have a measurable effect on the human health implications of the SCAB's ambient air quality.

The Congressional Research service prepared the *Background Ozone: Challenges in Science and Policy* report for the U.S. Congress in 2019. The report provides a summary of the scientific capabilities of measuring ozone and understanding the needs and improvements necessary to understand contributions from background sources. While this paper specifically addresses background concentrations of ozone and ozone modeling, it demonstrates the difficulty in assessing ozone and related health implications from any single source or project. According to the Congressional Research Service, currently there are several data and analytical challenges to reliably assess background ozone concentrations and to model ozone. First, the current understanding of the amount, location, and type of pollutant emissions from many types of sources is insufficient. Therefore, inventories typically provide estimation, which may not be precise enough for apportioning contributions. Second, meteorological data (i.e., wind speed, wind direction, temperature, cloud cover, humidity, etc.) is not currently measured at a fine enough spatial scale to adequately represent relevant weather processes. Third, data on pollutant

²¹ California Air Resources Board. *Overview: Diesel Exhaust & Health*. Available online at: <https://ww2.arb.ca.gov/resources/overview-diesel-exhaust-and-health>.

²² U.S. Environmental Protection Agency. *Ozone and Your Health*. Available online at: <https://www.airnow.gov/sites/default/files/2020-02/ozone-c.pdf>.

concentrations are limited, which increases the challenges of understanding ozone formation and movement. Fine spatial and temporal measurements are needed both horizontally across the surface and vertically to higher levels of the atmosphere. Finally, background ozone source contributions change by year, season, day, and hour and from location to location.²³

While several models and tools are available to quantify emissions, these models are limited by a number of factors in their ability to determine health impacts of individual development projects. The U.S. Environmental Protection Agency currently performs health impact assessments (HIAs) using the Community Multiscale Air Quality (CMAQ)²⁴ model for pollutant transport modeling and Environmental Benefits Mapping and Analysis Program – Community Edition (BENMAP – CE) for health impact calculations.²⁵ However, these models are designed to estimate health impacts over a large scale (e.g., city-wide, state-wide). In addition, the CMAQ model requires inputs such as regional sources of pollutants and global meteorological data, which are not readily accessible. In general, the current suite of available models are not able to accurately model concentrations or dispersion of ozone because they are regional models unable to provide accurate results for individual projects. If reliable ozone concentrations can be determined, there is also a limitation on being able to correlate concentrations to related health effects.

The SCAQMD acknowledges that quantifying the health impacts from O₃ is difficult. The *2012 AQMP* determines that a reduction of 432 tons (864,000 pounds) per day of NO_x and a reduction of 187 tons (374,000 pounds) per day of VOC would reduce O₃ levels at the highest monitored site by only nine parts per billion.²⁶ This means that a large reduction in precursor emissions translate to incremental reductions in measured ozone. Therefore, quantifying O₃ and related O₃ health impacts caused by NO_x or VOC emissions from relatively small projects (defined as projects with regional scope) is limited. Thus, as the Proposed Project would not exceed SCAQMD thresholds for construction and operational air emissions, it can reasonably be concluded that the Proposed Project would not have a measurable effect on the human health in the SCAB,

²⁶ SCAQMD. *Final 2012 AQMP*. Available online at: <https://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan>.

nor would the Proposed Project have implications on ambient air quality. As a result, the Proposed Project would have a less than significant impact for air quality health impacts.

Project Design Features (PDFs)

PDF 1: The following sustainable features aimed at reducing air quality and GHG emissions will be incorporated into the project design:

- Entirely electric buildings – no natural gas (residential and commercial building)
- ENERGY STAR appliances for both residential and commercial buildings
- LED lighting for both residential and commercial buildings
- Intend to purchase 100% green power from the Los Angeles Department of Water and Power grid²⁷
- Variable Air Volume (VAV) heating, ventilating, and air conditioning (HVAC) system in the Commercial Building with MERV 13-15 filter
- 100 Electric vehicle (EV) parking spaces
- Exploring on-site photovoltaic (PV) and battery storage
- Bike showers, lockers, and storage
- Rainwater collection cistern for stormwater management for reuse in landscaping on site
- Landscape with drought tolerant plants
- Commitment to using SCAQMD super-compliant low-VOC paint

c. Would the project expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

²⁷ Green Power is electricity produced from clean, sustainable energy sources such as the wind, water, and the sun. Source: Los Angeles Department of Water and Power

Less than Significant Impact. The Proposed Project has the potential to expose nearby sensitive receptors to air toxics during construction and operation. A full discussion of the impacts is provided in **Appendix B, Air Quality and Greenhouse Gas Technical Study.**

Localized Significance Thresholds

It should be noted that the ambient air quality standards are developed and represent levels at which the most susceptible persons are protected. In other words, the ambient air quality standards are purposely set in a stringent manner to protect children, elderly, and those with existing and respiratory problems. Thus, air quality health impacts would be less than significant.

Construction

The nearest sensitive receptors to the Project Site are residents located approximately 175 feet southeast of the Project Site across South La Cienega Boulevard. To identify impacts to sensitive receptors, the SCAQMD recommends addressing localized significance thresholds (LST) for construction.

LSTs were developed in response to the SCAQMD Governing Boards' Environmental Justice Enhancement Initiative (I-4). The SCAMQD provided the *Final Localized Significance Threshold Methodology* for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with project-specific analysis.

The applicable site receptor area (SRA) for the LST is the Northwest Coastal LA County area (SRA 2) since this area includes the Project Site. LSTs apply to CO, NO₂, PM₁₀, and PM_{2.5}. The SCAMQD produced look-up tables for projects that disturb areas less than or equal to 5 acres in size. The Project Site is approximately 3.53-acres; therefore, the LST threshold for two acres most closely aligns with the Project and was used for the construction LST analysis.

The SCAQMD's methodology clearly states that "off-site mobile emissions from the project should not be included in the emissions compared to LSTs."²⁸ Therefore, for purposes of the construction LST analysis, only emissions included in the CalEEMod "on-site" emissions outputs were considered. As stated above, the nearest sensitive receptors are approximately 175 feet southeast of the Project Site. LST screening thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters.

²⁸ SCAQMD. 2008. *Final Localized Significance Threshold Methodology*. Available online at: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/final-1st-methodology-document.pdf?sfvrsn=2>.

Therefore, LSTs for receptors located at 50 meters (approximately 164 feet) were used in this analysis.

Table IV-9, Localized Significance of Construction Emissions – Maximum Pounds per Day, presents the Project’s localized emissions during construction activity. As shown in **Table IV-9**, the on-site air pollutant emissions on the peak day of construction (with assumed compliance of SCAQMD Rule 403) would not exceed the applicable LST. Therefore, the Proposed Project’s localized construction air quality impacts would not expose sensitive receptors to substantial air pollutant concentrations. Impacts would be less than significant.

**Table IV-9
Localized Significance of Construction Emissions – Maximum Pounds per Day**

Construction Year	NOx	CO	PM10	PM2.5
2022	12.88	15.44	0.58	0.49
2023	11.30	15.41	0.52	0.43
2024	2.39	3.94	0.08	0.08
2025	1.15	1.81	0.05	0.05
LST Screening Threshold	143	1,213	19	5
Exceed?	No	No	No	No

Source: Impact Science, CalEEMod modeling, 2021. See Appendix A. SCAQMD. Appendix C Mass Rate Look Up Tables. Available online at: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/appendix-c-mass-rate-lst-look-up-tables.pdf?sfvrsn=2>.
Note: The table provides the on-site construction emissions with implementation of SCAQMD Rules 402 and 403.

Operation

According to the SCAQMD LST methodology, LST would apply to the operational phase of a proposed project only if the proposed project includes stationary sources or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities). The Project is proposing a residential and commercial development and, therefore, does not include such land uses. Thus, due to the lack of queuing and idling emissions, no long-term localized significance threshold analysis is needed. The Proposed Project’s operational localized operational air quality impacts would not expose sensitive receptors to substantial air pollutant concentrations. Impacts would be less than significant.

Localized Air Quality Health Impacts

As evaluated above, the Project's air emissions would not exceed the SCAQMD's LST thresholds. Therefore, the Project would not cause or contribute to an exceedance of the most stringent applicable NAAQS or CAAQS for emissions of CO, NO_x, PM₁₀, or PM_{2.5}.

Carbon Monoxide Hotspots

CO emissions are a function of vehicle idling time, meteorological conditions, and traffic flow. Under certain extreme meteorological conditions, CO concentrations near a congested roadway or intersection may reach unhealthful levels (i.e., adversely affecting residents, school children, hospital patients, the elderly, etc.).

The SCAB is designated as an attainment/maintenance area for the federal CO standards and attainment area for state standards. CO emissions have declined in recent years even as VMT has increased. Estimated anthropogenic CO emissions have decreased 68% between 1990 and 2014. In 2014, mobile sources accounted for 82% of the nation's total anthropogenic CO emissions.²⁹ Three major control programs have contributed to the reduced per-vehicle CO emissions: exhaust standards, cleaner burning fuels, and motor vehicle inspection/maintenance programs.

According to the SCAQMD CEQA Air Quality Handbook, a potential CO hotspot may occur at any location where the background CO concentration already exceeds 9.0 ppm, the CAAQS for 8-hour ozone. The SCAQMD prepared a detailed CO analysis in the *Federal Attainment Plan for Carbon Monoxide* as part of the 2003 AQMP.³⁰ The 2003 AQMP is the most recent AQMP that addresses CO concentrations. The CO analysis included microscale modeling of CO at the worst-case intersections in SCAB. Of these locations, the Wilshire Boulevard and Veteran Avenue intersection in Los Angeles experienced the highest CO concentration of 4.6 ppm. At the time of analysis, the Wilshire Boulevard and Veteran Avenue intersection was the most congested intersection in Los Angeles County with an average daily traffic volume of approximately 100,000 vehicles per day. As CO impacts at the Wilshire Boulevard and Veteran Avenue intersection did not exceed the 8-hour CAAQS, it can be inferred that the intersections near the Project Site, which generate far fewer vehicles per day, would not create any CO hotspots. Furthermore, as previously discussed, the site is located in SRA 2, Northwest Coastal Los Angeles County. The monitoring station closest to the Project Site is the VA Hospital,, West Los Angeles air quality monitoring station located approximately 5.9 miles north of

²⁹ U.S. Environmental Protection Agency. 2018. *Carbon Monoxide Emissions*.

³⁰ SCAQMD. *2003 Air Quality Management Plan*. Available online at: <https://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/2003-aqmp>.

the site. According to data obtained from the U.S. EPA's AirData database for CO pollutants, the highest eight-hour concentration reported for the VA Hospital, West Los Angeles station in 2019 was 1.2 ppm.³¹ As such, the background CO concentration in combination with the CO concentration at worst-case scenario intersection in SCAB do not exceed 9.0 ppm and a CO hotspot would not occur. Therefore, the Proposed Project's CO hotspot impacts would not expose sensitive receptors to substantial air pollutant concentrations. Impacts would be less than significant.

Diesel Particulate Matter

Project Construction

Construction would result in the generation of diesel particulate matter (DPM) emissions from the use of off-road diesel equipment required for grading and excavation, paving, and other construction activities. The amount to which the receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk (i.e., potential exposure to TAC emission levels that exceed applicable standards). Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer.

The use of diesel-powered construction equipment would be temporary and episodic. The duration of exposure would be short and exhaust from construction equipment dissipates rapidly. Current methodology for conducting health risk assessments are associated with long term exposure periods (9, 30, and 70 years). Therefore, short-term construction activities would not generate a significant health risk.

Additionally, the Project Site is approximately 3.5-acres. Generally, construction for projects contained in a site of less than 5 acres result in less than significant health risk impacts due: (1) to limitations of the off-road diesel equipment able to operate, which produces a reduced amount of generated DPM; (2) reduced amount of dust-generating ground-disturbance possible compared to larger construction sites, and (3) reduced duration of construction activities compared to the development of larger sites.³² Furthermore, construction would be subject to and would comply with California regulations, such as CARB's In-Use Off-Road Diesel Rule which limits the idling of heavy-duty construction equipment to no more than 5 minutes, which would further reduce

31 U.S. Environmental Protection Agency. 2018. Monitor Values Report. Available: <https://www.epa.gov/outdoor-air-quality-data/monitor-values-report>.

32 This statement is based on findings from air quality studies prepared throughout Los Angeles and California.

nearby sensitive receptors' exposure to temporary and variable DPM emissions.³³ For these reasons, DPM generated by construction activities, in and of itself, would not be expected to expose sensitive receptors to substantial amounts of air toxics and the Project would have a less than significant impact.

Project Operation

The greatest potential during long-term operations for exposure to TACs is from the use of heavy-duty diesel trucks and stationary generators that use diesel fuel. Once operational, the majority of vehicle trips to the Project Site would be from residents and employees and, as a result, the Proposed Project would attract very few diesel truck trips. The Proposed Project includes a small coffee shop/ restaurant which would get deliveries by truck, as would some of the commercial uses. However, most of these trucks would be small delivery trucks (i.e., UPS, Amazon). Further, many smaller delivery trucks are electric or natural gas powered.³⁴ Additionally, the Project does not propose any stationary generators on-site.

The West Adams – Baldwin Hills – Leimert Community Plan EIR includes Mitigation Measure AQ-2 which requires new development within 500 feet of the Santa Monica Freeway to prepare a Health Risk Assessment that demonstrates the risk posed to new sensitive receptors.³⁵ As the Project Site is approximately 3,960 feet from the Santa Monica Freeway and, as a result, is not required to adhere to this mitigation. Nonetheless, as part of the Project's design, the Applicant is committing to installing Minimum Efficiency Reporting Value (MERV) rated 15 air filters to reduce the health risk posed to employees in the Commercial Building from particulates and other TACs. For these reasons, once operational, the Proposed Project would not expose nearby sensitive receptors to substantial amounts of air toxics and the project would have a less than significant impact.

d. *Would the result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The SCAQMD *CEQA Air Quality Handbook* (1993) identifies certain land uses as sources of odors. These land uses include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. Once operational, the Proposed Project will provide both residential and commercial uses. The Proposed Project would not include any of the land uses that have been identified by the SCAQMD as odor sources.

Construction activities associated with the Proposed Project may generate detectable odors from heavy-duty equipment exhaust and architectural coatings. However, construction-related odors would be short-term in nature and cease upon Proposed Project completion. In addition, the Proposed Project would be required to comply with the California Code of Regulations, Title 13, sections 2449(d)(3) and 2485, which minimizes the idling time of construction equipment either by shutting it off when not in use or by reducing the time of idling to no more than five minutes. This would reduce the detectable odors from heavy-duty equipment exhaust. The Proposed Project would also be required to comply with the SCAQMD Rule 1113 – Architectural Coating, which would minimize odor impacts from ROG emissions during architectural coating. Any odor impacts to existing adjacent land uses would be short-term and not substantial. As such, the project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. Impacts would be less than significant.

4. Biological Resources

- a. *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project is in a developed urban area. The majority of the West Adams Community Plan Area is fully urbanized, containing primarily residential, commercial, and industrial development. The Project Site is fully developed with a self-storage facility and surface parking. As shown in **Figure II-2, Aerial View of the Project Site**, the Project Site is in a highly urbanized location surrounded by parcels that have long been fully developed with commercial, residential, industrial, and office uses. Immediately north of the Project Site is a Metro right-of-way for the E (Expo) Line tracks and bicycle path. The Metro property runs along Jefferson Boulevard for the length of the Project Site and the La Cienega / Jefferson Metro Station is located abutting the Project Site's northeast corner. Across Jefferson Boulevard to the north, (also under construction) is the "Cumulus Project" that will have a 320-foot-tall high-rise building and a 110-foot-tall podium building with multifamily residential, commercial, and retail uses (with 1,200+ units). To the east of the Project Site across South La Cienega Boulevard is a five-level parking structure serving as parking for Metro patrons. South of the Project Site along South La Cienega Boulevard is a single-story Sees' Candies factory. To the west of the Property is a 16-story office building (currently under construction) known as the "(W)rapper."

As the Project Site, and the surrounding area, is fully developed, development of the Proposed Project would not result in the removal or interference with any habitat. Therefore, the Proposed Project would not result in a substantial adverse effect, either directly or through habitat modification, on any candidate, sensitive, or special status species. No impact would occur.

- b. *Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and*

regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. Ballona Creek, located approximately 700 feet west of the Project Site, is the only significant water course in the vicinity. Ballona Creek is a concrete-lined channel surrounded by urban uses. Further, according to the California Department of Fish and Wildlife’s CNDDDB data, no riparian or other sensitive natural community are located on or adjacent to the Project Site.³⁶ The Project Site is also not located within a significant ecological area as determined by the City or County of Los Angeles.³⁷ Furthermore, the West Adams – Baldwin Hills – Leimert Community Plan does not show the Project Site as being within a Conservation/Preservation Area.³⁸ Implementation of the Proposed Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community. No impact would occur.

c. *Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site is located in a developed urban area with no naturally occurring wetland habitat. The Project Site has long been fully paved and developed with self-storage buildings and surface parking. The Project Site does not include any discernable drainage courses, inundated areas, wetland vegetation, or hydric soils, and thus does not include USACE jurisdictional drainages or wetlands.³⁹ Therefore, the

³⁶ CDFW, CNDDDB, “Maps and Data”, <https://www.wildlife.ca.gov/Data/CNDDDB/Maps-and-Data>.

³⁷ City of Los Angeles General Plan, “Conservation Element” (2001), “Exhibit B2: SEAs [Significant Ecological Areas] and Other Resources,” January 2001.

³⁸ City of Los Angeles Planning Department. 2016. West Adams – Baldwin Hills – Leimert Community Plan. Available at: https://planning.lacity.org/odocument/78984e0b-a63d-4533-ba57-4f84b8fd7696/West_Adams-Baldwin_Hills-Leimert_Community_Plan.pdf, accessed August 20, 2021.

³⁹ U.S. Fish and Wildlife Service. National Wetlands Inventory. Available at: <https://www.fws.gov/wetlands/data/mapper.html>, accessed September 23, 2021.

Proposed Project would have no impact to federally protected wetlands as defined by Section 404 of the Clean Water Act. No impact would occur.

- d. *Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Project is located in a dense, developed urban area. The Project Site has long been fully paved and developed with self-storage buildings and surface parking. The only vegetation within the Project Site consists of two non-native, non-protected ornamental trees that are typical of urban landscaping with diameters less than 8 inches. Accordingly, the Project will not involve the dispersal of wildlife nor would the Project result in a barrier to migration or movement. The Project includes the removal of two non-native trees. Based on the condition of the trees, they are unlikely to provide suitable nesting habitat for birds. However, the Migratory Bird Treaty Act of 1918 (MBTA) implements the United States' commitment to four treaties with Canada, Japan, Mexico, and Russia for the protection of shared migratory bird resources. The MBTA governs the taking, killing, possession, transportation, and importation of migratory birds, their eggs, parts, and nests. The US Fish and Wildlife Service administers permits to take migratory birds in accordance with the MBTA. The West Adams – Baldwin Hills – Leimert Community Plan EIR provides Mitigation Measure BR1 that ensures compliance with the MBTA.⁴⁰ See **Table III-3 West Adams – Baldwin Hills – Leimert Community Plan EIR Applicable Mitigation Measures**. The Proposed Project would include this mitigation measure as a condition of approval to ensure compliance with the MBTA. As such, the Proposed Project would comply with all applicable regulations of the MBTA. Therefore, impacts to wildlife movement would be less than significant.

⁴⁰ City of Los Angeles Planning Department. West Adams-Baldwin Hills-Leimert New Community Plan EIR. Available at: <https://planning.lacity.org/eir/westadams/westAdamsCoverPg.html>, accessed August 20, 2021.

- e. *Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Five tree species are included in the City's Protected Tree Ordinance: Coast Live Oak (*Quercus agrifolia*), Valley Oak (*Quercus lobata*), Western Sycamore (*Platanus racemosa*), California Black Walnut (*Juglans californica*), and California Bay (*Umbellularia californica*).⁴¹ The arborist site evaluation, completed by RELM Studio, confirmed none of the two remaining trees on the Project Site are protected species (see Appendix D). The two existing trees are both Pine species with a trunk diameter of less than 8 inches. This species is neither native to California nor protected.⁴² The two trees would be replaced in accordance with the existing tree replacement requirements of the City's Division of Urban Forestry, and the Project will result in a net increase of 80 trees at the Project Site. Therefore, the Project does not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, and in this regard will have a less than significant impact.

- f. *Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site is not located in any local, regional, or State mapped conservation area nor is it part of any draft or adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan.⁴³ Therefore, no impact would occur.

⁴¹ Los Angeles Municipal Code. Section 46.01. Available at: https://codelibrary.amlegal.com/codes/los_angeles/latest/lamc/0-0-0-132254, accessed August 20, 2021.

5. Cultural Resources

- a. *Would the project cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

A Historic Resource Assessment Report (HRAR), dated March 2021, was prepared by ASM Affiliates (ASM) and is included in Appendix G of this SCEA.

Less than Significant Impact. Section 15064.5(b) of the *CEQA Guidelines* states that a project would have a significant impact on historic resources if it would result in a substantial adverse change in the significance of a historic resource. Section 15064.5(a) of the *CEQA Guidelines* defines a historic resource as: 1) listed in, or determined to be eligible for listing, in the California Register of Historical Resources (California Register); 2) included in a local register of historical resources; or 3) identified as significant in an historical resources survey. Any object, building, structure, site, area, place, record, or manuscript may be historically significant if the resource meets the criteria for listing on the California Register.⁴⁴ The California Register automatically includes all properties listed in or formally determined to be eligible for listing the National Register of Historic Places (NRHP).

National Register of Historic Places (NRHP)

To be eligible for listing in the NRHP, a property must be at least 50 years of age (unless it is of “exceptional importance”) and be significant in American history and culture, architecture, or archaeology. A property of potential significance must meet one or more of the following four established criteria:

- A. Associated with events that have made a significant contribution to American history;
- B. Associated with the historically significant persons;

⁴⁴ *CEQA Guidelines* Section, 15064.5(a)(3).

- C. Embody distinctive characteristics of a type, period, or method of construction/work of a master; possess high artistic values, or represent a significant and distinguishable entity; or
- D. Yield information important in prehistory or history.

To be eligible for listing in the NRHP, a property must possess significance and retain sufficient integrity to convey that significance. The NRHP publication *How to Apply the National Register Criteria for Evaluation*, National Register Bulletin 15, establishes how to evaluate the integrity of a property: “Integrity is the ability of a property to convey its significance” (National Park Service, NRHP 1998). The evaluation of integrity must be grounded in an understanding of a property’s physical features and how they relate to the concept of integrity. Determining which of these aspects are most important to a property requires knowing why, where, and when a property is significant. To retain historic integrity, a property must possess several, and usually most, aspects of integrity:

1. Location is the place where the historic property was constructed or the place where the historic event occurred.
2. Design is the combination of elements that create the form, plan, space, structure, and style of a property.
3. Setting is the physical environment of a historic property and refers to the character of the site and the relationship to surrounding features and open space. Setting often refers to the basic physical conditions under which a property was built and the functions it was intended to serve. These features can be either natural or manmade, including vegetation, paths, fences, and relationships between other features or open space.
4. Materials are the physical elements that were combined or deposited during a particular period or time, and in a particular pattern or configuration to form a historic property.
5. Workmanship is the physical evidence of crafts of a particular culture or people during any given period of history or prehistory and can be applied to the property as a whole, or to individual components.
6. Feeling is a property’s expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, when taken together, convey the property’s historic character.

7. Association is the direct link between the important historic event or person and a historic property.

California Register of Historical Resources

To be eligible for listing in the State Historical Resources Commission's California Register, a property generally must be at least 50 years of age and be significant at the local, state, or national level under one or more of the following four criteria:

1. Associated with events that have made a significant contribution to the broad patterns of local or the cultural heritage of California or the United States;
2. Associated with the lives of persons important to local, California, or national history;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of a master, or possesses high artistic values; or
4. Yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

City of Los Angeles Historic-Cultural Monuments (HCM)

According to the City of Los Angeles Cultural Heritage Ordinance Chapter 9, Division 22 (Cultural Heritage Ordinance) of the Los Angeles Administrative Code, HCM designation is reserved for those resources that have a special aesthetic, architectural, or engineering interest or value of a historic nature. Any site (including significant trees or other plant life located on a site), building or structure of historic or cultural significance to the City of Los Angeles, can be designated as long as it is a historic structure or site:

1. in which the broad cultural, economic, or social history of the nation, State, or community is reflected or exemplified; or
2. that is identified with historic personages or with important events in the main currents of national, State, or local history; or
3. that embodies the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period, style, or method of construction; or
4. that is a notable work of a master builder, designer, or architect whose individual genius influenced his or her age.

A proposed resource may be eligible for local designation as a HCM if it meets at least one of the criteria above.

Los Angeles Historic Preservation Overlay Zone

According to Section 12.20.3 of the Los Angeles Municipal Code a Historic Preservation Overlay Zone (HPOZ) is an area of the City of Los Angeles which is designated as containing structures, landscaping, natural features or sites having historic, architectural, cultural, or aesthetic significance. To receive such designation, areas must be adopted as an HPOZ by the City Planning Commission and the City Council through a zone change procedure that includes notification of all affected and nearby property owners and public hearings (ordinance enacted in 1979). HPOZ areas range in size from neighborhoods of approximately 50 parcels to more than 3,000 properties. While most districts are primarily residential, many have a mix of single-family and multi-family housing, and some include commercial and industrial properties. HPOZs are established and administered by the Los Angeles City Planning Department (in concert with the City Council). Individual buildings in an HPOZ need not be of landmark quality on their own: it is the collection of a cohesive, unique, and intact collection of historic resources that qualifies a neighborhood for HPOZ status. The HCM designation is intended only for individual sites, structures or buildings that meet the HCM criteria. As there are no defined criteria for an HPOZ, the criteria for City of Los Angeles HCMs apply (see preceding section).

City of Los Angeles Eligibility Criteria

Districts, sites, buildings, structures, and objects are assigned historical significance based on their exceptional value or quality illustrating or interpreting the heritage of Los Angeles, California, or the United States in history, architecture, archaeology, engineering, and culture. A number of criteria are used in demonstrating resource importance. Specifically, criteria outlined in the NRHP, California Register and HCM are similar and provide the guidance for making such a determination. The California Office of Historic Preservation (OHP) and the City's Office of Historic Resources (OHR) guidelines recommend that resources at least 45 years old be evaluated for historical significance to ensure consideration of resources that may turn 50 prior to the beginning of a project (five-year buffer).

SurveyLA Contexts and Themes

SurveyLA is a multi-year, citywide project during which more than 800,000 parcels in the City of Los Angeles have been surveyed. As part of this project, the Office of Historic

Resources developed a citywide historic context statement that includes a set of contexts and themes for the consistent evaluation of properties. A specific context was developed that provides detailed background and guidelines for the evaluation of industrial properties (City of Los Angeles 2011:118-125).

- Context: Industrial Development, 1850–1980
- Sub-Context: Manufacturing for the Masses, 1887–1980
- Theme: Factories, 1887–1980
- Summary Statement of Significance: Resources evaluated under this theme may be significant in the area of Industry. Some may also be significant in the area of Architecture. This property type is intended to relate to factories that were not part of one of the major industries addressed in the context but were nonetheless important to the economy of Los Angeles.

Property Type #1: Industrial – Manufacturing – Factory

- Property Type Description: In this context, the term “factory” refers to an industrial building or small group of industrial buildings organized around a manufacturing process. This property type can include a single workshop, a large plant, or a complex of related buildings.
- Property Type Significance: In general, intact factory buildings from the first half of the twentieth century represent a brief but dramatic transition of Los Angeles from an agricultural town into a top-ranking industrial powerhouse. Factories that are associated with well-known and/or demonstrably influential manufacturing companies from the era significantly represent the importance of manufacturing in the industrial, economic, and social history of Los Angeles.
- Geographic Location: Citywide. Generally, have industrial zoning and located along historic rail alignments.
- Area(s) of Significance: Industry; Architecture
- Criteria: NRHP: A/C; CRHR: 1/3; Local: 1/3
- Period of Significance: 1887–1980

- Known “Manufacturing for the Masses” Resources in the City of Los Angeles: Two known resources under this theme are located in the vicinity of 3401 S. La Cienega Boulevard and constructed in the same year.

Resource Name	Location	Comments
Sterling Casket Company; Peerless Garment	3626 W. Jefferson Boulevard; 3410 S. Victoria Ave.	Constructed 1946. Used by Sterling Casket Co., until 1960. May not meet integrity thresholds for the NRHP.
See’s Candies	3425 S. La Cienega Boulevard	Candy factory and local industrial headquarters of See’s Candies. In continuous operation here since 1946.

Property Type #2: Industrial Manufacturing – District

- **Property Type Description:** A distinct concentration of industrial buildings that, as a whole, represents an important pattern of industrial development in Los Angeles may be eligible as a historic district under this theme. Industrialists in the twentieth century planned industrial tracts within City-prescribed zoning and invested in infrastructure like spur tracks, roads, water, and power to attract manufacturers to lots. Once established, the tract or district produced a variety of goods for both export and the local/regional market.
- **Property Type Significance:** Historic manufacturing districts may be significant in the area of Industry if they exemplify the industrial landscape of Los Angeles during its rise as a manufacturing powerhouse in the early and mid-twentieth century. Many contributors exemplify the key elements of industrial design from the period of significance, including daylighting (or controlled conditions) and are good to excellent examples of architectural styles of the day.
- **Geographic Location:** Citywide. Generally, have industrial zoning and located along historic rail alignments.
- **Area(s) of Significance:** Industry; Architecture
- **Criteria:** NRHP: A/C; CRHR: 1/3; Local: 1/3
- **Period of Significance:** 1887–1980

History of the Project Area and Site

The Project falls within the West Adams-Baldwin Hills-Leimert Community Plan Area of the City of Los Angeles; the following area history is drawn in part from the West Adams Community Plan and EIR. The Project Site is located within the original land grant of the

Pueblo of Los Angeles, which was established as a civilian settlement at the behest of the Spanish royal governor of California on September 4, 1781. Mexico rebelled against Spain in 1810, and by 1821 Mexico, including California, achieved independence. The Mexican Republic began to grant private land to citizens to encourage immigration to California. Huge land grant ranchos took up large sections of land in California. It was during this period that four land grants were made which included the area now designated as the West Adams-Baldwin Hills-Leimert CPA: Rancho Rincon de Los Bueyes, Rancho Las Cienegas, Rancho La Ballona, and Rancho Cienega O’Paso de la Tijera.

The Secularization Act was passed in 1833, giving the vast mission lands to the Mexican governor and downgrading the missions’ status to that of parish churches. The Governor of California then redistributed the former mission lands, in the form of grants, to private owners. By 1841 the population of Los Angeles was 141. In 1842, the first discovery of gold in California was made at Placerita Canyon near Mission San Fernando resulting in Los Angeles’ first population boom. California attained statehood and the City of Los Angeles was incorporated in 1850.

However, it was not until the Southern California real estate boom of the 1880s that many of the ranchos were subdivided and sold. One of these subdivisions was Rancho Cienega O’Paso de la Tijera, acquired by E. J. “Lucky J” Baldwin in 1875. Baldwin maintained the land for agriculture and cattle grazing use up until his death (shortly after which oil was discovered on the land). Later subdivisions of this large holding created the Leimert Park and the Baldwin Hills Estates communities.

The following information related to the period of significance for the Project Site is excerpted from the 3401 South La Cienega HRAR:

In the mid-1940s, industrial development on the west side of the County was booming. The same year that the first buildings on the Project Site and several other industrial properties nearby were constructed (1946), developer Samuel Hayden, a transplanted glass manufacturer from the east, and architect S. Charles Lee established the Hayden Tract, in Culver City across Ballona Creek from the project area. The area specifically tagged for industrial use was actively promoted by the Chamber of Commerce. Hayden filed the Hayden Tract map on March 14, 1946.

Harry Culver’s dream for a balanced community included an economic base to support its residents. Main Street provided the initial retail properties, and the studios were the earliest industry. By 1922, the first manufacturing plant, Western Stove, was established on Hays Street (now National Boulevard), north of Ballona Creek, along the Pacific

Electric right of way. The early 1930s saw the addition of Helms Bakeries, which delivered door to door. To survive, Western Stove produced parts for the war effort.

By 1949, the 40-acre Hayden Tract was a more than 60-acre subdivision of “modern reinforced concrete buildings,” according to the *Hollywood Citizen News*, which proclaimed it as “one of the finest in the world.” It was designed to expand Culver City’s economic base. Business owners gave easements on their properties to the railroad for spur tracks, which enhanced the manufacturers’ freight car access to the Pacific Electric Railway.

Late Twentieth Century Decline in Los Angeles Industry

Los Angeles industry began a gradual decline in the late 1960s, due in part to the rising price of fuel and land, dispersal of manufacturers beyond city limits, and a trade deficit that reflected ever greater reliance on foreign imports in the consumer market. Oil discoveries in the Los Angeles Basin dwindled in the 1960s and 1970s, and production declines in oil and natural gas led utilities in the area to import more of the fuel to feed the energy-hungry metropolitan area. In 1973, a fuel shock resulting from an oil embargo by the Organization of Petroleum Exporting Countries (OPEC) caused intense inflation and helped to send the national economy into recession.

The completion of the interstate highway system in the 1960s and 1970s contributed to the rise of truck transport, which further decentralized industry in the city. Manufacturers no longer needed to be near established rail lines, opening up cheaper land beyond city limits for industrial development. Many manufacturers moved their plants eastward, following Interstate 10 (I-10) to settle in communities in the San Gabriel Valley and western San Bernardino County. The buildings they left behind in Los Angeles often shifted to warehouse use within a growing network of importing and distribution businesses.

Universal Match Company

After World War II, cigarette smoking became an icon of the good life as conceived by the American consumer culture, due in large part to aggressive marketing on the part of tobacco manufacturers (Brandt 2007:97). Free matchbooks emblazoned with advertising gave smokers what was needed to make cigarettes ubiquitous (Brandt 2007:30). A number of matchbook manufacturers thrived, among them the Universal Match Company (Co.), which started production in 1925 and operated several plants throughout the United States. Production at the Los Angeles plant appears to have been modeled on the main plant in St. Louis, Missouri, which had a machine to cut large rolls of heavy paper into

sheets during the process of producing matchbooks. It also had printing capabilities, including a letterpress machine (Hopkins-Benton 2013:15). The matchbooks printed in each of the Universal Match Co. facilities began in the design department in St. Louis, where the printing plates were also made. Plates were shipped daily to the plants, where the printing and compositing of the matchbooks took place (Hopkins-Benton 2013:16).

Despite their success, the matchbook business was not without challenges. In 1947, executives from various companies stood before the House Ways and Means Committee to air their displeasure with federal taxation. F. J. Prince, the representative of Universal Match Co. said he “bristled when he sees a mechanical cigarette lighter.” He facetiously claimed that if the tax on matchbooks was not slashed, cigar stores would have to stop giving them away. “Matches are the only thing that Americans still get for free,” he said ... “After all, a match is no different from the pilot on a stove. It provides a light. So why tax it? Wouldn’t be surprised if the lawmakers taxed pilot lights” (Othman 1947).

Individual Assessment

Light industrial properties originally constructed in the 1940s, approximately the same time as the oldest buildings on the Project Site, are located immediately to the south and west, and along the south side of West Jefferson Boulevard across South La Cienega Boulevard. A larger industrial area includes the Hayden Tract in Culver City across Ballona Creek to the west, along with concentrations of industrial areas between the creek and the Inglewood Oil Fields to the southeast. Separate extensive residential developments are adjacent to the industrial areas, consisting of two-story apartment buildings and single-story houses with detached garages constructed in the 1940s and 1950s. The parcel contains nine buildings, comprising 1,144 storage units. All of them are painted in the Public Storage corporate colors of cream walls with bright orange doors and accents. The parcel is completely paved. Two of the buildings, including the largest, were constructed in 1946; the other seven are typical single-story self-storage buildings constructed in 1977.

A HRAR, dated March 2021, was prepared by ASM Affiliates (ASM) in anticipation of the Proposed Project, which includes demolition of the existing self-storage facility and construction of new residential and commercial buildings.⁴⁵

The Project Site is not listed in the California Register, it is not a California Historical Point of Interest (CPHI), and it is not a California State Historic Landmark (CSHL). It has not been identified as a City of Los Angeles HCM, and it is not located in an HPOZ.

⁴⁵ Phase 1 Historic Resources Assessment Report for 3401 S. La Cienega Boulevard, ASM Affiliates Inc., March 2021.

Furthermore, it is not listed in the NRHP. The Project Site has not previously been recorded by SurveyLA. ASM carefully considered whether the industrial buildings are individually eligible under NRHP/California Register/ HCM Criteria A/1/1, B/2/2, C/3/3, or D/4/4, as defined in the Eligibility Criteria, and/or old enough to warrant evaluation. To do so, ASM evaluated the buildings within the appropriate historic contexts established by SurveyLA.

Two of the buildings (referred to as A and L in the HRAR) on the Project Site were constructed in 1946 as the initial development of the parcel. The remaining buildings were added later and do not meet the 45-year age requirement, thus only two of the buildings were evaluated as potentially historically significant properties.

Building A is the largest on the site. It is a two-story utilitarian brick building with a rectangular plan and a flat parapet obscuring a system of rounded bowstring-truss roofs with skylights. Fenestration is irregular. Windows are multi-light steel with operable hopper-type sections; sizes range from eight-by-five lights to four-by-three lights. Windows are slightly recessed and have no surrounds. At the south (primary) façade, several windows have been painted over, and portions are replaced with fixed panes. There are five flat metal single doors at the south façade, approached by concrete ramps or steps that run parallel to the side of the building. One of the doors is inset into a slightly recessed stucco section approximately the size of a vehicle entry.

Building L is a single-story flat-roofed brick building constructed at the same time as Building A. A row of bricks laid vertically outlines the flat parapet. At each façade, the brickwork shows some detail in rows of bricks laid endwise to form a kind of stringcourse above and below the windows. At the southeast corner, a set of concrete steps with a steel railing provides access to a glazed door with sidelights. A brick planter is located to the west of the door. Above the door is an awning composed of synthetic material designed to look like shingles. There are two windows at the south façade, one of which has the same type of awning as the door. The windows have security bars. The west façade has two four-by-five-light windows similar in size toward the north end of the façade. A flat door is sheltered by a small, flat cantilevered canopy. Three more windows toward the south end of the façade are non-original replacements inserted into the original openings; these three windows have security bars. The north façade has three identical three-by-five-light steel windows, each with a one-by-two-light operable awning-type central section.

The single-story 1977 storage buildings are arranged within the parcel to maximize the utilitarian function of the Project Site. Buildings G, H, J, and K are positioned parallel to each other toward the west side of the Project Site, with a relatively narrow access lane

between them. Buildings D and E face one another toward the east side of the property. With the exception of Building F, all of these buildings have two similar façades, with the storage units arranged back-to-back and access doors aligned along the façades. They all have flat or nearly flat roofs with a shallow metal fascia and sit on poured-concrete foundations. Walls are constructed of concrete masonry units. Except for a few utility doors, the evenly spaced doors are recessed corrugated metal roll-up style, wide enough to accommodate a single vehicle. The wall space between the roll-up doors is minimal.

Criteria A/1/1

To evaluate Building A and Building L under Criteria A/1/1, ASM carefully considered whether they are associated with events that have made a significant contribution to the broad patterns of our history. ASM evaluated the building under the SurveyLA Context: Industrial Development, 1850–1980, Sub-Context: Manufacturing for the Masses, 1887–1980, Theme: Factories, 1887–1980, Property Type #1: Industrial – Manufacturing – Factory, as described in the preceding section.

The buildings meet some of the registration requirements of the themes. The buildings were constructed during the period of significance of the theme (1887-1980), and their original use was in the area of industry and manufacturing. In this way they are associated with an era when Los Angeles underwent a dramatic transition from an agricultural town into a major industrial hub. They are, and were, located in an area zoned for industry, established at a time when such designations were occurring throughout Los Angeles. Typical of factories from that era, they were located adjacent to a rail line.

However, the buildings do not meet enough of the registration requirements of the themes. The property was a factory for Universal Match Co. whose products are associated with twentieth-century social history. However, Universal Match Co. was not a company that had a **significant impact** on twentieth-century social history. Universal Match Co. simply provided a product with widespread use. Universal Match was a manufacturing enterprise, but it was not a household name and was not a demonstrably influential manufacturing company. As such, it does not meet the registration requirement that the manufacturing company must have had a significant impact. The company was not closely associated with the early manufacture of **new technologies** in the late nineteenth and early twentieth centuries (matches were not a new technology) and research did not reveal that the company has any significant **ethnic/cultural associations**.

SurveyLA, as well as NRHP⁴⁶ and California Register guidelines, recommend comparing similar resources in making a recommendation of eligibility. SurveyLA identified known eligible resources that are similar to Buildings A and L and that meet the registration requirements and possess the character defining features and local, state, and/or national criteria. Buildings A and L appear to retain only some of the essential physical features from the period of significance, and they can be described as two related utilitarian buildings. However, the buildings do not possess branding or company logos on the exterior, they do not retain distinctive equipment or building elements that reflect a particular kind of manufacturing process, and they do not have programmatic elements on the façade that denote what was manufactured at the plant. In comparison to other eligible resources, Buildings A and L are not good representations of the themes under Criterion A/1. There are many better examples of the theme throughout the City of Los Angeles, including the Sterling Casket Company at 3626 West Jefferson Boulevard and See's Candies, which is a significant national company in continuous operation since its founding in Los Angeles. (For more examples, see City of Los Angeles 2011, *SurveyLA Los Angeles Citywide Historic Context Statement: Industrial Development, 1850-1980*; and City of Los Angeles 2015,⁴⁷ *SurveyLA Supplemental Historic Resources Survey Report: Industrial Properties in the West Adams – Baldwin Hills – Community Plan Area*.⁴⁸)

As such, Building A and Building L are recommended not individually eligible under NRHP/California Register/HCM Criteria A/1/1 for Manufacturing for the Masses.

Criteria B/2/2

To evaluate the buildings under Criteria B/2/2, ASM carefully considered whether they are associated with persons significant in our past. No important persons were found associated with the Project Site. Furthermore, SurveyLA does not include Criteria B/2/2 among the applicable criteria under these Industrial themes. As such, Building A and

⁴⁶ According to the NPS, Bulletin No. 15, "Properties listed in the National Register must possess significance when evaluated in the perspective of their historic context. Once the historic context is established and the property type is determined, it is not necessary to evaluate the property in question against other properties if: 1) It is the sole example of a property type that is important in illustrating the historic context or 2) It clearly possesses the defined characteristics required to strongly represent the context. If these two conditions do not apply, then the property will have to be evaluated against other examples of the property type to determine its eligibility" (NPS 1998: Part V).

⁴⁷ SurveyLA. Los Angeles Historic Resources Survey. Available at: https://planning.lacity.org/odocument/ad40500b-cf5a-436e-8c80-a81606544c01/IndustrialDevelopment_1850-1980.pdf, accessed August 20, 2021.

⁴⁸ SurveyLA. Industrial Zone Properties in the West Adams – Baldwin Hills – Leimert Community Plan Area. Available at: https://planning.lacity.org/odocument/70187c01-923b-44b6-a6d9-b5e1b915c4ce/SurveyLAWestAdamsBaldwinHillsLeimert_IndustrialReport_0.pdf, accessed August 20, 2021.

Building L are recommended not individually eligible under NRHP/California Register/HCM Criteria B/2/2.

Criteria C/3/3

To evaluate the buildings under Criteria C/3/3, ASM carefully considered whether they embody distinctive characteristics of a type, period, or method of construction, whether they represent the work of a master, and whether they possess high artistic values. Applying the SurveyLA eligibility standards for this context, the property is recommended not eligible under NRHP/CRHR/HCM Criteria C/3/3 because it is not exemplary of the character-defining features of the industrial style, as defined for factories in the SurveyLA industrial context.

Although constructed during the period of significance, it is unknown whether Buildings A and L retain most of the essential physical features from their year of construction as there is not sufficient documentary evidence to support such a conclusion. In fact, both buildings do appear to have experienced alterations over time from visual observations made during a survey. They do not possess any signs of branding or company logos on the building exterior, they do not possess distinctive equipment or building elements that reflect a particular kind of manufacturing process, they do not have programmatic elements on the façade that denote what was manufactured at the plant, and they were not designed in prevalent architectural styles of the period.

Although constructed during the period of significance as a manufacturing plant, they are common utilitarian buildings that do not embody the distinctive characteristics of the style, period, region, or method of construction as well as other local examples, nor are they associated with a significant architect or builder. In comparison to other buildings associated with these themes, there are numerous better representatives throughout Los Angeles, all of which display architectural styles or innovations in engineering more distinctive than the utilitarian style of the buildings on the Project Site. A few of these are the Columbia Mills facility at 2630 Lacy Street, which is a daylight factory; the Mid-Century-Moderne Merle Norman Cosmetics factory at 9100 S. Bellanca Avenue; and a rare example of a Quonset hut at 3410 S. Farmedale Avenue (for more examples, see City of Los Angeles 2011, *SurveyLA Los Angeles Citywide Historic Context Statement: Industrial Development, 1850-1980*,⁴⁹ and City of Los Angeles 2015, *SurveyLA Supplemental Historic Resources Survey Report: Industrial Properties in the West Adams*

⁴⁹ SurveyLA. Los Angeles Historic Resources Survey. Available at: https://planning.lacity.org/odocument/ad40500b-cf5a-436e-8c80-a81606544c01/IndustrialDevelopment_1850-1980.pdf, accessed August 20, 2021

– *Baldwin Hills – Community Plan Area*⁵⁰). As such, Building A and Building L are recommended not individually eligible under NRHP/California Register/HCM Criteria C/3/3.

Criteria D/4/4

The buildings are a common property type that do not have the potential to provide information about history or prehistory that is not available through historic research. As such, Buildings A and L are recommended not individually eligible under NRHP/California Register/HCM Criteria D/4/4.

Integrity

Buildings A and L have not been found to meet any of the criteria for eligibility. Therefore, an assessment of historic integrity is not necessary, as there is no historical association, period, or area of significance.

Buildings D, E, F, G, H, J, and K

Following California OHP guidelines for historic resource surveys, Buildings D, E, F, G, H, J, and K do not meet the age requirement of 45 years to be considered for eligibility.

Historic District Eligibility

ASM carefully considered whether the buildings within the Project Site are potentially eligible as contributors to a historic district. The property is not located within or near any currently designated historic districts. There are two known historic resources of a similar age within 0.25 mile of the Project Site. Those two resources are the adjacent See's Candies facility, constructed in 1946 at 3425 South La Cienega Boulevard, and an industrial warehouse at 5500 West Jefferson Boulevard, constructed in 1949. See's Candies is a self-contained food-processing plant, and the property on West Jefferson is noted for its Late Modern design by a known architect; neither of these properties have areas of significance in common with the Project Site to the extent that the three properties could be considered as a discontinuous historic district. In addition, the elevated Expo Metro E Line and the La Cienega/Jefferson Metro Station immediately north and the recent demolition and replacement of many properties in the vicinity with high-rise multiple-use properties have changed the area in response to the City's drive to create a transit hub. As a result, there is a lack of coherence in what might previously

⁵⁰ SurveyLA. Industrial Zone Properties in the West Adams – Baldwin Hills – Leimert Community Plan Area. Available at: https://planning.lacity.org/odocument/70187c01-923b-44b6-a6d9-b5e1b915c4ce/SurveyLAWestAdamsBaldwinHillsLeimert_IndustrialReport_0.pdf, accessed August 20, 2021.

have been a good representation of the rapid development of industrial uses at South La Cienega Boulevard and W. Jefferson Boulevard. For a district to be eligible it must be coherent, meaning it “possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development” (NPS 1998:5).

In consideration of whether the buildings on the Project Site could be eligible as a historic district in itself, only two of the nine buildings are more than 45 years old; the remaining seven are not of such exceptional historic significance to warrant consideration. Regarding eligibility requirements for a historic district under the theme of Manufacturing for the Masses, the property was constructed during the period of significance as a manufacturing plant, but it does not meet any of the other eligibility standards for the theme. Regarding character-defining features, there are two associated utilitarian buildings, but the property does not display the other character-defining features listed for a historic district under this theme. Of the essential aspects of integrity, it retains only integrity of Location. Therefore, the Project Site is not recommended eligible as a contributor to any historic district or potential historic district under the recommended evaluation NRHP/California Register/HCM Criteria A/1/1 and C/3/3, or under any other criteria.

Therefore, the Proposed Project involving demolition of these buildings would have a less than significant impact on historical resources.

b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less Than Significant Impact. Section 15064.5(c) of the *CEQA Guidelines* states if a lead agency determines an archaeological site is an historical resource as defined by the PRC, then the protection measures of CEQA shall apply. An Historic Resources Assessment Report (HRAR) was prepared in anticipation of the Proposed Project⁵¹ (see Appendix G of this SCEA). The pedestrian survey conducted as part of the HRAR, did

⁵¹ Phase 1 Historic Resources Assessment Report for 3401 S. La Cienega Boulevard, ASM Affiliates Inc., March 2021.

not identify any prehistoric or historic archaeological sites as there is no exposed ground surface on the Project Site. Several prehistoric sites had been documented in proximity to the Project Site. A search result for the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was received on January 8, 2021. The result was positive and suggested that the Gabrieleno/Tongva San Gabriel Band of Mission Indians be contacted. The NAHC also provided a list of six additional tribal entities (Gabrieleno Band of Mission Indians – Kizh Nation, Gabrielino/Tongva Nation, Gabrielino Tongva Indians of California Tribal Council, Gabrielino- Tongva Tribe, Santa Rosa Band of Cahuilla Indians, Soboba Band of Luiseno Indians) who may also have knowledge of cultural resources in the Project area. A letter of inquiry was sent to the Gabrieleno/Tongva San Gabriel Band of Mission Indians on January 11, 2021, but no response has been received to date. Copies of the correspondence are provided in Appendix G of this SCEA.

While unlikely, it is possible that unknown archaeological resources or human remains could exist at the Project Site and could be encountered during excavation for the two proposed subterranean parking levels. Therefore, the Project would be subject to Mitigation Measures CR5 through CR10 of the West Adams Community Plan EIR as conditions of approval, which would minimize impacts in the event archaeological resources are encountered during construction. These conditions outline the process for accidental discovery of buried resources. See **Table III-3, West Adams – Baldwin Hills -Leimert CPA EIR Applicable Mitigation Measures**. As a result, impacts related to archeological resources would be less than significant.

c. *Would the project disturb any human remains, including those interred outside of formal ceremonies?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Project Site is not part of a formal cemetery and is not known to have been used for disposal of historic or prehistoric human remains and human remains are not expected to be encountered during construction of the Proposed Project. There are no known human remains on the site. If remains are encountered, State Health and Safety Code Section 7050.5 requires the project to halt until the County Coroner has made the necessary findings as to the origin and disposition of the remains pursuant to Public Resources Code Section 5097.98. Compliance with these regulations, as well the West Adams Community Plan EIR Mitigation Measures CR5 through CR9, as

outlined above, as Conditions of Approval, would ensure the Proposed Project would not disturb human remains. Impacts would be less than significant.

6. Energy

- a. *Would the project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The following policies address energy efficiency:

U.S. Clean Power Plan

On October 23, 2015, the EPA issued the Clean Power Plan under Section 111(d) of the Clean Air Act. The Clean Power Plan is also known as the Carbon Pollution Emission Guidelines for Existing Stationary Sources: Electric Utility Generating Units rule. The goal of the Clean Power Plan is to reduce carbon dioxide (CO₂) emissions from existing power plants 32% from 2005 levels by 2030, with incremental interim goals for years 2022 through 2029. The Clean Power Plan set a CO₂ emission reduction target for each state and requires each state to develop a plan to achieve the target. At the same time EPA issued the Carbon Pollution Standards for New, Modified and Reconstructed Power Plants rule under Section 111(b) of the Clean Air Act, to limit CO₂ emissions from new, modified, or reconstructed electricity generating units by implementing Best System of Emissions Reduction (BSER) for each type of generating unit. California's Proposed Compliance Plan for the Federal Clean Power Plan was adopted by CARB on July 27, 2017.

Assembly Bill 32

As discussed in Section VIII: Greenhouse Gas Emissions, the State passed the Global Warming Solutions Act of 2006, commonly referred to as Assembly Bill (AB) 32, which set the GHG emissions reduction goal for the State of California into law. As defined under AB 32, GHGs include CO₂, CH₄, nitrous oxide (N₂O), sulfur hexafluoride (SF₆), perfluorocarbons (PFCs), hydrofluorocarbons (HFCs), and water vapor (H₂O). AB 32 requires CARB—the State agency charged with regulating Statewide air quality—to adopt rules and regulations that would achieve GHG emissions equivalent to Statewide levels

in 1990 by 2020 by reducing GHG emissions from significant sources via regulation, market mechanisms, and other actions.

SB 375, passed in 2008, links transportation and land use planning with global warming. It requires CARB to set regional targets for the purpose of reducing GHG emissions from passenger vehicles. Under this law if regions develop integrated land use, housing, and transportation plans that meet SB 375 targets, new projects in these regions can be relieved of certain review requirements under CEQA.

Senate Bill 2 (1X)

SB 2 (1X) was passed in April 2011 and became effective December 10, 2011, requires utilities to procure eligible renewable energy resources of 33% by 2020, including the following interim targets:

- Maintain at least an average of 20% renewables between 2011 and 2013.
- Achieve 25% renewables by 2016.
- Achieve 27% renewables by 2017.
- Achieve 29% renewables by 2018.
- Achieve 31% renewables by 2019.
- Achieve 33% renewables by 2020.

Senate Bill 350

SB 350, which was passed in September 2015 and became effective October 7, 2015, requires utilities to procure eligible renewable energy resources of 50% by 2030, including the following interim targets:

- Achieve 40% renewables by 2024.
- Achieve 45% renewables by 2027.
- Achieve 50% renewables by 2030 and maintain this level in all subsequent years.

SB 350 also requires a doubling of energy efficiency of buildings and conservation savings in electricity and natural gas end uses of retail energy by 2030. The law requires publicly owned utilities to establish annual targets for energy efficiency savings and demand reductions consistent with the Statewide goal. The Public Utilities Commission also must approve programs and investments by electrical corporations in transportation electrification, including electric vehicle charging infrastructure.

Petroleum Fuel

The Proposed Project would not create an increase in demand such that new energy sources or capacity enhancing alterations to existing facilities would be required. Energy saving and sustainable design would be incorporated throughout the Proposed Project. The Proposed Project would be designed to meet Cal Green and Title 24 Building Standards Code (CALGreen Code). The Proposed Project's infill location would promote the concentration of development in a developed location with extensive infrastructure. The Proposed Project's proximity to public transportation and services would aid in reducing vehicle miles traveled for residents and employees.

In order to promote sustainability, the Proposed Project would be aligned to sustainable development targets including:

Americas Residential Partnership's Responsible Property Investment Strategy & Roadmap to Net Zero Carbon for the multifamily building which would incorporate:

- Net Zero Carbon from 2020 for Scope 1 & 2 in construction, and Scope 1, 2 & 3 in operation⁵²
- LEED Gold minimum
- Operational performance rating, such as FitWel

The Commercial Building is targeting:

- Net Zero Carbon from 2025 for Scope 1 & 2
- Absolute Zero by 2040 for Scopes 1, 2 & 3
- LEED Gold minimum
- Operational performance rating, such as FitWel

Strategies that support these targets and that are proposed for the Proposed Project (PDF 1) include:

⁵² GHG emissions are categorized into three groups or scopes. Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers.⁵²

- Designing for energy and water efficiency as a priority
- Both buildings will be entirely electric buildings (no natural gas in either building)
- ENERGY STAR Appliances
- LED lighting
- Intend to purchase 100% green power from the LADWP grid
- VAV HVAC system in the commercial building with MERV 15 filter + recycles outdoor air
- 100 EV parking spaces
- Exploring on-site PV & battery storage
- Bike showers, lockers, and storage
- Rain water collection cistern for stormwater management and reuse of water in landscaping on site
- Use of permeable paving where feasible
- Use of drought tolerant plants for landscaping
- Undertaking a Life Cycle Assessment of embodied carbon in materials to engage supply chain in achieving lower carbon material substitutions
- Target construction waste diversion
- Use of low carbon concrete and rebar construction materials where feasible

The building will be sustainably designed to meet and/or exceed all City of Los Angeles current building code and Title 24 requirements. As such, the Project will incorporate eco-friendly building materials, systems, and features wherever feasible, including Energy Star appliances, water saving/low flow fixtures, non-VOC paints/adhesives, drought tolerant planting, and high-performance building envelopment.

Construction of the Proposed Project would result in short-term consumption of petroleum-based fuels to power construction vehicles and equipment. During construction, energy would be consumed in the form of petroleum-based fuels (i.e.,

gasoline and diesel) used to power off-road construction vehicles and equipment on the Project Site, however, the Applicant has committed to using electric powered equipment where feasible. In addition, The Proposed Project will be required to implement Mitigation Measure AQ1 from the West Adams – Baldwin Hills – Leimert Community Plan EIR. Mitigation Measure AQ1 (See **Table III-3 West Adams – Baldwin Hills -Leimert CPA EIR Applicable Mitigation Measures**) includes the following best management practices:

- Use properly tuned and maintained equipment.
- Contractors shall enforce the idling limit of five minutes as set forth in the California Code of Regulations.
- Use diesel-fueled construction equipment to be retrofitted with after treatment products (e.g., engine catalyts) to the extent they are readily available and feasible.
- Use heavy duty diesel-fueled equipment that uses low NOX diesel fuel to the extent it is readily available and feasible.
- Use construction equipment that uses low polluting fuels (i.e., compressed natural gas, liquid petroleum gas, and unleaded gasoline) to the extent available and feasible.
- Maintain construction equipment in good operating condition to minimize air pollutants.
- All off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technologies devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.
- Construction contractors shall use electricity from power poles rather than temporary gasoline or diesel power generators, as feasible.

In addition to reducing emissions, these best management practices will also reduce petroleum use during construction. Construction worker travel to and from the Project Site would also use petroleum, as well as delivery truck trips (although many delivery trucks

are natural gas or electric powered); and to operate generators to provide temporary power for lighting and electronic equipment.

This Project would be one of hundreds of projects occurring within the Los Angeles area during the next several years. There are no unusual features about project construction, such as size of the site, length of the construction schedule, size of the building, etc., that would cause this project to result in greater use of petroleum fuels than other similar projects. In fact, the Applicant has committed to several energy saving features that would reduce petroleum use (listed above). Therefore, Proposed Project construction would not be wasteful or inefficient regarding use of petroleum.

During operation, motor vehicle travel and building maintenance equipment would consume petroleum-based fuels. Fuel consumption of motor vehicles in California is regulated by the National Highway Traffic Safety Administration and EPA's Safer Affordable Fuel Efficiency (SAFE) Vehicles which sets standards regarding fuel efficiency. The Proposed Project is expected to draw a mix of residents with a variety of vehicle types that would likely be representative of the overall region. The inclusion of EV charging spaces, proximity to the transit station, transportation demand management (TDM) strategy, and inclusion of bike parking will encourage residents and employees to use fewer petroleum-based options. The Project Site is located adjacent to the La Cienega/Jefferson Metro station and existing bicycle path, which will encourage the use of transit and alternative modes of transportation to and from the Project Site and reduce vehicle miles traveled and associated fuel consumption.

To further reduce VMT and petroleum demand associated with the Proposed Project, the following TDM strategies are incorporated into the Proposed Project as Project Design Features:

- Education and Encouragement: Promotions and Marketing. This strategy involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices. This strategy includes passive educational and promotional materials, such as posters, info boards, or a website with information that a traveler could choose to read at their own leisure. For the purposes of the analysis, it is assumed that every employee would be eligible for passive marketing and promotional materials.
- Commute Trip Reductions: Ride Share Program. This strategy involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride-share vehicles, and a website or message board to connect riders and coordinate

rides in order to increase vehicle occupancy. For the purposes of the analysis, it is assumed that every employee would be eligible for the ride-share program.

- Bicycle Infrastructure: Include Bike Parking Per LAMC. This strategy involves the implementation of short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Projects providing short-term and long-term parking in accordance with LAMC Section 12.21A.16 qualify for this measure. The applicant has indicated that the Proposed Project will comply with the requirements of the Los Angeles Municipal Code.
- Bicycle Infrastructure: Include Secure Bike Parking and Showers. This strategy involves implementation of additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel by providing amenities at destinations. Projects providing long-term bicycle parking secured from the general public in accordance with LAMC Section 12.21A.16(d)(2) and showers in accordance with LAMC Section 91.6307 qualify for this measure. The applicant has indicated that the proposed project will comply with the requirements of the Los Angeles Municipal Code.
- Neighborhood Enhancement: Pedestrian Network Improvements. This strategy involves implementation of pedestrian network improvements throughout and around the project site that encourage people to walk. This includes internally linking all uses within the project site with pedestrian facilities such as pathways and walkways and connecting the project site to the surrounding pedestrian network. It also includes the elimination of barriers such as walls, landscaping, and slopes that impede pedestrian circulation. The proposed project includes pedestrian infrastructure to connect facilities within the site and the surrounding street system.

Due to the many energy efficient features, best management practices, and TDMs, the Proposed Project will not result in wasteful or inefficient use of petroleum. Impacts would be less than significant.

Natural Gas

The Proposed Project will construct and operate entirely electric buildings and would not increase demand for natural gas. As such, there would be no increase in natural gas usage as a result of the Project.

Electricity

The Proposed Project will be powered entirely through electric power (no natural gas). To ensure the Proposed Project does not place additional demand on the Los Angeles Department of Water and Power (LADWP) power grid, the Proposed Project includes several sustainable features aimed at increasing energy efficiency. These include use of ENERGY star appliances and obtaining electricity from the LADWP's green power grid (see **PDF-1**). The Proposed Project also includes the planting of more than 80 trees to aid in lowering the overall temperature on the Project Site and the area, thereby reducing the overall need for electrical demand during peak times.

During construction of the Proposed Project, electricity would be consumed to supply and convey water for dust control and to power electric construction equipment as well as temporary lighting. Electricity use would not be wasteful or inefficient.

During operation, the Proposed Project is anticipated to consume a net increase of approximately 6.31 Mega Watt-hour per year (MWh/year) compared to existing uses on the Project Site, see **Table IV-10, Project Electricity Demand**.

**Table IV-10
Project Electricity Demand**

Land Use	Size	Electrical Demand (MWh/year)
Apartments Mid Rise	260 du	1.03
General Office Building	227,543 sf	3.18
Regional Shopping Center	2,869 sf	0.03
Parking	785 spaces	1.83
Total		6.81

Source: **Appendix A**, Impact Sciences, 2021. See CalEEMod output files.

Notes: du = dwelling units; sf = square feet

LADWP maintains an electrical capacity of more than 8,009 MW with a peak capacity of 6,502 MW (reached on August 31, 2017)⁵³ The Proposed Project would represent a daily capacity of 0.01 MW which would be a minimal impact on the City's overall demand. With the addition of PDFs specifically aimed at reducing electrical demand (i.e., ENERGY star

⁵³ About LADWP https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-power/a-p-factandfigures?_adf.ctrl-state=1cmyz2x7t6_4&_afLoop=113600433738952

appliances, green power, and landscaping to cool the site), electrical demand would not be wasteful or inefficient.

Accordingly, with the incorporation of the above-referenced design features, the Project would not cause wasteful, inefficient, or unnecessary consumption of energy during construction or operation. Impacts would be less than significant.

b. *Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A significant impact may occur if a project were to conflict with a state or local plan for renewable energy or energy efficiency.

The 2017 Power Strategic Long-Term Resource Plan (SLTRP)⁵⁴ document serves as a comprehensive 20-year roadmap that guides the LADWP’s Power System in its efforts to supply reliable electricity in an environmentally responsible and cost-effective manner. The 2017 SLTRP expands its analysis on the 2016 Final Power Integrated Resource Plan (IRP) recommended case with updates in line with the latest regulatory framework, and updates to case scenario assumptions that include a 65% renewable portfolio standard by 2050.

Regulatory interpretations of primary regulations and State laws affecting the power system, including AB 32, SB 1368, SB 1, SB 2 (1X), SB 350, SB 32, US EPA Rule 316(b), and the US Clean Power Plan as described above, continue to evolve particularly with certification requirements of existing renewable projects and their applicability towards meeting in-state or out-of-state qualifications. The most recent SLTRP attempts to incorporate the latest interpretation of these major regulations and State laws.

The Proposed Project would be required to comply with energy conservation standards pursuant to Title 24 of the California Administrative Code and the L.A. Green Building Code. The L.A. Green Building Code requires the use of numerous conservation measures, beyond those required by Title 24. The L.A. Green Building Code contains both mandatory and voluntary green building measures to conserve energy. Therefore, compliance with Title 24 and the L.A. Green Building Code would reduce Project energy

⁵⁴ LADWP, 2017 Power Strategic Long-Term Resource Plan, December 2017.

consumption. Additionally, as discussed above, electric service is available and would be provided. Moreover, LADWP plans to increase renewable energy sources to meet the City's goals for a clean energy future. Specifically, the goals include supplying 55% of power retail sales from renewable energy resources by 2025, 80% by 2036, and 100% by 2045, as well as achieve a carbon neutral power system by 2050.⁵⁵ As described above, the Proposed Project would be designed and constructed to incorporate environmentally sustainable design features that would be equivalent to the Gold level under the LEED green building program that would reduce energy and water usage. Specifically, the Proposed Project would include energy efficient lighting fixtures, ENERGY Star rated appliances for residential dwelling units, low-flow water features, rain cisterns, and energy efficient mechanical heating and ventilation systems. All of these characteristics would serve to reduce consumption of energy, consistent with State and local regulations and goals. As such, the Proposed Project's energy usage would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency, and impacts would be less than significant.

7. Geology and Soils

In 2015, the California Supreme Court in *CBIA v. BAAQMD* held that CEQA generally does not require a lead agency to consider the impacts of the existing environment on the future residents or users of the project. Specifically, the decision held that an impact from the existing environment to the project, including future users and/or residents, is not an impact for purposes of CEQA. However, if the project physically exacerbates existing conditions that already exist, that impact must be assessed, including how it might affect future users and/or residents of the project. Thus, in accordance with Appendix G of the *State CEQA Guidelines* and the *CBIA v. BAAQMD* decision, the Project would have a significant impact related to geology and soils if it would result in any of the following impacts to future residents.

The analysis is based on the following reports and documentation:

Geotechnical Engineering Feasibility Report, 3401 South La Cienega Boulevard Los Angeles, California, conducted by Langan Engineering and Environmental Services, Inc. (Langan), April 2021 (see **Appendix E**).

- a. *Would the project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:*

⁵⁵ LADWP, Renewable Energy Program, https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-power/a-renewableenergy/a-p-re-renewableenergypolicy?_adf.ctrl-state=n5qya6spv_4&_afLooop=100538317667626

- i. *Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. The California Geological Survey (CGS) establishes regulatory zones around active faults, called Alquist-Priolo Earthquake Fault Zones (previously called Special Study Zones). These zones, which extend from 200 to 500 feet on each side of the known fault, identify areas where a potential surface fault rupture could prove hazardous for buildings used for human occupancy. Development projects located within an Alquist-Priolo Earthquake Fault Zone are required to prepare special geotechnical studies to characterize hazards from any potential surface ruptures. In addition, the City designates Fault Rupture Study Areas along the sides of active and potentially active faults to establish areas of potential hazard due to fault rupture.

Based on a review of the California Geologic Survey “Earthquake Zones of Required Investigation, Hollywood Quadrangle”, the Site is not located within a mapped Alquist-Priolo Earthquake Fault Zone as defined by the Alquist-Priolo Earthquake Fault Zoning (AP) Act. The nearest Fault Zone is the Beverly Hills Fault Zone located approximately 550 feet to the west of the Project Site.⁵⁶ Review of the CGS Earthquake Zones of Required Investigation, Hollywood Quadrangle as well as the online California Earthquake Hazards Zone Application does not indicate the presence of active surface faulting within or directly adjacent to the Site. Therefore, the potential for surface rupture is considered very low and impacts would be less than significant.

⁵⁶ California Department of Conservation. EQ Zapp: California Earthquake Hazards Zone Application. Available at: <https://www.conservation.ca.gov/cgs/geohazards/eq-zapp>, accessed August 20, 2021.

ii. Strong seismic ground shaking?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. The Project Site is located within seismically active Southern California and therefore could be subject to moderate and possibly strong ground motion due to earthquakes. The closest mapped active faults to the site are the Newport-Inglewood Fault, approximately 0.25 miles southwest of the site, Puente Hills (LA) Blind Thrust Fault, approximately 2.2 miles east of the site, Santa Monica Fault, approximately 3.4 miles northwest of the site, and San Vicente Fault, 2.9 miles north of the site. As with any new development in the State of California, building design and construction would be required to conform to the current seismic design provisions of the California Building Code (CBC) and the City of Los Angeles Uniform Building Code (UBC) seismic standards. Further, construction would also be required to adhere to the seismic design requirements of the Los Angeles Building Code, as well as the General Plan Safety Element, which ensure new buildings are designed to resist ground shaking through modern construction techniques.

The 2016 CBC incorporates the latest seismic design standards for structural loads and materials as well as provisions from the National Earthquake Hazards Reduction Program to minimize losses from an earthquake and provide for the latest in earthquake safety. Additionally, construction of the Project would be required to adhere to the seismic safety requirements contained in the LABC, as well as the applicable recommendations provided in the geotechnical investigations required by the City to minimize seismic-related hazards (see Appendix E- Geotechnical Report). The Project consists of a mixed-use development and does not include any characteristics that would result in the exacerbation of existing environmental conditions with regard to seismic ground shaking. Adherence to current building codes and engineering practices would ensure that the Project would not expose people, property, or infrastructure to seismically induced ground shaking hazards that are greater than the average risk associated with locations in the Southern California region and would minimize the potential to expose people or structures to substantial risk, loss, or injury. With compliance with existing regulatory requirements, Project impacts associated with seismic ground shaking would be less than significant.

iii. Seismic-related ground failure, including liquefaction?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. Liquefaction is a transformation of soil from a solid to a liquefied state during which saturated soil temporarily loses strength resulting from the buildup of excess pore water pressure, especially during earthquake-induced cyclic loading. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits. As noted in the Geotechnical Report, the Site is located within a state designated liquefaction hazard zone as shown on the “Earthquake Zones of Required Investigation Hollywood Quadrangle” by the CGS.

As the Project Site is located in an area designated as potentially liquefiable on the Seismic Hazard Zones maps of the Hollywood and Beverly Hills Quadrangle, a liquefaction analysis of the earth materials within the Project Site was performed as part the geotechnical investigation. A Limited Geotechnical Evaluation for Planning Submission was conducted on February 10, 2021, for the Project Site. The geotechnical subsurface analysis consisted of two soil borings (identified as LB-1 and LB-2). Subsurface conditions encountered up to 5 feet of fill in LB-1 and no fill in LB-2. Fill consisted of clay with varying amounts of sand and was underlain by alluvium. Alluvium consisted of dense to very dense sand with varying amounts of silt, clay, and gravel and were encountered to a depth of 38 and 8 feet in LB-1 and LB-2, respectively. Stiff to very stiff silt and clay with varying amounts of sand and shell fragments were encountered under the sand until the bottom of boring. Groundwater or seepage was not encountered in the borings. Based on available data provided by the State Water Resources Control Board, the groundwater level in the vicinity of the Site has been measured on the order of 75 to 80 feet below ground surface; however, the historic high groundwater depth was reported between 10 to 15 feet. Thus, a groundwater depth of 15 feet was used in the liquefaction analysis.

Liquefaction was evaluated for LB-1 and LB-2 in accordance with the guidelines titled ‘City of Los Angeles Information Bulletin for Liquefaction Analysis Guidelines’ effective 1 January 2020.⁵⁷ In accordance with the guidelines, two analyses were performed, the first with a two-thirds PGAM and the second with the full PGAM, where PGAM is the

⁵⁷ Los Angeles Department of Building and Safety. Liquefaction Analysis Guidelines. Available at: https://www.ladbs.org/docs/default-source/publications/information-bulletins/building-code/lb-p-bc-2020-151-liquefaction.pdf?sfvrsn=974bf753_6, accessed August 20, 2021.

Maximum Considered Earthquake geometric mean peak ground acceleration adjusted for site class effects. Based on the analysis, the soils encountered at the site are not prone to liquefaction at levels of shaking evaluated. Impacts are considered less than significant.

iv. Landslides?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. Based on review of the “Earthquake Zones of Required Investigation Hollywood Quadrangle” by the CGS, the Site is not located within an ‘Earthquake-Induced Landslide’ zone. Further, the Project Site is relatively level, with minimal rises or changes in elevation. In addition, the Project Site is not identified by ZIMAS as being located within a landslide hazard zone.⁵⁸ Therefore, the project will have no impact with respect to seismic induced landslides.

b. Would the project result in substantial soil erosion or the loss of topsoil?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. Erosion is the movement of rock and soil from place to place and is a natural process. Common agents of erosion in the vicinity of the project area include wind and flowing water. Significant erosion typically occurs on steep slopes where stormwater and high winds can carry topsoil down hillsides. Erosion can be increased greatly by earthmoving activities if erosion-control measures are not used.

The Project Site is in a highly urbanized area of the City and is relatively level, with minimal rises or changes in elevation. No major slopes or bluffs are on or adjacent to the Project Site.

Construction of the Proposed Project would involve soil disturbance activities including excavation and grading that would leave soil on the Project Site exposed. Common

⁵⁸ Los Angeles Department of City Planning. Zimas. Available at: <http://zimas.lacity.org/>, accessed August 20, 2021.

means of soil erosion include water, wind, and being tracked off-site by vehicles. These activities could result in soil erosion. However, the Proposed Project will be subject to local and state codes and requirements for erosion control and grading during construction. Including, but not limited to, grading permits and haul route approval from the LADBS, which include requirements and standards designed to limit potential impacts to acceptable levels. In addition, on-site grading and site preparation must comply with all applicable provisions of Chapter IX, Division 70 of the Los Angeles Municipal Code, which addresses grading, excavations, and fills. Further, the Proposed Project will be required to comply with standard regulations, including South Coast Air Quality Management District Rule 402, which will reduce construction erosion impacts. Rule 402 requires dust suppression techniques be implemented to prevent dust and soil erosion from creating a nuisance off-site.

Additionally, the Construction General Permit (CGP) (CGP Order 2009-0009-DWQ) issued by the State Water Resources Control Board (SWRCB), effective July 1, 2010, which the Project must comply with during construction, regulates construction activities to minimize water pollution, including sediment. The Proposed Project will be subject to National Pollution Discharge Elimination System permitting regulations, including the development and implementation of a Stormwater Pollution Prevention Plan (SWPPP). A site-specific SWPPP would be prepared prior to earthwork activities and would be implemented during Project construction. The SWPPP would include BMPs and erosion control measures to prevent pollution in storm water discharge. Typical BMPs that could be used during construction include good-housekeeping practices (e.g., street sweeping, proper waste disposal, vehicle and equipment maintenance, concrete washout area, materials storage, minimization of hazardous materials, proper handling and storage of hazardous materials, etc.) and erosion/sediment control measures (e.g., silt fences, fiber rolls, gravel bags, storm water inlet protection, and soil stabilization measures, etc.). Construction contractors will be required to prepare and implement a SWPPP and associated BMPs in compliance with the CGP, along with the City of Los Angeles' Best Management Practices Handbook, Part A Construction Activities during grading and construction. Adherence to the BMPs in the SWPPP would reduce, prevent, or minimize soil erosion from project-related grading and construction activities.

Additionally, all Project construction activities would comply with the City's grading permit regulations, which require the implementation of grading and dust control measures, including a wet weather erosion control plan if construction occurs during rainy season, as well as inspections to ensure that sedimentation and erosion is minimized.

Once operational, the Proposed Project would not be anticipated to result in substantial erosion or loss of topsoil. The Proposed Project would utilize permeable paving

throughout the Project Site's open space areas. A rainwater collection cistern would manage stormwater drainage, helping to ensure that the Project Site would not result in significant erosion or loss of topsoil. Drought tolerant plants would also be utilized for landscaped areas once the Proposed Project is operational.

Through compliance with existing regulations, soil erosion impacts from grading and construction activities associated with construction of the Proposed Project will not occur and soil erosion impacts will be less than significant.

- c. *Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. As discussed above, the Site is not located within an 'Earthquake-Induced Landslide' zone.

Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. The surficial blocks are transported downslope or in the direction of a free face, by earthquake and gravitational forces. The site is relatively flat and does not include a free-facing slope in proximity of the site. Therefore, the potential for lateral spreading is considered very low.

Subsidence occurs when large amounts of groundwater have been withdrawn from certain types of rocks, such as fine-grained sediments. In California, large areas of land subsidence were first documented by USGS scientists in the first half of the 20th century. Most of this subsidence was a result of excessive groundwater pumping. The Project Site is not within a subsidence area according to the U.S. Geological Survey.⁵⁹

As discussed previously, the Project Site is considered to be within a liquefaction zone (although, as noted above, further evaluation concluded the soils were not susceptible to liquefaction). In addition, the Project Applicant would be required by LADBS, as part of the permitting process, to prepare (or have prepared) a Final Geotechnical Investigation that would confirm the building standards and recommendations that shall be followed in

⁵⁹ U.S. Geological Survey. Areas of Land Subsidence in California. Available at: https://ca.water.usgs.gov/land_subsidence/california-subsidence-areas.html, acce3ssed September 23, 2021.

order to construct the proposed structure in accordance with building standards that apply to building within the types of soils found at the Project Site, including areas prone to geologic or soil instability. Through compliance with the LABC and recommendations included in the Final Geotechnical Report, impacts related to geologic and soil instability would be less than significant.

- d. *Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Expansive soils experience swelling or shrinking due to moisture change as a result of cyclic wet/dry weather cycles, irrigation, landscaping, or site grading. Swelling and shrinking soils can result in differential movement of structures, including floor slabs and foundations, and site work, including hardscape, utilities, and sidewalks. Soils that exhibit shrinkage and swelling under these conditions generally consist of plastic clay.

Based on review for the Geotechnical Report of available subsurface data and borings on-site, the soils at or near the approximate planned foundation level are anticipated to be predominantly granular and therefore the potential for expansive soils to be present is anticipated to be very low. Impacts are considered less than significant.

- e. *Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project area is currently served by City-owned wastewater treatment and disposal facilities and does not utilize a septic system. The Project would connect to the City's existing sewer system and would not require the use of septic tanks for alternative wastewater disposal systems. Thus, the Project would not result in any impacts related

to soils that are incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems. Therefore, no impacts related to this issue would occur as a result of the Project.

f. *Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. The Proposed Project would be located in an urbanized area on a Site that has been previously developed. In addition to surface level disturbance of the Project Site as part of the current uses, past uses (See **Section IV-5, Cultural Resources**) have included underground storage tanks which indicate a higher level of soil removal and disturbance. While there are no indications of paleontological resources, it is possible that unknown paleontological resources could exist at the Project Site and could be encountered during excavation for the two proposed subterranean parking levels. Therefore, the Project would implement West Adams – Baldwin Hills – Leimert Community Plan EIR Mitigation Measures as conditions of approval, which would minimize impacts in the event paleontological resources are encountered during construction. Mitigation Measures CR-5 through CR10 will be incorporated into the Project as conditions of approval (See **Table III-3, West Adams – Baldwin Hills – Leimert Community Plan EIR Applicable Mitigation Measures**) and would ensure that the Project’s impacts with respect to paleontological resources are less than significant.

8. Greenhouse Gas Emissions

The analysis provided below is primarily based on the Air Quality and Greenhouse Gas Technical Study prepared by Impact Sciences and included as **Appendix B** to this SCEA.

Setting

Global climate change refers to any significant change in climate measurements, such as temperature, precipitation, or wind, lasting for an extended period (i.e., decades or longer).⁶⁰ Climate change may result from:

⁶⁰ US EPA. 2013. Overview of Greenhouse Gases. Available online at: <https://www.epa.gov/ghgemissions/overview-greenhouse-gases>. Accessed on August 11, 2018.

- Natural factors, such as changes in the sun’s intensity or slow changes in the Earth’s orbit around the sun;
- Natural processes within the climate system (e.g., changes in ocean circulation, reduction in sunlight from the addition of GHG and other gases to the atmosphere from volcanic eruptions); and
- Human activities that change the atmosphere’s composition (e.g., through burning fossil fuels) and the land surface (e.g., deforestation, reforestation, urbanization, desertification).

In recent decades, changes in climate have caused impacts on natural and human systems on all continents and across the oceans. Impacts are due to observed climate change, irrespective of its cause, indicating the sensitivity of natural and human systems to changing climate.⁶¹ Continuing changes to the global climate system and ecosystems, and to California, are projected to include:

- Rapidly diminishing sea ice and mountain snowpack levels, thereby increasing sea levels and sea surface evaporation rates with a corresponding increase in tropospheric water vapor due to the atmosphere’s ability to hold more water vapor at higher temperatures;⁶²
- Rising average global sea levels primarily due to thermal expansion and the melting of glaciers, ice caps, and ice sheets;
- Changing weather patterns, including changes to precipitation, ocean salinity, and wind patterns, and more energetic aspects of extreme weather, including droughts, heavy precipitation, heat waves, extreme cold, and the intensity of tropical cyclones;
- Changing levels in snowpack, river flow and sea levels indicating that climate change is already affecting California’s water resources,⁶³

⁶¹ Intergovernmental Panel on Climate Change. 2013. “Climate Change 2013: The Physical Science Basis.” Available online at: <http://www.climatechange2013.org/>. Accessed August 13, 2018.

⁶² Ibid.

⁶³ California Environmental Protection Agency (Cal EPA). 2010. Climate Action Team Report to Governor Schwarzenegger and the Legislature.

- Dry seasons that start earlier and end later, evoking more frequent and intense wildland fires,⁶⁴ and
- Increasing demand for electricity due to rising temperatures.⁶⁵

The natural process through which heat is retained in the troposphere⁶⁶ is called the “greenhouse effect.” Various gases in the Earth’s atmosphere, classified as atmospheric greenhouse gases (GHGs), play a critical role in determining the Earth’s surface temperature. Solar radiation enters Earth’s atmosphere as short-wave radiation. It travels through the atmosphere without warming it and is absorbed by the Earth’s surface. When the Earth re-emits this radiation back toward space, the radiation changes to long wave radiation. GHGs are transparent to incoming short wave solar radiation but absorb outgoing long wave radiation. As a result, radiation that otherwise would escape back into space is now retained, warming the atmosphere. This phenomenon is known as the greenhouse effect.

Greenhouse Gas Compounds

California law defines GHGs to include the following six compounds:

- **Carbon Dioxide** (CO₂) is released to the atmosphere when solid waste, fossil fuels (oil, natural gas, and coal), and wood and wood products are burned. CO₂ emissions from motor vehicles occur during operation of vehicles and operation of air conditioning systems.
- **Methane** (CH₄) is emitted during the production and transport of coal, natural gas, and oil. Methane emissions also result from the decomposition of organic waste in solid waste landfills, raising livestock, natural gas and petroleum systems, stationary and mobile combustion, and wastewater treatment.
- **Nitrous Oxide** (N₂O) is emitted during agricultural and industrial activities, as well as during combustion of solid waste and fossil fuels. N₂O emissions from motor vehicles generally occur directly from operation of vehicles.

⁶⁴ Ibid.

⁶⁵ California Environmental Protection Agency (Cal EPA). 2010. Climate Action Team Report to Governor Schwarzenegger and the Legislature.

⁶⁶ The troposphere is the bottom layer of the atmosphere, which varies in height from the Earth’s surface from 6- to 7-miles).

- **Hydrofluorocarbons** (HFCs) are one of several high global warming potential (GWP) gases that are not naturally occurring and are generated from industrial processes. HFC (refrigerant) emissions from vehicle air conditioning systems occur due to leakage, losses during recharging, or release from scrapping vehicles at end of their useful life.
- **Perfluorocarbons** (PFCs) are another high GWP gas that are not naturally occurring and are generated in a variety of industrial processes. Emissions of PFCs are generally negligible from motor vehicles.
- **Sulfur Hexafluoride** (SF₆) is another high GWP gas that is not naturally occurring and is generated in a variety of industrial processes. Emissions of SF₆ are generally negligible from motor vehicles.

Regulatory Framework

Federal

Paris Climate Agreement

The Paris Climate Agreement (Agreement) is an international treaty on climate change adopted on December 12, 2015. The goal of the agreement is to limit global warming to 1.5 degrees Celsius as compared to pre-industrial levels. Countries will aim to reach global peaking of GHG emissions as soon as possible to achieve a climate neutral world by mid-century. In order to achieve these reductions, the Paris Climate Agreement works on a 5-year cycle of increasingly ambitious climate action carried out by countries. Therefore, by 2020, countries were required to submit their plans for climate action, known as nationally determined contributions. Additionally, the Agreement provides a framework for financial, technical and capacity building support to those countries who need it. Developed counties will take a lead in providing financial assistance to other countries since large scale investments are required for GHG mitigation and climate adaptation.⁶⁷

The United States joined 190 other countries in the Paris Climate Agreement under the Obama administration in September 2016.⁶⁸ The United States announced an intention to withdraw from the Agreement in June 2017, and formally notified the United Nations in

⁶⁷ United Nations. *The Paris Agreement*. Available online at <https://unfccc.int/process-and-meetings/the-paris-agreement/the-paris-agreement>.

⁶⁸ The White House. *President Obama: The United States Formally Entered the Paris Agreement*. Available online at: <https://obamawhitehouse.archives.gov/blog/2016/09/03/president-obama-united-states-formally-enters-paris-agreement>.

November 2019. The United States officially withdrew from the Agreement in November 2020.⁶⁹ However, January 20, 2021, The United States rejoined the Agreement.⁷⁰

State

Executive Order (EO) S-03-05. On June 1, 2005, EO S-03-05 was issued by Governor Schwarzenegger in order to set statewide emissions reduction standards. The order required the state to reduce GHG emissions to 1990 levels by 2020 and reduce GHG emissions to 80% below 1990 levels by 2050. EO S-3-05 also calls for the Secretary of California Environmental Protection Agency (Cal/EPA) to be responsible for coordination of state agencies and progress reporting.

Assembly Bill (AB) 32

AB 32 (California Global Warming Solutions Act of 2006) which was codified into law in 2006 established the 2020 GHG emissions targets set by EO S-03-05. AB 32 represents the first enforceable statewide program to limit GHG emissions from all major sectors with penalties for noncompliance.

Senate Bill (SB) 32

SB 32 was signed into law in 2015 and sets into law the mandated reduction targets set in EO B-30-15, which required a reduction in GHG emissions to 40% below the 1990 levels by 2030.

CARB's 2017 Final Scoping Plan

The CARB, in collaboration with over twenty state agencies issued a Final Scoping Plan in 2017 in order to set a framework for the state to meet the overall reduction goals set in SB 32. The 2017 Scoping Plan identified key sectors of the implementation strategy, which includes improvements in low carbon energy, industry, transportation sustainability, natural and working lands, waste management, and water. Through a combination of data synthesis and modeling, CARB determined that the target statewide 2030 emissions limit is 260 MMTCO_{2e}, and that further commitments will need to be made to achieve an additional reduction of 50 million metric tons of carbon dioxide (MMTCO_{2e}) beyond current policies and programs. Key elements of the 2017 Final Scoping Plan include a

⁶⁹ NPR. *U.S. Officially Leaving Paris Climate Agreement*. Available online at: <https://www.npr.org/2020/11/03/930312701/u-s-officially-leaving-paris-climate-agreement>.

⁷⁰ The White House. 2021. *Paris Climate Agreement*. Available online at: <https://www.whitehouse.gov/briefing-room/statements-releases/2021/01/20/paris-climate-agreement/>.

proposed 20% reduction in GHG emissions from refineries and an expansion of the Cap-and-Trade program to meet the aggressive 2030 GHG emissions goal.

Regional

SCAG 2020-2045 Connect SoCal Plan RTP/SCS

On September 3, 2020, the SCAG Regional Council unanimously voted to approve and fully adopt Connect SoCal (2020-2045 RTP/SCS).

Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. It charts a path toward a more mobile, sustainable, and prosperous region by making connections between transportation networks, between planning strategies and between the people whose collaboration can improve the quality of life for Southern Californians. In addition, Connect SoCal is supported by a combination of transportation and land use strategies that outline how the region can achieve California's greenhouse gas emission reduction goals and federal CAA requirements. The plan also strives to achieve broader regional objectives, such as the preservation of natural lands, improvement of public health, increased roadway safety, support for the region's vital goods movement industries and more efficient use of resources.

Local

City of Los Angeles General Plan Air Quality Element

The Air Quality Element of the City of Los Angeles General Plan (City Air Quality Element), adopted on November 24, 1992, sets forth the goals, objectives and policies that guide the City in the implementation of its air quality improvement programs and strategies. The Air Quality Element acknowledges that numerous efforts are underway at the regional, county and City levels addressing clean air concerns and that coordination of these various efforts, and the involvement of the area's residents are crucial to the attainment of the federal and state AAQS. The Air Quality Element acknowledges the interrelationships among transportation and land use planning in meeting the City's mobility and clean air goals. Mutually reinforcing strategies need to be developed which work to reduce the use of single occupant vehicles and which work to reduce vehicle trips and vehicle miles traveled (VMT). The Air Quality Element established six goals:

- Good air quality in an environment of continued population growth and healthy economic structure;
- Less reliance on single-occupant vehicles with fewer commute and non-work trips;
- Efficient management of transportation facilities and system infrastructure using cost-effective system management and innovative demand-management techniques;
- Minimize impacts of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation and air quality;
- Energy efficiency through land use and transportation planning, the use of renewable resources and less-polluting fuels and the implementation of conservation measures including passive measures such as site orientation and tree planting; and
- Citizen awareness of the linkages between personal behavior and air pollution and participation in efforts to reduce air pollution.

L.A.'s Green New Deal (Sustainable City pLAN 2019)

In April 2019, Mayor Eric Garcetti released L.A.'s Green New Deal (Sustainable City pLAN 2019). Rather than an adopted plan, the Green New Deal is a mayoral initiative that consists of a program of actions designed to create sustainability-based performance targets through 2050 that advance economic, environmental, and equity objectives. L.A.'s Green New Deal (Sustainable City pLAN 2019) is the first four-year update to the City's first Sustainable City pLAN that was released in 2015. It augments, expands, and elaborates in even more detail L.A.'s vision for a sustainable future and it addresses climate change with accelerated targets and new aggressive goals. While not a plan adopted solely to reduce GHG emissions, climate mitigation is one of eight explicit benefits within L.A.'s Green New Deal that help define its strategies and goals.

These include reducing GHG emissions through near-term outcomes:

- Reduce potable water use per capita by 22.5% by 2025 and 25% by 2035.
- Reduce building energy use per square feet for all building types 22% by 2025; 34% by 2035; and 44% by 2050.

- All new buildings will be net zero carbon by 2030 and 100% of buildings will be by 2050.
- Ensure 57% of new housing units are built within 1,500 feet of transit by 2025; 75% by 2035.
- Increase the percentage of all trips made by walking, biking, micro-mobility/matched rides or transit to at least 35% by 2025, 50% by 2035, and maintain at least 50% by 2050.
- Reduce VMT per capita by at least 13% by 2025; 39% by 2035; and 45% by 2050.
- Increase the percentage of electric and zero emission vehicles in the city to 25% by 2025; 80% by 2035; and 100% by 2050.
- Increase landfill diversion rate to 90% by 2025; 95% by 2035 and 100% by 2050.
- Reduce municipal solid waste generation per capita by at least 15% by 2030, and phase out single-use plastics by 2028.
- Reduce urban/rural temperature differential by at least 1.7 degrees by 2025; and 3 degrees by 2035.
- Ensure proportion of Angelenos living within 0.5 miles of a park or open space is at least 65% by 2025; 75% by 2035; and 100% by 2050.

West Adams, Baldwin Hills, Leimert Community Plan

The West Adams – Baldwin – Leimert Community Plan was updated in 2016 and includes the Crenshaw District and the neighborhoods of Leimert Park, Hyde Park, Jefferson Park, Mid-City, West Adams, and Arlington Heights. The Plan EIR was issued in September 2012 which included a series of mitigation measures for new projects within the Plan Area Mitigation Measures GHG-1 from the West Adams – Baldwin – Leimert Community Plan EIR which requires developers to implement applicable GHG reduction measures in project design and comply with regulatory targets will be incorporated into the Proposed Project. See **Table III-3 West Adams – Baldwin Hills -Leimert CPA EIR Applicable Mitigation Measures.**

- a. *Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*
- b. *Would the project conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Proposed Project would have a significant impact with respect to GHG emissions and global climate change if it would substantially conflict with the provisions of Section 15064.4(b) of the *State CEQA Guidelines* which provides the lead agency with discretion to determine whether to quantify GHG emissions or rely on a qualitative analysis or performance-based standard.

Pursuant to Appendix G of the *CEQA Guidelines*, a significant GHG impact is identified if the Proposed Project could conflict with applicable GHG reduction plans, policies, or regulations.

For this Project, quantification of GHG emissions is provided for informational purposes. Significance, under CEQA, is based on the project’s consistency with statewide and regional policies and plans to meet the state reduction goals set in SB 32, specifically CARB’s 2017 Scoping Plan, SCAG’s 2020 Connect SoCal RTP/SCS, the City of Los Angeles General Plan, and the City of Los Angeles Green New Deal.

The Proposed Project will generate carbon dioxide, which is the primary component of GHGs. Thus, the project will contribute to global warming as described by the Intergovernmental Panel on Climate Change. GHG emissions are categorized into three groups or scopes. Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers.⁷¹ The quantification of GHG emissions presented below accounts for Scope 1 and Scope 2 emissions. Scope 3 emissions are

⁷¹ Carbon Trust. *Briefing: What are Scope 3 Emissions?* Available online at: <https://www.carbontrust.com/resources/briefing-what-are-scope-3-emissions#:~:text=Scope%201%20covers%20direct%20emissions,in%20a%20company's%20value%20chain.,> accessed May 26, 2021.

not under the control of the Proposed Project and are not required to be disclosed under the EPA’s GHG Corporate Protocol.⁷²

In total, the Project will generate 3,049 metric tons of CO₂ during construction⁷³ and 9,465 metric tons per year for operations, as explained in the **Air Quality and Greenhouse Gas Technical Report, Appendix B**.

Consistency with the Final 2017 Scoping Plan Update

CARB issued the Final 2017 Scoping Plan Update in November 2017 and establishes emissions reduction strategies necessary to meet SB 32’s 2030 reduction goals. **Table IV-11, Proposed Project Consistency with CARB Applicable 2017 Scoping Plan Greenhouse Gas Emission Reduction Strategies**, identifies the Scoping Plan policies that are applicable to the Proposed Project. As shown, the Proposed Project would be consistent with the Scoping Plan.

**Table IV-11
Proposed Project Consistency with CARB 2017 Scoping Plan
Greenhouse Gas Emission Reduction Strategies**

Strategy	Project Consistency
Implement SB 350 by 2030:	
<ul style="list-style-type: none"> Increase the Renewables Portfolio Standard to 50% of retail sales by 2030 and grid reliability 	<p>Consistent. The measure is not related to development projects but intended for energy providers. Nevertheless, the Proposed Project intends to purchase 100% green power from the Los Angeles Department of Water and Power (LADWP) grid.</p>
<ul style="list-style-type: none"> Establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030. 	<p>Consistent. This measure is directed towards policymakers, not development projects. Nevertheless, the Proposed Project is required to meet CALGreen Building Standards by including measures designed to reduce energy consumption. The Proposed Project will also include LED lighting, achieve LEED Gold, and incorporate ENERGY STAR appliances to reduce energy consumption.</p>
<ul style="list-style-type: none"> Reduce GHG emissions in the electricity sector through the implementation of the above 	<p>Consistent. The Proposed Project is required to adhere to the latest CALGreen Building Standards</p>

⁷² U.S. Environmental Protection Agency. 2021. *Scope 3 Inventory Guide*. Available online at: <https://www.epa.gov/climateleadership/scope-3-inventory-guidance>.

⁷³ Construction emissions amortized over thirty years is approximately 101.6 MT CO₂e/year.

Strategy	Project Consistency
measures and other actions as modeled in the IRPs to meet GHG emissions reductions planning targets in the IRP process. Load-serving entities and publicly-owned utilities meet GHG emissions planning targets through a combination of measures as described in IRPs.	and Title 24, which will result in a more efficient project site. In addition, the Proposed Project includes design measures to reduce electricity use, including LED lighting, ENERGY STAR appliances, and purchasing green power 100% green power from the LADWP grid.
<p>Implement Mobile Source Strategy (Cleaner Technology and Fuels):</p> <ul style="list-style-type: none"> Further reduce VMT through continued implementation of SB 375 and regional Sustainable Communities Strategies; forthcoming statewide implementation of SB 743; and potential additional VMT reduction strategies not specified in the Mobile Source Strategy but included in the document "Potential VMT Reduction Strategies for Discussion." 	<p>Consistent. This measure is directed towards policymakers, not development projects. Nevertheless, the Proposed Project is located adjacent to the La Cienega/Jefferson Metro station. As a result, the Proposed Project will reduce VMT by locating residents and job opportunities near a major transit line (See Transportation).</p>
By 2019, develop pricing policies to support low-GHG transportation (e.g., low-emission vehicle zones for heavy duty, road use, parking pricing, transit discounts).	<p>Consistent. This measure is directed towards policymakers, not development projects. However, the Proposed Project will provide housing and job opportunities near the Jefferson/La Cienega Metro station that will encourage transit use.</p>
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the SLCP and SB 1383.	<p>Consistent. This measure is directed towards CARB, CalRecycle, California Department of Food and Agriculture, State Water Regional Control Board, and local air districts. Nevertheless since the Proposed Project will be operational after this year, the Proposed Project's waste collection service will be required to be compliant with AB 341 which outlines the statewide waste reduction goals.</p>
Identify and expand funding and financing mechanisms to support GHG reductions across all sectors.	<p>Consistent. The Proposed Project will be required to adhere to the latest CALGreen Building Standards and Title 24. In addition, the Proposed Project includes a series of design measures that will reduce GHG emissions across multiple sectors. Specifically, to reduce GHG emissions from the energy sector, the Proposed Project will install LED lighting, ENERGY STAR appliances, design the building to be completely electric, and will purchase 100% of green power from the LADWP grid. Further, to reduce emissions from the transportation sector, the Proposed Project will include 100 electric vehicle (EV) parking spaces, bicycle parking and storage, and is located next to a major transit station. Finally, in order to reduce</p>

Strategy	Project Consistency
	GHG emissions associated with water use, the Proposed Project will be designed with drought tolerant plants and will include a rainwater collection cistern that will be used to water on-site landscaping.

CARB. California's 2017 Climate Change Scoping Plan. Available online at:

https://ww3.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf, accessed February 5, 2021.

Based on this evaluation, this analysis finds the Proposed Project would be consistent with all feasible and applicable strategies recommended in the 2017 Scoping Plan Update.

Consistency with Connect SoCal

At the regional level, the Connect SoCal RTP/SCS represents the region's Climate Action Plan that defines strategies for reducing GHGs. To assess the Proposed Project's potential to conflict with the RTP/SCS, this section analyzes the Proposed Project's land use profile for consistency with those in the RTP/SCS. Generally, proposed projects are considered consistent with the provisions and general policies of applicable City and regional land use plans and regulations, such as SCAG's RTP/SCS, if they are compatible with the general intent of the plans and would not preclude the attainment of their primary goals.⁷⁴

Table IV-12, Proposed Project Consistency with Connect SoCal, demonstrates the Proposed Project's consistency with the strategies set forth in the Connect SoCal Plan. The Proposed Project would also be consistent with the applicable strategies set forth in Connect SoCal's "A Path to Greater Access, Mobility, & Sustainability" chapter. Therefore, the Proposed Project would be consistent with the GHG reduction actions and strategies contained in Connect SoCal.

⁷⁴ Southern California Association of Governments. 2020. *Connect SoCal*. Available online at: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial-plan_0.pdf?1606001176.

**Table IV-12
Proposed Project Consistency with Connect SoCal**

Actions and Strategies	Consistency Analysis
<i>Focus Growth Near Destinations & Mobility Options</i>	
Emphasize land use patterns that facilitate multimodal access to work, educational and other destinations	Consistent: The Proposed Project would construct 260 residential units and office space approximately 100 feet from the Jefferson/La Cienega Metro station. Furthermore, the Project area is served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekend only) which have frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project will include on-site secure bicycle parking that will promote active transportation.
Focus on job/housing balance to reduce commute times and distances and expand job opportunities near transit and along center-focused main streets	Consistent: The Proposed Project would construct commercial and residential space that will provide job and housing opportunities approximately 100 feet from the Jefferson/La Cienega Metro station. Furthermore, the Project area is served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekend only) which have frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods.
Plan for growth near transit investments and support implementation of first/last mile strategies	Consistent: The Proposed Project would construct commercial and residential space that will provide job and housing opportunities approximately 100 feet from the Jefferson/La Cienega Metro station. Furthermore, the Project area is served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekend only) which have frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods.
Promote the redevelopment of underperforming retail developments and other outmoded nonresidential uses	Consistent: The Proposed Project would redevelop an existing Public Storage facility near an existing Metro Expo Line station to construct a mixed-use development that will facilitate transit use from residents and employees living or working on the site.

Actions and Strategies	Consistency Analysis
Prioritize infill and redevelopment of underutilized land to accommodate new growth, increase amenities and connectivity in existing neighborhoods	Consistent: The Proposed Project will redevelop an existing Public Storage facility in the City with a mixed-use development with residential units, job opportunities located near major transit and as well as other residential and commercial areas.
Encourage design and transportation options that reduce the reliance on and number of solo car trips (this could include mixed uses or locating and orienting close to existing destinations)	Consistent: The Proposed Project would construct 260 residential units and office space approximately 100 feet from the Metro Expo line Jefferson/La Cienega station. The Proposed Project will include on-site secure bicycle parking, showers, and storage that will promote active transportation.
Promote Diverse Housing Crisis	
Preserve and rehabilitate affordable housing and prevent displacement	Consistent: The Proposed Project will redevelop an existing Public Storage facility and would not displace any affordable housing units. Instead, the Proposed Project will construct housing on the Proposed Project Site, including 22 affordable residential units.
Identify opportunities for new workforce and affordable housing development	Consistent: The Proposed Project is a mixed-use development with 260 residential uses including 22 affordable residential units, 7 workforce housing units, and will provide job opportunities through the proposed commercial space.
Leverage Technology Innovations	
Promote low emission technologies such as neighborhood electric vehicles, shared rides hailing, car sharing, bike sharing and scooters by providing supportive and safe infrastructure such as dedications lanes, charging and parking/drop-off space	Consistent: This strategy is aimed at local government to promote shared bikes and scooters, electric vehicles, ride sharing and provide safe infrastructure such dedicated lanes, charging and parking/ drop-off space. The Proposed Project would not interfere with such policymaking. Additionally, the Proposed Project will promote the advancement of low emission technologies across the community by providing EV parking spaces. Furthermore, the Project will include 222 bicycle parking spaces and will provide a linkage to the existing bike path on the northern border of the Project Site.
Identify ways to incorporate "micro-power grids" in communities, for example solar energy, hydrogen fuel cell power storage and power generation	Not Applicable: This strategy is aimed at local government to identify ways to incorporate "micro-power grids." The Proposed Project would not interfere with such policymaking.
Promote a Green Region	
Promote more resource efficient development focused on conservation, recycling and reclamation	Consistent. The Proposed Project will be required to adhere to the latest CALGreen Building Codes and Title 24, which will result in a more efficient

Actions and Strategies	Consistency Analysis
	proposed project site. Moreover, the Proposed Project site lies within 100 feet of a major transit station that will promote public transit and reduce vehicle trips to the site. The Proposed Project will focus on water and energy efficiency in design by constructing the site with a drought tolerant landscape, rainwater collection cistern, LED lighting, and ENERGY STAR appliances. Additionally, the Proposed Project will be 100% electric with the intention to purchase 100% of green power from LADWP's grid.
Preserve, enhance and restore regional wildlife connectivity	Not Applicable: The Proposed Project will be constructed in an existing urban setting. The Proposed Project would not interfere with this goal.
Reduce consumption of resource areas, including agricultural land	Consistent. The Proposed Project will be constructed in an existing urban setting and, as a result, will not consume any resource areas or agricultural land.
Identify ways to improve access to public park space	Consistent. While this strategy calls on local governments to improve access to public park space, and the Proposed Project would not interfere with this goal. In fact, the Proposed Project site lies approximately 600 feet east of the Syd Kronenthal Park and is adjacent to the open space component of the Samitaur Office Building located at 5850 W. Jefferson Blvd. Therefore, residents and employees of the proposed will have access to open space and public parks.

 SCAG. 2019. Connect SoCal – The 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy, Chapter 3: A Path to Greater Access, Mobility, & Sustainability. Available online at: https://www.connectsocial.org/Documents/Draft/dConnectSoCal-03_Draft-Plan.pdf, accessed October 19, 2020.

Consistency with City of Los Angeles General Plan Air Quality Element

The Proposed Project would be consistent with the City's General Plan, specifically its Air Quality Element (see **Section 4.3**). While the Element did not explicitly address control of GHG emissions, global climate change, or resiliency objectives, it did identify several goals to reduce criteria pollutant emissions that would also work to reduce GHG

emissions that contribute to climate change, see **Table IV-13, Consistency with the Air Quality Element.**

**Table IV-13
Project Consistency with the Air Quality Element**

Goal	Consistency Analysis
Good air quality and mobility in an environment of continued population growth and health economy.	<p>Consistent: The Proposed Project would construct 260 residential units and commercial space approximately 100 feet from the Jefferson/La Cienega Metro station. Furthermore, the Project area is served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekend only) which have frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project will include on-site secure 222 bicycle parking spaces that will promote active transportation.</p> <p>Therefore, by placing housing and commercial space near transit and providing opportunities for alternative mobility options, the Proposed Project will help improve air quality and mobility by reducing the number of gas/diesel-fueled vehicles on the road.</p>
Less reliance on single-occupant vehicles with fewer commute and non-work trips.	<p>Consistent: The Proposed Project would construct 260 residential units and commercial space approximately 100 feet from the Jefferson/La Cienega Metro station. Furthermore, the Project area is served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekend only) which have frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project will include on-site secure bicycle parking (222 spaces) that will promote active transportation.</p> <p>Therefore, by placing housing and commercial space near transit and providing opportunities for alternative mobility options, the Proposed Project will help reduce reliance on single-occupant vehicles with fewer commute and non-work trips.</p>

Goal	Consistency Analysis
Efficient management of transportation facilities and system infrastructure using cost-effective system management and innovative demand management techniques.	Consistent: The Proposed Project would minimize congestion impacts in the region because of the Project Site's proximity to public transit.
Minimal impact of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation, and air quality.	Consistent. The Proposed Project would replace an existing Public Storage facility with an infill project with residential and commercial uses near a major public transportation line. The Proposed Project is consistent with the Element's focus on growing near transit facilities.
Energy efficiency through land use and transportation planning, the use of renewable resources and less polluting fuels, and the implementation of conservation measures including passive methods such as site orientation and free parking.	Consistent. The Proposed Project would replace an existing Public Storage facility with an infill project with residential and commercial uses near public transit. The Proposed Project will use resources (electricity, petroleum) efficiently (as described above). Furthermore, the Proposed Project will be required to be consistent with CalGreen and Title 24 standards. The Proposed Project will construct completely electric buildings, include long-term and short-term bicycle parking, and construct 100 EV parking spaces which will further reduce reliance on polluting fuels.

City of Los Angeles. Air Quality Element. Available online at: https://planning.lacity.org/odocument/0ff9a9b0-0adf-49b4-8e07-0c16feea70bc/Air_Quality_Element.pdf.

Consistency with City of Los Angeles Green New Deal

In 2019, the City of Los Angeles released the Green New Deal as an update to the City's 2015 Sustainable City pLAN. The City's Green New Deal is an expanded vision of the pLAN and aims to guide the City's transition to a more sustainable future. The Green New Deal sets forth a series of accelerated targets that will reduce GHG emissions. Many of these targets are not applicable at the project level; however, the Proposed Project will still further the overall goal where applicable, as explained in **Table IV-14, Consistency with the City's Green New Deal**.

**Table IV-14
Project Consistency with the City’s Green New Deal**

Targets	Consistency Analysis
Supply 55% renewable energy by 2025; 80% by 2036; and 100% by 2045.	Consistent. This measure is directed at energy providers to increase the amount of renewable energy created. The Proposed Project will not interfere with this target. Nevertheless, the Proposed Project will implement a series of design features that will reduce energy demand including ENERGY STAR appliances and LED lighting. The Proposed Project will also purchase green power from the LADWP grid which will promote this target.
Source 70% of our water locally by 2035, and capture 150,000 acre feet per year of stormwater by 2035.	Consistent. This target is directed at water suppliers to increase the amount of local water provided. To support this target, the Proposed Project will include a rainwater collection cistern for stormwater management and for reuse in landscaping onsite. Therefore, the Proposed Project will promote local water use in its landscaping as well as stormwater capture.
Reduce building energy use per square foot for all types of buildings by 22% by 2035; 34% by 2035; and 44% by 2050.	Consistent: The Proposed Project would replace an existing Public Storage facility with an infill project with residential and commercial uses. The Proposed Project will be required to adhere to the latest CalGreen Building Standards and Title 24 requirements that will result in a more efficient building per square foot than the existing uses on the site. Moreover, the Proposed Project will implement a series of design features that will reduce energy demand including ENERGY STAR appliances and LED lighting.
Reduce Vehicle Miles Traveled per capita by at least 13% by 2025, 39% by 2035, and 45% by 2050.	Consistent. The Proposed Project would construct 260 residential units and commercial space approximately 100 feet from the Jefferson/La Cienega Metro station. Furthermore, the Project area is served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekend only) which have frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project will include on-site secure bicycle parking (222 spaces) that will promote active transportation. As a result, the Proposed Project will encourage active and public forms of transportation for residents, visitors, and employees which will reduce VMT.
Ensure 57% of new housing units are built within 1,500 feet of transit by 2035; and 75% by 2035.	Consistent. The Proposed Project will construct 260 new residential units approximately 100 feet from the Jefferson/La Cienega Metro station. Furthermore, the

Targets	Consistency Analysis
	Project area is served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekend only) which have frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods.

https://plan.lamayor.org/sites/default/files/pLAn_2019_final.pdf.

Conclusion

The Proposed Project is an infill urban development in close proximity to transit which places residences, amenities, and jobs within walking distance (100 feet) of the Jefferson/La Cienega Metro Expo station. The Proposed Project would provide bicycle parking on-site to promote pedestrians and bicycle travel. In addition, the Proposed Project will implement PDF-1 which requires installation of ENERGY STAR appliances, LED lighting, a rainwater collection cistern, and EV parking. In addition, the Proposed Project intends to purchase green power from the LADWP grid and landscape the site with drought tolerant plants.

As a result, the Proposed Project is consistent with CARB's 2017 Scoping Plan, SCAG's Connect SoCal 2020 RTP/SCS, the City of Los Angeles General Plan Air Quality Element, and the City of Los Angeles Green New Deal. Furthermore, the Proposed Project will be constructed consistent with CALGreen Building Code and Title 24 which ensure efficient use of energy. For these reasons, the Proposed Project would not conflict with an applicable plan, policy, or regulations adopted for the purpose of reducing the emissions of GHG. Impacts would be less than significant.

9. Hazards And Hazardous Materials

- a. *Would the project create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. The types of hazardous materials that would be used during construction of the Project would be typical of those hazardous materials necessary for

construction of a mixed-use building (e.g., paints, solvents, fuel for construction equipment, building materials, etc.). Although construction of the Project would require the temporary transport, use, and disposal of hazardous waste, construction activities associated with the Project would be required to comply with all applicable federal, state, and local regulations governing such activities.

The Proposed Project includes demolition and removal of the nine existing buildings and surface parking lot from the Project Site and construction one commercial and one residential building with two subterranean levels of parking. The types of hazardous materials that would be found on the Project Site during the operation of the Project would be typically associated with commercial and residential land uses – paints, cleaning supplies, and small amounts of petroleum products. The Project would not require the routine transport, use, or disposal of hazardous materials that would create a significant hazard to the public or the environment. To the extent there would be any such transport, use, or disposal of small amounts of hazardous materials, compliance with existing local, State, and federal regulations would ensure the transport, storage, and use of these materials would not pose a significant hazard to the public or the environment. As described in the Phase I and Phase II ESA for the Proposed Project, past uses have included hazardous materials. However, there are no regulatory records of the site to indicate significant releases or contamination.⁷⁵ See question (b) for further discussion of the handling of hazardous materials. Therefore, the Project’s impacts related to this issue would be less than significant.

b. Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?)

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation Incorporated. Phase I and Phase II Environmental Site Assessments (ESA) were conducted for the site. At the time of the reconnaissance, the Site was occupied by nine buildings utilized by Public Storage for commercial self-storage. Onsite operations include the rental of storage units with an onsite residence for the property manager. Site improvements include the nine buildings,

⁷⁵ California Department of Toxic Substances Control. Envirostor. Available at: <https://www.envirostor.dtsc.ca.gov/public/>

asphalt paved drive aisles and parking, refuse enclosures, and fire hydrants. Three Recognized Environmental Conditions (RECs) were identified in the report and are described below. A REC is defined as:

“The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”⁷⁶

Underground Storage Tank. Based on a review of historical permits, a 15,000-gallon Underground Storage Tank (UST) was installed at the Site, likely in 1947 during the initial Site development, and was located immediately west of the northwest corner of the main on-site building. The documented content of the UST was paraffin wax, which was used in the manufacturing of matches by the Universal Match Company. Paraffin wax is a flammable, soft, colorless semi-solid waxy substance consisting of a mixture of saturated hydrocarbons. Based on available information, the UST was used until the mid to late 1970s (approximately 30 years) and it is unclear whether it was removed. The UST does not appear to have been used to store contents other than paraffin wax.

The Site was listed on the RCRA NonGen/NLR, UST, HAZNET, HWTS and ECHO regulatory databases, under the 3401 South La Cienega Boulevard address. The historical address of 5721 West Jefferson Boulevard was not listed on any databases. The UST listing, identified only by the address, reports the status as Historical but does not provide any additional information. As previously discussed, reviewed documents indicate that a 15,000-gallon paraffin wax UST was installed to the west of the main building in 1947. Public Storage (also listed as Public Storage 69191) was listed on the RCRA NonGen/NLR, HAZNET, HWTS and ECHO databases. These listings suggest that the facility is designated as a handler of hazardous waste but did not generate hazardous waste.

Results for soil samples evaluating the UST conclude that shallow soil (0.5 feet) at soil sampling location B-1 through 5 have concentrations of arsenic that exceed residential SLs and/or typical background levels for California soils. Under a residential redevelopment scenario, these soils will need to be permanently removed from the Site. Based upon the results of soil sampling at the former UST, TPH is not considered a chemical of potential concern (COPC). However, it was not possible to collect soil

⁷⁶ American Society for Testing Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E1527-13)

samples directly at the former location of the UST because it underlies the northern end of current Building G.

Railroad Spur. Based on reviewed records, including aerial photographs, topographic maps, and the historical diagram from circa 1950, a railroad spur existed on-Site to the immediate north of the main building. This railroad spur stemmed from the main line of the Southern Pacific Railroad that existed north of the Site. In approximately 2010, the right-of way for the railroad was converted into the present-day Metro Expo Line which is situated on platform raised approximately 15-20 feet above street level. Railroad spurs are known sources of shallow soil contamination from a variety Chemicals of Potential Concern (COPCs), including metals, total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), pesticides, and polychlorinated biphenyls (PCBs). It is unknown whether the railroad spur materials, such as the steel lines, ballast and underlying structural base, were fully removed from the Site during Site redevelopment.

For the evaluation of the railroad spurs, shallow soil (0.5 feet) at soil sampling locations R-1 and R-2 have concentrations of arsenic, and lead that exceed residential Screening Levels (SLs) and/or typical background levels for California soils. Under a residential redevelopment scenario, these soils will need to be permanently removed from the Site.

Former Match Manufacturing. Prior to Public Storage, the Site was primarily used as a match manufacturing operation by Universal Match Company from the initial development in 1947 to the mid/late 1970s. In addition to the paraffin wax stored in the UST, other hazardous materials used and maintained on Site included phosphorus, glue, water-soluble dyes, sulfur, and inert materials such as sand, glass and clay. According to permits reviewed and research on historical match making processes, wooden sticks are often soaked in phosphate, which serves as a fire retardant; while the inert materials (sand, glass, and clay) are used on the tips of matches to increase the friction and control the burning rate. Materials such as sulfur were used to sustain combustion and water-soluble dyes were often added to give the match head a color such as red or blue. No specific information regarding the size and quantities, or the handling and disposal, of chemicals or hazardous material was found during the historical research.

Although the possibility of the former on-Site use of solvents could pose a potential vapor intrusion risk to future occupants, the former match manufacturing activities are not believed to have been solvent intensive. In addition, it is noted that proposed development plans for the Site include excavation to depths between 15 and 30 feet below surface in the area of the main building to accommodate parking and footings for future structures.

Based on the Proposed Project's plans to develop the site, the following mitigation measures would be required to reduce impacts to below a significant level.

Mitigation Measures

HAZ-1 In accordance with the recommendations of the Phase II ESA, prior to Project construction, the Applicant shall develop a plan to ensure proper excavation and permanent removal of soils that exceed screening criteria for lead and arsenic. The Applicant shall prepare a Soil Management Plan (SMP) to address the following:

- Provide clear soil management procedures and protocols to be used at the Site during excavation and construction earthwork activities in the area of the suspected former UST after the overlying structure is fully demolished and other areas where COPCs may be present.
- Provide procedures and protocols for UST abandonment with the City of Los Angeles Fire Department, if necessary.
- Provide worker safety guidelines and soil management/handling protocols in the event that potentially contaminated soil is disturbed; and
- Provide contingency procedures to address previously unexpected environmental conditions, if encountered.
- Provide soil sampling and screening criteria for reuse of potentially impacted soils encountered during excavation and/or grading activities, including recommended laboratory analyses, stockpile management, and off-Site profiling and disposal options.

The Proposed Project would be required to comply with all local, State, and federal regulations concerning the release of hazardous materials. Furthermore, **Mitigation Measures HAZ-1** would reduce potential impacts due to the release of hazardous materials into the environment to less than significant. Therefore, with the incorporation of these mitigation measures, there would be no significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

- c. *Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation. The closest schools are the Echo Horizon Elementary School and Baldwin Hills Elementary School, which are more than 1,200 feet and 2,200 feet away, respectively. Echo Horizon Elementary School is within one-quarter mile from the Project Site, but Baldwin Hills Elementary School is not. However, the Project's operation would not produce hazardous emissions or handle hazardous materials, substance, or waste; Furthermore, construction activities that include handling hazardous waste would comply with **Mitigation Measure HAZ-1** and be reduced to a less than significant level. Therefore, the Proposed Project would have a less than significant impact associated with the emission of hazardous materials near an existing or proposed school.

- d. *Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation Incorporated. The Project Site is not located on the State of California Hazardous Waste and Substances Sites List of sites published by California Environmental Protection Agency (CAL/EPA).⁷⁷ The Project Site is used as a public storage site, which is not a land use associated with hazardous materials. Searches conducted using the California State Water Resources Control Board Geotracker and the Department of Toxic Substances Control EnviroStor did not reveal any open cases for potentially hazardous sites within 1,000 feet of the Project Site.⁷⁸

⁷⁷ Roux Associates, Inc. 2020. Phase II Subsurface Investigation Report: 3401 South La Cienega Boulevard.

⁷⁸ California State Water Resources Control Board. GeoTracker. Available at: <https://geotracker.waterboards.ca.gov/map/?CMD=runreport&myaddress=3401+la+cienea>

However, the Phase I ESA noted the Project Site was listed on the RCRA NonGen/NLR, UST, HAZNET, HWTS and ECHO regulatory databases, under the 3401 South La Cienega Boulevard address. The historical address of 5721 West Jefferson Boulevard was not listed on any databases. The UST listing, identified only by the address, reports the status as Historical but does not provide any additional information. As previously discussed, reviewed documents indicate that a 15,000-gallon paraffin wax UST was installed to the west of the main building in 1947. Public Storage (also listed as Public Storage 69191) was listed on the RCRA NonGen/NLR, HAZNET, HWTS and ECHO databases. These listings suggest that the facility is designated as a handler of hazardous waste but does not generate hazardous waste.

Compliance with **Mitigation Measure HAZ-1** would ensure any potential previous hazardous materials on the site are evaluated and mitigated. Therefore, the Project would not create a significant hazard to the public or environment since it is not located on a hazardous materials site compiled pursuant to Government Code Section 65962.5 and would not otherwise create such a significant hazard. With the incorporation of **Mitigation Measures HAZ-1**, impacts would be less than significant.

- e. *For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. A significant impact may occur if a project is located within two miles of a public airport, and subject to a safety hazard or within the vicinity of a private airstrip. Santa Monica Airport, the public airport nearest to the Project Site, is approximately 4 miles west of the Project Site. The Project Site not located within an airport land use plan. Therefore, no impact would occur.

f. *Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. Neither the construction nor operation of the Proposed Project would require or result in modifications to any of the roadways that would impact emergency traffic. Construction of the Proposed Project could temporarily interfere with local and on-site emergency response. However, construction traffic would conform to all traffic work plan and access standards to allow adequate emergency access. Implementation of a Construction Management Plan, and compliance with access standards would reduce the potential for the impacts on haul routes, emergency response and access during construction of the Proposed Project. The majority of construction activities for the Proposed Project would be confined to the site, except for infrastructure improvements, which may require some work in adjacent street rights-of-way. However, this work would be short-term and temporary, and would occur during off-peak periods. Access to the Project Site and surrounding area during construction of the Project would be maintained in accordance with standard construction management plans that would be implemented to ensure adequate circulation and emergency access. Furthermore, prior to the issuance of a building permit, the Project Applicant would be required by the Los Angeles Fire Department (LAFD) and the Department of Building and Safety to develop an emergency response plan for the Project in consultation with the LAFD. The emergency response plan shall include but not be limited to the following: mapping of emergency exits, evacuation routes for vehicles and pedestrians, location of nearest hospitals, and fire departments. Preparation and implementation of the Project-specific emergency response plan as required by the City would ensure that Project impacts related to emergency response would be less than significant.

g. *Would the project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site is in an urbanized area that does not contain any wildlands or urbanized areas intermixed with wildlands. The Project Site is not located within a designated Very High Fire Hazard Severity Zone or Fire Brush Clearance Zone.⁷⁹

In addition, the Project Site is surrounded by urban development and not adjacent to any wildlands. Therefore, the Proposed Project would not expose people or structures to a significant risk of loss, injury or death involving wild land fires, and the Project would have no associated impacts.

10. Hydrology And Water Quality

- a. *Would the project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. As part of Section 402 of the Clean Water Act, the United States Environmental Protection Agency (EPA) has established regulations under the National Pollution Discharge Elimination System (NPDES) program to control direct storm water discharges. In California, the SWRCB administers the NPDES permitting program and is responsible for developing NPDES permitting requirements. The NPDES program regulates industrial pollutant discharges, which include construction activities. The SWRCB works in coordination with the RWQCB to preserve, protect, enhance, and restore water quality.

A project would violate the state's water quality standards, and therefore have a significant impact on surface water quality, if discharges associated with a project would create pollution, contamination, or nuisance as defined in Section 13050 of the California Water Code (CWC) or that cause regulatory standards to be violated, as defined in the applicable NPDES stormwater permit or Water Quality Control Plan for the receiving water body. For the purpose of this specific issue, a significant impact may occur if a project would discharge water, which does not meet the quality standards of agencies which regulate surface water quality and water discharge, into stormwater drainage systems. Significant impacts would also occur if a project does not comply with all applicable regulations regarding surface water quality as governed by the SWRCB. These

⁷⁹ City of Los Angeles, Department of Public Works, Bureau of Engineering, NavigateLA. Available at: <https://navigate.lacity.org/navigate/>, accessed February 22, 2021.

regulations include compliance with the Standard Urban Storm Water Mitigation Plan (SUSMP) requirements to reduce potential water quality impacts. The Proposed Project would be required to follow all applicable regulations.

Further, as required under the NPDES, the Proposed Project would be responsible for the preparation of a Storm Water Pollution Prevention Plan (SWPPP) and implementation of best management practices to mitigate the effects of erosion and the inherent potential for sedimentation and other pollutants entering the stormwater system. Implementation of SWPPP and compliance with the NPDES and City discharge requirements would ensure that the construction of the Proposed Project would not violate any water quality standards and discharge requirements, or otherwise substantially degrade water quality.

During the operation, the Proposed Project would be required to comply with the City of Los Angeles's Low Impact Development (LID) Ordinance (No. 181,899) that was adopted by the Los Angeles Board of Public Works on July 1, 2011, and by the Los Angeles City Council on September 27, 2011; it became effective on May 12, 2012.

The LID Ordinance applies to all development and redevelopment in the City of Los Angeles that requires a building permit. The Ordinance requires the preparation of a LID Plan and a SUSMP if necessary. The LID Ordinance requires projects to capture and treat the first 3/4-inch of rainfall in accordance with established stormwater treatment priorities. Full compliance with the LID Plan, SUSMP, and implementation of design-related best management practices would ensure that the operation of the Proposed Project would not violate any water quality standards and discharge requirements or otherwise substantially degrade water quality. The Proposed Project does not include any point-source discharge (discharge of polluted water from a single point such as a sewage-outflow pipe). Therefore, the Project would result in a less than significant impact to water quality and waste discharge during its construction and operation, and no further analysis is required.

b. Would the project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. The Los Angeles Department of Water and Power (LADWP) is the water purveyor for the City. Water is supplied to the City from the Metropolitan Water District (MWD) (49%) snowmelt from the Eastern Sierra Nevada Mountains via the Los Angeles Aqueduct (38%), local groundwater (11%), and recycled water (2%).⁸⁰ Based on the City's most current Urban Water Management Plan, in 2011-2014 the LADWP has an average a water demand of 566,990 acre-feet per year. Groundwater levels in the City are maintained through an active process via spreading grounds and recharge basins found primarily in the San Fernando Valley.⁸¹

The Project Site is in an urbanized area of the City and is currently completely developed with impervious surfaces. During a storm event stormwater runoff flows to the adjacent roadways where it is directed into the City's storm drain system. As such, the Project Site is not a source of groundwater recharge. Following redevelopment of the Project Site, groundwater recharge would remain negligible, similar to existing conditions. Based on the Geotechnical Study conducted for the Project Site, the historic high groundwater depth was reported between 10 to 15 feet.⁸² The depth of excavation for the Project's two subterranean levels would exceed this depth. Therefore, temporary dewatering may be required during construction. However, the amount of groundwater infiltration likely to occur would be minimal given the small area and depth to the proposed excavation.

In addition, all potential dewatering operations would be conducted in compliance with all applicable regulations and requirements, including with all relevant NPDES requirements related to construction and discharges from dewatering operations. Due to the operation of dewatering systems being temporary, local groundwater hydrology in the immediate vicinity of the Project Site would be minimally affected.

Throughout Project operations, all water consumption associated with the Project would be supplied by LADWP and not from groundwater beneath the Project Site. Therefore, the Proposed Project's potential impacts relating to dewatering would be less than significant. To further reduce any impacts to groundwater during Project operations, the Project, as part of its sustainability concept, would include elements such as stormwater filtration, hardscape materials such as pavers that allow for filtration, and a rainwater

⁸⁰ Los Angeles Department of Water and Power. Facts and Figures – Water Supply Sources (5-year average) – Fiscal Year 2015-2019. Available at: https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-factandfigures?_adf.ctrl-state=t6q7wu6ee_4&_afLoop=1023653675697584

⁸¹ Los Angeles Department of Water and Power. Urban Water Management Plan. 2020. Available at: https://wuedata.water.ca.gov/public/uwmp_attachments/9314518570/1.%20LADWP%202020%20UWMP.pdf, accessed September 23, 2021.

⁸² Langan Engineering and Environmental Services, Inc (Langan). October 2020. Geotechnical Engineering Due Diligence Report, 3401 South La Cienega Boulevard Los Angeles, California.

collection cistern for stormwater management and reuse of water for landscaping on site. Impacts related to groundwater supplies would be less than significant.

- c. *Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner, which would:*
- i. *result in substantial erosion or siltation on-or off-site?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. A significant impact would occur if the Proposed Project substantially altered the drainage pattern of the site or an existing stream or river, so that substantial erosion or siltation would result on- or off-site.

The Project Site is located in a highly urbanized are within the City of Los Angeles. There are no natural watercourses on the Project Site or in the vicinity of the Project Site. While Ballona Creek lies approximately 600 feet to the west of the Project Site, the Proposed Project would not alter its course. As stated previously, the Project Site is almost entirely covered by impervious surfaces and current stormwater runoff flows to the local stormdrain system during a storm event. The Project would not increase the amount of impervious surfaces already present at the Project Site.

Grading and construction activities on the Project Site may temporarily alter the existing drainage patterns and change off-site flows. The project would be required to prepare a SWPPP and implement BMPs to reduce runoff and preserve water quality during construction of the Proposed Project. Further, the Project would be required to implement a LID Plan (during the Project's operation), which would reduce the amount of surface water runoff leaving the Project Site after a storm event. The LID Plan would require the implementation of stormwater best management practices to retain or treat the runoff from a storm event producing 3/4-inch of rainfall in a 24-hour period. Therefore, the Project would result in a less than significant impact in relation to surface water hydrology and would not result in substantial erosion or siltation on- or off-site.

ii. *result in flooding on-or off-site?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. The Project Site is currently developed and fully paved, and the Proposed Project would not substantially change the site's drainage patterns and would not alter a discernable drainage course resulting in flooding. As discussed above, the Project would implement both a SWPPP and a LID Plan and would not substantially increase the rate or amount of surface runoff in a manner, which would result in flooding on- or –off-site.

Grading and construction activities on the Project Site may temporarily alter the existing drainage patterns and change off-site flows. However, as discussed above, construction and operation of the Proposed Project would not result in a significant increase in site runoff or any changes in the local drainage patterns that would result in flooding on- or off-site. Since the Project would not involve alteration of a discernable watercourse and the Project would be required to comply with the LID Ordinance which would reduce the amount of surface water runoff leaving the Project Site. Therefore, the Proposed Project would not have the potential to alter drainage patterns or increase runoff such that flooding would occur. Therefore, impacts would be less than significant.

iii. *create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. As noted above, the Project Site is generally flat and is currently occupied by a public storage facility and surface parking. Grading and construction activities on the Project Site may temporarily alter the existing drainage patterns and change off-site flows. However, as discussed above, construction and operation of the Project would not result in a significant increase in site runoff or any changes in the local drainage patterns that would result in flooding on- or off-site. The Project would be required to prepare a SWPPP and implement BMPs to reduce runoff and preserve water

quality during construction. Compliance with the LID Ordinance, discussed above, would also reduce the amount of surface water runoff leaving the Project Site as compared to the current conditions. In addition, one of the sustainable features included in the Project is the collection of rainwater during operation. As part of the Project's sustainability concept, the Project would include elements such as stormwater filtration, hardscape materials such as pavers that allow for filtration, and an overall target of managing 80th percentile storm events with BMPs. Therefore, impacts related to runoff would be less than significant.

Three general sources of potential short-term construction-related stormwater pollution associated with the Project are: 1) the handling, storage, and disposal of construction materials containing pollutants; 2) the maintenance and operation of construction equipment; and 3) earth moving activities which, when not controlled, may generate soil erosion and transportation, via storm runoff or mechanical equipment. Generally, routine safety precautions for handling and storing construction materials may effectively mitigate the potential pollution of stormwater by these materials. These same types of common sense, "good housekeeping" procedures, or best management practices, can be extended to non-hazardous stormwater pollutants such as sawdust and other solid wastes.

Poorly maintained vehicles and heavy equipment leaking fuel, oil, antifreeze, or other fluids on the construction site are also common sources of stormwater pollution and soil contamination. Grading activities can greatly increase erosion processes. Two general strategies are recommended to prevent construction silt from entering local storm drains. First, erosion control procedures should be implemented for those areas that must be exposed. Secondly, the area should be secured to control off-site migration of pollutants. During construction, the Applicant shall be required to implement all applicable and mandatory BMPs in accordance with the approved LID Plan and the SWPPP. These "good-housekeeping" practices would ensure that short-term construction-related impacts would be less than significant.

Pursuant to City policy, stormwater retention would be required as part of the LID/SUSMP implementation features (despite no increase of imperviousness surfaces on the Project Site). Any contaminants gathered during routine cleaning of construction equipment would be disposed of in compliance with applicable stormwater pollution prevention permits. Further, pollutants resulting from Project operation, including petroleum products associated with parking and circulation areas, would be subject to the requirements and regulations of the NPDES and applicable LID Ordinance requirements. Accordingly, the Project would be required to demonstrate compliance with LID Ordinance standards and retain or treat the first three-quarters inch of rainfall in a 24-hour period. Thus, the Project

would not create or contribute surface runoff that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Therefore, the Project's construction impacts related to storm drain capacity and water quality would be less than significant.

Activities associated with operation of the Project could generate substances that could degrade the quality of water runoff. The deposition of certain chemicals by cars in the parking garage could have the potential to contribute metals, oil and grease, solvents, phosphates, hydrocarbons, and suspended solids to the storm drain system. However, impacts to water quality would be reduced since the Project must comply with water quality standards and wastewater discharge BMPs set forth by the City, the SWRCB, and the Project's approved LID Plan. Through compliance with existing regulations and the approved LID Plan, the Project would not create or contribute surface runoff that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Therefore, Project impacts related to storm drain capacity and water quality would be less than significant.

iv. impede or redirect flood flows?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site is not located within a 100-year zone, as mapped by the Federal Emergency Management Agency (FEMA).⁸³ While the Ballona Creek is located approximately 550 feet west of the Project Site across Jefferson Boulevard, it is a concrete-lined channel completely surrounded by urban uses, including light industrial and commercial uses. Thus, the Project would not have the potential to impede or redirect flood flows, and no impact would occur.

⁸³ Los Angeles County Department of Public Works. Flood Zone Determination Website. Available at: <https://pw.lacounty.gov/floodzone/>, accessed May 5, 2021.

d. *In flood hazard, tsunami, or seiche zones, would the project risk release of pollutants due to project inundation?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. The Project Site is identified in the Safety Element of the General Plan as being located in a potential inundation area but is not within a tsunami or seiche zone.⁸⁴ However, the Baldwin Hills dam failure in 1963 and the near collapse of the Van Norman Dam during the 1971 San Fernando Earthquake resulted in strengthening of the federal, state, and local design standards and retrofitting of existing dam facilities. None of the 13 dams in the greater Los Angeles area was severely damaged during the 1994 Northridge Earthquake. This low damage level was due in part to completion of the retrofitting of dams and reservoirs pursuant to the 1972 State Dam Safety Act following the San Fernando earthquake.⁸⁵ To further ensure against dam failure, the LADWP maintains a Water System Reservoir Surveillance Program. Most of LADWP's dams and reservoirs are under the jurisdiction of the California Department of Water Resources, Division of Safety of Dams (DSOD). DSOD issues operating licenses for dams and reservoirs under its jurisdiction, and the owner must comply with certain operation, maintenance, and inspection procedures to retain the license to operate the facility. LADWP maintains an assertive dam safety program, consisting of a six-person Reservoir Surveillance Group dedicated to inspecting each in-City reservoir monthly and each of its Owens Valley reservoirs annually or semi-annually. Reservoir inspections include reading groundwater monitoring wells in and around the dams, reading flows at seepage drains, and performing a thorough visual inspection. Many LADWP reservoirs have Movement and Settlement (M&S) survey points installed on, and near, the dams. These points are periodically measured using precision survey equipment. The M&S survey, groundwater, and seepage data are plotted on long-term charts to determine if there has been any significant change over time. LADWP conducts surveillance of the reservoirs as required by DSOD.⁸⁶ Current design and construction practices and ongoing programs of review, modification, or total reconstruction of existing dams are intended to ensure that all dams are capable of withstanding the maximum credible earthquake for the site. As such, the

⁸⁴ City of Los Angeles. 1996. Safety Element of the Los Angeles City General Plan. Exhibit G: Inundation & Tsunami Hazard Areas. Available at: https://planning.lacity.org/odocument/31b07c9a-7eea-4694-9899-f00265b2dc0d/Safety_Element.pdf, accessed May 5, 2021.

⁸⁵ Los Angeles General Plan Safety Element, Page II-16

⁸⁶ Los Angeles Department of Water and Power, Water Infrastructure Plan 2016 http://rates.ladwp.com/UserFiles/Rates%20Documents/2016/Water_Infra_Plan_2016.pdf

minimal risk of flooding from potential dam or levee failure would not be exacerbated by the Project. Therefore, impacts related to flooding and risk of release of pollutants would be less than significant.

- e. *Would the project conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. As discussed above, the Proposed Project would be responsible for the preparation of a SWPPP and implementation of best management practices to mitigate the effects of erosion and the inherent potential for sedimentation and other pollutants entering the stormwater system. Implementation of SWPPP and compliance with the NPDES and City discharge requirements would ensure that the construction of the Proposed Project would not violate any water quality standards and discharge requirements, or otherwise substantially degrade water quality.

Therefore, the Project would comply with applicable water quality control plans as analyzed above. Additionally, the Project Site would be constructed on a site previously developed and would not substantially increase the amount of impervious surface. Therefore, implementation of the Proposed Project would not conflict with or obstruct implementation of any other water quality control plans or sustainable groundwater management plans. Impacts are less than significant.

11. Land Use And Planning

- a. *Would the project physically divide an established community?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than significant. An impact would occur if the Project would include extensions of roadways or other development features through currently developed areas that could physically divide or isolate existing neighborhoods or an established community. The Project Site is an infill development in an established urbanized area of the City that is

already served by a well-developed roadway system and utility infrastructure. The Project Site does not propose to change any of the public circulation in the Project vicinity that would physically divide or isolate existing neighboring developments. The Project also would not physically divide an existing community, as the site is surrounded by similar, compatible development in all directions. Immediately to the north and west of the Project Site are two new developments proposing mixed-use and office space towers, respectively – the 16-story “(W)rapper” office building to the west and the 320-foot tall multifamily, commercial and retail “Cumulus” development to the north. To the east of the Project Site across South La Cienega Boulevard is a five-level parking structure serving as parking for Metro patrons. South of the Project Site along South La Cienega Boulevard is a single-story Sees’ Candies factory. Further, the Project does not propose any changes to the zoning or land use designation for the Project Site.

The Project would in fact unite the surrounding uses by incorporating the existing bicycle path along Jefferson Boulevard into the Project design, providing a plaza directly connecting the Project Site to the Jefferson / La Cienega Metro station, and providing over 30,000 sf of publicly accessible ground floor amenities to integrate the Project into the neighborhood. Whereas the existing self-storage development on the Property is entirely enclosed within a fence and not open to the general public, the Project will replace that with a porous site that allows visitors to and users of the Project Site to pass through it to reach neighboring properties and amenities.

Therefore, the Project would not physically divide an established community.

- b. *Would the project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than significant. The Proposed Project is seeking the following discretionary approvals (collectively referred to as Project Entitlements):

- Approval of a Site Plan Review for a project which creates more than 50 dwelling units and more than 50,000 sf of nonresidential floor area under LAMC Section 16.05.

- Approval under California’s DBL and LAMC Section 12.22-A.25 of the following in exchange for setting aside 11% of the Project’s base units for very low-income households:
 - a) A 35% increase in the permitted residential density,
 - b) A residential parking ratio of 0.5 (1/2) parking stalls for each residential unit pursuant to California Government Code § 65915(p)(2)(A), as modified by Assembly Bill 2345,
 - c) One Off-Menu Incentive to allow up to 92 feet in height for the commercial building and 149 feet 6 inches in height for the residential building (excluding architectural features and mechanical, solar, and other structures), and
 - d) A second Off-Menu Incentive to exceed the CPIO cap on parking (limiting parking to 50% of the LAMC minimum parking requirements) to allow up to 785 parking stalls total, 413 of which are to be unbundled
- A Conditional Use (“CUB”) to allow one establishment at the Project to sell and dispense a full line of alcoholic beverages (beer, wine, and liquor) for on-site consumption and the incidental sale of beer and wine for off-site consumption pursuant to LAMC § 12.24-W.1(a).
- A CPIO Administrative Clearance under the West Adams – Baldwin Hills – Leimert CPIO Section 6.C.2 for a project in compliance with all applicable provisions of the CPIO, as modified by the DBL and LAMC § 12.22-A.25.
- VTTM to subdivide the Project Site into five lots (four airspace lots and one master ground lot) with one of the airspace lots to have up to 260 residential condominium units under LAMC Section 17.06 and Section 17.15, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard, and an approval of a Haul Route in conjunction with the VTTM approval.

The Proposed Project Entitlements would not change the Project Site’s General Plan land use designation of Hybrid Industrial, CPIO designation of Jefferson/La Cienega-Expo Line Transit Oriented Development (TOD) subarea, or CM-2D-CPIO zoning. Further, as discussed below, the Project would be substantially consistent with all of the applicable plans, policies, and regulations contained in regional and local plans. While the policies described below were generally not adopted for the purpose of avoiding or mitigating an environmental effect, an analysis of the Project’s consistency with these policies has

nevertheless been provided below, for informational purposes. Finally, as discussed throughout this SCEA, implementation of the Project would not result in any significant impacts. As such, the Project's impacts with respect to land use and planning would be less than significant.

Land Use Compatibility

The L.A. CEQA Thresholds Guide 2006⁸⁷ addresses land use compatibility as it relates to assessing impacts on surrounding land uses. Evaluating the significance of environmental impacts, i.e., physical impacts and changes to the environment, related to compatibility requires more than merely comparing the physical attributes of the proposed building to the physical attributes of buildings adjacent to the Project Site and in the surrounding area. A significant impact is not generated simply because a proposed building is different than some of the buildings or even many of the buildings in the surrounding area. For purposes of evaluating environmental impacts related to compatibility, it is useful to address the functional compatibility of the Proposed Project with its surrounding land uses. Functional compatibility is defined as the capacity for adjacent, yet dissimilar land uses to maintain and provide services, amenities, and/or environmental quality associated with such uses. Potentially significant functional land use compatibility impacts may be generated when a Proposed Project hinders the functional patterns of use and relationships associated with existing land uses. Patterns of use relate to the interaction and movement of people, goods, and/or information.

The physical compatibility of the Proposed Project with its environs is based on an analysis of proposed uses and improvements and their potential on-site and off-site impacts on traffic, noise, air quality, and aesthetics. These impacts, together with proposed mitigation measures, where applicable, are discussed in their respective sections of this SCEA. As such, this section focuses on the compatibility of the Proposed Project from a functional perspective.

SCAG 2020 RTP/SCS Connect SoCal

SCAG functions as the Metropolitan Planning Organization (MPO) for six counties: Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The SCAG region encompasses a population exceeding 18 million persons in an area of more than 38,000 square miles. As the federally designated MPO, SCAG is mandated to research and create plans for transportation, growth management, and air quality. The 2020-2045 RTP/SCS includes a strong commitment to reduce emissions from transportation sources

⁸⁷ Available at: <https://planning.lacity.org/eir/CrossroadsHwd/deir/files/references/A07.pdf>

to comply with SB 375, improve public health, and meet the NAAQS as set forth by the Clean Air Act (CAA). As such, the 2020-2045 RTP/SCS contains a regional commitment for the broad deployment of zero- and near-zero-emission transportation technologies in the 2025-2045 timeframe and clear steps to move toward this objective. This is especially critical for the goods movement system. The development of a zero- or near-zero-emission freight transportation system is necessary to maintain economic growth in the region, to sustain quality of life, and to meet federal air quality requirements. The 2020-2045 RTP/SCS puts forth an aggressive strategy for technology development and deployment to achieve this objective. This strategy will have many co-benefits, including energy security, cost certainty, increased public support for infrastructure, GHG emissions reduction, and economic development. The 2020-2045 RTP/SCS includes a consideration of the economic impacts and opportunities provided by the transportation infrastructure plan set forth in the document, considering the economic and job creation impacts of the direct investment in transportation infrastructure, and also the efficiency gains in terms of worker and business economic productivity and goods movement. The 2020-2045 RTP/SCS provides a blueprint for improving quality of life for residents by providing more choices for where they will live, work, and play, and how they will move around. It is designed to promote safe, secure, and efficient transportation systems to provide improved access to opportunities, such as jobs, education, and healthcare. Its emphasis on transit and active transportation is designed to allow residents to lead a healthier, more active lifestyle. Its goal is to create jobs, ensure the region’s economic competitiveness through strategic investments in the goods movement system, and improve environmental and health outcomes for its 22.5 million residents by 2045. **Table IV-15** analyses the Project’s consistency with the goals and strategies of Connect SoCal (2020-2045 Regional Transportation Plan / Sustainable Communities Strategy).

**Table IV-15
Consistency Analysis with Connect SoCal (2020-2045 Regional Transportation Plan / Sustainable Communities Strategy)**

Goals and Strategies	Consistency Assessment
2020-2045 RTP/SCS Goals	
Goal 1: Encourage regional economic prosperity and global competitiveness	Consistent. This Goal is directed at SCAG and the City of Los Angeles and therefore does not directly apply to the Project. Nevertheless, the Project would further this Goal by providing new creative office space suitable for tech and innovative uses consistent with the surrounding area, fostering global competitiveness. The Project would also further this goal by providing co-working spaces

Goals and Strategies	Consistency Assessment
	within some of the residential uses to allow for work-life flexibility. The Project would also provide a variety of housing options affordable for various income levels, including very low income and workforce households, furthering economic prosperity across the City's socioeconomic spectrum.
Goal 2: Improve mobility, accessibility, reliability, and travel safety for people and goods	Consistent. The Project is in an urbanized area within the City of Los Angeles. The Project would develop multi-family residential and affordable units, office space, and ground floor retail uses within a High Quality Transit Area as defined by SCAG and a transit priority area as defined by SB 743. The Project site is located less than one-quarter mile from the Metro La Cienega/Jefferson, and less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Project includes highly visible and accessible bike access and bike parking from the bike lane and would also connect to the existing bike path along Jefferson Boulevard directly north of the site. As such, the Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. The location of the Project encourages a variety of transportation options and access and is therefore consistent with this Goal.
Goal 3: Enhance the preservation, security, and resilience of the regional transportation system	Consistent. The Project would further this Goal. The Project is located immediately adjacent to the Metro E Line and co-locates people and jobs in close proximity to transit, which helps to reduce overall VMT and, as a result, GHG emissions. The Project includes a landscaped plaza connecting the Project directly to the Metro E Line station, thereby enhancing the preservation, security, and resilience of the public transit system. The Project also creates a bicycle path link further enhancing the resilience of the transportation network.
Goal 4: Increase person and goods movement and travel choices within the transportation system	Consistent. The Project furthers this Goal by providing a variety of transportation options and access thereto. The Project site is located less than one-quarter mile from the Metro La Cienega/Jefferson light rail station, and less than

Goals and Strategies	Consistency Assessment
	<p>one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Project includes a landscaped plaza connecting the Project directly to the Metro E Line station. The Project also includes highly visible and accessible bike access and bike parking from the bike lane and would also connect to the existing bike path along Jefferson Boulevard directly north of the site. As such, the Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking.</p>
<p>Goal 5: Reduce greenhouse gas emissions and improve air quality</p>	<p>Consistent. The Project co-locates people and jobs immediately adjacent to a transit station and multiple bus lines, as well as provide bicycle and pedestrian amenities, thereby reducing VMT and, as a result, reducing GHG emissions and improving air quality. The Project will also implement additional transportation demand management strategies to further reduce GHG emissions, including a ride share program and educational materials regarding site-specific transportation options. In addition, the Project will implement a project design feature to increase the project's water and energy efficiency, which will further reduce air quality and GHG emissions. The Project would result in criteria air pollutant and GHG emissions during construction and operation. However, as will be set forth in detail in the SCEA, air pollutant emissions would not exceed SCAQMD significance thresholds and the project's GHG emissions would be consistent with SCAG's Connect SoCal Plan and CARB's 2017 Scoping Plan.</p>

Goals and Strategies	Consistency Assessment
Goal 6: Support healthy and equitable communities	Consistent. The Project meets this Goal by incorporating sustainable design features creating a healthy community for the residents. The low environmental footprint of the Project also contributes to the overall health of the region by generating fewer GHG emissions and minimizing use of water. Lastly, the Project enhances bicycle infrastructure through bike parking and access to the Expo Line Bike Path and Ballona Creek Bike Path, further contributing to healthy communities. The Project also furthers this Goal by providing affordable housing (to very low income and workforce households) immediately adjacent to jobs, transit, and bicycle, pedestrian, and other outdoor opportunities (Kenneth Hahn State Recreation Area and Baldwin Hills Scenic Overlook State Park located within one mile south of the Project Site), thus creating a more livable community for all income levels.
Goal 7: Adapt to a changing climate and support an integrated regional development pattern and transportation network	Consistent. The Project would be located in proximity to public transit opportunities and would implement a transportation demand management (TDM) program. Further, the Project includes sustainable features to address climate adaptation, such as entirely electric buildings, ENERGY STAR appliances, LED lighting, purchasing green power from the LADWP grid and constructing electric vehicle (EV) parking spaces. The Project will also include short- and long-term bicycle parking spots, a rainwater collection cistern, and landscaping with drought tolerant plants.
Goal 8: Leverage new transportation technologies and data-driven solutions that result in more efficient travel	Not Applicable. This strategy calls on SCAG to use new transportation technologies and data-driven solutions to increase travel efficiency. The Proposed Project would advance this Goal with its enhancements to the public transit and bicycle network.
Goal 9: Encourage development of diverse housing types in areas that are supported by multiple transportation options	Consistent. The Proposed Project would construct 260 multi-family residential units of varying sizes. 22 units would be set aside for low-income residents and 7 for workforce households. The Project site is located less than one-quarter mile from the Metro La Cienega/Jefferson light rail station, and less than one-half mile from Metro bus lines with frequency of service intervals of 15

Goals and Strategies	Consistency Assessment
	minutes or less during the morning and afternoon peak commute periods. The Project includes a landscaped plaza connecting the Project directly to the Metro E Line station. The Project also includes highly visible and accessible bike access and bike parking from the bike lane and would also connect to the existing bike path along Jefferson Boulevard directly north of the site. As such, the Project would provide residents with immediate access to a multitude of public transit, pedestrian, and bicycling opportunities.
Goal 10: Promote conservation of natural and agricultural lands and restoration of habitats	Not Applicable. This Goal is directed towards SCAG and does not apply to the Project. The Project would not interfere with this Goal as it is not located in an identified “constrained” area such as on agricultural land, open space, or tribal lands. ⁸⁸
2020-2045 RTP/SCS Growth Strategies	
Strategy 1: Focus growth near destinations and mobility options	Consistent. The Project is consistent with this Strategy in that it adds growth on a site with existing mobility options, including transit and bike and further enhances these options. The Project site is located less than one-quarter mile from the Metro La Cienega/Jefferson light rail station, and less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Project includes a landscaped plaza connecting the Project directly to the Metro E Line station. The Project also includes highly visible and accessible bike access and bike parking from the bike lane and would also connect to the existing bike path along Jefferson Boulevard directly north of the site and nearby access to the Ballona Creek bike path. The proposed Project would promote access to public open space destinations with Kenneth Hahn State Recreation Area located within one mile south of the Project Site, as well as the Baldwin Hills Scenic Overlook State Park. The Project site is also located within a HQTA and TPA, which are identified by SCAG as areas most suited for implementation of SCAG’s growth strategies in

⁸⁸ SCAG Connect SoCal (2020–2045 Regional Transportation Plan/Sustainable Communities Strategy, Adopted September 2020, <https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial-03-plan.pdf?1604533568>

Goals and Strategies	Consistency Assessment
	part because they provide greater mobility options than non HQTAs and TPAs.
Strategy 2: Promote diverse housing choices.	Consistent. The Project would develop 260 multi-family residential units of varying sizes. Furthermore, 22 units would be set aside for low-income residents and 7 for workforce households.
Strategy 3: Leverage technology innovations	Consistent. The Project will be designed to be a zero-emission community and includes cutting edge sustainable design features including ENERGY STAR appliances, LED lighting, rainwater collection cistern, and the purchase of 100% green power from the LADWP grid. GHG emissions are categorized into three groups (or scopes). Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers. ⁸⁹ The Project will be designed to reach absolute zero carbon emissions by 2040 for Scope 1, 2 and 3 emissions. The residential and office buildings will be constructed with LEED Gold minimum standards and will meet operational performance ratings, such as FitWel. Therefore, the Project will exceed CalGreen and Title 24 Building Standards.
Strategy 4: Support implementation of sustainability policies	Consistent. The Project will be designed to be a zero-emission community and includes cutting edge sustainable design features including ENERGY STAR appliances, LED lighting, rainwater collection cistern, and the purchase of 100% green power from the LADWP grid. GHG emissions are categorized into three groups (or scopes). Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business

⁸⁹ Carbon Trust. *Briefing: What are Scope 3 Emissions?* Available online at: <https://www.carbontrust.com/resources/briefing-what-are-scope-3-emissions#:~:text=Scope%201%20covers%20direct%20emissions,in%20a%20company's%20value%20chain.,> accessed May 26, 2021.

Goals and Strategies	Consistency Assessment
Strategy 5: Promote a Green Region	<p>travel, purchased goods and services, or transportation tied to suppliers and customers.⁹⁰ The Project will be designed to reach absolute zero carbon emissions by 2040 for Scope 1, 2 and 3 emissions. The residential and office buildings will be constructed with LEED Gold minimum standards and will meet operational performance ratings, such as FitWel. Therefore, the Project will exceed CalGreen and Title 24 Building Standards.</p> <p>Consistent. The Project would promote access to public open space with Kenneth Hahn State Recreation Area located within one mile south of the Project site, as well as the Baldwin Hills Scenic Overlook State Park. The Project also includes 34,214 SF of landscaped open space at the ground floor and enhancement of bicycle infrastructure through bike parking and access to the Expo Line Bike Path and Ballona Creek Bike Path, further contributing to healthy, greener communities. Furthermore, the Project will be designed to be zero emissions and incorporates numerous sustainable design features to achieve this Strategy.</p>

SCAQMD's Air Quality Management Plan

The Project Site is located within the South Coast Air Basin and within the jurisdiction of SCAQMD. In conjunction with SCAG, SCAQMD is responsible for formulating and implementing air pollution control strategies, including periodic updates to the AQMP, and guidance to local government about how to incorporate these strategies into their land use plans and decisions about development. SCAG is responsible for generating the socio-economic profiles and growth forecasts on which land use, transportation, and air quality management and implementation plans are based. The growth forecasts provide the socioeconomic data used to estimate vehicle trips and VMT. Emission estimates then can be forecast by SCAQMD based on these projected estimates. Reductions in emissions due to changes in the socio-economic profile of the region are an important

⁹⁰ Carbon Trust. *Briefing: What are Scope 3 Emissions?* Available online at: <https://www.carbontrust.com/resources/briefing-what-are-scope-3-emissions#:~:text=Scope%201%20covers%20direct%20emissions,in%20a%20company's%20value%20chain.,> accessed May 26, 2021.

way of taking account of changes in land use patterns. For example, changes in jobs/housing balance induced by changes in urban form and transit-oriented development induce changes in VMT by more closely linking housing to jobs. Thus, socio-economic growth forecasts are a key component to guide the Basin toward attainment of the NAAQS. The current AQMP establishes a comprehensive regional air pollution control program leading to the attainment of state and federal air quality standards in the Basin. In addition to setting minimum acceptable exposure standards for specified pollutants, the AQMP incorporates SCAG's growth management strategies that can be used to reduce vehicle trips and VMT, and hence air pollution. These include, for example, co-location of employment and housing, and mixed-use land patterns that allow the integration of residential and non-residential uses.⁹¹

As discussed above under "Air Quality," the Project would be consistent with the AQMP.

City of Los Angeles General Plan

The City's General Plan, adopted December 1996 and re-adopted August 2001, provides general guidance on land use issues for the entire City. The General Plan consists of a Framework Element, a Land Use Element, and 10 citywide elements.

Framework Element

The Framework Element of the General Plan serves as guide for the City's overall long-range growth and development policies and serves as a guide to update the community plans and the Citywide elements. The Citywide elements address functional topics that cross community boundaries, such as transportation, and address these topics in more detail than is appropriate in the Framework Element, which is the "umbrella document" that provides the direction and vision necessary to bring cohesion to the City's overall general plan. The Framework Element provides a conceptual relationship between land use and transportation and provides guidance for future updates to the various elements of the General Plan but does not supersede the more detailed community and specific plans. The Land Use chapter of the Framework Element contains Long Range Land Use Diagrams that depict the generalized distribution of centers, districts, and mixed-use boulevards throughout the City, but the community plans determine the specific land use designations. The Land Use Element of the General Plan is contained within 35

⁹¹ 2016 Air Quality Management Plan, Executive Summary; South Coast Air Quality Management District; <https://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-managementplan/final-2016-aqmp/executive-summary.pdf?sfvrsn=4>

community plans. The Project Site is located in the West Adams-Baldwin Hills-Leimert Community Plan Area, discussed below.

As discussed on **Table IV-16**, the Project would be substantially consistent with the Framework Element.

**Table IV-16
Framework Element Consistency Analysis**

Objectives	Consistency Assessment
Land Use	
Objective 3.1: Accommodate a diversity of uses that support the needs of the City's existing and future residents, businesses, and visitors.	Consistent. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor commercial consisting of neighborhood serving amenities such as a high-quality restaurant or neighborhood wine bar. Bringing jobs, housing, and lifestyle amenities to one site and community, immediately adjacent to multiple modes of public transportation, will greatly support the needs of the existing West Adams residents, businesses, and visitors.
Objective 3.2: Provide for the spatial distribution of development that promotes an improved quality of life by facilitating a reduction of vehicular trips, vehicle miles traveled, and air pollution.	Consistent. The Project Site is in an urbanized area within the City of Los Angeles. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor commercial uses within a High Quality Transit Area (HQT) as defined by SCAG and a transit priority area as defined by SB 743, ideal locations to reduce reliance on vehicle transportation. The Project Site is located less than one-quarter mile from the Metro La Cienega/Jefferson station. Furthermore, the site is located less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Project will also connect to and improve the existing bicycle path along Jefferson Boulevard and locate jobs, housing, and neighborhood serving commercial amenities in one site, thereby reducing the need for site users and visitors to travel elsewhere for services. The Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. These location and design features of the Project will greatly reduce vehicle

Objectives	Consistency Assessment
	miles traveled and congestion and improve air quality, and the Project is therefore consistent with this Goal.
Objective 3.4: Encourage new multi-family residential, retail commercial, and office development in the City's neighborhood districts, community, regional, and downtown centers as well as along primary transit corridors/boulevards, while at the same time conserving existing neighborhoods and related districts.	Consistent. The Project Site is in an urbanized area within the City of Los Angeles. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor commercial uses immediately adjacent to the La Cienega/Jefferson Metro station and multiple bus routes. The area of the Project Site is a HQTAs as defined by SCAG and a transit priority area as defined by SB 743. The area is also designated as a Transit Priority Area in the City of Los Angeles and as a Community Center within the West Adams Community Plan. The Project also will conserve existing neighborhoods by providing additional housing, high quality job opportunities, and commercial amenities, as well as abundant landscaped open space, promoting the overall health and sustainability of the existing West Adams residents.
Objective 3.9: Reinforce existing and encourage new community centers, which accommodate a broad range of uses that serve the needs of adjacent residents, promote neighborhood and community activity, are compatible with adjacent neighborhoods, and are developed to be desirable places in which to live, work and visit, both in daytime and nighttime.	Consistent. The Project Site is in an urbanized area within the City of Los Angeles. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor neighborhood serving amenities such as a restaurant or wine bar within a HQTAs as defined by SCAG and a transit priority area as defined by SB 743. The area is designated as a Transit Priority Area in the City of Los Angeles and as a Community Center within the West Adams Community Plan. The Project is consistent and compatible with the adjacent neighborhood and will enhance it by providing additional housing, high quality job opportunities, and commercial amenities, as well as abundant landscaped open space. Ground floor amenities such as a high-quality restaurant or wine bar, and the Project Site's copious landscaped ground floor that is open to the public, will activate the streetscape during the day, and on evenings and weekends, at a location that is currently fenced from public access.
Objective 3.14: Provide land and supporting services for the retention of existing and attraction of new industries.	Consistent. The Proposed Project aims to target office tenants such as medium / large content / media companies looking for a presence in heart of

Objectives	Consistency Assessment
	LA's entertainment industry. West Adams is the ideal location for this target. Many tech and innovative companies are following the content creation/media/entertainment industry into West Adams and the surrounding neighborhoods, fueling the revitalization of this area of the City. Content/media companies that have established a presence in the area include HBO, Amazon, Apple, and TikTok with new offices and/or studios in Culver City, and Netflix, Google, and Facebook, with West LA offices.
Objective 3.16: Accommodate land uses, locate and design buildings, and implement streetscape amenities that enhance pedestrian activity.	Consistent. The existing development on the Project Site is a self-storage facility fenced off from general public access. The Proposed Project will replace that with a mixed-use residential and office development that includes thousands of square feet of ground floor, landscaped plaza areas which will be open to the public. The Project also will include other pedestrian-oriented amenities such as bicycle facilities and improvements along the existing bicycle path (including street trees and other landscaping) that would enhance pedestrian activity. The ground floor will also feature neighborhood serving commercial uses such as a restaurant or wine bar that will activate the streetscape on evenings and weekends in an area that is currently fenced off from public access.
Housing	
Objective 4.2: Encourage the location of new multi-family housing development to occur in proximity to transit stations, along some transit corridors, and within some high activity areas with adequate transitions and buffers between higher-density developments and surrounding lower-density residential neighborhoods.	Consistent. The Project Site is in an urbanized area within the City of Los Angeles. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor commercial uses within a HQTAs as defined by SCAG and a transit priority area as defined by SB 743. The Project Site is located less than one-quarter mile from the Metro La Cienega/Jefferson station. Furthermore, the site is located less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. The location of the Proposed Project

Objectives	Consistency Assessment
	encourages a variety of transportation options and access and is therefore consistent with this Goal.
Urban Form and Neighborhood Design	
<p>Objective 5.2: Encourage future development in centers and in nodes along corridors that are served by transit and are already functioning as centers for the surrounding neighborhoods, the community or the region.</p>	<p>Consistent. The Project Site is in an urbanized area within the City of Los Angeles. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor commercial uses within a HQTAs as defined by SCAG and a transit priority area as defined by SB 743. The Project Site is located less than one-quarter mile from the Metro La Cienega/Jefferson station. Furthermore, the site is located less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. The location of the Proposed Project encourages a variety of transportation options and access and is therefore consistent with this Goal.</p>
<p>Objective 5.8: Reinforce or encourage the establishment of a strong pedestrian orientation in designated neighborhood districts, community centers, and pedestrian-oriented subareas within regional centers, so that these districts and centers can serve as a focus of activity for the surrounding community and a focus for investment in the community.</p>	<p>Consistent. The Proposed Project is located in an area is designated as a Transit Priority Area in the City of Los Angeles and as a Community Center within the West Adams Community Plan. The existing development on the Project Site is a self-storage facility fenced off from general public access. The Proposed Project will replace that with a mixed-use residential and office development that includes thousands of square feet of ground floor, landscaped plaza areas which will be open to the public. The Project also will include other pedestrian-oriented amenities such as bicycle facilities and improvements along the existing bicycle path (including street trees and other landscaping) that would enhance pedestrian activity. The ground floor will also feature neighborhood serving commercial uses such as a restaurant or wine bar that will activate the streetscape on evenings and weekends in an area that is currently fenced off from public access.</p>

Source: City of Los Angeles General Plan Framework Element.

West Adams-Baldwin Hills-Leimert Community Plan

The Community Plan is one of 35 Community Plans established for different areas of the City that are intended to implement the policies of the General Plan Framework. Together, the plans make up the Land Use Element of the General Plan. The Community Plan is intended to promote an arrangement of land uses, streets, and services, which will encourage and contribute to the economic, social, and physical health, safety, and welfare of the people who live and work in the community. The Community Plan is also intended to guide development in order to create a healthful and pleasing environment. The community plans coordinate development among the various communities of Los Angeles and adjacent municipalities in a fashion both beneficial and desirable to the residents of the community.

As discussed on **Table IV-17**, the Project would be consistent with the Community Plan.

**Table IV-17
West Adams-Baldwin Hills-Leimert Park Community Plan Consistency Analysis**

Goals	Consistency Assessment
Land Use	
<p>Goal LU7: A community that promotes an environment of safe, inviting, secure and high-quality multi-family neighborhoods for all segments of the community.</p>	<p>Consistent. The Proposed Project would develop a 260-unit multi-family residential building with designated affordable units (22 low income and 7 workforce housing), which will add a variety of housing opportunities and price points. The Proposed Project will also increase the safety and quality of the neighborhood by activating the streetscape at a site that is currently fenced off from and uninviting to the general public. The Proposed project includes thousands of square feet of ground floor, landscaped plaza areas which will be open to the public, other pedestrian-oriented amenities such as bicycle facilities and improvements along the existing bicycle path (including street trees and other landscaping) that would enhance pedestrian activity, and ground floor neighborhood serving commercial uses such as a restaurant or wine bar that will activate the streetscape on evenings and weekends for existing and future residents.</p>
<p>Goal LU11: A community where new housing is located in a manner which reduces vehicular trips and makes it accessible to services and facilities.</p>	<p>Consistent. The Project Site is in an urbanized area within the City of Los Angeles. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor commercial uses within a High Quality Transit Area (HQTA) as defined by SCAG and a transit priority area as defined by SB 743. The Project Site is located less than one-quarter mile from the Metro La Cienega/Jefferson station.</p>

Goals	Consistency Assessment
	Furthermore, the site is located less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. These design and location features encourage a variety of non-vehicular transportation options and access, thereby reducing vehicle miles traveled. The Project is therefore consistent with this Goal.
Goal LU12: A community that promotes an ecologically sustainable future by encouraging adherence to accepted principles of “green” building.	Consistent. The Project will aim to increase water and energy efficiency with features such as Energy Star appliances, purchasing green power from LADWP, and EV parking which will reduce air quality and GHG emissions. Further, the project co-locates people and jobs immediately adjacent to a transit station thereby reducing VMT and, as a result, GHG emissions. (See Section 3, Air Quality and Section 8, Greenhouse Gas Emissions).
Goal LU14: A community that conserves, enhances and regenerates its distinctive “main street” character by promoting continued pedestrian orientation of commercial areas.	Consistent. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor neighborhood serving uses such as a restaurant or wine bar. The site lies within an area designated as a community commercial center and the project would encourage the activation of pedestrian users by adding thousands of square feet of ground floor, landscaped plazas, improvements along the existing bicycle path, and ground floor dining options that will activate the streetscape.
Goal LU15: A community that prioritizes mixed-use projects within community commercial nodes, centers and transit-oriented development areas.	Consistent. The Proposed Project is located in a community commercial area and would develop multi-family residential and affordable units, office space, and ground floor commercial uses within a HQTAs as defined by SCAG and a transit priority area as defined by SB 743.

Goals	Consistency Assessment
<p>Goal LU28: A Community where residents will be able to access their daily needs by walking, biking or using other sustainable modes of transportation.</p>	<p>Consistent. The Project Site is in an urbanized area within the City of Los Angeles. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor commercial uses within a HQTA as defined by SCAG and a transit priority area as defined by SB 743. The Project Site is located less than one-quarter mile from the Metro La Cienega/Jefferson station. Furthermore, the site is located less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking by including improvements along the existing bicycle path, ground floor dining options, and thousands of square feet of ground floor, landscaped public plaza space that connects to the directly adjacent Metro station. The location of the Proposed Project encourages a variety of transportation options and access and is therefore consistent with this Goal.</p>
Mobility	
<p>Goal M3: A community-wide pleasant street environment that is universally accessible, safe, and convenient for pedestrians.</p>	<p>Consistent. The Project would encourage streetscape improvements within a transit-oriented area. It would also provide plaza areas that connect with the existing bike path and Metro station to the north of the Project Site.</p>
<p>Goal M4: A safe, comprehensive, and integrated bikeway network that is accessible to all, and encourages bicycling for recreation and transportation.</p>	<p>Consistent. The Project would connect to the existing bike pathway and act as a node that provides bicycle access for a transit-oriented community center. The Project would also incorporate bicycle amenities such as 222 bicycle parking spaces.</p>
<p>Goal M5: An integrated land use and transit strategy that directs growth to areas that are accessible by transit facilities and services.</p>	<p>Consistent. The Proposed Project would develop multi-family residential and affordable units, office space, and ground floor commercial uses within a High Quality Transit Area (HQTA) as defined by SCAG and a transit priority area as defined by SB 743. The Project Site is located less than one-quarter mile from the Metro La Cienega/Jefferson station. Furthermore, the site is located less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. The Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. The location of the Proposed Project encourages a variety of transportation options and access.</p>

Source: City of Los Angeles Weest Adams-Baldwin Hills-Leimert Park Community Plan.

West Adams-Baldwin Hills-Leimert Community Plan Implementation Overlay District (CPIO)

The West Adams CPIO District contains seven Subareas, which are parcels characterized by common overarching Community Plan themes, goals, and policies, and are grouped by a common boundary. The Project Site is located within the Jefferson/La Cienega TOD Subarea. This Subarea identifies specific blocks surrounding the La Cienega/Jefferson Metro Station and provides specific use limitations, development standards, and streetscape guidelines for projects to facilitate TOD. This Subarea identifies parcels where a range of development heights and intensities are permitted. The Jefferson/La Cienega TOD Subarea advances the creation of an employment destination outside of the City Center where a mix of uses that feature emerging and innovative commercial, office, “cleantech,” “information technology,” and other “high tech” uses can locate in proximity to existing and future residences within a medium to high intensity transit hub.

As discussed on **Table IV-18**, the Project would be consistent with the standards provided for the Jefferson/La Cienega TOD Subarea. The Proposed Project lies within Parcel Group B of the Jefferson/La Cienega TOD Subarea.

**Table IV-18
Jefferson / La Cienega TOD Subarea Consistency Analysis**

Development Standard	Consistency Assessment
Building Height: 75 feet for Parcel Group B.	Not Applicable. Pursuant to Government Code Section 65915 and LAMC Section 12.22-A.25, the Project Entitlements include a DBL Off-Menu Incentive to construct a residential building up to 149'-6" tall and a commercial building up to 92' tall. The DBL renders the CPIO's 75' height standard inapplicable to the Project. (See <i>Wollmer v. City of Berkeley</i> , 193 Cal.App.4th 1329, 1347.) Because the CPIO's height standard does not apply to the Project, the Project's height is not inconsistent with the CPIO for CEQA purposes. (<i>Ibid.</i>)
Building Intensity and Density: A Floor Area Ratio (FAR) of 3:1.	Consistent. The Proposed Project would have an FAR of 3:1 and be consistent with this development standard.
Building Disposition: A minimum lot coverage of 30%.	Consistent. The Proposed Project would comply with this development standard.

Development Standard	Consistency Assessment
Building Design: Frontages and pedestrian oriented ground floor.	Consistent. The Proposed Project would have pedestrian ordinated plaza areas and ground floor retail uses.
Parking: The maximum amount of parking that is allowed for buildings directly adjacent to or across the street from the Mass Transit Station shall be 50% of the parking required in the LAMC for the underlying zone district.	Not Applicable. Pursuant to Government Code Section 65915 and LAMC Section 12.22-A.25, the Project Entitlements include a DBL Off-Menu Incentive to waive the CPIO restriction on parking stalls in order to construct up to 785 parking spaces, 413 of which are to be unassigned. The DBL renders the CPIO's parking limitation inapplicable to the Project. (See <i>Wollmer v. City of Berkeley</i> , 193 Cal.App.4th 1329, 1347.) Because the CPIO's parking limitation does not apply to the Project, the Project's parking count is not inconsistent with the CPIO for CEQA purposes. (<i>Ibid.</i>)

Source: City of Los Angeles West Adams-Baldwin Hills-Leimert Park Community Plan Implementation Overlay District.

The Project includes construction of two buildings and other site improvements that are compatible with the scale and character of the adjacent properties and the surrounding neighborhood. The immediate vicinity has been home to many new developments within the past years, particularly to the north, west, and southwest of the Project Site. Located north of the Project Site (across the Metro E Line) is the nearly completed “Cumulus Project” which is improved with nearly 1,200+ residential units and up to 300,000 sf of commercial, office and retail uses with a 320’ tower. Southwest of the Project Site is the recently approved “Samitaur” building (5850 W. Jefferson Blvd.) which will include an approximately 344,947 sf office building that is 320 feet (22 stories) in height and provides 908 vehicular parking spaces, far denser and taller and with more parking than the Project. West of the Project, currently under construction, is the “(W)rapper” tower (5790 W. Jefferson Blvd.), a 230-foot-tall structure containing approximately 180,00 sf of office and ground floor retail. Further west is the content creation/media/entertainment hub of the Hayden Tract and Culver City. To the east, southeast, and northeast of the Property are existing single and multi-family neighborhoods, consistent with the Project’s multifamily use. While the immediate area lacks a consistent development pattern, architectural style, and land uses, and buildings in the area are built to a variety of heights, setbacks, and massing, the Project’s design, height, setbacks, massing and uses will be entirely compatible with and fall well within the building and use envelopes of these surrounding uses. These surrounding uses also demonstrate a consistent trend of an ongoing transformation of this major corridor and West Adams community from low-

impact, sprawling light industrial and commercial uses to a denser, transit-oriented mixed-use area consisting of creative office, digital and media-centered businesses, retail, and residential uses. The Project's design and uses coincide with this trend and will improve the community's future by bringing high quality job opportunities, a mix of rental options available for varying income levels, and residential-serving retail. The Project's articulated ground floor, open space, building design, abundant landscaping, and other features will also activate the ground level and improve the walkability, bikeability, and accessibility to public transit of this neighborhood.

As noted above and in **Table IV-18**, the Project complies with all applicable zoning, land use designations, and development standards of the CPIO and LAMC. As noted in **Table IV-18**, the Project's height and parking stall count exceeds the CPIO's height and parking limitations. The Project, however, is not inconsistent with these standards because the Project's height and parking stall count are development incentives that will be obtained through the DBL, which renders those CPIO standards inapplicable to the Project. (*Wollmer v. City of Berkeley*, 193 Cal.App.4th 1329, 1347 [finding that DBL rendered base development standards, which were modified by the DBL, inapplicable to project and thus project's inconsistency with such standards did not constitute inconsistency with applicable development standards for CEQA purposes].)

With respect to building design and pedestrian orientation, the majority of parking spaces would be provided in two subterranean parking levels, allowing for the generous landscaping and open spaces proposed. Key pedestrian-oriented components of the Project include:

- The Crossings Transit Plaza: A public gateway space located on the northeast corner of the Project Site that creates a threshold and welcoming entrance to the site.
- Cienega Square: At the heart of the Project Site between the two buildings and stretching parallel to the existing bike lane running along the northern edge of the Project Site. This area enhances the cyclist and pedestrian experience with opportunities for bike / running / fitness infrastructure, landscape and public art and leverages the adjacency to the bike path along the north end of the site.
- Bike access and bike parking that is highly visible and accessible from the bike lane and other public open spaces.

The Project not only provides for uses, buildings, structures, open spaces, and other improvements that are compatible with the scale and character of the adjacent properties

and the surrounding neighborhood but would also enhance the surrounding neighborhood. Therefore, the Project would be compatible with the surrounding area and impacts would be less than significant.

12. Mineral Resources

- a. *Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site is a well-developed, built out section of the West Adams community near a metro-transit stop and is designated as Hybrid Industrial zoning. The Conservation Element of the LA General Plan notes that the State Mining and Reclamation Act (SMARA) ensures against premature loss of minerals and protects sites threatened by development practices which might preclude future mineral extraction.⁹² The Project Site has not previously been used for mineral extraction and is not located within an oil drilling district, state-designated oil field or surface mining district, and there are no active mining operations on the Project Site or near the project vicinity.⁹³ State designated oil fields are located within the central western and northeastern portions of the West Adams – Baldwin Hills -Leimert Community Plan Area.⁹⁴

The Project Site is not within a Mineral Resource Zone (MRZ-2) - areas where adequate information indicates that significant mineral deposits are present, or where it is judged that a high likelihood exists for their presence.⁹⁵ Further, the Project is located in the Jefferson/La Cienega TOD Subarea, which is not an area of known mineral resources. The Project Site is currently zoned CM-2D-CPIO, and the Project does not propose any changes to the zoning or to the existing Hybrid Industrial land use designation. Thus, the Project Site is not zoned for oil extraction and drilling, or mining of mineral resources, and there are no such sites at the Project Site.

⁹² City of Los Angeles *General Plan*, "Conservation Element" (2001), *Mineral Resources Exhibit A*, January 2001, https://planning.lacity.org/odocument/28af7e21-ffdd-4f26-84e6-dfa967b2a1ee/Conservation_Element.pdf.

⁹³ Ibid.

⁹⁴ California Department of Conservation. CalGEM GIS. Available at: <https://maps.conservation.ca.gov/doggr/wellfinder/#openModal/-118.36866/34.01876/14>, accessed August 20, 2021.

⁹⁵ California Department of Conservation (2001); ESRI Streetmap USA (2008); Alta Planning + Design (2011)

Therefore, no impacts would occur to known mineral resources.

- b. *Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. As stated above, the proposed development is not located within an MRZ-2 Area and is not zoned for oil extraction or drilling. The Project Site is not identified as an important mineral resource recovery site on a local general plan, specific plan, or other land use plan. Therefore, no impacts would occur.

13. Noise

The following information is from the Noise and Vibration Technical Assessment conducted in July of 2021, found in **Appendix C**, which describes the existing noise and vibration environment of the Proposed Project, and evaluates potential impacts from its construction and operation.

- a. *Will the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Less than Significant with Mitigation Incorporated. Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as parks, historic sites, cemeteries, and recreation areas are considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also

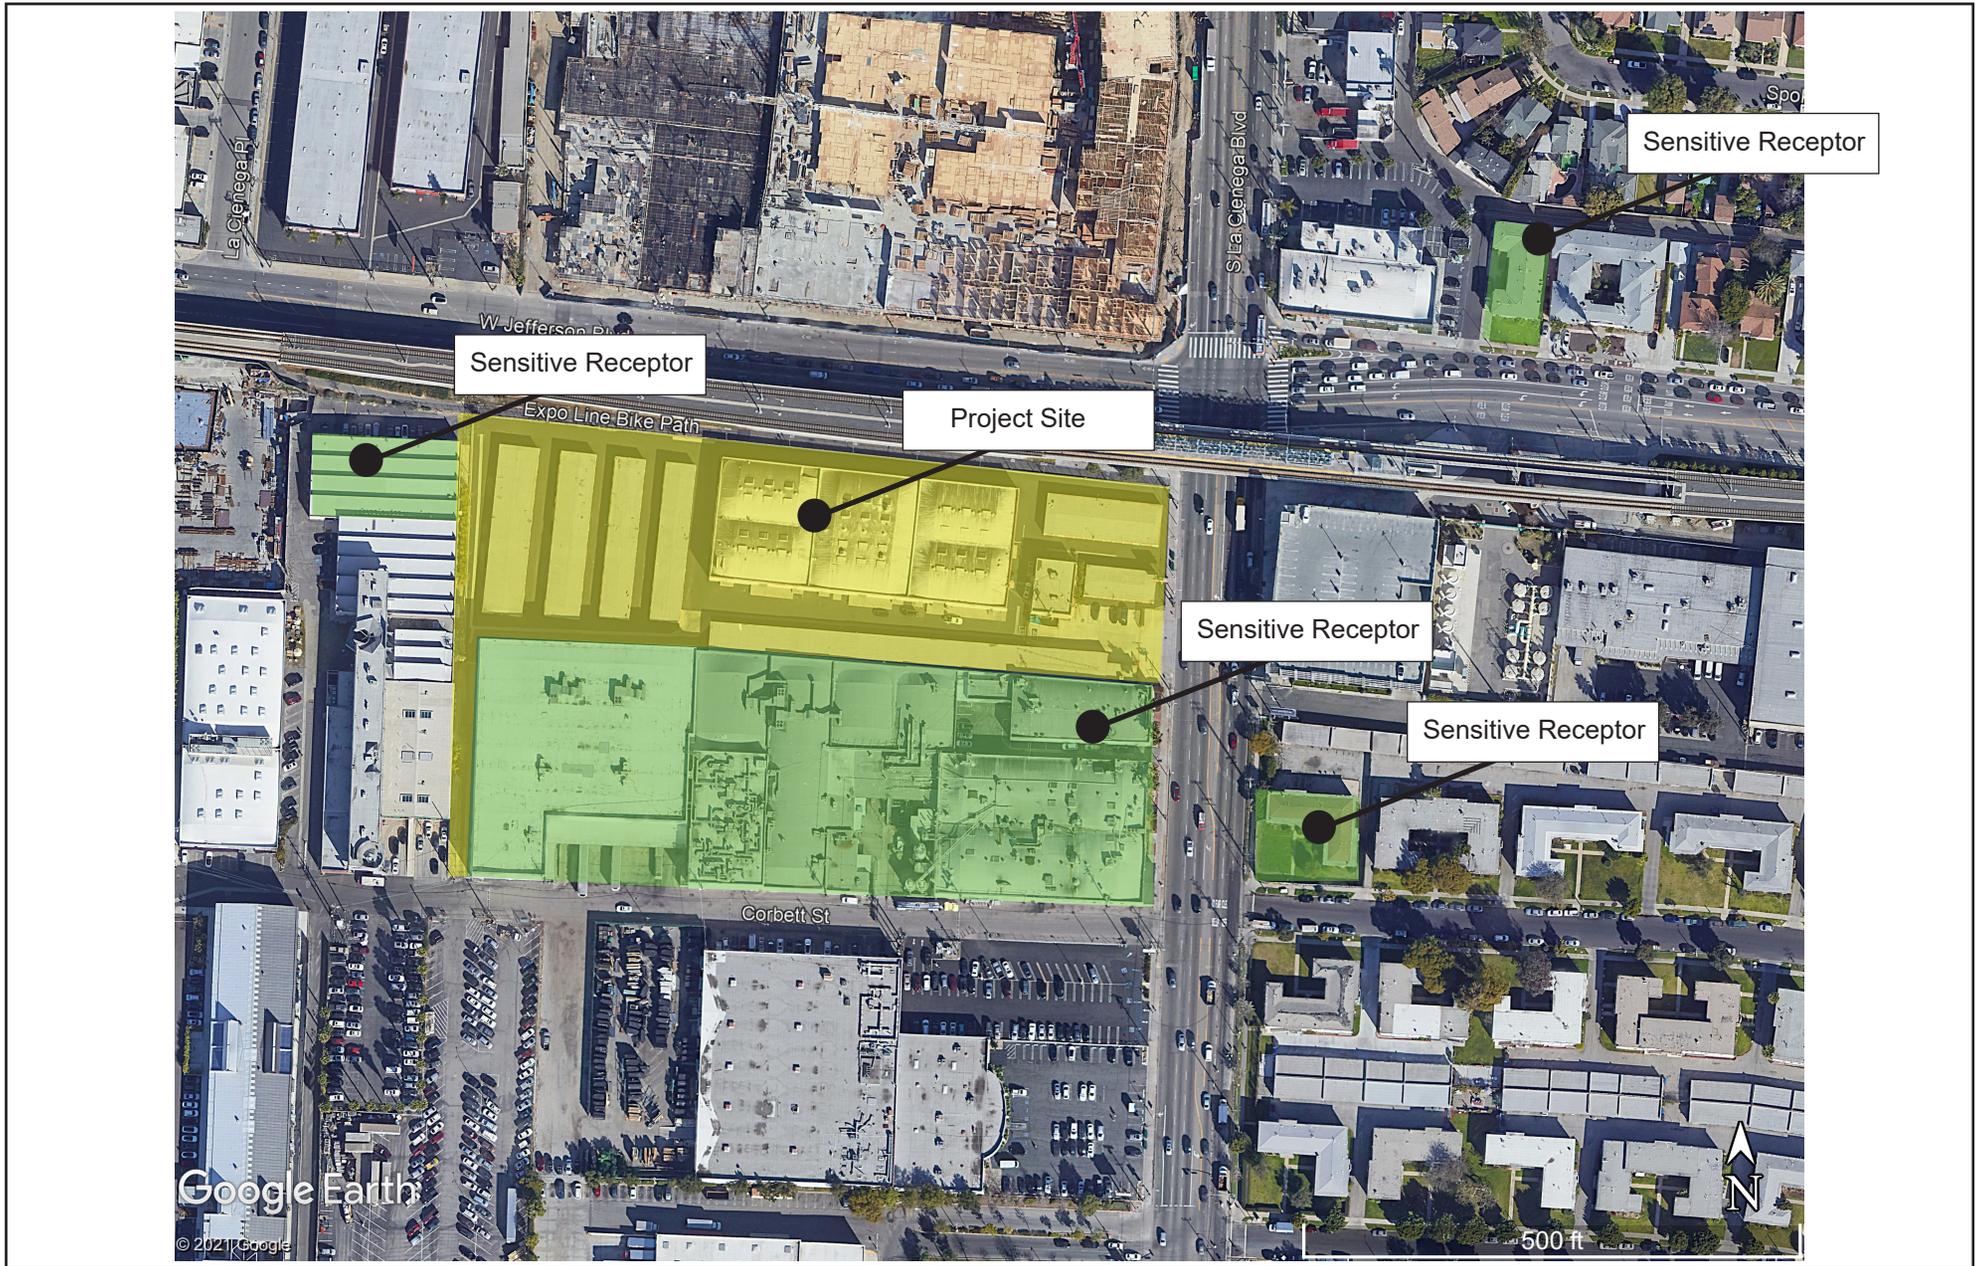

considered noise-sensitive land uses. Noise-sensitive receptors surrounding the Project Site include residential dwellings to the southeast across La Cienega Boulevard, the historic See's Candies building located immediately south of the Project Site, media and other potentially noise sensitive uses to the west and south of the Project Site, and more residential units to the northeast across the intersection of La Cienega Boulevard and Jefferson Boulevard.

Existing Ambient Noise Levels

The Project Site currently contains a self-storage facility. Noise is generally limited to auto-related activities, such as tire squeals, slamming vehicle doors, and vehicle travel. A noise monitoring survey was completed to establish existing noise levels in the vicinity of the Project Site. Transportation noise is the main source of noise in urban environments, largely from the operation of internal combustion engines and frictional contact between vehicles and ground and air.⁹⁶

Noise measurements were conducted on the Project Site and in the project vicinity (**Figure IV-2, Noise Monitoring Locations**). Four short-term measurements were conducted with a Larson Davis SoundTrack LxT1 sound level meter placed on a tripod with the microphone positioned approximately 5 feet above the ground. Ambient sound levels were generated dominated by street traffic noise. **Table IV-19** presents the result of the ambient, short-term noise measurements. It should be noted that due to the ongoing Coronavirus pandemic, traffic volumes on local roads are likely lower than usual. Therefore, noise measurements that were conducted in February 2021 are likely lower than pre-pandemic conditions and therefore conservative measurements for the existing noise environment.

⁹⁶ World Health Organization, <https://www.who.int/docstore/peh/noise/Comnoise-2.pdf> accessed July 2, 2020.

SOURCE: Google Earth, 2021

FIGURE IV-2

Noise Monitoring Locations

**Table IV-19
Ambient, Short-Term Noise Measurements**

Modeled Noise Measurement Location #	Street Address	dBA Leq
Location #1	5785 Corbett Street (residences)	73.6
Location #2	3431 S. La Cienega Boulevard (See's Candies)	63.0
Location #3	5760 W. Jefferson Boulevard (media company and offices)	63.5
Location #4	5673 W. Jefferson Boulevard (residences)	68.5

Based on the results of the ambient noise measurements and field observations, it was determined that transportation related noise sources are the primary contributor to the noise environment in each of the monitoring locations.

Construction Impacts

During all construction phases, noise-generating activities could occur at the Project Site between the hours of 7:00 A.M. and 9:00 P.M. Monday through Friday, in accordance with Section 41.40(a) of the LAMC. On-site activities could include the use of heavy equipment such as excavators and loaders, as well as smaller equipment such as saws, hammers, and pneumatic tools. Off-site secondary noises could be generated by sources such as construction worker vehicles, vendor deliveries, and haul trucks.

Noises from demolition and grading activities are typically the foremost concern when evaluating a project's construction noise impacts, as these activities often require the use of heavy-duty, diesel-powered earthmoving equipment. The types of heavy equipment required for these activities may include excavators, bulldozers, front-end loaders, graders, backhoes, and scrapers.

As shown on **Table IV-20, Construction Noise Impacts at Off-Site Sensitive Receptors (Unmitigated)**, when considering ambient noise levels, the use of multiple pieces of powered equipment simultaneously could increase noise by up to approximately 0.7 dBA Leq at the closest residences on Corbett Street to the southeast of the Project Site. Construction noise impacts could cause an increase of up to approximately 14.6 dBA at the historic See's Candies directly south of the Project Site and up to 14.1 dBA at the offices to the west of the Project Site.

**Table IV-20
Construction Noise Impacts at Off-Site Sensitive Receptors (Unmitigated)**

Receptor	Maximum Construction Noise Level (dBA L _{eq})	Existing Ambient Noise Level (dBA L _{eq})	New Ambient Noise Level (dBA L _{eq})	Increase (dBA L _{eq})	Potentially Significant ?
Location #1 – Residences at 5785 Corbett Street	66.0	73.6	74.3	0.7	No
Location #2 – See’s Candies at 3431 S. La Cienega Boulevard	77.4	63.0	77.6	14.6	Yes
Location #3 – Offices at 5760 W. Jefferson Boulevard	77.4	63.5	77.6	14.1	Yes
Location #4 – Residences at 5673 W. Jefferson Blvd	57.5	68.5	68.8	0.3	No

Source: Impact Sciences, 2021.

These estimated construction noise levels would exceed the City’s significance threshold of 5 dBA for the nearest office receptors and the See’s Candies building which is considered a historic resource for purposes of this analysis.⁹⁷

However, **Mitigation Measure NOI-1** would require the use of mufflers, sound barriers, or other suitable noise reduction devices capable of achieving attenuation of at least 13 dBA along the Project’s southern and western boundaries.

Mitigation Measures

MM NOI-1: During the construction phase, along the southern and western property line, the Proposed Project shall employ construction control measures to reduce increases in ambient noise at the closest receptors by a minimum of 13 decibel Leq. Examples of employable measures include use of mufflers, sound barriers and reducing the time construction equipment is used, as well as ensuring equipment is turned off when not in use. This specification shall be included on all construction documents to ensure compliance.

⁹⁷ Los Angeles Department of City Planning, Office of Historic Resources. Supplemental Historic Resources Report: Industrial Zone Properties in the West Adams – Baldwin Hills – Leimert Community Plan Area. Available at: https://planning.lacity.org/odocument/70187c01-923b-44b6-a6d9-b5e1b915c4ce/SurveyLAWestAdamsBaldwinHillsLeimert_IndustrialReport_0.pdf, accessed May 20, 2021

As shown in **Table IV-21, Construction Impacts at Off-Site Sensitive Receptors (with Mitigation)**, implementation of Mitigation Measures NOI-1 would reduce noise exposure of sensitive receptors to below the 5 dBA threshold. As a result, construction noise impacts would be considered less than significant with mitigation.

**Table IV-21
Construction Noise Impacts at Off-Site Sensitive Receptors (with Mitigation)**

Receptor	Maximum Construction Noise Level (dBA L _{eq})	Existing Ambient Noise Level (dBA L _{eq})	New Ambient Noise Level (dBA L _{eq})	Increase (dBA L _{eq})	Potentially Significant ?
Location #1 – Residences at 5785 Corbett Street	63.0	73.6	74.0	0.4	No
Location #2 – See’s Candies at 3431 S. La Cienega Boulevard	64.4	63.0	66.8	3.8	No
Location #3 – Offices at 5760 W. Jefferson Boulevard	64.4	63.5	67.0	3.5	No

Source: Impact Sciences, 2021.

Temporary Off-Site Construction Activity Noise

Construction haul trucks would generate noise off-site during site demolition and would peak during grading. This would include removal of materials from the Project Site, base materials, and demolished materials. While this vehicle activity would increase ambient noise levels along the haul route, ambient noise levels would not be expected to significantly increase ambient noise levels by 3 dBA or greater at any noise sensitive land use. Studies have shown that a 3 dBA increase in sound level pressure is barely detectable by the human ear. A 3 dBA increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.⁹⁸ While this vehicle activity would marginally increase ambient noise levels along the haul route, it would not be expected to significantly increase ambient noise levels by 5 dBA or greater at any noise sensitive land uses. During the grading phase, the Proposed Project would require approximately 209 haul truck trips (both to and from the project) per day. Because haul trucks generate more noise than traditional

⁹⁸ California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Protocol*. September 2013.

passenger vehicles, a 19.1 passenger car equivalency (PCE) was used to convert haul truck trips to a reference level conversion to an equivalent number of passenger vehicles.⁹⁹ Therefore, there would be an addition of 9,992 PCE trips due to haul truck activity during the grading phase. A 3 dBA increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.

Traffic volumes in the project area were obtained from the Los Angeles Department of Transportation (DOT) traffic count information.¹⁰⁰ The DOT Traffic Count shows that La Cienega Boulevard has a daily traffic volume of approximately 23,873 vehicles.¹⁰¹ The addition of 3,152 PCE trips due to the addition of haul trucks during the grading phase would account for approximately 16.7% of existing traffic volume.

Though the addition of haul trucks would alter the fleet mix of vehicles along the potential haul route on La Cienega Boulevard, their minimal addition to local roadways would not nearly double those roads' traffic volumes, let alone augment their traffic to levels capable of producing 5 dBA ambient noise increases. As a result, off-site construction noise impacts related to haul trips would be considered less than significant.

Operational Impacts

As discussed above, a 3 dBA increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant. Furthermore, a 3 dBA noise level increase is the minimum noise level increase required for a human to perceive a change in ambient noise.

Traffic volumes in the Project area were obtained from DOT traffic count information.¹⁰² Trip generation information for the Proposed Project was added to average daily traffic volumes for La Cienega Boulevard at the intersection of Jefferson Boulevard to determine whether traffic increased enough to result in an audible noise level increase. The DOT Traffic Count data shows that La Cienega Boulevard has a daily traffic volume of approximately 23,873 vehicles.¹⁰³ The Project's estimated maximum addition of approximately 3,061 daily vehicle trips would account for approximately 12.8% of the average daily traffic volume for just La Cienega Boulevard alone. This volume is not nearly

⁹⁹ Caltrans, Technical Noise Supplement Table 3-3, 2013.

¹⁰⁰ City of Los Angeles Department of Transportation, *Manual Traffic Count Summary*. May 2017. Available at: https://navigatela.lacity.org/dot/traffic_data/manual_counts/4401_JEFLAC170523.pdf

¹⁰¹ Ibid.

¹⁰² City of Los Angeles Department of Transportation, *Manual Traffic Count Summary*. May 2017. Available at: https://navigatela.lacity.org/dot/traffic_data/manual_counts/4401_JEFLAC170523.pdf

¹⁰³ Ibid.

the doubling of traffic volume required for a 3 dBA increase in noise. This increase in traffic volumes compared to current traffic counts is not significant enough to cause an audible increase in traffic noise and impacts would be less than significant.

LAMC Sec. 112.02 regulates noise from stationary sources such as HVAC systems, requiring that noise from these sources do not cause the noise level on any other occupied property to exceed the ambient noise level by more than five decibels. Regulatory compliance with LAMC Sec. 112.02 would ultimately ensure that noises from sources such as heating, air conditioning, and ventilation systems not increase ambient noise levels at neighboring occupied properties by more than 5 dBA. Given this regulation, ambient noise levels, and the relatively quiet operation of modern HVAC systems, these on-site noise sources would not be capable of causing the ambient noise levels of nearby uses to increase by 3 dBA CNEL to or within their respective L.A. CEQA Thresholds Guide's "normally unacceptable" or "clearly unacceptable" noise categories, or by 5 dBA or greater overall.

Parking noise typically generates noise levels of approximately 60 dB(A) at 50 feet. However, parking from the project would occur in a three-level underground structure. Noises from the Project's underground parking level would be inaudible, shielded from nearby receptors. These parking noises would not exceed the normally acceptable level of noise identified for adjacent land uses. Therefore, parking noise would result in a less than significant impact.

b. *Would the project generate excessive groundborne vibration or groundborne noise levels?*

Less than Significant. The Federal Transit Administration (FTA) provides ground-born vibration impact criteria with respect to building damage during construction activities. Peak Particle Velocity (PPV), expressed in inches per second, is used to measure building vibration damage. Construction vibration damage criteria are assessed based on structural category (e.g., reinforced-concrete, steel, or timber). FTA guidelines consider 0.2 inch/sec PPV to be the significant impact level for non-engineered timber and masonry buildings. Structures or buildings constructed of reinforced concrete, steel, or timber have a vibration damage criterion of 0.5 inch/sec PPV pursuant to FTA guidelines.¹⁰⁴ The FTA Transit Noise and Vibration Impact Assessment Manual also

¹⁰⁴ Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*. September 2018.

includes vibration thresholds based on land use categories, expressed as vibration decibels (VdB).

Groundborne vibration generated by construction activities associated with the Proposed Project would affect both on- and off-site sensitive uses located in close proximity to the Project Site. As shown in **Table IV-22, Vibration Source Levels for Construction Equipment**, vibration velocities could range from 0.003 to 0.089 inch/sec PPV at 25 feet from the source activity, with corresponding vibration levels (VdB) ranging from 58 VdB to 87 VdB at 25 feet from the source activity, depending on the type of construction equipment in use.

**Table IV-22
Vibration Source Levels for Construction Equipment**

Equipment	Approximate PPV (in/sec)					Approximate RMS (VdB)				
	25 Feet	50 Feet	60 Feet	75 Feet	100 Feet	25 Feet	50 Feet	60 Feet	75 Feet	100 Feet
Large Bulldozer	0.089	0.031	0.024	0.017	0.011	87	78	76	73	69
Caisson Drilling	0.089	0.031	0.024	0.017	0.011	87	78	76	73	69
Loaded Trucks	0.076	0.027	0.020	0.015	0.010	86	77	75	72	68
Jackhammer	0.035	0.012	0.009	0.007	0.004	79	70	68	65	61
Small Bulldozer	0.003	0.001	0.000 8	0.000 6	0.0004	58	49	47	44	40

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, 2018.

Table IV-23, Vibration Levels at Off-Site Sensitive Uses from Project Construction - Unmitigated, shows the vibration velocity and levels that would occur at these nearby buildings and structures during construction at the Project Site. It should be noted that while the See's Candies building is considered historical for purposes of this analysis it has not been officially designated as such and it is still in use for as a manufacturing facility today and all receptors are thus evaluated as non-engineered timber and masonry buildings.

**Table IV-23
Vibration Levels at Off-Site Sensitive Uses from Project Construction -
Unmitigated**

Sensitive Uses Off-Site	Distance to Project Site (ft.)	Receptor Significance Threshold PPV (in./sec)	Estimated PPV (in/sec) ^a
Location #1 - 5785 Corbett Street	185	0.2	0.004
Location #2 – 3431 S, La Cienega Boulevard (See’s Candies)	15	0.2	0.191
Location #3 - 5760 W. Jefferson Boulevard	15	0.2	0.191
Location #4 - 5673 W. Jefferson Boulevard	350	0.2	0.002

Source: Impact Sciences, Inc. 2020

The vibration velocities predicted to occur at Location #2 and #3, the nearest receptor located 15 feet from the nearest project site boundary would be 0.191 in/sec PPV. All receptors are evaluated as non-engineered timber or masonry buildings to account for the most sensitive building types and would not experience a PPV groundborne vibration level that exceed the FTA 0.2 in/sec PPV threshold.

Furthermore, since the See’s Candies building is considered a potential historic building, the Proposed Project would implement Mitigation Measure N2 from the West Adams-Baldwin Hills – Leimert Community Plan EIR as a Condition of Approval. This would require the preparation of a Vibration Control Plan that would be approved by the City (See **Table III-3, West Adams- Baldwin Hills – Leimert Community Plan Applicable Mitigation Measures**). Therefore, vibration impacts associated with building damage due to construction activities would result in a less than significant impact. No mitigation is required.

The Project area has several recording studios that could be sensitive to vibration due to the need to specialized equipment and precise volumes. The FTA Transit Noise and Vibration Impact Assessment Manual also includes vibration thresholds based on land use categories. For buildings with sensitive interior operations such as recording studios the FTA recommends a threshold of 65 VdB.¹⁰⁵ The nearest receptor with potentially sensitive interior operations would be the Eastham Drive Studios located approximately 630 feet west of the Project Site. At this distance, the unmitigated vibration levels from

¹⁰⁵ Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*. September 2018.

construction equipment would generate vibration levels of 45 VdB at the Eastham Drive Studios. This would be well below the threshold for recording studio uses and impacts would be less than significant. No mitigation is required.

- c. *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site is not in the vicinity of a private airstrip or airport land use plan. Likewise, the Project Site is not located within an airport land use plan or within two miles of a public airport or public use airport. The nearest public airport would be Santa Monica Airport, which is located over 4 miles to the west of the Project Site. As such, the Project would not expose people residing or working in the Project area to excessive airport-related noise levels. No impact would occur from the Proposed Project and no further analysis is required.

14. Population and Housing

- a. *Would the project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than significant. The Proposed Project involves development of a mixed-use project proximate to a transit station. The Proposed Project does not propose any changes to the zoning or land use designation for the Project Site (see **Section 11, Land Use**, of this document).

The population within the West Adams Baldwin Hills- Leimert CPA is approximately 174,168.¹⁰⁶ The population within the CPA is anticipated to grow to 214,012 by 2030.¹⁰⁷ The Proposed Project, which would increase local population by 744 residents and 1,284 employees, is consistent with the land use designation and development density prepared in the City of Los Angeles' General Plan, specifically the growth projections for the West Adams – Baldwin Hills – Leimert Community Plan. The increase of 744 residents would account for less than 2% of the anticipated growth in population, and that is assuming all residents would be new to the area and would not relocate from within the CPA itself.

Further, as provided in Section III SCEA Eligibility, a qualifying TPP is a project that is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in the SCAG Connect SoCal 2020-2045 RTP/SCS. On May 7, 2020, the SCAG Regional Council approved the Connect SoCal 2020-2045 RTP/SCS for conformity purposes only. On September 3, 2020, the Regional Council formally adopted the Connect SoCal 2020-2045 RTP/SCS in its entirety to provide a roadmap to expand transportation options, improve air quality, and bolster Southern California's long-term economic viability. On October 30, 2020, CARB accepted, via CARB Executive Order G-20-239, SCAG's determination that Connect SoCal would, if implemented, achieve the applicable GHG emissions reduction targets established by CARB for the region.

The Project Site, which is within one-half mile from a major transit stop since it is adjacent to the La Cienega / Jefferson Metro Station, is in an area that is considered by SCAG as a Priority Growth Area (PGA).¹⁰⁸ PGAs include Jobs Centers, Transit Priority Areas (TPA), High Quality Transit Areas (HQTA), Neighborhood Mobility Areas, and Livable Corridors, among other areas. SCAG identifies these areas as most suited for implementation of SCAG's growth strategies. If implemented, PGAs are expected to accommodate 64% of forecasted household growth and 74% of forecasted employment growth between 2016 and 2045.

The Proposed Project would also be consistent with the land use patterns promoted by the 2020-2045 RTP/SCS Forecasted Regional Development Pattern, as shown in **Table III-1**. SCAG's SCS is built on a "bottom up" land use approach with engagement from

¹⁰⁶ City of Los Angeles Department of City Planning. 2017. West Adams-Baldwin Hills-Leimert Demographic Profile. Available at: https://planning.lacity.org/odocument/ec32903f-791b-4351-a7c9-d347939282ca/2017_demo_profile_west_adam.pdf, accessed September 23, 2021.

¹⁰⁷ City of Los Angeles Department of City Planning. 2016. West Adams-Baldwin Hills-Leimert Community Plan. Available at: https://planning.lacity.org/odocument/78984e0b-a63d-4533-ba57-4f84b8fd7696/West_Adams-Baldwin_Hills-Leimert_Community_Plan.pdf, accessed September 23, 2021.

¹⁰⁸ Southern California Association of Governments. 2021. Priority Growth Areas (PGA) – SCAG Region. Available at: https://hub.arcgis.com/datasets/0da9bc5fba2d4b409c8f166166bf8888_6/explore?location=33.931017%2C-117.128018%2C8.14, accessed August 17, 2021.

local jurisdictions, meaning the overall uses are developed in coordination with local jurisdictions. Projects that are generally consistent with the general plan land use (or community or specific plan) would therefore be consistent with SCAG’s use designations, including density and intensity, as the local plan informs the SCS. As discussed in **Section II, Project Description**, the Proposed Project complies with the zoning, land use designations, and development standards of the General Plan, West Adams – Baldwin Hills – Leimert Community Plan Implementation Overlay, and City’s Municipal Code, including density and building intensity, except for those standards modified by the DBL. (*Wollmer v. City of Berkeley*, 193 Cal.App.4th 1329, 1347 [finding that DBL rendered base development standards, which were modified by the DBL, inapplicable to project and thus project’s inconsistency with such standards did not constitute inconsistency with applicable development standards for CEQA purposes].)

Therefore, the Proposed Project is consistent with the growth anticipated and accommodated by the City’s General Plan and SCAG’s Connect SoCal and in fact, furthers many of the City and region’s goals related to placement of housing and jobs in areas accessible to established high-quality transit. Furthermore, the Project is located in a developed urban area with an established roadway and transit network and in-place infrastructure. Thus, development of the Proposed Project would not require extending or improving infrastructure in a manner that would facilitate off-site growth. Therefore, the Proposed Project would not induce substantial unplanned population growth. Impacts would be less than significant.

b. *Would the project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site does not contain any existing dwelling units. Therefore, the Proposed Project would not displace any residents or housing and would have no related impacts.

15. Public Services

a. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause*

significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i. Fire Protection?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A development project would have a significant impact on fire protection if it requires a new or expanded fire station to maintain service and that new or expanded facility resulted in adverse physical effects.

Construction

Construction activities associated with the Project may temporarily increase demand for fire protection and emergency medical services. Construction activities may also cause the occasional exposure of combustible materials, such as wood, plastics, sawdust, coverings and coatings, to heat sources from machinery and equipment sparking, exposed electrical lines, welding activities, and chemical reactions in combustible materials and coatings.

To comply with California Department of Industrial Relations (Cal-OSHA) and State and City Fire and Building Code requirements, construction managers and personnel would be trained in fire prevention and emergency response, and fire suppression equipment specific to construction would be maintained on-site.¹⁰⁹ Project construction would comply with all applicable codes and ordinances related to the maintenance of mechanical equipment, handling and storage of flammable materials, and cleanup of spills of flammable materials. Thus, in light of City and State regulations and code requirements that would, in part, require personnel to be trained in fire prevention and emergency response, maintenance of fire suppression equipment, and implementation of proper procedures for storage and handling of flammable materials, construction impacts on fire protection and emergency medical services would be less than significant.

Construction activities also have the potential to affect fire protection services, such as emergency vehicle response, by adding construction traffic to the street network and by necessitating partial lane closures during street improvements and utility installations.

¹⁰⁹ <https://www.dir.ca.gov/title8/1920.html>.

These impacts, while potentially adverse, would be less than significant for the following reasons:

- Construction activities are temporary in nature and do not create continuing risks;
- General “good housekeeping” procedures employed by the construction contractors and the work crews (e.g., maintaining mechanical equipment, proper storage of flammable materials, cleanup of spills of flammable liquid) would minimize these hazards; and
- Partial lane closures would not significantly affect emergency vehicles, the drivers of which normally have a variety of options for dealing with traffic, such as using their sirens to clear a path of travel or driving in the lanes of opposing traffic. Additionally, if there are partial closures to streets surrounding the Project Site, flagmen would be used to facilitate the traffic flow until such temporary street closures are complete.

Impacts on traffic that could potentially affect emergency response are also addressed through a Construction Traffic Management Plan (CTMP), which includes traffic management strategies for Project construction. The CTMP, which is required by Los Angeles Department of Transportation (LADOT) would outline and dictate how construction operations would be carried out and would identify specific actions to reduce effects on the surrounding community.¹¹⁰ The CTMP would be based on the nature and timing of specific construction activities and other projects in the vicinity. In addition to traffic, there are a number of factors that influence emergency response, including alarm transfer time, alarm answering and processing time, mobilization time, risk appraisal, geography, distance, traffic signals, and roadway characteristics. It is acknowledged that, even with the CTMP, the Project could incrementally increase traffic, which could potentially delay emergency response times. However, the Project's potential impacts are minimal given these other factors.

The City of Los Angeles Fire Department (LAFD) is equipped and prepared to deal with construction-related traffic and fires should they occur. LAFD reviews new construction, change of use, and remodeling projects for buildings and structures containing State Fire Marshal occupancy. Plans are reviewed for compliance with national, state, and city codes and standards. Fire/Life safety systems such as fire alarm and two-way radio communication for all buildings and occupancies are reviewed.¹¹¹ Additionally, compliance with applicable City Building Code and Fire Code requirements would be

¹¹⁰ LLG Engineers, Transportation Assessment Report 3402 South La Cienega Boulevard Project, September 2021

¹¹¹ Los Angeles Fire Department Fire Life Safety Plan Review. <https://www.lafd.org/fire-life-safety-plan-review>

demonstrated as part of LAFD's fire/life safety plan review and LAFD's fire/life safety inspection for new construction projects, as set forth in LAMC Section 57.118, and which are required prior to the issuance of a building permit. As part of the normal building permit process, the Project Applicant would submit a plot plan for review and approval by the LAFD prior to the approval of a building permit. The plot plan shall include the following minimum design features; fire lanes, where required, shall be a minimum of 20 feet in width; all structures must be within 300 feet of an approved fire hydrant. Thus, regulatory compliance measures regarding fire protection and safety would ensure that that fire protection services are adequate within the proposed building and around the Project Site.

Due to the limited duration of construction activities and compliance with applicable codes, Proposed Project construction would not be expected to adversely impact firefighting and emergency services to the extent that there would be a need for new or expanded fire facilities in order to maintain acceptable service ratios, response times, or other performance objectives of the LAFD. Therefore, impacts on fire protection services associated with construction of the Project would be less than significant.

Operation

Fire Flow

Prior to construction of the Project, the Water Operations Division of LADWP would perform a detailed fire-flow study at the time of permit review (Plan Check) in order to ascertain whether further water system or site-specific improvements would be necessary. In addition, the LAFD would review the plans for compliance with applicable City Fire Code, California Fire Code, City of Los Angeles Building Code, and National Fire Protection Association standards, thereby ensuring that the Project would not create any undue fire hazard. Thus, fire flow to the Project Site would be adequate, and the associated impact would be less than significant.

Response Distance

LAFD's ability to provide adequate fire protection and emergency response services to a site is determined by the response distance and the degree to which emergency response vehicles can successfully navigate the given access ways and adjunct circulation system, which is largely dependent on roadway congestion along the response route. Section 903 of the 2020 Los Angeles Fire Code outlines the requirements for automatic sprinkler systems in residential dwelling units, based in part on a maximum response distance from

the land use proposed (1.5 miles in the case of the Project).¹¹² LAFD considers fire protection services for a project adequate if a project is within the maximum response distance. The site location is served by LAFD Fire Station 94, located at 4470 Coliseum Street, about 1.7 miles from the Project Site.¹¹³ Therefore, because the site location exceeds the maximum response distance of 1.5 miles between residential land uses and a LAFD fire station that houses an engine or truck company, the applicant must install fire sprinklers in the residential building.

Additionally, as stated previously, the Project would be required to comply with applicable City Fire Code, California Fire Code, City of Los Angeles Building Code, and National Fire Protection Association standards, and would be required to include features such as an emergency and standby power system, a fire command center, established emergency procedures, emergency stairways, automatic fire-extinguishing system, automatic smoke detection system, emergency voice/alarm communication system, manual alarm fire boxes, etc. Given the incorporation of fire sprinklers and other fire protection systems within the proposed building, Project impacts related to response distance would be less than significant.

Emergency Access

The LAFD would review Project plans for compliance with the Los Angeles Fire Code, California Fire Code, City of Los Angeles Building Code, and National Fire Protection Association standards, thereby ensuring that the Project would not create any undue fire hazard. As required by applicable codes and regulations, the Proposed Project would include an emergency response plan that would address the following: mapping of emergency exits, evacuation routes for vehicles and pedestrians, and locations of nearest hospitals and fire departments. Residents and visitors would all be informed of emergency procedures in accordance with applicable codes and regulations. The Proposed Project is being designed to also comply with applicable LAFD requirements as it relates to the internal roadway system. Through compliance with applicable provisions of the Fire Code, Project impacts related to emergency access would be less than significant.

Conclusion

Consistent with the ruling of City of *Hayward v. Board Trustees of California State University* (2015) 242 Cal.App.4th 833 and the requirements stated in the California

¹¹² Los Angeles Fire Code. Section 901. Available at: https://codes.iccsafe.org/content/CACLAFC2020P1/chapter-9-fire-protection-and-life-safety-systems#CACLAFC2020P1_Pt03_Ch09_Sec903

¹¹³ Los Angeles Fire Department, Find My Station, accessed on February 18, 2021, <https://www.lafd.org/fire-stations/station-results>.

Constitution Article XIII, Section 35(a)(2), the obligation to provide adequate fire protection and emergency medical services is the responsibility of the City. Through the City's regular budgeting efforts, LAFD's resource needs, including staffing, equipment, trucks and engines, ambulances, other special apparatuses and possibly station expansions or new station construction, would be identified and allocated according to the priorities at the time. If LAFD determines that new facilities are necessary at some point in the future, such facilities (1) would occur where allowed under the designated land use, (2) would be located on parcels that are infill opportunities on lots that are between 0.5 and 1 acre in size, and (3) could qualify for a categorical exemption or Mitigated Negative Declaration under *CEQA Guidelines* Section 15301 or 15332 and would not be expected to result in significant impacts.¹¹⁴ Further analysis, including a specific location, would be speculative and beyond the scope of this document. Thus, the Project impacts on fire protection and emergency medical services would be less than significant.

ii. *Police protection?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Project Site is served by the Los Angeles Police Department (LAPD) District 321 of the Southwest Division¹¹⁵, which services the West Adams, Leimert Park, and Jefferson Park communities.¹¹⁶ The station is located on 1546 West Martin Luther King Jr. Boulevard, about four miles from the proposed Project.

Construction

Construction sites, if not properly managed, have the potential to attract criminal activity (such as trespassing, theft, and vandalism) and can become a distraction for local law enforcement from more pressing matters that require their attention. However, as required by the City as a regulatory compliance measure, the Proposed Project would employ construction safety features including security lighting and guards and erecting

¹¹⁴ Although an EIR was prepared for the construction of Fire Station 39, the EIR concluded there would be no significant impacts. See, Notice of Determination for Van Nuys Fire Station 39, at http://eng2.lacity.org/techdocs/emg/docs/vannuys_fs39/NOD_160701.pdf

¹¹⁵ Los Angeles ZIMAS, accessed February 18, 2021, <http://zimas.lacity.org/>.

¹¹⁶ Los Angeles Police Department, Southwest Community Police Station, https://www.lapdonline.org/southwest_community_police_station.

temporary fencing along the periphery of the active construction areas to screen as much of the construction activity from view at the local street level and to deter trespassing, vandalism, short-cut.

Construction activities also have the potential to affect police response times, by adding construction traffic to the street network and potentially requiring partial lane closures during street improvements and utility installations. Thus, construction could have the potential to adversely affect fire access. In accordance with LADOT requirements, a CTMP would be prepared if the public right of way would be affected by Project construction. If temporary street, lane, and sidewalk closures will be needed for the duration of 72 hours or longer a B-Permit is required from the BSS. Through this review and permit process LADOT ensures compliance with federal and State principles and standards and the safe and efficient movement through and around construction zones. Therefore, impacts to police protection response time during Project construction would be less than significant.

During construction, emergency response vehicles can use a variety of options for dealing with traffic, such as using their sirens to clear a path of travel or driving in the lanes of opposing traffic. Lights and other identifying noises compel traffic to pull to the side where available to provide access through traffic. Although minor traffic delays due to potential lane closures could occur during construction, particularly during the construction of utilities and street improvements, impacts to police response times are considered to be less than significant for the following reasons:

- Emergency access would be maintained to the Project Site during construction through marked emergency access points approved by the LAPD;
- Construction impacts are temporary in nature and do not cause lasting effects; and
- Partial lane closures, if determined to be necessary, would not significantly affect emergency vehicles, the drivers of which normally have a variety of options for avoiding traffic, such as using their sirens to clear a path of travel or driving in the lanes of opposing traffic. Additionally, if there are partial closures to streets surrounding the Project Site, flagmen would be used to facilitate the traffic flow until such temporary street closures are complete.

Construction of the Project would not affect the LAPD's ability to respond to emergencies to the extent that there is no need for any additional new or expanded police facilities, in order to maintain acceptable service ratios, response times, or other performance

objectives of the LAPD. For these reasons, Project construction impacts on police services would be less than significant

Operation

The Project Site is currently developed with a self-storage facility. The existing minimally used site would be replaced with a vibrant development that would generate more people on the site most of the day, as well as activation of the street and connection with the bike path, potentially increasing the overall safety of the Project Site. However, it is possible that the increase of on-site residents, visitors, patrons, and employees to the Project Site, could generate a potential increase in the number of service calls from the Project Site. Responses to thefts, vehicle burglaries, vehicle damage, traffic-related incidents, and crimes against persons may escalate as a result of the increased on-site activity and increased traffic on adjacent streets and arterials. The Proposed Project would include adequate and strategically positioned functional and security lighting to enhance public safety. Visually obstructed and infrequently accessed “dead zones” would be limited and, where possible, security controlled to limit public access. The building and layout design of the Proposed Project would also include crime prevention features, such as nighttime security lighting and secure parking facilities. In addition, the continuous visible and nonvisible presence of residents at all times of the day would provide a sense of security during evening and early morning hours. The Project would also include security cameras for the residential and commercial components. These preventative and proactive security measures would decrease the amount of service calls that LAPD would otherwise receive. These features will be developed with Los Angeles Police and Fire through their review of the Proposed Project.

Finally, as required the Proposed Project would incorporate Mitigation Measure PS1 from the West Adams – Baldwin Hills -Leimert CPA EIR as a condition of approval, which would ensure that the Project incorporates all crime prevention features recommended by the LAPD. The provision of on-site security features, coordination with LAPD, and incorporation of crime prevention features, would not require the provision of new or physically altered police stations in order to maintain acceptable service ratios or other performance objectives for police protection. Moreover, consistent with City of *Hayward v. Trustees of California State University* (2015) 242 Cal.App.4th 833, significant impacts under CEQA consist of adverse changes in any of the physical conditions within the area of a project, and potential impacts on public safety services are not an environmental impact that CEQA requires a project applicant to mitigate. Therefore, Proposed Project impacts related to police protection services would be less than significant.

iii. Schools?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Project Site is served by the Los Angeles Unified School District (LAUSD). A significant impact could occur if a project includes substantial employment or population growth that could generate a demand for school facilities which would exceed the capacity of LAUSD. Whether a project results in a significant impact on public schools is made with the following considerations:

1. Population increases resulting from the project, based on the net increase of residential units or square footage of nonresidential floor area;
2. Demand for school services anticipated at the time of project completion and occupancy compared to the expected level of service available, considering, as applicable, scheduled improvements to LAUSD services (facilities, equipment, and personnel) and the project's proportional contribution to the demand;
3. Whether (and to the degree to which) accommodation of the increased demand would require construction of new facilities, a major reorganization of students or classrooms, major revisions to the school calendar (such as year-round sessions), or other actions that would create a temporary or permanent impact on the school(s); and
4. Whether the project includes features that would reduce the demand for school services (e.g., on-site school facilities or direct support to LAUSD).

The Project area is currently served by one elementary school, one middle school, and one high school that is part of the LAUSD system.¹¹⁷ Baldwin Hills Elementary School serves kindergarten through fifth grade and is located at 5421 Rodeo Road, about 1.25 miles from the Project Site. Audubon Middle School serves sixth through eighth grade, and is located at 4120 11th Avenue, 2.72 miles from the Project Site. Finally, Susan Miller Dorsey Senior High School serves ninth through twelfth grades and is located at 3537 Farndale Avenue, 1.5 miles from the Project Site. All three schools are within a 10-minute drive to the Project Site. The Proposed Project consists of 260 residential apartment units.

¹¹⁷ Resident School Identifier, Los Angeles Unified School District, accessed on February 22, 2021, <https://rsi.lausd.net/ResidentSchoolIdentifier/>.

LAUSD uses student generation factors to determine student projections. Using the most recent LAUSD student generation factor of 0.437 students per household, the Project would potentially generate up to 113 students. The current enrollment at the above three schools is approximately 1,740 students.¹¹⁸ The capacity for the three schools is 616 students for Baldwin Hills Elementary School, 2,400 students for Audubon Middle School, and 2,320 students for Susan Miller Dorsey Senior High School.¹¹⁹ The Proposed Projects generation of students would not increase the number of students beyond the current capacities at either of these schools, even when assuming all students would be coming from different schools as opposed to relocating within the same area.

Pursuant to the California Government Code Section 65995, the Project Applicant would be required to pay school fees established by LAUSD, payment of which in accordance with existing rules and regulations regarding the calculation and payment of such fees would, by law, provide full and complete mitigation for any potential direct and indirect impacts to schools as a result of the Project. Therefore, Project impacts to school services would be less than significant.

iv. Parks?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A Project could result in a significant impact on local parks if the population increase as a result of the development disproportionately increases or reduces the demand for recreation and park services. The Proposed Project is located approximately a quarter mile from the nearest Los Angeles City park, Westside Neighborhood Park.¹²⁰ The Rancho Cienega Recreation Center is located about 1.27 miles away and is a sports center with a gymnasium, community room, pool, and adjacent stadium.¹²¹ The Proposed Project is expected to generate approximately 744 residents based on 260 residential units,¹²² and may result in a proportional increase in the use of

¹¹⁸ Los Angeles Unified School District. LAUSD Open Data. Available at: <https://my.lausd.net/opendata/dashboard>, accessed September 23, 2021.

¹¹⁹ City of Los Angeles. 2006. L.A. CEQA Thresholds Guide. Available at: <https://planning.lacity.org/eir/CrossroadsHwd/deir/files/references/A07.pdf>, accessed on September 23, 2021.

¹²⁰ Syd Kronenthal Park, part of adjacent Culver City, is one third of a mile away from the Project location.

¹²¹ City of Los Angeles Department of Recreation and Parks, Facility Map Locator, <https://www.laparks.org/maplocator>, accessed February 2021.

¹²² Estimated population based on CalEEMod modeling, see Air Quality and Greenhouse Gas Technical Report.

the local community parks as well as regional parks (including Baldwin Hills Scenic Overlook and Kenneth Hahn State Recreation Area).

The demand for parks and recreational facilities in the City is generally determined based on the number of residents a project would generate and the City's parkland acreage-to-population ratios are based on residential population and not employee population. The Proposed Project would be required to comply with Los Angeles Municipal Code Section 12.33, which requires all new, non-exempt, residential dwelling units to dedicate land, pay a fee or provide a combination of land dedication and fee payment for the purpose of acquiring, expanding and improving park and recreational facilities for new residents,¹²³ with an exception made for affordable housing units. These fees are used to fund land acquisition and capital improvements. Furthermore, the proximity to the La Cienega/Jefferson Station would connect residents to various recreational areas in the City and County, such as access to beach cities and other regional recreational areas.

The Proposed Project would include open space areas which would be required per LAMC 12.21-G. Per City requirements, the required Useable Open Space (an area which is designed and intended to be used for active or passive recreation) would be 28,925 square feet. This requirement will be fulfilled by both common open space areas and private open space areas as defined by LAMC 12.21-G. The Proposed Project would include 22,836 square feet of additional exterior common open space beyond what is required by LAMC 12.21-G. As part of the required 28,925 square feet, the Project also would include 7,032 square feet of planted common open space, which is equivalent to 25% of the Project's Common Open Space. As such, all LAMC 12.21-G requirements regarding open space for new residents' units would be met.

It is estimated that development of the Proposed Project would result in an increase of approximately 744 new residents, and that these residents would increase the activity and frequency of use of these facilities. The Proposed Project includes on-site open space amenities intended to serve the recreational needs of on-site residents, including an outdoor wellness garden, connection to the existing bike path adjacent to the northern edge of the Project Site, an outdoor barbeque lounge, a swimming pool and an approximately 1,700 square foot indoor fitness facility. However, it is assumed the future residents of the Project Site would use recreation and park facilities in the surrounding area and generate additional demand for such amenities. Based on the standard parkland ratio goal of two acres per 1,000 residents, the Proposed Project would generate a need for approximately one acre of public parkland. This demand would be met through a

¹²³ Board Report No. 17-120, Board of Recreation and Park Commissioners, Approved May 17, 2017, <https://www.laparks.org/sites/default/files/pdf/commissioner/2017/may17/17-120.pdf>.

combination of (1) on-site open space proposed within the Project discussed above, and (2) payment of applicable fees regarding the availability of existing park and recreation facilities within the area. Los Angeles Municipal Code Section 12.33 requires all new, non-exempt, residential dwelling units to dedicate land, pay a fee or provide a combination of land dedication and fee payment for the purpose of acquiring, expanding and improving park and recreational facilities for new residents,¹²⁴ with an exception made for affordable housing units. Therefore, due to the Project's open space and amenities, the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for parks and impacts of the Project would be less than significant. Impacts related to parks and recreational facilities would be less than significant.

v. *Other public facilities?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Libraries

Less than Significant Impact. A significant impact could occur if a project includes substantial employment or population growth whose demand would exceed the capacity available to serve the Project Site.

Library facilities within two miles of a Project site are generally considered to be within the service area of a Project, and the nearest Los Angeles Public Library (LAPL) is the Baldwin Hills Branch Library, which is about a mile away from the Project Site.¹²⁵

The Los Angeles Public Library service area covers 468 square miles and over four million people. There are approximately 2.5 million cardholders and 10.8 million library visits for

¹²⁴ Board Report No. 17-120, Board of Recreation and Park Commissioners, Approved May 17, 2017, <https://www.laparks.org/sites/default/files/pdf/commissioner/2017/may17/17-120.pdf>.

¹²⁵ Los Angeles Public Library. Baldwin Hills Branch Library. Available at: <https://www.lapl.org/branches/baldwin-hills>, accessed on September 23, 2021.

all 73 library locations.¹²⁶ Website visits numbered at 11,466,412 million, vastly exceeding the amount of in person visits.¹²⁷

On March 8, 2011, City voters approved ballot Measure L, which amends the City Charter to incrementally increase the amount the City is required to dedicate annually from its General Fund to LAPL to an amount equal to 0.03% of the assessed value of all property in the City, and incrementally increase LAPL's responsibility for its direct and indirect costs until it pays for all direct and indirect costs. The measure was intended to provide neighborhood public libraries with additional funding to help restore library service hours, purchase books, and support library programs, subject to audits, using existing funds with no new taxes. Beginning in fiscal year 2014-2015 and thereafter, LAPL was to be responsible for payment of all direct and indirect costs.¹²⁸ Library funding is now mandated under the City Charter to be funded from property taxes including those assessed against the Project, which would increase with the new development and be used for additional staff, books, computers, and other library materials. Therefore, impacts to library facilities would be less than significant. .

16. Recreation

- a. *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Refer to discussion 15(d) above.

¹²⁶ Los Angeles Public Library. By the Numbers: Fiscal Year 2019-2020. Available at: <https://www.lapl.org/about-lapl/press/library-facts>, accessed on September 23, 2021.

¹²⁷ Ibid.

¹²⁸ Los Angeles Office of the City Clerk, Interdepartmental Correspondence and Attachments Regarding Measure L, website: http://clkrep.lacity.org/online/docs/2011/11-1100-S2_rpt_cao_11-16-10.pdf, accessed July 2020.

- b. *Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Proposed Project does not propose recreational facilities outside of the Project Site boundaries, such as a park. Therefore, the Project does not involve the construction of recreational facilities that would have an adverse physical effect on the environment, and no impact would occur. While the Project does include open space amenities, the environmental effects of those amenities are evaluated elsewhere within this SCEA.

17. Transportation

A transportation assessment report was prepared to identify and evaluate the potential transportation impacts of the Proposed Project on the regional network. This report is attached as **Appendix F**.

The transportation assessment follows City of Los Angeles (“City”) transportation assessment guidelines¹ (TAG). The City’s TAG are focused on transportation metrics that promote: the reduction of greenhouse gas emissions, the development of multimodal networks and access to diverse land uses, and safety, sustainability and smart growth. In compliance with the California Environmental Quality Act (CEQA), the City’s TAG identify vehicle miles traveled (VMT) as the primary metric for evaluating a project’s transportation impacts along with whether the Proposed Project conflicts or is inconsistent with local plans and policies. In addition, the City’s TAG require evaluation of non-CEQA mobility elements such as pedestrian, bicycle and transit access, project access and circulation, project construction, and the potential for residential street intrusion.

- a. *Would the project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. In general, transportation policies or standards adopted to protect the environment are those that support multi-modal transportation options and a reduction in VMT. Conversely, a project would not be shown to result in an impact merely based on whether a project would not implement a particular program, plan, policy, or ordinance. Many of these programs must be implemented by the City itself over time, and over a broad area, and it is the intention of this threshold test to ensure that proposed development projects and plans do not preclude the City from implementing adopted programs, plans and policies.

The methodology for determining project impacts associated with conflicts with plans, programs, ordinances, or policies is defined per the City’s TAG as follows:

- A project that generally conforms with, and does not obstruct, the City’s development policies and standards will generally be consistent. The Project Applicant should review the documents and ordinances identified in the TAG (refer to Table 2.1-1 on pages 2-3 and 2-4) for City plans, policies, programs, ordinances and standards relevant to determining project consistency. The list highlights City documents that establish the regulatory framework. Attachment D of TAG contains a Plan Consistency Worksheet which provides a specific list of questions that must be answered to help guide whether the project conflicts with City circulation system policies. A ‘yes’ or ‘no’ answer to these questions does not determine a conflict. Rather, as indicated in Attachment D of the TAG, the Project Applicant must provide substantiating information to help determine whether the Proposed Project precludes the City’s implementation of any adopted policy and/or program that was adopted to protect the environment. A mere conflict with adopted transportation related policies, or standards that requires administrative relief or legislative change does not in itself constitute an impact.
- If vacation of a public right-of-way, or relief from a required street dedication is sought as part of a proposed project, an assessment should be made as to whether the right-of-way in question is necessary to serve a long-term mobility need, as

defined in the Mobility Plan 2035, transportation specific plan, or other planned improvement in the future.

- The analysis of cumulative impacts may be quantitative or qualitative. Each of the plans, ordinances and policies reviewed to assess potential conflicts with proposed projects should be reviewed to assess cumulative impacts that may result from the Proposed Project in combination with other development projects in the study area. In addition, the cumulative analysis should also consider known development projects and planned transportation system improvements within the study area as identified in consultation with LADOT.¹²⁹

Mobility Plan

The Mobility Plan combines “complete street” principles with the following goals and objectives that define the City’s mobility priorities:

- **Safety First:** Design and operate streets in a way that enables safe access for all users, regardless of age, ability, or transportation mode choice.
- **World Class Infrastructure:** A well-maintained and connected network of streets, paths, bikeways, trails, and more provides Angelenos with the optimum variety of mode choices.
- **Access for all Angelenos:** A fair and equitable system must be accessible to all and must pay particularly close attention to the most vulnerable users.
- **Collaboration, Communication, and Informed Choices:** The impact of new technologies on our day-to-day mobility demands will continue to become increasingly important to the future.
- **Clean Environments and Healthy Communities:** Active transportation modes such as bicycling and walking can significantly improve personal fitness and create new opportunities for social interaction, while lessening impacts on the environment.

The Proposed Project is being designed to be consistent with these mobility goals. The Project provides direct pedestrian access to the Project Site from sidewalks along South La Cienega Boulevard and Jefferson Boulevard. The Proposed Project design does not result in modifying, removing, or otherwise affecting existing bicycle infrastructure, and

¹²⁹ A SCEA need not consider the cumulative effects of the project that have been adequately addressed and mitigated in prior environmental review, in this case the SCAG Connect SoCal RTP/SCS EIR, certified in May 2020, and the West Adams – Baldwin Hills – Leimert Community Plan EIR, which was certified in May 2016.

the Project driveways are not proposed along streets with existing bicycle facilities. The Proposed Project encourages non-motorized travel through provision of short- and long-term bicycle parking and will promote transit usage by complying with the City's TDM Ordinance. Also, the Proposed Project is located adjacent to the Metro E Line (Expo) La Cienega / Jefferson Station and a number of Metro and other transit service provider bus lines and proposes to provide a new public plaza connecting with the bicycle path, Metro station, and surrounding neighborhood.

The Proposed Project would maintain the designated driveway and roadway width requirements as indicated in the Mobility Plan. The existing driveway on South La Cienega Boulevard is planned to be maintained and modified and no new driveways along La Cienega Boulevard are proposed.

South La Cienega Boulevard is designated as a Modified Boulevard II roadway in the Mobility Plan. This standard requires a 52-foot half right-of-way width, a 40-foot half roadway width, and a 12-foot sidewalk width. South La Cienega Boulevard currently has a 50-foot half right-of-way width, a 40-foot half roadway width, and a 10-foot sidewalk width. As such, a 2-foot dedication is required to bring the 50-foot half right-of-way width into compliance with the City's 52-foot half right-of-way standard for Modified Boulevard II classification roadways. A relief from the required street dedication is being sought as part of the Proposed Project. This dedication would cause a reduction in the number of residential units that the applicant is entitled to build under the State Density Bonus Law and in the density of the commercial space of the Proposed Project with the loss of the property's square footage. La Cienega also serves as the project's primary frontage due to the location of bike path and Metro Line between the Project Site and Jefferson Boulevard. As such, the applicant desires to enhance the primary frontage.

The Applicant will need a waiver of this dedication for each of these reasons. Even if the dedication were granted, the street dedication of two (2) feet is not likely to occur south of the Project Site since the existing See's Candies building, which is located immediately south of the Project Site, was constructed with the façade directly at the current property line and is eligible for listing as a historic cultural monument which would render unlikely its future demolition or major renovation. Therefore, a continuous, expanded sidewalk width would not be afforded along the South La Cienega Boulevard corridor even with the dedication along the Proposed Project's frontage. In addition, the project proposes to provide a setback ranging from two (2) to eight (8) feet along South La Cienega Boulevard and will comply with any applicable open space and streetscape requirements of the West Adams CPIO District. Furthermore, the west side of South La Cienega Boulevard currently has a 50-foot half right-of-way width for the entire length of the roadway until Obama Boulevard to the south. No roadway widenings (i.e., curb line modifications) are

currently proposed on South La Cienega Boulevard, and for the reasons stated above, it is unlikely any widening would occur in the future.

The Proposed Project would nevertheless be consistent with the goals of the Mobility Plan even if the two-foot dedication is not granted since the Project would still advance all the Mobility Plan's mobility priorities without this dedication. For example, the Proposed Project would promote the Mobility Plan's priorities, including Safety First because the Proposed Project will preserve the safe operation of the existing street infrastructure that would serve the Project. All sidewalks, curb ramps and ADA ramps along the Project frontage would be designed in compliance with ADA standards. The Proposed Project would also provide sufficient off-street parking to accommodate the project's typical daily parking demand. The Proposed Project will improve the City's World Class Infrastructure, another mobility priority, by enhancing the pedestrian access, paths, bikeways, and street frontage along La Cienega Boulevard that serve the Project, the Metro Station the existing bikeways, as described above. By doing so, the Proposed Project would ensure fair and equitable access for all Angelenos and promote clean environments and healthy communities, two other Mobility Plan mobility priorities.

The Proposed Project will thus advance the Mobility Plan's mobility priorities and policies. Therefore, the Proposed Project is consistent with and would not obstruct the implementation of the Mobility Plan.

Plan for a Healthy Los Angeles

A Health and Wellness Element of the General Plan introduces guidelines for the City to follow to enhance the City's position as a regional leader in health and equity, encourage healthy design and equitable access, and increase awareness of equity and environmental issues.

The Proposed Project will be consistent with the Plan for a Healthy Los Angeles by including 22 very low-income affordable housing dwelling units, 7 workforce units, and prioritizing safety and access for all individuals utilizing the Project Site by complying with all ADA requirements and providing clearly distinct pedestrian and vehicular access points. The inclusion of low income and workforce housing helps to ease the region's housing burden and places low income and workforce housing near high quality transit, reducing the cost of transportation for the residents of those units who will not be required to drive long distances to jobs, shops and other amenities. Further, the Proposed Project supports healthy lifestyles by providing bicycle parking, access to the existing bike path, and enhancing the pedestrian environment by providing trees and landscaped plaza/s internal to the site to create a more comfortable environment for pedestrians. The project

also emphasizes sustainable design and materials to further the Plan's goals. Thus, the Proposed Project would be consistent with the goals of the Plan for a Healthy Los Angeles.

Land Use Element of the General Plan

The City General Plan's Land Use Element contains 35 Community Plans that establish specific goals and strategies for the various neighborhoods across Los Angeles. The Proposed Project is located in the West Adams-Baldwin Hills-Leimert Community Plan area. The Proposed Project site is also situated within the Jefferson/La Cienega Transit Oriented Development (TOD) Subarea of the West Adams-Baldwin Hills-Leimert Community Plan Implementation Overlay District (West Adams CPIO District). A detailed analysis of the Proposed Project's consistency with the West Adams-Baldwin Hills-Leimert Community Plan area is provided in Section Land Use of this SCEA as well as in the entitlement application. The Proposed Project is also consistent with the circulation standards and criteria of the West Adams-Baldwin Hills-Leimert Community Plan as the transportation system adjacent to the Project Site would adequately serve the traffic generated by the project without major congestion, as demonstrated by the Proposed Project's transportation assessments.

Los Angeles Municipal Code (LAMC) Section 12.21A.16 – Bicycle Parking

LAMC Section 12.21A.16 details the bicycle parking requirements for new developments. As described in the project description, construction of the Proposed Project would require 36 short-term and 186 long-term bicycle spaces. The Proposed Project's bicycle parking supply would comply and thus be consistent with these LAMC requirements.

LAMC Section 12.26.J – Transportation Demand Management

LAMC Section 12.26.J is the City's TDM Ordinance, which establishes trip reduction requirements for non-residential projects in excess of 25,000 square feet. The proposed project's new nonresidential components would exceed 25,000 square feet, and therefore LAMC Section 12.26J would apply to the Project. The Proposed Project would comply with and not conflict with the requirements of LAMC Section 12.26.J, as discussed below. The Proposed Project TDM strategies are in the form of education and encouragement regarding transportation options, implementation of a ride-share program, bicycle parking, and bicycle infrastructure such as lockers and showers. Implementation of these TDM strategies are included in the Project as project design features.

LAMC Section 12.37

LAMC Section 12.37 states that a project must dedicate and improve adjacent streets to half-right-of-way standards consistent with street designations from the Mobility Plan. A two (2)-foot dedication is required to bring the 50-foot half right-of-way width into compliance with the City's 52-foot half right-of-way standard for Modified Boulevard II classification roadways.

A relief from the required street dedication is being sought as part of the Proposed Project. This dedication would cause a reduction in the number of residential units that the applicant is entitled to build under the State Density Bonus Law and in the density of the commercial space of the Proposed Project with the loss of the property's square footage. La Cienega also serves as the project's primary frontage due to the location of bike path and Metro Line between the Project Site and Jefferson Boulevard. As such, the applicant desires to enhance the primary frontage. Even if the dedication were granted, the street dedication of two (2) feet is not envisioned to occur south of the Project Site since the existing See's Candies building, which is located immediately south of the Project Site, was constructed with the façade directly at the current property line. Therefore, a continuous, expanded sidewalk width would not be afforded along the South La Cienega Boulevard corridor even with the dedication along the Proposed Project's frontage. The existing See's Candies building is also eligible for listing as a historic cultural monument, resulting in the unlikely future demolition or major renovation of the structure. In addition, the project proposes to provide a setback ranging from two (2) to eight (8) feet along South La Cienega Boulevard and will comply with any applicable open space and streetscape requirements of the West Adams CPIO District. Furthermore, the west side of South La Cienega Boulevard currently has a 50-foot half right-of-way width for the entire length of the roadway until Obama Boulevard to the south. No roadway widenings (i.e., curb line modifications) are currently proposed on South La Cienega Boulevard, and for the reasons stated above, it is unlikely any widening would occur in the future. The Proposed Project is being designed to also comply with applicable Fire Department requirements as it relates to the internal roadway system. Thus, the Proposed Project would be consistent with LAMC Section 12.37.

Vision Zero Action and Corridor Plans

Vision Zero implements projects that are designed to increase safety on the most vulnerable City streets. The City has identified a number of streets as part of the High Injury Network (HIN) where City projects will be targeted. The Project Site is located adjacent to South La Cienega Boulevard, which is identified as part of the HIN. Therefore, the Proposed Project is expected to contribute additional vehicular or active transportation

trips to roadways designated as part of the HIN. The Proposed Project is being designed to be consistent with Vision Zero goals. The Proposed Project improvements to the pedestrian environment would not preclude future Vision Zero safety improvements by the City, should they be deemed necessary. Thus, the Project does not conflict with Vision Zero.

Streetscape Plans

The Proposed Project site is situated within the Jefferson/La Cienega Transit Oriented Development (TOD) Subarea of the West Adams-Baldwin Hills-Leimert Community Plan Implementation Overlay District (West Adams CPIO District). An overlay is an additional layer of planning control applied to properties in a clearly defined geographic area. Overlays function as tailored zoning districts, each with its own specialized set of regulations. Overlays implement the City's General Plan and Community Plans through neighborhood-specific policy objectives, supplementing the underlying base zoning. The Proposed Project will comply with any applicable open space and streetscape requirements of the West Adams CPIO District.

Citywide Design Guidelines

Citywide Design Guidelines (Los Angeles City Planning Urban Design Studio, October 2019) identify urban design principles to guide architects and developers in designing high-quality projects that meet the City's functional, aesthetic, and policy objectives and help foster a sense of community. The design guidelines are organized around the following approaches:

Pedestrian-first Design

- Guideline 1: Promote a safe, comfortable, and accessible pedestrian experience for all.
- Guideline 2: Carefully incorporate vehicular access such that it does not degrade the pedestrian experience.
- Guideline 3: Design projects to actively engage with streets and public space and maintain human scale.

The Proposed Project has been designed to encourage walking as a transportation mode¹³⁰. Walkways are planned within the Proposed Project which will connect to adjacent sidewalks in a manner that promotes walkability. Walkability indicates walking is readily available as a safe, connected, accessible and pleasant mode of transport. Several criteria are widely accepted as key aspects of walkability of urban areas that should be satisfied. The underlying principle is that pedestrians should not be delayed, diverted, or placed in danger. These criteria include:

- **Connectivity:** People can walk from one place to another without encountering major obstacles, obstructions, or loss of connectivity.
- **Convivial:** Pedestrian routes are friendly and attractive, and perceived as such by pedestrians.
- **Conspicuous:** Suitable levels of lighting, visibility and surveillance over its entire length, with high quality delineation and signage.
- **Comfortable:** High quality and well-maintained footpaths of suitable widths, attractive landscaping and architecture, shelter and rest spaces, and a suitable allocation of roadspace to pedestrians.
- **Convenient:** Walking is a realistic travel choice, partly because of the impact of the other criteria set forth above, but also because walking routes are of a suitable length as a result of land use planning with minimal delays.

These primary characteristics are accommodated within the Project. Proposed Project features would include landscaped and lighted pedestrian walkways connecting facilities within the site, as well as connections with the adjacent public sidewalks on the South La Cienega Boulevard and Jefferson Boulevard project frontages. In addition, the Proposed Project will have approximately one acre of ground level landscaping, open space, and interactive features including a new public plaza connecting with the bicycle path, Metro station, and surrounding neighborhood as well as a landscaped semi-public plaza located between the two buildings that stretch parallel to the bicycle path. Street trees and streetscape plantings should be introduced along the same public frontages in accordance with the City's standards. In addition, project signage could include general ground level and wayfinding pedestrian signage around the perimeter of the Project Site, building identification signs, and other sign types. Wayfinding signs would be located at

¹³⁰ For example, refer to <http://www.walkscore.com/>, which generates a walkability score of approximately 73 (Very Walkable) out of 100 for the project site. Walk Score calculates the walkability of an address by locating nearby stores, restaurants, schools, parks, etc. Walk Score measures how easy it is to live a car-lite lifestyle—not how pretty the area is for walking.

access points to the on-site amenities and facilities, parking areas, commercial and residential entries, corridors and elevator lobbies.

Regarding vehicle access, the existing vehicular driveway on South La Cienega Boulevard would continue to accommodate right-turn ingress and egress movements only for motorists accessing the Project Site.

A secondary, one-way exit is planned to be provided via a 20-foot strip of land connecting the project site to Corbett Street to the south. Corbett Street is a 40-foot private roadway located south of the project site and extends between Jefferson Boulevard to the west and South La Cienega Boulevard to the east. Motorists will be able to exit the Project Site southerly via the secondary access roadway and access South La Cienega Boulevard to the east (i.e., only left turns are allowed from the project site onto Corbett Street).

A residential vehicle drop-off area is planned to be provided at the southeast corner of the residential building. A vehicular drop-off area for the commercial uses is planned to be provided at the southwest corner of the commercial building. Both proposed drop-off areas will be accessed from the vehicular driveway on South La Cienega Boulevard. The design of vehicular access will not degrade the pedestrian experience as vehicles will be routed away from the primary pedestrian areas.

The Proposed Project would be consistent with the Design Guidelines. Adequate sidewalks will be provided and enhanced in accordance with the City's Living Streets design considerations. Additionally, street trees would be incorporated to provide shade for a more comfortable mobility environment for pedestrians. Therefore, the Proposed Project would align with Citywide Design Guidelines to provide a safe, comfortable, and accessible experience for all transportation modes.

As shown above, build-out (i.e., year 2025) of the Proposed Project has been found to be consistent with the relevant City plans, policies and programs and does not include any features that would preclude the City from completing and complying with these guiding documents and policy objectives. Further, the Applicant will comply with existing applicable City ordinances (e.g., the City's existing TDM Ordinance, referred to in the City of Los Angeles Municipal Code Section 12.26.J) and the other requirements pursuant to the City's Municipal Code.

b. *Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The State of California Governor’s Office of Planning and Research (OPR) issued proposed updates to the *CEQA Guidelines* in November 2017 and an accompanying technical advisory guidance finalized in December 2018 (OPR Technical Advisory) that amends the Appendix G threshold for significance for transportation impacts to delete reference to vehicle delay and level of service and instead refer to Section 15064.3, subdivision (b)(1) of the *CEQA Guidelines* asking if the project will result in a substantial increase in vehicle miles traveled (VMT).). The California Natural Resources Agency certified and adopted the *CEQA Guidelines* (Public Resources Code 21000–21189) in December of 2018 and are now in effect. Accordingly, the City of Los Angeles has adopted significance criteria for transportation impacts based on VMT for land use projects and plans in accordance with the amended Appendix G threshold for significance. For land use projects, the intent of this threshold is to assess whether vehicle miles traveled exceeds an applicable threshold of significance.

Screening Criteria

As outlined in the City’s current TAG, if the project requires discretionary action, and the answer is no to either T-2.1-1 or T-2.1-2 stated below, further analysis will not be required for CEQA Threshold T-2.1, and a “no impact” determination can be made for that threshold:

- T-2.1-1: Would the land use project generate a net increase of 250 or more daily vehicle trips?

For purposes of screening the daily vehicle trips, a proposed project’s daily vehicle trips should be estimated using the City’s VMT Calculator tool or the most recent edition of the ITE *Trip Generation Manual*. TDM strategies that are to be applied as mitigation measures should not be considered for the purposes of screening. If existing land uses are present on the Project Site or there were previously terminated land uses that meet the criteria for trip credits described in the trip generation methodology discussion (refer to Subsection 3.3.4.1 of the TAG), the

daily vehicle trips generated by the existing or qualified terminated land uses can be estimated using the VMT Calculator tool and subtracted from the Proposed Project's daily vehicle trips to determine the net increase in daily vehicle trips.

- T-2.1-2: Would the project generate a net increase in daily VMT?

For the purpose of screening the VMT, a project's daily VMT should be estimated using the City's VMT Calculator tool or the City's Travel Demand Forecasting (TDF) model. TDM strategies should not be considered for the purpose of screening. If existing land uses are present on the Project Site or there were previously terminated land uses that meet the criteria for trip credits description in the trip generation methodology discussion (refer to Subsection 3.3.4.1 of the TAG), the daily VMT generated by the existing or qualified terminated land uses can be estimated using the City VMT Calculator tool and subtracted from the project's daily VMT to determine the net increase in daily VMT.

In addition to the above screening criteria, the portion or the entirety of a project that contains small-scale or local serving retail uses¹³¹ are assumed to have less than significant VMT impacts. If the answer to the following question is no, then that portion of the project meets the screening criteria and a no impact determination can be made for the portion of the project that contains retail uses. However, if the retail project is part of a larger mixed-use project, then the remaining portion of the project may be subject to further analysis in accordance with the above screening criteria. Projects that include retail uses in excess of the screening criteria would need to evaluate the entirety of the project's VMT, as specified in Subsection 2.2.4 of the TAG.

- If the project includes retail uses, does the portion of the project that contain retail uses exceed a net 50,000 square feet?

Independent of the above screening criteria, and if the project requires a discretionary action, further analysis will be required if the following statement is true:

- Would the Project or Plan located within a one-half mile of a fixed-rail or fixed-guideway transit station replace an existing number of residential units with a smaller number of residential units?

For the purposes of screening for a proposed change in housing units located near fixed-rail or fixed-guideway transit for development projects, the total number of housing units

¹³¹ As noted in the TAG, the definition of retail for this purpose includes restaurant.

that exist on the Project Site should be counted and compared to the total number of housing units as proposed by the project to determine if the project would result in a net decrease in housing units.

Impact Criteria and Methodology

For development projects, the Proposed Project will have a potential VMT impact if the project meets the following:

- For residential projects, the project would generate household VMT per capita exceeding 15% below the existing average household VMT per capita for the Area Planning Commission (APC) area in which the project is located.
- For office projects, the project would generate work VMT per employee exceeding 15% below the existing average work VMT per employee for the APC in which the project is located.
- For regional serving projects including retail projects, entertainment projects, and/or event centers, the project would result in a net increase in VMT.
- For other land use types, measure VMT impacts for the work trip element using the criteria for office projects above.

Different VMT significance thresholds have been established for each APC boundary area as the characteristics of each are distinct in terms of land use, density, transit availability, employment, etc. As the Project Site is located in the South Los Angeles APC, the VMT impact criteria (i.e., 15% below the APC average) applicable to the Proposed Project is 6.0 daily household VMT per capita for the residential component and 11.6 daily work VMT per employee for the general office land use component.

The impact methodology set forth in the TAG for a mixed-use project such as the Proposed Project is as follows:

- **Mixed-Use Projects.** The project VMT impact should be considered significant if, after taking credit for internal capture, the project exceeds the impact criteria for any one (or all) of a particular project land use(s). In such cases, mitigation options that reduce the VMT generated by any or all of the land uses could be considered.

Transportation Demand Management Measures

The City's VMT Calculator tool also estimates the effectiveness of potential VMT reduction strategies both as project design features and as mitigation measures in

addition to estimating whether a development project exceeds the VMT thresholds. A total of 22 strategies are built into the VMT Calculator, covering several categories including parking, transit, education and encouragement, commute trip reductions, shared mobility, bicycle infrastructure, and neighborhood enhancements. These strategies address the potential VMT reductions available due to certain types of project site modifications, programming, and operational changes which are collectively known as Transportation Demand Management (TDM) strategies. The effectiveness of each strategy is primarily based on research documented in *Quantifying Greenhouse Gas Mitigation Measures (CAPCOA, 2010)*¹³². The VMT Calculator either utilizes the methodology provided in the CAPCOA document directly or adjusts the methodology to account for local needs and departmental goals. A detailed review of the 22 pre-defined TDM strategies included in the VMT Calculator, including the definitions, benefits, and applicability of each measure, is presented in Attachment G to the City's TAG, *Transportation Demand Management Strategies in LA VMT Calculator*.

The Applicant will comply with existing applicable City ordinances (e.g., the City's existing Transportation Demand Management [TDM] Ordinance, referred to in the City of Los Angeles Municipal Code Section 12.26.J) and the other requirements per the City's Municipal Code. The following TDM strategies included in the VMT Calculator have been applied as project design features:

- **Education and Encouragement: Promotions and Marketing.** This strategy involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices. This strategy includes passive educational and promotional materials, such as posters, info boards, or a website with information that a traveler could choose to read at their own leisure. For the purposes of the analysis, it is assumed that every employee would be eligible for passive marketing and promotional materials.
- **Commute Trip Reductions: Ride Share Program.** This strategy involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride-share vehicles, and a website or message board to connect riders and coordinate rides in order to increase vehicle occupancy. For the purposes of the analysis, it is assumed that every employee would be eligible for the ride-share program.

¹³² *Quantifying Greenhouse Gas Mitigation Measures*, California Air Pollution Control Officers Association (CAPCOA), 2010.

- **Bicycle Infrastructure: Include Bike Parking Per LAMC.** This strategy involves the implementation of short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Projects providing short-term and long-term bicycle parking in accordance with LAMC Section 12.21A.16 qualify for this measure. The applicant has indicated that the Proposed Project will comply with the short-term and long-term bicycle parking requirements of the Los Angeles Municipal Code.
- **Bicycle Infrastructure: Include Secure Bike Parking and Showers.** This strategy involves implementation of additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel by providing amenities at destinations. Projects providing long-term bicycle parking secured from the general public in accordance with LAMC Section 12.21A.16(d)(2) and showers in accordance with LAMC Section 91.6307 qualify for this measure. The applicant has indicated that the Proposed Project will comply with the requirements of the Los Angeles Municipal Code and provide showers, lockers, and bicycle storage with bicycle repair equipment, and 36 short term and 186 long term bicycle parking spaces.
- **Neighborhood Enhancement: Pedestrian Network Improvements.** This strategy involves implementation of pedestrian network improvements throughout and around the Project Site that encourage people to walk. This includes internally linking all uses within the Project Site with pedestrian facilities such as pathways and walkways and connecting the Project Site to the surrounding pedestrian network. It also includes the elimination of barriers such as walls, landscaping, and slopes that impede pedestrian circulation. The Proposed Project includes pedestrian infrastructure to connect facilities within the site and the surrounding street system. Proposed Project features include landscaped and lighted pedestrian walkways connecting facilities within the site, as well as connections with the adjacent public sidewalks on the South La Cienega Boulevard and Jefferson Boulevard project frontages. In addition, the Proposed Project will have approximately one acre of ground level landscaping, open space, and interactive features including a new public plaza connecting with the bicycle path, Metro station, and surrounding neighborhood as well as a landscaped semi-public plaza located between the two buildings that stretch parallel to the bicycle path. Street trees and streetscape plantings should be introduced along the same public frontages in accordance with the City's standards. In addition, Project signage could include general ground level and wayfinding pedestrian signage around the perimeter of the Project Site, building identification signs, and other sign types.

Summary of VMT Analysis

The daily vehicle trips and VMT expected to be generated by the Proposed Project were forecast using the City's VMT Calculator tool. The TDM strategies proposed as part of the project were incorporated into the base assumptions of the VMT calculator as project design features. The Proposed Project is forecast to generate the following with the above-referenced TDM strategies incorporated into the Proposed Project as project design features:

- A net total of 3,061 daily vehicle trips.
- A net total of 25,937 daily VMT.
- The estimated household VMT per capita for the Proposed Project is 6.0 VMT per capita, which is equal to the South Los Angeles APC significance threshold of 6.0 VMT per capita. Pursuant to the TAG, a development project will have a potential significant impact if the project meets the following: For residential projects, the project would generate household VMT per capita exceeding 15% below the existing average household VMT per capita for the APC area in which the project is located. The Proposed Project would not exceed the household VMT per capita for the South Los Angeles APC.

As stated in the City's TAG document (refer to page 2-12 of the TAG), analyses should consider both short-term and long-term project effects on VMT. Short-term effects are evaluated in the detailed project-level VMT analysis summarized above. Long-term, or cumulative, effects are determined through a consistency check with the Southern California Association of Government's (SCAG's) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The RTP/SCS is the regional plan that demonstrates compliance with air quality conformity requirements and greenhouse gas (GHG) reduction targets. As such, projects that are consistent with this plan in terms of development, location, density, and intensity, are part of the regional solution for meeting air pollution and GHG reduction goals. Projects that are deemed to be consistent would have a less than significant cumulative impact on VMT. Development in a location where the RTP/SCS does not specify any development may indicate a significant impact on transportation. However, as noted in the City's TAG document, for projects that do not demonstrate a project impact by applying an efficiency-based impact threshold (i.e., VMT per capita, VMT per employee, or VMT per service population) in the impact analysis, a less than significant project impact conclusion is sufficient in demonstrating there is no cumulative VMT impact and that such projects are consistent with the RTP/SCS. Projects, such as the Proposed Project that fall under the City's efficiency-based impact thresholds

are already shown to align with the long-term VMT and GHG reduction goals of SCAG's RTP/SCS. Based on the above, the Proposed Project's impacts are considered less than significant.

c. *Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A significant impact could occur if a project includes new roadway design or introduces a new land use or features into an area with specific transportation requirements and characteristics that have not been previously experienced in that area, or if project site access or other features were designed in such a way as to create hazard conditions.

For vehicle, bicycle and pedestrian safety impacts, a review of all project access points, internal circulation, and parking access from an operational and safety perspective (for example, turning radii, driveway queuing, line of sight for turns into and out of project driveway[s]) was conducted. Where project driveways would cross pedestrian facilities or bicycle facilities (bike lanes or bike paths), operational and safety issues related to the potential for vehicle/pedestrian and vehicle/bicycle conflicts and the severity of consequences that could result was considered. In areas with moderate to high levels of pedestrian or bicycle activity, the collection of pedestrian or bicycle count data is required.

The existing vehicular driveway on South La Cienega Boulevard would continue to accommodate right-turn ingress and egress movements only for motorists accessing the Project Site. A secondary, one-way exit is planned to be provided via a 20-foot strip of land connecting the project site to Corbett Street to the south. Motorists will be able to exit the Project Site southerly via the secondary access roadway and access South La Cienega Boulevard to the east (i.e., only left turns are allowed from the project site onto Corbett Street).

A residential vehicle drop-off area is planned to be provided at the southeast corner of the residential building. A vehicular drop-off area for the commercial uses is planned to be provided at the southwest corner of the commercial building.

As the Proposed Project driveway location is essentially the same as what exists under current conditions and based on a review of the forecast net new weekday AM and PM peak hour project traffic volume, no safety concerns related to geometric design are noted. Moreover, the Proposed Project would not include unusual or hazardous design features that are atypical to large scale commercial and residential developments. Impacts would be less than significant.

d. *Would the project result in inadequate emergency access?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A significant impact could occur if the Project design would not provide emergency access meeting the requirements of the LAFD, or in any other way threatened the ability of emergency vehicles to access and serve the Proposed Project Site or adjacent uses. Development of the Project Site may require temporary and/or partial street and sidewalk closures due to construction activities. Such closures would be coordinated with the City of Los Angeles Departments of Transportation, Buildings and Safety, and the Department of Public Works. Closures would not be expected to interfere with emergency response or evacuation plans. As described under Public Services, this Proposed Project would satisfy the emergency response requirements of the LAFD. No hazardous design features are included in the access design or site plan for the Project that could impede emergency access. Furthermore, the Proposed Project would be subject to site plan review by the LAFD and the LAPD to ensure that all access roads, driveways, and parking areas would remain accessible to emergency service vehicles. Because the Proposed Project would not be expected to result in inadequate emergency access, impacts would be less than significant.

18. Tribal Cultural Resources

a. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size*

and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*

- ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant. The Proposed Project is subject to compliance with Assembly Bill 52 (AB 52), which requires consideration of impacts to “tribal cultural resources” as defined in Public Resources Code 21074 as part of the CEQA process. It requires the City to notify any tribes who are traditionally or culturally affiliated with the geographic area of the Project.

A search result for the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was received on January 8, 2021. The result was positive and suggested that the Gabrieleno/Tongva San Gabriel Band of Mission Indians be contacted. The NAHC also provided a list of six additional tribal entities (Gabrieleno Band of Mission Indians – Kizh Nation, Gabrielino/Tongva Nation, Gabrielino Tongva Indians of California Tribal Council, Gabrielino- Tongva Tribe, Santa Rosa Band of Cahuilla Indians, Soboba Band of Luiseno Indians) who may also have knowledge of cultural resources in the Project area. A letter of inquiry was sent to the Gabrieleno/Tongva San Gabriel Band of Mission Indians on January 11, 2021, but no response has been received to date.

As described in the Cultural Resources section of this SCEA, an archaeological report was prepared in anticipation of the Proposed Project.¹³³ The report noted that the archaeological pedestrian survey did not result in the identification of any prehistoric or historic archaeological sites. However, several prehistoric sites have been previously

¹³³ Cultural Resources Study Results for the 3401 W. La Cienega Boulevard Redevelopment Project, ASM Affiliates Inc., February 2021.

documented in proximity to the Project and the NAHC search of the Sacred Lands File returned a positive result indicating that there are potential tribal cultural resources in the area that could be impacted by the Proposed Project.

While unlikely, it is possible that unknown archaeological resources or human remains could exist at the Project Site and could be encountered during excavation for the two proposed subterranean parking levels. As noted in Section 5(b) of this SCEA, the Project incorporate Mitigation Measures CR5 through CR8 of the West Adams Community Plan EIR, which would minimize impacts in the event archaeological resources are encountered during construction.

Past industrial use of the Project Site makes it unlikely that any previously undisturbed resources would be uncovered during Project construction. Further, the City has established a standard condition of approval (provided below) to address the inadvertent discovery of tribal cultural resources. Should tribal cultural resources be inadvertently encountered, this condition of approval provides for temporarily halting of construction activities near the encounter, having the Project's certified construction monitor such activities for this purpose, and notifying the City and Native American tribes that have informed the City that they are traditionally and culturally affiliated with the geographic area of the Proposed Project. If the City determines that the object or artifact appears to be a tribal cultural resource in case tribal resources are encountered. In the event of such an inadvertent discovery the City would provide any affected tribe a reasonable period of time to conduct a site visit and make recommendations regarding the monitoring of future ground disturbance activities, as well as the treatment and disposition of any discovered tribal cultural resources.

Condition of Approval

Inadvertent discovery of tribal cultural resources: If objects or artifacts that may be tribal cultural resources are encountered during the course of any ground disturbance activities, all such activities shall temporarily cease on the Project Site until the potential tribal cultural resources are properly assessed and addressed pursuant to the process set forth below:

- Upon a discovery of a potential tribal cultural resource, the project permittee shall immediately stop all ground disturbance activities and contact the following: (1) all California Native American tribes that have informed the City they are traditionally and culturally affiliated with the geographic area of the Proposed Project; and (2) the Department of City Planning at (213) 978-1454.

- If the City determines, pursuant to PRC Section 21074(a)(2), that the object or artifact appears to be a tribal cultural resource, the City shall provide any affected tribe a reasonable period of time, not less than 14 days, to conduct a site visit and make recommendations to the project permittee and the City regarding the monitoring of future ground disturbance activities and the treatment and disposition of any discovered tribal cultural resources.
- The project permittee shall implement the tribe's recommendations if a qualified archaeologist, retained by the City and paid for by the project permittee, reasonably concludes that the tribe's recommendations are reasonable and feasible.
- The project permittee shall submit a tribal cultural resource monitoring plan to the City that includes all recommendations from the City and any affected tribes that have been reviewed and determined by the qualified archaeologist to be reasonable and feasible. The project permittee shall not be allowed to recommence ground disturbance activities until the City approves this plan.
- If the project permittee does not accept a particular recommendation determined to be reasonable and feasible by the qualified archaeologist, the project permittee may request mediation by a mediator agreed to by the permittee and the City who has the requisite professional qualifications and experience to mediate such a dispute. The project permittee shall pay any costs associated with the mediation.
- The project permittee may recommence ground disturbance activities outside of a specified radius of the discovery site, so long as this radius has been reviewed by the qualified archaeologist and determined to be reasonable and appropriate.
- Copies of any subsequent prehistoric archaeological study or tribal cultural resources study or report detailing the nature of any significant tribal cultural resources, remedial actions taken, and disposition of any significant tribal cultural resources shall be submitted to the SCCIC at California State University, Fullerton.
- Notwithstanding the above, any information determined to be confidential in nature by the City Attorney's office shall be excluded from submission to the SCCIC or the public under the applicable provisions of the California Public Records Act, California PRC, and shall comply with the City's AB 52 Confidentiality Protocols.

19. Utilities and Service Systems

- a. *Would the project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact.

Water

Water services for this Project would be provided by the Los Angeles Department of Water and Power (LADWP). LADWP is the primary provider of water and electric services for the City of Los Angeles, servicing more than four million customers in 473 square miles through an intricate network of more than 7,000 miles of pipes.¹³⁴ The Project Site would be served by the existing system of water lines.

The 2015 Urban Water Management Plan (UWMP) was adopted in June 2016, and projects a demand of 611,800 acre-feet per year (AFY) in 2020 and 644,700 AFY in 2025.¹³⁵ The UWMP forecasts water demand by estimating baseline water consumption by use (single-family, multi-family, commercial/government, industrial), then by adjusting for projected changes in socioeconomic variables (including personal income, family size, conservation effects) and projected growth of different uses based on SCAG's 2012 RTP.¹³⁶ The 2012 RTP models local and regional population, housing supply and jobs using a model accounting for job availability by wage and sector and demographic trends (including household size, birth and death rates, migration patterns and life expectancy).¹³⁷ Neither the UWMP forecasts, nor the 2012 RTP include parcel level zoning and land use designation as an input.

¹³⁴ Los Angeles Department of Water and Power, Facts & Figures, accessed on February 18, 2021, https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-factandfigures?_afrcLoop=19640900766831.

¹³⁵ 2015 Urban Water Management Plan, Los Angeles, pg. ES-23.

¹³⁶ 2015 Urban Water Management Plan, Los Angeles, pgs. 1-12.

¹³⁷ SCAG, 2012 Regional Transportation Plan Growth Forecast Report, pgs 2-10.

At the City level, any shortfall in LADWP controlled supplies (groundwater, recycled, conservation, LA aqueduct) is offset with Metropolitan Water District (MWD) purchases to rise to the level of demand. As recently as March 2021, MWD has recognized uncertainties in water demand and supply. Future population growth, drought/environmental conditions, housing mix and economy are drivers that will have considerable influence on future demands on MWD supplies. While uncertainties exist, in its current form, the UWMP demonstrates adequate capacity currently and future capacity to accommodate City growth into which the Project would easily fit. Further, the Project does not propose any changes to the zoning or land use designation for the Project Site, and therefore, the water demand for the Project was also accounted for within the analysis contained in the water demand estimates in the West Adams-Baldwin Hills-Leimert Community Plan EIR. The West Adams Community Plan EIR determined the area had an existing demand of 22,475,081 gallons per day.¹³⁸ The EIR assumed implementation of the Plan¹³⁹ would result in a 17% increase in water demand as compared to existing water usage within the West Adams CPA. When compared to total water supplied by LADWP in 2008 (the year of the EIR), the increase in water usage at full implementation of the Proposed Project in year 2030 would represent an additional 0.66% of water supplied by LADWP in year 2008. Of total expected water supplies available in year 2030, the water usage increase within the West Adams CPA due to the Proposed Project would represent an additional 0.61% of total expected water supplies and impacts therefore would be less than significant.

As shown on **Table IV-24**, the Proposed Project would demand an increase of approximately 68,235 gallons of water per day (or 0.068 mgd). This would account for approximately 0.3% of the existing water demand for the West Adams-Baldwin Hills-Leimert CPA and is well within the estimates for the West Adams Community Plan EIR, which did not identify significant impacts for wastewater. This total is a conservative estimate as it does not take any credit for any proposed sustainable and water conservation features of the Project. As provided in the Project Description, the Project includes numerous sustainable features aimed at increasing energy efficiency, reducing GHG emissions and water demand. These features include:

- Utilizing non-potable water for project irrigation and flushing demand

¹³⁸ City of Los Angeles Planning Department. West Adams-Baldwin Hills-Leimert Community Plan EIR. Available at: <https://planning.lacity.org/eir/westadams/westAdamsCoverPg.html>, accessed September 23, 2021.

¹³⁹ The West Adams EIR assumed the following persons for buildout of the Plan in 2030: 30,903 single family units; 55,215 multi-family units; 44,329 commercial employees; 5,780 industrial employees, 216 open space employees; 2,787 public facilities employees.

- Reduction in cooling tower demand
- Green roof
- Permeable surfaces such as concrete pavers

Therefore, impacts related to water supply would be less than significant.

**Table IV-24
Project Water Generation During Operation**

Land Use	Size	Generation Rate (gallons per day)	Water Demand (gallons per day)
Studio	26 du	90 gpd/du	2,340 gpd
1-Bedroom	143 du	132 gpd/du	18,876 gpd
2-bedroom	78 du	180 gpd/du	14,040 gpd
3-bedroom	13 du	228 gpd/du	2,964 gpd
Office	227,543 sf	144 gpd/1000 gsf	32,766 gpd
Retail	2,869 sf	30 gpd/1000 gsf	86 gpd
Subtotal Proposed			71,072 gpd
Existing			2,837 gpd
Net New			68,235 gpd

Source: Estimated water demand is generated using the water demand rates and methodology described in the City of Los Angeles, Department of Public Works, Bureau of Sanitation Sewer Generation Rates (2012)). water consumption is assumed to be 120 % of wastewater generation.

The proposed development land uses will conform to Water-Efficiency Requirements Ordinance No. 180822, 2013 California Plumbing Code, 2013 California Green Building Code (CALGreen), 2014 Los Angeles Plumbing Code, and 2014 Los Angeles Green Building Code.

Wastewater

The Los Angeles Bureau of Sanitation would provide sewer service to the proposed Project area. Sewage from the Project Site would be conveyed through existing infrastructure and deposited at the Hyperion Treatment Plant (HTP). The HTP treats an average daily flow of 260 million gallons per day (mgd)¹⁴⁰ and has the capacity to treat 450 mgd.¹⁴¹ This equals a remaining capacity of 190 mgd of wastewater able to be treated at the HTP.

¹⁴⁰ City of Los Angeles Department of Public Works, Bureau of Sanitation. 2019. Sewer System Management Plan. Available at: <https://www.lacitysan.org/cs/groups/public/documents/document/y250/mdm1/~edisp/cnt035427.pdf>, accessed on September 23, 2021.

¹⁴¹ City of Los Angeles Department of Public Works, Bureau of Sanitation, "Wastewater System Fact Sheet" (2014).

The West Adams EIR evaluated capacity of the Plan area and determined that full implementation of the Plan would cause wastewater generation to increase by approximately 5.5 mgd over existing wastewater generation within West Adams CPA. This amounts to an increase of less than 1% of the current maximum treatment capacity of all four treatment plants (580 mgd). As shown in **Table IV-25**, the Proposed Project is estimated to generate a net total of approximately 56,413 gallons per day (or 0.056 mgd) of wastewater and is well within estimates for the CPA. With a remaining daily capacity of 190 mgd, the HTP would have adequate capacity to serve the Project's projected 0.056 mgd generation. Furthermore, the Proposed Project is not located in an area already experiencing constrained sewer capacity.¹⁴² Further, as stated above, the Proposed Project does not propose any changes to the zoning or land use designation for the Project Site, and therefore, the wastewater generation for the Project was accounted for within City and regional estimates. Furthermore, the Project Applicant shall be required to implement applicable LA Green Building Code requirements that would further reduce wastewater flow. Features would include:

- Graywater waste drainage system
- Grease waste collection system
- Stormwater drainage system connected to infiltration or rainwater retention system.

Therefore, impacts related to wastewater treatment would be less than significant, and the Proposed Project would be adequately served by the City's wastewater facilities. As part of the Project's permit process, the City would conduct further detailed gauging and evaluation to identify specific sewer connection points. If additional sewer line capacity is needed to serve the Proposed Project, the Project Applicant would be required to install adequately sized sewer lines. Thus, sewer infrastructure would be adequate to accommodate the Proposed Project. Therefore, impacts related to wastewater service would be less than significant.

¹⁴² City of Los Angeles Planning Department. West Adams-Baldwin Hills-Leimert Community Plan EIR. Available at: <https://planning.lacity.org/eir/westadams/westAdamsCoverPg.html>, accessed September 23, 2021.

**Table IV-25
Project Wastewater Generation During Operation**

Land Use	Size	Generation Rate (gallons per day)	Water Demand (gallons per day)
Studio	26 du	75 gpd/du	1,950 gpd
1-Bedroom	143 du	110 gpd/du	15,730 gpd
2-bedroom	78 du	150 gpd/du	11,250 gpd
3-bedroom	13 du	190 gpd/du	2,470 gpd
Office	227,543 sf	120 gpd/1000 gsf	27,305 gpd
Retail	2,869 sf	25 gpd/1000 gsf	72 gpd
Subtotal Proposed			58,777 gpd
Existing			2,364 gpd
Net New			56,413 gpd

Source: Estimated water demand is generated using the water demand rates and methodology described in the City of Los Angeles, Department of Public Works, Bureau of Sanitation Sewer Generation Rates (2012)).

The proposed development land uses will conform to Water-Efficiency Requirements Ordinance No. 180822, 2013 California Plumbing Code, 2013 California Green Building Code (CALGreen), 2014 Los Angeles Plumbing Code, and 2014 Los Angeles Green Building Code.

Stormwater

The Project Site is located within the Ballona Creek urban watershed¹⁴³ in a developed area of Los Angeles served by LA Sanitation. Therefore, this Project would be subject to the policies of the Watershed Protection Program, which employs a multi-pronged approach to ensure the City of Los Angeles is in compliance with regulations and reduce the amount of pollution flowing into and through regional waterways.¹⁴⁴ One such regulation includes the LID Ordinance. The primary purpose of the LID Ordinance is to ensure development projects mitigate runoff in a manner that captures rainwater and removes pollutants while reducing the volume and intensity of stormwater flows. The Stormwater LID Ordinance requires LID measures be incorporated into the design of all development and redevelopment projects that have a land disturbance activity and add, create or replace 500 square feet or more of impervious area. The Ordinance requires the preparation of a LID Plan and a Standard Urban Stormwater Mitigation Plan (SUSMP) if necessary. The LID Ordinance requires projects to capture and treat the first 3/4-inch of

¹⁴³ Los Angeles Geohub. *Watersheds*. <https://geohub.lacity.org/datasets/watersheds?geometry=-118.375%2C34.025%2C-118.370%2C34.027>.

¹⁴⁴ Watershed Protection, LA Sanitation – City of Los Angeles, https://www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-wp?_afLoop=2799911397528235&_afWindowMode=0&_afWindowId=null&_adf.ctrl-state=nghx0d7oj_299#!%40%40%3F_afWindowId%3Dnull%26_afLoop%3D2799911397528235%26_afWindowMode%3D0%26_adf.ctrl-state%3Dnghx0d7oj_303.

rainfall in accordance with established stormwater treatment priorities. Although final LID measures will be determined in coordination with the City, the Proposed Project will be required to comply with LID requirements for stormwater. In accordance with LID requirements, the Proposed Project will implement a LID system to mitigate stormwater by reducing pollutants and retaining stormwater on site. Los Angeles operates on a priority-based system requiring captured stormwater to be infiltrated into the ground, if site conditions allow, which will be determined by a geotechnical engineer. If infiltration is not feasible then a capture and use system will be implemented. If a capture system is deemed infeasible then biotreatment will be required. If biotreatment is used, the Proposed Project will need to capture 150 % of the design stormwater volume. Based on the City standards, the Proposed Project will need to treat approximately 93,500 gallons of stormwater on site.¹⁴⁵

Further, as detailed in ‘Hydrology and Water Quality’ above, the Proposed Project is required to obtain coverage under the General Permit for Discharges of Storm Water Associated with Construction Activity Construction General Permit Order 2009-0009-DWQ¹⁴⁶ as well as NPDES Construction General Permit and a SWPPP would be prepared and implemented for the Proposed Project in compliance with the requirements of the NPDES Permit. The SWPPP would identify construction BMPs to be implemented to ensure that the potential for soil erosion and sedimentation is minimized and to control the discharge of pollutants in stormwater runoff as a result of construction activities.

Electric power, Natural gas, and Telecommunications

Based on the survey and existing Los Angeles records, there are several utility easements in and near the Project Site. There is a 40-foot-wide existing easement for sewer, water, and gas. The easement is defined as Corbett Street (a private street) located 250 feet south of the Project Site. The easement extends 1,025 feet to the west from La Cienega Boulevard. The sanitary sewer and water line are owned by the City of Los Angeles and the gas line is owned by Southern California Gas. New connection to the private street utilities would require further approval of the private owner and the City. The portion of the existing self-storage facility proposed to be demolished does not contain electrical, gas, or telecommunications generation or transmission infrastructure that would need to be relocated off-site.

¹⁴⁵ Preliminary Engineering Feasibility Report, KPFF, October 28, 2020.

¹⁴⁶ Watershed Protection, General Construction Activity Stormwater Permit, LA Sanitation – City of Los Angeles, https://www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-wp/s-lsh-wwd-wp-ec/s-lsh-wwd-wp-ec-rm?_afLoop=2802032421121765&_afWindowMode=0&_afWindowId=null&_adf.ctrl-state=nghx0d7oj_1068#!%40%40%3F_afWindowId%3Dnull%26_afLoop%3D2802032421121765%26_afWindowMode%3D0%26_adf.ctrl-state%3Dnghx0d7oj_1072.

The Proposed Project will be all electric and will not use natural gas. The Project Site is located in a developed, urbanized portion of Los Angeles that is served by existing electric power, and telecommunications services. Electricity would be provided by LADWP. In the context of the greater Los Angeles service area and the growth forecasts used by utility service providers, the Proposed Project would not be a substantial source of new unplanned demand for electrical, gas or telecommunications services (Refer to **Section IV-6, Energy**, above). New connections for the Proposed Project would be coordinated with the appropriate service provider. Any trenching or other excavation within the public right of way would also be coordinated with the City Department of Public Works.

As such, the Project would not require relocation of electrical, gas, or telecommunications facilities, the relocation of which could cause significant environmental effects. Therefore, impacts to water, wastewater, stormwater, and other utilities would be less than significant

- b. *Would the project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Refer to 'a' above. As shown in **Table IV-28** under projected water use, the Proposed Project would result in a net increase of approximately 68,235 gallons per day in water consumption. The Proposed Project does not materially alter socioeconomic variables or projected growth by use which means the anticipated land use on the Project Site was accounted for in estimates prepared by LADWP. The UWMP demonstrates adequate current and future capacity to accommodate City growth into which the Proposed Project would easily fit. Further, water demand estimates in for the West Adams Community Plan assumed buildout of the Plan area, including more than 55,215 new multifamily dwelling units and 44,329 new employees. The Proposed Project includes 260 multifamily units and is well within the capacity evaluated in the West Adams Community Plan EIR. Of total expected water supplies available in year 2030, the water usage increase within the entire West Adams CPA due to the Plan would represent an additional 0.61% of total expected water supplies. Therefore, the anticipated increase in demand for water supplies on the Project Site represents a small proportion of total anticipated water supplies in year 2030. Additionally, the Proposed Project includes **PDF-1** to reduce water demand. Therefore, the water demand for the Project was also

accounted for within the analysis contained in the West Adams EIR and impacts would be less than significant.

- c. *Would the project result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. Refer to 'a' above. With a remaining daily capacity of 88 mgd, the HTP would have adequate capacity to serve the Proposed Project's projected 0.056 mgd generation. Further, as stated above, the Proposed Project does not propose any changes to the zoning or land use designation for the Project Site, and therefore, the wastewater generation for the Project was accounted for within City and regional estimates.

- d. *Would the project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact.

Solid waste generated within the City is disposed of at privately owned landfill facilities throughout the County of Los Angeles. While the Bureau of Sanitation provides waste collection services to single-family and some small multifamily developments, private haulers provide waste collection services for most multifamily residential and commercial developments within the City. Solid waste transported by both public and private haulers is recycled, reused, and transformed at a waste-to-energy facility, or disposed of at a landfill. The County's Public Works Department prepares an annual report on solid waste management in the County in order to help meet long-term needs and maintain adequate capacity. Landfills within the County are categorized as either Class III or unclassified landfills. Non-hazardous municipal solid waste is disposed in Class III landfills, while inert waste such as construction waste, yard trimmings, and earth-like waste are disposed of

in unclassified landfills.¹⁴⁷ The Countywide Class III landfill remaining capacity is estimated to be 148.4 million tons.¹⁴⁸

Pursuant to the requirements of Senate Bill 1374, the Project would implement a construction waste management plan to recycle and/or salvage a minimum of 75% of nonhazardous demolition and construction debris. Materials that could be recycled or salvaged include asphalt, glass, and concrete.

As shown in **Table IV-26**, after accounting for mandatory recycling, the Proposed Project would result in approximately 2,337 tons of construction waste. Given the remaining 148.4 million tons of capacity at the Class III landfills within the County, the landfills serving the Project Site would have sufficient capacity to accommodate the Project’s construction solid waste disposal needs.

**Table IV-26
Project Construction Waste Generation**

Land Use	Size	Generation Rate (Lb/sf)	Total (tons)
Residential (Multi-family)	230,412 sf	4.05	467
Office	227,543 sf	3.92	446
Retail	2,869 sf	4.00	6
Demolition of Existing	78,793 sf	36.00	1,418
Total			2,337

Note: sf = square feet; 1 ton = 2,000 pounds. Rate: U.S. Environmental Protection Agency, Report No. EPA530-98-010, Characterization of Building Related Construction and Demolition Debris in the United States, June 1998, Table 3, Table 4 and Table 6. Generation rates used in this analysis are based on an average of individual rates assigned to specific building types
Impact Sciences, 2021

As shown in **Table IV-27**, the Proposed Project’s operations would generate a net increase of approximately 370 tons per year. The estimated solid waste is conservative because the waste generation factors used do not account for recycling or other waste diversion measures such as compliance with Assembly Bill 341, which requires California commercial enterprises and public entities that generate four cubic yards or more per

¹⁴⁷ Inert waste is waste which is neither chemically or biologically reactive and will not decompose. Examples of this are sand and concrete.

¹⁴⁸ Los Angeles County Public Works. 2020. Integrated Waste Management Plan: 2019 Annual Report. Available at: <https://dpw.lacounty.gov/epd/swims/ShowDoc.aspx?id=14372&hp=yes&type=PDF>, accessed on September 23, 2021.

week of waste, and multi-family housing with five or more units, to adopt recycling practices. Likewise, the analysis does not include implementation of the City’s Zero Waste LA franchising system, which is expected to result in a reduction of landfill disposal Citywide with a goal of reaching a Citywide recycling rate of 90% by the year 2025.¹⁴⁹

The increase in solid waste disposal from the Proposed Project’s operations would represent an approximate 0.01% increase in the City’s annual solid waste disposal quantity, based on the 2017 disposal of approximately 3.2 million tons. The increase in solid waste disposal would represent approximately 0.0003% of the estimated remaining Class III landfill capacity of 149.77 million tons available to the City of Los Angeles.

**Table IV-27
Projected Daily Solid Waste Generation**

Land Use	Size	Generation Rate	Total (tons/year)
Residential (Multi-family)	260 du	4 lbs/dwelling unit/day	190
Office	227,543 sf	6 lbs/1000 sf/day	249
Retail	2,869 sf	5 lbs/1000 sf/day	3
Projected Subtotal			442
Existing			72
Net Increase			370

Source: CalRecycle Estimated Solid Waste Generation Rates for Commercial, Service, and Residential uses, <https://www2.calrecycle.ca.gov/wastecharacterization/general/rates>

Note: sf = square feet; 1 ton = 2,000 pounds; du = dwelling unit

Based on the above, landfills that serve the Project Site would have sufficient permitted capacity to accommodate solid waste generated by construction and operation of the Proposed Project. Therefore, impacts would be less than significant.

¹⁴⁹ The Zero Waste LA Franchise System would divide the City into 11 zones and designate a single trash hauler for each zone. Source: LA Sanitation, “Zero Waste LA—Franchise,” www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-s/s-lshwwd-s-zwlaf.jsessionid=nJABd_CcLHL4DCOkGSCJWv1buV9atyQtoUkP50TwYHe5jczy6OaK!782088041!NONE?_afLoop=17071741526736871&_afWindowMode=0&_afWindowId=null#!%40%40%3F_afWindowId%3Dnull%26_afLoop%3D17071741526736871%26_afWindowMode%3D0%26_adf.ctrl-state%3Dqe1mehnju_4

- e. *Would the project comply with federal, state, and local management and reduction statutes and regulations related to solid waste?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. A significant impact could occur if a project would generate solid waste that was not disposed of in accordance with applicable regulations. The Project would generate solid waste that is typical of retail and mixed-use residential buildings and would comply with all federal, State, and local statutes and regulations regarding proper disposal. Impacts would be less than significant.

20. Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

- a. *Would the project substantially impair an adopted emergency response plan or emergency evacuation plan?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Project Site is located in an urbanized and built out area surrounded by existing roadways, transportation rails, and other infrastructure, and is not located in a Very High Fire Hazard Zone.¹⁵⁰ The City of Los Angeles Emergency Operations Plan – Evacuation Annex identifies the LAFD as the lead in conducting evacuations for brush fires.¹⁵¹ The Evacuation Annex’s objectives include providing a concept of operations to support evacuation procedures including transportation resources. The Project Site is surrounded on all sides by existing infrastructure including roadways a bike path, and an elevated transit line. A major freeway, Interstate 10, is located about half a mile from the Site, providing ready access to residents and

¹⁵⁰ The Very High Fire Hazard Severity Zone (or “Zone”) was first established in the City of Los Angeles in 1999 and replaced the older “Mountain Fire District” and “Buffer Zone.” The “Zone” was carefully determined according to California State Law. Los Angeles Fire Department, Fire-Zone, <https://www.lafd.org/fire-zone>.

¹⁵¹ City of Los Angeles Evacuation Annex 2018, https://emergency.lacity.org/sites/g/files/wph1791/files/2021-04/evacuation_annex_2018.pdf

employees of the Proposed Project. Therefore, there is ample opportunity for residents and employees to vacate in the event of a wildfire. Accordingly, the Project would not impair any adopted emergency response plan or emergency evacuation plan and impacts would therefore be less than significant.

- b. *Due to slope, prevailing winds, and other factors, would the project exacerbate wildfire risks and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Kenneth Hahn State Recreation Area is located approximately one and a half miles to the south and is an LAFD identified Very High Fire Zone. However, the Project Site and the intervening area does not have wildlands or natural habitat that could exacerbate an ongoing fire. The Project Site and surrounding area have long been fully developed with industrial, commercial, and residential uses in a highly urbanized fashion and does not contain vegetation that could contribute to the uncontrolled spread of wildfire. Therefore, given the urbanized location of the Project Site, the Project does not include any features that would exacerbate wildfire risk. This would result in a less than significant impact.

- c. *Would the project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Less than Significant Impact. The Project Site is located within an urbanized area of the City and does not include wildlands or high fire terrain. The Site is surrounded by existing infrastructure including roadways and a transit metro line and would not require the installation or maintenance of roads, fuel breaks, emergency water or other sources that could exacerbate fire risk. During construction, the Project would require temporary power from existing power lines. However, maintenance of these temporary power

sources would be in accordance with LAFD requirements. As such, in the unlikely event of a fire on the Project Site during construction, accepted protocols would be followed to minimize risk to surrounding areas. Due to the urbanized nature of the area, it is unlikely any fire would spread beyond the confines of the Project Site. Therefore, impacts would be less than significant.

d. Would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Potentially Significant Impact	Significant Unless Mitigation is Incorporated	Less than Significant Impact	No Impact
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

No Impact. The Project Site is relatively flat and would not be subject to any post fire slope instability or landslides. The Project Site is not within a designated Landslide Zone.¹⁵² Therefore, there would be no impact.

21. Earlier Analysis

Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. See *CEQA Guidelines* Section 15063(c)(3)(D).

Earlier analysis used are listed below:

- West Adams-Baldwin Hills-Leimert Park New Community Plan Final EIR. May 2016. Available at: <https://planning.lacity.org/eir/westadams/FEIR/West%20Adams%20New%20Community%20Plan%20Final%20EIR.html>
- Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy) Final Program EIR. May 2020. Available at: https://scag.ca.gov/sites/main/files/file-attachments/fpeir_connectsocial_complete.pdf?1607981618

¹⁵² California Department of Conservation. Earthquake Zones of Required Investigation. Available at: <https://maps.conservation.ca.gov/cgs/EQZApp/app/>, accessed August 20, 2021.

22. Mandatory Findings of Significance

- a. *Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?*

Less than Significant Impact. As discussed under **Section IV.4, Biological Resources**, the Project would not impact any endangered fauna or flora. The West Adams CPA EIR provides Mitigation Measure BR1 that ensures compliance with the MBTA, which the Project would include as a condition of approval. Further, because of the highly urbanized nature of the Project Site and the surrounding area, construction and operation of the Proposed Project would not impact the habitat or population of the Project Site and the surrounding area. The Project would not impact the habitat or population level of fish or wildlife species, nor would it threaten a plant or animal community, nor impact the range of a rare-endangered plant or animal.

As discussed in **Section IV.5, Cultural Resources**, potential impacts related to historical, archaeological, and paleontological resources would be less than significant following the implementation of West Adams – Baldwin Hills- Leimert Community Plan EIR Mitigation Measures as conditions of approval.

Therefore, the Project will not substantially degrade the quality of the land, air, water, minerals, flora, fauna, noise and objects of historic or aesthetic significance.

- b. *Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?*

Less than Significant Impact. The potential for cumulative impacts occurs when the independent impacts of the Project are combined with impacts from other developments to result in impacts that are greater than those of this Project alone. Located within the vicinity of the Project Site are other past, current, and reasonably foreseeable projects whose development, in conjunction with that of the Project, may contribute to potential cumulative impacts. However, based on the proceeding discussions, no unmitigatable significant impacts were identified for the environmental resources identified in this SCEA. Further, the West Adams EIR evaluated the cumulative impacts of development within the Community Plan Area where the Proposed Project is located and is relied on in this

SCEA. The Proposed Project would not result in any unmitigated significant impacts pursuant to the topics analyzed in the above Environmental Checklist, and therefore cumulative impacts would be less than significant.

- c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

Less than Significant With Mitigation Incorporated. A significant impact could occur if the Project has the potential to result in significant impacts. As identified throughout this SCEA, the Proposed Project would have no unmitigable significant impacts that would cause substantial adverse effects to human beings directly or indirectly. Any potentially significant impacts would be reduced to less than significant levels through the implementation of the applicable conditions of approval and mitigation measures recommended. Therefore, the impact would be less than significant with mitigation incorporated.

V. LIST OF PREPARERS

Impact Sciences, Inc., has prepared this environmental document under contract to the Lendlease Corporation. Persons directly involved in the review and preparation of this report include:

Impact Sciences, Inc.

Jessica Kirchner Flores, AICP, Managing Principal

Doug Kim, AICP, Principal

3401 South La Cienega Proposed Project - Los Angeles-South Coast County, Annual

3401 South La Cienega Proposed Project
Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	263.00	1000sqft	6.04	263,000.00	0
Enclosed Parking with Elevator	871.00	Space	7.84	348,400.00	0
Apartments Mid Rise	260.00	Dwelling Unit	6.84	260,000.00	744
Regional Shopping Center	5.00	1000sqft	0.11	5,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	33
Climate Zone	8			Operational Year	2025
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MW hr)	1227.89	CH4 Intensity (lb/MW hr)	0.029	N2O Intensity (lb/MW hr)	0.006

1.3 User Entered Comments & Non-Default Data

3401 South La Cienega Proposed Project - Los Angeles-South Coast County, Annual

Project Characteristics -

Land Use -

Construction Phase - Construction Schedule provided by applicant

Off-road Equipment -

Off-road Equipment - Construction equipment and estimated hours provided.

Off-road Equipment - Construction equipment list and estimated usage provided by project applicant.

Off-road Equipment - Construction equipment and estimated hours provided.

Off-road Equipment - Construction equipment and estimated hours provided.

Trips and VMT - assumes a 14 cy per grading hauling truck; demo and grading export will travel to Hansen Aggregate in Irwindale. Average number of worker per phase provided by applicant.

Demolition -

Grading - Total grading cut is approximately 146,000 CY, export accounts for soil expansion.

Vehicle Trips - According to the City of Los Angeles VMT Calculator, the project will generate approximately 3,387 trips per day.

Woodstoves - per SCAQMD Rule 415, the proposed project will not install wood burning devices. In addition, as part of the design, the building is completely electric and will not include any gas fireplaces.

Construction Off-road Equipment Mitigation - SCAQMD Fugitive Dust Rule; per the project developer the cranes will be electric.

Mobile Land Use Mitigation -

Area Mitigation - The proposed project will utilize super compliant VOC paint per the mitigation and as recommended from the Community Plan.

Energy Mitigation - as part of the project design, the project will include ENERGY STAR appliances.

Water Mitigation - As part of the project design, the project will be designed with drought tolerant landscapings.

Table Name	Column Name	Default Value	New Value

1.3 User Entered Comments & Non-Default Data

3401 South La Cienega Proposed Project - Los Angeles-South Coast County, Summer

Project Characteristics -

Land Use -

Construction Phase - Construction Schedule provided by applicant

Off-road Equipment -

Off-road Equipment - Construction equipment and estimated hours provided.

Off-road Equipment - Construction equipment list and estimated usage provided by project applicant.

Off-road Equipment - Construction equipment and estimated hours provided.

Off-road Equipment - Construction equipment and estimated hours provided.

Trips and VMT - assumes a 14 cy per grading hauling truck; demo and grading export will travel to Hansen Aggregate in Irwindale. Average number of worker per phase provided by applicant.

Demolition -

Grading - Total grading cut is approximately 146,000 CY, export accounts for soil expansion.

Vehicle Trips - According to the City of Los Angeles VMT Calculator, the project will generate approximately 3,387 trips per day.

Woodstoves - per SCAQMD Rule 415, the proposed project will not install wood burning devices. In addition, as part of the design, the building is completely electric and will not include any gas fireplaces.

Construction Off-road Equipment Mitigation - SCAQMD Fugitive Dust Rule; per the project developer the cranes will be electric.

Mobile Land Use Mitigation -

Area Mitigation - The proposed project will utilize super compliant VOC paint per the mitigation and as recommended from the Community Plan.

Energy Mitigation - as part of the project design, the project will include ENERGY STAR appliances.

Water Mitigation - As part of the project design, the project will be designed with drought tolerant landscapings.

1.3 User Entered Comments & Non-Default Data

3401 South La Cienega Proposed Project - Los Angeles-South Coast County, Winter

Project Characteristics -

Land Use -

Construction Phase - Construction Schedule provided by applicant

Off-road Equipment -

Off-road Equipment - Construction equipment and estimated hours provided.

Off-road Equipment - Construction equipment list and estimated usage provided by project applicant.

Off-road Equipment - Construction equipment and estimated hours provided.

Off-road Equipment - Construction equipment and estimated hours provided.

Trips and VMT - assumes a 14 cy per grading hauling truck; demo and grading export will travel to Hansen Aggregate in Irwindale. Average number of worker per phase provided by applicant.

Demolition -

Grading - Total grading cut is approximately 146,000 CY, export accounts for soil expansion.

Vehicle Trips - According to the City of Los Angeles VMT Calculator, the project will generate approximately 3,387 trips per day.

Woodstoves - per SCAQMD Rule 415, the proposed project will not install wood burning devices. In addition, as part of the design, the building is completely electric and will not include any gas fireplaces.

Construction Off-road Equipment Mitigation - SCAQMD Fugitive Dust Rule; per the project developer the cranes will be electric.

Mobile Land Use Mitigation -

Area Mitigation - The proposed project will utilize super compliant VOC paint per the mitigation and as recommended from the Community Plan.

Energy Mitigation - as part of the project design, the project will include ENERGY STAR appliances.

Water Mitigation - As part of the project design, the project will be designed with drought tolerant landscapings.

3.1 Mitigation Measures Construction

Use Alternative Fuel for Construction Equipment

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

3.2 Demolition - 2022

Unmitigated Construction On-Site

Air Quality and Greenhouse Gas Technical Study

AIR QUALITY AND GREENHOUSE GAS TECHNICAL STUDY

1.0 INTRODUCTION

This Air Quality and Greenhouse Gas Technical Study describes the existing air quality and greenhouse gas (GHG) setting of the proposed mixed-use development at 3401 S. La Cienega Boulevard in the City of Los Angeles (City) and evaluates the potential air quality and GHG impacts of the proposed project, as described below. This report has been prepared by Impact Sciences, Inc. to support the environmental documentation being prepared pursuant to the California Environmental Quality Act (CEQA). This analysis considers both temporary air quality and GHG impacts that would result from project construction and long-term impacts associated with operation of the project.

1.1 Project Location

The 3401 S. La Cienega Boulevard proposed project site is located at the intersection of La Cienega Blvd. and W Jefferson Blvd. in the West Adams neighborhood of the City of Los Angeles and is bounded by West Jefferson and the Metro Expo Line to the north, a See's Candy factory to the south, Jefferson Blvd. and Ballona Creek to the west, and South La Cienega Blvd. to the east. The nearest transit facility to the proposed project site is the La Cienega / Jefferson Expo Line Metro Station located approximately 25 feet north of the proposed project site.

1.2 Project Description

The proposed project site is approximately 3.53 acres and is currently improved with a Public Storage self-storage facility. The proposed project will replace the existing Public Storage facility on the site to construct a mixed-use development of 260 residential units, approximately 263,000 gross square feet of office space, and 5,000 square feet of retail space. The site is zoned for Industrial use with a land use designation of Hybrid Industrial within the West Adams Community Plan Implementation Overlay (CPIO) La Cienega/Jefferson district. The proposed project will construct two separate buildings. The building on the western side of the proposed project site will be up to 12-stories and designated for residential uses. The building on the eastern side of the proposed project site will be up to 9-stories and be designated for office and retail space. Parking for the proposed project will include 871 spaces in three subterranean levels. The proposed project includes a series of sustainable design features that focuses on increasing the water and energy efficiency of the new development, see **PDF 1** below.

The proposed project site is surrounded by commercial space, parking structures, and multi-family housing as well as future office space immediately north and west of the site.

Project Design Features

PDF 1: The Proposed Project will implement a series of features within the project design that will reduce air quality and GHG emissions by increasing water and energy efficiency.

- Entirely electric buildings (residential and office building)
- ENERGY STAR appliances
- LED lighting
- Intend to purchase 100% green power from the LADWP grid
- VAV HVAC system in the office building with MERV 15 filter
- 100 EV parking spaces
- Exploring on-site PV & battery storage
- Bike showers, lockers, and storage
- Rain water collection cistern (80,000 to 90,000 gallons) for stormwater management for reuse in landscaping on site
- Landscape with drought tolerant plants
- Commitment to using SCAQMD super-compliant low-VOC paint.

2.0 AIR QUALITY

2.1 Air Quality Setting

South Coast Air Basin

South Coast Air Basin Characteristics

The California Air Resources Board (CARB) divides the state into air basins that share similar meteorological and topographical features. The City of Los Angeles is located within the South Coast Air Basin (SCAB), which incorporates approximately 12,000 square miles consisting of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to the San Geronio Pass area in Riverside County. SCAB is a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean to the southwest and high mountains around the rest of its perimeters.

Temperature and Precipitation

The general region lies in the semi-permanent high-pressure zone of the eastern Pacific, resulting in a mild climate tempered by cool sea breezes with light average wind speeds. The region is considered semi-arid and is characterized by warm summers, mild winters, infrequent seasonal rainfall, moderate daytime onshore breezes, and moderate humidity. This usually mild climatological pattern is interrupted occasionally by periods of extremely hot weather, winter storms, or Santa Ana winds. The annual average temperature varies little throughout the SCAB region, ranging from the low 60s to the high 80s, measures in degrees Fahrenheit (F°). With a more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas.

In contrast to a very steady pattern of temperature, rainfall is seasonally and annually highly variable. Almost all annual rains fall between November and April. Summer rainfall is normally restricted to widely scattered thundershowers near the coast, with slightly heavier shower activity in the east and over the mountains.

Humidity

Although the SCAB has a semiarid climate, the air near the earth's surface is typically moist because of the presence of a shallow marine layer. Except for infrequent periods when dry, continental air is brought into the SCAB by offshore winds, the "ocean effect" is dominant. Periods of heavy fog, especially along the coast, are frequent, and low clouds, often referred to as high fog, are a characteristic climate feature. Annual average humidity is 70 percent at the coast and 57 percent in the eastern portions of the SCAB.

Wind

Wind patterns across the south coastal region are characterized by westerly or southwesterly onshore winds during the day and by easterly or northeasterly breezes at night. Wind speed is higher during the dry summer months than during the rainy winter.

Between periods of wind, air stagnation may occur in both the morning and evening hours. Air stagnation is one of the critical determinants of air quality conditions on any given day. During the winter and fall, surface high-pressure systems over the SCAB, combined with other meteorological conditions, can result in very strong, downslope Santa Ana winds. These winds normally continue a few days before predominant meteorological conditions are reestablished.

The mountain ranges to the east affect the diffusion of pollutants by inhibiting the eastward transport of pollutants. Air quality in the SCAB generally ranges from fair to poor and is similar to air quality in most

of coastal Southern California. The entire region experiences heavy concentration of air pollutants during prolonged periods of stable atmospheric conditions.

Inversions

In conjunction with the two characteristic wind patterns that affect the rate and orientation of horizontal pollutant transport, two similarly distinct types of temperature inversions control the vertical depth through which pollutants are mixed. These inversions are the marine/subsidence inversion and the radiation inversion. The height of the base of the inversion at any given time is known as the “mixing height.” The combination of winds and inversions is a critical determinant leading to highly degraded air quality in the summer and generally good air quality in the winter in Los Angeles.

Air Pollutants of Concern

Criteria air pollutants are defined as pollutants for which the federal and state governments have established ambient air quality standards for outdoor concentrations. The federal and state standards have been set at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons such as children, pregnant women, and the elderly, from illness or discomfort. Criteria air pollutants include ozone (O₃), nitrogen dioxide (NO₂), carbon monoxide (CO), sulfur dioxide (SO₂), particulate matter 2.5 microns or less in diameter (PM_{2.5}), particulate matter ten microns or less in diameter (PM₁₀), and lead (Pb). Note that reactive organic gases (ROGs), which are also known as reactive organic compounds (ROCs) or volatile organic compounds (VOCs), and nitrogen oxide (NO_x) are not classified as criteria pollutants. However, ROGs and NO_x are widely emitted from land development projects and participate in photochemical reactions in the atmosphere to form O₃; therefore, NO_x and ROGs are relevant to the proposed project and are of concern in the air basin and are listed below along with the criteria pollutants. Sources and health effects commonly associated with criteria pollutants are summarized in **Table 1, Criteria Pollutants Summary of Common Sources and Effects**.

Table 1
Criteria Pollutants Summary of Common Sources and Effects

Pollutant	Major Man-Made Sources	Human Health & Welfare Effects
Carbon Monoxide (CO)	An odorless, colorless gas formed when carbon in fuels is not burned completely; a component of motor vehicle exhaust.	Reduces the ability of blood to deliver oxygen to vital tissues, affecting the cardiovascular and nervous system. Impairs vision, causes dizziness, and can lead to unconsciousness or death.
Nitrogen Dioxide (NO ₂)	A reddish-brown gas formed during fuel combustion for motor vehicles and industrial sources. Sources include moto vehicles, electric utilities, and other sources that burn fuel.	Respiratory irritant; aggravates lung and heart problems. Precursor to ozone and acid rain. Contributes to global warming and nutrient overloading which deteriorates water quality. Causes brown discoloration of the atmosphere.
Ozone (O ₃)	Formed by a chemical reaction between volatile organic compounds (VOC) and nitrous oxides (NO _x) in the presence of sunlight. VOCs are also commonly referred to as reactive organic gases (ROGs). Common sources of these precursor pollutants include motor vehicle exhaust, industrial emissions, gasoline storage and transport, solvents, paints, and landfills.	Irritates and causes inflammation of the mucous membranes and lung airways; causes wheezing, coughing, and pain when inhaling deeply; decreases lung capacity; aggravates lung and heart problems. Damages plants; reduces crop yield. Damages rubber, some textiles, and dyes.
Particulate Matter (PM ₁₀ & PM _{2.5})	Produced by power plants, steel mills, chemical plants, unpaved roads and parking lots, wood-burning stoves and fireplaces, automobiles, and others.	Increased respiratory symptoms, such as irritation of the airways, coughing or difficulty breathing; aggravated asthma; development of chronic bronchitis; irregular heartbeat; nonfatal heart attacks; and premature death in people with heart or lung disease. Impairs visibility (haze).
Sulfur Dioxide (SO ₂)	A colorless, nonflammable gas formed when fuel containing sulfur is burned; when gasoline is extracted from ore. Examples are petroleum refineries, cement manufacturing, metal processing facilities, locomotives, and ships.	Respiratory irritant; aggravates lung and heart problems. In the presence of moisture and oxygen, sulfur dioxide converts to sulfuric acid which can damage marble, iron, and steel. Damages crops and natural vegetation. Impairs visibility. Precursor to acid rain.

Ambient Air Quality

Criteria Air Pollutant Monitoring Data

Ambient air quality in Los Angeles can be inferred from ambient air quality measurements conducted at nearby air quality monitoring stations. Existing levels of ambient air quality and historical trends and projections in the vicinity of Los Angeles are documented by measurements made by the South Coast Air Quality Management District (SCAQMD), the air pollution regulatory agency in the SCAB regions maintains air quality monitoring stations which process ambient air quality measurements.

The purpose of the monitoring station is to measure ambient concentrations of pollutants and determine whether ambient air quality meets the National Ambient Air Quality Standards (NAAQS) and the California Ambient Air Quality Standards (CAAQS). Ozone and particulate matter (PM10 and PM2.5) are pollutants of particular concern in the SCAB. The monitoring station located closest to the proposed project site and most representative of air quality near the proposed project site is the West Los Angeles-VA Hospital station, located at 11301 Wilshire Blvd. approximately 5.9 miles northwest of the proposed project site. Ambient emission concentrations vary due to localized variations in emissions sources and climate and should be considered “generally” representative of ambient concentrations near the proposed project site. The West Los Angeles – VA Hospital station monitors O₃ and NO₂, see **Table 2, West Los Angeles – VA Hospital Air Monitoring Station Ambient Pollutant Concentrations**.

NA = not available

¹ Parts by volume per million of air (ppm), micrograms per cubic meter of air (µg/m³), or annual arithmetic mean (aam).

² The 8-hour federal O₃ standard was revised from 0.075 ppm to 0.070 ppm in 2015. The statistics shown are based on the 2015 standard of 0.070 ppm.

The attainment status for the SCAB region is included in **Table 3, Attainment Status of Criteria Pollutants in the South Coast Air Basin**. Areas that meet ambient air quality standards are classified as attainment areas, while areas that do not meet these standards are classified as nonattainment areas. The SCAB region is designated as a nonattainment area for federal ozone, PM2.5, and lead standards and are designated as nonattainment for state ozone, PM10, and PM2.5 standards.

Table 3
Attainment Status of the South Coast Air Basin (SCAB)

Pollutant	State	Federal
Ozone (O ₃)	Non-Attainment	Non-Attainment
Particulate Matter (PM ₁₀)	Non-Attainment	Attainment
Particulate Matter (PM _{2.5})	Non-Attainment	Non-Attainment
Carbon Monoxide (CO)	Attainment	Attainment
Nitrogen Dioxide (NO ₂)	Attainment	Attainment
Sulfur Dioxide (SO ₂)	Attainment	Attainment
Lead	Attainment	Non-Attainment (Partial) ¹

Source: SCAQMD. 2016. *National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) Attainment Status for South Coast Air Basin.*

¹ The Los Angeles County portion of the Basin is designated as a non-attainment area for the federal lead standard on the basis of source-specific monitoring at two locations as determined by U.S. EPA using 2007-2009 data. However, all stations in the Basin, including the near-source monitoring in Los Angeles County, have remained below the lead NAAQS for the 2012 through 2015 period. The SCAQMD will request that the U.S. EPA re-designate the Los Angeles County portion of the Basin as attainment for lead.

Toxic Air Contaminants

In addition to the criteria pollutants discussed above, toxic air contaminants (TACs) are another group of pollutants of concern. TACs are considered either carcinogenic or noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For regulatory purposes, carcinogenic TACs are assumed to have no safe threshold below which health impacts would not occur, and cancer risk is expressed as excess cancer cases per one million exposed individuals. Noncarcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

There are many different types of TACs, with varying degrees of toxicity. Sources of TACs include industrial processes, such as petroleum refining and chrome-plating operations; commercial operations, such as gasoline stations and dry cleaners; and motor vehicle exhaust. Public exposure to TACs can result from emissions from normal operations, as well as from accidental releases of hazardous materials during upset conditions. The health effects associated with TACs are quite diverse and generally are assessed locally, rather than regionally. TACs can cause long-term health effects such as cancer, birth defects, neurological damage, asthma, bronchitis, or genetic damage, or short-term acute effects such as eye watering, respiratory irritation (a cough), running nose, throat pain, and headaches.

To date, CARB has designated 244 compounds as TACs. Additionally, CARB has implemented control measures for a number of compounds that pose high risks and show potential for effective control. The majority of the estimated health risks from TACs can be attributed to a relatively few compounds.¹

CARB identified diesel particulate matter (DPM) as a TAC. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particulates and gases produced when an engine burns diesel fuel. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. DPM includes the particle-phase constituents in diesel exhaust. The chemical composition and particle sizes of DPM vary between different engine types (heavy-duty, light-duty), engine operating conditions (idle, accelerate, decelerate), fuel formulations (high/low sulfur fuel), and the year of the engine. Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs. Almost all diesel exhaust particle mass is 10 microns or less in diameter. Because of their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.

Sensitive Receptors

Some land uses are considered more sensitive to air pollution than others due to the types of population groups or activities involved. Sensitive population groups include children, the elderly, the acutely ill, and the chronically ill, especially those with cardiovascular diseases.²

Residential areas are considered sensitive receptors to air pollutions because residents (including children and the elderly) tend to be at home for extended periods of time, resulting in sustained exposure to any pollutants present. Children are considered more susceptible to health effects of air pollution due to their immature immune systems and developing organs.³ As such, schools are also considered sensitive receptors, as children are present for extended durations and engage in regular outdoor activities. Recreational land uses are considered moderately sensitive to air pollution. Although exposure periods are generally short, exercise places a high demand on respiratory functions, which can be impaired by air pollution. In addition, noticeable air pollution can detract from the enjoyment of recreation.

2.2 Regulatory Framework

Federal

Clean Air Act

The Clean Air Act (CAA) of 1970 and the CAA Amendments of 1971 required the U.S. Environmental Protection Agency (EPA) to establish NAAQS, with states retaining the option to adopt more stringent standards or to include other specific pollutants. On April 2, 2007, the Supreme Court found that carbon dioxide is an air pollutant covered by the CAA; however, no NAAQS have been established for carbon dioxide.

These standards are the levels of air quality considered safe, with an adequate margin of safety, to protect the public health and welfare. They are designed to protect those “sensitive receptors” most susceptible to further respiratory distress such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

The EPA has classified air basins (or portions thereof) as being in attainment, nonattainment, or unclassified for each criteria air pollutant, based on whether or not the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for a nonattainment or attainment designations. **Table 3** lists the federal attainment status of the SCAB for the criteria pollutants.

National Emissions Standards for Hazardous Air Pollutants Program

Under federal law, 187 substances are currently listed as hazardous air pollutants (HAPs). Major sources of specific HAPs are subject to the requirements of the National Emissions Standards for Hazardous Air Pollutants (NESHAPS) program. The EPA is establishing regulatory schemes for specific source categories and requires implementation of the Maximum Achievable Control Technologies (MACT) for major sources of HAPs in each source category. State law has established the framework for California’s TAC identification and control program, which is generally more stringent than the federal program and is aimed at HAPs that are a problem in California. The state has formally identified 244 substances as TACs and is adopting appropriate control measures for each. Once adopted at the state level, each air district will be required to adopt a measure that is equally or more stringent.

National Ambient Air Quality Standards

The federal CAA required the U.S. EPA to establish NAAQS. The NAAQS set primary standards and secondary standards for specific air pollutants. Primary standards define limits for the intention of protecting public health, which include sensitive populations such as asthmatics, children, and the elderly. Secondary Standards define limits to protect public welfare to include protection against decreased visibility, damage to animals, crops, vegetation, and buildings. A summary of the federal ambient air quality standards is shown in **Table 4, National Ambient Air Quality Standards**.

Table 4
National Ambient Air Quality Standards

Pollutant		Primary/Secondary	Averaging Time	Level
Carbon Monoxide		Primary	8 hours	9 ppm
			1 hour	35 ppm
Lead		Primary and secondary	Rolling 3-month average	0.15 µg/m ³
Nitrogen dioxide		Primary	1 hour	100 ppb
		Primary and secondary	Annual	0.053 ppm
Ozone		Primary and secondary	8 hours	0.070 ppm
Particulate Matter	PM2.5	Primary	Annual	12 µg/m ³
		Secondary	Annual	15 µg/m ³
		Primary and secondary	24 hours	35 µg/m ³
	PM10	Primary and secondary	24 hours	150 µg/m ³
Sulfur dioxide		Primary	1 hour	75 ppb
		Secondary	3 hours	0.5 ppm

State

California Clean Air Act of 1988

The California CAA of 1988 (CCAA) allows states to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. The California Air Resources Board (CARB), a part of the California Environmental Protection Agency (Cal EPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the CAAQS. The CCAA, amended in 1992, requires all air quality management districts (AQMDs) in the state to achieve and maintain the CAAQS. The CAAQS are generally stricter than national standards for the same pollutants and has also established state standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles, for which there are no national standards. CARB also

conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB also has primary responsibility for the development of California's State Implementation Plan (SIP), for which it works closely with the federal government and the local air districts.

California Ambient Air Quality Standards

The federal CAA permits states to adopt additional or more protective air quality standards if needed. California has set standards for certain pollutants, such as particulate matter and ozone, which are more protective of public health than respective federal standards. California has also set standards for some pollutants that are not addressed by federal standards. The state standards for ambient air quality are summarized in **Table 5, California Ambient Air Quality Standards**.

Table 5
California Ambient Air Quality Standards

Pollutant		Averaging Time	Level
Carbon monoxide		8 hours	9 ppm
		1 hour	20 ppm
Lead		30-day average	1.5 µg/m ³
Nitrogen dioxide		1 hour	0.180 ppm
		Annual	0.030 ppm
Ozone		8 hours	0.070 ppm
		1 hour	0.09 ppm
Particulate matter	PM2.5	Annual	12 µg/m ³
	PM10	24 hours	50 µg/m ³
		Annual	20 µg/m ³
Sulfur dioxide		1 hour	0.25 ppm
		24 hours	0.04 ppm
Sulfates		24 hours	25 µg/m ³
Hydrogen sulfide		1 hour	0.03 ppm
Vinyl chloride		24 hours	0.01 ppm

Source: California Air Resources Board. May 2016. *Ambient Air Quality Standards*. Available online at: <https://www.arb.ca.gov/research/aaqs/aaqs2.pdf>, accessed January 12, 2021.

California State Implementation Plan

The federal CAA (and its subsequent amendments) requires each state to prepare an air quality control plan referred to as a State Implementation Plan (SIP). The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported

by the agencies with jurisdiction over them. The CAA Amendments dictate that states containing areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The EPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA.

State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the EPA for approval and publication in the Federal Register. The 2016 Air Quality Management Plan (2016 AQMP) is the SIP for SCAB. The 2016 AQMP is a regional blueprint for achieving air quality standards and healthful air in the SCAB and those portions of the Salton Sea Air Basin (SSAB) that are under the SCAQMD's jurisdictions. The 2016 AQMP represents a new approach, focusing on available, proven, and cost-effective alternatives to traditional strategies, while seeking to achieve multiple goals in partnerships with other entities promoting reductions in greenhouse gases and toxic risk, as well as efficiencies in energy use, transportation, and goods movement. The most effective way to reduce air pollution impacts is to reduce emissions from mobile sources. The AQMP relies on regional and multi-level partnerships of governmental agencies at the federal, state, regional, and local level. Those agencies (EPA, CARB, local governments, Southern California Association of Governments [SCAG] and the SCAQMD) are the primary agencies that implement the AQMP programs. The 2016 AQMP incorporates the latest scientific and technical information and planning assumptions, including SCAG's 2016-2035 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), updated emission inventory methodologies for various source categories, and SCAG's latest growth forecasts. The 2016 AQMP includes integrated strategies and measures to meet the NAAQS.

On September 3, 2020, SCAG's Regional Council unanimously voted to approve and fully adopt Connect SoCal (2020-2045 RTP/SCS). However, the forecasts and measures in the plan have not been incorporated into any applicable air quality plan for the region.⁴

California Air Toxics "Hot Spots" Information and Assessment Act (AB 2588)

The California Air Toxics Program is supplemented by the Air Toxics "Hot Spots" program, which became law (AB 2588, Statutes of 1987) in 1987. In 1992, the AB 2588 program was amended by Senate Bill 1731 to require facilities that pose a significant health risk to the community to perform a risk reduction audit and reduce their emissions through implementation of a risk management plan. Under this program, which is required under the Air Toxics "Hot Spots" Information and Assessment Act (Section 44363 of the California

⁴ Southern California Association of Governments. *Adopted Final Connect SoCal*. Available online at: <https://scag.ca.gov/read-plan-adopted-final-plan>.

Health and Safety Code), facilities are required to report their air toxics emissions, assess health risks, and notify nearby residents and workers of significant risks when present.

Typically, land development projects generate diesel emissions from construction vehicles during the construction phase, as well as some diesel emissions from small trucks during the operational phase. Diesel exhaust is mainly composed of particulate matter and gases, which contain potential cancer-causing substances. Emissions from diesel engines currently include more than 40 substances that are listed by EPA as hazardous air pollutants and by CARB as TACs. On August 27, 1998, CARB identified particulate matter in diesel exhaust as a TAC, based on data linking diesel particulate emissions to increased risks of lung cancer and respiratory disease.⁵

In March 2015, the OEHHA adopted “The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments” in accordance with the Health and Safety Code, Section 44300. The Final Guidance Manual incorporates the scientific basis from three earlier developed Technical Support Documents to assess risk from exposure to facility emissions. The 2015 OEHHA Final Guidance has key changes including greater age sensitivity in particular for children, decreased exposure durations, and higher breathing rate profiles. Because cancer risk could be up to three times greater using this new guidance, it may result in greater mitigation requirements, more agency backlog, and increased difficulty in getting air permits. Regardless of the change in calculation methodology, actual emissions and cancer risk within South Coast Air Basin has declined by more than 50 percent since 2005.

CARB provides a computer program, the Hot Spots Analysis and Reporting Program (HARP), to assist in a coherent and consistent preparation of a health risk assessment (HRA). HARP2, an update to HARP, was released in March 2015. HARP2 has a more refined risk characterization in HRA and CEQA documents and incorporates the 2015 OEHHA Final Guidance.

Regional

South Coast Air Quality Management District

The SCAQMD is the air pollution control district for Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. The agency’s primary responsibility is ensuring that the SCAB region meets attainment for the federal and state standards. The SCAQMD is responsible for preparing an air quality management plan to meet federal attainment status. The SCAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing

⁵ Diesel exhaust is included within pollutants subject to the hotspot program. Please refer to OEHHA’s Air Toxics Hot Spot Program Risk Assessment Guidelines. <https://oehha.ca.gov/air/crn/notice-adoption-air-toxics-hot-spots-program-guidance-manual-preparation-health-risk-0>.

permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, and conducting public education campaigns, as well as many other activities. All projects are subject to SCAQMD rules and regulations in effect at the time of construction.

SCAQMD Rules and Regulations

The following is a list of noteworthy SCAQMD rules that are required of construction activities associated with the proposed project:

- **Rule 402 (Nuisance)** – This rule prohibits the discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health, or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property. This rule does not apply to odors emanating from agricultural operations necessary for the growing of crops or the raising of fowl or animals.
- **Rule 403 (Fugitive Dust)** – This rule requires fugitive dust sources to implement best available control measures for all sources, and all forms of visible particulate matter are prohibited from crossing any property line. This rule is intended to reduce PM10 emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM10 suppression techniques are summarized below.
 - Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
 - All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
 - All material transported off-site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
 - The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
 - Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the work day to remove soil tracked onto the paved surface.
- **Rule 1113 (Architectural Coatings)** – This rule requires manufacturers, distributors, and end-uses of architectural and industrial maintenance coatings to reduce ROG emissions from the use of these coatings, primarily by placing limits on the ROG content of various coating categories.

Local

Air Quality Element of the Los Angeles General Plan

The *Air Quality Element of the City of Los Angeles General Plan* (Air Quality Element) was adopted on November 24, 1992, and sets forth the goals, objectives and policies that guide the City in the implementation of its air quality improvement programs and strategies.⁶ The Air Quality Element acknowledges that numerous efforts are underway at the regional, county and city levels addressing clean air concerns and that coordination of these various efforts and the involvement of the area's residents are crucial to the achievement of State and Federal air quality standards.

Relevant to the proposed project, the Air Quality Element establishes the following goals and policies aimed to reduce air quality emissions across the City of Los Angeles:

Goal 1. Good air quality and mobility in an environment of continued population growth and healthy economic structure.

Objective 1.1. It is the objective of the City of Los Angeles to reduce air pollutants consistent with the Regional Air Quality Management Plan (AQMP), increase traffic mobility, and sustain economic growth citywide.

Policy 1.1.1. Encourage demonstration projects which involve creative and innovative uses of market incentive mechanisms to achieve air quality objectives.

Objective 1.3. It is the objective of the City of Los Angeles to reduce particulate air pollutants emanating from unpaved areas, parking lots, and construction sites.

Policy 1.3.1. Minimize particulate emissions from construction sites.

Policy 1.3.2. Minimize particulate emissions from unpaved roads and parking lots which are associated with vehicular traffic.

Goal 2. Less reliance on single-occupant vehicles with fewer commute and non-work trips.

⁶ City of Los Angeles Planning Department. 1992. *Air Quality Element*. Available online at: https://planning.lacity.org/odocument/0ff9a9b0-0adf-49b4-8e07-0c16f6ea70bc/Air_Quality_Element.pdf.

Objective 2.2. It is the objective of the City of Los Angeles to increase vehicle occupancy for non-work trips by creating disincentives for single passenger vehicles, and incentives for high occupancy vehicles.

Policy 2.2.1. Discourage single-occupant vehicle use through a variety of measures such as market incentive strategies, mode-shift incentives, trip reduction plans and ridesharing subsidies.

Goal 3. Efficient management of transportation facilities and system infrastructure using cost effective system management and innovative demand management techniques.

Objective 3.2. It is the objective of the City of Los Angeles to reduce vehicular traffic during peak periods.

Policy 3.2.1. Manage traffic congestion during peak periods.

Goal 4. Minimal impact of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation, and air quality.

Objective 4.1. It is the objective of the City of Los Angeles to include the regional attainment of ambient air quality standards as a primary consideration in land use planning.

Policy 4.1.1. Coordinate with all appropriate regional agencies in the implementation of strategies for the integration of land use, transportation, and air quality policies.

Policy 4.1.2. Ensure that project level review and approval of land use development remain at the local level.

Objective 4.2. It is the objective of the City of Los Angeles to reduce vehicle trips and vehicle miles traveled associated with land use patterns.

Policy 4.2.1. Revise the City's General Plan/Community Plans to achieve a more compact, efficient urban form and to promote more transit-oriented development and mixed-use development.

Policy 4.2.2. Improve accessibility for the City's residents to places of employment, shopping centers, and other establishments.

Policy 4.2.3 Ensure that new development is compatible with pedestrians, bicycles, transit, and alternative fuel vehicles.

Policy 4.2.4. Require that air quality impacts to be a consideration in the review and approval of all discretionary projects.

Policy 4.2.5. Emphasize trip reduction, alternative transit and congestion management measures for discretionary projects.

West Adams, Baldwin Hills, Leimert Community Plan

The West Adams – Baldwin – Leimert Community Plan was updated in 2016 and includes the Crenshaw District and the neighborhoods of Leimert Park, Hyde Park, Jefferson Park, Mid-City, West Adams, and Arlington Heights. Through a collaborative effort involving residents, owners, businesses, and developers, a Long-Range Plan was developed to set forth actions to achieve a common vision that encompasses the full spectrum of issues and opportunities regarding the Community Plan Area’s physical evolution. The Community Plan addresses a wide range of topics including jobs and housing, parks and open space, urban design and mobility, as well as arts, culture, history, and health.⁷

Thresholds of Significance

The impact analysis provided below is based on the application of *CEQA Guidelines* Appendix G, which indicates that a project would have a significant impact on air quality if it would:

1. Conflict with or obstruct implementation of any applicable air quality plan.
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard.
3. Expose sensitive receptors to substantial pollutant concentrations.
4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The significance criteria established by the applicable air quality management or air pollution control district (SCAQMD) may be relied upon to make the above determinations. According to the SCAQMD, an air quality impact is considered significant if the proposed project would violate any ambient air quality standard, contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations. The SCAQMD has established thresholds of significance

⁷ Los Angeles Department of City Planning. 2016. *West Adams – Baldwin Hills – Leimert Community Plan*. Available online at: https://planning.lacity.org/odocument/78984e0b-a63d-4533-ba57-4f84b8fd7696/West_Adams-Baldwin_Hills-Leimert_Community_Plan.pdf.

for air quality for construction and operational activities of land use development projects, shown in **Table 6, South Coast AQMD Regional Significance Thresholds – Pounds per Day.**

Table 6
South Coast AQMD Regional Air Quality Significance Thresholds – Pounds per Day

Mass Daily Thresholds ^a		
Pollutant	Construction ^b	Operation ^c
NO _x	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM ₁₀	150 lbs/day	150 lbs/day
PM _{2.5}	55 lbs/day	55 lbs/day
SO _x	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day
Toxic Air Contaminants (TACs), Odor, and GHG Thresholds		
TACs (including carcinogens and non-carcinogens)	Maximum Incremental Cancer Risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Chronic & Acute Hazard Index ≥ 1.0 (project increment)	
Odor	Project creates an odor nuisance pursuant to South Coast AQMD Rule 402	
GHG	10,000 MT/yr CO ₂ eq for industrial facilities	
Ambient Air Quality Standards for Criteria Pollutants ^d		
NO₂ 1-hour average annual arithmetic mean	South coast AQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.18 ppm (state) 0.03 ppm (state) and 0.0534 ppm (federal)	
PM₁₀ 24-hour average annual average	10.4 µg/m ³ (construction) ^e & 2.5 µg/m ³ (operation) 1.0 µg/m ³	
PM_{2.5} 24-hour average	10.4 µg/m ³ (construction) ^e & 2.5 µg/m ³ (operation)	
SO₂ 1-hour average 24-hour average	0.25 ppm (state) & 0.075 ppm (federal - 99th percentile) 0.04 ppm (state)	
Sulfate 24-hour average	25 µg/m ³ (state)	
CO 1-hour average 8-hour average	South Coast AQMD is in attainment; project is significant if it causes or contributes to an exceedance of the following attainment standards: 20 ppm (state) and 35 ppm (federal) 9.0 ppm (state/federal)	
Lead 30-day Average Rolling 3-month average	1.5 µg/m ³ (state) 0.15 µg/m ³ (federal)	

^a Source: South Coast AQMD CEQA Handbook (South Coast AQMD, 1993)

^b Construction thresholds apply to both the South Coast Air Basin and Coachella Valley (Salton Sea and Mojave Desert Air Basins).

^c For Coachella Valley, the mass daily thresholds for operation are the same as the construction thresholds.

^d Ambient air quality thresholds for criteria pollutants based on South Coast AQMD Rule 1303, Table A-2 unless otherwise stated.

^e Ambient air quality threshold based on South Coast AQMD Rule 403.

Note: PM_{2.5} 24-hour ambient air quality standards are to meet federal attainment standards.

CO Hotspot Analysis

In addition to the daily thresholds listed above, the proposed project area would also be subject to the ambient air quality standards, through an analysis of localized CO impacts. The California 1-hour and 8-hour CO standards are:

- 1-hour = 20 parts per million
- 8-hour = 9 parts per million

The significance of localized impacts depends on whether ambient CO levels in the vicinity of the proposed project site are above state and federal CO standards. Carbon monoxide concentrations in Los Angeles no longer exceed either the CAAQS or the NAAQS criteria. Additionally, the SCAB region is designated as attainment under the 1-hour and 8-hour standards (see **Table 3**).

Localized Significance Thresholds

In addition to regional emissions and the CO hotspot analysis, the SCAQMD has developed a set of mass emissions rate look-up tables that can be used to evaluate localized impacts that may result from construction and operational-period emissions called localized significance thresholds (LSTs). If the on-site emissions from proposed construction activities are below the emission levels found in the LST mass rate look-up tables for the project site receptor area (SRA), then emissions would not have the potential to cause a significant localized air quality impact. When quantifying mass emissions for LST analysis, only emissions that occur on site are considered. Consistent with SCAQMD LST guidance, emissions from offsite delivery hauling trucks, or employee trips are not considered in the evaluation of localized impacts (SCAQMD 2008).

The proposed project site lies within SCAQMD SRA 2 and the proposed project site is approximately 3.53-acres. Therefore, **Table 7, Local Significance Thresholds – Pounds per Day**, shows the LST screening threshold for a 2-acre project site in SRA 2 with sensitive receptors located approximately 50 meters of the proposed project site.⁸

⁸ The SCAQMD provides mass rate look-up tables provide thresholds by SRA for 1-, 2-, or 5-acre sites. Since the proposed project site is 3.53-acres, we evaluated the project against the 2-acre which are more conservative than the 5-acre thresholds for SRA 2.

Table 7
Local Significance Thresholds – Pounds per Day

Phase	Nitrogen Oxide (NO_x)	Carbon Monoxide (CO)	Coarse Particulate Matter (PM10)	Fine Particulate Matter (PM2.5)
Construction	143	1,213	19	5
Operation	143	1,213	5	2

SCAQMD. 2009. *Appendix C Mass Rate Look Up Table*. Available at: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/appendix-c-mass-rate-look-up-tables.pdf?sfvrsn=2>.

Methodology

Air quality impacts were evaluated in accordance with the methodologies recommended by CARB and the SCAQMD. Where criteria air pollutant quantification was required, emissions modeled using the California Emissions Estimator Model version 2016.3.2 (CalEEMod). CalEEMod is a statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects.

2.3 Project Impacts and Mitigation Measures

Impact 1 **Would implementation of the proposed project conflict with or obstruct implementation of any applicable air quality plan? (*Less than Significant*).**

As part of its enforcement responsibilities, the EPA requires each state with nonattainment areas to prepare and submit a SIP that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the federal and state ambient air quality standards. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

As previously mentioned, the proposed project site is located within the SCAB, which is under the jurisdiction of the SCAQMD. The SCAQMD is required, pursuant to the federal Clean Air Act, to reduce emissions of criteria pollutants for which the SCAB is in nonattainment. To reduce such emissions, the

SCAQMD drafted the 2016 AQMP.⁹ As described above, the 2016 AQMP was developed in coordination with CARB, SCAG, and the U.S. EPA to establish a program of rules and regulations to reduce air pollutant emissions to achieve CAAQS and NAAQS. The plan's pollutant control strategies are based on SCAG's 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). While SCAG adopted the updated 2020-2045 RTP/SCS in September 2020, it has not been incorporated into an applicable air quality plan.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the SCAQMD's 1993 CEQA Air Quality Handbook, and include the following:

- Consistency Criterion No. 1: The proposed project will not result in an increase in the frequency or severity of an existing air quality violation, or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.
- Consistency Criterion No. 2: The proposed project will not exceed the assumptions in the AQMP or increments based on the years of the project build-out phase.

The violations to which Consistency Criterion No. 1 refers are the CAAQS and the NAAQS. As evaluated under Impacts 2 and 3 below, the proposed project would not exceed the short-term construction standards or long-term operational standards and in so doing would not violate any air quality standards (see **Table 8** and **Table 9**). Thus, no significant impact is expected, and the proposed project would be consistent with first criterion.

Concerning Consistency Criterion No. 2, the 2016 AQMP contains air pollutant reduction strategies based on SCAG's growth forecast, and SCAG's growth forecast was developed in consultation with local governments and with reference to local general plans. The proposed project would increase local population by 744 residents and 1,284 employees and is consistent with the land use designation and development density prepared in the City of Los Angeles' General Plan, specifically the growth projections for the West Adams Community Plan and the CPIO La Cienega/Jefferson district. The 2016 RTP/SCS estimated that from 2015 to 2040 the City of Los Angeles is expected to increase in population by 763,900 people and add 472,700 jobs.¹⁰ The Department of City Planning refines the City's allocation for each plan area. The West Adams-Baldwin Hills-Leimert Community Plan area is expected to grow by 214,012 people

⁹ South Coast Air Quality Management District. 2016. *Air Quality Management Plan*. Available online at: <http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/final2016aqmp.pdf>.

¹⁰ SCAG. 2016. *2016-2040 RTP/SCS Demographics and Growth Forecast*. Available online at: https://scag.ca.gov/sites/main/files/file-attachments/f2016rtpscs_demographicsgrowthforecast.pdf?1606073557.

and add 53,556 jobs by 2040.¹¹ As a result, the proposed project would be adding less than 1% of the projected population growth and approximately 2.4% of the projected employment growth in the Community Plan Area. Therefore, the proposed project would not exceed the population or job growth projections used by the SCAMQD to develop the 2016 AQMP.^{12, 13} Thus, no significant impact would occur, as the proposed project is also consistent with the second criterion.

Impact 2 **Would implementation of the proposed project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard? (*Less than Significant*).**

A project may have a significant impact if project-related emissions would result in a cumulatively considerable net increase for an criteria pollutant for which the region is nonattainment under applicable federal or state ambient air quality standards. To determine if a project would have a cumulatively considerable air quality impact on the project's region, emissions were compared to the SCAQMD construction and operational air quality thresholds.

Regional Construction Significance Analysis

Construction associated with the proposed project would generate short-term emissions of criteria air pollutants. The criteria pollutants of primary concern within the proposed project area include ozone-precursor pollutants (i.e., ROG and NOx), PM10, and PM2.5. Construction-generated emissions are short term and of temporary duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the SCAQMD's thresholds of significance.

Construction results in the temporary generation of emissions resulting from site grading and excavation, road paving, motor vehicle exhaust associated with construction equipment and worker trips, and the movement of construction equipment, especially on unpaved surfaces. Emissions of airborne particulate

¹² Estimated population based on CalEEMod modeling, see Attachment A. Estimated employment numbers based on the Los Angeles Unified School District 2020 Developer Fee Justification Study for Standard Commercial Office which estimates 4.79 employees per 1,000 square feet.

¹³ Los Angeles Unified School District. 2020. 2020 Developer Fee Justification Study. Available online at: https://achieve.lausd.net/cms/lib/CA01000043/Centricity/Domain/921/LAUSD%20Dev%20Fee%20Study%202020_Final.pdf.

matter are largely dependent on the amount of ground disturbance associated with site preparation activities as well as weather conditions and the appropriate application of water.

The duration of construction activities associated with the proposed project is estimated to last approximately thirty-one and a half months, beginning in August 2022. Construction-generated emissions associated with the proposed project were calculated using the SCAQMD- and CARB-approved CalEEMod model. CalEEMod is designed to model construction and operational emissions for land use development projects. The model incorporates typical construction requirements such as construction equipment, demolition debris, and hauling trips. The assumptions used in the CalEEMod model, including construction equipment usage, the demolition quantity of approximately 79,790 square feet of existing structures, and grading quantity of approximately 161,000 cubic yards of soil export, were based on information provided by the project applicant.^{14,15} In addition, the project applicant provided estimates of the construction equipment expected to be used during each phase of proposed project construction as well as the expected usage during that phase of construction. See **Attachment A** for proposed project construction assumptions. Predicted maximum daily construction-generated emissions for the proposed project are summarized in **Table 8, Construction-Related Criteria Pollutant and Precursor Emissions – Maximum Pounds per Day**.

During construction, the contractors are required to comply with SCAQMD Rule 402 (Nuisance) and Rule 403 (Fugitive Dust), among others, which assist in reducing short-term construction-related air pollutant emissions. Rule 402 prohibits emissions that would cause a public nuisance and Rule 403 requires fugitive dust sources to implement best available control measures for all sources, and all forms of visible particulate matter are prohibited from crossing any property line. The proposed project would be subject to Rules 402, 403, and 1113, described in the Regulatory Framework subsection above. As shown below, all criteria pollutant emissions would remain below their respective thresholds. Thus, the proposed project would not result in a cumulatively considerable net increase of any criteria air pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard.

¹⁴ See **Attachment A** for CalEEMod modeling inputs and output files.

¹⁵ Grading will excavate approximately 146,000 CY of soil. The export of 161,000 CY of soil accounts for anticipated soil expansion.

Table 8
Construction-Related Criteria Pollutant and Precursor Emissions – Maximum Pounds per Day

Regional Operational Significance Analysis

Proposed project-generated emissions would be associated with motor vehicle use, energy use, and area sources, such as the use of landscape maintenance equipment, consumer cleaning products, and architectural coatings associated with the operation of a 260-unit apartment building, 263,000 square feet of office space, 5,000 square feet of retail space, and 871-space parking garage.

Emissions associated with vehicle travel depend on the year of analysis because emission control technology requirements are phased-in over time. Therefore, the earlier the year analyzed in the model, the higher emission rates used by CalEEMod. The earliest year the proposed project could possibly be constructed and fully occupied would be 2025. Emissions associated with build-out later than 2025 would be lower, because newer vehicles have to meet increasingly more stringent emissions standards, while older, more polluting, vehicles are used less.

CalEEMod allows the user to enter specific vehicle trip generation rates. The daily vehicle trips were calculated using the City of Los Angeles Vehicle Miles Traveled (VMT) Calculator Version 1.3. The model calculates that the proposed project will generate approximately 3,387 daily vehicle trips before mitigation.¹⁶

Emissions associated with area-sources include landscape maintenance equipment, and architectural coatings. The proposed project is designed to be all-electric and will not include any wood-burning or natural-gas powered fireplaces. In addition, the proposed project will utilize SCAQMD super-compliant low-VOC paint. See **PDF-1** above.

¹⁶ See **Attachment A** for the Los Angeles VMT Calculator output and proposed VMT mitigation measures.

Long-term operational emissions attributable to the proposed project are summarized in **Table 9, Long-Term Operational Emissions – Maximum Pounds per Day**.

Table 9
Long-Term Operational Emissions – Maximum Pounds per Day

Source: Impact Sciences, CalEEMod modeling, 2021. See Attachment A.

As shown in **Table 8** and **Table 9**, the proposed project's construction and operational emissions would not exceed the SCAQMD's thresholds for any criteria air pollutants. Therefore, regional construction and operation operational emissions would not result in a significant long-term regional air quality impact. Thus, the proposed project would not result in a cumulatively considerable net increase of any criteria air pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard.

Air Quality Health Impacts

The following discussion analyzes the proposed project's potential impacts to inform the public how the impacts' quantitative results translate to a potential adverse health impacts or explain how existing scientific constraints cannot translate the emissions numbers to the potential health impacts.

SCAB is in state non-attainment for PM2.5, PM10, and O₃ and federal non-attainment for PM2.5 and O₃. Therefore, an increase in emissions of particulate matter or ozone precursors (ROG and NOx) has the potential to push the region further from reaching attainment status and, as a result, are the pollutants of greatest concern in the region. As noted in **Table 8** and **Table 9** above, the proposed project will emit criteria air pollutants during construction and operation. However, the proposed project will not exceed SCAQMD thresholds for ozone precursors (ROG and NOx), PM2.5, PM10, or any other criteria air pollutants, and will not result in a cumulatively significant impact for which the region is in non-attainment. This discussion focuses on the health effects from the pollutants for which the region is in non-attainment and why it is not

feasible to provide an analysis to relate the emissions of ozone precursors from an individual project to likely human health consequences.

Exposure to particulate matter can affect both a person's lungs and heart and has been linked to a variety of health problems including aggravated asthma, decreased lung function, and increased respiratory symptoms. DPM is a type of particulate that is emitted from diesel engines and is estimated to cause approximately 70% of total known cancer risks related to air toxics in California.¹⁷ As discussed below, see **Impact 3**, the proposed project would not result in an increased health risk as a result from exposure to DPM or other TACs. Further, since the proposed project will not exceed SCAQMD regional thresholds for particulate matter, the project will not result in a cumulatively significant impact to particulate matter in the region.

Exposure to O₃ can cause respiratory irritation, lung damage, aggravate asthma, and may worsen existing chronic lung diseases such as emphysema and chronic bronchitis.¹⁸ O₃ is formed in the atmosphere when heat and sunlight cause a chemical reaction between NO_x and ROG emissions. NO_x and ROG are referred to as ozone precursors and affect air quality on a regional scale. Health effects related to O₃ are therefore the product of emissions generated by numerous sources throughout a region. Existing models have limited sensitivity to small changes in criteria pollutant concentrations, and, as such, translating project-generated criteria pollutants to specific health effects or additional days of nonattainment would produce meaningless results. In other words, the proposed project's less than significant increases in regional air pollution from criteria air pollutants would not have measurable effect on the human health implications of the Basin's ambient air quality.

The Congressional Research service prepared the *Background Ozone: Challenges in Science and Policy* report for U.S. Congress which provides a summary of the scientific capabilities of measuring ozone and understanding the needs and improvements necessary to understand contributions from background sources. While this paper specifically addresses background concentrations of ozone and ozone modeling, it demonstrates the difficulty in assessing ozone and related health implications from any single source or project. According to the Congressional Research Service, currently there are several data and analytical challenges to reliably assess background ozone concentrations and to model ozone. First, the current understanding of the amount, location, and type of pollutant emissions from many types of sources is insufficient. Therefore, inventories typically provide estimation, which may not be precise enough for apportioning contributions. Second, meteorological data (i.e., wind speed, wind direction, temperature,

¹⁷ California Air Resources Board. *Overview: Diesel Exhaust & Health*. Available online at: <https://ww2.arb.ca.gov/resources/overview-diesel-exhaust-and-health>.

¹⁸ U.S. Environmental Protection Agency. *Ozone and Your Health*. Available online at: <https://www.airnow.gov/sites/default/files/2020-02/ozone-c.pdf>.

cloud cover, humidity, etc.) is not currently measured at a fine enough spatial scale to adequately represent relevant weather processes. Third, data on pollutant concentrations are limited, which increases the challenges of understanding ozone formation and movement. Fine spatial and temporal measurements are needed both horizontally across the surface and vertically to higher levels of the atmosphere. Finally, background ozone source contributions change by year, season, day, and hour and from location to location.¹⁹

While several models and tools are available to quantify emissions, these models are limited by a number of factors in their ability to determine health impacts of individual development projects. The U.S. EPA currently performs health impact assessments (HIAs) using the Community Multiscale Air Quality (CMAQ)²⁰ model for pollutant transport modeling and Environmental Benefits Mapping and Analysis Program – Community Edition (BENMAP – CE) for health impact calculations.²¹ However, these models are designed to estimate health impacts over a large scale (e.g., city-wide, state-wide). In addition, the CMAQ model requires inputs such as regional sources of pollutants and global meteorological data, which are not readily accessible. In general, the current suite of available models are not able to accurately model concentrations or dispersion of ozone because they are regional models unable to provide accurate results for individual projects. If reliable ozone concentrations can be determined, there is also a limitation on being able to correlate concentrations to related health effects.

The SCAQMD acknowledges that quantifying the health impacts from O₃ is difficult. The *2012 Air Quality Management Plan* determines that a reduction of 432 tons (864,000 pounds) per day of NO_x and a reduction of 187 tons (374,000 pounds) per day of VOC would reduce O₃ levels at the highest monitored site by only nine parts per billion.²² This means that a large reduction in precursor emissions translate to incremental reductions in measured ozone. Therefore, quantifying O₃ and related O₃ health impacts caused by NO_x or VOC emissions from relatively small projects (defined as projects with regional scope) is limited. Thus, as the proposed project would not exceed SCAQMD thresholds for construction and operational air emissions, it can be reasonably concluded that the proposed project would not have a measurable effect on the human health in the Basin, nor would it have implications for the ambient air quality. As a result, the proposed project would have a less than significant impact for air quality health impacts.

Impact 3 **Would implementation of the proposed project expose sensitive receptors to substantial air pollutant concentrations? (*Less than Significant*).**

Localized Significance Thresholds

Construction

The nearest sensitive receptors to the proposed project site are residents located approximately 175 feet southeast of the proposed project site across La Cienega Blvd. To identify impacts to sensitive receptors, the SCAQMD recommends addressing LSTs for construction.

LSTs were developed in response to SCAQMD Governing Board’s Environmental Justice Enhancement Initiative (I-4). The SCAMQD provided the *Final Localized Significance Threshold Methodology* for guidance. The LST methodology assists lead agencies in analyzing localized impacts associated with project-specific analysis.

As detailed above, the SRA for the LST is the Northwest Coastal LA County area (SRA 2) since this area includes the proposed project site. LSTs apply to CO, NO₂, PM₁₀, and PM_{2.5}. The SCAMQD produced look-up tables for projects that disturb areas less than or equal to 5 acres in size. The proposed project site is approximately 3.53-acres, therefore, the LST threshold for two acres was used for the construction LST analysis.

The SCAQMD’s methodology states that “off-site mobile emissions from the project should not be included in the emissions compared to LSTs.” Therefore, for purposes of the construction LST analysis, only emissions included in the CalEEMod “on-site” emissions outputs were considered. The nearest sensitive receptors to the proposed project site is a multi-family residence approximately 175 feet southeast of the proposed project site across La Cienega Blvd. LST screening thresholds are provided for distances to sensitive receptors of 25, 50, 100, 200, and 500 meters. Therefore, LSTs for receptors located at 50 meters (165 feet) were used in this analysis.

Table 10, Localized Significance of Construction Emissions – Maximum Pounds per Day, presents the proposed project’s localized emissions during construction activity. As shown in **Table 10**, the on-site air pollutant emissions on the peak day of construction (with assumed compliance of SCAQMD Rule 403) would not exceed the applicable LST. Therefore, the proposed project’s localized air quality impacts would not expose sensitive receptors to substantial air pollutant concentrations. Impacts would be less than significant.

Table 10
Localized Significance of Construction Emissions – Maximum Pounds per Day

Construction Year	NOx	CO	PM10	PM2.5
2022	12.88	15.44	0.58	0.49
2023	11.30	15.41	0.52	0.43
2024	2.39	3.94	0.08	0.08
2025	1.15	1.81	0.05	0.05
LST Screening Threshold	143	1,213	19	5
<i>Exceed?</i>	<i>No</i>	<i>No</i>	<i>No</i>	<i>No</i>

Source: Impact Science, CalEEMod modeling, 2021. See Appendix A.

Note: The table provides the on-site construction emissions with implementation of SCAQMD Rules 402 and 403.

Localized Operational Significance Analysis

According to the SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project only if the proposed project includes stationary sources or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities). The proposed project is proposing a residential development with 260 units, 263,000 square feet of office space, 5,000 square feet of retail space, and 871 parking spaces and, therefore, does not include such land uses. Thus, due to the lack of queuing and idling emissions, no long-term localized significance threshold analysis is needed. The proposed project's operational LST impacts would not expose sensitive receptors to substantial air pollutant concentrations. Impacts would be less than significant.

Localized Air Quality Health Impacts

As evaluated above, the proposed project's air emissions would not exceed the SCAQMD's LST thresholds. Therefore, the proposed project would not cause or contribute to an exceedance of the most stringent applicable NAAQS or CAAQS for emissions of CO, NOx, PM10, or PM2.5. It should be noted that the ambient air quality standards are developed and represent levels at which the most susceptible persons are protected. In other words, the ambient air quality standards are purposely set in a stringent manner to protect children, elderly, and those with existing and respiratory problems. Thus, air quality health impacts would be less than significant.

Carbon Monoxide Hotspots

CO emissions are a function of vehicle idling time, meteorological conditions, and traffic flow. Under certain extreme meteorological conditions, CO concentrations near a congested roadway or intersection

may reach unhealthful levels (i.e., adversely affecting residents, school children, hospital patients, the elderly, etc.).

The SCAB is designated as an attainment/maintenance area for the federal CO standards and attainment area for state standards. CO emissions have declined in recent years even as VMT on urban and rural roads have increased nationwide. Estimated anthropogenic CO emissions have decreased 68 percent between 1990 and 2014. In 2014, mobile sources accounted for 82 percent of the nation's total anthropogenic CO emissions (EPA 2018). Three major control programs have contributed to the reduced per-vehicle CO emissions: exhaust standards, cleaner burning fuels, and motor vehicle inspection/maintenance programs.

According to the SCAQMD CEQA Air Quality Handbook, a potential CO hotspot may occur at any location where the background CO concentration already exceeds 9.0 ppm, the CAAQS for 8-hour ozone. The SCAQMD prepared a detailed CO analysis in the *Federal Attainment Plan for Carbon Monoxide* as part of the 2003 AQMP.²³ The 2003 AQMP is the most recent AQMP that addresses CO concentrations. The CO analysis included microscale modeling of CO at the worst-case intersections in SCAB. Of these locations, the Wilshire Boulevard and Veteran Avenue intersection in Los Angeles experienced the highest CO concentration of 4.6 ppm. At the time of analysis, the Wilshire Boulevard and Veteran Avenue intersection was the most congested intersection in Los Angeles County with an average daily traffic volume of approximately 100,000 vehicles per day. As CO impacts at the Wilshire Boulevard and Veteran Avenue intersection did not exceed the 8-hour CAAQS, it can be inferred that the intersections near the proposed project site, which generate far fewer vehicles per day, would not create any CO hotspots. Furthermore, as previously discussed, the site is located in SRA 2, Northwest Coastal Los Angeles County. The monitoring station closest to the proposed project site is the VA Hospital, West Los Angeles air quality monitoring station located approximately 5.98 miles north of the site. According to data obtained from the EPA's AirData database for CO pollutants, the highest eight-hour concentration reported for the VA Hospital, West Los Angeles station in 2019 was 1.2 ppm.²⁴ As such, the background CO concentration in combination with the CO concentration at worst-case scenario intersection in SCAB do not exceed 9.0 ppm and a CO hotspot would not occur. Therefore, the proposed project's CO hotspot impacts would not expose sensitive receptors to substantial air pollutant concentrations. Impacts would be less than significant.

²⁴ U.S. Environmental Protection Agency. 2018. *Monitor Values Report*. Available: <https://www.epa.gov/outdoor-air-quality-data/monitor-values-report>.

Diesel Particulate Matter

Project Construction

Construction would result in the generation of DPM emissions from the use of off-road diesel equipment required for grading and excavation, paving, and other construction activities. The amount to which the receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk (i.e., potential exposure to TAC emission levels that exceed applicable standards). Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of contracting cancer.

The use of diesel-powered construction equipment would be temporary and episodic. The duration of exposure would be short and exhaust from construction equipment dissipates rapidly. Current methodology for conducting health risk assessments are associated with long term exposure periods (9, 30, and 70 years). Therefore, short-term construction activities would not generate a significant health risk.

Additionally, the proposed project site is approximately 3.53-acres. Generally, construction for projects contained in a site of such size to represent less than significant health risk impacts due to limitations of the off-road diesel equipment able to operate and thus a reduced amount of generated DPM, reduced amount of dust-generating ground-disturbance possible compared to larger construction sites, and reduced duration of construction activities compared to the development of larger sites. Furthermore, construction would be subject to and would comply with California regulations limiting the idling of heavy-duty construction equipment to no more than 5 minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions.²⁵ For these reasons, DPM generated by construction activities, in and of itself, would not be expected to expose sensitive receptors to substantial amounts of air toxics and the proposed project would have a less than significant impact.

Project Operation

The greatest potential during long-term operations for exposure to TACs is from the use of heavy-duty diesel trucks and stationary generators that use diesel fuel. The proposed project is a 260-unit residential development with 268,000 square feet of office space. Once operational, the majority of vehicle trips to the proposed project site would be from residents and employees and, as a result, the proposed project would attract very few diesel truck trips. Additionally, the proposed project does not propose any stationary generators on-site.

²⁵ California Air Resources Board. 2015. *Frequently Asked Questions Regulation for In-Use Off-Road Diesel-Fueled (Off-Road Regulation)*. Available online at: <https://ww3.arb.ca.gov/msprog/ordiesel/faq/idlepolicyfaq.pdf>.

The West Adams Community Plan's EIR includes Mitigation Measure AQ-2 that would require new developments within 500 feet of the Santa Monica Freeway to prepare an HRA that demonstrates the risks posed to new sensitive receptors.²⁶ The proposed project site is approximately 0.75 miles from the Santa Monica Freeway and, as a result, would not be required to adhere to this mitigation. However, as part of the proposed project's design, the Applicant is committing to installing Minimum Efficiency Reporting Value (MERV) rated 15 air filters to reduce the risks posed to employees in the office from particulates and other TACs. For these reasons, once operational, the proposed project would not be expected to expose nearby sensitive receptors to substantial amounts of air toxics and the proposed project would have a less than significant impact.

Impact 4 Would the proposed project include sources that could create other emissions (such as those leading to odors) adversely affecting a substantial number of people? (Less than Significant).

The SCAQMD *CEQA Air Quality Handbook* (1993) identifies certain land uses as sources of odors. These land uses include agriculture (farming and livestock), wastewater treatment plants, food processing plants, chemical plants, composting facilities, refineries, landfills, dairies, and fiberglass molding. Once operational, the proposed project will serve as a residential and office development with minor retail uses. The proposed project would not include any of the land uses that have been identified by the SCAQMD as odor sources.

Construction activities associated with the proposed project may generate detectable odors from heavy-duty equipment exhaust and architectural coatings. However, construction-related odors would be short-term in nature and cease upon proposed project completion. In addition, the proposed project would be required to comply with the California Code of Regulations, Title 13, sections 2449(d)(3) and 2485, which minimizes the idling time of construction equipment either by shutting it off when not in use or by reducing the time of idling to no more than five minutes. This would reduce the detectable odors from heavy-duty equipment exhaust. The proposed project would also be required to comply with the SCAQMD Rule 1113 – Architectural Coating, which would minimize odor impacts from ROG emissions during architectural coating. Any odor impacts to existing adjacent land uses would be short-term and not substantial. As such, the project would not result in other emissions (such as those leading to odors) adversely affecting a substantial number of people. Impacts would be less than significant.

²⁶ City of Los Angeles. 2012. *West Adams – Baldwin Hills – Leimert New Community Plan Draft EIR*. Available online at: <https://planning.lacity.org/eir/westadams/deir/index.html>.

2.4 Cumulative Setting, Impacts, and Mitigation Measures

Cumulative Setting

The cumulative setting for air quality includes Los Angeles and SCAB. SCAB is designated as nonattainment area for state standards of ozone, PM_{2.5}, and PM₁₀. SCAB is designated as a nonattainment area for federal standards of ozone and PM_{2.5}. SCAB is designated as being unclassified and/or attainment for all other pollutants. Cumulative growth in population and vehicle use could inhibit efforts to improve regional air quality and attain the ambient air quality standards.

Cumulative Impacts and Mitigation Measures

Result in a Cumulatively Considerable Net Increase in Nonattainment Criteria Pollutant

Impact 5 **Would implementation of the proposed project result in a cumulatively considerable net increase of criteria air pollutants for which the SCAB is designated nonattainment? (*Less than Significant*).**

The SCAQMD's approach to assessing cumulative impacts is based on the 2016 AQMP forecasts of attainment of ambient air quality standards in accordance with the requirements of the CAA and the CCAA. The SCAQMD neither recommends quantified analyses of cumulative construction or operational emissions, nor does it provide separate methodologies or thresholds of significance to be used to assess cumulative construction or operational impacts. Instead, the SCAQMD recommends that a project's potential contribution to cumulative impacts should be assessed using the same significance criteria as those for project-specific impacts. Therefore, individual development projects that generate construction-related or operational emissions that exceed the SCAQMD recommended daily thresholds for project-specific impacts would also cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is nonattainment.

As discussed in **Impact 1**, the proposed project would be consistent with the 2016 AQMP, which is intended to bring the SCAB into attainment for all criteria pollutants. Furthermore, the operational and construction emissions calculated for the proposed project do not exceed the applicable SCAQMD daily significance thresholds that are designed to assist the region in attaining the applicable ambient air quality standards (see **Table 8, Construction-Related Criteria Pollutant and Precursor Emissions**, and **Table 9, Long-Term Operational Emissions**).

Additionally, with respect to the proposed project's construction-related air quality emissions and cumulative basin-wide conditions, the SCAQMD has developed strategies to reduce criteria pollutant

emissions outlined in the 2016 AQMP pursuant to federal CAA mandates. As such, the proposed project and related projects through SCAB would comply with SCAQMD Rule 403 requirements and with adopted 2016 AQMP emissions control measures.

The proposed project would also not result in cumulatively operational air quality impacts because emissions would not exceed the SCAQMD-adopted operational thresholds and the proposed project's contribution is not a significant proportion of the cumulative total emissions. Cumulative projects would likewise be required to reduce their emissions per SCAQMD rules and mandates. The proposed project's cumulative emissions would not considerably contribute to an exceedance of the NAAQS or CAAQS and would, therefore, comply with the goals of the 2016 AQMP. Therefore, the proposed project would not result in a cumulatively considerable net increase of any criteria pollutant for which the SCAB is in non-attainment.

3.0 GREENHOUSE GAS

3.1 Greenhouse Gas Setting

Global climate change refers to any significant change in climate measurements, such as temperature, precipitation, or wind, lasting for an extended period (i.e., decades or longer).²⁷ Climate change may result from:

- Natural factors, such as changes in the sun's intensity or slow changes in the Earth's orbit around the sun;
- Natural processes within the climate system (e.g., changes in ocean circulation, reduction in sunlight from the addition of GHG and other gases to the atmosphere from volcanic eruptions); and
- Human activities that change the atmosphere's composition (e.g., through burning fossil fuels) and the land surface (e.g., deforestation, reforestation, urbanization, desertification).

In recent decades, changes in climate have caused impacts on natural and human systems on all continents and across the oceans. Impacts are due to observed climate change, irrespective of its cause, indicating the sensitivity of natural and human systems to changing climate.²⁸ Continuing changes to the global climate system and ecosystems, and to California, are projected to include:

²⁷ US EPA. 2013. Overview of Greenhouse Gases. Available online at: <https://www.epa.gov/ghgemissions/overview-greenhouse-gases>. Accessed on August 11, 2018.

²⁸ Intergovernmental Panel on Climate Change. 2013. "Climate Change 2013: The Physical Science Basis." Available online at: <http://www.climatechange2013.org/>. Accessed August 13, 2018.

- Rapidly diminishing sea ice and mountain snowpack levels, thereby increasing sea levels and sea surface evaporation rates with a corresponding increase in tropospheric water vapor due to the atmosphere's ability to hold more water vapor at higher temperatures;²⁹
- Rising average global sea levels primarily due to thermal expansion and the melting of glaciers, ice caps, and ice sheets;
- Changing weather patterns, including changes to precipitation, ocean salinity, and wind patterns, and more energetic aspects of extreme weather, including droughts, heavy precipitation, heat waves, extreme cold, and the intensity of tropical cyclones;
- Changing levels in snowpack, river flow and sea levels indicating that climate change is already affecting California's water resources;³⁰
- Dry seasons that start earlier and end later, evoking more frequent and intense wildland fires;³¹ and
- Increasing demand for electricity due to rising temperatures.³²

The natural process through which heat is retained in the troposphere³³ is called the "greenhouse effect." Various gases in the Earth's atmosphere, classified as atmospheric greenhouse gases, play a critical role in determining the Earth's surface temperature. Solar radiation enters Earth's atmosphere as short-wave radiation. It travels through the atmosphere without warming it and is absorbed by the Earth's surface. When the Earth re-emits this radiation back toward space, the radiation changes to long wave radiation. GHGs are transparent to incoming short wave solar radiation but absorb outgoing long wave radiation. As a result, radiation that otherwise would escape back into space is now retained, warming the atmosphere. This phenomenon is known as the greenhouse effect.

Greenhouse Gas Compounds

California State law defines GHGs to include the following six compounds:

²⁹ Ibid.

³⁰ California Environmental Protection Agency (Cal EPA). 2010. Climate Action Team Report to Governor Schwarzenegger and the Legislature.

³¹ Ibid.

³² California Environmental Protection Agency (Cal EPA). 2010. Climate Action Team Report to Governor Schwarzenegger and the Legislature.

³³ The troposphere is the bottom layer of the atmosphere, which varies in height from the Earth's surface from 6 to 7 miles).

- **Carbon Dioxide** (CO₂) is released to the atmosphere when solid waste, fossil fuels (oil, natural gas, and coal), and wood and wood products are burned. CO₂ emissions from motor vehicles occur during operation of vehicles and operation of air conditioning systems.
- **Methane** (CH₄) is emitted during the production and transport of coal, natural gas, and oil. Methane emissions also result from the decomposition of organic waste in solid waste landfills, raising livestock, natural gas and petroleum systems, stationary and mobile combustion, and wastewater treatment.
- **Nitrous Oxide** (N₂O) is emitted during agricultural and industrial activities, as well as during combustion of solid waste and fossil fuels. N₂O emissions from motor vehicles generally occur directly from operation of vehicles.
- **Hydrofluorocarbons** (HFCs) are one of several high global warming potential (GWP) gases that are not naturally occurring and are generated from industrial processes. HFC (refrigerant) emissions from vehicle air conditioning systems occur due to leakage, losses during recharging, or release from scrapping vehicles at end of their useful life.
- **Perfluorocarbons** (PFCs) are another high GWP gas that are not naturally occurring and are generated in a variety of industrial processes. Emissions of PFCs are generally negligible from motor vehicles.
- **Sulfur Hexafluoride** (SF₆) is another high GWP gas that is not naturally occurring and is generated in a variety of industrial processes. Emissions of SF₆ are generally negligible from motor vehicles.

3.2 Regulatory Framework

Federal

Paris Climate Agreement

The Paris Climate Agreement is an international treaty on climate change adopted on December 12, 2015. The goal of the agreement is to limit global warming to 1.5 degrees Celsius as compared to pre-industrial levels. Countries will aim to reach global peaking of GHG emissions as soon as possible to achieve a climate neutral world by mid-century. In order to achieve these reductions, the Paris Climate Agreement works on a 5-year cycle of increasingly ambitious climate action carried out by countries. Therefore, by 2020, countries were required to submit their plans for climate action, known as nationally determined contributions. Additionally, the Agreement provides a framework for financial, technical and capacity building support to those countries who need it. Developed countries will take a lead in providing financial

assistance to other countries since large scale investments are required for GHG mitigation and climate adaptation.³⁴

The United States joined 190 other countries in the Paris Climate Agreement under the Obama administration in September 2016.³⁵ Under the Trump administration, the former President announced his intention to withdraw from the Agreement in June 2017 and formally notified the United Nations in November 2019. However, the Agreement requires a year-long waiting period before a formal withdrawal will be recognized. As a result, the United States officially withdrew the Agreement in November 2020.³⁶ However, on January 20, 2021, President Biden accepted and rejoined the Paris Climate Agreement.³⁷

State

The state of California has implemented a series of greenhouse gas plans and policies aimed at reducing state greenhouse gas emissions. Measures applicable to the proposed project are summarized below:

Executive Order (EO) S-03-05

On June 1, 2005, EO S-03-05 was issued by Governor Schwarzenegger to set statewide emissions reduction standards. The order required the state to reduce GHG emissions to 1990 levels by 2020 and reduce GHG emissions to 80% below 1990 levels by 2050. EO S-3-05 also calls for the Secretary of California Environmental Protection Agency (Cal/EPA) to be responsible for coordination of state agencies and progress reporting.

Assembly Bill (AB) 32

AB 32 (California Global Warming Solutions Act of 2006) was codified into law in 2006 and codified into law the 2020 GHG emissions targets set by EO S-03-05. AB 32 represents the first enforceable statewide program to limit GHG emissions from all major sectors with penalties for noncompliance.

Senate Bill (SB) 32

³⁴ United Nations. *The Paris Agreement*. Available online at <https://unfccc.int/process-and-meetings/the-paris-agreement/the-paris-agreement>.

³⁵ The White House. *President Obama: The United States Formally Entered the Paris Agreement*. Available online at: <https://obamawhitehouse.archives.gov/blog/2016/09/03/president-obama-united-states-formally-enters-paris-agreement>.

³⁶ NPR. *U.S. Officially Leaving Paris Climate Agreement*. Available online at: <https://www.npr.org/2020/11/03/930312701/u-s-officially-leaving-paris-climate-agreement>.

³⁷ The White House. 2021. *Paris Climate Agreement*. Available online at: <https://www.whitehouse.gov/briefing-room/statements-releases/2021/01/20/paris-climate-agreement/>.

SB 32 was signed into law in 2015 and sets into law the mandated reduction targets set in EO B-30-15, which required a reduction in GHG emissions to 40% below the 1990 levels by 2030.

CARB's 2017 Final Scoping Plan

The California Air Resources Board (CARB) in collaboration with over twenty state agencies issued a Final Scoping Plan in 2017 to set a framework for the state to meet the overall reduction goals set in SB 32. The 2017 Scoping Plan identified key sectors of the implementation strategy, which includes improvements in low carbon energy, industry, transportation sustainability, natural and working lands, waste management, and water. Through a combination of data synthesis and modeling, CARB determined that the target statewide 2030 emissions limit is 260 MMTCO_{2e}, and that further commitments will need to be made to achieve an additional reduction of 50 MMTCO_{2e} beyond current policies and programs. Key elements of the 2017 Update include a proposed 20 percent reduction in GHG emissions from refineries and an expansion of the Cap-and-Trade program to meet the aggressive 2030 GHG emissions goal.

Regional

SCAQMD Draft Guidance Regarding Interim CEQA GHG Significance Thresholds

SCAQMD released draft guidance regarding interim CEQA GHG significance thresholds. In its October 2008 document, the SCAQMD proposed the use of a percent emission reduction target (e.g., 30 percent) to determine significance for commercial/residential projects that emit greater than 3,000 metric tons per year. On December 5, 2008, the SCAQMD Governing Board adopted the staff proposal for an interim GHG significance threshold for stationary source/industrial projects where the SCAQMD is lead agency. However, SCAQMD has yet to adopt a GHG significance threshold for land use development projects (e.g., residential/commercial projects) and has formed a GHG Significance Threshold Working Group to further evaluate potential GHG significance thresholds. The draft tier thresholds recommended by the SCAQMD Working Group were never authorized as guidance for GHG analyses. These recommended thresholds are more than a decade old, as a result. these thresholds were not used in this analysis.

SCAG 2020 Connect SoCal Plan RTP/SCS

On September 3, 2020, the Southern California Association of Governments (SCAG) Regional Council unanimously voted to approve and fully adopt Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy [RTP/SCS]).

Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more

sustainable growth pattern. It charts a path toward a more mobile, sustainable and prosperous region by making connections between transportation networks, between planning strategies and between the people whose collaboration can improve the quality of life for Southern Californians. In addition, Connect SoCal is supported by a combination of transportation and land use strategies that outline how the region can achieve California's greenhouse gas emission reduction goals and federal CAA requirements. The plan also strives to achieve broader regional objectives, such as the preservation of natural lands, improvement of public health, increased roadway safety, support for the region's vital goods movement industries and more efficient use of resources.

Local

West Adams, Baldwin Hills, Leimert Community Plan

The West Adams – Baldwin – Leimert Community Plan was updated in 2016 and includes the Crenshaw District and the neighborhoods of Leimert Park, Hyde Park, Jefferson Park, Mid-City, West Adams, and Arlington Heights. The Plan EIR was issued in September 2012 which included a series of mitigation measures for new projects within the Plan Area. Mitigation Measures GHG-1 from the Plan EIR states the following:³⁸

GHG-1. As a condition of approval for any Discretionary or "Active Change Area Project," as defined in Section 3.4 of the Project Description, the City shall require developers to implement applicable GHG reduction measures in project design and comply with regulatory targets. Sources of GHG reduction measures include the California Attorney General

3.3 Thresholds and Methodology

Thresholds of Significance

The impact analysis provided below is based on the application of the following CEQA Guidelines Appendix G, which indicates that a proposed project would have a significant impact on GHG emissions if it would:

- 1) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.

³⁸ City of Los Angeles. 2012. *West Adams – Baldwin Hills – Leimert New Community Plan Draft EIR*. Available online at: <https://planning.lacity.org/eir/westadams/deir/index.html>.

- 2) Conflict with an applicable plan, policy or regulations adopted for the purpose of reducing the emissions of greenhouse gas emissions.

Methodology

GHG emissions and climate change were evaluated in accordance with Appendix G of the 2019 *CEQA Guidelines*. *CEQA Guidelines* Section 15064.4 states that, when making a determination with respect to the significance of a proposed project's GHG emissions, a lead agency shall have discretion to determine whether to: (1) Use a model or methodology to quantify greenhouse gas emissions resulting from a project, and which model or methodology to use; and/or (2) Rely on a qualitative analysis or performance-based standards. Section 15064.4 also states that a lead agency should consider the following factors when assessing the significance of the impact of GHG emissions on the environment: (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting; (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; and (3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.

GHG emissions were calculated in the same CalEEMod modeled used to determine the proposed project's criteria air pollutant emissions. Consistent with SCAQMD recommendations, construction emissions were amortized over a thirty-year period and added to the annual operational emissions to determine the proposed project's annual GHG emissions. Consistent with *CEQA Guidelines* Section 15064(h)(3), project significance was determined based on the proposed project's consistency with an approved plan or mitigation program that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area of the proposed project. CARB's 2017 Scoping Plan and SCAG's 2020 Connect SoCal Plan apply to the proposed project and are intended to reduce GHG emissions to meet the statewide targets set in Senate Bill (SB) 32. Thus, the proposed project would not have a significant effect on the environment if it is found to be consistent with CARB's 2017 Scoping Plan and SCAG's 2020 Connect SoCal Plan.

3.4 Project Impacts and Mitigation Measures

Impact 1 **Would implementation of the proposed project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment? (*Less than Significant*).**

Both construction and operational activities have the potential to generate GHG emissions.

Construction Emissions

The proposed project would generate GHG emissions during temporary, short-term construction activities such as demolition, site preparation and grading, running of construction equipment engines, movement of on-site heavy-duty construction vehicles, hauling of materials to and from the site, asphalt paving, and construction worker motor vehicle trips.

Through CalEEMod, proposed project GHG emissions throughout proposed project construction were calculated from off-road equipment usage, hauling vehicles, delivery, and worker trips to and from the site. The total GHG construction emissions over the approximately 31-month construction period would be approximately 3,049 metric tons of carbon dioxide equivalent (MT CO₂e). As GHG emissions impact from construction activities would occur over a relatively short time span, it would contribute a relatively small portion of the lifetime GHG emission impact of the proposed project. The total construction GHG emissions were divided by 30 to determine an annual construction emission rate to be amortized over the proposed project's first 30 years of operational life, consistent with CEQA analysis across the state. Amortized over a 30-year period, the proposed project is anticipated to emit approximately 101.6 MT CO₂e/year.

Operational Emissions

Operational emissions are those that occur over the life of the proposed project. The proposed project is expected to generate GHG emissions from area, energy, and mobile-source emissions as the site will generate vehicle trips from residents and employees. Area source emissions are based on the land use sizes, GHG emission factors for fuel combustion, and the global warming potential (GWP) values for the GHGs emitted. Electricity usage emissions are based on the land uses, default demand factors for the land use, GHG emission factors for the utility provider, and the GWP values of the GHGs emitted. Mobile-source GHG emissions are determined based on the proposed project's estimated annual VMT, which is calculated in CalEEMod based on the daily trip generation rates estimated through the City of Los Angeles VMT Calculator Version 1.3. Waste and water emissions are derived from the anticipated water usage and

wastewater generated based on the proposed project’s proposed land uses and the associated water demand factors.

The estimated total net annual proposed project emissions, including operation emissions and amortized construction emissions, are detailed in **Table 12, Proposed Project Greenhouse Gas Emissions**.

Table 12
Proposed Project Greenhouse Gas Emissions

Emissions Source	Metric Tons of Carbon Dioxide Equivalent (per year)
Amortized Construction	101.6
Area Sources	4.5
Energy Sources	4,075
Mobile Sources	4,300
Waste Sources	186
Water Sources	798
Total GHG Emissions	9,465

Source: Impact Sciences, 2021.

As shown in **Table 12**, the proposed project’s combined long-term net operational emissions and amortized construction emissions would be approximately 9,465 MT CO₂e/year. Quantification of GHG emissions is provided for informational purposes, significance, under CEQA, is based on the project’s consistency with statewide and regional policies and plans to meet the state reduction goals set in SB 32, including CARB’s 2017 Scoping Plan, SCAG’s 2020 Connect SoCal RTP/SCS, the City of Los Angeles General Plan, and the City of Los Angeles Green New Deal see **Impact 2**.

Impact 2 **Would implementation of the proposed project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases? (Less than Significant).**

The proposed project would have a significant impact with respect to GHG emissions and global climate change if it would substantially conflict with the provisions of Section 15064.4(b) of the *State CEQA Guidelines*.

Pursuant to Appendix G of the *CEQA Guidelines*, a significant GHG impact is identified if the proposed project could conflict with applicable GHG reduction plans, policies, or regulations. Development projects

would be subject to complying with SB 32, and SCAG’s Connect SoCal Plan. SB 32 is a statewide reduction goal aimed at reducing emissions to 40% below 1990 levels by 2030. CARB’s 2017 Scoping Plan sets a framework for the State to meet the reduction targets of SB 32.

Consistency with the Final 2017 Scoping Plan Update

CARB issued the Final 2017 Scoping Plan Update in November 2017 and establishes emissions reduction strategies necessary to meet SB 32’s 2030 reduction goals. **Table 13, Proposed Project Consistency with Applicable 2017 Scoping Plan Measures**, identifies the Scoping Plan policies that are applicable to the proposed project. As shown, the proposed project would be consistent with the Scoping Plan.

**Table 13
Proposed Project Consistency with CARB 2017 Scoping Plan
Greenhouse Gas Emission Reduction Strategies**

Strategy	Project Consistency
<p><i>Implement SB 350 by 2030:</i></p> <ul style="list-style-type: none"> • Increase the Renewables Portfolio Standard to 50 percent of retail sales by 2030 and grid reliability • Establish annual targets for statewide energy efficiency savings and demand reduction that will achieve a cumulative doubling of statewide energy efficiency savings in electricity and natural gas end uses by 2030. • Reduce GHG emissions in the electricity sector through the implementation of the above measures and other actions as modeled in the IRPs to meet GHG emissions reductions planning targets in the IRP process. Load-serving entities and publicly-owned utilities meet GHG emissions planning targets through a combination of measures as described in IRPs. 	<p>Not Applicable. The measure is not related to development projects but intended for energy providers. However, the proposed project intends to purchase 100% green power from the Los Angeles Department of Water and Power (LADWP) grid.</p> <p>Not Applicable. This measure is directed towards policymakers, not development projects. However, the proposed project is required to meet CALGreen building standards by including measures designed to reduce energy consumption. The proposed project will also include LED lighting and ENERGY STAR appliances to reduce energy consumption.</p> <p>Consistent. The proposed project is required to adhere to the latest CALGreen building Codes and Title 24, which will result in a more efficient project site. In addition, the proposed project includes design measures to reduce electricity use, including LED lighting, ENERGY STAR appliances, and purchasing 100% green power from the LADWP grid.</p>
<p><i>Implement Mobile Source Strategy (Cleaner Technology and Fuels):</i></p> <ul style="list-style-type: none"> • Further reduce VMT through continued implementation of SB 375 and regional Sustainable Communities Strategies; forthcoming statewide implementation of SB 743; and potential additional VMT reduction strategies not specified in the Mobile Source Strategy but included in the document "Potential VMT Reduction Strategies for Discussion." 	<p>Not Applicable. This measure is directed towards policymakers, not development projects. However, the proposed project is located adjacent to the La Cienega/Jefferson Metro Expo Line station. As a result, the proposed project will reduce VMT by locating residents and job opportunities near a major transit line.</p>
<p>By 2019, develop pricing policies to support low-GHG transportation (e.g. low-emission vehicle zones for heavy duty, road use, parking pricing, transit discounts).</p>	<p>Not Applicable. This measure is directed towards policymakers, not development projects. However, the proposed project will provide housing and job opportunities near the Jefferson/La Cienega Metro Expo Line station that will encourage transit use.</p>

Strategy	Project Consistency
By 2019, develop regulations and programs to support organic waste landfill reduction goals in the SLCP and SB 1383.	Not Applicable. This measure is directed towards CARB, CalRecycle, CDFR, SWRCB, and local air districts. However, the statewide policy goals of 75 percent of solid waste generated be source reduce, recycled, or composted by 2020 under AB 341. Since the proposed project will be operational after this year, the proposed project’s waste collection service will be required to be compliant with this waste reduction.
Identify and expand funding and financing mechanisms to support GHG reductions across all sectors.	Consistent. The proposed project will be required to adhere to the latest CALGreen Building Standards and Title 24. In addition, the proposed project includes a series of design measures that will reduce GHG emissions across multiple sectors. Specifically, to reduce GHG emissions from the energy sector, the proposed project will install LED lighting, ENERGY STAR appliances, design the building to be completely electric, and will purchase 100% of green power from the LADWP grid. Further, to reduce emissions from the transportation sector, the proposed project will include 100 electric vehicle (EV) parking spaces, bicycle parking and storage, and is located next to a major transit station. Finally, in order to reduce GHG emissions associated with water use, the proposed project will be designed with drought tolerant plants and will include a rainwater collection cistern that will be used to water on-site landscaping.

CARB. *California’s 2017 Climate Change Scoping Plan. Available online at:*

https://ww3.arb.ca.gov/cc/scopingplan/scoping_plan_2017.pdf, accessed February 5, 2021.

Based on this evaluation, this analysis finds the proposed project would be consistent with all feasible and applicable strategies recommended in the 2017 Scoping Plan Update.

Consistency with SCAG’s Connect SoCal Plan

At the regional level, the Connect SoCal Regional Transportation Plan (RTP) and Sustainable Communities Strategy (SCS) represent the region’s Climate Action Plan that defines strategies for reducing GHGs. To assess the proposed project’s potential to conflict with the RTP/SCS, this section analyzes the proposed project’s land use profile for consistency with those in the RTP/SCS. Generally, proposed projects are considered consistent with the provisions and general policies of applicable City and regional land use plans and regulations, such as SCAG’s RTP/SCS, if they are compatible with the general intent of the plans and would not preclude the attainment of their primary goals.³⁹

Table 14, Proposed Project Consistency with SCAG Connect SoCal, demonstrates the proposed project’s consistency with the strategies set forth in the Connect SoCal Plan. The proposed project would also be consistent with the applicable strategies set forth in Connect SoCal’s “A Path to Greater Access, Mobility,

³⁹ Southern California Association of Governments. 2020. *Connect SoCal*. Available online at: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial-plan_0.pdf?1606001176.

& Sustainability” chapter. Therefore, the proposed project would be consistent with the GHG reduction related actions and strategies contained in Connect SoCal.

Table 14
Proposed Project Consistency with SCAG Connect SoCal Plan

Actions and Strategies	Consistency Analysis
<i>Focus Growth Near Destinations & Mobility Options</i>	
Emphasize land use patterns that facilitate multimodal access to work, educational and other destinations	Consistent: The proposed project would construct 260 residential units and office space approximately 100 feet from the Jefferson/La Cienega Metro Expo line station. The proposed project will include on-site secure bicycle parking that will promote active transportation.
Focus on job/housing balance to reduce commute times and distances and expand job opportunities near transit and along center-focused main streets	Consistent: The proposed project would construct commercial and residential space that will provide job and housing opportunities approximately 100 feet from the Jefferson/La Cienega Metro Expo line station.
Plan for growth near transit investments and support implementation of first/last mile strategies	Consistent: The proposed project would construct commercial and residential space that will provide job and housing opportunities approximately 100 feet from the Jefferson/La Cienega Metro Expo line station.
<i>Focus Growth Near Destinations & Mobility Options</i>	
Promote the redevelopment of underperforming retail developments and other outmoded nonresidential uses	Consistent: The proposed project would redevelop an existing Public Storage facility near an existing Metro Expo Line station to construct a mixed-use development that will facilitate transit use from residents and employees living or working on the site.
Prioritize infill and redevelopment of underutilized land to accommodate new growth, increase amenities and connectivity in existing neighborhoods	Consistent: The proposed project will redevelop an existing Public Storage facility in the City with a mixed-use development with residential units, job opportunities, and retail located near major transit and as well as other residential and commercial areas.
Encourage design and transportation options that reduce the reliance on and number of solo car trips (this could include mixed uses or locating and orienting close to existing destinations)	Consistent: The proposed project would construct 260 residential units and office space approximately 100 feet from the Metro Expo line Jefferson/La Cienega station. The proposed project will include on-site secure bicycle parking, showers, and storage that will promote active transportation.
<i>Promote Diverse Housing Crisis</i>	
Preserve and rehabilitate affordable housing and prevent displacement	Consistent: The proposed project will redevelop an existing Public Storage facility and would not displace any affordable housing units. Instead, the proposed project will construct housing on the proposed project site, including 22 affordable residential units.
Identify opportunities for new workforce and affordable housing development	Consistent: The proposed project is a mixed-use development with 260 residential uses including 22 affordable residential units and will provide job opportunities through the proposed office space.
<i>Leverage Technology Innovations</i>	
Promote low emission technologies such as neighborhood electric vehicles, shared rides hailing, car sharing, bike sharing and scooters by providing supportive and safe infrastructure such as dedications lanes, charging and parking/drop-off space	Not Applicable: This strategy is aimed at local government to promote shared bikes and scooters, electric vehicles, ride sharing and provide safe infrastructure such dedicated lanes, charging and parking/ drop-off space. The proposed project would not

Actions and Strategies	Consistency Analysis
	interfere with such policymaking. Additionally, the proposed project will promote the advancement of low emission technologies across the community by providing 100 EV parking spaces.
Identify ways to incorporate "micro-power grids" in communities, for example solar energy, hydrogen fuel cell power storage and power generation	Not Applicable: This strategy is aimed at local government to identify ways to incorporate "micro-power grids." The proposed project would not interfere with such policymaking.
Support Implementation of Sustainability Policies	
Pursue funding opportunities to support local sustainable development implementation projects that reduce GHG emissions	Not Applicable: While this strategy calls on local governments to adopt policies for sustainable infrastructure and development projects, the proposed project would not interfere with such policymaking.
Support statewide legislation that reduces barriers to new construction and that incentivizes development near transit corridors and stations	Not Applicable: While this strategy calls on the state to adopt policies to new construction near transit corridors and stations, the proposed project would not interfere with such policymaking and would construct a mixed-use development approximately 100 feet of a major transit station.
Support cities in the establishment of Enhanced Infrastructure Financing Districts (EIFDs), Community Revitalization and Investment Authorities (CRIAs), or other tax increment or value capture tools to finance sustainable infrastructure and development projects	Not Applicable: While this strategy calls on cities to establish tax incentive or other value capture tools to finance sustainable infrastructure, the proposed project would not interfere with such policymaking.
Work with local jurisdictions/communities to identify opportunities and assess barriers to implement sustainability strategies	Not Applicable: While this strategy calls on SCAG to work with local jurisdictions to identify ways to implement sustainable strategies, the proposed project would not interfere with such policymaking.
Enhance partnerships with other planning organizations to promote resources and best practices in the SCAG region	Not Applicable: While this strategy calls on planning organizations to promote resources and best practices in SCAG, the proposed project would not interfere with such policymaking.
Continue to support long range planning efforts by local jurisdictions	Not Applicable: While this strategy calls on local jurisdictions to support long range planning, the proposed project would not interfere with such policymaking.
Provide educational opportunities to local decisions makers and staff on new tools, best practices and policies related to implementing the Sustainable Communities Strategy	Not Applicable: While this strategy calls on local jurisdictions to provide educational opportunities on new tools and practices to promote the Sustainable Communities Strategy, the proposed project would not interfere with such policymaking.
Promote a Green Region	
Support development of local climate adaptation and hazard mitigation plans, as well as project implementation that improves community resiliency to climate change and natural hazards.	Not Applicable: While this strategy calls on local jurisdictions to support the development of local climate adaptation and hazard mitigation plans, the proposed project would not interfere with this goal.
Support local policies for renewable energy production, reduction of urban heat islands and carbon sequestration	Not Applicable: While this strategy calls on local governments to adopt policies for renewable energy production, the proposed project would not interfere with such policymaking.
Integrate local food production into the regional landscape	Not Applicable: While this strategy calls on local governments to integrate local food into the regional landscape, the proposed project would not interfere with such policymaking.
Promote more resource efficient development focused on conservation, recycling and reclamation	Consistent. The proposed project will be required to adhere to the latest CALGreen Building Codes and Title 24, which will result in a more efficient proposed project site. Moreover, the

Actions and Strategies	Consistency Analysis
	proposed project site lies within 100 feet of a major transit station that will promote public transit and reduce vehicle trips to the site. The proposed project will focus on water and energy efficiency in design by constructing the site with a drought tolerant landscape, rainwater collection cistern, LED lighting, and ENERGY STAR appliances. Additionally, the proposed project will be 100% electric with the intention to purchase 100% of green power from LADWP’s grid.
Preserve, enhance and restore regional wildlife connectivity	Not Applicable: The proposed project will be constructed in an existing urban setting. The proposed project would not interfere with this goal.
Reduce consumption of resource areas, including agricultural land	Consistent. The proposed project will be constructed in an existing urban setting and, as a result, will not consume any resource areas or agricultural land.
Identify ways to improve access to public park space	Not Applicable. While this strategy calls on local governments to improve access to public park space, the proposed project would not interfere with this goal. However, the proposed project site lies approximately 600 feet east of the Syd Kronenthal Park and is adjacent to the open space component of the Samitaur Office Building located at 5850 W. Jefferson Blvd. Therefore, residents and employees of the proposed will have access to open space and public parks.

Consistency with City of Los Angeles General Plan Air Quality Element

The Proposed Project would be consistent with the City’s General Plan, specifically its Air Quality Element (see Section 4.3). While the Element did not explicitly address control of GHG emissions, global climate change, or resiliency objectives, it did identify several goals to reduce criteria pollutant emissions that would also work to reduce GHG emissions that contribute to climate change, see Table 15, Consistency with the Air Quality Element.

Goal	Consistency Analysis
Good air quality and mobility in an environment of continued population growth and health economy.	<p>Consistent: The proposed project would construct 260 residential units, office space, and retail space approximately 100 feet from the Jefferson/La Cienega Metro Expo line station. The proposed project will include on-site secure bicycle parking that will promote active transportation.</p> <p>Therefore, by placing housing and commercial space near transit and providing opportunities for alternative mobility options, the Proposed Project will help</p>

Table 15	
Project Consistency with the Air Quality Element	
Goal	Consistency Analysis
	improve air quality and mobility by reducing the number of gas/diesel-fueled vehicles on the road.
Less reliance on single-occupant vehicles with fewer commute and non-work trips.	<p>Consistent: The proposed project would construct 260 residential units, office space, and retail space approximately 100 feet from the Jefferson/La Cienega Metro Expo line station. The proposed project will include on-site secure bicycle parking that will promote active transportation.</p> <p>Therefore, by placing housing and commercial space near transit and providing opportunities for alternative mobility options, the Proposed Project will help reduce reliance on single-occupant vehicles with fewer commute and non-work trips.</p>
Efficient management of transportation facilities and system infrastructure using cost-effective system management and innovative demand management techniques.	<p>Consistent: The Proposed Project would minimize congestion impacts in the region because of the Project Site’s proximity to public transit.</p>
Minimal impact of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation, and air quality.	<p>Consistent. The Proposed Project would replace an existing Public Storage facility with an infill project with residential, office, and retail uses near a major public transportation line. The Proposed Project is consistent with the Element’s focus on growing near transit facilities.</p>
Energy efficiency through land use and transportation planning, the use of renewable resources and less polluting fuels, and the implementation of conservation measures including passive methods such as site orientation and free parking.	<p>Consistent. The Proposed Project would replace an existing Public Storage facility with an infill project with residential, office, and retail uses near public transit that will reduce single vehicle trips to and from the project site. Furthermore, the Proposed Project will be required to be consistent with CalGreen and Title 24 standards. The Proposed Project will construct completely electric buildings, include long-term and short-term bicycle parking, and construct 100 EV parking spaces which will further reduce reliance on polluting fuels.</p>
Citizen awareness of the linkages between personal behavior and air pollution, and participation in efforts to reduce air pollution.	<p>Not Applicable. The goal is focused on City outreach and public education about personal behavior and its connection to air pollution. The Proposed Project would not interfere with this goal.</p>
<p><i>Source: Impact Sciences 2021.</i> <i>City of Los Angeles. Air Quality Element. Available online at: https://planning.lacity.org/odocument/0ff9a9b0-0adf-49b4-8e07-0c16f6ea70bc/Air_Quality_Element.pdf.</i></p>	

Consistency with City of Los Angeles Green New Deal

In 2019, the City of Los Angeles released the Green New Deal as an update to the City’s 2015 Sustainable City pLAN. The City’s Green New Deal is an expanded vision of the pLAN and aims to guide the City’s transition to a more sustainable future. The Green New Deal sets forth a series of accelerated targets that

will reduce GHG emissions. Many of these targets are not applicable at the project level, however, the Proposed Project will still further the overall goal where applicable, see **Table 16, Consistency with the City's Green New Deal**.

Table 16	
Project Consistency with the City's Green New Deal	
Targets	Consistency Analysis
Supply 55% renewable energy by 2025; 80% by 2036; and 100% by 2045.	Not Applicable. This measure is directed at energy providers to increase the amount of renewable energy created. The Proposed Project will not interfere with this target. Moreover, the Proposed Project will implement a series of design features that will reduce energy demand including ENERGY STAR appliances and LED lighting. The Proposed Project will also purchase 100% green power from the LADWP grid which will promote this target.
Source 70% of our water locally by 2035, and capture 150,000 acre feet per year of stormwater by 2035.	Consistent. This target is directed at water suppliers to increase the amount of local water provided. However, the Proposed Project will include a rain water collection cistern with a capacity of 80,000 to 90,000 gallons for stormwater management and for reuse in landscaping onsite. Therefore, the Proposed Project will promote local water use in its landscaping as well as stormwater capture.
Reduce building energy use per square foot for all types of buildings by 22% by 2035; 34% by 2035; and 44% by 2050.	Consistent: The Proposed Project would replace an existing Public Storage facility with an infill project with residential, office, and retail uses. The Proposed Project will be required to adhere to the latest CalGreen and Title 24 requirements that will result in a more efficient building per square foot than the existing project. Moreover, the Proposed Project will implement a series of design features that will reduce energy demand including ENERGY STAR appliances and LED lighting.
Reduce Vehicle Miles Traveled per capita by at least 13% by 2025, 39% by 2035, and 45% by 2050.	Consistent. The proposed project would construct 260 residential units, office, and retail space approximately 100 feet from the Jefferson/La Cienega Metro Expo line station. The proposed project will include on-site secure bicycle parking that will promote active transportation. As a result, the Proposed Project will encourage active and public forms of transportation for residents, visitors, and employees which will reduce the amount of vehicle miles traveled.
Ensure 57% of new housing units are built within 1,500 feet of transit by 2035; and 75% by 2035.	Consistent. The Proposed Project will construct 260 new residential units approximately 100 feet from the Jefferson/La Cienega Metro Expo station.
Increase the percentage of zero emission vehicles in the city by 25% by 2025; 80% by 2035; and 100% by 2050/	Not Applicable. This target is directed at the City of Los Angeles, not individual project. The Proposed Project would not interfere with implementation of this target.

Table 16	
Project Consistency with the City’s Green New Deal	
Targets	Consistency Analysis
Create 300,000 green jobs by 2035; and 400,000 by 2050	Not Applicable. This target is directed at the City of Los Angeles, not individual project. The Proposed Project would not interfere with implementation of this target.
Convert all city fleet vehicles to zero emission where technically feasible by 208.	Not Applicable. This target is directed at the City of Los Angeles, not individual project. The Proposed Project would not interfere with implementation of this target.
Reduce municipal GHG emissions 55% by 2025 and 65% by 2035 from 2008 baseline levels, reaching carbon neutral by 2045.	Not Applicable. This target is directed at the City of Los Angeles, not individual project. The Proposed Project would not interfere with implementation of this target.

Conclusion

The proposed project is a transit-oriented development which places residences, amenities and jobs within walking distance to the Metro Expo Line. The proposed project also plans to implement streetscape improvements and provide bicycle parking on-site in order to promote pedestrians and bicycle travel. In addition, the proposed project will implement a series of project design features that will reduce GHG emissions including installing ENERGY STAR appliances, LED lighting, a rainwater collection cistern, and EV parking. In addition, the proposed project intends to purchase 100% green power from the LADWP grid and landscape the site with drought tolerant plants. As a result, the proposed project is not only consistent with CARB’s 2017 Scoping Plan and SCAG’s Connect SoCal 2020 RTP/SCS, but goes beyond the goals and strategies laid out in these plans to reduce GHG emissions from mobile-source emissions. Furthermore, the proposed project will be constructed consistent with CALGreen Building Code and Title 24 which will reduce on-site GHG emissions from area and energy sources. For these reasons, the proposed project would not conflict with an applicable plan, policy, or regulations adopted for the purpose of reducing the emissions of greenhouse gas emissions. Impacts would be less than significant.

1.0 INTRODUCTION

This study describes the existing noise and vibration environment of the proposed mixed-use development project at 3401 South La Cienega Boulevard and evaluates potential impacts from construction and operation of the proposed project. This report has been prepared by Impact Sciences, Inc., in support of the environmental documentation being prepared pursuant to the California Environmental Quality Act (CEQA).

1.1 Project Location

The Project Site is bounded by the elevated Metro E Line tracks and West Jefferson Boulevard to the north, office buildings to the west, South La Cienega Boulevard on the east, and a See's Candy retail/manufacturing building along Corbett Street to the south. The Project Site is served by a network of regional transportation facilities providing connectivity to greater Los Angeles County. Regional access to the Project Site is provided by Interstate 10 (I-10), approximately 0.6 miles to the north. La Cienega Boulevard and West Jefferson Boulevard both also serve as major arterials.

The elevated Metro E Line runs rail service directly north of the Project Site parallel to West Jefferson Boulevard, with the La Cienega/Jefferson Metro stop at the south side of the intersection between West Jefferson and La Cienega Boulevards. The La Cienega/Jefferson Metro station is located less than 100 feet to the east and provides direct access to the City of Santa Monica to the west and downtown Los Angeles to the east.

The Project Site is in a highly urbanized location surrounded by a mix of land uses, including commercial, residential, industrial, and office developments. There are six transit-oriented developments (TODs) approved, completed, or currently being constructed within a quarter mile radius around the La Cienega/Jefferson Metro stop¹, inclusive of office and housing development projects. To the west are commercial enterprises including an advertising agency and market researcher.

1.2 Project Description

The project proposes to demolish the nine existing buildings on the Project Site and develop a six- and a eleven-story mixed-use complex consisting of 260 multi-family residential units and approximately 224,448 square feet of office space with 2,651 square feet of ground floor commercial uses. The Project would be

¹ See 3401 La Cienega Public Introduction & Preliminary Development Concept Plan Set, updated September 2020.

approximately 150 feet in height and would include a total floor area of approximately 460,824 square feet and a Floor Area Ratio (FAR) of 3:1. The residential portion would include 59 studio units, 103 one-bedroom units, 88 two-bedroom units, and 10 three-bedroom units. A total of 11 percent of the proposed residential units (22 units) would be designated as restricted affordable housing for Extremely Low-Income Households or Very Low Income Households.

Up to 871 parking spaces would be provided in structured parking located within two subterranean levels. Vehicular access to the Project is proposed via a two-way driveway on the south side of West Jefferson Boulevard, part of which is uncovered for access to the commercial building and the other part is covered for access to the residential building. Vehicle access to the parking would be provided via a full access driveway on La Cienega Blvd., and a limited access driveway accommodating right turn ingress and tight turn egress only for motorists accessing the Project Site.

Open space areas and amenities for residents would be in the residential project and includes an outdoor wellness garden, outdoor lounge and barbeque area, pool and spa.

2.0 ENVIRONMENTAL SETTING

2.1 Fundamentals of Noise and Vibration

Noise

Noise is usually defined as unwanted sound that is an undesirable byproduct of society's normal day-to-day activities. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, and/or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). The human ear does not respond uniformly to sounds at all frequencies. For example, the human ear is less sensitive to low and high frequencies than medium frequencies, which more closely correspond with human speech. In response to the sensitivity of the human ear to different frequencies, the A-weighted noise level (or scale), which corresponds better with people's subjective judgment of sound levels, has been developed. This A-weighted sound level, referenced in units of dB(A), is measured on a logarithmic scale such that a doubling of sound energy results in a 3 dB(A) increase in noise level. Typically, changes in a community noise level of less than 3 dB(A) are not noticed by the human ear.² Changes from 3 to 5 dB(A) may be noticed by some individuals who are sensitive to changes in noise. A greater than 5 dB(A) increase is readily noticeable, while the human ear perceives a 10 dB(A) increase in sound level to be a doubling of sound.

On the A-weighted scale, the range of human hearing extends from approximately 3 to 140 dB(A). **Table 1, A-Weighted Decibel Scale**, provides examples of A-weighted noise levels from common sources. Noise sources occur in two forms: (1) point sources, such as stationary equipment or individual motor vehicles; and (2) line sources, such as a roadway with a large number of point sources (motor vehicles). Sound generated by a point source typically diminishes (attenuates) at a rate of 6 dB(A) for each doubling of distance from the source to the receptor at acoustically "hard" sites and 7.5 dB(A) at acoustically "soft" sites.³ For example, if a noise source produces a noise level of 89 dB(A) at a reference distance of 50 feet, the noise level would be 83 dB(A) at a distance of 100 feet from the noise source, 77 dB(A) at a distance of 200 feet, and so on. Noise generated by a mobile source will decrease by approximately 3 dB(A) over hard surfaces and 4.5 dB(A) over soft surfaces for each doubling of distance.

² California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, 2013.

³ Federal Highway Administration, *Highway Noise Fundamentals*, (1980) 97. Examples of "hard" or reflective sites include asphalt, concrete, and hard and sparsely vegetated soils. Examples of acoustically "soft" or absorptive sites include soft, sand, plowed farmland, grass, crops, heavy ground cover, etc.

Table 1
A-Weighted Decibel Scale

Typical A-Weighted Sound Levels	Sound Level (dB(A), Leq)
Threshold of Pain	140
Jet Takeoff at 100 Meters	125
Jackhammer at 15 Meters	95
Heavy Diesel Truck at 15 Meters	85
Conversation at 1 Meter	60
Soft Whisper at 2 Meters	35

Source: United States Occupational Safety & Health Administration, Noise and Hearing Conservation Technical Manual, 1999.

Sound levels also can be attenuated by man-made or natural barriers (e.g., sound walls, berms, ridges), as well as elevational differences. Noise is most audible when traveling by direct line-of-sight, which is when there is an uninterrupted visual path between the noise source and noise receptor. Barriers, such as walls or buildings that break the line-of-sight between the source and the receiver, can greatly reduce noise levels from the source since sound can only reach the receiver by diffraction. Sound barriers can reduce sound levels by up to 20 dB(A) or more. However, if a barrier is not high or long enough to break the line-of-sight from the source to the receiver, its effectiveness is greatly reduced.

Solid walls and berms may reduce noise levels by 5 to 10 dB(A) depending on their height and distance relative to the noise source and the noise receptor.⁴ Sound levels may also be attenuated 3 dB(A) by a first row of houses and 1.5 dB(A) for each additional row of houses.⁵ The minimum noise attenuation provided by typical structures in California is provided in **Table 2, Building Noise Reduction Factors**.

⁴ Federal Highway Administration, *Highway Noise Mitigation*, (1980) 18.

⁵ California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, 2013.

Table 2
Building Noise Reduction Factors

Building Type	Window Condition	Noise Reduction Due to Exterior of the Structure (dB(A))
All	Open	10
Light Frame	Ordinary Sash (closed)	20
	Storm Windows	25
Masonry	Single Glazed	25
	Double Glazed	35

Source: Federal Highway Administration, Highway Traffic Noise: Analysis and Abatement Guidance, December 2011.

Sound Rating Scales

Various rating scales approximate the human subjective assessment to the “loudness” or “noisiness” of a sound. Noise metrics have been developed to account for additional parameters, such as duration and cumulative effect of multiple events. Noise metrics are categorized as single event metrics and cumulative metrics, as summarized below.

To simplify the measurement and computation of sound loudness levels, frequency weighted networks have obtained wide acceptance. The A-weighted scale, discussed above, has become the most prominent of these scales and is widely used in community noise analysis. A-weighted sound levels represent the overall noise at a receiver that is adjusted in frequency to approximate typical human hearing sensitivity. The A-weighted scale has shown good correlation with community response and is easily measured. The metrics used in this analysis are all based upon the dB(A) scale.

Equivalent Noise Level

Equivalent Noise Level (Leq) is the sound level corresponding to a steady-state A-weighted sound level containing the same total energy as several single event noise exposure level events during a given sample period. Leq is the “acoustic energy” average noise level during the period of the sample. It is based on the observation that the potential for noise annoyance is dependent on the total acoustical energy content of the noise. The equivalent noise level is expressed in units of dB(A). Leq can be measured for any period, but is typically measured for 15 minutes, 1 hour, or 24 hours. Leq for a 1-hour period is used by the Federal Highway Administration (FHWA) for assessing highway noise impacts. Leq for 1 hour is referred to as the Hourly Noise Level (HNL) in the California Airport Noise Regulations and is used to develop Community

Noise Equivalent Level values for aircraft operations. Construction noise levels and ambient noise measurements in this section use the Leq scale.

Community Noise Equivalent Level

Community Noise Equivalent Level (CNEL) is a 24-hour, time-weighted energy average noise level based on the A-weighted decibel. It is a measure of the overall noise experienced during an entire day. The term “time-weighted” refers to the penalties attached to noise events occurring during certain sensitive periods. In the CNEL scale, 5 dB are added to measured noise levels occurring between the hours of 7 P.M. and 10 P.M. For measured noise levels occurring between the hours of 10 P.M. and 7 A.M., 10 dB are added. These decibel adjustments are an attempt to account for the higher sensitivity to noise in the evening and nighttime hours and the expected lower ambient noise levels during these periods. Existing and projected future traffic noise levels in this section use the CNEL scale.

Day-Night Average Noise Level

The day-night average sound level (Ldn) is another average noise level over a 24-hour period. Noise levels occurring between the hours of 10 P.M. and 7 A.M. are increased by 10 decibels (dB). This noise is weighted to take into account the decrease in community background noise of 10 dB(A) during this period. Noise levels measured using the Ldn scale are typically similar to CNEL measurements.

Adverse Effects of Noise Exposure

Noise is known to have several adverse effects on humans, which has led to laws and standards being set to protect public health and safety, and to ensure compatibility between land uses and activities. Adverse effects of noise on people include hearing loss, communication interference, sleep interference, physiological responses, and annoyance. Each of these potential noise impacts on people is briefly discussed in the following narrative.

Hearing Loss

Hearing loss is generally not a community noise concern, even near a major airport or a major freeway. The potential for noise-induced hearing loss is more commonly associated with occupational noise exposures in heavy industry, very noisy work environments with long-term exposure, or certain very loud recreational activities (e.g., target shooting and motorcycle or car racing). The Occupational Safety and Health Administration (OSHA) identifies a noise exposure limit of 90 dB(A) for 8 hours per day to protect from hearing loss (higher limits are allowed for shorter duration exposures). Noise levels in neighborhoods, even in very noisy neighborhoods, are not sufficiently loud enough to cause hearing loss.

Communication Interference

Communication interference is one of the primary concerns in environmental noise. Communication interference includes speech disturbance and intrusion with activities such as watching television. Noise can also interfere with communications such as within school classrooms. Normal conversational speech is in the range of 60 to 65 dB(A) and any noise in this range or louder may interfere with speech.

Sleep Interference

Noise can make it difficult to fall asleep, create momentary disturbances of natural sleep patterns by causing shifts from deep to lighter stages, and cause awakening. Noise may even cause awakening that a person may or may not be able to recall.

Physiological Responses

Physiological responses are those measurable effects of noise on people that are realized as changes in pulse rate, blood pressure, and other physical changes. Studies to determine whether exposure to high noise levels can adversely affect human health have concluded that, while a relationship between noise and health effects seems plausible, there is no empirical evidence of the relationship.

Annoyance

Annoyance is an individual characteristic and can vary widely from person to person. Noise that one person considers tolerable can be unbearable to another of equal hearing capability. The level of annoyance depends both on the characteristics of the noise (including loudness, frequency, time, and duration), and how much activity interference (such as speech interference and sleep interference) results from the noise. However, the level of annoyance is also a function of the attitude of the receiver. Personal sensitivity to noise varies widely. It has been estimated that 2% to 10% of the population is highly susceptible to annoyance from any noise not of their own making, while approximately 20% are unaffected by noise.⁶ Attitudes may also be affected by the relationship between the person affected and the source of noise, and whether attempts have been made to abate the noise.

Vibration

Vibration consists of waves transmitted through solid material. Groundborne vibration propagates from a source through the ground to adjacent buildings by surface waves. Vibration may comprise a single pulse, a series of pulses, or a continuous oscillatory motion. The frequency of a vibrating object describes how

⁶ Wayne County Airport Authority. *Background information on noise & its measurement*, 2009

rapidly it is oscillating and is measured in hertz (Hz). Most environmental vibrations consist of a composite, or “spectrum” of many frequencies, and are generally classified as broadband or random vibrations. The normal frequency range of most groundborne vibration that can be felt generally starts from a low frequency of less than one Hz to a high of about 200 Hz. Vibration is often measured in terms of the peak particle velocity (PPV) in inches per second (in/sec) when considering impacts on buildings or other structures, as PPV represents the maximum instantaneous peak of vibration that can stress buildings. Because it is a representation of acute vibration, PPV is often used to measure the temporary impacts of short-term construction activities that could instantaneously damage built structures. Vibration is often also measured by the Root Mean Squared (RMS) because it best correlates with human perception and response. Specifically, RMS represents “smoothed” vibration levels over an extended period of time and is often used to gauge the long-term chronic impact of a project’s operation on the adjacent environment. RMS amplitude is the average of a signal’s squared amplitude. It is most commonly measured in decibel notation (VdB).

Vibration energy attenuates as it travels through the ground, causing the vibration amplitude to decrease with distance away from the source. High frequency vibrations reduce much more rapidly than low frequencies, so that in the far-field from a source, the low frequencies tend to dominate. Soil properties also affect the propagation of vibration. When groundborne vibration interacts with a building, there is usually a ground-to-foundation coupling loss (i.e., the foundation of the structure does not move in sync with the ground vibration), but the vibration can also be amplified by the structural resonances of the walls and floors. Vibration in buildings is typically perceived as rattling of windows or items on shelves, or the motion of building surfaces. At high levels, vibration can result in damage to structures.

Manmade groundborne vibration is generally limited to areas within a few hundred feet of certain types of construction activities, especially pile driving. Road vehicles rarely create enough groundborne vibration to be perceptible to humans unless the road surface is poorly maintained and there are potholes or bumps. If traffic induces perceptible vibration in buildings, such as window rattling or shaking of small loose items (typically caused by heavy trucks in passing), then it is most likely an effect of low-frequency airborne noise or ground characteristics. Human annoyance by vibration is related to the number and duration of events. The more events or the greater the duration, the more annoying it will be to humans.

Construction vibration damage criteria are assessed based on structural category (e.g., reinforced-concrete, steel, or timber). FTA guidelines consider 0.2 inch/sec PPV to be the significant impact level for non-engineered timber and masonry buildings. Structures or buildings constructed of reinforced concrete, steel, or timber have a vibration damage criterion of 0.5 inch/sec PPV pursuant to FTA guidelines.⁷ The FTA

⁷ Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*. September 2018.

Guidelines include a table showing the vibration damage criteria based on structural category and is presented below in **Table 3, Construction Vibration Damage Criteria**.

Table 3
Construction Vibration Damage Criteria

Building/Structural Category	PPV, in/sec
I. Reinforced-concrete, steel, or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

2.2 Noise Sensitive Receptors

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as parks, historic sites, cemeteries, and recreation areas are considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses. Noise-sensitive receptors surrounding the Project Site include residential dwellings to the southeast across La Cienega Boulevard, the historic See's Candy building located immediately south of the site, media and other potentially noise sensitive uses to the west and south of the Project Site, and more residential units to the northeast across the intersection of La Cienega Boulevard and Jefferson Boulevard.

2.3 Existing Conditions

A noise monitoring survey was completed to establish existing noise levels in the vicinity of the Project Site. Transportation noise is the main source of noise in urban environments, largely from the operation of internal combustion engines and frictional contact between vehicles and ground and air.⁸ It should be noted that due to the ongoing Coronavirus pandemic, traffic volumes on local roads are likely lower than usual. Therefore, noise measurements that were conducted in February 2021 are likely lower than pre-pandemic conditions and are therefore conservative measurements for the existing noise environment.

⁸ World Health Organization, <https://www.who.int/docstore/peh/noise/Comnoise-2.pdf> accessed July 2, 2020.

Figure 1, Noise Monitoring Locations, maps the noise measurement locations relative to the Project Site. The existing average daily noise levels are presented in **Table 4, Ambient Sound-Level Readings**.

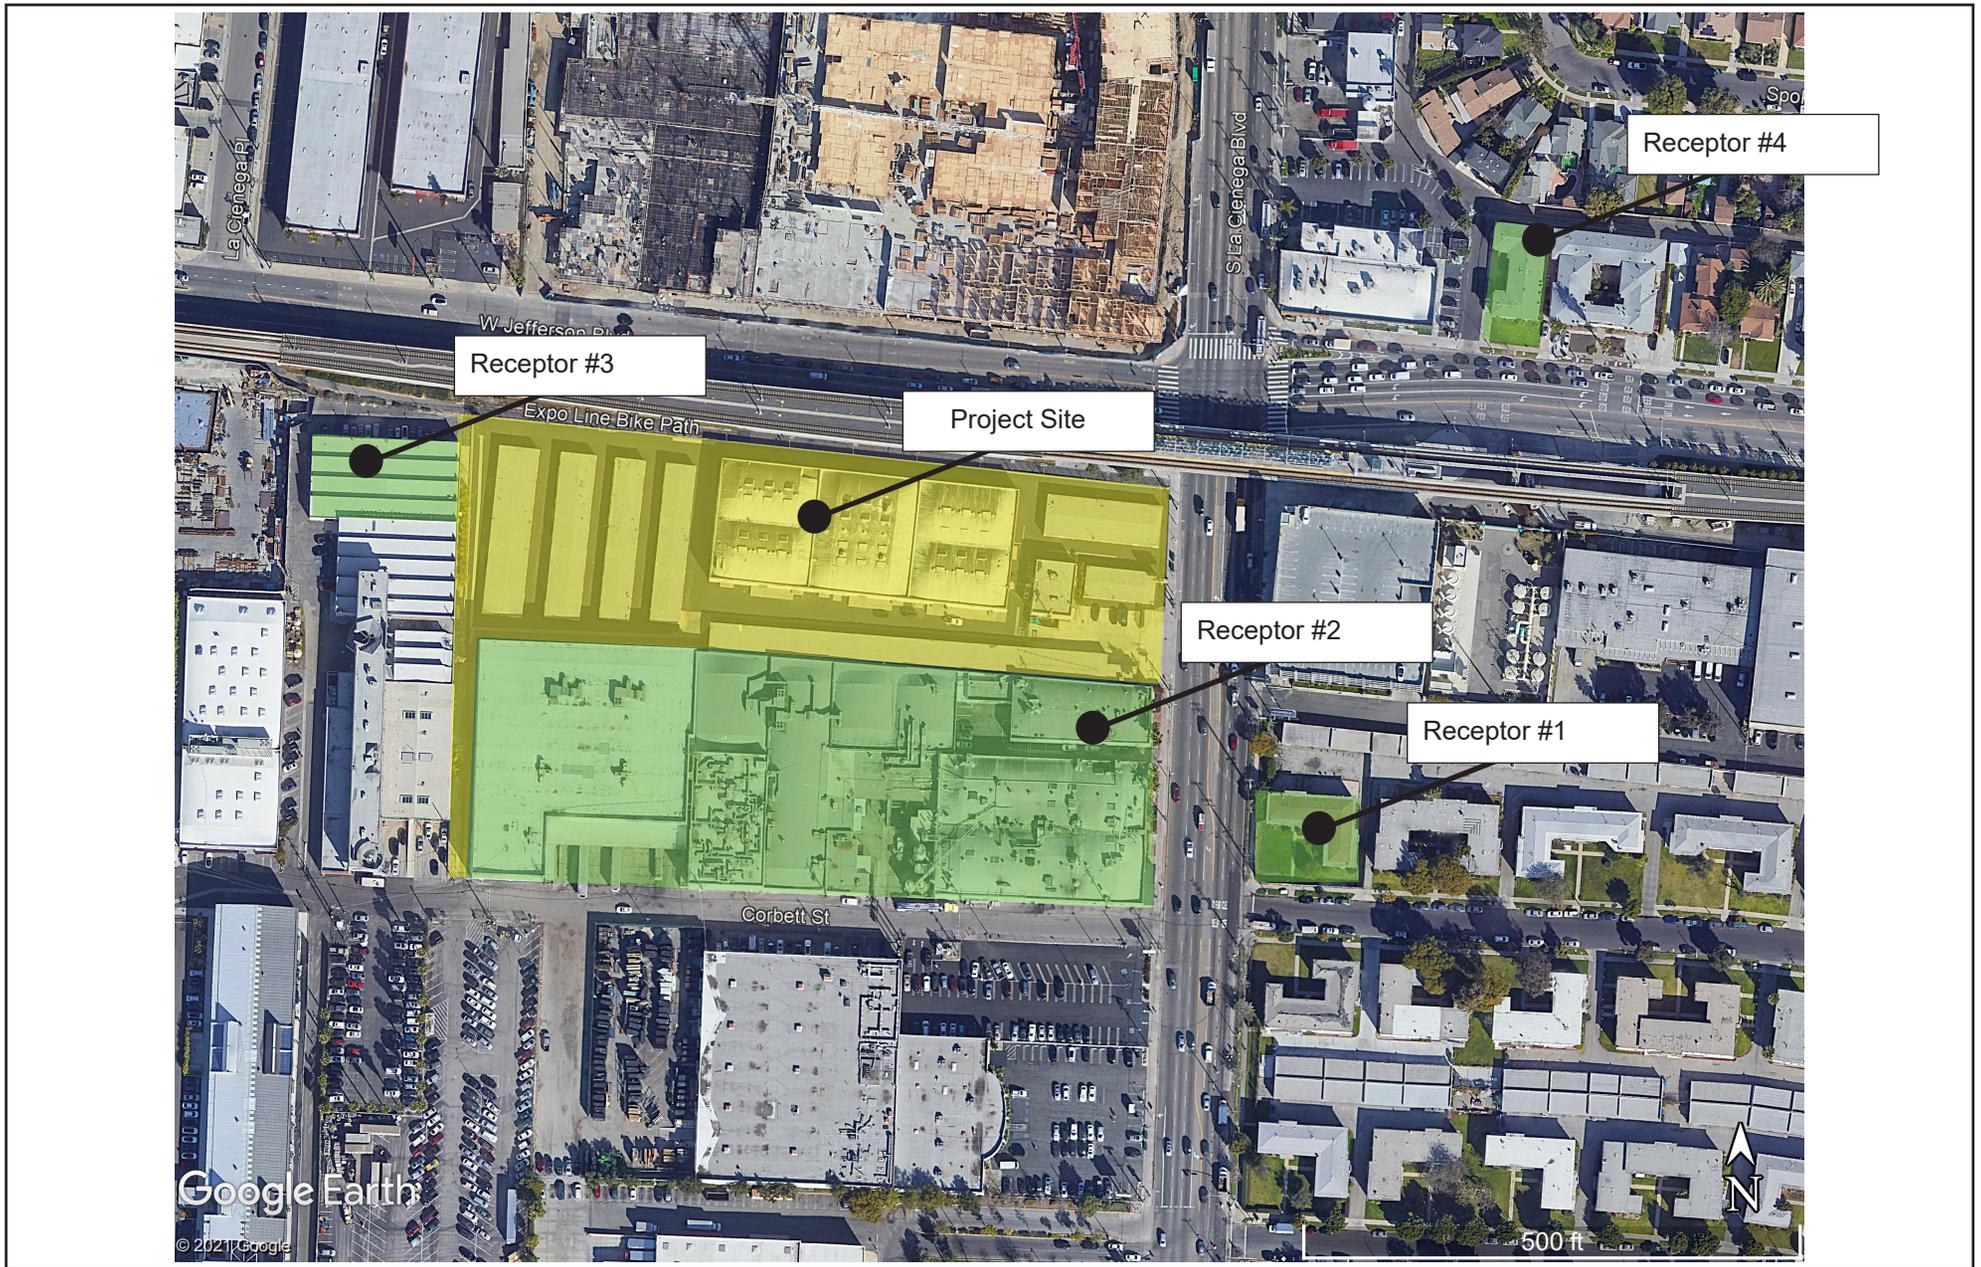

Table 4
Ambient Sound-Level Readings

Modeled Noise Measurement Location #	Street Address	dBA Leq
Location #1	5785 Corbett Street (residences)	73.6
Location #2	3431 S. La Cienega Boulevard (See's Candies)	63.0
Location #3	5760 W. Jefferson Boulevard (media company and offices)	63.5
Location #4	5673 W. Jefferson Boulevard (residences)	68.5

The primary sources of groundborne vibration in the Project Site vicinity are heavy-duty vehicles (e.g., refuse trucks, delivery trucks, and school buses) traveling on local roadways and potentially the elevated Metro E Line. Trucks and buses typically generate groundborne vibration velocity levels of around 63 VdB, and these levels could reach 72 VdB where trucks and buses pass over bumps in the road.⁹ Rapid transit or light rail systems typically generate vibration levels of 70 VdB or more near their tracks.¹⁰ However, since the Metro Station is at that location, vibration levels are likely much lower than this due to the lower operating speed and because it runs on an elevated structure.

FIGURE 1

3.0 REGULATORY FRAMEWORK

3.1 State Regulations

Title 24, California Code of Regulations

The California Noise Insulation Standards of 1988 (California Code of Regulations Title 24, Section 3501 et seq.) require that interior noise levels from the exterior sources not exceed 45 dBA Ldn/community noise equivalent level (CNEL)¹¹ in any habitable room of a multi-residential use facility (e.g., hotels, motels, dormitories, long-term care facilities, and apartment houses and other dwellings, except detached single-family dwellings) with doors and windows closed. Where exterior noise levels exceed 60 dBA CNEL/Ldn, an acoustical analysis is required to show that the building construction achieves an interior noise level of 45 dBA CNEL/Ldn or less.

3.2 Local Plans and Policies

City of Los Angeles Municipal Code

The LAMC provides two types of noise standards that are relevant to this analysis: 1) construction noise standards, and 2) general noise ordinance standards. The construction noise standards apply only to construction activities, while the general noise ordinance standards apply to noise generated by land use activities.

Construction Noise Standards

The City of Los Angeles Municipal Code (LAMC) has established noise regulations for both short-term construction activities and long-term operation of a project. The LAMC regulates noise from any powered equipment or powered hand tool in a residential zone (or within 500 feet) at a distance of 50 feet between 7:00 AM and 10:00 PM to the following:

- 75 dBA for construction, industrial, and agricultural machinery including crawler-tractors, dozers, rotary drills and augers, loaders, power shovels, cranes, derricks, motor graders, paving machines, off-highway trucks, ditchers, trenchers, compactors, scrapers, wagons, pavement breakers, compressors and pneumatic or other powered equipment;
- 75 dBA for powered equipment of 20 horse-power or less intended for infrequent use in residential areas, including chain saws, log chippers and powered hand tools;

¹¹ Measurements are based on Ldn or CNEL.

- 65 dBA for powered equipment intended for repetitive use in residential areas, including lawn mowers, backpack blowers, small lawn and garden tools.¹²

These noise limits do not apply where compliance is deemed technically infeasible. Specifically, such activities are allowed when it is demonstrated that compliance is not possible “despite the use of mufflers, shields, sound barriers, and/or other noise reduction device or techniques during the operation of the equipment.”¹³

Section 41.40 of the LAMC also prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, and between 6:00 PM and 8:00 AM on Saturday.¹⁴ This is intended to protect persons occupying sleeping quarters in any hotel, apartment, or other place of residence. Construction noise intruding onto property zoned for manufacturing or industrial uses is exempt from these standards.

General Noise Ordinance

LAMC Chapter XI, “Noise Regulation,” regulates noise from non-transportation noise sources such as commercial or industrial operations, mechanical equipment or residential activities. Although these regulations do not apply to vehicles operating on public rights-of-way, the regulations do apply to noise generated by vehicles on private property, such as truck operations at commercial or industrial facilities. The exact noise standards vary depending on the type of noise source, but the allowable noise levels are generally determined relative to the existing ambient noise levels at the affected location. LAMC Section 111.01 (a) defines the ambient noise as “the composite of noise from all sources near and far in a given environment, exclusive of occasional and transient intrusive noise sources and of the particular noise source or sources to be measured. Ambient noise shall be averaged over a period of at least 15 minutes.”

Section 112.01 of the LAMC would prohibit any amplified noises, especially those from outdoor sources (e.g., outdoor speakers, stereo systems, etc.) from exceeding the ambient noise levels of adjacent properties by more than 5 dBA. Amplified noises would also be prohibited from being audible at any distance greater than 150 feet from the Project’s property line.

LAMC Section 112.02 (a) would prevent project HVAC systems and other mechanical equipment from elevating noise levels at neighboring residences by more than 5 dBA.

¹² City of Los Angeles, Municipal Code Chapter XI-Noise Regulation (Section 112.05), 1986.

¹³ Ibid.

¹⁴ City of Los Angeles, Municipal Code Chapter IV-Public Welfare (Section 41.40), 1984.

City Guidance

The City recommends that a Project would, under normal circumstances, have a significant impact if:

- Construction activities lasting more than one day would exceed existing ambient exterior noise levels by 10 dBA or more at a noise sensitive use;
- Construction activities lasting more than 10 days in a three-month period would exceed existing ambient exterior noise levels by 5 dBA or more at a noise sensitive use; or
- Construction activities would exceed the ambient noise level by 5 dBA at a noise sensitive use between the hours of 9:00 P.M. and 7:00 A.M. Monday through Friday, before 8:00 A.M. or after 6:00 P.M. on Saturday, or at any time on Sunday.¹⁵

For a project's operational impacts:

- The ambient noise level measured at the property line of affected uses to increase by 3 dBA in CNEL to or within the “normally unacceptable” or “clearly unacceptable” category...
- Any 5 dBA or greater noise increase.

These “normally unacceptable” and “clearly unacceptable” categories refer to those outlined by the State's noise and land-use compatibility chart, shown in **Table 5** below.

¹⁵ City of Los Angeles, Municipal Code Chapter XII-Environmental Protection (Chapter 12.08 – Noise Control), 1978

Table 5
State of California Noise/Land Use Compatibility Matrix

Land Use Category	Community Noise Exposure (dB, L _{dn} or CNEL)					
	55	60	65	70	75	80
Residential - Low Density Single-Family, Duplex, Mobile Homes	Normally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Residential - Multi-Family	Normally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Transient Lodging - Motels Hotels	Normally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Schools, Libraries, Churches, Hospitals, Nursing Homes	Normally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Auditoriums, Concert Halls, Amphitheaters	Conditionally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Clearly Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Sports Arena, Outdoor Spectator Sports	Conditionally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Clearly Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Playgrounds, Neighborhood Parks	Normally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Golf Courses, Riding Stables, Water Recreation, Cemeteries	Normally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Office Buildings, Business Commercial and Professional	Normally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable	Clearly Unacceptable
Industrial, Manufacturing, Utilities, Agriculture	Normally Acceptable	Conditionally Acceptable	Conditionally Acceptable	Normally Unacceptable	Clearly Unacceptable	Clearly Unacceptable

	Normally Acceptable - Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.
	Conditionally Acceptable - New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply system or air conditioning will normally suffice.
	Normally Unacceptable - New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.
	Clearly Unacceptable - New construction or development should generally not be undertaken.

4.0 NOISE ANALYSIS

4.1 Thresholds of Significance

The impacts of the proposed project related to noise would be considered significant if they would exceed any of the following Standards of Significance, in accordance with Appendix G of the *California Environmental Quality Act (CEQA) Guidelines*:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project Site in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generation of excessive groundborne vibration or groundborne noise levels;
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

4.2 Methodology

Noise levels associated with project-related construction activities were calculated using the FHWA Roadway Construction Noise Model (RCNM) and evaluated with existing ambient noise levels to determine new ambient noise levels with construction activities. The California Emissions Estimator Model (CalEEMod) construction equipment assumptions were used to develop a construction equipment list used for RCNM inputs. Noise levels were compared to the City's noise ordinance which includes provisions regarding construction noise levels.

Traffic noise in the project area was estimated using Los Angeles Department of Transportation traffic count information obtained for the project to get a percentage of increase to traffic volumes.¹⁶ Studies have shown that a 3 dB(A) increase in sound level pressure is barely detectable by the human ear. A 3 dB(A) increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.¹⁷ Therefore, the analysis will determine if there is a potential traffic noise impact by analyzing if there is a doubling (i.e., 100 percent increase) in traffic volumes.

¹⁶ City of Los Angeles Department of Transportation, *Manual Traffic Count Summary*. April 2015. Available at: https://navigatela.lacity.org/dot/traffic_data/manual_counts/LACIENEGA.JEFFERSON.150415-WILMAN.pdf

¹⁷ California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Protocol*. September 2013.

4.3 Impact Analysis

Construction Impacts

Temporary On-Site Construction Activity Noise

During all construction phases, noise-generating activities could occur at the Project Site between the hours of 7:00 A.M. and 9:00 P.M. Monday through Friday, in accordance with Section 41.40(a) of the LAMC. On-site activities could include the use of heavy equipment such as excavators and loaders, as well as smaller equipment such as saws, hammers, and pneumatic tools. Off-site secondary noises could be generated by sources such as construction worker vehicles, vendor deliveries, and haul trucks.

Noises from demolition and grading activities are typically the foremost concern when evaluating a project's construction noise impacts, as these activities often require the use of heavy-duty, diesel-powered earthmoving equipment. The types of heavy equipment required for these activities may include excavators, bulldozers, front-end loaders, graders, backhoes, and scrapers.

As shown on **Table 6, Construction Noise Impacts at Off-Site Sensitive Receptors (Unmitigated)**, when considering ambient noise levels, the use of multiple pieces of powered equipment simultaneously could increase noise by up to approximately 0.7 dBA L_{eq} at the closest residences on Corbett Street to the southeast of the Project Site. Construction noise impacts could cause an increase of up to approximately 14.6 dBA at the historic See's Candies directly south of the Project Site and up to 14.1 dBA at the offices to the west of the Project Site.

Table 6
Construction Noise Impacts at Off-Site Sensitive Receptors (Unmitigated)

Receptor	Maximum Construction Noise Level (dBA L_{eq})	Existing Ambient Noise Level (dBA L_{eq})	New Ambient Noise Level (dBA L_{eq})	Increase (dBA L_{eq})	Potentially Significant?
Location #1 – Residences at 5785 Corbett Street	66.0	73.6	74.3	0.7	No
Location #2 – See's Candies at 3431 S. La Cienega Boulevard	77.4	63.0	77.6	14.6	Yes
Location #3 – Offices at 5760 W. Jefferson Boulevard	77.4	63.5	77.6	14.1	Yes
Location #4 – Residences at 5673 W. Jefferson Blvd	57.5	68.5	68.8	0.3	No

Source: Impact Sciences, 2021.

These estimated construction noise levels would exceed the City’s significance threshold of 5 dBA for the nearest office receptors and the See’s Candies building which is considered eligible as an historic resource.¹⁸ However, **Mitigation Measure NOI-1** would require the use of mufflers or other suitable noise reduction devices and **Mitigation Measure NOI-2** would require the use of sound barriers capable of achieving attenuation of at least 10 dBA along the Project’s southern and western boundaries.

Mitigation Measures:

MM-NOI-1: All powered construction equipment shall be equipped with exhaust mufflers or other suitable noise reduction devices capable of achieving a sound attenuation of at least 3 dBA.

MM-NOI-2: Temporary sound barriers capable of achieving a sound attenuation of at least 10 dBA shall be erected along the Project’s southern and western boundaries to obstruct line of sight noise travel from the Project Site to sensitive uses south and west of the Project Site.

As shown in **Table 7, Construction Impacts at Off-Site Sensitive Receptors (with Mitigation)**, implementation of Mitigation Measures NOI-1 and NOI-2 would reduce noise exposure of sensitive receptors to below the 5 dBA threshold. As a result, construction noise impacts would be considered less than significant with mitigation.

Table 7
Construction Noise Impacts at Off-Site Sensitive Receptors (Mitigated)

Receptor	Maximum Construction Noise Level (dBA Leq)	Existing Ambient Noise Level (dBA Leq)	New Ambient Noise Level (dBA Leq)	Increase (dBA Leq)	Potentially Significant?
Location #1 – Residences at 5785 Corbett Street	63.0	73.6	74.0	0.4	No
Location #2 – See’s Candies at 3431 S. La Cienega Boulevard	64.4	63.0	66.8	3.8	No
Location #3 – Offices at 5760 W. Jefferson Boulevard	64.4	63.5	67.0	3.5	No

Temporary Off-Site Construction Activity Noise

Construction haul trucks would generate noise off-site during site demolition and would peak during grading. This would include removal of materials from the Project Site, base materials, and demolished materials. While this vehicle activity would increase ambient noise levels along the haul route, ambient noise levels would not be expected to significantly increase ambient noise levels by 3 dBA or greater at any noise sensitive land use. Studies have shown that a 3 dBA increase in sound level pressure is barely detectable by the human ear. A 3 dBA increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.¹⁹ While this vehicle activity would marginally increase ambient noise levels along the haul route, it would not be expected to significantly increase ambient noise levels by 5 dBA or greater at any noise sensitive land uses. During the grading phase, the project would have approximately 165 haul trucks (both to and from the project) per day. Because haul trucks generate more noise than traditional passenger vehicles, a 19.1 passenger car equivalency (PCE) was used to convert haul truck trips to a reference level conversion to an equivalent number of passenger vehicles.²⁰ Therefore, there would be an addition of 3,152 PCE trips due to haul truck activity during the grading phase. Generally, a 3 dBA increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.

Traffic volumes in the project area were obtained from the Los Angeles Department of Transportation traffic count information.²¹ The DOT Traffic Count shows that La Cienega Boulevard has a daily traffic volume of approximately 23,873 vehicles.²² The addition of 3,152 PCE trips due to the addition of haul trucks during the grading phase would account for approximately 13.2 percent of existing traffic volume.

Though the addition of haul trucks would alter the fleet mix of vehicles along the potential haul route on La Cienega Boulevard, their minimal addition to local roadways would not nearly double those roads' traffic volumes, let alone augment their traffic to levels capable of producing 5 dBA ambient noise increases. As a result, off-site construction noise impacts related to haul trips would be considered less than significant.

²² Ibid.

Temporary Construction Vibration

The Federal Transit Administration provides ground-borne vibration impact criteria with respect to building damage during construction activities. Peak Particle Velocity (PPV), expressed in inches per second, is used to measure building vibration damage. Construction vibration damage criteria are assessed based on structural category (e.g., reinforced-concrete, steel, or timber). FTA guidelines consider 0.2 inch/sec PPV to be the significant impact level for non-engineered timber and masonry buildings. Structures or buildings constructed of reinforced concrete, steel, or timber have a vibration damage criterion of 0.5 inch/sec PPV pursuant to FTA guidelines.²³

Groundborne vibration generated by construction activities associated with the proposed project would affect both on- and off-site sensitive uses located in close proximity to the Project Site. As shown in **Table 8, Vibration Source Levels for Construction Equipment**, vibration velocities could range from 0.003 to 0.089 inch/sec PPV at 25 feet from the source activity, with corresponding vibration levels (VdB) ranging from 58 VdB to 87 VdB at 25 feet from the source activity, depending on the type of construction equipment in use.

Table 8
Vibration Source Levels for Construction Equipment

Equipment	Approximate PPV (in/sec)					Approximate RMS (VdB)				
	25 Feet	50 Feet	60 Feet	75 Feet	100 Feet	25 Feet	50 Feet	60 Feet	75 Feet	100 Feet
Large Bulldozer	0.089	0.031	0.024	0.017	0.011	87	78	76	73	69
Caisson Drilling	0.089	0.031	0.024	0.017	0.011	87	78	76	73	69
Loaded Trucks	0.076	0.027	0.020	0.015	0.010	86	77	75	72	68
Jackhammer	0.035	0.012	0.009	0.007	0.004	79	70	68	65	61
Small Bulldozer	0.003	0.001	0.0008	0.0006	0.0004	58	49	47	44	40

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.

Table 9, Vibration Levels at Off-Site Sensitive Uses from Project Construction - Unmitigated, shows the vibration velocity and levels that would occur at these nearby buildings and structures during construction at the Project Site. It should be noted that while the See's Candies building is considered historic, it is still

²³ Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*. September 2018.

in use for as a manufacturing facility today and all receptors are thus evaluated as non-engineered timber and masonry buildings.

Table 7
Vibration Levels at Off-Site Sensitive Uses from Project Construction - Unmitigated

Sensitive Uses Off-Site	Distance to Project Site (ft.)	Receptor Significance Threshold PPV (in./sec)	Estimated PPV (in./sec) ^a
Location #1 - 5785 Corbett Street	185	0.2	0.004
Location #2 - 3431 S. La Cienega Boulevard (See's Candies)	15	0.2	0.191
Location #3 - 5760 W. Jefferson Boulevard	15	0.2	0.191
Location #4 - 5673 W. Jefferson Boulevard	350	0.2	0.002

Source: Impact Sciences, Inc. 2020

The vibration velocities predicted to occur at Locations #2 and #3, the nearest receptors located 15 to the Project Site boundary would be 0.191 in/sec PPV. All receptors are considered to be a non-engineered timber or masonry building and would not experience a PPV groundborne vibration level that exceeds the FTA 0.2 in/sec PPV threshold. Therefore, vibration impacts associated with building damage due to construction activities would result in a less than significant impact. No mitigation is required.

Operation Impacts

Permanent Operational Traffic Noise

As discussed above, a 3 dBA increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant. Furthermore, a 3 dBA noise level increase is the minimum noise level increase required for a human to perceive a change in ambient noise.

Traffic volumes in the project area were obtained from the Los Angeles Department of Transportation traffic count information.²⁴ Trip generation information for the proposed project was added to average daily traffic volumes for La Cienega Boulevard at the intersection of Jefferson Boulevard to determine whether traffic increased enough to result in an audible noise level increase. The DOT Traffic Count data

²⁴ City of Los Angeles Department of Transportation, *Manual Traffic Count Summary*. May 2017. Available at: https://navigatela.lacity.org/dot/traffic_data/manual_counts/4401_IJFLAC170523.pdf

shows that La Cienega Boulevard has a daily traffic volume of approximately 23,873 vehicles.²⁵ The project's estimated maximum addition of approximately 3,645 daily vehicle trips would account for approximately 14.8 percent of the average daily traffic volume for just La Cienega Boulevard alone. This volume is not nearly the doubling of traffic volume required for a 3 dBA increase in noise. This increase in traffic volumes compared to current traffic counts is not significant enough to cause an audible increase in traffic noise and impacts would be less than significant.

Permanent Operation Stationary Noise

Regulatory compliance with LAMC Sec.112.02 would ultimately ensure that noises from sources such as heating, air conditioning, and ventilation systems not increase ambient noise levels at neighboring occupied properties by more than 5 dBA. Given this regulation, ambient noise levels, and the relatively quiet operation of modern HVAC systems, these on-site noise sources would not be capable of causing the ambient noise levels of nearby uses to increase by 3 dBA CNEL to or within their respective L.A. CEQA Thresholds Guide's "normally unacceptable" or "clearly unacceptable" noise categories, or by 5 dBA or greater overall.

Parking noise typically generates noise levels of approximately 60 dB(A) at 50 feet. However, parking from the project would occur via valet on ground level and in a two-level underground structure. Noises from the Project's underground parking level would be inaudible, shielded from nearby receptors. These parking noises would not exceed the normally acceptable level of noise identified in **Table 4**. Therefore, parking noise would result in a less than significant impact.

Permanent Operational Aircraft Noise

The Project Site is not in the vicinity of a private airstrip or airport land use plan. Likewise, the Project Site is not located within an airport land use plan or within two miles of a public airport or public use airport. The nearest public airport would be Santa Monica Airport, which is located over 4 miles to the west of the Project Site. As such, the project would not expose people residing or working in the Project area to excessive airport-related noise levels. No impact would occur from the proposed Project and no further analysis is required.

Tree Protection Memo

13 May 2021

Mr. Arden Hearing
Executive General Manager - Development, West Coast
La Cienega Owner LLC
111 Sutter Street, Floor 18
San Francisco, CA 94104

**RE: EVALUATION OF EXISTING TREES
3401 SOUTH LA CIENEGA BOULEVARD
LOS ANGELES, CA 90016**

To Whom It May Concern:

This letter is to state that as a licensed Landscape Architect in the State of California pursuant to Section 17.02 and Section 46.00 of the Los Angeles Municipal Code, I am deemed a tree expert and am therefore qualified to evaluate the preservation, removal, replacement, or relocation of protected trees for the above stated project.

Further, based on our on-site evaluation, no protected trees were found to exist on the project site. The two existing trees are both *Pinus* spp., with a trunk diameter of less than 8". This species is neither native to California nor protected.

Sincerely,

Scott D Baker, PLA
President

APPENDIX E

Geotechnical Engineering Feasibility Report

22 April 2021

Mr. Matthew Isken
Lendlease Group
515 South Flower Street, Suite 600
Los Angeles, CA 90071

**Re: Geotechnical Engineering Feasibility Report
3401 South La Cienega Boulevard
Los Angeles, California
Langan Project No. 700088300**

Dear Mr. Isken,

As requested by the Lendlease Group, and in accordance with our Proposal for Geotechnical Engineering Services during Project Entitlements dated 15 January 2021, Langan Engineering and Environmental Services, Inc. (LANGAN) has completed a geotechnical and geological desktop study and limited field exploration program for a proposed mixed-use development (Project) at 3401 South La Cienega Boulevard in Los Angeles, California (Site). The site vicinity is shown in Figure 1.

The scope of our services for this limited study included: an evaluation of the subsurface conditions based on available publications, including geotechnical data from adjacent sites; identification of potential geotechnical and geological issues within the development; a limited subsurface exploration program consisting of two borings and the development of preliminary recommendations for the proposed development.

This letter report provides the following: (i) a brief summary of our understanding of the existing Site conditions and the proposed development, (ii) our review of available geologic and geotechnical information, (iii) our limited field exploration program and results, and (iv) preliminary geotechnical evaluation and recommendations for the proposed development. Elevations referenced herein are in feet with respect to Mean Sea Level, unless otherwise noted.

PROJECT OVERVIEW

Existing Site Conditions

The approximate 3.59-acre Site is located within the Culver City area of Los Angeles, California. The Site is bordered by South La Cienega Boulevard to the east, an LA Metro light rail (the E line) and West Jefferson Boulevard to the north, and commercial buildings to the west and south. The Site is generally rectangular in shape and includes a small alleyway extending to the south along the west side of the Site. The Site is occupied by storage buildings, and associated office and paved drive aisles as shown on Figure 2.

The Site topography slopes gently downward to the west, matching ground surface elevations of the adjacent developments and infrastructure. Based on data available from Google Earth Pro® the ground surface elevation ranges from approximately 109 feet at the east end to approximately 101 feet at the west end of the Site.

Proposed Development

We understand the proposed development includes demolition of all existing structures and construction of two new buildings. One building is proposed as a commercial building with office and

retail space up to 9 stories tall. The second building is proposed as a residential apartment building up to 12 stories tall. Both buildings will be underlain by up to three below grade parking levels.

AVAILABLE INFORMATION REVIEW

Information that we reviewed for this study included publications from the United States Geological Survey (USGS), California Department of Conservation, Division of Mines and Geology (CDMG), and California Geological Survey (CGS). We also utilized the data presented in the Phase I Environmental Site Assessment (ESA) Report that was prepared for the proposed development by Partner Engineering and Sciences, Inc., dated March 5, 2020.

We also reviewed the following geotechnical documents that were obtained from the Los Angeles Department of Building and Safety:

- "Geotechnical Investigation Proposed Mixed-Use Development, 3321 & 3351 South La Cienega Boulevard, 57074 – 5735 West Jefferson Boulevard Los Angeles California" by Geocon West, Inc. dated 6 January 2015
- "Air Treatment Facility – Jefferson & La Cienega" by the City of Los Angeles Department of General Services, Standards dated October 2005
- "Foundation Investigation, Proposed Warehouse, Jefferson Boulevard, Los Angeles, California" by Kovacs-Byer dated 1 June 1981
- "Soil and Concrete Slab Report, Storage Building 3401 South La Cienega Boulevard. Los Angeles, California", by Robert Stone and Associates dated 16 May 1983
- "Report of Compaction Tests, Proposed Storage Buildings, 3401 La Cienega Boulevard, Los Angeles, California" by Duco Engineering, Inc. dated 31 January 1977.
- Third Quarter 2009 Site Conceptual Model Update and Groundwater Monitoring Report Arco Facility No. 0518 5851 Rodeo Road, Los Angeles, California by Stantec dated 15 October 2009

A brief summary of our review is presented below followed by our preliminary conclusions and recommendations. Select boring logs from the publicly available studies that are closest to the Site are included in Appendix A and the approximate boring locations are shown in Figure 2.

REGIONAL AND LOCAL GEOLOGY

The Site is located near the northwestern end of the Peninsular Ranges Geomorphic Province of Southern California. The Peninsular Ranges Geomorphic Province consists of a series of mountain ranges separated by northwest trending valleys that are subparallel to faults that branch from the San Andreas Fault. More specifically, the site is near the boundary between the Southwestern and Central structural blocks of the Los Angeles Basin, an extensive sediment-filled depression bound by the San Gabriel Mountains in the north, Santa Monica Mountains and the Pacific Ocean in the west, the Palos Verdes Peninsula in the southwest, the Santa Ana Mountains in the southeast, and the Puente, San Jose, and Chino Hills in the east. The basin's structural history includes extension and strike-slip faulting, followed by oblique contraction via thrusting and strike-slip faulting.

Regional geologic maps of the area by Dibblee (1991) indicates the site is underlain by alluvium (map unit Qa), and Campbell et al (2014) mapped the site area as being underlain by late Pleistocene age young alluvium (map unit Qya). These late Pleistocene soils are described as "unconsolidated,

generally friable, stream-deposited silt, sand, and gravel on flood plains, locally including related alluvial fans and streambeds.”

The regional geologic map is presented in Figure 3.

GEOLOGIC HAZARDS REVIEW

The following subsections present the results of our review of geologic hazards as they pertain to the Site.

- Regional Faulting and Seismicity – According to the CGS 2010 Fault Activity Map of California and the 2014 USGS Seismic Source Model, the closest mapped active faults to the site are the Newport-Inglewood Fault, approximately 0.25 miles southeast of the site, Puente Hills (LA) Blind Thrust Fault, approximately 2.2 miles east of the site, Santa Monica Fault, approximately 3.4 miles northwest of the site, and San Vicente Fault, 2.9 miles north of the site.

The site is located in an active seismic area that has historically been affected by generally moderate to occasionally strong levels of earthquake-induced ground shaking. Therefore, the proposed development is expected to experience strong levels of ground shaking from nearby faults as well as ground shaking from other active seismic areas in the southern California region. A search of the USGS ANSS Comprehensive Earthquake Catalog indicates that as of 7 April 2021, 51 earthquakes with magnitudes of 5.0 or greater have occurred within a 100-km radius of the site since 1800.

- Surface Fault Rupture – Based on our review of the CGS “Earthquake Zones of Required Investigation, Hollywood Quadrangle”, the Site is not located within a mapped Alquist-Priolo Earthquake Fault Zone as defined by the Alquist-Priolo Earthquake Fault Zoning (AP) Act. The geologic review does not indicate the presence of active surface faulting within or directly adjacent to the Site as show in Figure 4. Therefore the potential for surface rupture is considered very low.
- Historically High Groundwater – Based on our review of the “Seismic Hazard Zone Report for the Hollywood 7.5-Minute Quadrangle, Los Angeles County, California” by the CGS, the historical high groundwater depth at the Site is approximately 10 to 15 feet.
- Liquefaction – Liquefaction is a transformation of soil from a solid to a liquefied state during which saturated soil temporarily loses strength resulting from the buildup of excess pore water pressure, especially during earthquake-induced cyclic loading. Soil susceptible to liquefaction includes loose to medium dense sand and gravel, low-plasticity silt, and some low-plasticity clay deposits.

The Site is located within a state designated liquefaction hazard zone as shown on the “Earthquake Zones of Required Investigation Hollywood Quadrangle” by the CGS as shown in Figure 4. Therefore, a site-specific liquefaction analysis is required for the proposed development. Our preliminary liquefaction assessment is presented later in this report.

- Lateral Spreading – Lateral spreading is a phenomenon in which surficial soil displaces along a shear zone that has formed within an underlying liquefied layer. The surficial blocks are transported downslope or in the direction of a free face, by earthquake and gravitational forces. The Site is relatively flat and does not include a free-facing slope. Therefore the potential for lateral spreading is considered very low.

- Seismic-Induced Ground Deformations – Seismic-induced ground deformations include ground surface settlement and differential settlement resulting from liquefaction of saturated cohesionless soils and cyclic densification of unsaturated sands and gravels caused by earthquakes. The potential for seismic-induced ground deformation is discussed later in this report.
- Earthquake-Induced Landslide Areas – Based on our review of the “Earthquake Zones of Required Investigation Hollywood Quadrangle” by the CGS, the Site is not located within an ‘Earthquake-Induced Landslide’ zone. Therefore the potential for earthquake-induced landsliding is considered very low.
- Expansive Soils – Expansive soils experience swelling or shrinking due to moisture change as a result of cyclic wet/dry weather cycles, irrigation, landscaping, or site grading. Swelling and shrinking soils can result in differential movement of structures, including floor slabs and foundations, and site work, including hardscape, utilities, and sidewalks. Soils that exhibit shrinkage and swelling under these conditions generally consist of plastic clay.

Based on our review of the available subsurface data (discussed later in this report), the soils at or near the approximate planned foundation level are anticipated to be predominantly granular (non-plastic) and therefore the potential for expansive soils to be present is anticipated to be very low.

- Soil Erosion – Soil erosion is the removal of soil by water and/or wind. Factors which influence the erosion potential include the soil type, amount of rainfall, wind, length and steepness of slopes, and the amount and type of vegetation covering the site and slopes. The site is fully developed and has limited landscaping. The proposed development does not include slopes, or site features which may be susceptible to erosion; therefore, erosion potential of soils at the site and loss of topsoil is considered to be low.

AERIAL PHOTOGRAPHS

Several historical aerial photographs dated between 1923 and 2016 were presented in the project’s March 2020 ESA. Based on our review of the historical photographs, the Site was undeveloped/undisturbed land until circa 1928 where apparent grading or otherwise disturbed ground was observed at the eastern half of the site, as evidenced by vegetation clearance in the aerial photograph. The subsequent photograph, taken in 1938, appears to show a minor access road, possibly an unpaved road/trail that traverses the site in the east-west direction.

By 1948, the Site was developed with what appears to be the present day storage structure within the middle approximately one-third of the Site and two smaller structures located to the east and west.

The Site appears to have been relatively unchanged based on subsequent photos until 1977, when the four present-day rectangular buildings are present at the west end. A rectangular building that is currently present along the southern Site boundary is also shown in the 1977 photograph. Each of the subsequent photographs taken through 2016 do not indicate significant changes, and the Site appears to be consistent with the current-day development.

LIMITED FIELD EXPLORATION PROGRAM

Our geotechnical subsurface exploration program consisted of two hollow-stem auger (HSA) borings (identified as LB-1 and LB-2). LB-1 and LB-2 were drilled to a depth of approximately 101.5 and 51.5

feet, respectively. Prior to drilling, the boring location was marked out by a LANGAN field engineer. Underground Service Alert of Southern California (USA/DigAlert) was contacted to locate and mark known public underground utilities within the public right-of-way. A private utility-locating subcontractor also confirmed that the boring locations were clear of conductive underground utilities. Refer to Figure 5 for approximate boring locations.

Borings were drilled by Martini Drilling, Inc., on 4 February 2021 using a truck-mounted drill rig under the full-time observation of a LANGAN field engineer. The borings were hand-augered to a depth of approximately 5 feet and subsequently advanced with the drill rig using conventional drilling techniques. Standard Penetration Tests (SPT)¹ and California Modified Ring samples were generally collected at 5-foot intervals until boring termination depth. California Modified Ring samples were collected at select locations using a 3.0-inch-outer-diameter split-barrel California sampler lined with 2.42-inch-inner-diameter brass rings. SPT N-values were recorded to identify the relative density and stiffness of the cohesionless and cohesive soils, respectively.

Upon completion, the boring was backfilled via tremie method with cement-grout slurry to near ground surface, and the surface was patched with quick-dry set concrete. Excess soil cuttings were temporarily stored on site in Department of Transportation (DOT) approved 55-gallon drums for subsequent characterization and disposal. Excess soil cuttings encountered are pending characterization and disposal.

Retrieved soil samples were visually examined and classified in the field following the Unified Soil Classification System (USCS) and confirmed by re-examination in our office. A copy of the boring logs is provided in Appendix B.

SUBSURFACE CONDITIONS

Based on our review of the subsurface information obtained to date, the Site is underlain by artificial fill consisting primarily of silty sand with various amounts of gravel. The grading activities for the westerly four rectangular buildings constructed in 1977 was relatively well documented in a compaction report prepared by Duco Engineering dated 31 January 1977. Based on our review of their report, the native ground surface elevation ranged from approximately 92.0 feet to approximately 105 feet, and artificial fill ranging from approximately 1.3 feet to approximately 9 feet in thickness was placed to achieve the current grade. Though documentation of the grading activities for the remainder of the Site was not available, we anticipate similar fill could be present throughout the site.

Subsurface conditions encountered in our limited field exploration encountered up to 5 feet of fill in LB-1 and no fill in LB-2. Fill consisted of clay with varying amounts of sand and was underlain by alluvium. Alluvium consisted of dense to very dense sand with varying amounts of silt, clay and gravel and were encountered to a depth of 38 and 8 feet in LB-1 and LB-2, respectively. Stiff to very stiff silt and clay with varying amounts of sand and shell fragments were encountered under the sand until the bottom of boring.

Groundwater or seepage was not encountered in any of the borings that were drilled. Based on available data provided by the State Water Resources Control Board, the groundwater level in the vicinity of the Site has been measured on the order of 75 to 80 feet below ground surface (bgs). Historic high groundwater depth was reported at approximately 10 to 15 feet.

¹ The Standard Penetration Test is a measure of the soil density and consistency. The SPT N-value is defined as the number of blows required to drive a 2-inch outer diameter split-barrel sampler 12-inches, after an initial penetration of 6 inches, using a 140-pound automatic hammer free falling of a height of 30 inches (ASTM D1586).

PRELIMINARY GEOTECHNICAL EVALUATION AND DESIGN RECOMMENDATIONS

Liquefaction Potential

As noted previously, the site is located within a California designated liquefaction hazard zone and as such, a liquefaction analysis is required for the proposed development. Groundwater or seepage was not encountered in any LANGAN borings however the historic high groundwater depth was reported between 10 to 15 feet. Thus, a groundwater depth of 15 feet was used in the liquefaction analysis.

Liquefaction was evaluated for LB-1 and LB-2 in accordance with the guidelines titled 'City of Los Angeles Information Bulletin for Liquefaction Analysis Guidelines' effective 1 January 2020. In accordance with the guidelines, two analyses were performed, the first with a $2/3$ PGA_M and the second with the full PGA_M , where PGA_M is the Maximum Considered Earthquake geometric mean peak ground acceleration adjusted for site class effects. The first analyses used $2/3$ PGA_M (0.629g), a mode magnitude of 6.4 and factor of safety of 1.1. The second analyses used PGA_M (0.943g), a mode magnitude earthquake of 6.4 and factor of safety less than 1.0. Based on our evaluation, the calculated factors of safety against liquefaction are greater than 1.1 and 1.0 at $2/3$ PGA_M and PGA_M levels of ground shaking. As such, the soils encountered at the site are not prone to liquefaction at the levels of shaking evaluated.

Seismic Design Criteria

Seismic design criteria for the proposed development will be performed in accordance with the 2020 Los Angeles Building Code (LABC) and ASCE 7-16. Based on the available soils data, we anticipate that Site Class D conditions are present per Chapter 20 of ASCE 7-16 because we anticipate the structure will be underlain by stiff to hard or dense to very dense alluvium. Per Section 11.4.8 of ASCE 7-16, unless the criteria defined within the exceptions of Section 11.4.8 of ASCE 7-16 are implemented by the structural engineer, a site-specific ground motion evaluation is required because the mapped risk-targeted maximum considered earthquake spectral response acceleration parameter at a period of 1 second exceeds 0.2 g. During the design phase of the project, the project structural engineer should clarify the seismic design approach so that LANGAN can provide recommendations for seismic design criteria, either based on mapped values or based on site-specific ground motion hazard analysis in accordance with Section 11.4.8 of ASCE 7-16.

Preliminary Foundation Recommendations

The proposed development will include up to 3 levels of subterranean parking, and we anticipate that the finished floor will be on the order of 30 feet below grade, with the foundation bearing about 35 feet below grade. Based on the preliminary borings drilled at the site, borings from adjacent developments as listed in above, and our experience with the geologic materials in this area of Los Angeles, the proposed development may be supported on spread and continuous footings bearing within the native, alluvium material that is anticipated to be present at the foundation level. A preliminary allowable bearing value of 6,000 to 7,000 pounds per square foot (psf) could be used for concept design. The higher values would be achievable in areas underlain by more granular soils. This recommendation will need to be confirmed based on additional site-specific borings that extend beneath the foundation subgrade. Recommended allowable bearing values include both dead and live loads, and may be increased by one-third for transient loads, such as wind and seismic forces.

Slabs-on-Grade

Floor slabs can preliminarily be designed as slabs-on-grade bearing on native alluvial soils. Steel reinforcing and concrete thickness should be designed by a Structural Engineer for soils with a low expansion potential (EI of 21). At a minimum, we recommend the following:

- Subgrade modulus, K, equal to 100 pounds per cubic inch (pci),
- 5-inch minimum thickness,
- A capillary break section consisting of 6 inches of gravel underlying a 15-mil HDPE membrane.

Shoring

The proposed development will require excavations on the order of 35 to 40 feet below existing grade and will require vertical cuts adjacent to existing infrastructure. Temporary shoring will be required to support the excavations; surcharge loading from the adjacent buildings and roadways should be included in design to provide lateral support for existing foundations and vehicular loading as appropriate.

The most common type of shoring in the greater Los Angeles area for excavations of this depth generally consists of soldier beams and timber lagging with one or more rows of tieback anchors. Rakers with deadmen are often required when tiebacks are not feasible.

Adjacent Elevated Metro Line

Due to the depth of the proposed excavation and the proximity of the adjacent Metro Line, the temporary excavation could be within the geotechnical zone of influence of the adjacent Metro structure. The adjacent Metro structure foundation plan should be requested from Metro so that geotechnical influence (if any) of the new construction can be evaluated. The evaluation may need to be submitted to Metro for their review in accordance with the Metro Design Criteria and Standards Adjacent Construction Design Manual.

RECOMMENDED FUTURE STUDIES

The conclusions and preliminary recommendation provide herein are based on project information provided to date and a limited number of borings drilled at the site and prior borings performed by others for projects adjacent to the proposed development. As part of schematic design, when structural loads and architectural plans are available, the following additional geotechnical studies should be provided:

- A design-level geotechnical investigation and evaluation that includes site-specific exploratory borings that extend below the proposed foundation level to confirm the subsurface conditions that were anticipated at the site which formed the basis of our preliminary recommendations.
- Development of site-specific response spectra in accordance with Chapter 21 of ASCE 7-16, if required by the project structural engineer.
- Infiltration testing to support the site civil storm water management design
- Review of existing available plans for the nearby Metro line and evaluation to determine if the proposed construction will be within the geotechnical zone of influence of the Metro Line foundations.

LIMITATIONS

The conclusions and preliminary recommendations provided in this report result from our interpretation of the geotechnical conditions existing at the site inferred from a limited number of borings performed in this study. Actual subsurface conditions may vary. Recommendations provided are dependent upon one another and no recommendation should be followed independent of the others.

Any proposed changes in structures or their locations should be brought to LANGAN's attention as soon as possible so that we can determine whether such changes affect our recommendations. Information on subsurface strata and groundwater levels shown on the logs represent conditions encountered only at the locations indicated and at the time of investigation. If different conditions are encountered during construction, they should immediately be brought to LANGAN's attention for evaluation, as they may affect our recommendations.

This report has been prepared to assist the owner in their due diligence and preliminary design process and is only applicable to the design of the specific project identified. The information in this report cannot be utilized or depended on by engineers or contractors who are involved in evaluations or designs of facilities (including underpinning, grouting, stabilization, etc.) on adjacent properties which are beyond the limits of that which is the specific subject of this report.

Environmental issues (such as permitting or potentially contaminated soil and groundwater) are outside the scope of this study and should be addressed in a separate evaluation.

We appreciate the opportunity to have provided these services for this project. Should you have any questions regarding this letter, please feel free to contact us.

Sincerely,

Langan Engineering and Environmental Services, Inc.

LEGEND:

EARTHQUAKE FAULT ZONES

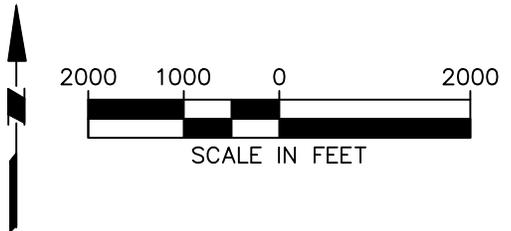

Earthquake Fault Zones
 Zone boundaries are delineated by straight-line segments; the boundaries define the zone encompassing active faults that constitute a potential hazard to structures from surface faulting or fault creep such that avoidance as described in Public Resources Code Section 2621.5(a) would be required.

Active Fault Traces
 Faults considered to have been active during Holocene time and to have potential for surface rupture: Solid Line in Black or Red where Accurately Located; Long Dash in Black or Solid Line in Purple where Approximately Located; Short Dash in Black or Solid Line in Orange where Inferred; Dotted Line in Black or Solid Line in Rose where Concealed; Query (?) indicates additional uncertainty. Evidence of historic offset indicated by year of earthquake-associated event or C for displacement caused by fault creep.

SEISMIC HAZARD ZONES

Liquefaction Zones
 Areas where historical occurrence of liquefaction, or local geotechnical and ground water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

Earthquake-Induced Landslide Zones
 Areas where previous occurrence of landslide movement, or local topographic, geological, geotechnical and subsurface water conditions indicate a potential for permanent ground displacements such that mitigation as defined in Public Resources Code Section 2693(c) would be required.

KEY TO SYMBOLS

Symbol Description

Symbol Description

STRATA

AC pavement.

Inorganic clays or low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays

Well graded sand with silt.

Poorly graded sands or gravelly sands, little or no fines

Silty sands, sand-silt mixtures

Poorly graded sand with silt.

MISCELLANEOUS

Boring continues.

SAMPLERS

No sample recovery.

Split Spoon.

Standard Penetration.

Notes:

1. The Notice to Proceed with the subsurface investigation was given by GED to Standards on 09/01/2005.
2. Exploratory borings were drilled on 10/12/2005 with a CME-75HT drill rig using 8" diameter hollow stem augers.
3. Free water was not encountered during the drilling of this project.
4. Boring locations were provided by Geotechnical Services and verified by Standards. Test boring location coordinates and elevations were estimated using a held Trimble GPS device.
5. Abbreviations used on logs:

N/o = north of	NCF = north curb face	NE = northeast
S/o = south of	SCF = south curb face	NW = northwest
E/o = east of	ECF = east curb face	SE = southeast
W/o = west of	WCF = west curb face	SW = southwest
C/L = center line		PL = property line
AC = asphalt concrete		PCC = Portland cement concrete
OVA = organic vapor analyzer		LEL = lower explosive limit
PM = parts per million		HT = high torque
6. The stratification lines indicated on the boring maps and profiles represent the approximate boundary between material types and the transition may be gradual.
7. The materials, boundaries, and conditions have been established only at the boring locations, and are not necessarily representative of subsurface conditions elsewhere across the site.

LOG OF TEST BORING

LAB. NO.: 140- 5488 **PROJECT:** AIR TREATMENT FACILITY, JEFFERSON & LA CIENEGA

BORING NO.: B-1 **ELEVATION:** 110' **DRILLING DATE:** 10/12/2005

BORING LOCATION: 60' E/o ECF La Cienega Blvd. and 122' S/o SCF Jefferson Blvd.

DRILL RIG TYPE: CME-75HT using 8" diameter hollow stem augers

TRANSPORTATION ASSESSMENT REPORT
3401 SOUTH LA CIENEGA BOULEVARD PROJECT

City of Los Angeles, California
August 11, 2021

1.0 INTRODUCTION

1.1 Transportation Assessment Overview

This transportation assessment report has been prepared to identify and evaluate the potential transportation impacts of the proposed 3401 South La Cienega Boulevard Mixed-Use project (“proposed project” herein) on the surrounding street system. The proposed project site is located at 3401 South La Cienega Boulevard in the City of Los Angeles, California. The proposed project site is generally bounded by Jefferson Boulevard and Metro’s E Line (Expo) La Cienega/Jefferson station to the north, a See’s Candy factory to the south, South La Cienega Boulevard to the east and existing commercial development to the west. The proposed project and general vicinity are shown in *Figure 1-1*.

The transportation assessment follows City of Los Angeles (“City”) transportation assessment guidelines¹ (TAG). The City’s TAG are focused on transportation metrics that promote: the reduction of greenhouse gas emissions, the development of multimodal networks and access to diverse land uses, as well as safety, sustainability and smart growth. In compliance with the California Environmental Quality Act (CEQA), the City’s TAG identify vehicle miles traveled (VMT) as the primary metric for evaluating a project’s transportation impacts along with whether the proposed project conflicts or is inconsistent with local plans and policies. In addition, the City’s TAG require evaluation of non-CEQA mobility elements such as pedestrian, bicycle and transit access, project access and circulation, project construction, and the potential for residential street intrusion.

This transportation assessment (i) presents a CEQA assessment of project-related VMT accounting for any project design features, (ii) provides a CEQA assessment of whether the project conflicts or is inconsistent with local plans and policies, (iii) presents a non-CEQA assessment of pedestrian, bicycle and transit access, (iv) provides a non-CEQA evaluation of project access, safety and circulation, (v) provides a non-CEQA review of project construction activities, and (vi) recommends mitigation and improvement measures, where necessary.

¹ *Transportation Assessment Guidelines*, City of Los Angeles Department of Transportation (LADOT), July 2020.

3401 South La Cienega Boulevard Project

1.2 Study Methodology

The CEQA and non-CEQA analysis criteria for this transportation assessment were identified in consultation with City of Los Angeles Department of Transportation (LADOT) staff. The analysis criteria were determined based on the City's TAG, the proposed project description and location, and the characteristics of the surrounding transportation system. As defined by the City as Lead Agency under CEQA, LADOT confirmed the appropriateness of the analysis criteria when it entered into a transportation assessment Memorandum of Understanding (MOU) for the proposed project. The approved transportation assessment MOU is attached to this report in *Appendix A*.

2.0 PROJECT DESCRIPTION

2.1 Project Location

The proposed project site is located at 3401 South La Cienega Boulevard in the City of Los Angeles, California. The proposed project site is generally bounded by Jefferson Boulevard and Metro's E Line (Expo) La Cienega/Jefferson station to the north, a See's Candy factory to the south, South La Cienega Boulevard to the east and existing commercial development to the west. The proposed project and general vicinity are shown in *Figure 1-1*.

The project site is situated along the west side of South La Cienega Boulevard south of Jefferson Boulevard. The existing 3.59-acre project site is comprised of an 86,900 square-foot, 1,144-unit self-storage facility with 36 surface parking spaces. The project site is highlighted in an aerial photograph presented in *Figure 2-1*.

The proposed project site is located within the West Adams-Baldwin Hills-Leimert Community Plan area of the City of Los Angeles. The West Adams-Baldwin Hills-Leimert Community Plan² area is generally bounded by Pico and Venice Boulevards to the north, the City of Inglewood to the south, Arlington and Van Ness Avenues to the east, and Culver City to the west. It is bordered by the communities of West Los Angeles, Wilshire and South Los Angeles. Refer to *Figure 2-2* which shows the West Adams-Baldwin Hills-Leimert Community Plan area.

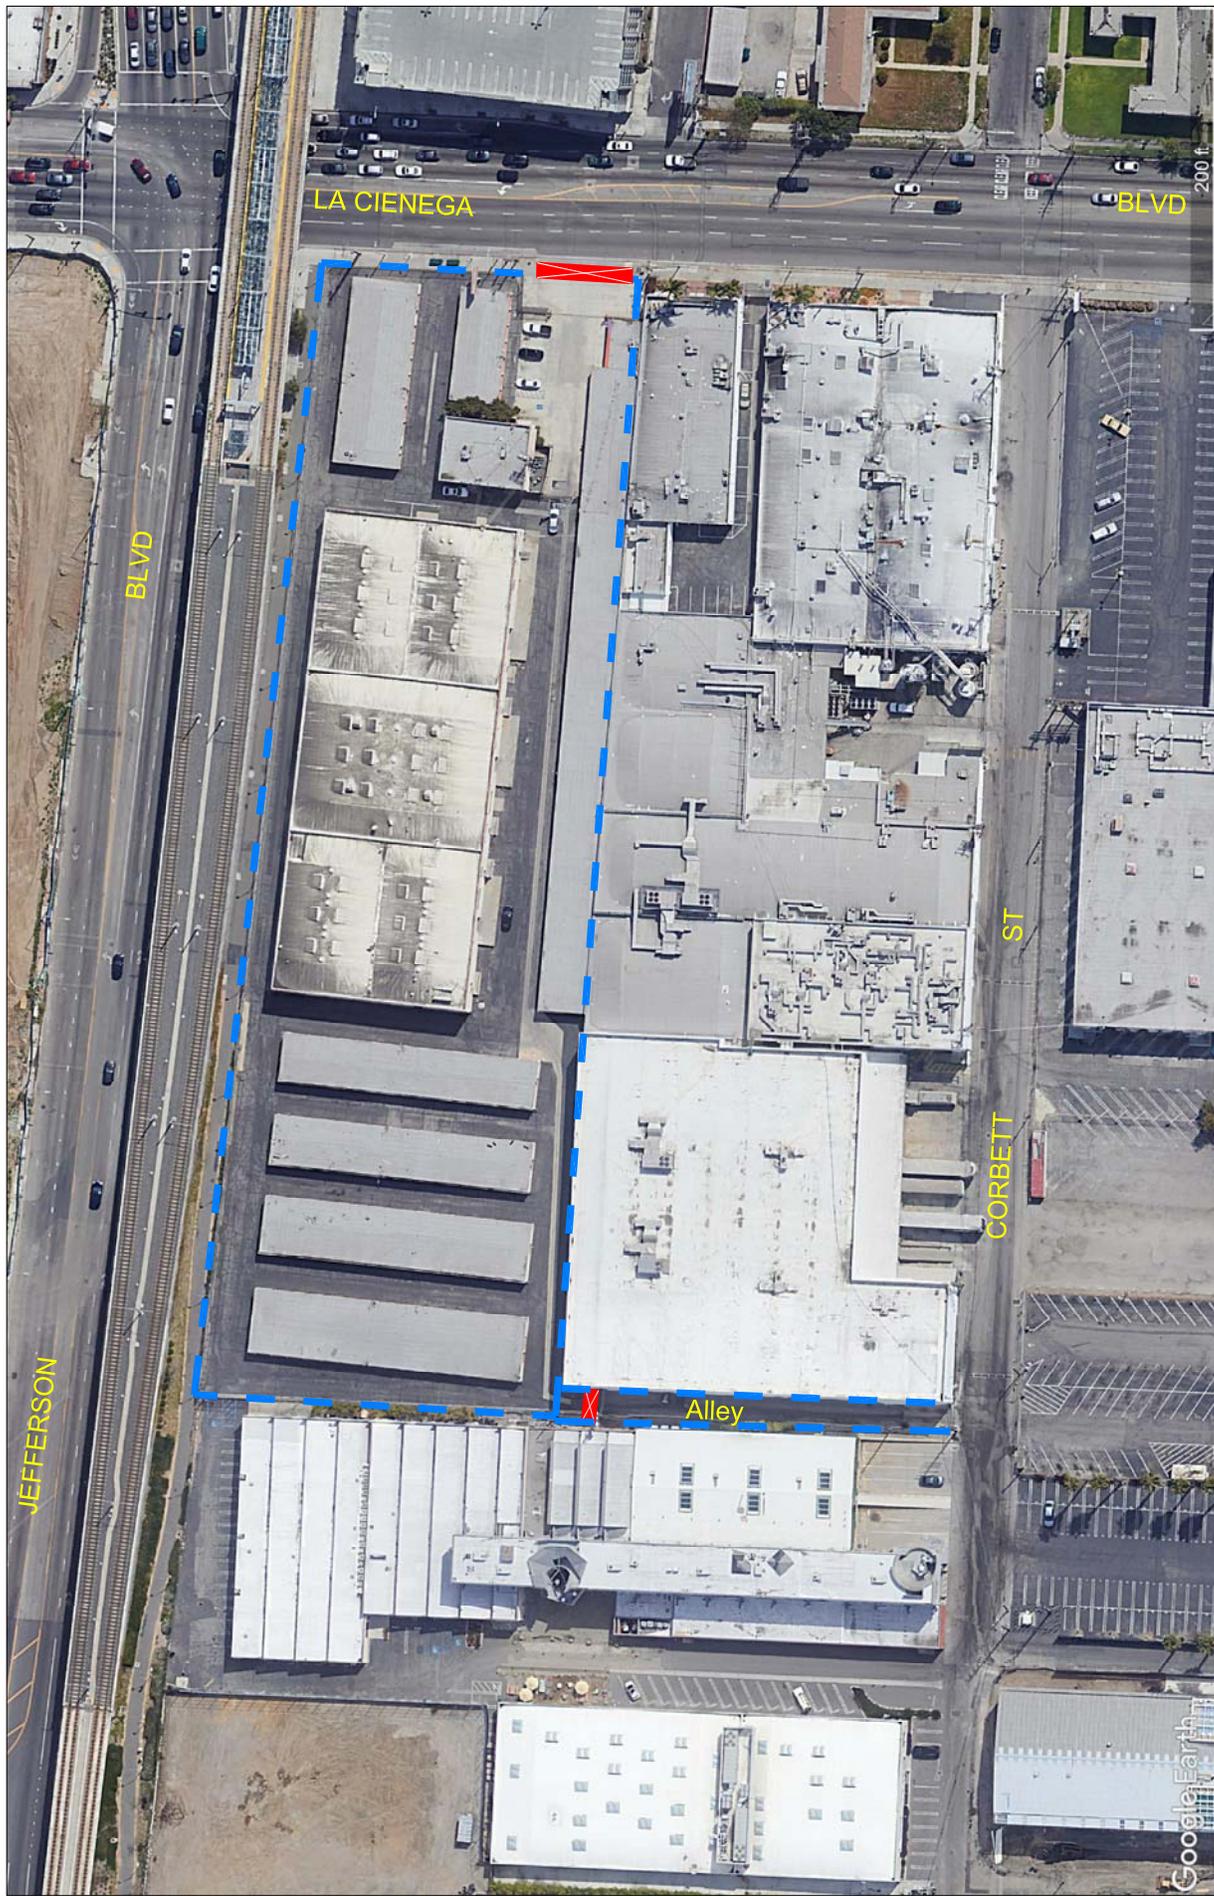

The proposed project site is also situated within the Jefferson/La Cienega Transit Oriented Development (TOD) Subarea of the West Adams-Baldwin Hills-Leimert Community Plan Implementation Overlay District (West Adams CPIO District)³. The West Adams CPIO District comprises of Subareas referred to as the Commercial Corridor Subarea, the Major Intersection Node Subarea, the La Brea/Farmdale TOD Subarea, the Jefferson/La Cienega TOD Subarea, the Venice/National TOD Subarea, the Hyde Park Industrial Corridor Subarea, and the Character Residential Subarea. Refer to *Figure 2-3* which shows the West Adams CPIO District boundaries.

2.2 Proposed Project Description

The proposed project consists of the construction of a mixed-use development within two separate buildings. The 13-story residential building located on the western side of the site will contain 260 residential units, including 22 very low-income affordable housing dwelling units, and seven workforce housing units. The residential unit mix will consist of 26 studios, 143 one-bedroom units, 78 two-bedroom units, and 13 three-bedroom units. The residential building will contain various residential amenities for the use of the residents and their guests, such as a ground floor lobby, package room, mail room, bicycle storage with bicycle repair equipment, wellness room, lounge, club room, swimming pool, hot tub, lawn, communal dining area, and gaming area. The 6-story

Project Site

Figure 2-3
West Adams-Baldwin Hills-Leimert CPIO District

commercial building located on the eastern side of the site will consist of 227,543 gross square feet of office space and 2,869 square feet of ground floor retail space. The retail space, most likely food and beverage use, will be located at the northeast corner of the commercial building, visible from the Metro station, Jefferson Boulevard, and La Cienega Boulevard. The commercial building will also include ground floor bicycle and pedestrian amenities which may include lockers, showers, and bicycle storage with bicycle repair equipment. In addition, the proposed project will have approximately one acre of ground level landscaping, open space, and interactive features including a new public plaza connecting with the bicycle path, Metro station, and surrounding neighborhood as well as a landscaped semi-public plaza located between the two buildings that stretch parallel to the bicycle path. Construction of the proposed project is planned to begin in year 2022 and be completed by year 2025 (i.e., project build-out year 2025). The site plan (Level 1 – Floor Plan) for the proposed project is displayed in *Figure 2-4*.

2.3 Vehicular Project Site Access

Vehicular access to the existing project site is currently provided via one driveway on South La Cienega Boulevard (i.e., along the easterly property frontage). As indicated in *Figure 2-3*, the driveway is planned to be retained as part of the proposed project and would provide access to/from the internal roadway connecting the proposed buildings. It is anticipated that the planned project site vehicular driveway on South La Cienega Boulevard would continue to accommodate right-turn ingress and egress movements only for motorists accessing the project site.

A secondary, one-way exit is planned to be provided via a 20-foot strip of land connecting the project site to Corbett Street to the south. Corbett Street is a 40-foot private roadway located south of the project site and extends between Jefferson Boulevard to the west and South La Cienega Boulevard to the east. Motorists will be able to exit the project site southerly via the secondary access roadway and access South La Cienega Boulevard to the east (i.e., only left-turns are allowed from the project site onto Corbett Street).

A residential vehicle drop-off area is planned to be provided at the southeast corner of the residential building. A vehicular drop-off area for the commercial uses is planned to be provided at the southwest corner of the commercial building. Both proposed drop-off areas will be accessed from the vehicular driveway on South La Cienega Boulevard.

2.4 Project Parking

A total of 785 parking spaces is planned to be provided on-site. Majority of the parking spaces will be provided within the two-level subterranean parking garage spanning the property, with minimal spaces provided at or above ground. Of the 785 parking spaces, 242 parking spaces will be reserved for the commercial uses, 130 parking spaces will be reserved for the residential uses, and the remainder, 413 spaces, will be unreserved for any specific use (i.e., unbundled). The Applicant also intends to offer valet service for the commercial uses

Use of bicycles as a transportation mode to and from the project site will be encouraged by the provision of ample and safe bicycle parking (refer to Los Angeles Municipal Code Sections 12.21.A.16 and 12.21 A.4(c)). The bicycle spaces will be provided in a readily accessible location(s). Appropriate lighting will be provided to increase safety and provide theft deterrent during night-time parking. **Table 2-1** summarizes the City’s bicycle parking requirements as well as the number of bicycle parking spaces proposed to be provided by the proposed project. As indicated in **Table 2-1**, a total of 228 bicycle spaces is required for the proposed project, including 40 short-term spaces and 188 long-term spaces. Bicycle parking for the proposed project will be provided in accordance with the LAMC (i.e., a total of 228 bicycle spaces).

2.5 Project Loading

All loading activities for the proposed project are anticipated to occur on-site. Designated loading areas will be provided for the commercial and residential buildings, respectively. Trucks are expected to utilize the South La Cienega Boulevard driveway to access the site and once on-site would conduct back-in maneuvers to access the designated loading areas. This access scheme is consistent with LADOT policy which requires that any loading activities associated with new developments to be accomplished via head-in and head-out maneuvers only from/to the public roadway system (i.e., prohibits backing-in from a public roadway).

2.6 Project Trip Generation and Distribution

As noted previously, a Non-CEQA transportation analysis is required pursuant to the City’s current *Transportation Assessment Guidelines*. For operational evaluation of land use projects, the City’s TAG requires a quantitative evaluation of the project’s expected access and circulation operations. In order to estimate the proposed project’s effect on intersection operations, a multi-step forecasting process has been utilized to determine the project trip generation, which estimates the total arriving and departing traffic volumes on a peak hour and daily basis, and the project trip distribution, which identifies the origins and destinations of inbound and outbound project traffic volumes, as described in the following section.

2.6.1 Project Trip Generation

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. Traffic volumes to be generated by the proposed project were forecast for the weekday AM and PM peak hours. Generation rates provided in the ITE *Trip Generation Manual* were utilized to forecast project traffic generation for the proposed project. Traffic volumes expected to be generated by the residential component of the proposed project were based upon rates per number and type of dwelling units. Traffic volumes expected to be generated by the commercial component of the proposed project were based upon rates per 1,000 square feet. Trip generation average rates for the following uses were used to forecast the traffic volumes expected to be generated by the proposed project:

- ITE Land Use Code 221: Multi-Family Housing (Low-Rise)

**Table 2-1
SUMMARY OF BICYCLE PARKING REQUIREMENTS**

LAND USE	SIZE	TYPE OF PARKING	PARKING RATIO [1]	NO. OF CODE REQUIRED SPACES
<u>Residential</u>				
Dwelling Units: 1-25	25 DU	Short-Term	1 / 10 DU	3
		Long-Term	1 / 1 DU	25
Dwelling Units: 26-100	75 DU	Short-Term	1 / 15 DU	5
		Long-Term	1 / 1.5 DU	50
Dwelling Units: 101-200	100 DU	Short-Term	1 / 20 DU	5
		Long-Term	1 / 2 DU	50
Dwelling Units: 200+	60 DU	Short-Term	1 / 40 DU	2
		Long-Term	1 / 4 DU	15
Subtotal Residential				155
Office	227,543 SF	Short-Term	1 / 10 KSF	23
		Long-Term	1 / 5 KSF	<u>46</u>
Subtotal Office				69
Retail	2,869 SF	Short-Term	1 / 2 KSF	2
		Long-Term	1 / 2 KSF	<u>2</u>
Subtotal Retail				4
Subtotal Number of Short-Term Bicycle Parking Spaces [A]				40
Subtotal Number of Long-Term Bicycle Parking Spaces [B]				188
Total Number of Code Required Bicycle Parking Spaces ([A]+[B])				228

[1] Source: City of Los Angeles Ordinance No. 185480, Adopted March 27, 2018.

- ITE Land Use Code 710: General Office
- ITE Land Use Code 930: Fast Casual Restaurant (PM Peak Hour Rate)
- ITE Land Use Code 932: High-Turnover (Sit-Down) Restaurant (AM Peak Hour Rate)

As noted previously, the retail space is anticipated to be a food and beverage use. As such, in order to provide a conservative analysis, the higher trip generation rates between the ITE Land Use 930 (Fast Casual Restaurant) and ITE Land Use 932 (High-Turnover [Sit-Down] Restaurant) have been incorporated for the analysis.

As the ITE publication does not provide trip rates for a land use such as the project’s residential (affordable) land use component, it was deemed appropriate to forecast the trips expected to be generated by the affordable housing land use component using trip rates recently published by LADOT which are directly applicable to the proposed project. The LADOT trip generation rates for affordable housing projects were published in November, 2016, and developed based on vehicle trip count data collected at affordable housing sites in the City of Los Angeles during year 2016. The LADOT affordable housing trip rates include three different housing type categories: affordable family housing; affordable seniors housing, and affordable special needs and supportive housing. In this instance, the affordable family housing inside the TPA area category is applicable to the proposed project. LADOT’s affordable family housing category trip rates are summarized below:

Affordable Family Housing

- Average AM Peak Hour Trip Rate: 0.49 trips per dwelling unit; 37% inbound and 63% outbound
- Average PM Peak Hour Trip Rate: 0.35 trips per dwelling unit; 56% inbound and 44% outbound

Pursuant to LADOT and City policy goals to promote the use of transit and walking, a transit/walk trip adjustment has been employed in the project traffic generation forecasts. Specifically, with the proposed development to be located adjacent to Metro’s E Line (Expo) La Cienega/Jefferson station, a 25 percent (25%) transit/walk adjustment has been applied to the weekday AM and PM peak hour traffic volume forecasts for all proposed land use components consistent with LADOT policy.

For the proposed project, a forecast was made of likely internal capture/captive market trips projected at the site with respect to the proposed uses. Internal capture and captive markets trips are trips made from other components of the proposed project and other uses in the immediate vicinity of the site. The internal capture/captive market reduction for the residential uses has been estimated based on the ITE *Trip Generation Handbook*⁴, the National Cooperative Highway Research Program

⁴ Institute of Transportation Engineers *Trip Generation Handbook*, 3rd Edition, 2017.

(NCHRP) Report 684 – “Enhanced Internal Trip Capture Estimation for Mixed-Use Developments”⁵ and in consultation with LADOT staff. A conservative 5 percent (5.0%) internal capture/captive market reduction factor has been applied to the AM and PM peak hour traffic volume forecasts to reflect the internal trip making between the project land uses and other site uses, as well as from other uses in the immediate vicinity.

In addition to the proposed project trip generation forecasts, forecasts also were made for the existing project site land use. ITE Land Use Code 151 (Mini Warehouse) trip generation average rates were used to forecast expected traffic generation for the existing self-storage facility on-site. If existing land uses are present on the project site or there were previously terminated land uses that meet the criteria for trip credits described in the trip generation methodology discussion (refer to Subsection 3.3.4.1 of the TAG), the vehicle trips generated by the existing or qualified terminated land uses can be estimated and subtracted from the proposed project’s vehicle trips to determine the net increase in vehicle trips.

The trip generation rates and forecast of the vehicular trips anticipated to be generated by the proposed project are presented in **Table 2-2**. As summarized in *Table 2-2*, the proposed project is expected to generate a net increase of 253 vehicle trips (178 inbound trips and 75 outbound trips) during the weekday AM peak hour. During the weekday PM peak hour, the proposed project is expected to generate a net increase of 264 vehicle trips (79 inbound trips and 185 outbound trips).

2.6.2 Project Trip Distribution and Assignment

Project traffic volumes both entering and exiting the site have been distributed and assigned to the adjacent street system based on the following considerations:

- The site's proximity to major traffic corridors (i.e., South La Cienega Boulevard, Jefferson Boulevard, National Boulevard, Obama Boulevard, etc.);
- Expected localized traffic flow patterns based on adjacent roadway channelization and presence of traffic signals;
- Existing intersection traffic volumes;
- Existing site parcel access ingress/egress schemes;
- Ingress/egress scheme planned for the proposed project;
- Nearby population and employment centers; and
- Input from LADOT staff.

⁵ National Cooperative Highway Research Program (NCHRP) Report 684 – “Enhanced Internal Trip Capture Estimation for Mixed-Use Developments,” 2011.

 - PM Peak Hour Trip Rate: 0.35 trips/dwelling unit; 56% inbound/44% outbound
- [7] The higher trip generation rates between High-Turnover Restaurant and Fast Casual Restaurant have been incorporated for the analysis.
 ITE Land Use Code 932 (High-Turnover [Sit-Down] Restaurant) trip generation average rates.
 - AM Peak Hour Trip Rate: 9.94 trips/1,000 SF of floor area; 55% inbound/45% outbound
 ITE Land Use Code 930 (Fast Casual Restaurant) trip generation average rates.
 - PM Peak Hour Trip Rate: 14.13 trips/1,000 SF of floor area; 55% inbound/45% outbound
- [8] Source: LADOT policy on pass-by trip adjustments. Pass-by trips are made as intermediate stops on the way from an origin to a primary trip destination without a route diversion. Pass-by trips are attracted from the traffic passing the site on an adjacent street or roadway that offers direct access to the site.
- [9] ITE Land Use Code 710 (General Office Building) trip generation average rates.
 - AM Peak Hour Trip Rate: 1.16 trips/1,000 SF of floor area; 86% inbound/14% outbound
 - PM Peak Hour Trip Rate: 1.15 trips/1,000 SF of floor area; 16% inbound/84% outbound
- [10] ITE Land Use Code 151 (Mini-Warehouse) trip generation average rates.
 - AM Peak Hour Trip Rate: 1.39 trips/storage unit; 51% inbound/49% outbound
 - PM Peak Hour Trip Rate: 1.95 trips/storage unit; 50% inbound/50% outbound

The general, directional traffic distribution patterns for the proposed project for the weekday AM and PM peak hours are presented in *Figures 2-5* and *2-6*, respectively. An eastbound left-turn restriction is currently in place during the weekday PM peak hour at the South La Cienega Boulevard/Corbett Street intersection. The forecast net new weekday AM and PM peak hour project traffic volumes at the study intersections associated with the proposed project are presented in *Figures 2-7 and 2-8*, respectively. The traffic volume assignments presented in *Figures 2-7 and 2-8* reflect the traffic distribution characteristics shown in *Figures 2-5 and 2-6* and the project traffic generation forecasts presented in *Table 2-2*.

2.7 Project Transportation Demand Management Features

The project applicant will install and maintain a transportation information display kiosk in a common area at the project site that displays the following in order to facilitate and encourage use of public transportation:

- Maps, routes, and schedules for public transit serving the site.
- Materials publicizing internet and telephone numbers for referrals on transportation information.
- Ridesharing promotional material supplied by Metro and/or other publicly supported transportation organizations.

Weekday PM Peak Hour
3401 South La Cienega Boulevard Project

3.0 PROJECT CONTEXT

3.1 Non-Vehicle Transport System

3.1.1 Pedestrian Framework

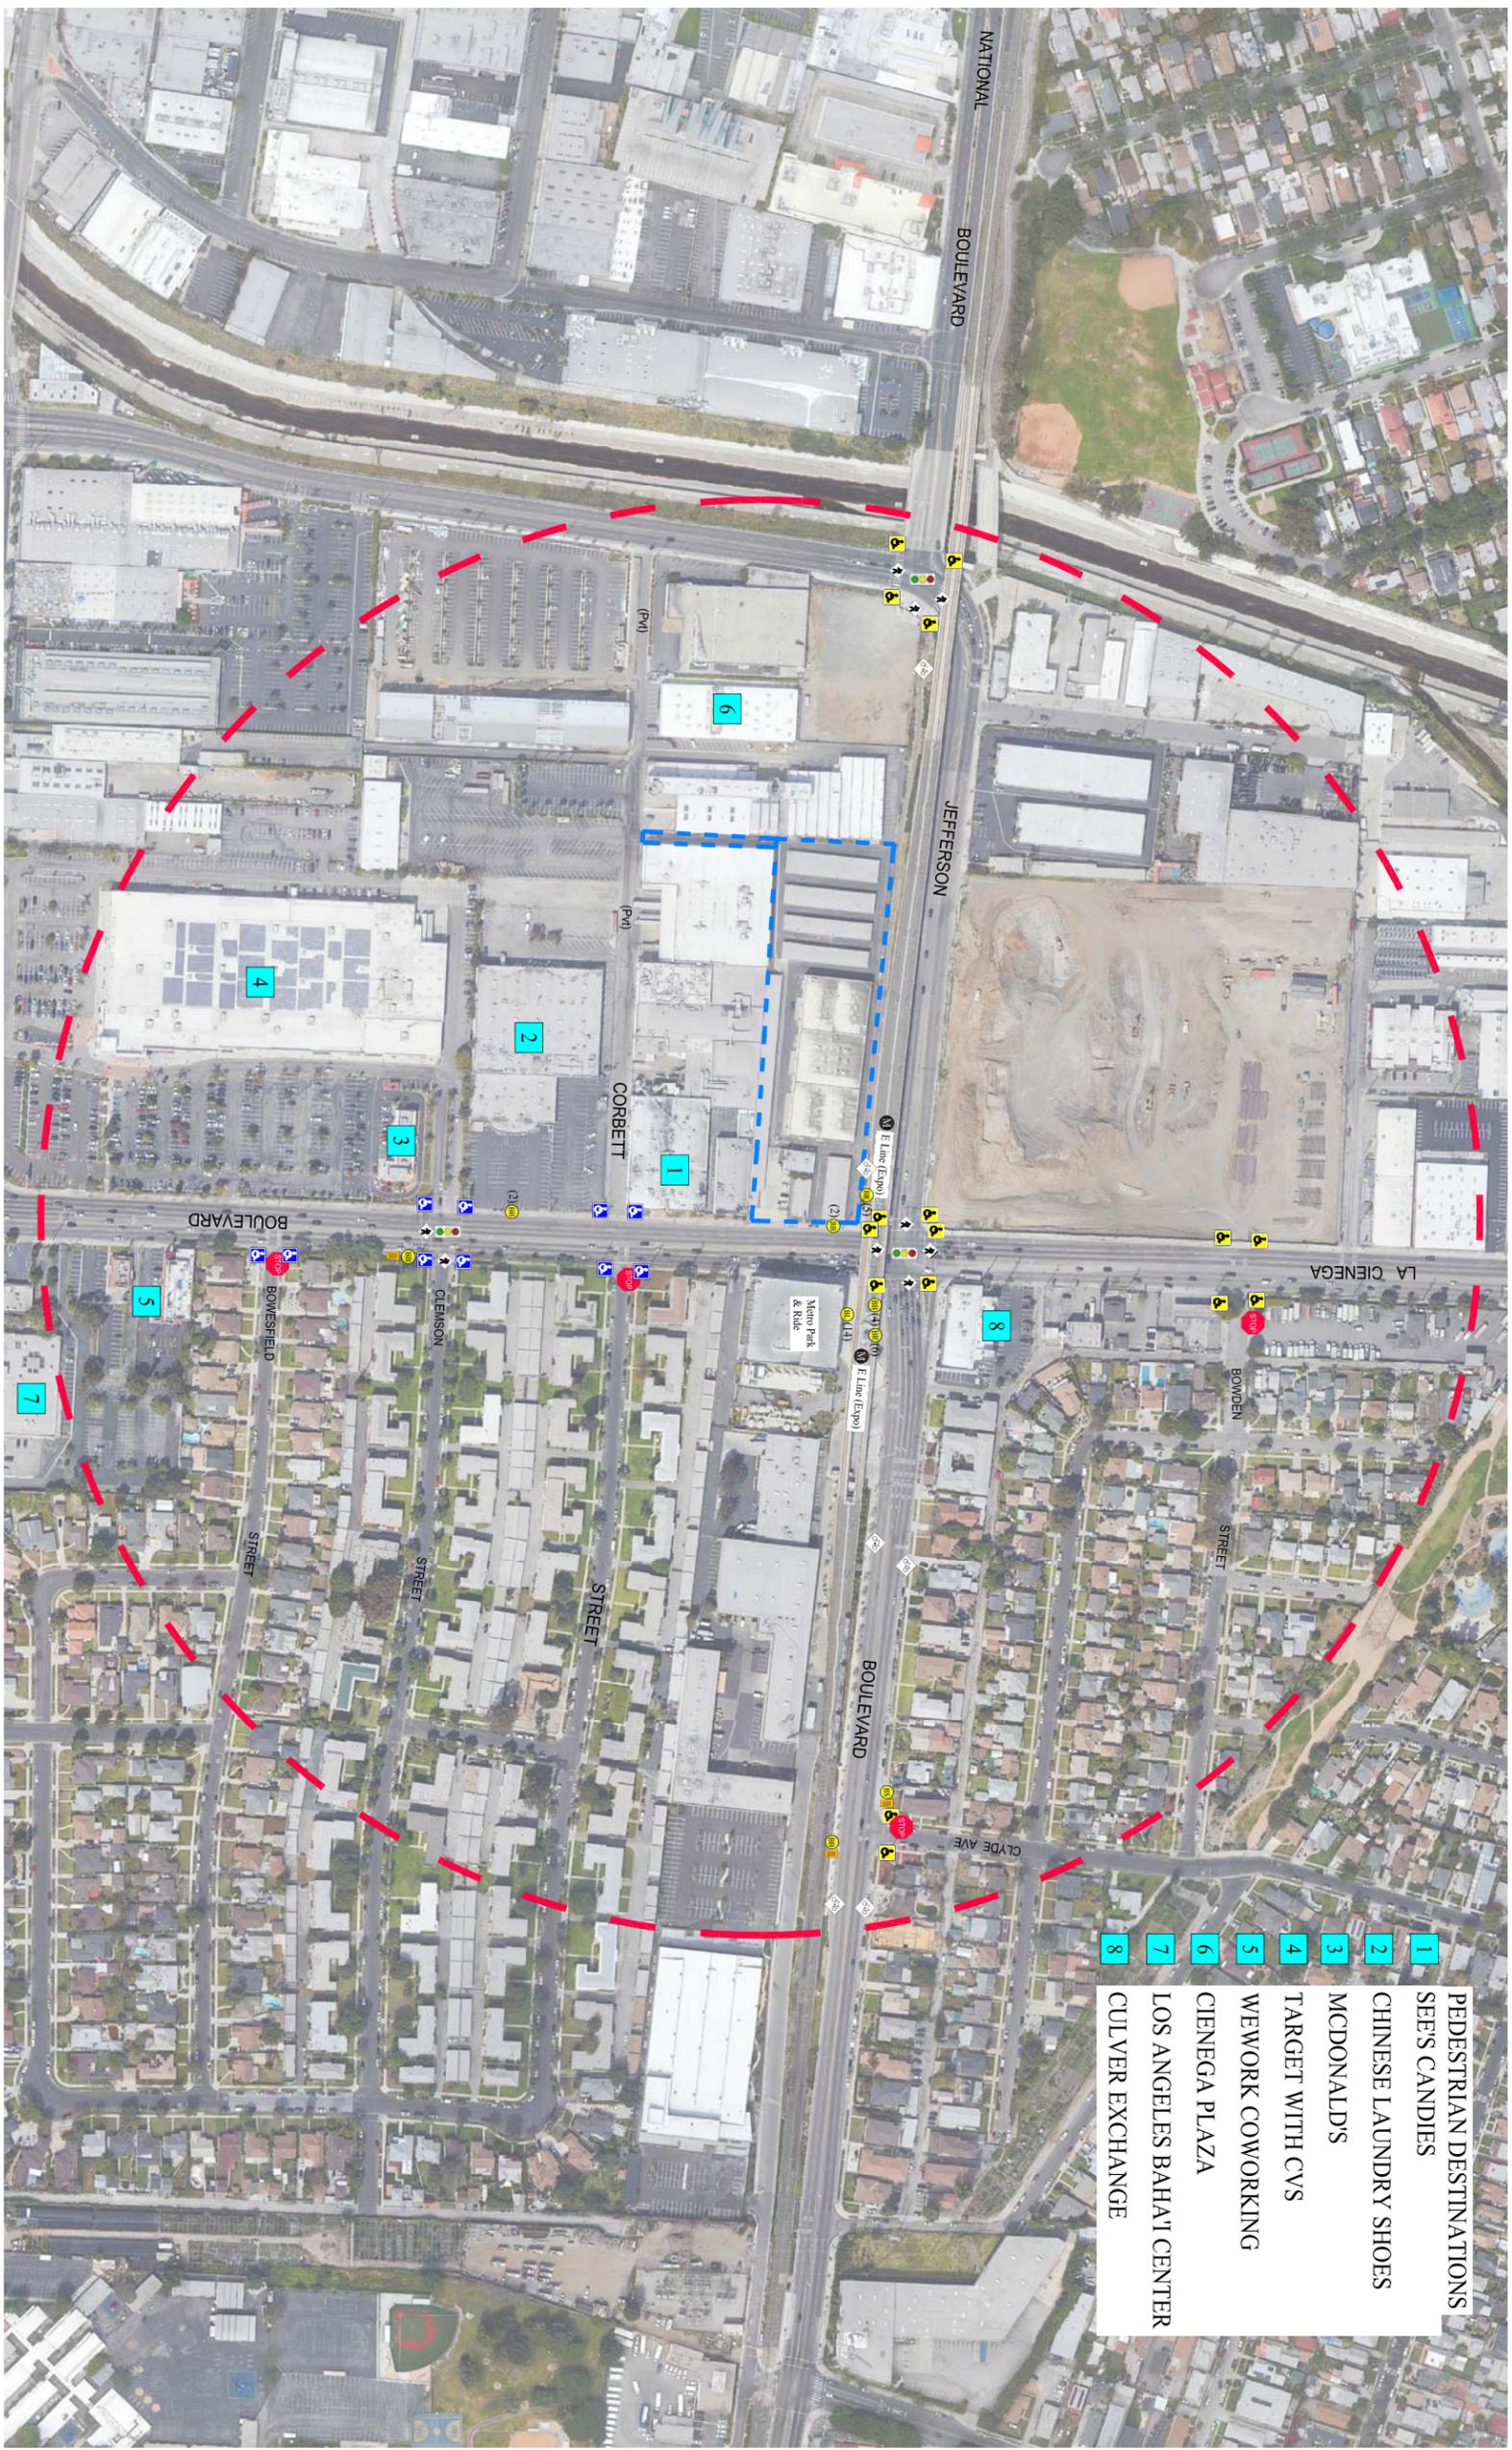

Public sidewalks and pedestrian facilities are provided on all streets within the project vicinity. A 10-foot-wide public sidewalk is provided along the South La Cienega Boulevard property frontage. Potential pedestrian destinations located within an approximately one-quarter mile radius (i.e., 1,320 feet) from the project site are noted in *Figure 3-1*. *Figure 3-2* shows the existing pedestrian and transit facilities near the project site. As presented in *Figure 3-2*, the following pedestrian facilities are near the proposed project site:

- American With Disabilities Act (ADA) handicap ramps, including some with the yellow truncated domes, are at the following intersections near the project site:
 - Jefferson Boulevard/National Boulevard
 - South La Cienega Boulevard/Jefferson Boulevard
 - South La Cienega Boulevard/Corbett Street
 - South La Cienega Boulevard/Clemson Street
- Traditional parallel bar or continental style pedestrian crosswalks with varying widths are at the following intersections near the project site:
 - Jefferson Boulevard/National Boulevard
 - South La Cienega Boulevard/Jefferson Boulevard
 - South La Cienega Boulevard/Clemson Street

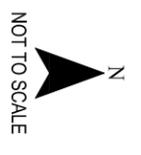

The project has been designed to encourage walking as a transportation mode⁶. As indicated in *Figure 2–3*, walkways are planned within the proposed project which will connect to adjacent sidewalks in a manner that promotes walkability. Walkability indicates walking is readily available as a safe, connected, accessible and pleasant mode of transport. Several criteria are widely accepted as key aspects of walkability of urban areas that should be satisfied. The underlying principle is that pedestrians should not be delayed, diverted, or placed in danger. These criteria include:

- **Connectivity:** People can walk from one place to another without encountering major obstacles, obstructions, or loss of connectivity.

⁶ For example, refer to <http://www.walkscore.com/>, which generates a walkability score of approximately 73 (Very Walkable) out of 100 for the project site. Walk Score calculates the walkability of an address by locating nearby stores, restaurants, schools, parks, etc. Walk Score measures how easy it is to live a car-lite lifestyle—not how pretty the area is for walking.

Figure 3-2
Existing Nearby Pedestrian and Transit Facilities

3401 South La Cienega Boulevard Project

- Convivial: Pedestrian routes are friendly and attractive, and perceived as such by pedestrians.
- Conspicuous: Suitable levels of lighting, visibility and surveillance over its entire length, with high quality delineation and signage.
- Comfortable: High quality and well-maintained footpaths of suitable widths, attractive landscaping and architecture, shelter and rest spaces, and a suitable allocation of roadspace to pedestrians.
- Convenient: Walking is a realistic travel choice, partly because of the impact of the other criteria set forth above, but also because walking routes are of a suitable length as a result of land use planning with minimal delays.

A review of the proposed project pedestrian walkways indicates that these primary characteristics are accommodated within the project. Proposed project features would include landscaped and lighted pedestrian walkways connecting facilities within the site, as well as connections with the adjacent public sidewalks on the South La Cienega Boulevard and Jefferson Boulevard project frontages. In addition, the proposed project will have approximately one acre of ground level landscaping, open space, and interactive features including a new public plaza connecting with the bicycle path, Metro station, and surrounding neighborhood as well as a landscaped semi-public plaza located between the two buildings that stretch parallel to the bicycle path. Street trees and streetscape plantings should be introduced along the same public frontages in accordance with the City's standards. In addition, project signage could include general ground level and wayfinding pedestrian signage around the perimeter of the project site, building identification signs, and other sign types. Wayfinding signs would be located at access points to the on-site amenities and facilities, parking areas, commercial and residential entries, corridors and elevator lobbies.

3.1.2 Bicycle Network

Bicycle access to the project site is facilitated by the City's bicycle roadway network. Walk Score calculates a bike score based on the topography, number and proximity of bike lanes, etc., and generates a bike score for the project site of approximately 67 (Bikeable) out of 100.⁷ Existing and proposed bicycle facilities (e.g., Class I Bicycle Path, Class II Bicycle Lanes, Class III Bicycle Routes, Proposed Bicycle Routes, Bicycle Friendly Streets, etc.) identified in the City's 2010 Bicycle Plan are located within an approximate one-mile radius from the project site.⁸ It is important to note that the 2010 Bicycle Plan goals and policies have been folded into the Mobility Plan 2035 to reflect a commitment to a balanced, multi-modal, sustainable and efficient transportation plan. The location of the City's bicycle enhanced network (low stress network) in

⁷ Refer to <http://www.walkscore.com/>, which generates the bike score for the project site. Walk Score calculates the bike score of an address by locating nearby bicycling facilities as well as connections to bus/rail transit routes and stops. Walk Score measures how easy it is to live a car-lite lifestyle.

⁸ Sources: City of Los Angeles Mobility Plan 2035 (2015), and City of Los Angeles Bicycle Parking Plan; www.labikeplan.org. As noted in the Mobility Plan 2035, the 2010 Bicycle Plan and policies have been folded into the Mobility Plan to reflect a commitment to a balanced, multi-modal viewpoint.

close proximity to the project site and in the surrounding area is shown in *Figure 3-3*. The location of the City of Los Angeles' proposed bicycle lane network in close proximity to the project site and in the surrounding area is illustrated in *Figure 3-4*. As shown, a Class I bicycle facility is currently provided along Jefferson Boulevard to the north. In addition, the location of public bicycle racks in the project study area is noted in *Figure 3-2*.

The Federal and State transportation systems recognize three primary bikeway facilities: Bicycle Paths (Class I), Bicycle Lanes (Class II), and Bicycle Routes (Class III). Bicycle Paths (Class I) are exclusive car-free facilities that are typically not located within a roadway area. Bicycle Lanes (Class II) are part of the street design that is dedicated only for bicycles and identified by a striped lane separating vehicle lanes from bicycle lanes. Bicycle Routes (Class III) are preferably located on collector and lower volume arterial streets.

3.2 Transit Framework

Extensive public bus and rail transit service is provided within the project study area. Public bus transit service in the immediate project study area is currently provided by the County of Los Angeles Metropolitan Transportation Authority (Metro), Culver City Bus and the County of Los Angeles Baldwin Hills Parklands Shuttle (weekends only). As noted previously, the project site borders the Metro E Line (Expo) to the north. The project study area also is served by Metro Bus Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekends only). Walk Score calculates a transit score based on the number and proximity of bus and rail routes, which generates a transit score of approximately 67 (Good Transit) out of 100 for the project site.⁹ A summary of the existing transit service, including the transit route, destinations and peak hour headways is presented in *Table 3-1*. The existing public transit routes in the project site vicinity are illustrated in *Figure 3-5*. In addition, the location of bus stops and amenities (e.g., bus benches, shelters, etc.) in the project study area is displayed in *Figure 3-2*.

3.3 Vehicle Network

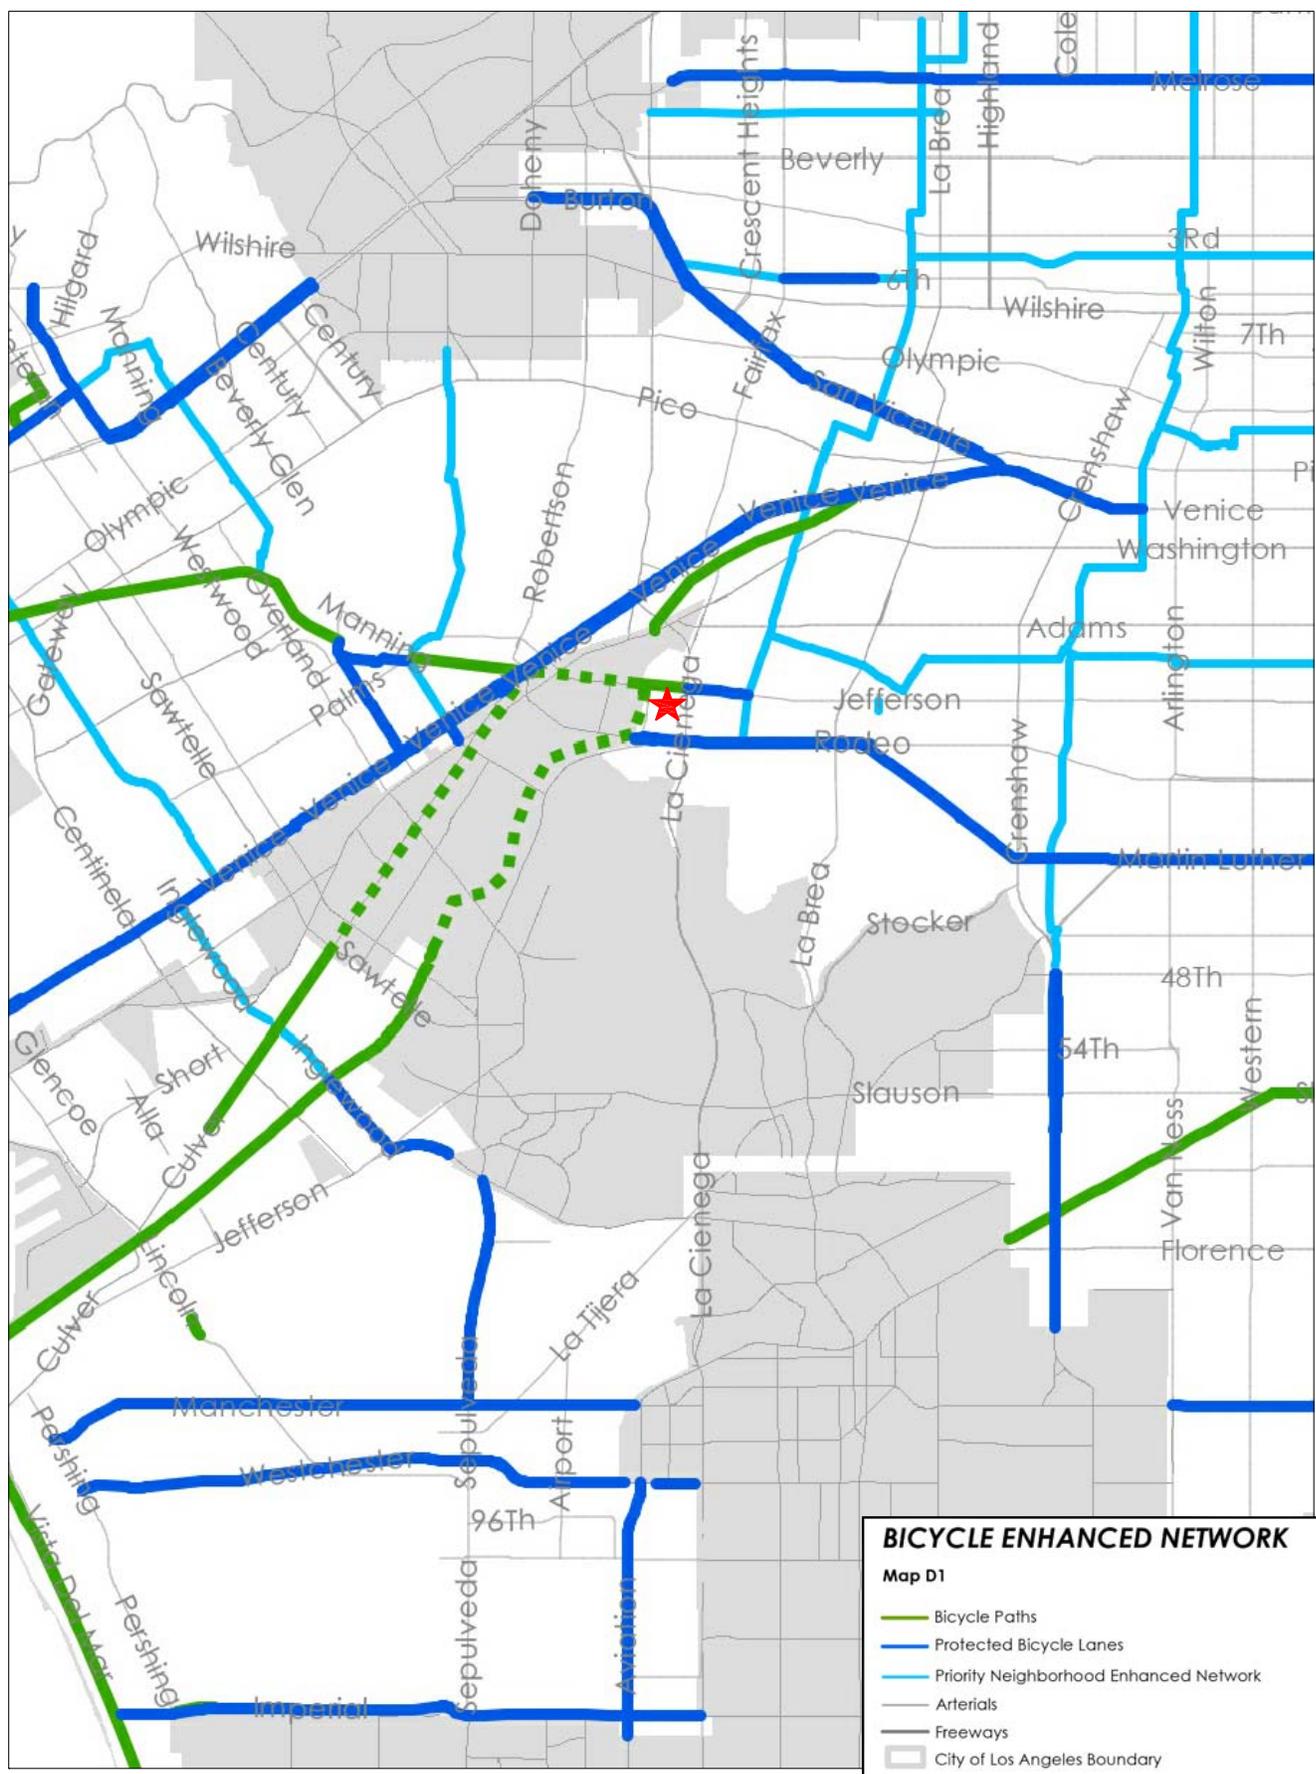

3.3.1 Roadway Classifications

The City utilizes the roadway categories recognized by regional, state, and federal transportation agencies. There are four categories in the roadway hierarchy, ranging from freeways with the highest capacity to two-lane undivided roadways with the lowest capacity. The roadway categories are summarized as follows:

- *Freeways* are limited-access and high-speed travel ways included in the state and federal highway systems. Their purpose is to carry regional through-traffic. Access is provided by interchanges with typical spacing of one mile or greater. No local access is provided to adjacent land uses.

⁹ Refer to <http://www.walkscore.com/>, which generates the transit score for the project site. Walk Score calculates the transit score of an address by locating nearby bus/rail transit routes and stops. Walk Score measures how easy it is to live a car-lite lifestyle—not how pretty the area is for using transit service.

★ Project Site

Figure 3-5
Existing Transit Routes

- *Arterial* roadways are major streets (e.g., Boulevard and Avenue designations) that primarily serve through-traffic and provide access to abutting properties as a secondary function. Arterials are generally designed with two to six travel lanes and their major intersections are signalized. This roadway type is divided into two categories: principal and minor arterials. Principal arterials are typically four-or-more lane roadways and serve both local and regional through-traffic. Minor arterials are typically two-to-four lane streets that service local and commute traffic.
- *Collector* roadways are streets that provide access and traffic circulation within residential and non-residential (e.g., commercial and industrial) areas. Collector roadways connect local streets to arterials and are typically designed with two through travel lanes (i.e., one through travel lane in each direction) that may accommodate on-street parking. They may also provide access to abutting properties.
- *Local* roadways distribute traffic within a neighborhood, or similar adjacent neighborhoods, and are not intended for use as a through-street or a link between higher capacity facilities such as collector or arterial roadways. Local streets are fronted by residential uses and do not typically serve commercial uses.
- *Alleys* are common throughout the Downtown area and the City. Alleys parallel to major and secondary highways provide an essential service function, enable limitations on curb cuts, and assist traffic flow on arterial streets.

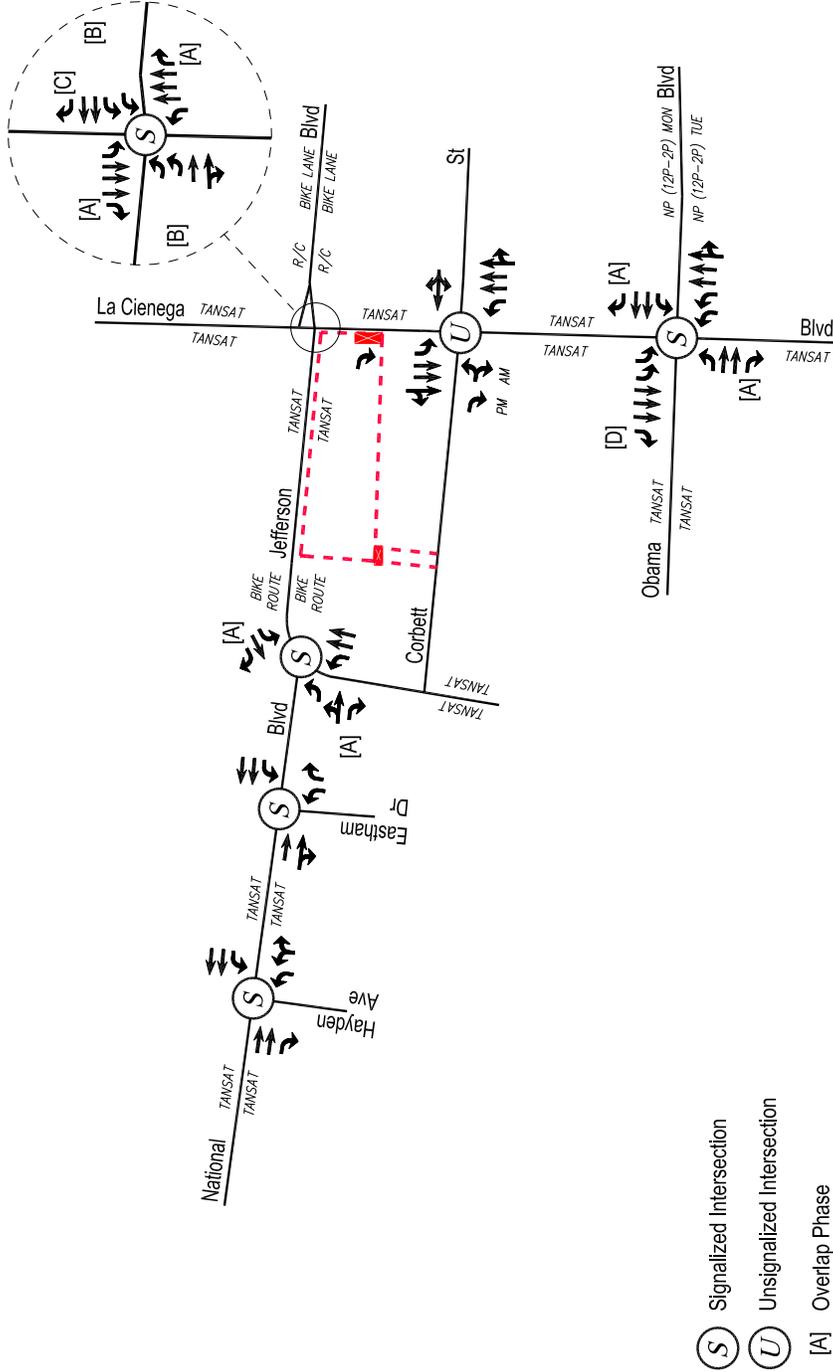

3.3.2 Roadway Descriptions

Immediate access to the project site is provided via South La Cienega Boulevard. The existing roadway configurations and intersection controls at the study intersections are displayed in **Figure 3-6** and descriptions of the existing roadways (e.g., number of travel lanes, median type, speed limit, etc.) are provided in **Table 3-2**.

3.3.3 Regional Highway Access

Regional access to the project site is provided mainly by the I-10 (Santa Monica) Freeway as shown in **Figure 1-1**. A brief description of the I-10 Freeway is provided in the following paragraph.

I-10 (Santa Monica) Freeway is a major east-west oriented freeway connecting Santa Monica to the west to the Inland Empire to the east. The Santa Monica Freeway generally contains four mainline freeway lanes in each direction along with auxiliary lanes in the project vicinity. Access to and from I-10 is available via interchanges at Washington Boulevard and Fairfax Avenue. The I-10 Freeway interchange with I-405 Freeway is located approximately 3.5 miles northwest of the project site.

3.3.4 City of Los Angeles High Injury Network

Vision Zero¹⁰ is a citywide initiative which prioritizes the safety of pedestrians and bicyclists on public streets, with the understanding that roads which are safe for vulnerable users will be safer for all users, in an effort to eliminate traffic fatalities. Key elements of the policy, such as reducing traffic speeds, are founded on the principles of engineering, education, enforcement, evaluation, and equity. Originating in Sweden, the policy has been adopted in numerous other North American cities, including California cities such as San Francisco and San Diego.

Mayor Eric Garcetti issued Executive Directive No. 10 in August 2015, formally launching the Vision Zero initiative in Los Angeles. Vision Zero is also a stated safety objective in the Mobility Plan 2035, which sets the goal of zero traffic deaths by 2035. Jointly directed by LADOT and the Police Department, Vision Zero takes a multi-disciplinary approach to identifying safety risk factors and implementing solutions on a citywide scale. Using a methodology originally developed by the San Francisco Public Health Department, the Vision Zero Task Force has identified streets where investments in safety will have the most impact in reducing severe injuries and traffic fatalities in the City. These roads are collectively known as the High Injury Network (HIN). The HIN will be reviewed by the LADOT's Vision Zero group for potential engineering re-design as well as educational and enforcement campaigns.

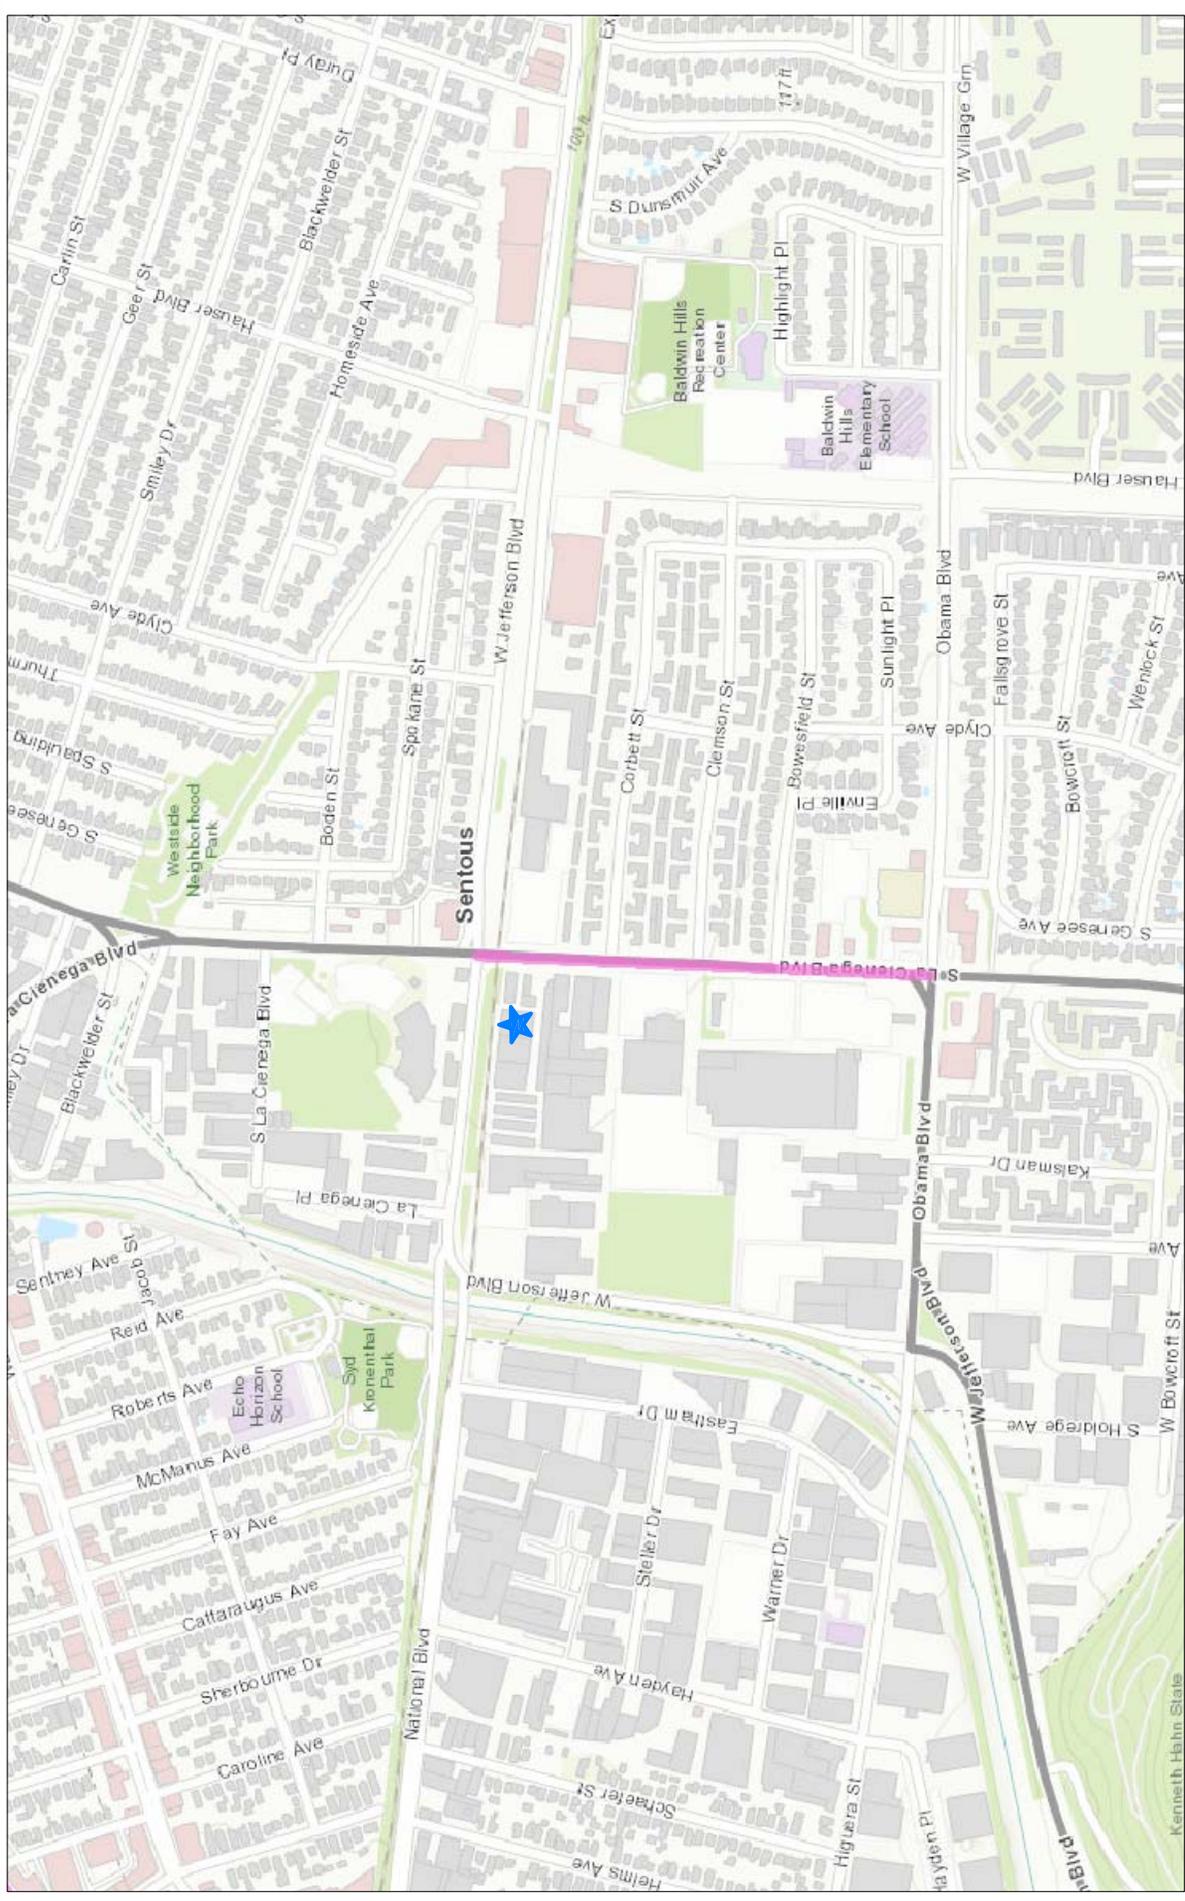

The proposed project is located along the west side of South La Cienega Boulevard between Jefferson Boulevard and Obama Boulevard within the West Adams-Baldwin Hills-Leimert Community Plan area. As shown in **Figure 3-7**, South La Cienega Boulevard is identified as part of the HIN in the project vicinity. Therefore the proposed project is on the HIN. If a proposed project results in significant transportation impacts, LADOT's Vision Zero group will review those specific locations and immediate vicinity for potential pedestrian safety enhancements that are consistent with the City's Vision Zero initiative.

3.4 Traffic Count Data

For the Non-CEQA transportation analysis discussed in Section 5.0, manual counts of vehicular turning movements were researched for the following seven (7) intersections identified for review:

1. Jefferson Boulevard/National Boulevard
2. South La Cienega Boulevard/Jefferson Boulevard
3. South La Cienega Boulevard/Obama Boulevard
4. South La Cienega Boulevard/Project Driveway
5. South La Cienega Boulevard/Corbett Street
6. Hayden Avenue/National Boulevard

¹⁰ Vision Zero Los Angeles 2015-2025, August 2015.

N MAP SOURCE: SWITRS, LADOT

-  Project Site
-  High Injury Network

Figure 3-7
City of Los Angeles High Injury Network

7. Eastman Drive/National Boulevard

Given the changes in travel patterns and lower activity due to the ongoing coronavirus pandemic, new traffic counts were not conducted at this time based on consultation with City staff. Historical traffic count data for six (6) of the seven (7) locations were obtained from both City and LLG files and were adjusted by an annual growth rate of 0.20 percent (0.20%) per year to reflect Year 2021 existing conditions. A new manual traffic count was conducted at the South La Cienega Boulevard/Corbett Street intersection. The manual counts were conducted by an independent traffic count subconsultant at the study locations from 7:00 to 10:00 AM to determine the weekday AM peak commute hour, and from 3:00 to 6:00 PM to determine the weekday PM peak commute hour. The existing traffic volumes at the study intersections during the weekday AM and PM peak hours are shown in **Figures 3-8** and **3-9**, respectively. Summary data worksheets of the traffic count data for the study intersections are contained in *Appendix B*.

3.5 Cumulative Development Projects

3.5.1 Related Projects

For the Non-CEQA transportation analysis discussed in Section 5.0, a list of cumulative development projects (i.e., related projects) in the study area (i.e., within an approximate one-half (0.5) mile radius from the project site) was researched based on data available at the City of Los Angeles and Culver City. With this information, the potential impact of the proposed project can be evaluated within the context of the cumulative impacts of all ongoing development. The related projects research was based on information on file with both LADOT and LADCP. For LADOT, a list of related projects was obtained from the Department for an approximate 0.5-mile radius from the project site. For LADCP, the research included, but was not limited to, proposed development projects within an approximate 0.5-mile radius from the project site for which EIRs are being or have been prepared (as shown on the Major Projects section of LADCP's website), and LADCP's bi-weekly case filing reports. In addition, related projects lists from recently approved transportation impact study MOUs and transportation impact studies in the project vicinity were reviewed. The list of related projects in the project site area is presented in **Table 3-3**. The location of the related projects is shown in **Figure 3-10**.

Traffic volumes expected to be generated by the related projects were obtained from LADOT, calculated using rates provided in the *ITE Trip Generation Manual*, or they were obtained from other transportation impact studies recently approved by the City. The related projects' respective traffic generation for the weekday AM and PM peak hours, as well as on a daily basis for a typical weekday, is summarized in **Table 3-3**. The related projects traffic volumes were distributed and assigned to the street system based on the projects' locations in relation to the study intersections, their proximity to major traffic corridors, proposed land uses, nearby population and employment centers, etc. The distribution of the related projects traffic volumes to the study intersections during the weekday AM and PM peak hours are displayed in **Figures 3-11** and **3-12**, respectively.

3.5.2 Ambient Traffic Growth

Horizon year background traffic growth estimates have been calculated using an ambient traffic growth factor. The ambient traffic growth factor is intended to include unknown related projects in the study area as well as account for typical growth in traffic volumes due to the development of projects outside the study area. Ambient traffic growth in the West/Central Los Angeles area (i.e., included in Regional Statistical Area 17 [RSA 17]), which is presented in the *2010 Congestion Management Program*, indicates existing traffic volumes are expected to increase at an annual rate of approximately 0.20 percent (0.20%) per year between years 2015 and 2025. An annual growth rate of 0.20 percent (0.20%) per year until the year 2025 (i.e., the anticipated project build-out year) was selected for this analysis in consultation with LADOT during the scoping process. Therefore, application of this 0.20 percent (0.20%) per year ambient growth factor in addition to the forecast traffic generated by the related projects allows for a conservative forecast of future traffic volumes in the project study area as incorporation of both (i.e., an ambient traffic growth rate and a detailed list of cumulative development projects) is expected to overstate potential future traffic volumes. The cumulative development projects should already be incorporated as part of the growth rate projection per the adopted, local and regional planning documents (i.e., which account for the future population, housing, and employment [socio-economic data] projections).

4.0 CEQA ANALYSIS OF TRANSPORTATION IMPACTS

4.1 Consistency With Adopted Plans, Programs, Ordinances or Policies (Threshold T-1)

The City of Los Angeles aims to achieve an accessible and sustainable transportation system that meets the needs of all users. The City's adopted transportation-related plans and policies affirm that streets should be safe and convenient for all users of the transportation system, including pedestrians, bicyclists, motorists, public transit riders, disabled persons, senior citizens, children, and movers of commercial goods. Therefore, the transportation requirements and mitigations for proposed developments should be consistent with the City's transportation goals and policies.

Proposed projects shall be analyzed to identify potential conflicts with adopted City plans and policies and, if there is a conflict, improvements that prioritize access for and improve the comfort of people walking, bicycling, and riding transit in order to provide safe and convenient streets for all users should be identified. Projects designed to encourage sustainable travel help to reduce vehicle miles traveled. This section provides a review of the screening criteria and a summary of the consistency of the proposed project with the City's adopted plans and policies.

4.1.1 Screening Criteria

If the project requires a discretionary action, and the answer is yes to any of the following questions, further analysis is required to assess whether the proposed project would conflict with adopted City plans, programs, ordinances, or policies that establish the transportation planning framework for all travel modes:

- Does the project require a discretionary action that requires the decision-maker to find that the decision substantially conforms to the purpose, intent and provisions of the General Plan?
 - ▣ Yes, the project requires a discretionary action.
- Is the project known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety?
 - ▣ No.
- Is the project required to or proposing to make any voluntary modifications to the public right-of-way (i.e., dedications and/or improvements in the right-of-way, reconfigurations of curb line, etc.)?
 - ▣ Yes. While the City will make a final determination if any roadway dedications and/or widenings are required, based on the current street designation for South La Cienega Boulevard as a Modified Boulevard II roadway, a two (2)-foot dedication along the South La Cienega Boulevard property frontage may be required. No roadway widenings (i.e., curb line modifications) are necessary along South La Cienega Boulevard and the applicant will seek a waiver of dedication from the City.

As the answer is yes to at least one of the screening criteria (i.e., project requires a discretionary action and roadway dedication), further analysis is required to assess whether the proposed project would conflict with adopted City plans, programs, ordinances, or policies.

4.1.2 Impact Criteria and Methodology

The impact criteria set forth in the City's TAG for conflicts with plans, programs, ordinances, or policies (referred to a Threshold T-1) is defined as follows:

- Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?

The threshold test is to assess whether a project would conflict with an adopted program, policy, plan, or ordinance that is adopted to protect the environment. In general, transportation policies or standards adopted to protect the environment are those that support multi-modal transportation options and a reduction in VMT. Conversely, a project would not be shown to result in an impact merely based on whether a project would not implement a particular program, plan, policy, or ordinance. Many of these programs must be implemented by the City itself over time, and over a broad area, and it is the intention of this threshold test to ensure that proposed development projects and plans do not preclude the City from implementing adopted programs, plans and policies. This determination may require consultation with LADCP and LADOT.

The methodology for determining project impacts associated with conflicts with plans, programs, ordinances, or policies is defined per the City's TAG as follows:

- A project that generally conforms with, and does not obstruct, the City's development policies and standards will generally be considered to be consistent. The Project Applicant should review the documents and ordinances identified in the TAG (refer to Table 2.1-1 on pages 2-3 and 2-4) for City plans, policies, programs, ordinances and standards relevant to determining project consistency. The list highlights City documents that establish the regulatory framework. Attachment D of TAG contains a Plan Consistency Worksheet which provides a specific list of questions that must be answered in order to help guide whether the project conflicts with City circulation system policies. A 'yes' or 'no' answer to these questions does not determine a conflict. Rather, as indicated in Attachment D of the TAG, the Project Applicant must provide substantiating information to help determine whether the proposed project precludes the City's implementation of any adopted policy and/or program that was adopted to protect the environment. A mere conflict with adopted transportation-related policies, or standards that requires administrative relief or legislative change does not in itself constitute an impact.

- If vacation of a public right-of-way, or relief from a required street dedication is sought as part of a proposed project, an assessment should be made as to whether the right-of-way in question is necessary to serve a long-term mobility need, as defined in the Mobility Plan 2035, transportation specific plan, or other planned improvement in the future.
- The analysis of cumulative impacts may be quantitative or qualitative. Each of the plans, ordinances and policies reviewed to assess potential conflicts with proposed projects should be reviewed to assess cumulative impacts that may result from the proposed project in combination with other development projects in the study area. In addition, the cumulative analysis should also consider known development projects and planned transportation system improvements within the study area as identified in consultation with LADOT.

As noted in Subsection 2.1.4 of the TAG, based on current guidelines, related projects considered in the cumulative analysis are known development projects located within one-quarter mile (1,320 foot) radius of the project site. Please refer to the list of related projects identified in *Table 3-3* and *Figure 3-10* for the location of the related projects in relation to the proposed project site.

4.1.3 Review of Project Consistency

This section provides a summary of the consistency review comparing the characteristics of the proposed project and site design features (i.e., including the site access and circulation scheme) with the City’s adopted plans and policies. The following paragraphs provide more detail with respect to the documents listed in Table 2.1-1 of the TAG, which are the series of City documents or plans that establish the regulatory framework for development in the City. Each of the documents listed in Table 2.1-1 of the TAG was reviewed for applicability to the Project, and the relevant transportation-related policies are summarized below, along with the Project’s conformance.

Mobility Plan

The Mobility Plan combines “complete street” principles with the following goals and objectives that define the City’s mobility priorities:

- **Safety First:** Design and operate streets in a way that enables safe access for all users, regardless of age, ability, or transportation mode choice.
- **World Class Infrastructure:** A well-maintained and connected network of streets, paths, bikeways, trails, and more provides Angelenos with the optimum variety of mode choices.
- **Access for all Angelenos:** A fair and equitable system must be accessible to all and must pay particularly close attention to the most vulnerable users.
- **Collaboration, Communication, and Informed Choices:** The impact of new technologies on our day-to-day mobility demands will continue to become increasingly important to the future.

- Clean Environments and Healthy Communities: Active transportation modes such as bicycling and walking can significantly improve personal fitness and create new opportunities for social interaction, while lessening impacts on the environment.

The proposed project is being designed to be consistent with these mobility goals. The Project provides direct pedestrian access to the Project site from sidewalks along South La Cienega Boulevard and Jefferson Boulevard. The proposed project design does not result in modifying, removing, or otherwise affecting existing bicycle infrastructure, and the project driveways are not proposed along streets with existing bicycle facilities. The proposed project encourages non-motorized travel through provision of short- and long-term bicycle parking and will promote transit usage by complying with the City's TDM Ordinance. Also, the proposed project is located adjacent to the Metro E Line (Expo) Jefferson/La Cienega Station and a number of Metro and other transit service provider bus lines and proposes to provide a new public plaza connecting with the bicycle path, Metro station, and surrounding neighborhood as well as a landscaped semi-public plaza located between the two buildings that stretch parallel to the bicycle path.

The proposed project would maintain the designated driveway and roadway width requirements as indicated in the Mobility Plan. The existing driveway on South La Cienega Boulevard is planned to be maintained and modified and no new driveways along La Cienega Boulevard are proposed. South La Cienega Boulevard is designated as a Modified Boulevard II roadway in the Mobility Plan. This standard requires a 52-foot half right-of-way width, a 40-foot half roadway width, and a 12-foot sidewalk width. South La Cienega Boulevard currently has a 50-foot half right-of-way width, a 40-foot half roadway width, and a 10-foot sidewalk width. As such, a 2-foot dedication is required to bring the 50-foot half right-of-way width into compliance with the City's 52-foot half right-of-way standard for Modified Boulevard II classification roadways. A relief from the required street dedication is being sought as part of the proposed project. This dedication would cause a reduction in the number of residential units that the applicant is entitled to build under the State Density Bonus Law and in the density of the commercial space of the proposed project with the loss of the property's square footage. La Cienega also serves as the project's primary frontage due to the location of bike path and Metro Line between the project site and Jefferson Boulevard. As such, the applicant desires to enhance the primary frontage. The applicant will need a waiver of this dedication for each of these reasons. Even if the dedication were granted, the street dedication of two (2) feet is not likely to occur south of the project site since the existing See's Candies building, which is located immediately south of the project site, was constructed with the façade directly at the current property line and is eligible for listing as a historic cultural monument which would render unlikely its future demolition or major renovation. Therefore, a continuous, expanded sidewalk width would not be afforded along the South La Cienega Boulevard corridor even with the dedication along the proposed project's frontage. In addition, the project proposes to provide a setback ranging from two (2) to eight (8) feet along South La Cienega Boulevard and will comply with any applicable open space and streetscape requirements of the West Adams CPIO District. Furthermore, the west side of South La Cienega Boulevard currently has a 50-foot half right-of-way width for the entire length of the roadway until Obama Boulevard to the south. No roadway widenings (i.e., curb line modifications) are currently proposed on South La Cienega Boulevard,

and for the reasons stated above, it is unlikely any widening would occur in the future. Therefore, the proposed project would be consistent with the goals of the Mobility Plan even if the two-foot dedication is not granted.

All sidewalks, curb ramps and ADA ramps along the Project frontage would be designed in compliance with ADA standards. The proposed project would also provide sufficient off-street parking to accommodate the project's typical daily parking demand. The proposed project does not hinder the goals and policies identified in the Mobility Plan. Therefore, the proposed project is consistent with and would not obstruct the implementation of the Mobility Plan.

Plan for a Healthy Los Angeles

Plan for a Healthy Los Angeles: A Health and Wellness Element of the General Plan (Los Angeles Department of City Planning, March 2015) introduces guidelines for the City to follow to enhance the City's position as a regional leader in health and equity, encourage healthy design and equitable access, and increase awareness of equity and environmental issues.

The proposed project will be consistent with the Plan for a Healthy Los Angeles by including 22 very low-income affordable housing dwelling units and prioritizing safety and access for all individuals utilizing the project site by complying with all ADA requirements and providing clearly distinct pedestrian and vehicular access points. Further, the proposed project supports healthy lifestyles by providing bicycle parking, access to the existing bike path, and enhancing the pedestrian environment by providing trees and landscaped plaza/s internal to the site to create a more comfortable environment for pedestrians. The project also emphasizes sustainable design and materials to further the Plan's goals. Thus, the proposed project would be consistent with the goals of the Plan for a Healthy Los Angeles.

Land Use Element of the General Plan

The City General Plan's Land Use Element contains 35 Community Plans that establish specific goals and strategies for the various neighborhoods across Los Angeles. The proposed project is located in the West Adams-Baldwin Hills-Leimert Community Plan area. The proposed project site is also situated within the Jefferson/La Cienega Transit Oriented Development (TOD) Subarea of the West Adams-Baldwin Hills-Leimert Community Plan Implementation Overlay District (West Adams CPIO District). A detailed analysis of the proposed project's consistency with the West Adams-Baldwin Hills-Leimert Community Plan area will be provided in the environmental documentation for the project's entitlement process. The proposed project is also consistent with the circulation standards and criteria of the West Adams-Baldwin Hills-Leimert Community Plan as the transportation system adjacent to the project site would adequately serve the traffic generated by the project without major congestion, as demonstrated by the proposed project's transportation assessments. Therefore, the proposed project would be consistent with the Community Plan.

Los Angeles Municipal Code (LAMC) Section 12.21A.16 – Bicycle Parking

LAMC Section 12.21A.16 details the bicycle parking requirements for new developments. As described in the project description, construction of the proposed project would require 44 short-term and 196 long-term bicycle spaces. The proposed project's bicycle parking supply would comply with LAMC requirements.

LAMC Section 12.26.J – TDM Ordinance

LAMC Section 12.26.J is the City's TDM Ordinance, which establishes trip reduction requirements for non-residential projects in excess of 25,000 square feet. The proposed project's new non-residential components would exceed 25,000 square feet, and therefore LAMC Section 12.26J would apply to the Project. The proposed project would comply with and not conflict with the requirements of LAMC Section 12.26.J. as discussed below.

LAMC Section 12.37

LAMC Section 12.37 states that a project must dedicate and improve adjacent streets to half-right-of-way standards consistent with street designations from the Mobility Plan. A two (2)-foot dedication is required to bring the 50-foot half right-of-way width into compliance with the City's 52-foot half right-of-way standard for Modified Boulevard II classification roadways.

A relief from the required street dedication is being sought as part of the proposed project. This dedication would cause a reduction in the number of residential units that the applicant is entitled to build under the State Density Bonus Law and in the density of the commercial space of the proposed project with the loss of the property's square footage. La Cienega also serves as the project's primary frontage due to the location of bike path and Metro Line between the project site and Jefferson Boulevard. As such, the applicant desires to enhance the primary frontage. Even if the dedication were granted, the street dedication of two (2) feet is not envisioned to occur south of the project site since the existing See's Candies building, which is located immediately south of the project site, was constructed with the façade directly at the current property line. Therefore, a continuous, expanded sidewalk width would not be afforded along the South La Cienega Boulevard corridor even with the dedication along the proposed project's frontage. The existing See's Candies building is also eligible for listing as a historic cultural monument, resulting in the unlikely future demolition or major renovation of the structure. In addition, the project proposes to provide a setback ranging from two (2) to eight (8) feet along South La Cienega Boulevard and will comply with any applicable open space and streetscape requirements of the West Adams CPIO District. Furthermore, the west side of South La Cienega Boulevard currently has a 50-foot half right-of-way width for the entire length of the roadway until Obama Boulevard to the south. No roadway widenings (i.e., curb line modifications) are currently proposed on South La Cienega Boulevard, and for the reasons stated above, it is unlikely any widening would occur in the future. The proposed project is being designed to also comply with applicable Fire Department requirements as it relates to the internal roadway system. Thus, the proposed project would be consistent with LAMC Section 12.37.

Vision Zero Action and Corridor Plans

Vision Zero implements projects that are designed to increase safety on the most vulnerable City streets. The City has identified a number of streets as part of the HIN where City projects will be targeted. The project site is located adjacent to South La Cienega Boulevard, which is identified as part of the HIN. Therefore, the proposed project is expected to contribute additional vehicular or active transportation trips to roadways designated as part of the HIN. The proposed project is being designed to be consistent with Vision Zero goals. The proposed project improvements to the pedestrian environment would not preclude future Vision Zero safety improvements by the City, should they be deemed necessary. Thus, the Project does not conflict with Vision Zero.

Streetscape Plans

The proposed project site is situated within the Jefferson/La Cienega Transit Oriented Development (TOD) Subarea of the West Adams-Baldwin Hills-Leimert Community Plan Implementation Overlay District (West Adams CPIO District). An overlay is an additional layer of planning control applied to properties in a clearly defined geographic area. Overlays function as tailored zoning districts, each with its own specialized set of regulations. Overlays implement the City's General Plan and Community Plans through neighborhood-specific policy objectives, supplementing the underlying base zoning. The proposed project will comply with any applicable open space and streetscape requirements of the West Adams CPIO District.

Citywide Design Guidelines

Citywide Design Guidelines (Los Angeles City Planning Urban Design Studio, October 2019) identify urban design principles to guide architects and developers in designing high-quality projects that meet the City's functional, aesthetic, and policy objectives and help foster a sense of community. The design guidelines are organized around the following approaches:

- *Pedestrian-first Design*

Guideline 1: Promote a safe, comfortable, and accessible pedestrian experience for all.

Guideline 2: Carefully incorporate vehicular access such that it does not degrade the pedestrian experience.

Guideline 3: Design projects to actively engage with streets and public space and maintain human scale.

The proposed project would be consistent with the Design Guidelines. Adequate sidewalks will be provided and enhanced in accordance with the City's Living Streets design considerations. Additionally, street trees would be incorporated to provide shade for a more comfortable mobility environment for pedestrians. Therefore, the proposed project would align with

Citywide Design Guidelines to provide a safe, comfortable, and accessible experience for all transportation modes.

As shown above, build-out (i.e., year 2025) of the proposed project has been found to be consistent with the relevant City plans, policies and programs and does not include any features that would preclude the City from completing and complying with these guiding documents and policy objectives. Further, the Applicant will comply with existing applicable City ordinances (e.g., the City's existing TDM Ordinance, referred to in the City of Los Angeles Municipal Code Section 12.26.J) and the other requirements pursuant to the City's Municipal Code.

4.1.4 Review of Cumulative Consistency

This section requires consultation and confirmation with the City of Los Angeles Departments of Planning and Transportation (i.e., with LADCP and LADOT). The above project consistency analysis, supporting data and review of the guiding language contained in the City's TAG demonstrate that no cumulative inconsistency with the City's plans, policies, ordinances and programs will occur. The absence of any project features that would preclude the City from completing and complying with these guiding documents and policy objectives further demonstrates this conclusion.

4.2 VMT Analysis (Threshold T-2.1)

The State of California Governor's Office of Planning and Research (OPR) issued proposed updates to the CEQA guidelines in November 2017 and an accompanying technical advisory guidance finalized in December 2018 (*OPR Technical Advisory*) that amends the Appendix G question for transportation impacts to delete reference to vehicle delay and level of service and instead refer to Section 15064.3, subdivision (b)(1) of the CEQA Guidelines asking if the project will result in a substantial increase in vehicle miles traveled (VMT). The California Natural Resources Agency certified and adopted the CEQA Guidelines in December of 2018, and are now in effect. Accordingly, the City of Los Angeles has adopted significance criteria for transportation impacts based on VMT for land use projects and plans in accordance with the amended Appendix G question:

- Threshold T-2.1: For a land use project, would the project conflict or be inconsistent with CEQA guidelines section 15064.3, subdivision (b)(1)?

For land use projects, the intent of this threshold is to assess whether a land use development or plan causes substantial vehicle miles traveled. The City has developed the following screening and impact criteria to address this question. The criteria below are based on the OPR technical advisory and local considerations.

4.2.1 Screening Criteria

As outlined in the City's current TAG, if the project requires discretionary action, and the answer is no to either T-2.1-1 or T-2.1-2, further analysis will not be required for CEQA Threshold T-2.1, and a "no impact" determination can be made for that threshold:

- T-2.1-1: Would the land use project generate a net increase of 250 or more daily vehicle trips?

For purposes of screening the daily vehicle trips, a proposed project's daily vehicle trips should be estimated using the City's VMT Calculator tool or the most recent edition of the ITE *Trip Generation Manual*. TDM strategies that are to be applied as mitigation measures should not be considered for the purposes of screening. If existing land uses are present on the project site or there were previously terminated land uses that meet the criteria for trip credits described in the trip generation methodology discussion (refer to Subsection 3.3.4.1 of the TAG), the daily vehicle trips generated by the existing or qualified terminated land uses can be estimated using the VMT Calculator tool and subtracted from the proposed project's daily vehicle trips to determine the net increase in daily vehicle trips.

- T-2.1-2: Would the project generate a net increase in daily VMT?

For the purpose of screening the VMT, a project's daily VMT should be estimated using the City's VMT Calculator tool or the City's Travel Demand Forecasting (TDF) model. TDM strategies should not be considered for the purpose of screening. If existing land uses are present on the project site or there were previously terminated land uses that meet the criteria for trip credits description in the trip generation methodology discussion (refer to Subsection 3.3.4.1 of the TAG), the daily VMT generated by the existing or qualified terminated land uses can be estimated using the City VMT Calculator tool and subtracted from the project's daily VMT to determine the net increase in daily VMT.

In addition to the above screening criteria, the portion or the entirety of a project that contains small-scale or local serving retail uses¹¹ are assumed to have less than significant VMT impacts. If the answer to the following question is no, then that portion of the project meets the screening criteria and a no impact determination can be made for the portion of the project that contains retail uses. However, if the retail project is part of a larger mixed-use project, then the remaining portion of the project may be subject to further analysis in accordance with the above screening criteria. Projects that include retail uses in excess of the screening criteria would need to evaluate the entirety of the project's VMT, as specified in Subsection 2.2.4 of the TAG.

- If the project includes retail uses, does the portion of the project that contain retail uses exceed a net 50,000 square feet?

¹¹ As noted in the TAG, the definition of retail for this purpose includes restaurant.

Independent of the above screening criteria, and if the project requires a discretionary action, further analysis will be required if the following statement is true:

- Would the Project or Plan located within a one-half mile of a fixed-rail or fixed-guideway transit station replace an existing number of residential units with a smaller number of residential units?

For the purposes of screening for a proposed change in housing units located near fixed-rail or fixed-guideway transit for development projects, the total number of housing units that exist on the project site should be counted and compared to the total number of housing units as proposed by the project to determine if the project would result in a net decrease in housing units. For the purposes of screening for a proposed change in housing units that are in proximity to transit for land use plans, the total number of existing housing units within a one-half mile of a fixed-rail transit station that fall within the land use plan area should be counted and compared to the total housing capacity within the same area that could be built as a result of the land use plan to determine if the plan could result in a net decrease in housing.

4.2.2 Impact Criteria and Methodology

For development projects, the proposed project will have a potential VMT impact if the project meets the following:

- For residential projects, the project would generate household VMT per capita exceeding 15% below the existing average household VMT per capita for the Area Planning Commission (APC) area in which the project is located.
- For office projects, the project would generate work VMT per employee exceeding 15% below the existing average work VMT per employee for the APC in which the project is located.
- For regional serving projects including retail projects, entertainment projects, and/or event centers, the project would result in a net increase in VMT.
- For other land use types, measure VMT impacts for the work trip element using the criteria for office projects above.

Different VMT significance thresholds have been established for each APC boundary area as the characteristics of each are distinct in terms of land use, density, transit availability, employment, etc. The City of Los Angeles significance thresholds (i.e., provided on a daily household VMT per capita basis and a daily work VMT per employee basis) for each of the seven (7) APC boundary areas are presented in *Table 4-1*. As the project site is located in the South Los Angeles APC, the VMT impact criteria (i.e., 15% below the APC average) applicable to the proposed project is 6.0 daily household VMT per capita for the residential component and 11.6 daily work VMT per employee for the general office land use component.

Table 4-1
CITY OF LOS ANGELES VMT IMPACT CRITERIA [1]

AREA PLANNING COMMISSION	15 PERCENT (15%) BELOW APC CRITERIA [2]	
	DAILY HOUSEHOLD VMT PER CAPITA	DAILY WORK VMT PER EMPLOYEE
Central	6.0	7.6
East Los Angeles	7.2	12.7
Harbor	9.2	12.3
North Valley	9.2	15.0
South Los Angeles	6.0	11.6
South Valley	9.4	11.6
West Los Angeles	7.4	11.1

[1] Source: City of Los Angeles Transportation Assessment Guidelines, July 2020.

[2] The development project will have a potential impact if the project meets the following:

- For residential projects, the project would generate household VMT per capita exceeding 15% below the existing average household VMT per capita for the APC area in which the project (refer to above [source: Table 2.2-1 of the guidelines]).
- For office projects, the project would generate work VMT per employee exceeding 15% below the existing average work VMT per employee for the APC in which the project is located (refer to above [source: Table 2.2-1 of the guidelines]).
- For retail projects, the project would result in a net increase in VMT.
- For other land use types, measure VMT impacts for the work trip element using the criteria for office project above (source: Table 2.2-1 of the guidelines).

The impact methodology set forth in the TAG for a mixed-use project such as the proposed project is as follows:

- **Mixed-Use Projects.** The project VMT impact should be considered significant if, after taking credit for internal capture, the project exceeds the impact criteria for any one (or all) of a particular project land use(s). In such cases, mitigation options that reduce the VMT generated by any or all of the land uses could be considered.

4.2.3 Transportation Demand Management Measures

The City's VMT Calculator tool also estimates the effectiveness of potential VMT reduction strategies both as project design features and as mitigation measures in addition to estimating whether a development project exceeds the VMT thresholds. A total of 22 strategies are built into the VMT Calculator, covering several categories including parking, transit, education and encouragement, commute trip reductions, shared mobility, bicycle infrastructure, and neighborhood enhancements. These strategies address the potential VMT reductions available due to certain types of project site modifications, programming, and operational changes which are collectively known as Transportation Demand Management (TDM) strategies. The effectiveness of each strategy is primarily based on research documented in *Quantifying Greenhouse Gas Mitigation Measures (CAPCOA, 2010)*¹². The VMT Calculator either utilizes the methodology provided in the CAPCOA document directly or adjusts the methodology to account for local needs and departmental goals. A detailed review of the 22 pre-defined TDM strategies included in the VMT Calculator, including the definitions, benefits, and applicability of each measure, is presented in Attachment G to the City's TAG, *Transportation Demand Management Strategies in LA VMT Calculator*.

The Applicant will comply with existing applicable City ordinances (e.g., the City's existing Transportation Demand Management [TDM] Ordinance, referred to in the City of Los Angeles Municipal Code Section 12.26.J) and the other requirements per the City's Municipal Code. The following TDM strategies included in the VMT Calculator have been applied as project design features:

- Education and Encouragement: Promotions and Marketing
This strategy involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices. This strategy includes passive educational and promotional materials, such as posters, info boards, or a website with information that a traveler could choose to read at their own leisure. For the purposes of the analysis, it is assumed that every employee would be eligible for passive marketing and promotional materials.

¹² *Quantifying Greenhouse Gas Mitigation Measures*, California Air Pollution Control Officers Association (CAPCOA), 2010.

- Commute Trip Reductions: Ride Share Program
This strategy involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride-share vehicles, and a website or message board to connect riders and coordinate rides in order to increase vehicle occupancy. For the purposes of the analysis, it is assumed that every employee would be eligible for the ride-share program.
- Bicycle Infrastructure: Include Bike Parking Per LAMC
This strategy involves the implementation of short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Projects providing short-term and long-term parking in accordance with LAMC Section 12.21A.16 qualify for this measure. The applicant has indicated that the proposed project will comply with the requirements of the Los Angeles Municipal Code.
- Bicycle Infrastructure: Include Secure Bike Parking and Showers
This strategy involves implementation of additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel by providing amenities at destinations. Projects providing long-term bicycle parking secured from the general public in accordance with LAMC Section 12.21A.16(d)(2) and showers in accordance with LAMC Section 91.6307 qualify for this measure. The applicant has indicated that the proposed project will comply with the requirements of the Los Angeles Municipal Code.
- Neighborhood Enhancement: Pedestrian Network Improvements
This strategy involves implementation of pedestrian network improvements throughout and around the project site that encourage people to walk. This includes internally linking all uses within the project site with pedestrian facilities such as pathways and walkways, and connecting the project site to the surrounding pedestrian network. It also includes the elimination of barriers such as walls, landscaping, and slopes that impede pedestrian circulation. The proposed project includes pedestrian infrastructure to connect facilities within the site and the surrounding street system.

4.2.4 Summary of Project VMT Analysis

The daily vehicle trips and VMT expected to be generated by the proposed project were forecast using the City's VMT Calculator tool. The TDM strategies proposed as part of the project were incorporated into the base assumptions of the VMT calculator as project design features. Copies of the detailed City of Los Angeles VMT Calculator worksheets for the proposed project are contained in *Appendix C*. As indicated in the summary VMT Calculator worksheets, the proposed project is forecast to generate the following:

- The proposed project is estimated to generate a net total of 3,061 daily vehicle trips.
- The proposed project is estimated to generate a net total of 25,937 daily VMT.

- The estimated household VMT per capita for the proposed project is 6.0 VMT per capita, which is equal to the South Los Angeles APC significance threshold of 6.0 VMT per capita.
- The estimated work VMT per employee for the proposed project is 10.4 VMT per capita, which is below the South Los Angeles APC significance threshold of 11.6 VMT per capita.

4.2.5 Summary of Cumulative VMT Analysis

As stated in the City’s TAG document (refer to page 2-12 of the TAG), analyses should consider both short-term and long-term project effects on VMT. Short-term effects are evaluated in the detailed project-level VMT analysis summarized above. Long-term, or cumulative, effects are determined through a consistency check with the Southern California Association of Government’s (SCAG’s) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). The RTP/SCS is the regional plan that demonstrates compliance with air quality conformity requirements and greenhouse gas (GHG) reduction targets. As such, projects that are consistent with this plan in terms of development, location, density, and intensity, are part of the regional solution for meeting air pollution and GHG reduction goals. Projects that are deemed to be consistent would have a less than significant cumulative impact on VMT. Development in a location where the RTP/SCS does not specify any development may indicate a significant impact on transportation. However, as noted in the City’s TAG document, for projects that do not demonstrate a project impact by applying an efficiency-based impact threshold (i.e., VMT per capita, VMT per employee, or VMT per service population) in the impact analysis, a less than significant project impact conclusion is sufficient in demonstrating there is no cumulative VMT impact. Projects that fall under the City’s efficiency-based impact thresholds are already shown to align with the long-term VMT and GHG reduction goals of SCAG’s RTP/SCS. The TAG also notes that projects which do demonstrate VMT impacts through application of efficiency-based thresholds, and which are deemed inconsistent with the RTP/SCS, could contribute toward a significant cumulative impact on VMT.

Based on the above project-related VMT analysis and the conclusions reported in Section 4.2.3 (i.e., which conclude that the proposed project falls under the City’s efficiency-based impact thresholds and thus are already shown to align with the long-term VMT and GHG reduction goals of SCAG’s RTP/SCS), no cumulative VMT impacts are anticipated.

4.3 Geometric Design (Threshold T-3)

As stated in the City’s TAG document (refer to page 2-19 of the TAG), impacts regarding the potential increase of hazards due to a geometric design feature generally relate to the design of access points to and from the project site, and may include safety, operational, or capacity impacts. Impacts can be related to vehicle/vehicle, vehicle/bicycle, or vehicle/pedestrian conflicts as well as to operational delays caused by vehicles slowing and/or queuing to access a project site. These conflicts may be created by the driveway configuration or through the placement of project driveway(s) in areas of inadequate visibility, adjacent to bicycle or pedestrian facilities, or too close to busy or congested intersections. Evaluation of access impacts require details relative to project land use, size, design, location of access points, etc. These impacts are typically evaluated for permanent conditions after project completion, but can also be evaluated for temporary conditions

during project construction. Project access can be analyzed in qualitative and/or quantitative terms, and in conjunction with the review of internal site circulation and access to parking areas. All proposed site access points should be evaluated.

4.3.1 Screening Criteria

If the project requires a discretionary action, and the answer is “yes” to either of the following questions, further analysis will be required to assess whether the project would result in impacts due to geometric design hazards or incompatible uses:

- Is the project proposing new driveways, or introducing new vehicle access to the property from the public right-of-way?
 - ▣ Yes, a modified driveway will be constructed at the existing location of the site driveway to provide access to/from the site.
- Is the project proposing to make any voluntary or required modifications to the public right-of-way (i.e., street dedications, reconfigurations of curb line, etc.)?

As stated in the City’s TAG document (refer to page 2-20 of the TAG), for the purpose of the screening for projects that are making physical changes to the public right-of-way, determine the street designation and improvement standard for any project frontage along streets classified as an Avenue or Boulevard (as designated in the City’s General Plan) using the Mobility Plan 2035, or NavigateLA. If any street fronting the project site is an Avenue or Boulevard and it is determined that additional dedication, or physical modifications to the public right-of-way are proposed or required, the answer to this question is yes. For projects not subject to dedication and improvement requirements under the Los Angeles Municipal Code, though the project does propose dedications or physical modifications to the public right-of-way, which may also include new physical modifications along streets classified as either Collectors or Locals, the answer to this question is yes. Based on a review of the proposed project, the following answer is provided:

- ▣ Yes. While the City’s Bureau of Engineering (BOE) will make a final determination if any roadway dedications and/or widenings are required, based on the current street designation for South La Cienega Boulevard as a Modified Boulevard II roadway, a two (2)-foot dedication along the South La Cienega Boulevard property frontage is required. No roadway widenings (i.e., curb line modifications) are necessary along South La Cienega Boulevard and the applicant will be filing a waiver of dedication with the City.

As the answer is yes to at least one of the screening criteria (i.e., new/modified project driveway), further analysis will be required to assess whether the project would result in impacts due to geometric design hazards or incompatible uses.

4.3.2 *Impact Criteria and Methodology*

The impact criteria set forth in the City's TAG for substantially increasing hazards due to a geometric design feature or incompatible use (referred to a Threshold T-3) is defined as follows:

- Threshold T-3: Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?
 - No, the proposed project would not substantially increase hazards due to a geometric design feature.

Preliminary project access plans are to be reviewed in light of commonly-accepted traffic engineering design standards to ascertain whether any deficiencies are apparent in the site access plans which would be considered significant. The determination of significance shall be on a case-by-case basis, considering the following factors:

- The relative amount of pedestrian activity at project access points.
- Design features/physical configurations that affect the visibility of pedestrians and bicyclists to drivers entering and exiting the site, and the visibility of cars to pedestrians and bicyclists.
- The type of bicycle facilities the project driveway(s) crosses and the relative level of utilization.
- The physical conditions of the site and surrounding area, such as curves, slopes, walks, landscaping or other barriers, that could result in vehicle/pedestrian, vehicle/bicycle, or vehicle/vehicle safety hazards.
- The project location, or project-related changes to the public right-of-way, relative to proximity to the High Injury Network or a Safe Routes to School program area.
- Any other conditions, including the approximate location of incompatible uses that would substantially increase a transportation hazard.

For vehicle, bicycle and pedestrian safety impacts, the City's TAG (refer to page 28) indicate that a review of all project access points, internal circulation, and parking access from an operational and safety perspective (for example, turning radii, driveway queuing, line of sight for turns into and out of project driveway[s]) should be conducted. Where project driveways would cross pedestrian facilities or bicycle facilities (bike lanes or bike paths), operational and safety issues related to the potential for vehicle/pedestrian and vehicle/bicycle conflicts and the severity of consequences that could result should be considered. In areas with moderate to high levels of pedestrian or bicycle activity, the collection of pedestrian or bicycle count data is required.

4.3.3 Qualitative Review of Site Access Points

As the proposed project driveway location is essentially the same as what exists under current conditions and based on a review of the forecast net new weekday AM and PM peak hour project traffic volumes (i.e., those traffic volumes are summarized in Section 2.6 herein), no safety concerns related to geometric design are noted.

5.0 NON-CEQA ANALYSIS

As outlined in the City’s current TAG, the authority for requiring non-CEQA transportation analysis and potentially requiring improvements to address identified deficiencies that may result from a development project lies in the City of Los Angeles’ Site Plan Review discretionary authority as established in Section 16.05 of the Los Angeles Municipal Code (LAMC). As provided in Section 16.05:

“The purposes of site plan review are to promote orderly development, evaluate and mitigate significant environmental impacts, and promote public safety and the general welfare by ensuring that development projects are properly related to their sites, surrounding properties, traffic circulation, sewers, other infrastructure and environmental setting; and to control or mitigate the development of projects which are likely to have a significant adverse effect on the environment as identified in the City’ s environmental review process, or on surrounding properties by reason of inadequate site planning or improvements.”

Additional authority is found in other discretionary processes where the City is required to make findings to support approval of a land use development project. Discretionary authority to impose transportation related conditions is also established by other City ordinances, such as certain transportation specific plans. The impacts, also referred to as deficiencies, discussed in City’s TAG are not intended to be interpreted as thresholds of significance, or significance criteria for purposes of CEQA review unless otherwise specifically identified (refer to Section 2.0, CEQA Analysis of Transportation Impacts).

5.1 Pedestrian, Bicycle, and Transit Access

The pedestrian, bicycle, and transit facilities assessment is intended to determine a project’s potential effect on pedestrian, bicycle, and transit facilities in the vicinity of the proposed project. The deficiencies could be physical (through removal, modification, or degradation of facilities) or demand-based (by adding pedestrian or bicycle demand to inadequate facilities).

5.1.1 Screening Criteria

If the answer is yes to all of the following questions, further analysis will be required to assess whether the project would negatively affect existing pedestrian, bicycle, or transit facilities:

- Does the land use project involve a discretionary action that would be under review by the Department of City Planning?
 - Yes, the project will require a discretionary action.
- Does the land use project include the construction, or addition of?
 - 50 (or more) dwelling units or guest rooms or combination thereof, or

- 50,000 square feet (or more) of non-residential space
- ▣ Yes, the land use project includes the construction of more than 50 dwelling units and more than 50,000 square feet of non-residential space.
- Would the project generate a net increase of 1,000 or more daily vehicle trips, or is the project's frontage along an Avenue, Boulevard, or Collector (as designated in the City's General Plan) 250 linear feet or more, or is the project's building frontage encompassing an entire block along an Avenue or Boulevard (as designated in the City's General Plan)?
 - ▣ Yes, the project will generate a net increase of 1,000 or more daily vehicle trips.

As the answer is yes to all of the screening criteria, further analysis is required to assess whether the proposed project would negatively affect existing pedestrian, bicycle, or transit facilities.

5.1.2 *Evaluation Criteria*

Factors to consider when assessing a project's potential effect on pedestrian, bicycle and transit facilities, include, but are not limited to, the following:

- Would a project directly or indirectly result in a permanent removal or modification that would lead to the degradation of pedestrian, bicycle, or transit facilities, including but not limited to:
 - ▣ Removal or degradation of existing sidewalks, crosswalks, pedestrian refuge islands, and/or curb extensions/bulb-outs
 - ▣ Removal or degradation of existing bikeways and/or supporting facilities (e.g., bikeshare stations, on-street bike racks/parking, bike corrals, etc.)
 - ▣ Removal or degradation of existing transit and/or local circulator facilities including stop, bench, shelter, concrete pad, bus lane, or other amenities
 - ▣ Removal of other existing transportation system elements supporting sustainable mobility
 - ▣ Increase street crossing distance for pedestrians; increase in number of travel/turning lanes; increase in turning radius or turning speeds
 - ▣ Removal, degradation, or narrowing of an existing sidewalk, path, crossing, or pedestrian access way
 - ▣ Removal or narrowing of existing sidewalk-street buffering elements (e.g., curb extension, parkway, planting strip, street trees, etc.)

- Would a project intensify use of existing pedestrian, bicycle, or transit facilities, including but not limited to:
 - Increase in pedestrian or vehicle volume, and thereby increase the need or attraction to cross a street at unmarked pedestrian crossings or unsignalized or uncontrolled intersections where a crossing is not available without significant rerouting. Refer to the Guidelines for Marked Crosswalks Across Uncontrolled Locations, in LADOT's Manual of Policies and Procedures (MPP) Section 344, or Guidelines for Traffic Signals in MPP Section 353 to determine approval and warrant criteria for an additional crossing.
 - Result in new pedestrian demand between project site entries/exits and major destinations or transit stops expected to serve the development where there are missing pedestrian facilities (e.g., gaps in the sidewalk network) or substandard pedestrian facilities (e.g., narrow or uneven sidewalks, no crosswalks at intersections or mid-block, no marked crossing, or push button crossing rather than actuated, etc.).
 - Increase transit demand at bus stops that lack at bus stops that lack marked crossings, with insufficient sidewalks, or are in isolated, or unlit areas.

The locations and descriptions of pedestrian, bicycle and transit facilities in the project vicinity that could be affected by project-related traffic or by users traveling between a project and nearby destinations is presented in Section 3.0 (Project Context) herein. Potential pedestrian destinations located within an approximately one-quarter mile (i.e., 1,320 feet) from the project site are noted in *Figure 3-1*. Existing pedestrian facilities currently located near the project site also are provided in *Figure 3-2*. In addition, the location of public bicycle racks in the project study area is noted in *Figure 3-2*. The location of the City's bicycle enhanced network (low stress network) in close proximity to the project site and in the surrounding area is shown in *Figure 3-3*. The location of the City of Los Angeles proposed bicycle lane network in close proximity to the project site and in the surrounding area is illustrated in *Figure 3-4*.

5.1.3 Results of Qualitative Access Review

Table 5-1 summarizes the City's criteria associated with the two guiding questions regarding the pedestrian, bicycle, and transit access assessment and the determination of potential project-related effect on the subject facilities in the vicinity of the proposed project. The determination is based on whether the proposed project would create deficiencies that could be physical (through removal, modification, or degradation of facilities) or demand-based (by adding pedestrian or bicycle demand to inadequate facilities). As indicated in *Table 5-1*, it is determined the proposed project does not include any features that would permanently remove, adversely modify, or degrade pedestrian, bicycle, and transit facilities in the project vicinity. As also noted in *Table 5-1*, it is determined that it is possible that the proposed project may intensify use of pedestrian, bicycle, and transit facilities in the project vicinity, however, such use is not expected to result in a deficient condition caused by the project. Additionally, a qualitative assessment of the existing pedestrian, bicycle, and transit

TABLE 5-1
PROJECT EVALUATION OF PEDESTRIAN, BICYCLE, AND TRANSIT ACCESS

CRITERIA	PROJECT RESPONSE	FURTHER QUANTITATIVE ASSESSMENT?
PERMANENT REMOVAL OR MODIFICATION OF FACILITIES		
Removal or degradation of existing sidewalks, crosswalks, pedestrian refuge islands, and/or curb extensions/bulbouts	No	No
Removal or degradation of existing bikeways and/or supporting facilities (e.g., bikeshare stations, on-street bike racks/parking, bike corrals, etc.)	No	No
Removal or degradation of existing transit and/or local circulator facilities including stop, bench, shelter, concrete pad, bus lane, or other amenities	No	No
Removal of other existing transportation system elements supporting sustainable mobility	No	No
Increase street crossing distance for pedestrians; increase in number of travel/turning lanes; increase in turning radius or turning speeds	No	No
Removal, degradation, or narrowing of an existing sidewalk, path, crossing, or pedestrian access way	No	No
Removal or narrowing of existing sidewalk-street buffering elements (e.g., curb extension, parkway, planting strip, street trees, etc.)	No	No
INTENSIFY USE OF FACILITIES		
Increase in pedestrian or vehicle volume, and thereby increase the need or attraction to cross a street at unmarked pedestrian crossings or unsignalized or uncontrolled intersections where a crossing is not available without significant rerouting. Refer to the Guidelines for Marked Crosswalks Across Uncontrolled Locations, in LADOT's Manual of Policies and Procedures (MPP) Section 344, or Guidelines for Traffic Signals in MPP Section 353 to determine approval and warrant criteria for an additional crossing.	Possible	No
Result in new pedestrian demand between project site entries/exits and major destinations or transit stops expected to serve the development where there are missing pedestrian facilities (e.g., gaps in the sidewalk network) or substandard pedestrian facilities (e.g., narrow or uneven sidewalks, no crosswalks at intersections or mid-block, no marked crossing, or push button crossing rather than actuated, etc.).	Possible	No
Increase transit demand at bus stops that lack marked crossings, with insufficient sidewalks, or are in isolated, unshaded, or unlit areas.	No	No

facilities in the project vicinity is included in *Table 5-1* (i.e., as part of the responses to the criteria questions). Based on this analysis, no project-specific actions or improvements are recommended as it relates to pedestrian, bicycle, and transit access.

It is noted that the proposed project site is located along South La Cienega Boulevard, a roadway included on the HIN. As such, it is understood that LADOT staff may coordinate internal review with the Vision Zero Programs Bureau to determine if safety-related measures are needed to support safe access to/or from the development site for vulnerable road users (i.e., pedestrians and bicyclists).

5.2 Project Access and Circulation Review

Project access and circulation constraints relate to the provision of access to and from the project site, and may include safety, operational, or capacity constraints. Constraints can be related to vehicular/vehicular, vehicular/bicycle, or vehicular/pedestrian constraints as well as to operational delays. These conflicts may be created by the driveway configuration or through the placement of project driveway(s) in areas of inadequate visibility, adjacent to bicycle or pedestrian facilities, or too close to an intersection or crosswalk. The project access and circulation has been evaluated for permanent conditions after project completion. *Table 5-2* summarizes the vehicle queuing analysis prepared for each of the study locations for the representative intersection traffic movements for the weekday AM and PM peak hours. *Appendix D* contains the analysis data worksheets for the study intersections.

5.2.1 Screening Criteria

For land use projects, if the answer is yes to all of the following questions, further analysis will be required to assess whether the project would negatively affect project access and circulation:

- Does the land use project involve a discretionary action that would be under review by the Department of City Planning?
 - ▣ Yes, the project will require a discretionary action.
- Would the land use project generate a net increase of 250 or more daily vehicle trips?
 - ▣ Yes, the project will generate a net increase of 250 or more daily vehicle trips.

As the answer is yes to both of the screening criteria questions (i.e., the project will require a discretionary action and the project will generate more than 250 daily trips), further analysis is required to evaluate project access, safety and circulation.

5.2.2 Evaluation Criteria

For operational evaluation of land use projects, the City's TAG requires a quantitative evaluation of the project's expected access and circulation operations. Project access is considered constrained if the project's traffic would contribute to unacceptable queuing on an Avenue or Boulevard (as

- [1] Pursuant to LADOT's *Transportation Assessment Guidelines*, July 2020, the Highway Capacity Manual (HCM) methodology for signalized intersections was utilized to calculate vehicle queuing.
- [2] The 95th percentile queue is the maximum back of queue with 95th percentile traffic volumes. The HCM 6th Edition methodology worksheets report queues in number of vehicles per lane, however an average vehicle length of 25 feet was assumed for analysis purposes. The reported queues therefore represent the calculated maximum back of queue in feet per lane.
- [3] Represents the change in calculated maximum back of queue (in feet per lane) due to the addition of project-related traffic.

designated in the Mobility Plan 2035) at project driveway(s) or would cause or substantially extend queuing at nearby signalized intersections. Unacceptable or extended queuing may be defined as follows:

- Spill over from turn pockets into through lanes.
- Block cross streets or alleys.
- Contribute to gridlock congestion. For the purposes of this section, “gridlock” is defined as the condition where traffic queues between closely-spaced intersections and impedes the flow of traffic through upstream intersections.

For land use and transportation projects, the City’s TAG also requires identification as to whether project-related traffic queuing is expected to increase traffic diversion so as to burden neighborhood streets if the proposed project is located in proximity to residential areas (refer to TAG Section 3.5). Since the nearby residential streets do not offer as alternatives to congested traffic access routes to/from the project site, no residential street cut-through analysis is required as part of this transportation assessment report.

The City’s TAG acknowledges that demand for curbside space has substantially increased due to the continued expansion of driver-for-hire transportation network companies (TNCs) and shared mobility services. As such, the TAG states that a transportation assessment should characterize the on-site loading demand of the project frontage and answer the following questions:

- Would the project result in passenger loading demand that could not be accommodated within any proposed on-site passenger loading facility?
 - No. It is envisioned that passenger loading/unloading will occur on-site.
- Would accommodating the passenger loading demand create pedestrian or bicycle conflicts? Which curbside management options should be explored to better address passenger loading needs in the public right-of-way?
 - No pedestrian or bicycle conflicts due to potential loading/unloading activities are anticipated to occur. It is envisioned that passenger loading/unloading will occur on-site.

5.2.3 Operational and Passenger Loading Evaluation Methodology

Based on coordination with LADOT staff and as presented in the transportation assessment MOU, the following seven (7) study intersections were identified for operational evaluation of whether the project’s traffic would contribute to unacceptable queuing on an Avenue or Boulevard:

1. Jefferson Boulevard/National Boulevard

2. South La Cienega Boulevard/Jefferson Boulevard
3. South La Cienega Boulevard/Obama Boulevard
4. South La Cienega Boulevard/Project Driveway
5. South La Cienega Boulevard/Corbett Street
6. Hayden Avenue/National Boulevard
7. Eastman Drive/National Boulevard

Five (5) of the seven (7) study locations are currently controlled with traffic signals. The study locations were based on proximity to the proposed project site and its driveway location on South La Cienega Boulevard, and the importance of the intersections in terms of the project's site access and circulation scheme.

The analysis was prepared based on the *Highway Capacity Manual*¹³ (HCM) operational analysis methodology pursuant to the City's TAG. Intersection analyses were prepared utilizing the *Synchro 10* software package, which implements the Highway Capacity Manual operational methods. A *Synchro* network was created based on existing conditions field reviews at the above seven study intersections. In addition, specifics such as traffic volume data, lane configurations, available vehicle storage lengths, crosswalk locations, posted speed limits, traffic signal timing and phasing for signalized locations, etc., were coded to complete the roadway network. The operational analysis was prepared utilizing the following data previously presented herein:

- Project Peak Hour Traffic Generation: Refer to Subsection 2.6.1
- Project Trip Distribution and Assignment: Refer to Subsection 2.6.2
- Existing Roadway Network: Refer to Subsection 3.3
- Existing Weekday AM and PM Hour Traffic Count Data: Refer to Subsection 3.4
- Related Projects (i.e., with a one-half mile radius) and Ambient Traffic Growth: Refer to Subsection 3.5

LADOT confirmed the appropriateness of the above data when it entered into a transportation assessment MOU for the proposed project.

The operational analysis of vehicle queuing at the study intersections was prepared for the following conditions:

¹³ *Highway Capacity Manual 6th Edition*, Transportation Research Board of the National Academies of Sciences-Engineering-Medicine, 2016.

- [a] Existing conditions.
- [b] Condition [a] plus 0.2 percent (0.2%) annual ambient traffic growth through year 2025 (i.e., project build-out) and with completion and occupancy of the related projects (i.e., future without project conditions).
- [c] Condition [b] with completion and occupancy of the proposed project (i.e., future with project conditions).

Pursuant to the City’s TAG, the HCM methodology for signalized and unsignalized intersections was utilized to calculate vehicle queuing. The operational analysis reports the 95th percentile queues (in feet) for all approaches for the signalized intersections and the minor street approaches for the unsignalized intersections. The 95th percentile queue is the maximum back of queue with 95th percentile traffic volumes. The HCM 6th Edition methodology worksheets report queues in number of vehicles. As such, an average vehicle length of 25 feet, which includes the length of the vehicle and spacing between vehicles, was assumed for analysis purposes. The reported queues therefore represent the calculated maximum back of queue in feet. The summary of the operational analysis of the study intersections is provided in *Table 5-2*. The HCM methodology worksheets for the analyzed intersections are contained in *Appendix D*.

5.2.4 Results of Operational and Passenger Loading Evaluation

As presented in *Table 5-2*, it is concluded the proposed project weekday AM and PM peak hour traffic volumes will not cause or substantially extend vehicle queuing at five (5) of the seven (7) intersections. The change in queue length associated with the westbound left-turn lane at the South La Cienega Avenue/Jefferson Boulevard intersection under the Future With Project condition is anticipated to extend beyond the existing pocket (i.e., beyond the 372-foot westbound left-turn per lane storage length which exists today). In addition, the proposed project is forecast to extend vehicle queuing for the northbound left-turn movement (i.e., change in queue of approximately four [4] vehicle lengths) at the Jefferson Boulevard/National Boulevard intersection under the Future With Project condition. Further, the proposed project is forecast to extend vehicle queuing for the southbound left-turn movement (i.e., change in queue of approximately seven [7] vehicle lengths) at the La Cienega Avenue/Obama Boulevard intersection under the Future With Project condition.

It is envisioned that passenger loading/unloading will occur on-site at a designated area/s. No pedestrian or bicycle conflicts due to potential loading/unloading activities are anticipated to occur. For any curbside loading/unloading zones that may be proposed by the Applicant, appropriate signage and pavement/curb markings will be required by the City and installed by the Applicant. Any installations that fall within the City’s (public) right-of-way will require prior review and approval by LADOT.

5.3 Project Construction Effect on Nearby Mobility

The project construction evaluation addresses activity associated with project construction and major in-street construction of infrastructure projects. While detailed construction staging plans have not

yet been developed, the project applicant has provided preliminary information regarding the overall construction activities in order to identify the potential construction traffic generation. The following general construction details are provided based on information provided by the applicant:

Construction of the project is expected to occur within 32 months, beginning in 2022 with an estimated completion and project occupancy in 2025. Construction activities would be limited to hours more restrictive than LAMC requirements; specifically, construction would be permitted between the hours of 7:00 AM and 4:00 PM, Monday through Friday. No construction would occur on Saturday or Sunday. Earthwork activities necessary for construction would require an estimated 161,000 cubic yards of cut and export. All earthwork volumes have been adjusted to account for swelling and shrinking. Exported soil materials likely would be disposed of at Hanson Aggregates in Irwindale.

Based on information provided by the applicant, the construction vehicles that are planned to be utilized for import and export activities will have a capacity of 14 cubic yards per truck. Therefore, a total of 11,500 truckloads would be required for complete export of material associated with the project. During peak grading activities, up to 105 truckloads per day and 40 workers can be expected. Following the completion of the site grading, paving is expected to occur in the next 5 months, requiring 20 workers. Building construction would occur during the following 12 months, requiring 350 workers. Painting/building finishing would occur during the final 6 months of construction, requiring 250 workers.

It is assumed that the equipment staging area during construction would occur on/within the project site. Construction worker parking also could occur on-site. Based on the above construction hours it is assumed that workers would generally arrive at the site by 7:00 AM and depart the site by 4:30 PM (i.e., after a nine-hour workday including a lunch break), except when overtime is necessary to maintain the schedule. At this time, it is not known if temporary lane closures will be necessary during the course of project construction. However, any such lane closures would be expected to occur outside the weekday AM and PM commute hours so as to maintain roadway capacity when the street system is typically most heavily constrained based on current City of Los Angeles construction practices.

Based on a review of the construction phasing, it is determined that the overall highest construction traffic generation is expected to occur during grading activities. Other phases such as demolition, paving, building construction, and painting/building finishing are expected to be less intensive in terms of overall construction traffic generation. In addition, with implementation of a Construction Staging and Traffic Management Plan (CSTMP), discussed further below, it is anticipated that most haul truck activity to and from the project site would occur outside of the morning and afternoon peak hours. Accordingly, construction traffic associated with the other phases are not expected to result in any construction traffic impacts.

5.3.1 Screening Criteria

For land use projects, if the answer is yes to any of the following questions, further analysis will be required to assess whether project construction would negatively affect pedestrian, bicycle, transit, or vehicle circulation:

- Would a project that requires construction activities to take place within the right-of-way of a Boulevard or Avenue (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than one day (including day and evening hours, and overnight closures if on a residential street)?
 - ▣ As a general contractor has not yet been hired at this point in the entitlement process, it is indeterminant if any construction activity would require a temporary lane closure along South La Cienega Boulevard, a Modified Boulevard II roadway.
- Would a project require construction activities to take place within the right-of-way of a Collector or Local Street (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than seven days (including day and evening hours, and including overnight closures if on a residential street)?
 - ▣ No.
- Would in-street construction activities result in the loss of regular vehicle, bicycle, or pedestrian access, including loss of existing bicycle parking to an existing land use for more than one day, including day and evening hours and overnight closures if access is lost to residential units?
 - ▣ No.
- Would in-street construction activities result in the loss of regular ADA pedestrian access to an existing transit station, stop, or facility (e.g., layover zone) during revenue hours?
 - ▣ No.
- Would in-street construction activities result in the temporary loss for more than one day of an existing bus stop or rerouting of a bus route that serves the project site?
 - ▣ As a general contractor has not yet been hired at this point in the entitlement process, it is indeterminant if any construction activity would require a temporary loss for more than one day of an existing bus stop/s or rerouting of a bus route/s near the site.
- Would construction activities result in the temporary removal and/or loss of on-street metered parking for more than 30 days?
 - ▣ No.

- Would the project involve a discretionary action to construct new buildings or additions of more than 1,000 square feet that require access for hauling construction materials and equipment from streets of less than 24-feet wide in a hillside area?
 - ▣ No.

As the answer is indeterminant to two of the screening criteria questions, further analysis is required to evaluate whether project construction would negatively affect pedestrian, bicycle, transit, or vehicle circulation.

5.3.2 Evaluation Criteria and Methodology

The evaluation criteria for project construction is focused on whether the proposed project would adversely affect mobility in the project vicinity during the construction process. Specifically, the City’s TAG asks the following question: “Would construction of a project substantially interfere with pedestrian, bicycle, transit, or vehicle circulation and accessibility to adjoining areas?”.

Factors to consider when assessing a project construction’s potential effect on mobility in the project area include the following:

- Temporary transportation constraints:
 - ▣ The length of time of temporary street closures or closures of two or more travel lanes;
 - ▣ The classification of the street (major arterial, state highway) affected;
 - ▣ The existing congestion levels on the affected street segments and intersections;
 - ▣ The operational constraints of substandard hillside streets needing to access construction sites;
 - ▣ Whether the affected street directly leads to a freeway on- or off-ramp or other state highway, substandard hillside local or collector, etc.) affected;
 - ▣ Potential safety issues involved with street or lane closures; and
 - ▣ The presence of emergency services (fire, hospital, etc.) located nearby that regularly use the affected street.
- Temporary loss of access:
 - ▣ The length of time of any loss of pedestrian or bicycle circulation past a construction area;

- The length of time of any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area;
- The length of time of any loss or impedance of access by emergency vehicles or area residents to hillside properties;
- The length of time of any loss of ADA pedestrian access to a transit station, stop, or facility;
- The availability of nearby vehicular or pedestrian access within ¼ mile of the lost access; and
- The type of land uses affected, and related safety, convenience, and/or economic issues.

Temporary Loss of Bus Stops or Rerouting of Bus Lines:

- The length of time that an existing bus stop would be unavailable or that existing service would be interrupted;
- The availability of a nearby location (within ¼ mile) to which the bus stop or route can be temporarily relocated;
- The existence of other bus stops or routes with similar routes/destinations within a ¼-mile radius of the affected stops or routes; and
- Whether the interruption would occur on a weekday, weekend or holiday, and whether the existing bus route typically provides service that/those day(s).

Descriptions of the project location and physical setting are provided in Subsection 2.1, Project Location, and Section 3.0, Project Context, herein for reference purposes in the project construction evaluation. The project location and project setting data items such as adjacent street classifications, public bicycle parking, inventory of existing transit lines, bus stops, etc. are provided in Section 3.0. The evaluation of the project construction includes a review of whether construction activity within the street right-of-way would require any of the following:

- Street, sidewalk, or lane closures.
- Block existing vehicle, bicycle, or pedestrian access along a street or to parcels fronting the street.
- Modification of access to transit stations, stops, or facilities during revenue hours.
- Closure or movement of an existing bus stop or rerouting of an existing bus line.

- Creation of transportation hazards.

The TAG also notes that for construction on hillside properties that exceed the screening criteria, review of the hillside streets needed for access to the property for hauling materials and equipment is necessary in order to determine if temporary access would be constrained during project construction. This assessment should:

- Map the full extent of routes within hillside areas used for hauling materials and equipment that need to access the property from non-hillside areas.
- Identify any portion of a street along those routes that are less than 24 feet in width curb to curb.
- Identify the portion of routes used for hauling that are less than 24 feet in width and are in a Very High Fire Severity Hazard Zone.
- Identify the availability, regulatory limits, and the existing use of on-street parking supply along those routes that are less than 24 feet in width.
- Collect the existing peak hour volumes between 8:00 AM to 6:00 PM along those routes that are less than 24 feet in width within hillside areas.
- Evaluate the cumulative effects on emergency access, deliveries, residential circulation, and street parking from other construction activity from both ministerial and other discretionary projects (related projects) with overlapping construction schedules and that are located within a ½ mile radius from the project site.

The City’s TAG notes that a comparison of the results to the evaluation criteria should be provided in order to determine the level of impact. The summary of the project construction evaluation criteria review in order to determine level of impact is provided in **Table 5-3**.

5.3.3 Summary of Results of Qualitative Review of Project Construction

As presented in *Table 5-3*, the proposed project would not result in the closure of two or more travel lanes, would not relocate existing bus transit stops or routes, and would not impede emergency access. Further, as required by the State of California Vehicle Code (i.e., specifically Section 21806, Authorized Emergency Vehicles), “upon the immediate approach of an authorized emergency vehicle which is sounding a siren and which has at least one lighted lamp exhibiting red light that is visible, under normal atmospheric conditions, from a distance of 1,000 feet in front of a vehicle, the surrounding traffic shall, except as otherwise directed by a traffic officer, do the following:

- (a) (1) Except as required under paragraph (2), the driver of every other vehicle shall yield the right-of-way and shall immediately drive to the right-hand edge or curb of the highway, clear of any intersection, and thereupon shall stop and remain stopped until the authorized emergency vehicle has passed.

TABLE 5-3
QUALITATIVE REVIEW OF PROJECT CONSTRUCTION ACTIVITIES

CRITERIA	PROJECT RESPONSE	DESCRIPTION
TEMPORARY TRANSPORTATION CONSTRAINTS		
The length of time of temporary street closures or closures of two or more travel lanes	No formal street closures are anticipated. Any temporary use of the alley would be shorter than 7 days.	When the general contractor is retained this will be confirmed.
The classification of the street (major arterial, state highway) affected	Modified Boulevard II	La Cienega Boulevard is a Modified Boulevard II roadway
The existing congestion levels on the affected street segments and intersections	Acceptable LOS	
Whether the affected street directly leads to a freeway on- or off-ramp or other state highway	N/A	N/A
Potential safety issues involved with street or lane closures	None	N/A
The presence of emergency services (fire, hospital, etc.) located nearby that regularly use the affected street	None	N/A
TEMPORARY LOSS OF ACCESS		
The length of time of any loss of pedestrian or bicycle circulation past a construction area	None	When the general contractor is retained this will be confirmed.
The length of time of any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area	None	"
The length of time of any loss of ADA pedestrian access to a transit station, stop, or facility	None	"
The availability of nearby vehicular or pedestrian access within ¼ mile of the lost access	None	"
The type of land uses affected, and related safety, convenience, and/or economic issues	None	Access will be maintained for adjacent parcels in the project vicinity
TEMPORARY LOSS OF BUS STOPS OR REROUTING OF BUS LINES		
The length of time that an existing bus stop would be unavailable or that existing service would be interrupted	Yes	When the general contractor is retained this will be confirmed.
The availability of a nearby location (within ¼ mile) to which the bus stop or route can be temporarily relocated	No	N/A
The existence of other bus stops or routes with similar routes/destinations within a ¼-mile radius of the affected stops or routes	No	N/A
Whether the interruption would occur on a weekday, weekend or holiday, and whether the existing bus route typically provides service that/those day(s)	TBD	When the general contractor is retained this will be confirmed.

- (2) A person driving a vehicle in an exclusive or preferential use lane shall exit that lane immediately upon determining that the exit can be accomplished with reasonable safety.
- (b) The operator of every street car shall immediately stop the street car, clear of any intersection, and remain stopped until the authorized emergency vehicle has passed.
- (c) All pedestrians upon the highway shall proceed to the nearest curb or place of safety and remain there until the authorized emergency vehicle has passed.”¹⁴

During construction of the proposed project, it is expected that emergency vehicles will continue to utilize the surrounding street system (i.e., particularly La Cienega Boulevard) even though a travel lane along certain portions of some roadways may be temporarily used for construction purposes. If required, drivers of emergency vehicles are also trained to utilize center turn lanes, or travel in opposing through lanes (on two-way streets) to pass through crowded intersections or streets. Thus, the respect entitled to emergency vehicles and driver training allow emergency vehicles to negotiate typical street conditions in urban areas including areas near any temporary travel lane closure(s). Construction activities associated with the proposed project are not expected to have a detrimental effect on emergency response times. Therefore, effects to emergency access during project construction would be less than significant.

Having stated the above, Section 5.4.1 below summarizes recommendations pertaining to construction activities.

5.4 Non-CEQA Transportation Measures

5.4.1 Project Construction Measures

Due to the short-term nature of construction activities and the variable characteristics and needs of a specific project’s construction phase(s), it is recommended that a construction work site traffic control plan be submitted to LADOT’s Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of construction activity. The construction work site traffic control plan is required to identify the location of all temporary roadway lane and/or sidewalk closures needed during project construction. Additionally, if pedestrian detours and/or temporary travel lane closures are proposed, LADOT requires submission and approval of a traffic control/management plan prior to the issuance of building permits.

Consistent with LADOT’s recommendation and requirements, the project applicant would prepare a detailed Construction Staging and Traffic Management Plan (CSTMP), which would include any applicable street/lane/sidewalk closure information, a detour plan, haul route(s), and a staging plan. The plan would be based on the nature and timing of the Project’s specific construction activities and would consider other projects under construction in the immediate vicinity of the Project Site. The CSTMP also would include features such as notification to adjacent project owners and occupants of upcoming construction activities, advance notification regarding any temporary transit stop

¹⁴ Source: State of California Department of Motor Vehicles website; <https://www.dmv.ca.gov/portal/dmv>; Amended Sec. 68, Ch. 1154, Stats 1996 Effective September 30, 1996.

relocations, and limitation of any potential roadway lane closure(s) to off-peak travel periods, to the extent feasible.

Specifically, the CSTMP will include, but not be limited to, the following measures:

- Advance notification of adjacent property owners and occupants of upcoming construction activities, including durations and daily hours of operation.
- Temporary traffic control during all construction activities adjacent to public rights-of-way to improve traffic flow on public roadways (e.g., flag men).
- Scheduling of construction activities to reduce the effect on traffic flow on surrounding arterial streets.
- Potential sequencing of construction activity for the Project to reduce the amount of construction-related traffic on arterial streets.
- Containment of construction activity within the Project Site boundaries, per the Worksite Traffic Control Plan.
- Prohibition on construction-related vehicles/equipment parking on surrounding public streets.
- Coordination with Metro to address any potential conflicts with existing transit service.
- Safety precautions for pedestrians and bicyclists through such measures as alternate routing and protection barriers shall be implemented as appropriate.
- Schedule delivery of construction materials and hauling/transport of oversize loads to non-peak travel periods, to the extent possible. No hauling or transport shall be allowed during nighttime hours, Sundays, or federal holidays unless required by Caltrans or LADOT.
- Installation of appropriate traffic signs around the project site to ensure pedestrian, bicycle, and vehicle safety, as may be necessary.
- Installation of truck crossing signs within 300 feet of the exit of the Project Site in each direction.
- Securing of loads by trimming and watering or covering to prevent the spilling or blowing of the earth material.
- Cleaning of trucks and loads at the export site to prevent blowing dirt and spilling of loose earth.
- Identification of a construction manager and provision of a telephone number for any inquiries or complaints from residents regarding construction activities. The telephone

number shall be posted at the site readily visible to any interested party during site preparation, grading, and construction.

- Obtain a Caltrans transportation permit for use of oversized transport vehicles on Caltrans facilities, if needed.

Any lane closures are expected to occur outside of the weekday AM and PM commute peak hours so as to maintain roadway capacity when the street system is typically most heavily constrained.

In addition to the CSTMP, approvals required by the City of Los Angeles for implementation of the proposed project include a Truck Haul Route program. The proposed haul routes would require review and approval by the City of Los Angeles.

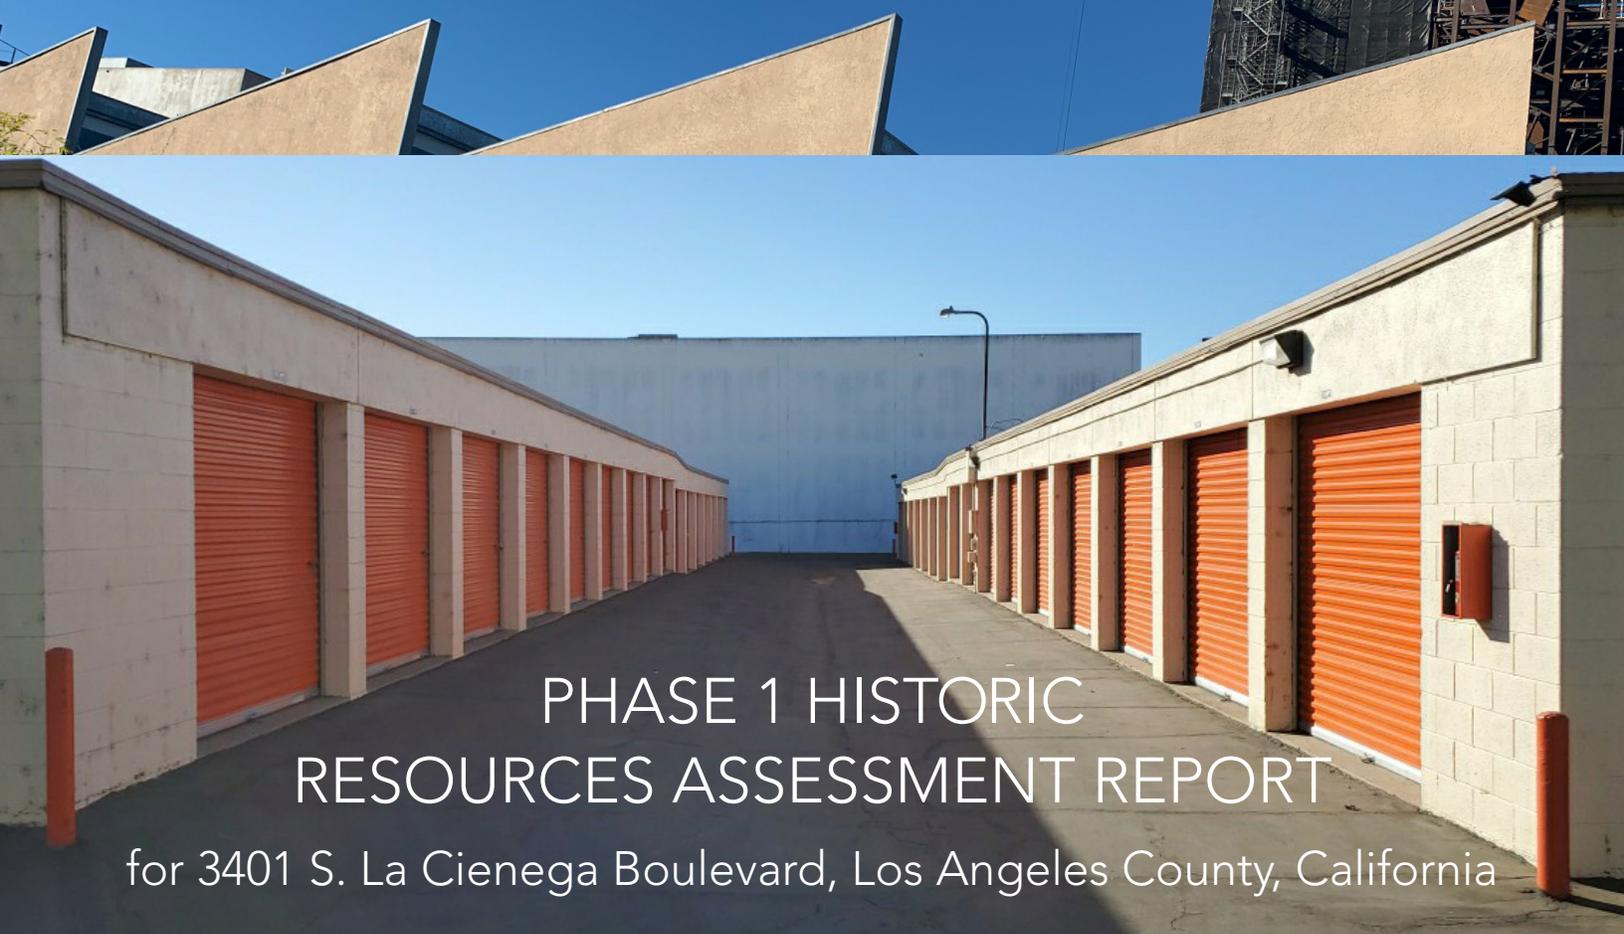

6.0 SUMMARY AND CONCLUSIONS

- **Project Description** – The proposed project site is located at 3401 South La Cienega Boulevard in the City of Los Angeles, California. The proposed project consists of the construction of a mixed-use development with 260 residential units, including 22 very low-income affordable housing dwelling units and seven workforce housing units, 227,543 gross square feet of office space, and 2,869 square feet of ground floor retail space. Construction of the proposed project is planned to begin in year 2022 and be completed by year 2025 (i.e., project build-out year 2025).
- **Study Scope** – This transportation assessment (i) presents a CEQA assessment of project-related VMT, (ii) provides a CEQA assessment of whether the project conflicts or is inconsistent with local plans and policies, (iii) presents a non-CEQA assessment of pedestrian, bicycle and transit access, (iv) provides a non-CEQA evaluation of project access, safety and circulation, (v) provides a non-CEQA review of project construction activities, and (vi) recommends mitigation and improvement measures, where necessary. As defined by the City as Lead Agency under CEQA, LADOT confirmed the appropriateness of the analysis criteria when it entered into a transportation assessment MOU for the proposed project.
- **Project Trip Generation** – The proposed project is expected to generate a net increase of 253 vehicle trips (178 inbound trips and 75 outbound trips) during the weekday AM peak hour. During the weekday PM peak hour, the proposed project is expected to generate a net increase of 264 vehicle trips (79 inbound trips and 185 outbound trips).
- **CEQA Analysis**
 - **Project Consistency with Local Plans and Policies:** The proposed project has been found to be consistent with the relevant City plans, policies and programs and does not include any features that would preclude the City from completing and complying with these guiding documents and policy objectives. Further, the Applicant will comply with existing applicable City ordinances (e.g., the City’s existing TDM Ordinance) and the other requirements pursuant to the City’s Municipal Code.
 - **VMT Analysis:** The project is not expected to result in a significant VMT impact. Further, based on the project-related VMT analysis and the conclusions reported in Section 4.2.3 (i.e., which conclude that the proposed project falls under the City’s efficiency-based impact thresholds and thus are already shown to align with the long-term VMT and GHG reduction goals of SCAG’s RTP/SCS), no cumulative VMT impacts are anticipated.
 - **Geometric Design Review:** As the proposed project driveway location is essentially the same as what exists under current conditions and based on a review of the forecast net new weekday AM and PM peak hour project traffic volumes (i.e., those traffic volumes are summarized in Section 2.6 herein), no safety concerns have been noted related to geometric design.

- *CEQA Transportation Measures:* The proposed project is not expected to result in a significant VMT impact. Therefore, no mitigation is necessary as it relates to VMT or geometric design. The Applicant will comply with existing applicable City ordinances (e.g., the City’s existing TDM Ordinance, referred to in the City of Los Angeles Municipal Code Section 12.26.J) and the other requirements per the City’s Municipal Code.
- ***Non-CEQA Analysis***
 - *Pedestrian, Bicycle, and Transit Access:* It is determined the proposed project does not include any features that would permanently remove, adversely modify, or degrade pedestrian, bicycle, and transit facilities in the project vicinity. As noted herein, it is determined that it is possible that the proposed project may intensify use of pedestrian, bicycle, and transit facilities in the project vicinity; however, such use is not expected to result in a deficient condition caused by the project. The project has the potential to increase pedestrian activity to an existing unmarked crossing (e.g., at the South La Cienega Boulevard/Corbett Street intersection).
 - *Project Access and Circulation Review:* It is concluded the proposed project weekday AM and PM peak hour traffic volumes will potentially extend vehicle queuing at three signalized study intersections (i.e., South La Cienega Boulevard/Jefferson Boulevard, South La Cienega Boulevard/Obama Boulevard, and Jefferson Boulevard/National Boulevard).
 - *Project Construction Effect on Nearby Mobility:* While it is concluded the proposed project would not result in the closure of two or more travel lanes, would not relocate existing bus transit stops or routes, and would not impede emergency access, it is recommended that a construction work site traffic control plan be submitted to LADOT’s Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of construction activity should any lane closure/s be proposed. Consistent with LADOT’s recommendation and requirements, the project applicant would also prepare a detailed Construction Staging and Traffic Management Plan (CSTMP), which includes any applicable street/lane/sidewalk closure information, a detour plan, haul route(s), and a staging plan.

PN 36480
March 2021

ASM Affiliates, Inc. (ASM) prepared this letter report as an evaluation of the property at 3401 S. La Cienega Boulevard in the West Adams – Baldwin Hills – Leimert Community Plan Area (CPA) of Los Angeles, Los Angeles County, California, for eligibility for the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and the City of Los Angeles Register of Historic-Cultural Monuments (HCM). The evaluation has been requested by the City of Los Angeles prior to approval of proposed development and demolition of all buildings located on the property, including two that are more than 45 years of age (Project). This report was prepared following California Environmental Quality Act (CEQA) regulations and definitions for historical resources.

Executive Summary

ASM evaluated the nine warehouse/office buildings at 3401 S. La Cienega Boulevard in the West Adams – Baldwin Hills – Leimert Community Plan Area (CPA), in the Jefferson/La Cienega subarea. The subarea was established to advance the creation of an employment destination outside of the City Center where a mix of uses that feature emerging and innovative commercial, office, clean-tech, information technology, and other high-tech uses can locate in proximity to existing and future residences within a medium- to high-intensity transit hub, in this case the La Cienega Station of the Metro Expo Line. The buildings are located on Assessor’s parcel number 4205-032-001. Two buildings (Building A and Building L) were constructed in 1946, and thus are more than 45 years old. The other seven buildings appear to have been constructed in 1977 (Figures 1-3). The City of Los Angeles Zone Information Map Access System (ZIMAS) describes the property as light industrial/manufacturing. This property is not listed in the California Register of Historical Resources (CRHR), it is not a California Point of Historical Interest, and it is not a California State Historical Landmark. It has not been identified as a City of Los Angeles Historic Cultural Monument (HCM), and it is not located in a City Historic Preservation Overlay Zone. Furthermore, it is not listed in the National Register of Historic Places (NRHP). The property has not previously been recorded by SurveyLA.

ASM began the project by reviewing the City of Los Angeles SurveyLA records (West Adams – Baldwin Hills – Leimert CPA survey data) and determined that 3401 S. La Cienega Boulevard has not been previously identified as an eligible historic resource. ASM then conducted an on-site survey of the buildings, photographing the exteriors of the building that were accessible and taking detailed field notes. The interiors of the buildings were accessible, and ASM carefully surveyed the interiors of the two buildings older than 45 years and conducted cursory interior surveys of the seven newer buildings. ASM also conducted a brief reconnaissance survey of the neighborhood near the property to confirm that the property is not a likely contributor to any eligible historic district and to identify comparable properties to assist in this evaluation. ASM did not develop any additional historic context for this evaluation for association with significant events but relied on that developed for the SurveyLA project. ASM analyzed the historic significance of the buildings within the appropriate themes established in SurveyLA’s citywide historic context statement. The evaluation was conducted in conformance with NRHP Bulletin *How to Apply the National Register Criteria for Evaluation*, the California Office of Historic Preservation’s (OHP) *Instructions for Recording Historical Resources*, and the OHP’s Technical Assistance Series #7 *How to Nominate a Resource to the California Register of Historical Resources*.

As a result of these efforts, ASM recommends the buildings at 3401 S. La Cienega Boulevard not individually eligible or eligible as contributors to any historic district or potential historic district under NRHP/CRHR criteria A/1, B/2, C/3, or D/4, or City of Los Angeles HCM criteria 1-4, nor as a historical resource as defined by the California Environmental Quality Act (CEQA).

Introduction

This assessment was prepared by ASM to determine the historical and architectural significance of the industrial/manufacturing buildings located at 3401 S. La Cienega Boulevard. This property is not listed in the California Register of Historical Resources (CRHR), it is not a California Point of Historical Interest (CPHI), and it is not a California State Historical Landmark (CSHL). It has not been identified as a City of Los Angeles Historic Cultural Monument (HCM), and it is not located in a City Historic Preservation Overlay Zone (HPOZ). Furthermore, it is not listed in the National Register of Historic Places (NRHP). The property has not previously been recorded by SurveyLA. The results of this analysis will assist the potential owner to determine whether the property needs to be considered as historically significant in compliance with California Environmental Quality Act (CEQA).

The report is divided into the following sections: Introduction, Methodology, Historic Context, Survey Findings, Eligibility Criteria, Statement of Significance, and Conclusion. An archaeological report is included as Attachment A, Figures and maps are included as Attachment B, building permits as Attachment C, and resumes of key personnel as Attachment D.

Methodology

Field Survey Methods

ASM conducted a historic resource field survey on December 21, 2020, to document the property. The intensive-level field survey was conducted by ASM Senior Archaeologist Sherri Andrews and ASM Architectural Historian Marilyn Novell. During the survey, multiple photographs were taken of the buildings to document the resources and their setting. The buildings' plans, architectural features, condition, and integrity were noted. A brief windshield survey was conducted of the surrounding neighborhood to identify similar properties and determine alterations over time. The architectural survey findings and evaluations are included in this report, and the archaeological findings are included as Attachment A.

Archival Research

This property is not listed in the CRHR, it is not a CPHI, and it is not a CSHL. It has not been identified as a City of Los Angeles HCM, and it is not located in a City HPOZ. Furthermore, it is not listed in the NRHP. The property has not previously been recorded by SurveyLA. To prepare this evaluation ASM consulted numerous repositories, including City of Los Angeles Zone Information Map Access System (ZIMAS) for property and zoning information, City of Los Angeles Department of Building and Safety online building records, and the Los Angeles County Assessor property information system. ASM searched the Los Angeles Public Library's collection of city and street directories and historic photos available from the University of Southern California Digital Library, including the archive of the *Los Angeles Examiner* and other collections. Historical newspapers, including the *Los Angeles Times*, were searched through newspapers.com. Historical maps and aerial views were consulted to determine changes in land use and development of the area. Sanborn Fire Insurance Maps did not cover the project area. ASM consulted the results of SurveyLA for the West Adams – Baldwin Hills – Leimert Community Plan Area (CPA) and found the property had not been identified as a potential historic resource, nor was it considered part of any previously designated or recommended eligible historic district.

Historic Context

Industrial Development in Los Angeles¹

The establishment and growth of industry in Los Angeles is tied to the larger narrative of population growth during the nineteenth and twentieth centuries. Prior to the arrival of the transcontinental railroad in 1876, exports from the region were limited to agricultural goods produced by a small population of farmers, cattlemen, vintners, and horticulturalists, who traded their wares for a variety of manufactured goods they could not purchase locally. A rudimentary port at San Pedro facilitated international trade of these goods throughout the Spanish Colonial, Mexican, and early American eras of settlement. In the late nineteenth century, tens of thousands of new residents arrived by rail to the pueblo, in the process creating a viable local market for manufactured goods. Among these new residents were entrepreneurs and industrialists, who were eager to establish and expand the region's burgeoning manufacturing sector beyond agriculture. Their efforts, combined with civic investments in port and freight infrastructure, an expanding pool of skilled workers, and the purchasing power of increasingly prosperous consumers, brought about a dramatic expansion of the industrial landscape of Los Angeles in the twentieth century.

Railroads were the most important trigger for industrial growth in Los Angeles, as they provided means to transport goods throughout the region and to outside markets. The arrival of the Southern Pacific railroad in 1876 provided Los Angeles with access to the transcontinental railroad via San Francisco, and in 1885, the Santa Fe railroad provided a more direct route east. Until the rise of trucking and inter-modal shipping in the 1970s, most manufactured goods were shipped through a network of railways. Los Angeles goods typically traveled from the factory on a spur to the main rail, then connected with similarly destined goods in classification yards, and were then sent out to distant markets on regional and transcontinental networks. Even with the freight infrastructure provided by railroads, industrial growth remained weak as long as the population stayed relatively small. The rate war between the Santa Fe and Southern Pacific railroads brought on the "boom of the eighties," with a significant influx of new residents and exuberant speculation throughout the region. Although a real estate bust in the 1890s followed the boom, by 1900, the population had grown to more than 100,000 from less than 6,000 in 1870. This growth required industrial support in the form of building materials, produce, and consumer goods, and in turn provided a steady pool of workers and industrialists who were familiar with manufacturing practices in the Midwest and East.

In 1892, the Los Angeles Oil Field was discovered by prospectors Edward Doheny and Charles Canfield. Doheny and Canfield's discovery in the Elysian Park area set off the first oil boom in the region. Early exploitation of oil, natural gas, and hydroelectric power in the region ensured a steady local supply of electricity for factory equipment, and cheap power was one of many benefits civic boosters trumpeted in their intensifying efforts to expand industry in the region.

From 1870 through the turn of the twentieth century, industrial growth lagged far behind population growth, which civic boosters determined to fix. The Chamber of Commerce organized in 1888 with a mission to increase the population and economic base of the city. In 1896, the Los

¹ Except where indicated, this section is excerpted and adapted from *SurveyLA Citywide Historic Context Statement: Industrial Development, 1850-1980* (City of Los Angeles 2011, pp. 4-14).

Angeles Merchants and Manufacturers Association, formed in 1896, worked with the Chamber to promote industrial growth in the region. Among their early tactics was creating publicity for “home products,” which included all locally manufactured goods.

The *Los Angeles Times* served as an unabashed booster for these efforts and provided support for industrial growth through both its editorials and reportage. The efforts of the Chamber and the *Los Angeles Times* were successful in bringing new industries to the area, and as their constituency grew, the pressure on the city to improve the Port of Los Angeles increased. In 1890, the Chamber introduced a resolution to the United States Congress to develop a deep-water port in San Pedro. Los Angeles formally acquired the harbor and its facilities in 1906 by annexing a mile-wide strip of land running the 16 miles between the southern city boundary and the independent cities of Wilmington and San Pedro; by 1909, these cities were consolidated into Los Angeles. In 1907, the City Council created the Board of Harbor Commissioners and officially founded the Port of Los Angeles.

Boosters also focused on labor, starting a massive branding campaign of Los Angeles as the bastion of the “open shop,” with the main intention to undercut strong union cities, particularly San Francisco (McWilliams 1973:278-279). *Los Angeles Times* owner Harrison Gray Otis was relentless in producing anti-union editorials and news articles. When his own struggles with the newspaper’s Typographical Union erupted in 1890, he compounded words with deeds and replaced his striking workers with nonunion workers from Kansas City. The workers retaliated with a boycott against the *Times* and its advertisers, and Otis shot back with calls to boycott any company that hired union labor. In this environment, local industries, especially the steel industry, felt free to engage in union-busting activities, and conflict spread between manufacturers and workers throughout the city. In 1910, the Iron Workers initiated a strike against iron manufacturers to gain a \$0.50 per hour minimum wage. The Merchants and Manufacturer’s Association raised millions of dollars to break the strike and influenced court injunctions that severely limited their ability to picket. The fight turned deadly on October 1, 1910, when the *Times* building was dynamited, killing 21 employees and injuring 100 more. The bombing shocked the unionists and vindicated the open shop manufacturers. The labor movement in Los Angeles was set back significantly for several decades.

With cheap power and labor secured for industry, the Chamber created a new Industrial Bureau in 1913, which focused on creating trade partnerships outside the area, developing a pro-industry environment, and luring manufacturers from other parts of the country. That same year, the Owens Valley Aqueduct opened, providing the city with a heretofore unimaginable abundance of water. The opening of the Panama Canal in 1914 cut the trade route between the east and west coasts of the United States in half, making it easier for Los Angeles exports to reach Eastern and European markets. The Port of Los Angeles had a favorable strategic position among the West Coast ports due to its proximity to the canal, and the port became a key port-of-call for trans-Pacific shipments.

Although successful booster campaigns brought in new industries, the contentious issue of where to site the new industries remained. Residents and real estate investors, who sought to preserve the value (and peace) of their new suburbs, protested heavy industries nearby and pushed for exclusive residential districts in the late nineteenth century. The conflict was especially pointed with the oil industry, where a discovery on one lot could trigger well-building throughout a neighborhood. Refiners were plagued by neighbors complaining about unpleasant sights and sounds (*Los Angeles Times* 1894). Deed restrictions were an early way for residents to put a barrier between themselves and heavy industry, but as more manufacturers moved in and residential development spread

beyond established residential areas, residents and manufacturers sought a broader solution to the issue. As early as 1892, the *Los Angeles Times* was running editorials in favor of creating “industrial districts” where factories could be built without provoking complaints (*Los Angeles Times* 1892, 1895, 1909). In 1906, the City established the first industrial district in the city, located on a strip of land that paralleled the Salt Lake, Southern Pacific, and Santa Fe railroads east of Downtown (*Los Angeles Times* 1906). The rise of “industrial suburbs” outside Los Angeles city limits such as Vernon and Commerce also attracted industries with low taxes and dedicated infrastructure.

Boom of the Twenties

A post-World War I economic boom led to the rapid expansion of industry along with commerce and residential development. The Chamber’s first notable success in attracting eastern manufacturers to Los Angeles came with the arrival of Goodyear Tire Company in 1919. A related industrial tract at Slauson and Avalon followed, as well as a nearby housing tract called “Goodyear Gardens.” The year 1923 turned out to be a watershed in the growth of the city. Among reports of staggering residential and commercial growth, the industrial sector saw record-setting growth (*Los Angeles Times* 1924). The factories that developed at this time took advantage of available daylight and ventilation through expansive industrial sash panels and distinctive rooflines. Their visual character now serves as a window into the relatively brief but pivotal time where even the most technologically advanced plants were tied to their environment through design.

A second, larger wave of oil field discoveries in the early 1920s (Huntington Beach 1920, Santa Fe Springs 1920, and Signal Hill/Long Beach 1921) led to an explosion in oil production and made the Los Angeles Basin the largest oil exporting region in the world in the mid-1920s. This led to the construction of thousands of wells, scores of refineries, tank farms, and processing sites, and produced immense wealth that financed the construction of lavish mansions and “height limit” commercial buildings.

In 1922, a large syndicate of Chicago-based industrialists established the Central Manufacturing District, a tract of 300 acres of land just outside Los Angeles City limits. Bounded by the Los Angeles River on the north and east, Downey Avenue on the west, and Fruitland Avenue on the south, the area became the focal point of industrial development (*Los Angeles Times* 1922). Around the same time, the City of Vernon rededicated itself as an all-industrial city and in the process attracted a large chunk of the region’s industrial growth.

Although the garment industry began in the late nineteenth century, with Jewish and Italian immigrant tailors and a few textile makers, it grew into a major industry during the boom of the 1920s. Access to inexpensive wool (and eventually cotton) from western fields and ranches helped Los Angeles textile mills gain a competitive foothold against the big Eastern mills. Chamber-funded trade schools for sewing and continuing immigration from the northeast also helped to spur the growth of the industry, which was concentrated mainly in the southeast section of Downtown. By 1928, the Los Angeles garment industry ranked second only to New York in garment manufacturing.

Several major automakers opened west coast factories in and around the city, including Studebaker, General Motors, Chrysler, Ford, and Nash. In addition to automobiles, Los Angeles became home to scores of auto parts manufacturers. The rubber industry became especially prominent in the post-

World War II era. After Goodyear Tire opened in South Los Angeles in 1919, several other rubber companies moved in, including Goodrich, Firestone, U.S. Rubber, and Fisk.

Seeing the potential for passenger and cargo flights, aviators started up aircraft manufacturing firms in the city, including American Aircraft, Aero Corporation, Lockheed, Bach, and others. By July 1928, there were 43 active airfields and airports in and around Los Angeles, including Mines Field (the earliest incarnation of Los Angeles International Airport [LAX]) and Van Nuys Airport (VNY).

The Great Depression

The stock market crash of 1929, and the Great Depression that followed, led to the closure of many Los Angeles businesses, including manufacturers. However, leading industries that had developed in the 1920s (especially movies and oil) helped keep the local economy stable relative to other parts of the country. Population growth likely also served to keep industry in expansion mode, albeit at a more modest pace. From 1920 to 1930, Census figures showed that Los Angeles had added 656,888 new residents, more than doubling in size. Furthermore, Los Angeles had become the west coast hub for many eastern manufacturers. This fueled mass immigration from devastated parts of the rural Midwest. Ultimately, many of these migrant workers did not stay in California, but those who did increased the local supply of labor. The construction industry was kept afloat by public works projects funded by the Federal Works Progress Administration and the Public Works Administration. In 1939, economist Clifford Zierer (1941) described the physical character of industrial Los Angeles thus:

Industrial districts are likewise [compared to commercial districts] widely and irregularly placed in relation principally to transportation routes, harbor facilities, cheap lands, markets and labor supply ... each satellite city or community tends to develop at least a small industrial district of its own. Such districts may have few genuinely important manufacturing plants, but may consist largely of servicing industries, such as laundries, public utility plants, retail lumber yards and associated mills and similar establishments.

Historian Greg Hise has provided an alternative view of industrial geography in the early twentieth century, identifying three planned areas of industrial development that existed by the mid-twentieth century. These areas included a diverse eastside industrial district, several planned industrial suburbs interspersed with worker housing and dedicated to heavy manufacturing, and outlying satellite centers where growing film, aircraft, and oil industry firms established their new operations. Among the latter was Culver City, a new community on the former Rancho Ballona along Ballona Creek. As seen in the areas surrounding the industry in Culver City and the properties on S. La Cienega Boulevard, housing for workers was a critical element in the establishment of these industrial zones (Hise 2004:197).

World War II and Postwar Prosperity

World War II changed the face of Los Angeles industry, as wartime rationing dampened production of civilian goods. Manufacturers switched to wartime production, retooling shops to produce equipment and supplies for the military. Aircraft and shipbuilding industries expanded rapidly, producing new types of fighters and bombers, missiles, and tanks. In addition to physical expansion to meet wartime needs, new realities changed the physical character of industry. Military contracts with large orders of more sophisticated products resulted in the consolidation of smaller defense

contractors, and the development of large complexes to meet demand. Blackout orders led manufacturers to paint over existing industrial sash windows and rely more on electricity to light workspaces. New buildings tended to be windowless to avoid detection in anticipated air raids. A shortage of building materials a few years into the war meant that buildings constructed during wartime were often made of wood frame rather than steel. These changes combined with developments in electricity and air conditioning created the controlled conditions factory, which replaced the daylight factory as the dominant industrial design in the latter half of the twentieth century.

Returning soldiers, defense workers, and other new residents created an intense demand for housing after the war, sparking a building boom throughout southern California that lasted through the 1960s. All these new households fueled a resurgent consumer market, with the resources to purchase an unprecedented volume of material goods, including appliances, processed foods, clothing, cars, and furnishings. Industry responded with a commensurate expansion of production facilities, especially in the San Fernando Valley and near LAX.

Rather than declining in the post-World War II era, defense contracts continued to come to Los Angeles as the country shifted into the Cold War. Aircraft manufacturers continued to turn out new models of aircraft and aerospace firms emerged to research and develop ever more sophisticated propulsion, navigation, and missile technology for the Department of Defense. By the 1960s, more than half of all jobs in Los Angeles County were in aerospace.

Between 1942 and 1944, investment in new plants and expansions of existing plants in Los Angeles County totaled more than \$303 million (\$2 billion in 2009 dollars). The pace of construction continued upward through the post-World War II era, spreading out in all directions along train lines.

Zoned for Industry: The Hayden Tract

In the mid-1940s, industrial development on the west side of the County was booming. The same year that the first buildings on the property at 3401 S. La Cienega Boulevard and several other industrial properties nearby were constructed, developer Samuel Hayden, a transplanted glass manufacturer from the east, and architect S. Charles Lee established the Hayden Tract, in Culver City across Ballona Creek from the project area (*Los Angeles Times* 1949). The area specifically tagged for industrial use was actively promoted by the Chamber of Commerce. Hayden filed the Hayden Tract map on March 14, 1946.

Harry Culver's dream for a balanced community included an economic base to support its residents. Main Street provided the initial retail properties, and the studios were the earliest industry. By 1922, the first manufacturing plant, Western Stove, was established on Hays Street (now National Boulevard), north of Ballona Creek, along the Pacific Electric right of way. The early 1930s saw the addition of Helms Bakeries, which delivered door to door (Cooper 2011). To survive, Western Stove produced parts for the war effort.

The Hayden Tract abutted Western Stove, which by 1947 was celebrating its silver anniversary and had grown from two small buildings and 20 employees into a manufacturing concern, with 720 employees on 11 acres. In 1948, W. I. Hollingsworth & Co. announced that it had sold sites worth about \$1,300,000 in the Hayden Tract, suggesting southern California was an ideal location for

industrial growth. Among the early businesses located in the tract were Fitzsimmons Stores, Ltd., Capital Chair Co., Western Distributing Co., Ellis-Klatcher Co., Joscelyn Motors Corp., Cobin-Wides Co., National Chemical & Manufacturing Co. of Illinois, Mattel Creations, General Vendors, Inc., and Kimberly Corp. (*Hollywood Citizen News* 1948).

By 1949, the 40-acre Hayden Tract was a more than 60-acre subdivision of “modern reinforced concrete buildings,” according to the *Hollywood Citizen News*, which proclaimed it as “one of the finest in the world.” It was designed to expand Culver City’s economic base. Business owners gave easements on their properties to the railroad for spur tracks, which enhanced the manufacturers’ freight car access to the Pacific Electric Railway.

Late Twentieth Century Decline in Los Angeles Industry

Los Angeles industry began a gradual decline in the late 1960s, due in part to the rising price of fuel and land, dispersal of manufacturers beyond city limits, and a trade deficit that reflected ever greater reliance on foreign imports in the consumer market. Oil discoveries in the Los Angeles Basin dwindled in the 1960s and 1970s, and production declines in oil and natural gas led utilities in the area to import more of the fuel to feed the energy-hungry metropolitan area. In 1973, a fuel shock resulting from an oil embargo by the Organization of Petroleum Exporting Countries (OPEC) caused intense inflation and helped to send the national economy into recession.

The completion of the interstate highway system in the 1960s and 1970s contributed to the rise of truck transport, which further decentralized industry in the city. Manufacturers no longer needed to be near established rail lines, opening up cheaper land beyond city limits for industrial development. Many manufacturers moved their plants eastward, following Interstate 10 (I-10) to settle in communities in the San Gabriel Valley and western San Bernardino County. The buildings they left behind in Los Angeles often shifted to warehouse use within a growing network of importing and distribution businesses.

Universal Match Company

After World War II, cigarette smoking became an icon of the good life as conceived by the American consumer culture, due in large part to aggressive marketing on the part of tobacco manufacturers (Brandt 2007:97). Free matchbooks emblazoned with advertising gave smokers what was needed to make cigarettes ubiquitous (Brandt 2007:30). A number of matchbook manufacturers thrived, among them the Universal Match Company (Co.), which started production in 1925 and operated several plants throughout the United States. Production at the Los Angeles plant appears to have been modeled on the main plant in St. Louis, Missouri, which had a machine to cut large rolls of heavy paper into sheets during the process of producing matchbooks. It also had printing capabilities, including a letterpress machine (Hopkins-Benton 2013:15). The matchbooks printed in each of the Universal Match Co. facilities began in the design department in St. Louis, where the printing plates were also made. Plates were shipped daily to the plants, where the printing and compositing of the matchbooks took place (Hopkins-Benton 2013:16).

Smokers used the matchbooks throughout the day, each time presented with advertisements. According to one salesman, “Indirectly we were in a business to make matches. We were in a business to sell advertisement. Matches were just a commodity that came along with advertisement” (Hopkins-Benton 2013:16). Indicative of the prosperity of the company, Universal Match Co. ran a

high-end promotional campaign for their products in the 1940s, drawing on the historical association of humans with fire. The ads were placed in mainstream publications including *Life Magazine* and featured dramatic paintings of scenes such as primitive humans' discovery of fire, ancient Egyptians using friction to spark a flame, and an Incan god creating fire by concentration the Sun's rays (*Life*, November 1, 1943; December 20, 1943; April 3, 1944, respectively) (Figure 4). Typical copy celebrated the match:

Yes, people did worship fire in days gone by! Today we rarely give second thought to that miracle in a match tip ... fire ... or how much we depend upon the modern match. It's in our pockets ... on our kitchen shelves ... ready to create fire for us in a split second [Universal Match Co. Advertisement, *Life*, April 3, 1944].

Despite their success, the matchbook companies were not without challenges. In 1947, executives from various companies stood before the House Ways and Means Committee to air their displeasure with federal taxation. F. J. Prince, the representative of Universal Match Co. said he "bristled when he sees a mechanical cigarette lighter." He facetiously claimed that if the tax on matchbooks was not slashed, cigar stores would have to stop giving them away. "Matches are the only thing that Americans still get for free," he said ... "After all, a match is no different from the pilot on a stove. It provides a light. So why tax it? Wouldn't be surprised if the lawmakers taxed pilot lights" (Othman 1947).

Property History

Los Angeles County Assessor data for APN 4205-032-001 were reviewed to determine the ages of the nine buildings in the Area of Potential Effects (APE). Records show data for the buildings, two constructed in 1946 and seven constructed in 1977. Available historic aerials show only Building A and Building L on the parcel in 1948. In a clearer 1952 aerial view, Building A appears to have multiple barrel roofs with skylights: two to the west and two more to the east, with a larger flat roof in between. The roofs remain intact and are visible in all of the aerials available (historicaerials.com 1948, 1952, 1994, 1972, 1980, 1989, 1994, 2003, 2004, 2005, 2009, 2010, 2012, 2014, 2016). Seven additional buildings are visible in the aerial views for the first time appearing sometime between 1972 and 1980, consistent with the assessor's date of construction of 1977. It is our professional conclusion that archival documents provide sufficient evidence that Building A and Building L were constructed by and for Universal Match Co.

The property was part of the rapid expansion of light industry in the area in the late 1940s. The two older buildings on the site were constructed in 1946, the same year the See's Candies plant was established immediately to the south, and the first buildings of the industrial property were constructed immediately to the west. In 1946, the Hayden Industrial Tract was a thriving manufacturing hub across Ballona Creek near the Pacific Electric Railway in Culver City. During this time, developers were also rezoning large swaths of San Fernando Valley farmland for industry and industrial parks were established in West Los Angeles near Playa Del Rey and LAX, demonstrating the rising importance of air freight to industrial activity.

The first indication of Universal Match Co.'s interest in establishing a facility in southern California came when the Chamber of Commerce noted the company's purchase of land in 1940 as a site for a plant at 5721 W. Jefferson Boulevard (*Los Angeles Times* 1946). Building permits were not fully available because of government closures when ASM conducted research for this project (City of Los

Angeles Department of Building and Safety; Attachment C). However, an unspecified Certificate of Occupancy (COO) for the property was issued in 1946, which is the year of construction of buildings A and L, according to Assessor's records. A 1948 COO was issued on August 4, 1948, to the Universal Match Co. for a one-story 24-by-36-foot storage shed for incombustible materials; this confirms the owner of the property at that time but does not specify where the storage shed was located. None of these documents provide information about the architect or builder. The address of the factory at this time was 5721 W. Jefferson (*Palm Springs Desert Sun* Dec 8, 1950). The match company was soon up and running, running classified ads for "GIRLS, YNG, Lite facty. work," experience not necessary, at 5721 W. Jefferson (*Los Angeles Times*, various dates). In 1950, Universal Match Co. advertised help wanted for clean-cut and experienced "book match advertising salesmen." According to the ad, Universal Match Co. produced the "world's best known and finest quality advertising book match line ... the most complete and beautiful line of book matches ever offered" (Figure 5). The company noted that its factory in southern California ensured prompt deliveries. In 1952, classified ads appeared for "young men with printing/compositing experience or schooling" at 5721 W. Jefferson, confirming that the plant printed and produced matchbooks at the Los Angeles plant, and that the company enlisted local salespeople.

The company received a COO on July 30, 1953, for a one-story 7-by-9-foot storage vault for flammables. Notably, the address was changed sometime around 1950, as this and several subsequent COOs showed the owner, Universal Match Co., at 5721 W. Jefferson, not the current parcel address of 3401 S. La Cienega Boulevard. In 1955, the company received a COO for a 200-by-280-foot parking lot. In 1970, a COO issued to the company showed the address at 3401 S. La Cienega; this was for a one-story 10-by-20-foot addition to an existing 120-by-300-foot match factory, clearly referring to Building A.

City records show the last owner change on December 22, 1976 (Zimas.lacity.org). The ownership change spurred multiple construction projects, consistent with the year of construction of the seven storage buildings. Eleven unspecified building permits were issued on November 30, 1976. Seven permits for new construction were issued on December 10, 1976; presumably these are for the seven storage buildings constructed in 1977. The first permit for a sign was issued on March 15, 1977. That year, multiple COOs were issued to La Cienega Co. (called La Cienega Properties by 1985) in Pasadena, indicative of the change of function and ownership of the property. Projects include COOs after alterations to Building A and Building L and for one-story warehouses of various sizes corresponding to the 1977 buildings on the property: 40 by 105 feet, 30 by 70 feet (LA 37202/76), 30 by 444 feet (Building F, LA 37203/76), 30 by 157 feet (LA 37203/76), 30 by 157 (LA 37204/76), 30 by 160 feet (LA 37205/76), 35 by 165 feet (LA 37206/76), and 40 by 168 feet.

Survey Findings

The property at 3401 S. La Cienega is located at the southwest corner of the major traffic corridors of W. Jefferson Boulevard and S. La Cienega Boulevard. The La Cienega/Jefferson Metro Expo station runs on an elevated track immediately to the north. Light industrial properties originally constructed in the 1940s, approximately the same time as the oldest buildings on the property, are located immediately to the south and west, and along the south side of W. Jefferson Boulevard across La Cienega. A larger industrial area includes the Hayden Tract in Culver City across Ballona Creek to the west, along with concentrations of industrial areas between the creek and the Inglewood Oil Fields to the southeast. Separate extensive residential developments are adjacent to the industrial areas, consisting of two-story apartment buildings and single-story houses with detached garages constructed in the 1940s and 1950s. The approximately 3.5-acre parcel contains nine buildings, comprising 1,144 storage units. All of them are painted in the Public Storage corporate colors of cream walls with bright orange doors and accents. The parcel is completely paved. Two of the buildings, including the largest, were constructed in 1946; the other seven are typical single-story self-storage buildings constructed in 1977 (Figures 6 and 7).

Architectural Descriptions of 1946 Buildings

Building A

Building A is the largest on the site. It is a two-story utilitarian brick building with a rectangular plan and a flat parapet obscuring a system of rounded bowstring-truss roofs with skylights (Figures 8-12). Fenestration is irregular. Windows are multi-light steel with operable hopper-type sections; sizes range from eight-by-five lights to four-by-three lights. Windows are slightly recessed and have no surrounds. At the south (primary) façade, several windows have been painted over, and portions are replaced with fixed panes. There are five flat metal single doors at the south façade, approached by concrete ramps or steps that run parallel to the side of the building. One of the doors is inset into a slightly recessed stucco section approximately the size of a vehicle entry.

At the east façade is a row of windows, consisting of four-by-five-light windows with a four-light operable central section. At the center is a wider window, which is flanked by two smaller windows on each side. Toward the south end of the façade is a single door. The north façade has a row of windows, all similar in size, placed toward the top of the wall. There is a single door toward the east end.

The interior consists of two levels, with concrete floors, that open off two-floor atriums along the south façade. Two staircases and an elevator provide access to the second floor. Both levels have been retrofitted with rows of storage units. At the first floor the walls and ceiling are smooth wallboard. A row of fluorescent lights runs down the center of the ceiling. The space is divided into a series of identical long, narrow halls with regularly spaced recessed roll-up corrugated metal access doors. At the second floor, the materials of the wall and ceiling are similar to those on the first floor. However, rather than metal roll-up doors, each small unit has a flush door that appears to have been cut out of the wallboard. Each door is secured by a hasp designed to accommodate a padlock. At the ends of some of the halls the exterior windows are visible. At the second floor, the

floor plane is cut back to accommodate the large window, resulting in an open shaft to the first floor. The elevator is accessed off a small foyer (Figures 13-18).

Building L

Building L is a single-story flat-roofed brick building constructed at the same time as Building A. A row of bricks laid vertically outlines the flat parapet. At each façade, the brickwork shows some detail in rows of bricks laid endwise to form a kind of stringcourse above and below the windows. At the southeast corner, a set of concrete steps with a steel railing provides access to a glazed door with sidelights. A brick planter is located to the west of the door. Above the door is an awning composed of synthetic material designed to look like shingles. There are two windows at the south façade, one of which has the same type of awning as the door. The windows have security bars. The west façade has two four-by-five-light windows similar in size toward the north end of the façade. A flat door is sheltered by a small, flat cantilevered canopy. Three more windows toward the south end of the façade are non-original replacements inserted into the original openings; these three windows have security bars. The north façade has three identical three-by-five-light steel windows, each with a one-by-two-light operable awning-type central section (Figures 19 and 20).

The northeast corner contains a recessed porch accessed by a short flight of concrete steps. The detailing in this area indicates that it was likely the primary entrance to the building when the business was accessed from its original address on W. Jefferson. The porch ceiling is supported by a round steel pole at the corner. To the south of the porch is a brick planter similar to the one at the south end of the same façade. Glass blocks fill the space between the two stringcourses along part of the north façade and the porch at the east façade, meeting at the corner. A paneled wood door is centrally located on the east façade of the porch. To the south of the porch is a two-by-two-light steel window (Figures 21 and 22).

The door off the porch at the northeast corner of the building opens into an interior vestibule, with the glass blocks at the corner of both the north and east façades providing natural light. Only the north end of the building was accessible at the time of survey. The space is filled with partial height retrofit cabinets constructed of wallboard holding two levels of small storage units. Each unit has a flat plywood or wallboard door. The ceiling is covered in wall board and has non-original fluorescent-tube-type lighting fixtures (Figures 23-26).

Architectural Descriptions of 1977 Buildings

The single-story 1977 storage buildings are arranged within the parcel to maximize the utilitarian function of the property. Buildings G, H, J, and K are positioned parallel to each other toward the west side of the property, with a relatively narrow access lane between them. Buildings D and E face one another toward the east side of the property. With the exception of Building F, all of these buildings have two similar façades, with the storage units arranged back-to-back and access doors aligned along the façades. They all have flat or nearly flat roofs with a shallow metal fascia and sit on poured-concrete foundations. Walls are constructed of concrete masonry units. Except for a few utility doors, the evenly spaced doors are recessed corrugated metal roll-up style, wide enough to accommodate a single vehicle. The wall space between the roll-up doors is minimal.

Building D

Building D is located in the northeast corner of the parcel. It measures approximately 40 by 105 feet. On the east façade facing S. La Cienega are four roll-up doors, which are narrower than the access doors on the main façades. The south façade faces Building E, and the north façade faces the fenced-in north boundary of the property and a parallel bicycle path (Figure 27).

Building E

Building E is located off S. La Cienega south of Building D and east of Building L. It measures approximately 30 by 70 feet. A roll-up door is centrally located on the east façade (Figure 28).

Building F

Building F is the only 1977 building that has a single façade with access to storage units. The south façade is constructed flush with the two-story building to the south, and the north façade has a row of roll-up doors. The long, narrow building measures approximately 30 by 444 feet. The building steps down occasionally to accommodate changes in the topography. Toward the east end, the building becomes narrower and is stepped back to allow space for parking in front of the offices inside. Three bays contained recessed glazed doors. A sign across the front reads “Rental Office” (Figures 29 and 30).

Buildings G, H, J, and K

Buildings G, H, J, and K are oriented in a north-south direction, with access doors along the west and east façades. Their measurements vary slightly from approximately 30, 35, or 40 feet wide and 157, 160, 165, or 168 feet in length. A deep fascia covered in stucco runs below the narrow fascias on the façades with access doors. The short (north and south) façades have either one or two recessed roll-up doors (Figures 31-41).

Eligibility Criteria

Districts, sites, buildings, structures, and objects are assigned historical significance based on their exceptional value or quality illustrating or interpreting the heritage of Los Angeles, California, or the United States in history, architecture, archaeology, engineering, and culture. A number of criteria are used in demonstrating resource importance. Specifically, criteria outlined in the NRHP, CRHR, and HCM are similar and provide the guidance for making such a determination. The following sections detail the criteria that a resource must meet to be determined eligible and a full evaluation of eligibility. The California Office of Historic Preservation (OHP) and the City's Office of Historic Resources (OHR) guidelines recommend that resources at least 45 years old be evaluated for historical significance to ensure consideration of resources that may turn 50 prior to the beginning of a project (five-year buffer) (see below for more information on "the 50-year rule" and NRHP Criteria Consideration G).

National Register of Historic Places

Authorized by the National Historic Preservation Act of 1966, the National Park Service's (NPS) NRHP is part of a national program to coordinate and support public and private efforts to identify, evaluate, and protect America's historic and archeological resources. The NRHP is the official list of the nation's historic districts, sites, buildings, structures, and objects that have a quality of significance in American history, architecture, archaeology, engineering, and culture. To be eligible for listing in the NRHP, the district, site, building, structure, or object must possess significance and integrity. To be significant, the district, site, building, structure, or object must:

- A. be associated with events that have made a significant contribution to the broad patterns of our history; or
- B. be associated with the lives of persons significant in our past; or
- C. embody distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. have yielded, or may be likely to yield, information important in prehistory or history.

Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years are not considered eligible for the NRHP. However, such properties will qualify if they are integral parts of districts that do meet the criteria or if they fall within the following categories (known as Criteria Considerations):

- a. a religious property deriving primary significance from architectural or artistic distinction or historical importance; or

-
- b. a building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or
 - c. a birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his productive life; or
 - d. a cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or
 - e. a reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
 - f. a property primarily commemorative in intent, if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or
 - g. a property achieving significance within the past 50 years if it is of exceptional importance.

The “50-year rule” has long been understood as a test of longevity, to avoid consideration of properties that represent recent trends, events, or individuals (Sprinkle 2007:81-82). However, Criteria Consideration G—for properties of exceptional importance that have achieved significance within the last 50 years—applies to the importance of an event or to an entire category of resources so fragile that survivors of any age are unusual; properties do not need to be of national significance to qualify (NPS 1993:42). Criteria Consideration G fills the need to understand and evaluate properties that are of exceptional significance that are less than 50 years old.

Integrity

To be eligible for listing in the NRHP, a property must possess significance and retain sufficient integrity to convey that significance. The NRHP publication *How to Apply the National Register Criteria for Evaluation*, National Register Bulletin 15, establishes how to evaluate the integrity of a property: “Integrity is the ability of a property to convey its significance” (National Park Service, National Register of Historic Places 1998). The evaluation of integrity must be grounded in an understanding of a property’s physical features and how they relate to the concept of integrity. Determining which of these aspects are most important to a property requires knowing why, where, and when a property is significant. To retain historic integrity, a property must possess several, and usually most, aspects of integrity:

1. Location is the place where the historic property was constructed or the place where the historic event occurred.
2. Design is the combination of elements that create the form, plan, space, structure, and style of a property.
3. Setting is the physical environment of a historic property, and refers to the character of the site and the relationship to surrounding features and open space. Setting often refers to the basic physical conditions under which a property was built and the functions it was intended to serve. These features can be either natural or manmade, including vegetation, paths, fences, and relationships between other features or open space.

-
4. Materials are the physical elements that were combined or deposited during a particular period or time, and in a particular pattern or configuration to form a historic property.
 5. Workmanship is the physical evidence of crafts of a particular culture or people during any given period of history or prehistory, and can be applied to the property as a whole, or to individual components.
 6. Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, when taken together, convey the property's historic character.
 7. Association is the direct link between the important historic event or person and a historic property

California Register of Historical Resources

The CRHR program encourages public recognition and protection of resources of architectural, historical, archaeological, and cultural significance; identifies historical resources for state and local planning purposes; determines eligibility for state historic preservation grant funding; and affords certain protections under CEQA. The criteria established for eligibility for the CRHR are directly comparable to the national criteria established for the NRHP.

In order to be eligible for listing in the CRHR, a building, object, or structure must satisfy at least one of the following four criteria:

- 1) It is associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.
- 2) It is associated with the lives of persons important to local, California, or national history.
- 3) It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values.
- 4) It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

Historical resources eligible for listing in the CRHR must also retain integrity, which is enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. For the purposes of eligibility for the CRHR, integrity is defined as “the authenticity of an historical resource’s physical identity evidenced by the survival of characteristics that existed during the resource’s period of significance” (California Office of Historic Preservation 2001). This general definition is generally strengthened by the more specific definition offered by the NRHP—the criteria and guidelines upon which the CRHR criteria and guidelines are based.

City of Los Angeles Historic-Cultural Monuments

According to the City of Los Angeles Cultural Heritage Ordinance Chapter 9, Division 22 (Cultural Heritage Ordinance) of the Los Angeles Administrative Code, HCM designation is reserved for those resources that have a special aesthetic, architectural, or engineering interest or value of a historic nature. Any site (including significant trees or other plant life located on a site), building or

structure of particular historic or cultural significance to the City of Los Angeles, can be designated as long as it is a historic structure or site:

1. in which the broad cultural, economic or social history of the nation, State or community is reflected or exemplified; or
2. that is identified with historic personages or with important events in the main currents of national, State or local history; or
3. that embodies the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period, style or method of construction; or
4. that is a notable work of a master builder, designer, or architect whose individual genius influenced his or her age.

A proposed resource may be eligible for local designation as a HCM if it meets at least one of the criteria above.

Los Angeles Historic Preservation Overlay Zone

According to Section 12.20.3 of the Los Angeles Municipal Code an HPOZ is an area of the City of Los Angeles which is designated as containing structures, landscaping, natural features or sites having historic, architectural, cultural, or aesthetic significance. To receive such designation, areas must be adopted as an HPOZ by the City Planning Commission and the City Council through a zone change procedure that includes notification of all affected and nearby property owners and public hearings (ordinance enacted in 1979). HPOZ areas range in size from neighborhoods of approximately 50 parcels to more than 3,000 properties. While most districts are primarily residential, many have a mix of single-family and multi-family housing, and some include commercial and industrial properties. HPOZs are established and administered by the Los Angeles City Planning Department (in concert with the City Council). Individual buildings in an HPOZ need not be of landmark quality on their own: it is the collection of a cohesive, unique, and intact collection of historic resources that qualifies a neighborhood for HPOZ status. The HCM designation is intended only for individual sites, structures or buildings that meet the HCM criteria. As there are no defined criteria for an HPOZ, the criteria for City of Los Angeles HCMs apply (see preceding section).

California Environmental Quality Act

CEQA Section 15064.5 *Determining the Significance of Impacts to Archeological and Historical Resources* requires that all private and public activities not specifically exempted be evaluated against the potential for causing significant environmental impacts, including effects to historical resources. Historical resources are recognized as part of the environment under CEQA. It defines historical resources as “any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California.”

Lead agencies have a responsibility to evaluate historical resources against the CRHR criteria prior to making a finding as to a proposed Project’s impacts to historical resources. Mitigation of adverse impacts is required if the proposed Project will cause substantial adverse change to a historical resource. Substantial adverse change includes demolition, destruction, relocation, or alteration such

that the significance of an historical resource would be impaired. While demolition and destruction are fairly obvious significant impacts, it is more difficult to assess when change, alteration, or relocation crosses the threshold of substantial adverse change. The CEQA Guidelines provide that a Project that demolishes or alters those physical characteristics of an historical resource that convey its historical significance (i.e., its character-defining features) can be considered to materially impair the resource's significance. The CRHR is used in the consideration of historical resources relative to significance for purposes of CEQA. The CRHR includes resources listed in, or formally determined eligible for listing in, the NRHP, as well as some California State Landmarks and Points of Historical Interest. Properties of local significance that have been designated under a local preservation ordinance (local landmarks or landmark districts), or that have been identified in a local historical resources inventory, may be eligible for listing in the CRHR and are presumed to be significant resources for purposes of CEQA unless a preponderance of evidence indicates otherwise. CEQA's definition of a "historical resource" includes the types of properties that are identified as historically significant although they are not formally listed or designated in the NRHP, CRHR, or local register.

Generally, a resource shall be considered by the lead agency to be a "historical resource" if it:

1. Is listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (PRC Section 5024.1, Title 14 CCR, Section 4850 et seq.).
2. Is included in a local register of historical resources, or is identified as significant in an historical resource survey meeting the requirements Section 5024.1(g) of the PRC.
3. Is a building or structure determined to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California.

SurveyLA Contexts and Themes

SurveyLA is a multi-year, citywide project during which more than 800,000 parcels in the City of Los Angeles have been surveyed. As part of this project, the Office of Historic Resources developed a citywide historic context statement that includes a set of contexts and themes for the consistent evaluation of properties. A specific context was developed that provides detailed background and guidelines for the evaluation of industrial properties (City of Los Angeles 2011:118-125).

Context: Industrial Development, 1850–1980

Sub-Context: Manufacturing for the Masses, 1887–1980

Theme: Factories, 1887–1980

Summary Statement of Significance: Resources evaluated under this theme may be significant in the area of Industry. Some may also be significant in the area of Architecture. This property type is intended to relate to factories that were not part of one of the major industries addressed in the context but were nonetheless important to the economy of Los Angeles.

Property Type #1: Industrial – Manufacturing – Factory

Property Type Description: In this context, the term “factory” refers to an industrial building or small group of industrial buildings **organized** around a manufacturing process. This property type can include a single workshop, a large plant, or a complex of related buildings.

Property Type Significance: In general, intact factory buildings from the first half of the twentieth century represent a brief but dramatic transition of Los Angeles from an agricultural town into a top-ranking industrial powerhouse. Factories that are associated with well-known and/or demonstrably influential manufacturing companies from the era significantly represent the importance of manufacturing in the industrial, economic, and social history of Los Angeles.

Geographic Location: Citywide. Generally have industrial zoning and located along historic rail alignments.

Area(s) of Significance: Industry; Architecture

Criteria: NRHP: A/C; CRHR: 1/3; Local: 1/3²

Period of Significance: 1887–1980

Period of Significance Justification: Date range is broad to include a wide range of significant manufacturers throughout the city’s industrial history.

Eligibility Standards

- Constructed between 1887 and 1980 as a manufacturing plant
- May be a representative example of industrial design as defined in the Industrial Design and Engineering Theme
- Was a key factory for a company whose branding and/or products had a significant impact on twentieth-century social history (e.g., new technology, household name)
- Was closely associated with the early manufacture of new technologies in the late nineteenth and early twentieth centuries (e.g., neon signs, plastic)
- May be significant for ethnic/cultural associations

Character-Defining/Associative Features

- Retains most of the essential physical features from the period of significance
- One or more related utilitarian buildings
- May possess branding or company logos on the building exterior
- May retain distinctive equipment or building elements that reflect a particular kind of manufacturing process
- May have programmatic elements on the façade that denote what was manufactured at the plant
- Often designed in prevalent architectural styles of the period of significance. May also be a significant example of an architectural style from the period of significance and/or the work of noted architects

² See preceding Eligibility Criteria section beginning on page 14.

Integrity Considerations

- Should retain integrity of Location, Design, Materials, Feeling, and Association
- Setting may have changed
- Original use may have changed

Known “Manufacturing for the Masses” Resources in the City of Los Angeles: Two known resources under this theme are located in the vicinity of 3401 S. La Cienega Boulevard and constructed in the same year.

Resource Name	Location	Comments
Sterling Casket Company; Peerless Garment	3626 W. Jefferson Boulevard; 3410 S. Victoria Ave.	Constructed 1946. Used by Sterling Casket Co., until 1960. May not meet integrity thresholds for the NRHP.
See’s Candies	3425 S. La Cienega Boulevard	Candy factory and local industrial headquarters of See’s Candies. In continuous operation here since 1946.

Property Type #2: Industrial Manufacturing – District

Property Type Description: A distinct concentration of industrial buildings that, as a whole, represents an important pattern of industrial development in Los Angeles may be eligible as a historic district under this theme. Industrialists in the twentieth century planned industrial tracts within City-prescribed zoning and invested in infrastructure like spur tracks, roads, water, and power to attract manufacturers to lots. Once established, the tract or district produced a variety of goods for both export and the local/regional market.

Property Type Significance: Historic manufacturing districts may be significant in the area of Industry if they exemplify the industrial landscape of Los Angeles during its rise as a manufacturing powerhouse in the early and mid-twentieth century. Many contributors exemplify the key elements of industrial design from the period of significance, including daylighting (or controlled conditions) and are good to excellent examples of architectural styles of the day.

Geographic Location: Citywide. Generally have industrial zoning and located along historic rail alignments.

Area(s) of Significance: Industry; Architecture

Criteria: NRHP: A/C; CRHR: 1/3; Local: 1/3³

Period of Significance: 1887–1980

Period of Significance Justification: Date range is broad to include a wide range of significant manufacturers throughout the city's industrial history.

Eligibility Standards

- Is a concentration of industrial buildings that represent a significant time period or theme in Los Angeles' industrial history
- The majority of properties within the district are intact contributors that were constructed within the period of significance established by the development of an industrial tract
- Contains contributors that are representative examples of industrial design
- Contains contributors that are good examples of architectural styles as applied to an industrial building

Character-Defining/Associative Features

- Retains industrial infrastructure and streetscape, including railroad spurs, loading docks, drainage ditches, distinctive street layout
- District Boundaries relate to a planned industrial tract (or a sizeable intact portion thereof)
- Retains most of the essential physical features from the period of significance

Integrity Considerations

- Original use of contributors may have changed

³ See preceding Eligibility Criteria section beginning on page 14.

Statement of Significance

Given the various historical significance criteria discussed above and the property's history, in evaluating the light industrial property at 3401 S. La Cienega Boulevard, ASM considered a number of factors relevant to making a recommendation of eligibility, including:

- the history of industrial development in Los Angeles;
- the history of the buildings' construction, use, and associations;
- the history of the surrounding community and the buildings' relationship to that community;
- the buildings' association with important people or events;
- whether the buildings are the work of a master architect, craftsman, artist, or landscaper;
- whether the buildings are representative of a particular style or method of construction; and
- whether the buildings have undergone structural alterations over the years, the extent to which such alterations have compromised their historical integrity, and the current condition of the property.

Individual Assessment

This property is not listed in the CRHR, it is not a CPHI, and it is not a CSHL. It has not been identified as a City of Los Angeles HCM, and it is not located in an HPOZ. Furthermore, it is not listed in the NRHP. The property has not previously been recorded by SurveyLA. ASM carefully considered whether the industrial buildings at 3401 S. La Cienega Boulevard are individually eligible under NRHP/CRHR/HCM Criteria A/1/1, B/2/2, C/3/3, or D/4/4, as defined in the Eligibility Criteria section on pages 14-16 of this document, and/or old enough to warrant evaluation. To do so, ASM evaluated the buildings within the appropriate historic contexts established by SurveyLA.

Building A and Building L

Unlike Buildings D, E, F, G, H, J, and K, which do not meet the age requirement of 45 years to be considered for eligibility, Buildings A and L were constructed in 1946 as the initial development of the parcel. The 45-year age requirement is the recommendation of the California OHP and required by the City's OHR to ensure consideration of buildings that may turn 50 prior to the beginning of a project (five-year buffer). Thus, the two older buildings are evaluated here as potential historically significant properties.

Criteria A/1/1

To evaluate Building A and Building L under Criteria A/1/1, ASM carefully considered whether they are associated with events that have made a significant contribution to the broad patterns of our history. ASM evaluated the building under the SurveyLA Context: Industrial Development, 1850–1980, Sub-Context: Manufacturing for the Masses, 1887–1980, Theme: Factories, 1887–1980, Property Type #1: Industrial – Manufacturing – Factory, as described in the preceding section.

The buildings meet some of the registration requirements of the themes. The buildings were constructed during the period of significance of the theme (1887-1980), and their original use was in the area of industry and manufacturing. In this way they are associated with an era when Los Angeles underwent a dramatic transition from an agricultural town into a major industrial hub. They are, and were, located in an area zoned for industry, established at a time when such designations were occurring throughout Los Angeles. Typical of factories from that era, they were located adjacent to a rail line.

However, the buildings do not meet enough of the registration requirements of the themes. The property at 3401 S. La Cienega was a key factory for Universal Match Co. company whose products are associated with twentieth-century social history. However, Universal Match was not a company that had a *significant impact* on twentieth-century social history. Universal Match simply provided a product with widespread use. Universal Match was a manufacturing enterprise, but it was not a household name and was not a demonstrably influential manufacturing company. As such, it does not meet the registration requirement that the manufacturing company must have had a significant impact. The company was not closely associated with the early manufacture of *new technologies* in the late nineteenth and early twentieth centuries (matches were not a new technology) and research did not reveal that the company has any significant *ethnic/cultural associations*.

SurveyLA, as well as NRHP⁴ and CRHR guidelines, recommend comparing similar resources in making a recommendation of eligibility. SurveyLA identified known eligible resources that are similar to Buildings A and L and that meet the registration requirements and possess the character defining features and local, state, and/or national criteria. Buildings A and L appear to retain only some of the essential physical features from the period of significance, and they can be described as two related utilitarian buildings. However, the buildings do not possess branding or company logos on the exterior, they do not retain distinctive equipment or building elements that reflect a particular kind of manufacturing process, and they do not have programmatic elements on the façade that denote what was manufactured at the plant. In comparison to other eligible resources, Buildings A and L are not good representations of the themes under Criterion A/1. There are many better examples of the theme throughout the City of Los Angeles, including the Sterling Casket Company at 3626 W. Jefferson Boulevard and See's Candies, which is a significant national company in continuous operation since its founding in Los Angeles. (For more examples, see City of Los Angeles 2011, *SurveyLA Los Angeles Citywide Historic Context Statement: Industrial Development, 1850-1980*; and City of Los Angeles 2015, *SurveyLA Supplemental Historic Resources Survey Report: Industrial Properties in the West Adams – Baldwin Hills – Community Plan Area*.)

As such, Building A and Building L are recommended not individually eligible under NRHP/CRHR/HCM Criteria A/1/1 for Manufacturing for the Masses.

⁴ According to the NPS, Bulletin No. 15, "Properties listed in the National Register must possess significance when evaluated in the perspective of their historic context. Once the historic context is established and the property type is determined, it is not necessary to evaluate the property in question against other properties if: 1) It is the sole example of a property type that is important in illustrating the historic context or 2) It clearly possesses the defined characteristics required to strongly represent the context. If these two conditions do not apply, then the property will have to be evaluated against other examples of the property type to determine its eligibility" (NPS 1998: Part V).

Criteria B/2/2

To evaluate the buildings under Criteria B/2/2, ASM carefully considered whether they are associated with persons significant in our past. No important persons were found associated with the property. Furthermore, SurveyLA does not include Criteria B/2/2 among the applicable criteria under these Industrial themes. As such, Building A and Building L are recommended not individually eligible under Criteria B/2/2.

Criteria C/3/3

To evaluate the buildings under Criteria C/3/3, ASM carefully considered whether they embody distinctive characteristics of a type, period, or method of construction, whether they represent the work of a master, and whether they possess high artistic values. Applying the SurveyLA eligibility standards for this context, the property is recommended not eligible under NRHP/CRHR/HCM Criteria C/3/3 because it is not exemplary of the character-defining features of the industrial style, as defined for factories in the SurveyLA industrial context.

Although constructed during the period of significance, it is unknown whether Buildings A and L retain most of the essential physical features from their year of construction as there is not sufficient documentary evidence to conclude that, although both buildings do appear to have experienced alterations over time from visual observations made during our survey. They do not possess any signs of branding or company logos on the building exterior, they do not possess distinctive equipment or building elements that reflect a particular kind of manufacturing process, they do not have programmatic elements on the façade that denote what was manufactured at the plant, and they were not designed in prevalent architectural styles of the period.

Although constructed during the period of significance as a manufacturing plant, they are common utilitarian buildings that do not embody the distinctive characteristics of the style, period, region, or method of construction as well as other local examples, nor are they associated with a significant architect or builder. In comparison to other buildings associated with these themes, there are numerous better representatives throughout Los Angeles, all of which display architectural styles or innovations in engineering more distinctive than the utilitarian style of the buildings at 3401 S. La Cienega Boulevard. A few of these are the Columbia Mills facility at 2630 Lacy Street, which is a daylight factory; the Mid-Century-Moderne Merle Norman Cosmetics factory at 9100 S. Bellanca Avenue; and a rare example of a Quonset hut at 3410 S. Farmedale Avenue (for more examples, see City of Los Angeles 2011, *SurveyLA Los Angeles Citywide Historic Context Statement: Industrial Development, 1850-1980*; and City of Los Angeles 2015, *SurveyLA Supplemental Historic Resources Survey Report: Industrial Properties in the West Adams – Baldwin Hills – Community Plan Area*). As such, Building A and Building L are recommended not individually eligible under NRHP/CRHR/HCM Criteria C/3/3.

Criteria D/4/4

The buildings are a common property type that do not have the potential to provide information about history or prehistory that is not available through historic research. As such, Building A and Building L are recommended not individually eligible under NRHP/CRHR/HCM Criteria D/4/4.

Integrity

Building A and Building L have not been found to meet any of the criteria for eligibility. Therefore, an assessment of historic integrity is not necessary, as there is no historical association, period, or area of significance.

Buildings D, E, F, G, H, J, and K

Following California OHP guidelines for historic resource surveys, Buildings D, E, F, G, H, J, and K do not meet the age requirement of 45 years to be considered for eligibility.

Historic District Eligibility

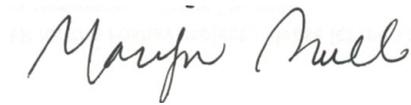

ASM carefully considered whether the buildings at 3401 S. La Cienega Boulevard are potentially eligible as contributors to a historic district. The property is not located within or near any currently designated historic district. There are two known historic resources of a similar age within .25 mile of 3401 S. La Cienega Boulevard. Those two resources are the adjacent See's Candies facility, constructed in 1946 at 3425 S. La Cienega Boulevard, and an industrial warehouse at 5500 W. Jefferson Boulevard, constructed in 1949. See's Candies is a self-contained food-processing plant, and the property on W. Jefferson is noted for its Late Moderne design by a known architect; neither of these properties have areas of significance in common with the property at 3401 S. La Cienega Boulevard to the extent that the three properties could be considered as a discontinuous historic district. In addition, the elevated Expo Metro line and station immediately north on W. Jefferson Boulevard and the recent demolition and replacement of many properties in the vicinity with high-rise multiple-use properties have changed the area in response to the City's drive to create a transit hub. As a result, there is a lack of coherence in what might previously have been a good representation of the rapid development of industrial uses at S. La Cienega Boulevard and W. Jefferson Boulevard. For a district to be eligible it must be coherent, meaning it "possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development" (NPS 1998:5). In consideration of whether the buildings on the parcel at 3401 S. La Cienega Boulevard could be eligible as a historic district in itself, only two of the nine buildings are more than 45 years old; the remaining seven are not of such exceptional historic significance to warrant consideration. Regarding eligibility requirements for a historic district under the theme of Manufacturing for the Masses, the property was constructed during the period of significance as a manufacturing plant, but it does not meet any of the other eligibility standards for the theme. Regarding character-defining features, there are two associated utilitarian buildings, but the property does not display the other character-defining features listed for a historic district under this theme. Of the essential aspects of integrity, it retains only integrity of Location. Therefore, the property at 3401 S. La Cienega Boulevard is not recommended eligible as a contributor to any historic district or potential historic district under the recommended evaluation NRHP/CRHR/HCM Criteria A/1/1 and C/3/3, or under any other criteria.

Recommendations

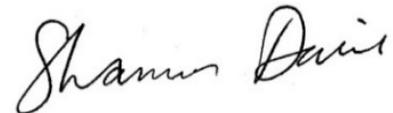

The industrial buildings at 3401 S. La Cienega Boulevard are recommended not eligible as individual resources or as contributors to any historic district under NRHP/CRHR/HCM Criteria A/1/1, B/2/2, C/3/3, or D/4/4. As such, the buildings are not historical resources in accordance with CEQA, and the property does not warrant further consideration and additional analysis as a historical resource.

Please contact me, as needed, if you have questions or concerns.

Sincerely,

Marilyn Novell

NATIVE AMERICAN HERITAGE COMMISSION

January 8, 2021

Sherrí Andrews
ASM Affiliates

Via Email to: sandrews@asmaffiliates.com

Re: Native American Tribal Consultation, Pursuant to the Assembly Bill 52 (AB 52), Amendments to the California Environmental Quality Act (CEQA) (Chapter 532, Statutes of 2014), Public Resources Code Sections 5097.94 (m), 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2 and 21084.3, 3401 S. La Cienega Redevelopment Project, Los Angeles County

Dear Ms. Andrews:

Pursuant to Public Resources Code section 21080.3.1 (c), attached is a consultation list of tribes that are traditionally and culturally affiliated with the geographic area of the above-listed project. Please note that the intent of the AB 52 amendments to CEQA is to avoid and/or mitigate impacts to tribal cultural resources, (Pub. Resources Code §21084.3 (a)) ("Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.")

Public Resources Code sections 21080.3.1 and 21084.3(c) require CEQA lead agencies to consult with California Native American tribes that have requested notice from such agencies of proposed projects in the geographic area that are traditionally and culturally affiliated with the tribes on projects for which a Notice of Preparation or Notice of Negative Declaration or Mitigated Negative Declaration has been filed on or after July 1, 2015. Specifically, Public Resources Code section 21080.3.1 (d) provides:

Within 14 days of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section.

The AB 52 amendments to CEQA law does not preclude initiating consultation with the tribes that are culturally and traditionally affiliated within your jurisdiction prior to receiving requests for notification of projects in the tribe's areas of traditional and cultural affiliation. The Native American Heritage Commission (NAHC) recommends, but does not require, early consultation as a best practice to ensure that lead agencies receive sufficient information about cultural resources in a project area to avoid damaging effects to tribal cultural resources.

The NAHC also recommends, but does not require that agencies should also include with their notification letters, information regarding any cultural resources assessment that has been completed on the area of potential effect (APE), such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:

- A listing of any and all known cultural resources that have already been recorded on or adjacent to the APE, such as known archaeological sites;
- Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
- Whether the records search indicates a low, moderate, or high probability that unrecorded cultural resources are located in the APE; and
- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.

2. The results of any archaeological inventory survey that was conducted, including:

- Any report that may contain site forms, site significance, and suggested mitigation measures.

All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code section 6254.10.

3. The result of any Sacred Lands File (SLF) check conducted through the Native American Heritage Commission was positive. Please contact the Gabrieleno/Tongva San Gabriel Band of Mission Indians on the attached list for more information.

4. Any ethnographic studies conducted for any area including all or part of the APE; and

5. Any geotechnical reports regarding all or part of the APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS are not exhaustive and a negative response to these searches does not preclude the existence of a tribal cultural resource. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the event that they do, having the information beforehand will help to facilitate the consultation process.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our consultation list remains current.

If you have any questions, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green
Cultural Resources Analyst

Re: 3401 W. La Cienega Boulevard Redevelopment Project, Los Angeles, Los Angeles County, California

Dear Chairperson Morales,

ASM Affiliates, Inc. (ASM) is conducting a cultural resources inventory relating to the 3401 W. La Cienega Boulevard Redevelopment Project, Los Angeles, Los Angeles County, California. The approximately 3.53-acre site (Accessor Parcel Number [APN] 4205-032-001) is mostly rectangular in shape. The Project site fronts on W. La Cienega Boulevard and is bounded by a bicycle lane that runs along W. Jefferson Boulevard on the north and the See's Candies facility on the south. It can be found on the USGS Hollywood, California 7.5-minute topographic quadrangle. The Project proposes to construct a new development with 260 residential units and 240,000-268,000 gross square feet of office space (5,000 of which will be retail), on the approximately 3.53-acre Project site. The entire site is currently developed, housing a Public Storage facility.

A search of the Native American Heritage Commission's (NAHC) Sacred Lands File has been undertaken with positive results. The NAHC response also included the list of additional contacts, upon which you appear. As a result, we would appreciate any information you may wish to share regarding Native American cultural resources located in or near the proposed Project location or concerns you may have regarding the proposed Project. This query is for informational purposes only. Any information concerning the location, identity, character, and traditional use of cultural places identified will be considered strictly confidential.

You may contact me at sandrews@asmaffiliates.com, (626) 793-7395, or the Pasadena office address provided below. Thank you in advance for taking the time to review this request.

Respectfully yours,

Sherri Andrews, M.A., RPA
Senior Archaeologist

*Part of a scene illustrating the History of Peru
Painted by Francis Urban for the Universal advertisement*

"Match of Gold"

Inti, sun god of the Incas, looks down upon the High Priest and the royal assembly. In the magnificent golden "Temple of the Sun" at Cuzco, capital of ancient Peru, mansions of earlier Incas sit enthroned upon seats of gold. Solemnly the High Priest raises the chipana. This "match of gold" is a highly polished concave golden cup attached to a bracelet. In the center is a little cotton which serves as tinder. When the sun's rays concentrate in the center of the cup, the tinder is set afire.

Some five hundred years have passed since the height of the fabulous reign of the Incas . . . and their firemaking by reflection of the sun's rays. They worshipped the sun and its sacred fire, made once a year at a solemn ceremony. For a match they used the chipana.

Their temple fires were carefully tended throughout the year by lovely maidens in

white . . . Virgins of the Sun. Should a Virgin allow one of the sacred fires to die, she was severely punished; sometimes put to death.

Yes, people did worship fire in days gone by! Today, we rarely give second thought to that miracle in a match tip* . . . fire . . . or how much we depend upon the modern match. It's in our pockets . . . on our kitchen shelves . . . ready to create fire for us in a split second.

PERU . . . land of the Incas yesterday . . . South American good neighbor today . . . its seven million people use billions of Universal Matches. Universal Matches are globe trotters . . . not only in a civilian way . . . but also as companions to our Armed Services at home and abroad.

Swift, sure light . . . that's what you want when you strike a match. And that's what

you get if the book or box reads Manufactured by **Universal Match Corporation**. It is the same guaranty of quality in matches that sterling is in silver.

*It's the tips of Universal Matches that so conclusively prove their superiority on every count. They light better . . . they burn better . . . they are better! Whether you buy the utility wood match for your home . . . or get the handy hook match for your pocket or purse . . . ask for **UNIVERSAL** the next time you need matches. They are sold everywhere.

Keep the Light of Civilization burning by buying more and more **WAR BONDS**

Resumes of Key Personnel

Shannon Davis, M.A., RPH

Architectural Historian/Historian

Total Years of Experience: 20

Education:

M.A. 1998/Historic Preservation/George Washington University, Washington, D.C.
B.A. 1993/American History/University of Southern California, Los Angeles (Cum laude with honors)

Registrations

2011 Register of Professional Historians (No. 613)

Professional Profile:

Ms. Davis has 20 years of experience in the field of historic preservation. She has an MA in Historic Preservation/American Studies from George Washington University, where she wrote her master's thesis on the architectural history of drive-in theaters, and a B.A. in American History from the University of Southern California. As an Architectural Historian at ASM, Ms. Davis has documented and evaluated numerous cultural resources for California Environmental Quality Act (CEQA) and National Register of Historic Places (NRHP) compliance, prepared Historic Structures Reports (HSRs), Historic American Building Surveys (HABS), and conducted NRHP evaluations and nominations. Recent projects include a comprehensive city-wide survey of Chula Vista; successfully listing a property in the California Register of Historical Resources (CRHR); preparing NRHP nominations for a historic highway and a historic residential district; developing the historic context of Los Angeles military history for Survey LA; and preparing planning documents for several California Naval bases.

Before joining ASM, Ms. Davis worked for the National Trust for Historic Preservation as their west-coast representative for heritage tourism. Much of Ms. Davis's professional experience is with the cultural resources programs of the National Park Service (NPS). For eight years she worked for the NRHP as an Historian. She also worked as a Historic Preservation Specialist and Project Manager for three other NPS programs: American Battlefield Protection Program, NPS History Program and HABS/HAER/HALS/CRGIS. Ms. Davis has experience with the operational requirements of a historic site, through her position as Assistant Site Manager of the 1812 Federal home of Supreme Court Justice Gabriel Duvall. Additionally, Ms. Davis served for several years as Chair of a local preservation advocacy group, the Arlington Heritage Alliance, and was one of the founders of the national non-profit Recent Past Preservation Network.

Selected Project Experience:

Ontario International Airport Historic Context Statement and Survey, San Bernardino County, CA Project Manager/Architectural Historian CLIENT: City of Ontario, California

Conducted an intensive-level survey and completed documentation for numerous buildings and structures within the Ontario International Airport. Prepared a historic context statement for the Ontario International Airport, informed by extensive background research and an intensive-level survey. Developed themes, contexts, registration requirements, and character-defining features for identification of a range of property types, from World War II aircraft hangars to Cold War-era administration buildings. Conducted interviews for oral histories with individuals associated with the airport and preparation of a short video reviewing the history, findings, and stories gathered for the project. Oversaw the production of a 10-minute video documentary.

City of Monrovia Historic Context Statement, Los Angeles County, CA**Architectural Historian****CLIENT: City of Monrovia**

Prepared a historic context statement for the City of Monrovia, based on reconnaissance-level surveys of the city to identify and define potential historic districts within the City. Work included development of themes and identification of associated property types, character-defining features, and registration requirements for historic districts comprising late 19th-century to early 20th-century residential properties, commercial districts, ethnic enclaves, and institutional properties. Organized public outreach and meetings with City personnel.

University of Nevada, Reno, Historic Neighborhoods Historic Context Statement, Washoe County, NV**Architectural Historian****CLIENT: City of Reno**

As part of a Certified Local Government (CLG) grant, the City of Reno retained ASM Affiliates, Inc., to prepare a historic context statement for the neighborhoods surrounding the University of Nevada, Reno (UNR). City of Reno staff and the City of Reno Historical Resources Commission were interested in obtaining knowledge of the historical context of the area surrounding UNR, particularly with respect to growth patterns of the surrounding neighborhoods, how that pattern impacted the current neighborhood structure, and how UNR's historic and continued growth has influenced the development of the surrounding neighborhoods. ASM conducted a reconnaissance survey of 1,759 parcels and identified four historic districts that could potentially be eligible to the NRHP. Responsible for all project management tasks, including coordination between City of Reno and Nevada SHPO, and preparing the historic context statement.

Los Angeles County Landmark Evaluation Report: The Doumakes House, 4918 Angeles Vista Boulevard, View Park, California**Project Manager and Senior Architectural Historian****CLIENT: Los Angeles County Department of Regional Planning**

Prepared landmark evaluation report for Doumakes House as the first Los Angeles County Register of Landmarks under the new County Historic Preservation Ordinance. Prepared under our on-call contact as the Planning Department's historic preservation consultants. The Doumakes House is single family residence built in 1928, eligible because of its association with the Doumakes family and as a good example of a typical Spanish Colonial Revival single family residence.

HRER for 880 Stone Canyon, Los Angeles County, CA**Project Manager****CLIENT: City of Los Angeles Office Historic Preservation**

Surveyed, documented, and evaluated 1936 single-family residence built in the Hollywood Regency style by architect Douglas Honnold for screenwriter Stanley Rauh. Evaluated within the City of Los Angeles's Survey LA historic context statements for Residential Development and Suburbanization, 1850-1980 and Architecture and Engineering, 1850-1980, with the theme/subtheme of the Hollywood Regency, 1850-1980. Conducted in compliance with CEQA by request of the City of Los Angeles's Office of Historic Resources.

Historic Resources Evaluation Report for the Beckman Instruments Administration Building, Fullerton, Orange County, CA, 2016**Project Manager and Senior Architectural Historian****CLIENT: BonTerra Psomas**

Prepared evaluation and impact assessments report for development project with the potential to impact the Beckman Instruments Administration Building, a Mid-Century Modern building constructed as the headquarters for, a large scientific instrument research and manufacturing facility. Reviewed the pending National Register nomination, conducted site visit, and assessed direct and indirect impacts. Conducted in compliance with CEQA for the City of Fullerton as the Lead Agency.

Impacts Assessment Report for Subdivision of Sepulveda Unitarian Universalist Society Sanctuary (“The Onion”) Property, North Hills, Los Angeles County, 2016
Project Manager and Senior Architectural Historian

CLIENT: Jag Narayan

Prepared impacts assessment report for parcel subdivision of Sepulveda Unitarian Universalist Society Sanctuary (known as “The Onion”) at 9550 N. Haskell, designated City of Los Angeles Historic Cultural Monument (#975). The report, which focused on viewshed impacts to and from the HCM, was prepared pursuant to CEQA at request of LA Office of Historic Resources.

Mt. San Antonio College Cultural Resources Evaluation Report, Walnut, Los Angeles County, CA, 2016

Project Manager and Senior Architectural Historian

CLIENT: Mt. San Antonio College

Prepared cultural resources evaluation report for Supplemental EIR for the 2015 Facilities Master Plan Update and Physical Education Projects. The report evaluated more than 20 historic resources within the school’s proposed project area, and to assess potential direct and indirect visual impacts to the Mt. SAC Historic District. Work included intensive pedestrian-level survey of potentially significant historic buildings on campus, as well as the Wildlife Sanctuary, and archival research. Report prepared in compliance with CEQA.

Historic Resource Assessment Report for the Rossmore Avenue Apartments, Los Angeles, Los Angeles County, CA, 2016

Project Manager and Senior Architectural Historian

CLIENT: etco Homes, Inc.

Evaluated three 1948 French Revival-style apartment buildings at 535-553 N. Rossmore Avenue in the Hancock Park neighborhood of Los Angeles to determine their historic significance. The three buildings are located within the original boundaries of the Hancock Park Historic Preservation Overlay Zone (HPOZ), a City of Los Angeles-defined zoning district intended to preserve the historic nature of areas within the City. The evaluation included preparation of California DPR forms.

Historic Resource Evaluation Report for 427 Santa Clara Avenue, Los Angeles. Los Angeles County, CA, 2016

Project Manager and Senior Architectural Historian

CLIENT: Huron Drive LLC

Evaluated a 1912 bungalow located in the Venice area of Los Angeles for CEQA compliance of a proposed project. Conducted a site visit and background research. Prepared documentation for determination of historic significance under NRHP, CRHR, City of Los Angeles Historic Cultural Monument and under contexts and themes defined by SurveyLA. Work was done in compliance with CEQA at request of LA Office of Historic Resources.

HRER for James A. Foshay Learning Center, Los Angeles County, CA

Senior Architectural Historian

CLIENT: Impact Sciences and Los Angeles Unified School District

Completed an HRER for possible eligibility for the CRHR under eligibility criteria established by the LAUSD Historic Context Statement based on closely followed parallel criteria established for NRHP and CRHR significance. Conducted archival research for property information, including the architect, chain of title and history of the property as well as a records search at the local information center (IC). An intensive field survey was then undertaken including photographic documentation of the interior and exterior of the building to document the resources and its setting.

Historic Resource Evaluation Report for 420 Drake Circle, Sacramento, Sacramento County, CA

Project Manager

CLIENT: Kimley-Horn & Associates, Inc.

Completed a Historic Resource Evaluation Report (HRER) for a commercial building in Sacramento prior to proposed renovations. The purpose was to evaluate whether or not the proposed project would affect

any identified historic properties within the APE and was completed per Section 106 of the NHPA. Evaluated the historical and architectural significance of the building for eligibility to the NRHP and the CRHR as well as a contributor to a potential early 20th century residential historic district.

Evaluation of Bakersfield High School Water Tower, Bakersfield, Kern County, California

Architectural Historian

CLIENT: Lozano Smith, Attorneys at Law

Project Manager for an intensive-level survey to document the water tower, and a reconnaissance-level survey of the high school to assess the 1933 water tower. Prepared a Historical Resources Evaluation and California Department of Parks and Recreation (DPR) 523 A and B forms to evaluate the structure's eligibility for listing in the CRHR. Recommended that Water Tower as individually eligible for CRHR under Criterion 1 as a visual landmark representing the history and development of Bakersfield High School

Lanterman Developmental Center, Pomona, Los Angeles County, CA, 2016

Project Manager and Senior Architectural Historian

CLIENT: Petra Resource Management

Prepared Historic Resources Assessment Report (HRAR) for Lanterman Developmental Center—a state mental developmental center—to clarify NRHP and CRHR eligibility, develop historic context statement, period of significance, and contributing resources. On-site intensive pedestrian survey included photographic documentation of more than 100 buildings (exteriors and public interior spaces). Work included preparation of California DPR forms for historic district and individual eligibility. Prepared under PRC 5024 compliance for transfer of state property, for CA Dept. of General Services, with SHPO concurrence.

Historic Resources Evaluation Report for Academy Road Widening Project, Sanger, Fresno County, CA, 2016

Senior Architectural Historian

CLIENT: Petra Resource Management

Conducted a historic study to address road widening and reconstruction of Academy Avenue in Sanger. Performed intensive field survey and archival research to develop sufficient historic overview and site-specific histories. Made recommendations of eligibility for listing in the NRHP and CRHR for potentially historic buildings in the APE. Evaluated in compliance with requirements of Section 106 of the National Historic Preservation Act (NHPA), CEQA, and Caltrans guidelines as specified in the agency's Standard Environmental Reference (SER), Volume 2, Cultural Resources.

Maintenance Manual for Milpitas Ranch House/Hacienda, Fort Hunter Liggett, Jolon, Monterey County, CA, 2014

Project Manager and Senior Architectural Historian

CLIENT: Gulf South Research Corp.

Updated maintenance manual for 1930 ranch house designed by noted architect Julia Morgan for newspaper tycoon William Randolph Hearst, concurrent with her design of nearby Hearst's Castle. Conducted site inspection with US Army Corps of Engineers Historic Architect. Prepared manual targeted at maintenance staff audience, included background history of the property, assessment of current conditions, and specific guidance on what needs attention, how to preserve the building, where to acquire replacement materials, and recommended future restoration projects. Manual included quick reference guide to maintenance do's and don'ts, annual checklist, and list of character-defining features with links to online Flickr photo gallery of all such features and inappropriate alterations. Plan developed in accordance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties* in support of Section 106 and 110 of the National Historic Preservation Act (NHPA) for Army's Fort Hunter Liggett cultural resources staff, stewards of this NRHP listed-resource.

Inventory and NRHP Evaluation of 17 Potential Historic Resources, Fort Hunter Liggett, Jolon, Monterey County, CA, 2014

Project Manager and Senior Architectural Historian

CLIENT: Gulf South Research Corp.

Surveyed, documented, and evaluated a 17 built environment of early Fort Hunter Liggett. Resources included training facilities and cantonment and infrastructure features built between 1941 and 1951. Researched and developed appropriate historic context. Evaluated within the contexts of Military History (1942-1945) and WWII Army property types. Conducted in compliance with Section 106 and 110/NHPA.

Peer Review of CRHR and NRHP Evaluation of Caltrans District 11 Headquarters, Old Town San Diego, San Diego County, CA, 2014

Senior Architectural Historian

CLIENT: California Department of State Parks

Reviewed prior evaluation for Caltrans district office complex (1947-1967) and concurred with determination of eligibility (as concurred on by SHPO) as a good example of a "Modernist" office building in the local San Diego area, and the best-designed Caltrans district office complex of that period. Preparing peer review letter, assessment of impacts, and proposing mitigation measures for proposed redevelopment of the property.

Bayshore Bikeway Project HPSR, ASR and FNAE, San Diego County, CA

Senior Architectural Historian

CLIENT: San Diego Association of Governments

In accordance with Caltrans Section 106 PA and CEQA, prepared HPSR and FNAE for bikeway project with the potential to impact the Western Salt Company Salt Works (WSCSW) Historic District. ASM recommended a FNAE without Standard Conditions as none of the character defining features of historic district would be adversely affected as a result of the proposed project activities. Reports prepared following updated Caltrans SER, Volume 2, Cultural Resources.

Historic Resources Report for Two Buildings at Hoover High School, San Diego, San Diego County, CA, 2014

Project Manager and Senior Architectural Historian

CLIENT: BRG Consulting for San Diego Unified School District

Surveyed, documented, and evaluated two mid-20th century buildings at Hoover High School: a Spanish Colonial Revival 1938-1942 classroom building and 1942-1970s Art Deco/Modern auditorium, built by master architects Kistner and Curtis. Evaluated within the local contexts of education, economics, social history, and architecture. Conducted in compliance with CEQA.

HRER for Vista/Highgrove Substation, Grand Terrace, San Bernardino County, CA, 2014

Senior Architectural Historian

CLIENT: Southern California Edison

Surveyed, documented, and evaluated a mid-20th century vernacular electrical substation complex constructed in 1945. Researched local historic context. Evaluated within the contexts of mid-twentieth century development of Grand Terrace or San Bernardino County and architecture. Conducted in compliance with CEQA.

Verizon St. Clair Wireless Telecommunications Tower FCC 620 Form, Los Angeles, Los Angeles County, California, 2014

Project Manager and Senior Architectural Historian

CLIENT: Archer, Inc.

Surveyed urban project APE to assess direct and indirect impacts from construction of new wireless telecommunications tower. Completed FCC Form 620 in compliance with Section 106 and the *Nationwide Programmatic Agreement for Review of Effects on Historic Properties for Certain Undertakings Approved by the Federal Communications Commission (FCC), September 2004*. Prepared public notice, consulted with local government, tribes, and interested parties. Submitted 620 form electronically through FCC's website, and facilitated consultation on project with CA SHPO.

Verizon Wireless Telecommunications Tower Smart Forms, Los Angeles County, California, 2014
Project Manager and Senior Architectural Historian
CLIENT: Archer, Inc.

Conducted records searches and initial assessment of age of resources that could require assessment of impacts for three Verizon wireless telecommuniacaitons tower sites. Conducted in compliance with Section 106 and the *Nationwide Programmatic Agreement for Review of Effects on Historic Properties for Certain Undertakings Approved by the Federal Communications Commission (FCC), September 2004.*

HABS Documentation and Interpretive Signage, Marron-Hayes Adobes Historic District, Carlsbad, San Diego County, CA, 2014

Project Manager and Senior Architectural Historian
CLIENT: Corky McMillin Companies

Conducted official HABS Level II documentation for the Marron-Hayes Adobes Historic District, and coordinated submission with the HABS National Park Service headquarters office. Prepared outline history, large format photography, and sketch drawings. Developed content for interpretive signage including narrative text and historic photographs. Conducted in compliance with CEQA and Section 106 of the NHPA.

LARICS Communications Tower FCC 620 Form Compliance, Los Angeles County, California, 2014
Project Manager and Senior Architectural Historian

CLIENT: UltraSystems Environmental

Surveyed 863 NRHP eligible historic resources to assess direct and indirect impacts from construction of new Los Angeles Regional Interoperable Communications System Authority (LARICS) communication towers at more than 150 locations in Los Angeles County over a period of 6 months. Completed portions of FCC Form 620 for each project and resource in compliance with the Section 106 and the *Nationwide Programmatic Agreement for Review of Effects on Historic Properties for Certain Undertakings Approved by the Federal Communications Commission (FCC), September 2004.*

HRER for Grove Street Bible Church, Pomona, Los Angeles County, CA
Project Manager and Senior Architectural Historian, 2014

CLIENT: Warmington Residential

Surveyed, documented, and evaluated a Mid-Century Modern church constructed in 1961. Researched and developed local historic context. Evaluated within the contexts of mid-twentieth century development of Pomona and architecture. Conducted in compliance with CEQA.

Historic Resources Evaluation Report (HRER) for Imperial Beach Library, San Diego County, CA
Project Manager and Senior Architectural Historian

CLIENT: Dudek

Surveyed, documented, and evaluated a Mid-Century Modern library constructed in 1967. Evaluated the building within the contexts of community development, government services, and Modern architecture. Report to be prepared in accordance with CEQA.

Integrated Cultural Resource Management Plan (ICRMP) for Marine Corps Base Camp Pendleton, San Diego County, CA

Senior Architectural Historian

CLIENT: NAVFAC Southwest

Compiled ICRMP in collaboration with installation staff. Worked with Marine Corp to establish cultural resource and preservation goals and objectives. Synthesized previous studies to develop an update to the installation's comprehensive planning document.

Peer Review of Chula Vista Sears Evaluation, San Diego County, CA
Project Manager and Senior Architectural Historian

CLIENT: City of Chula Vista

Reviewed evaluation and recommendation of ineligibility for 1966 commercial building that ASM had previously recommended eligible. Provided additional support for our original recommendation and testimony to the Chula Vista Historic Preservation Commission and City Council.

Impacts Assessment for Construction of Lemon St. Parking Garage, Orange County, CA
Project Manager and Senior Architectural Historian
CLIENT: HDR Engineering, Inc.

Assessed and evaluated direct and indirect impacts on the construction of a parking garage on the Old Towne Orange and Plaza historic districts for three project alternatives in support of an Mitigated Negative Declaration. Participated in SHPO consultation process. Conducted in compliance with Section 106 of the NHPA, NEPA, CEQA, and Federal Highway Administration's (FHWA) Section 4(f) regulations.

Historic Resources Evaluation for Ecke Ranch Office Building, San Diego County, CA
Project Manager and Senior Architectural Historian
CLIENT: Leichtag Foundation

Surveyed, documented, and evaluated former office building of the Ecke Ranch, Evaluated the building as a contributor to potential Ecke Ranch Historic District for its associations with development of Encinitas, the agricultural industry, and its association with significant individuals Paul Ecke, Sr. and Paul Ecke, Jr.

Cultural and Historical Resources Existing Conditions and Evaluation Report for the Pacific Surfliner Carlsbad Village Double-Track Project, San Diego County, CA
Senior Architectural Historian
CLIENT: BRG Consulting, Inc.

Conducted an intensive level survey and evaluation of more than 60 potential historic resources, including residential, commercial, and transportation property types. Considered direct and indirect impacts from railroad improvements on eligible historic resources and recommended mitigation for adverse impacts. Conducted in compliance with Section 106 of the NHPA and NEPA.

Historic Resources Technical Report (HRTR) for Hillside Receiving Home, San Diego County, CA
Project Manager and Senior Architectural Historian
CLIENT: Dudek

Surveyed, documented, and evaluated a government residential facility for children, consisting of two Mid-Century Modern buildings constructed in 1955 and 1963. Evaluated within the contexts of San Diego County Public Welfare services and Modern architecture. Report prepared in accordance with CEQA.

Impacts Assessment for Renovation of AMK Ranch Historic District, Teton County, WY
Project Manager and Senior Architectural Historian
CLIENT: University of Wyoming and Walsh Environmental

Assessed and evaluated direct and indirect impacts on the historic AMK Ranch Historic District for three project alternatives for their renovation and expansion, in support of an Environmental Assessment (EA). Conducted on-site survey with National Park Service's Cultural Resources Specialist to identify potential areas of impact. Coordinating consultation with the Wyoming State Historic Preservation Office (SHPO).

Historic American Landscape Survey (HALS) Documentation for Arden, Helena Modjeska Historic House and Gardens, Orange County, CA
Project Manager and Senior Architectural Historian
CLIENT: Orange County Parks and Recreation

Documented 14.4-acre gardens and residential complex of Madame Helena Modjeska, famous late 19th-century Shakespearean actresses. Arden was Modjeska's primary residence from 1888 until 1905. Field survey included detailed field notes and digital photography. Prepared HALS Short Form. Landscape features include gardens with exotic and native plant species, cobble flowerbed garden borders, a well, fountains, pool/plunge, rock monument, meadow of grasses and native wildflowers, Santiago Creek and its associated wetland, and surrounding oak woodlands.

Henderson Historic Preservation Plan, Clark County, NV
Project Manager and Senior Architectural Historian
CLIENT: City of Henderson

Conducted community outreach and codified the steps needed to develop a Historic Preservation Plan for the City of Henderson. Worked with City staff, public officials, and members of the public to discuss the

city's historic and cultural resources and foster community engagement/interest in the historic preservation process. Conducted a citywide reconnaissance survey of all buildings constructed prior to 1970. Made recommendations for the next steps in the Historic Preservation Plan process, and then through a subsequent contract developed the Historic Preservation Plan for the City, which was adopted by the City Council. Identified prioritized areas in the city for future intensive survey to identify historic resources.

Maintenance Plan for Naval Postgraduate Engineering Historic District, Monterey County, CA

Project Manager

CLIENT: NAVFAC Southwest

Facilitated and oversaw the condition assessment of five mid-century educational buildings and make prioritized recommendations for their on-going maintenance, in accordance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties*. Developed in partnership with historic architects and structural engineers. Prepared in support of Section 106 and 110 of the National Historic Preservation Act (NHPA).

HRER for St. Martha's Episcopal Church, Dove Residence, and Day School, Los Angeles County, CA

Project Manager and Senior Architectural Historian

CLIENT: Warmington Residential

Surveyed, documented, and evaluated a Mid-Century Modern church complex, school, and Ranch house constructed between 1954 and 1965. Researched and developed local historic context. Evaluated within the contexts of mid-twentieth century development of West Covina and architecture. Conducted in compliance with CEQA.

Eligibility Consultation, Orange County, CA

Project Manager and Senior Architectural Historian

CLIENT: Sempra Utilities

Provided guidance to TRC and SDG&E on their consultation with the California State Historic Preservation Office (SHPO) regarding the eligibility of the Capistrano Utility Building. Helped draft a consultation letter to the SHPO, and recommended that the draft National Register of Historic Places (NRHP) nomination did not support an argument of eligibility.

ICRMP for Marine Corps Mountain Warfare Training Center, Mono County, CA

Project Manager and Senior Architectural Historian

CLIENT: NAVFAC Southwest

Compiled ICRMP in collaboration with installation staff. Worked with Marine Corp to establish cultural resource and preservation goals and objectives. Synthesized previous studies to develop one comprehensive planning document for installation that had not heretofore had any preservation management plan.

HRER, Historical Resources Compliance Report (HRCR), and Treatment Plan for the Rancho Lilac Historic District, San Diego County, CA

Senior Architectural Historian

CLIENT: Caltrans

Evaluated the eligibility of 27 built environment resources for the NRHP and as California Historic Landmarks prior to transfer of ownership. Recommended an eligible historic district with three periods of significance: the pioneer homesteading period (1880s-1900), early community and ranching period (1900-1945), and Irving Salomon's association with the property (1945 to 1966). Also prepared Treatment Plan recommending protective easements and covenants to ensure preservation of the district after transfer of ownership. Recommended *Rehabilitation* as the appropriate treatment standard and adherence to the Secretary of the Interior's (SOI) *Standards for the Treatment of Historic Properties*. Project conducted to comply with Public Resources Code (PRC) 5024.

Visual Impacts Assessment on the Marron-Hayes Adobes Historic District for the Quarry Creek Master Plan Environmental Impact Report, San Diego County, CA

Senior Architectural Historian

CLIENT: Corky McMillin Companies

Conducted a visual impacts assessment of the impacts of a housing development project on the Marron-Hayes Adobes Historic District, eligible for the NRHP. Recommended mitigation measures to address adverse indirect visual impact. Attended and testified at series of local planning commission and city council meetings. Conducted in compliance with CEQA and Section 106/NHPA.

Palomar Gateway District Specific Plan Cultural Resources Report, San Diego County, CA

Senior Architectural Historian

CLIENT: Atkins

Conducted constraints level analysis of Palomar Gateway project area in support of an EIR for a proposed Specific Plan. Identified 12 potential historic resources and provided constraint-level analysis of potential impacts on resources that were likely to be historically significant.

HRER for Garfield Reservoir, Los Angeles County, CA

Project Manager and Senior Architectural Historian

CLIENT: Helix Environmental Planning, Inc.

Surveyed, documented, and evaluated public water storage reservoir constructed in 1924. Evaluated within the contexts of community planning and development and architecture. Conducted in compliance with CEQA and NHPA.

Cultural Resources Survey for the Metrolink CTO-31 Project, Los Angeles County, CA

Senior Architectural Historian

CLIENT: HDR Engineering

Conducted windshield survey to identify potential historic resources within the project area, to provide baseline data for preliminary assessment of adverse impacts in compliance with NHPA and NEPA.

Historic American Engineering Record (HAER) Documentation for Jet Propulsion Lab (JPL) Facility, Kern County, CA

Project Manager and Senior Architectural Historian

CLIENT: Edwards Air Force Base

Documented mid-twentieth century aeronautics testing facility through field documentation, review of architectural plans, and archival research. Facilitated recommendations for documentation with west-coast NPS regional staff. Provided HAER Level II and Level III documentation for 40 buildings and structures, including archival photographic documentation, outline and short-form historical reports, and hand-drawn sketch plans or reproduction of architectural plans and drawings.

Citywide Historic Resources Survey, San Diego County, CA

Senior Architectural Historian

CLIENT: City of Chula Vista

Conducted a reconnaissance survey of more than 12,000 parcels and intensive survey of more the 350 parcels, based on a historic context developed as part of the project for the City of Chula Vista. Solicited public input on and presented findings of the survey in a series of public meetings. Made recommendations of local, state, and national eligibility. In addition to a final survey report, prepared a comprehensive survey database as well as web-based interactive photograph and maps.

NRHP Nomination and Historic American Building Survey (HABS) Documentation for Berylwood Historic District, Ventura County, CA

Project Manager and Senior Architectural Historian

CLIENT: San Diego Military Family Housing

Documented, researched, and reevaluated the 10-acre Berylwood Historic District to prepare an amended NHRP nomination and new HABS documentation of the district that included the 1912 Myron Hunt designed mansion built for prominent local developer and U.S. Senator, Thomas Bard, a second home built 1910-

1925 for son and local businessman Richard Bard, as well as supporting structures and the cultural landscape associated with the estate. Developed and presented keynote address for centennial celebration of the construction of the house.

NRHP Nomination for U.S. Highway 80 in California, San Diego and Imperial counties, CA

Senior Architectural Historian

CLIENT: San Diego Gas & Electric

Evaluated the 186 –mile California segment of U.S. Highway 80, one of the earliest all-weather coast-to-coast highways in the United States. Developed NRHP nomination and supporting materials. Recommended an eligible historic district with contributing constructed during the period of significance (1926-1964) that include 42 bridges and culverts and 186 miles of the road from San Diego to Yuma (both current and abandoned segments of the road).

HABS, HRCR, and FAE for Sorrento Valley Industrial Park, San Diego County, CA

Senior Architectural Historian

CLIENT: Caltrans

Prepared Caltrans specific compliance for the proposed demolition of the Sorrento Valley Industrial Park Historic District. Summarized identification efforts and resources eligible for the NRHP, identified the effect of the project upon those resources, and prepared mitigation plan in compliance with CEQA and Public Resources Code (PRC) §5024. Prepared HABS Level II documentation (Caltrans Heritage documentation equivalent) as well as Finding of Adverse Effect (FAE) per Caltrans format.

Military Context for Survey Los Angeles, Los Angeles County, CA

Project Manager and Senior Architectural Historian

CLIENT: City of Los Angeles Office of Historic Preservation

Prepared pro-bono historic context statement for military history of Los Angeles in support of ongoing citywide-survey, Survey LA.

Evaluation of Banning Mine, Riverside County, CA

Senior Architectural Historian

CLIENT: Southern California Edison Company

Researched, documented, and evaluated a 1940s mine. Evaluated within the contexts of community planning and development, industry, or engineering. Conducted in compliance with CEQA.

HRTR for Padre Trail Inn, San Diego County, CA

Project Manager and Senior Architectural Historian

CLIENT: HELIX Environmental

Surveyed, documented, and evaluated a 1965 motel. Evaluated within the contexts of the tourism industry in San Diego and architecture. Report prepared in accordance with CEQA.

HRER for Fenton Dairy Houses and Office, San Diego County, CA

Project Manager and Senior Architectural Historian

CLIENT: Dudek

Surveyed, documented, and evaluated four workers' houses and one office constructed between 1940 and 1945. Evaluated within the contexts of settlement and agriculture/ranching. Conducted in compliance with CEQA.

Historic Resource Analysis for Five Buildings at Mount San Antonio College, Los Angeles County, CA

Project Manager and Senior Architectural Historian

CLIENT: Mount San Antonio College

Surveyed, documented, and evaluated five recreational college buildings constructed between 1958 and 1972. Evaluated as contributors to a potential historic district within the contexts of education and architecture. Conducted in compliance with CEQA.

HRER for 8048-8050-8052 Comstock Avenue in Whittier, Los Angeles County, CA

Project Manager and Senior Architectural Historian

CLIENT: City of Whittier

Surveyed, documented, and evaluated two residential buildings constructed between 1927 and 1929. Evaluated within the contexts of Community Planning and Development, Whittier Thrives in the Early Twentieth Century, Whittier in the 1920s, Oil Industry in Whittier, and architecture. Conducted in compliance with CEQA.

ICRMP for Detachment Fallbrook, San Diego County, CA

Project Manager and Senior Architectural Historian

CLIENT: NAVFAC Southwest

Compiled ICRMP in collaboration with installation staff. Advised client on recommended content, synthesized sections, and prepared three iterations of the plan, incorporating comments from client.

Impacts Assessment for the SDG&E East County Substation Project, San Diego County, CA

Senior Architectural Historian

CLIENT: Sunrise Powerlink

Analyzed potential for adverse effects from proposed SDG&E East County Substation Project. Provided recommendations for NRHP and CRHR eligibility for an approximate 14-mile (mi.) segment of Old Highway 80 within the APE, determined in consultation with BLM. Conducted in compliance with NHPA and CEQA.

Highway 80 Interpretive Signage Recommendations for the SDG&E East County Substation Project, San Diego County, CA

Senior Architectural Historian

CLIENT: Sunrise Powerlink

Surveyed historic Highway 80 to make recommendations for placement of interpretive signs. Recommendations for signs were made based on integrity of Highway 80 at specific locations, character of specific sections of the highway, and demarkation at regular intervals. a Conducted in compliance with NHPA and CEQA.

Advanced Summary Report for the Historical Resources Evaluation of Hamlet Parcel for the Sunrise Powerlink Phase I ESA, San Diego County, CA

Senior Architectural Historian

CLIENT: San Diego Gas & Electric

Conducted an on-site survey and provided summary report of five buildings within project area that were 45 years old and older. Conducted in compliance with CEQA to be incorporated into the Environmental Site Assessment (ESA).

Inventory, Evaluation and Analysis of Effects on Historic Resources for the Campo Verde Solar Project, Imperial County, CA

Senior Architectural Historian

CLIENT: KP Environmental, LLC

Conducted intensive survey within a 1,990 acre project area for proposed solar field and transmission line in Imperial County. Documented and evaluated 20 potential historic resources and analyzed the effects of the project on those resources recommended as historically significant.

Historic Structure Report (HSR) for Building 1133 (1st Marine Corps Division Headquarters), MCB Camp Pendleton, San Diego County, CA

Senior Architectural Historian

CLIENT: NAVFAC Southwest

Prepared HSR to evaluate and assess the architectural and structural state of Building 1133 to establish guidelines and priorities for maintenance and rehabilitation activities. Conducted in compliance with Sections 106 and 110 of the National Historic Preservation Act (NHPA).

HSR for Building 51811 (San Onofre Beach Club), San Diego County, CA

Senior Architectural Historian

CLIENT: NAVFAC Southwest, MCB Camp Pendleton

Prepared HSR to evaluate and assess the architectural and structural state of Building 1133 to establish guidelines and priorities for maintenance and rehabilitation activities. Conducted in compliance with Sections 106 and 110.

HABS Documentation for the Cienega Elementary School, Los Angeles County, CA

Project Manager and Senior Architectural Historian

CLIENT: PMC World

Documented 1923 elementary school, with features of the Classical Revival and Spanish Colonial Revival styles. Field survey included sketch plan, detailed field notes, and archival research. Documentation prepared to HABS Level II standards.

HRER for Collier Park, San Diego County, CA

Project Manager and Senior Architectural Historian

CLIENT: Atkins

Surveyed, documented, and evaluated 7.7-acre park, portions of which were established in 1910. Report prepared in accordance with CEQA and Section 106 of NHPA prior to the park's redevelopment.

Built Environment Assessment for Gregory Canyon Landfill Project, San Diego County, CA

Senior Architectural Historian

CLIENT: PCR Services

Surveyed, documented, and evaluated two dairy complexes and associated buildings, of which one complex was recommended eligible. Report prepared in accordance with CEQA and Section 106 of the NHPA prior to the parcel's redevelopment.

Treatment Plan for 918 Discovery Street, San Diego County, CA

Senior Architectural Historian

CLIENT: City of San Marcos

Surveyed, documented, and evaluated residential building prior to its proposed relocation. Made recommendations for project preparation and execution, and future rehabilitation of the building with specific treatment recommendations for the building's character-defining features.

HRER for the California Valley Solar Ranch Project, San Luis Obispo County, CA

Senior Architectural Historian

CLIENT: Ecology and Environment

Consulted on and edited evaluation of a four-mi. segment of Highway 58, and two gypsum strip mines for a solar project in the California Valley for Sunpower.

HRER for 6940 Otay Mesa Road, Rabago Otay Technical Business Park, San Diego County, CA

Senior Architectural Historian

CLIENT: RBF Consulting

Documented and evaluated mid-20th-century farmstead including ranch house and barns for eligibility for NRHP, CRHR, San Diego County Local Register of Historical Resources, and the County of San Diego Resource Protection Ordinance (RPO) in accordance with CEQA.

Impacts Assessment for SDG&E East County Substation Project, San Diego County, CA

Senior Architectural Historian

CLIENT: Insignia Environmental

Consulted on and edited an evaluation and visual impacts assessment of a 13-mi. segment of historic Old Highway 80. Insignia Environmental requested this assessment for their powerline project in east San Diego County.

Inventory, Evaluation, and Analysis of Effects on Historic Built-Environment Properties, Imperial County, CA

Senior Architectural Historian

CLIENT: LS Power Development

Evaluated 16 resources within a solar project area in Imperial County and assessed the effects of the project on those resources recommended as historically significant.

Inventory, Evaluation and Analysis of Effects on Historic Built Environment Properties for the Imperial Solar Energy Center West and South Projects, Imperial County, CA

Senior Architectural Historian

CLIENT: LightSource, LLC

Surveyed, documented, and evaluated resources within a solar project area in Imperial County and analyzed the effects of the project on those resources recommended as historically significant for CSolar Development, LLC.

Documenting the Colorado River Front Work and Levee System (CRFWLS): A Historic Context and Inventory, San Bernadino, Riverside, and Imperial counties, CA and Yuma, La Paz, and Mojave counties, AZ

Historical Consultant

Consulted on, reviewed, and edited, report providing context for and documenting the CRFWLS.

HSR, Maravilla Handball Court and Market, LA Conservancy, Los Angeles County, CA

Project Manager and Senior Architectural Historian

CLIENT: LA Conservancy

Surveyed, evaluated, researched, and prepared HSR and California Register of Historical Resources (CRHR) nomination for a 1928 handball court and associated commercial and residential building as a pro-bono project for Los Angeles Conservancy. Evaluated for eligibility for CRHR and NRHP. Property was successfully designated on CRHR in 2012. Report prepared to assist with preservation efforts for neighborhood recreation and community center.

Section 106 Review and Recommendations, San Diego County, CA

Senior Architectural Historian

CLIENT: San Diego Military Family Housing

Annual review of multiple undertakings within historic districts at California Naval and Marine Corp Bases. Prepare determinations of effect, in conformance with several Programmatic Agreements (Pas) between the military, CA SHPO, and Advisory Council on Historic Preservation, governing undertakings at the specific military installation as well as *Secretary of the Interior's Standards for the Treatment of Historic Properties*.

Convair Lagoon Alternative Analysis of Historic Resources, San Diego County, CA

Senior Architectural Historian

CLIENT: Atkins

Consulted on, reviewed, and edited evaluation of seaplane ramp and pier located in a lagoon formerly owned by the now defunct aircraft manufacturer Convair in the San Diego Bay. Atkins requested a historic built environment study for the proposed demolition of both structures for future redevelopment project.

ICRMP for MCAS Miramar, San Diego County, CA

Senior Architectural Historian

CLIENT: NAVFAC Southwest

Addressed comments and finalized ICRMP for base facilities.

Historic Context and Eligibility Criteria for Puget Sound Dikes, Multiple Counties in Puget Sound, WA

Senior Architectural Historian

CLIENT: U.S. Fish and Wildlife Service

Assisted with research to develop historic context for late-nineteenth- and early-twentieth-century dikes that contributed to the agricultural development of the Puget Sound region of northwestern Washington. Developed NRHP eligibility criteria as a management tool for USFWS for future compliance with Section 106 of the NHPA.

HRER for Fort Yuma Healthcare Center, Imperial County, CA

Senior Architectural Historian

CLIENT: HKM Dowd

Surveyed, evaluated, and edited report for nine buildings on the 1.9 acres at Fort Yuma. Field survey included consultation with Quechan tribe. HSR prepared in support of an Environmental Assessment (EA) for potential demolition, including one contributing building to the Yuma Crossing National Historic Landmark (NHL) historic district.

Due Diligence Report for the Renovation of the Imperial Beach Library, San Diego County, CA

Architectural Historian

CLIENT: RBF Consulting

Evaluated the potential for historical significance of the subject property by conducting a constraints analysis to provide baseline information on the architect of record, date of construction, and potential eligibility to the CRHR.

Cultural Resources Survey for 203 E. Olive St., San Diego County, CA

Architectural Historian

CLIENT: The Planning Center

Evaluated and prepared survey report for one-acre parcel with three agricultural buildings, including 1898 farm house. In compliance with CEQA, each building was evaluated for eligibility for the NRHP, CRHR, and as a CEQA historic resource.

Cold War Historic Context for NAWS China Lake, San Bernardino County, CA

Architectural Historian

CLIENT: Epsilon Systems Solutions

Consulted on and edited historic context (1943-1989) prepared for updated inventory and evaluation of two historic districts listed in the NRHP. Context developed for one of the most significant World War II and Cold War research, development, testing, and evaluation facilities in the country.

HABS Documentation for the American Legion Hall, San Diego County, CA

Architectural Historian

CLIENT: City of Vista

Documented art deco American Legion Hall to HABS Level III standards. Field survey included photography, sketch plan, detailed field notes, and archival research. Edited survey report, including historical and architectural information prepared to HABS Level II standards.

HSR for Palomar College, San Diego County, CA

Architectural Historian

CLIENT: Palomar College

Consulted on and reviewed HSR for seven buildings at Palomar College. In compliance with CEQA, each building was evaluated for eligibility for the NRHP, CRHR, and as a CEQA historic resource.

Survey Eligibility and Update of NRHP Eligibility of 73 Buildings at Naval Weapons Station Seal Beach, Detachment Corona, Riverside County, CA

Field Director

CLIENT: NAVFAC Southwest

Surveyed 247 acre site to assess NRHP eligibility of 73 buildings, structures, and landscape features, within careful consideration of the site as a cultural landscape. Authored evaluation report, considering potential national, state, and local significance for three distinct periods of significance from 1927 to 1989.

Tenth Avenue Marine Terminal Historical Assessment, San Diego County, CA

Architectural Historian

CLIENT: Atkins

Evaluated mid-twentieth century maritime industrial buildings that served as transit sheds and warehouses. Conducted research and fieldwork to determine the buildings' architectural significance and eligibility for the CRHR.

Historic Building Maintenance Plan, Herrmann Hall (Building 220), Naval Postgraduate School, Monterey County, CA

Architectural Historian

CLIENT: NAVFAC Southwest

Assisted with preparation of maintenance plan for late nineteenth-century Spanish Mediterranean Revival-style former hotel building.

ICRMP for Naval Base San Diego, San Diego County, CA

Architectural Historian

CLIENT: NAVFAC Southwest

Prepared ICRMP for base facilities including Naval Station San Diego, Mission George Recreational Center, and Broadway Complex. Advised client on recommended content, conducted interviews, reviewed and synthesized previous cultural resource studies, and wrote three iterations of the plan, incorporating comments from client.

ICRMP for Naval Base Coronado, San Diego County, CA

Architectural Historian

CLIENT: NAVFAC Southwest

Prepared ICRMP for base facilities including NAS North Island, Naval Amphibious Base Coronado, Naval Radio Receiving Facility, Outlying Landing Field Imperial Beach, and Special Warfare Mountain Training Center La Posta. Advised client on recommended content, conducted interviews, reviewed and synthesized previous cultural resource studies, and wrote three iterations of the plan, incorporating comments from client.

ICRMP for Naval Base Ventura County, Ventura County, CA

Architectural Historian

CLIENT: NAVFAC Southwest

Assisted with preparation of final drafts of ICRMP for base facilities including NAS Point Mugu, CBC Port Hueneme, Laguna Peak, Catalina Heights housing area, and the Camarillo Airport. Prepared three iterations of the plan, incorporating comments from client.

2345 S. Gaffey Historic Resources Report, 2345 Gaffey Avenue, Los Angeles County, CA

Architectural Historian

CLIENT: LLC/Netarq Design Group

Assisted with the preparation of a report to private property owner for CEQA compliance. Conducted research and prepared written report detailing the building's architectural significance and eligibility for the NRHP, CRHR, Los Angeles Historic-Cultural Monument, and a Historic Preservation Overlay Zone.

National Trust for Historic Preservation

Heritage Travel, National Trust for Historic Preservation, Los Angeles, California, 2008-2009. As Senior Account Executive, worked with west-coast communities and destinations to improve their marketing efforts to heritage and cultural travelers through new website, Gozaic.com. Working from Los Angeles office, participated in developing and executing marketing strategies both for the company and our clients. Represented company at professional conferences. Utilized Salesforce database to ensure timely communication with clients.

American Battlefield Protection Program, National Park Service

NPS Grants Administration, National Park Service Headquarters, 2007-2008. As Historic Preservation Specialist, evaluated applications, monitored projects, coordinated reporting and organized workshops for grant recipients for \$1.5 million annual grant program. Reviewed deliverables such as NRHP nominations, easements, cultural resource inventories and management plans.

Section 106 Review, National Park Service Headquarters, 2007-2008. As Historic Preservation Specialist, reviewed projects potentially effecting historic battlefields for which the American Battlefield Protection party was a consulting party. Prepared comments to consultants evaluating projects and their potential effects on historic resources, and made recommendations for mitigation of projects adversely effecting historic battlefields.

Update of Civil War Sites Advisory Commission Report on the Nation's Civil War Battlefields, National Park Service Headquarters, 2007-2008. Conducted onsite evaluation and boundary determinations for Civil War battlefields in Charleston, South Carolina, and Leesburg, Virginia. Coordinated national survey of preservation activities at 384 Civil War battlefields for report to Congress. Identified changes in condition and threats, as well as preservation opportunities.

National Park Service History Program and HABS/HAER/HALS/CRGIS

HABS/HAER/HALS/CRGIS Online Publications, National Park Service Headquarters, 2006-2007. As Project Manager, redesigned navigation, content and design of HABS/HAER/HALS/CRGIS website and NPS History Program website. Created online publications for NPS History including Abraham Lincoln web feature, Teaching with Historic Places Lesson Plan on lighthouses, and Maritime Resources of Massachusetts travel itinerary.

Maritime Heritage Program, National Park Service Headquarters, 2006-2007. As Historian, maintained national inventory of historic lighthouses and ships for Maritime Heritage Program. Reviewed applications for the transfer of federally-owned historic light stations, under the National Historic Lighthouse Preservation Act of 2000.

National Park Service Cultural Resources Web Team, 1999-2008. As Team Member, assessed popularity and usability of web materials, and established guidance to achieve increased visibility. Served on subcommittee for website redesign, participated in focus group and usability testing.

National Register of Historic Places, National Park Service

Consultation on Review of National Register of Historic Places and National Historic Landmark Nominations, 1998-2006. As Historian, contributed to peer review of multiple nominations. Edited NHL nomination for Ryman Auditorium, Nashville, Tennessee. Wrote comments for return of Spud Drive-in Theater nomination, Driggs, Idaho to SHPO. Developed presentation for national conference: "America at Play: Documenting and Evaluating Recreational Resources with the National Register of Historic Places."

Public Outreach for NRHP, 1998-2006. As Historian, contributed to publication of printed and online materials to increase awareness of and understanding of NRHP. Provided guidance on listing properties, benefits of listing, and pertinent laws and regulations. Assisted with development of public workshops,

production of brochures, bulletins, power point presentations and exhibits. Assisted with the final editing and printing of two NRHP bulletins: "Telling the Stories Planning Effective Interpretive Programs for Properties Listed in the National Register of Historic Places" and "Historic Residential Suburbs: Guidelines for Evaluation and Documentation for the National Register of Historic Places." Helped monitor the reprinting of several other NR technical bulletins, which provide standards and guidelines for evaluating historic properties.

Discover our Shared Heritage Travel Itineraries, 1998-2006. As Historian and Team Leader, coordinated the production of 38 travel itineraries developed in partnership with state and local governments, and private organizations, Each travel itinerary was created to highlight historic sites listed in the NRHP, increase awareness of the diverse and representative historic places across the United States, encourage heritage tourism, and provide a valuable educational resource. Managed project development and supervised team members, evaluated new proposals, established work plans, coordinated launch and press releases, researched, wrote and edited historical descriptions, essays and program talking points, created graphics, web pages and PowerPoint presentations.

Development of Thematic Features, NRHP, National Park Service Headquarters, 1999-2006. As Historian, designed, researched and wrote content for periodic thematic features, highlighting the diversity of historic sites listed in the NRHP. Themes included African American History, Asian Pacific Heritage, Hispanic Heritage, Women's History, American Indian Heritage, Preservation Month, Veterans Day, National Park Week, and Family History Month.

Arlington Heritage Alliance

Chair and Board Member of Arlington Heritage Alliance, Arlington, Virginia, 2000-2008. As Chair, determined and guided the initiatives of local historic preservation non-profit organization. Developed projects and publications to broaden local preservation constituency. Developed and facilitated numerous small and large meetings of preservation constituents, including community-wide preservation planning committee. Represented organization at public meetings and in communication with local and national elected officials. Evaluated local development and preservation plans. Developed "My Historic House" program to encourage sensitive renovations and additions. Judged Arlington Historic Preservation Design Awards.

Recent Past Preservation Network

Founder, Recent Past Preservation Network, 2000-2006. As one of the founders, and inaugural Board Member, of a new national preservation non-profit, guided the organization's direction and initiatives, helped develop short- and long-term goals and objectives. Developed and facilitated annual membership meetings. Worked with legal council to file incorporation paperwork and secured 501(c)3 status with the IRS. As Treasurer, prepared and monitored five-year projected budget, filed annual reports, and analyzed fiscal feasibility of proposed projects.

Marietta Manor, Prince George's County, Maryland

Building Restoration, 1996. As Assistant Site Manager, contributed to final stages of restoration of the 1812 Federal home of Supreme Court Justice Gabriel Duvall. Developed and helped implement an interior paint plan based on paint analysis.

Museum Operations, 1996. As Assistant Site Manager, lead interpretative tours for school groups and the general public. Assisted with event planning for on-site programs and the County's Tri-centennial Celebration.

Marilyn Novell, M.S.

Architectural Historian

Firm Name: ASM Affiliates, Inc., Pasadena, California

Total Years of Experience: 9

Employment History:

2015-Present Architectural Historian, ASM Affiliates, Inc., Pasadena, California
2015-2015 Architectural Historian and Historic Resources Coordinator, Sapphos Environmental, Inc., Pasadena, California
2012-2013 Technical Writer, Preservation Management Services, Sacramento, California
2010-2011 Preservation Intern, City of Los Angeles Office of Historic Resources
2010-2012 Senior Editor, American Journal Experts, Durham, North Carolina
2010-2011 Technical Writer, North State Resources, Sacramento, California
2000-2015 Managing Editor and Graphic Designer, Jon Peddie Research, Tiburon, California

Education:

M.S. 2010/History of Architecture and Urbanism, University of California, Berkeley
B.A. 2008/American Studies, concentration in Cultural Landscapes, University of California, Berkeley

Additional Training:

2009 University of California, Berkeley, Department of City and Regional Planning Course, Historic Preservation in California
2010 University of Southern California, Historic Preservation Intensive Course

Professional Memberships:

Vernacular Architecture Forum
Society of Architectural Historians
Los Angeles Conservancy
California Preservation Foundation
National Trust for Historic Preservation

Other Capabilities:

Expertise in copy editing and proofreading
Expertise in Windows and Macintosh platforms
Expertise in layout and graphics programs: InDesign, Photoshop, Illustrator
Expertise in Microsoft Office software

Citizenship: USA

Carole Zellie, Principal, LR Landscape Research, (612) 616-5353, czellie@aol.com

Professional Profile:

Ms. Novell has nine years of professional and academic experience in historic preservation, cultural resources documentation, and architectural history and meets the Secretary of the Interior's Professional Qualification Standards for Architectural History and History.

She has worked on historic and cultural resource assessments for projects throughout Los Angeles County and in Berkeley, Palm Springs, Fresno County, Bakersfield, Coalinga, and the Klamath River basin in California. She contributed to the City of Los Angeles Historic Resources Survey project (SurveyLA), both in the City Office of Historic Resources and for consultant firms conducting the survey for the City. Ms. Novell has experience in developing historical and cultural resources reports and in evaluating properties under federal, state, and local criteria, including National Register of Historic Places (NRHP), Section 106, California Register of Historical Resources (CRHR), and California Environmental Quality Act (CEQA) compliance.

Ms. Novell's professional background includes management and contributions to projects concentrating on the evaluation of historic properties and districts. She served as project manager for open-end historic preservation services for the City of Long Beach and served as the assistant project manager for the historic context for the Los Angeles Unified School District, which received preservation awards from the California Preservation Foundation and the L.A. Conservancy. Her responsibilities included conducting background research, writing summary reports, conducting large-scale surveys, and compiling evaluations and significance statements for California Department of Parks and Recreation (DPR) historic resources forms.

Select Project Experience:

National Register of Historic Places Update for Anacapa Island Light Station, Channel Islands National Park, Ventura County, CA

Architectural Historian

CLIENT: National Park Service

Prepared an update for the 1991 National Register form for Anacapa Island Light Station. The update required additional research to consider alterations that have occurred since the original nomination, a pedestrian-intensive survey, GIS mapping, and extensive photography compliant with National Register standards.

Reference: Laura Kirn, Cultural Resources Division Lead, Channel Islands National Park, (805) 658-5752. Laura_Kirn@nps.gov

NASA Ames Research Center, Moffett Field, Santa Clara County, CA

Architectural Historian

CLIENT: Mountain View Housing Ventures LLC

Conducted an architectural survey and prepared an inventory of historical buildings at National Aeronautics and Space Administration's Ames Research Center to determine what direct or indirect effects would potentially be caused by construction of a multi-building housing project on part of the NASA property. The project allows redevelopment of NASA Research Park by mitigating impacts to the region's housing imbalance, among other goals. Ms. Novell prepared the built-environment portion of a comprehensive Cultural Resources Technical Report summarizing the findings of effect, which also included archaeological assessment within the Area of Potential Effects.

Ontario International Airport Historic Context Statement and Survey, San Bernardino County, CA

Architectural Historian

CLIENT: City of Ontario, California

Prepared a historic context statement for the Ontario International Airport, informed by extensive background research and an intensive-level survey. Developed themes, contexts, registration requirements, and character-defining features for identification of a range of property types, from World

War II aircraft hangars to Cold War-era administration buildings. Assisted in conducting interviews for oral histories with individuals associated with the airport and preparation of a short video reviewing the history, findings, and stories gathered for the project.

Reference: Diane Ayala, Senior Planner, City of Ontario Planning Department, (909) 395-2428, dayala@ontarioca.gov

City of Monrovia Historic Context Statement, Los Angeles County, CA

Architectural Historian

CLIENT: City of Monrovia

Prepared a historic context statement for the City of Monrovia, based on reconnaissance-level surveys of the city to identify and define potential historic districts within the City. Work included development of themes and identification of associated property types, character-defining features, and registration requirements for historic districts comprising late 19th-century to early 20th-century residential properties, commercial districts, ethnic enclaves, and institutional properties. Work included participation in public outreach and meetings with City personnel.

Reference: Sheri Bermejo, Planning Division Manager, City of Monrovia, (626) 932-5539, sbermejo@ci.monrovia.ca.us

Historic Properties Inventory Survey for the Whitmore Agricultural Project, Waialua District, Island of Oahu, HI

Architectural Historian

CLIENT: PBR Hawaii & Associates

Surveyed and evaluated historic resources at the Hawaiian Pineapple Company Plantation at Whitmore Village, Oahu. The roughly 37-acre study area is former pineapple plantation land transferred from Dole Corporation to the Agribusiness Development Corporation of Hawaii for development as an agricultural project to benefit the local economy. At the time of survey and evaluation, the property served as a partially unused industrial facility that included warehouse, administrative, and maintenance buildings built over a period of several decades, from 1948 through the 1980s. Evaluation of the historical buildings included identification of historic districts within the project site.

Mitigation Report for the Bank of Hawaii Waialae-Kahala Branch Demolition Project, Honolulu, HI

Architectural Historian

CLIENT: Bank of Hawaii

Architectural Historian

Developed a historic context study for the Bank of Hawaii Waialae-Kahala branch bank building in the Waialae community. The study was requested by the State Historic Preservation Division of Hawaii as mitigation for the planned demolition of the Mid-Century-Modern circular building. The report includes a comprehensive history of the building and an introduction to the Modern movement in Hawaii. For purposes of mitigation, the study identifies 10 additional extant and demolished circular Modern buildings in Honolulu and provides a brief history of each, including information about the architect, the design concept, character-defining features, and materials and method of construction.

Assessment Letter for Planned New Construction within the Marconi Telegraphy Historic District, Oahu, HI

Architectural Historian

CLIENT: Department of Land and Natural Resources, State Historic Preservation Division, Hawaii

Prepared a report to assess conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties regarding a proposed new residence to be constructed within the Marconi Telegraphy Historic District on the Island of Oahu. The report included a design review of architectural plans to determine whether the new construction would impact the significance of the National Register-listed historic district.

Edwards Air Force Base Architectural History Survey and Inventory, Kern County, CA
Architectural Historian

CLIENT: Redhorse Corporation

After preparing a work plan, conducted an architectural survey and prepared an inventory of historical buildings on Edwards Air Force Base in support of Section 110 of the National Historic Preservation Act (NHPA). During the survey, multiple photographs and extensive notes were taken of each historical resource, and archival research was performed at the base History Office and Real Property Office. The evaluation process included an intensive-level survey of 30 individual historic resources constructed between 1943 and 1966. An additional 25 properties were inventoried and considered as elements or contributors to potential historic districts. A comprehensive report was prepared of all properties and historic districts inventoried and evaluated, including the appropriate California Department of Parks and Recreation forms for each resource.

Reference: Colleen Lavery, NEPA Specialist/Project Manager, Redhorse Corporation, (775) 671-5662, colleen.lavery@redhorsecorp.com

Roosevelt High School Historic District, Los Angeles, CA

Architectural Historian and Photographer

CLIENT: Los Angeles Unified School District

Prepared a Cultural Resources Technical Report in support of an Environmental Impact Report (EIR) for a Comprehensive Modernization Project at Roosevelt High School, which involves demolition of multiple buildings within a previously identified historic district. Also prepared Historic American Building Survey (HABS)-like historic documentation in accordance with mitigation stipulated in the EIR. All work was done in accordance with the California Environmental Quality Act (CEQA).

Reference: Edward Paek, Edward S. Paek, Los Angeles Unified School District, Office of Environmental Health & Safety, edward.paek@lausd.net

YWCA Glendale Historical Resource Assessment Report, Glendale, CA

Architectural Historian

CLIENT: Glendale YWCA

Surveyed and documented the Mediterranean-Revival-style YWCA facilities, consisting of three distinct phases constructed in 1938/1939, 1948/1949, and 1955/1956. Prepared a report detailing and evaluating the building, including impacts analysis for proposed project. Evaluation included research at the YWCA archives and consideration of the role of the national and local YWCA in advocacy for women's education, spirituality, and recreation, and the ways in which the Y's mission evolved over time.

Reference: TARA Peterson, Executive Director, YWCA Glendale, tarapeterson@glendaleywca.org

Calico Early Man Site Documentation, Yermo CA

Architectural Historian

CLIENT: Bureau of Land Management

Surveyed and documented built-environment resources at Calico Early Man Site in the Mojave Desert. The site is notable for the participation of renown archaeologist and paleoanthropologist Dr. Louis Leakey, whose work was important in investigating the presence of early man in Africa. The project included evaluation of significance for buildings and structures associated with the site.

Peer Review of Historical Resources Evaluation Report and Preparation of Landmark Nomination for Chester Washington Golf Course, Los Angeles, CA

Architectural Historian

CLIENT: County of Los Angeles

Reviewed evaluation of the Chester Washington Golf Course in South Los Angeles and presented the landmark nomination to the Los Angeles County Historical Landmarks and Records Commission. As the first golf course integrated in Los Angeles, the property was recommended eligible for landmark status for its association with African-American social history in Los Angeles.

Reference: Dean Edward, Los Angeles Department of Regional Planning, (213) 974-0087, Dean Edwards dedwards@planning.lacounty.gov

Mills Act Reviews of Los Angeles County Properties**Architectural Historian****CLIENT: County of Los Angeles**

Considered work items for properties under the California Mills Act property tax relief program. Items were reviewed for compliance with the Secretary of the Interior's Standards, and specific recommendations were accordingly made to property owners.

Reference: Dean Edward, Los Angeles Department of Regional Planning, (213) 974-0087, Dean Edwards dedwards@planning.lacounty.gov

Historical Resources Evaluation Report for Sears Auto Center, El Cajon, CA**Architectural Historian****CLIENT: DLR Group**

Surveyed and documented the Sears Auto Center, constructed in 1968/1969. Evaluated the property for significance and prepared a Historical Resources Evaluation Report.

Reference: José A. Sanchez, DLR Group, jsanchez@dlrgroup.com

Mt. Laguna Cheroske Family Interpretative Signage, San Diego County, CA**Graphic Designer****CLIENT: Insignia Environmental**

Designed a set of three interpretive signs providing historical information, maps, photographs, and applicable logos installed by San Diego Gas & Electric Company on United States Forest Service land. The signs explain the history of remnants of a historic lodge, cabin, and the people associated with them.

Brochure for BOMARC CQM10A/B Target Drone Launch Complex at Vandenberg Air Force Base, Santa Barbara County, CA**Graphic Designer****CLIENT: ManTech SRS Technologies, Inc.**

Designed a three-panel, two-sided informational brochure for the BOMARC CQM10A/B Target Drone Launch Complex. Elements included historic architectural and schematic drawings and photographs, as well as a timeline and specifications combined to explain the history and purpose of the complex.

Technical Reports for the Evaluation of Historic Properties, Mojave National Preserve, San Bernardino County, CA**Architectural Historian****CLIENT: Mojave National Preserve**

Conducted intensive-level surveys and prepared Determinations of Eligibility for seven historic properties in Mojave National Preserve. Most of these properties are remote abandoned mining-associated cabins accessed only from ungraded roads in rugged environments that have never been assessed. Methodology included archival research, interviews with persons associated with the properties, and intensive-level pedestrian surveys.

Reference: David R. Nichols, Park Archeologist, Mojave National Preserve, (760) 252-6145, david_r_nichols@nps.gov

Historic Trails Context Study, West Mojave Route Management Plan, Historic Properties Treatment Plan, Kern and San Bernardino Counties, CA**Architectural Historian****CLIENT: United States Bureau of Land Management**

Based on archival research and previous historic contexts and reports, prepared a historic context for historic-period roads and highways associated with historic trails in the Western Mojave Desert. Work included literature review, review of historic maps and images, and guidelines for using the study for future evaluations.

Section 106 Evaluations, Los Angeles County, CA**Architectural Historian****CLIENT: City of Los Angeles**

On-call historic resources services for the City of Los Angeles, primarily related to historic properties affected by use of community development block grants, including programs to provide housing and shelter for homeless populations. Projects included the assessment of potential development along the South Vermont Avenue commercial corridor and the Hollywood Boulevard Commercial and Entertainment Historic District.

Loch Crane Survey, San Diego County, CA**Architectural Historian****CLIENT: Helix Caltrans**

Participated in preparation of a Historic Resources Survey of the Works of Architect Loch Crane in the City of San Diego. Conducted a reconnaissance-level survey of 34 buildings and prepared DPR forms for the evaluation of each property.

Section 106 Reviews for FCC Projects Within the State of Hawaii**Architectural Historian****CLIENT: EnviroWest**

Reviewed potential impacts of proposed FCC antenna installations on historical buildings. Evaluated the proposed sites for significance under both National Register of Historic Places and Hawaii Register of Historic Places criteria.

Reference: Scott Billat, Principal Investigator, EnviroWest, scott@envirowestllc.com

Supplemental Historic Resources Evaluation Report for Roosevelt Senior High School, Los Angeles County, CA**Architectural Historian****CLIENT: Impact Sciences**

Reviewed previous evaluations of the Roosevelt Senior High School campus and prepared a Supplemental HREER addressing Criteria A/1 and B/2 for its association with the Chicano Civil Rights Movement in 1968 and Sal Castro, a teacher who was a leader in the movement. Defined a historic district comprising all the extant buildings on campus at the time of student protests that spread through schools in East L.A.

Reference: Edward Paek, **Edward S. Paek, Los Angeles Unified School District**, Office of Environmental Health & Safety, edward.paek@lausd.net

Historic Resource Evaluation Report for Collins Street Elementary School, Woodland Hills, Los Angeles County, CA**Architectural Historian****CLIENT: Impact Sciences**

Prepared an evaluation report for a Los Angeles Unified School District elementary school in the San Fernando. The report was informed by archival research from LAUSD archives, the LAUSD historic context statement, newspaper databases, and primary sources and an intensive-level pedestrian survey.

Cultural Resource Studies, Muroc Joint Unified School District, Edwards Air Force Base, Kern County, CA**Architectural Historian****CLIENT: Muroc Joint Unified School District**

Prepared a technical report to support CEQA requirements for five schools within approximately 110 acres at Edwards Air Force Base. Photographed interiors and exteriors of the five schools and conducted background research to place the schools and buildings within the appropriate local historic context.

Secretary of the Interior's Standards Review for Los Angeles Unified School District Campuses, Los Angeles County, CA
Architectural Historian

CLIENT: Parsons

Project-level reviews for proposed renovations to six LAUSD campuses in compliance with Americans with Disabilities Act (ADA). The campuses are known historical resources pursuant to the California Environmental Quality Act (CEQA). Renovations were to comply with the *Los Angeles Unified School District Design Guidelines*. Campuses reviewed were Chatsworth High School, Madison Middle School, Marina Del Rey Middle School, Narbonne High School, 10th Street Elementary School, and Dodson Middle School.

HABS Documentation for Anacapa Island Light Station, Channel Islands National Park, Ventura County, CA

Architectural Historian

CLIENT: National Park Service

Surveyed the Anacapa Island Light Station Historic District on East Anacapa Island to record the derrick system that is used to lift goods and personnel from sea level to the bluff where the light station is located. Documentation was prepared in advance of replacement of the derrick system, parts of which are contributors to the existing historic district.

Reference: Laura Kirn, Cultural Resources Division Lead, Channel Islands National Park, (805) 658-5752. Laura_Kirn@nps.gov

Historic Resources Evaluation Report for the Beckman Instruments Administration Building, Los Angeles County, CA

Architectural Historian

CLIENT: BonTerra Psomas

Reviewed previous evaluations including a National Register nomination and prepared an evaluation report of the building at 4300 North Harbor Boulevard, a Mid-Century Modern building constructed as the headquarters for Beckman Instruments, a large scientific instrument research and manufacturing facility. Character-defining features were identified, and direct and indirect impacts were addressed in advance of development of the adjacent land on the parcel.

Historic Resource Evaluation Report for Woodcrest Park, Orange County, CA

Architectural Historian

CLIENT: Parks and Recreation Department, City of Fullerton

Prepared an evaluation of a city-owned and -operated park in compliance with Section 106 review in advance of renovation of the park.

Impacts Assessment Report for Subdivision of Sepulveda Unitarian Universalist Society Sanctuary ("The Onion") Property, Los Angeles County, CA

Architectural Historian

CLIENT: Jag Narayan

Prepared an impacts assessment report of a proposed project to subdivide the parcel occupied the Sepulveda Unitarian Universalist Society Sanctuary (known as "The Onion") at 9550 N. Haskell, which is a designated City of Los Angeles Historic Cultural Monument (#975). The report, which focused on impacts to the viewshed to and from the HCM, was prepared pursuant to CEQA prior to the City's permitting process for the proposed project.

California Department of General Services Weatherization Projects for Homes Statewide Project, State of California

Architectural Historian

CLIENT: ICF Jones & Stokes, Inc.

Provided on-call review services for proposed weatherization projects of historical buildings. Reviews were performed in accordance with methodologies defined by the State Historic Preservation Officer for projects funded by the Low Income Energy Assistance Program and other Department of Energy programs.

Mt. San Antonio College Cultural Resources Evaluation Report, Los Angeles County, CA
Architectural Historian

CLIENT: Mt. San Antonio College

Assisted in the preparation of a cultural resources evaluation report as part of a Supplemental EIR for the 2015 Facilities Master Plan Update and Physical Education Projects. The report was prepared to record and assess historic resources within the school's proposed project area, and to assess potential direct and indirect visual impacts to the Mt. SAC Historic District. Work included intensive pedestrian-level survey of potentially significant historic buildings on campus, as well as the Wildlife Sanctuary. The report was prepared to ensure the proposed projects are in compliance with CEQA and Secretary of the Interior's Standards.

Historic Resource Assessment Report for the Rossmore Avenue Apartments, Los Angeles County, CA
Architectural Historian

CLIENT: etco Homes, Inc.

Evaluated three 1948 French Revival-style apartment buildings at 535-553 N. Rossmore Avenue in the Hancock Park neighborhood of Los Angeles to determine their historic significance. The three buildings are located within the original boundaries of the Hancock Park Historic Preservation Overlay Zone (HPOZ), a City of Los Angeles-defined zoning district intended to preserve the historic nature of areas within the City. The evaluation included preparation of California DPR forms.

Historic Resource Evaluation Report for 427 Santa Clara Avenue, Los Angeles. Los Angeles County, CA
Architectural Historian

CLIENT: Huron Drive LLC

Evaluated a 1912 bungalow located in the Venice area of Los Angeles for CEQA compliance of a proposed project. Conducted a site visit and background research. Prepared documentation for determination of historic significance under NRHP, CRHR, City of Los Angeles Historic Cultural Monument and under contexts and themes defined by SurveyLA.

Los Angeles County Landmark Evaluation Report: The Doumakes House, Los Angeles County, CA
Architectural Historian

CLIENT: County of Los Angeles

Prepared a historic evaluation report of a house at 4918 Angeles Vista Boulevard for submission to the County of Los Angeles as part of the County's first application for landmark status. The evaluation considered NRHP, CRHR, and local criteria for significance of a 1928 Spanish Colonial Revival house in the View Park neighborhood of Los Angeles County. Conducted a site visit and background research and prepared the evaluation report, finding the house significant under Criteria A and C.

Historic Resource Evaluation Memo for the Bakersfield High School Water Tower, Kern County, CA
Architectural Historian

CLIENT: Kern High School District

Evaluated a 1933 water tower on the campus of Bakersfield High School in advance of planned relocation of the tower to an off-site location. The tower was evaluated for its eligibility for listing as an individual resource in the CRHR and as a potential contributor to a historic district comprising the campus.

Historic Resources Evaluation Report, Department of Conservation Division of Oil and Gas Office, Fresno County, CA
Architectural Historian

CLIENT: California Department of General Services

CLIENT: California Department of General Services

Evaluated the regional office of the State Mining Bureau Division of Oil and Gas in the City of Coalinga, in advance of the proposed sales of the property. The 1918 building was evaluated for its eligibility as a historic resource in compliance with CEQA. Conducted a site visit and background research, and prepared documentation summarizing findings.

Cultural Resources Evaluation Report for Point Loma High School Whole Site Modernization, San Diego County, CA

Architectural Historian

CLIENT: San Diego Unified School District

Prepared a historic evaluation report for eleven buildings on the Point Loma High School campus in advanced of modernization projects. Efforts included a site visit, photographic documentation of the buildings, and archival research. The evaluation included preparation of California DPR forms.

Historic Resources Evaluation Report for Foshay Learning Center, Los Angeles County, CA

Architectural Historian

CLIENT: Impact Sciences

Surveyed, researched, documented, and evaluated Foshay Learning Center, a Los Angeles Unified School District Campus located in the South Los Angeles Community Plan Area. Core campus was constructed in the 1920s, one of the rare remaining pre-1933 Long Beach earthquake Los Angeles Unified School District (LAUSD) campuses, with buildings added in the 1960s. The evaluation was required in preparation for a project proposing the demolition of several campus buildings and construction of new buildings and landscaping. A historic district was identified and defined, and contributors were identified and recorded according to the LAUSD Historic Context Statement, 1870 to 1969, and LAUSD design guidelines. The project was evaluated for compliance with CEQA.

HRER for the Verde School Bridge Replacement Project, Imperial County, CA

Architectural Historian

CLIENT: Panorama Environmental, Inc.

In order to comply with Caltrans responsibilities under CEQA, CRHR and the NHPA, ASM completed an HRER in advance of a project proposed by the Imperial County Public Works Department to replace the Verde School Road Bridge. Conducted archival research to identify resources potentially eligible for the NRHP and CRHR. A final report was prepared following Caltrans guidelines as specified in the agency's SER, Volume 2, Cultural Resources.

Historic Resources Evaluation Report for Academy Road Widening Project, Fresno County, CA

Architectural Historian

CLIENT: Petra Resource Management

Surveyed, researched, documented, and evaluated properties adjacent to Academy Avenue, located in Sanger, California, in the County of Fresno, in preparation for a Caltrans road widening project. Services involved completing a cultural resources inventory of the project area. Evaluated in compliance with requirements of Section 106 of the National Historic Preservation Act (NHPA) and Caltrans guidelines as specified in the agency's Standard Environmental Reference (SER), Volume 2, Cultural Resources.

Lanterman Developmental Center, Los Angeles County, CA

Architectural Historian

CLIENT: Petra Resource Management

Surveyed and contributed to preparation of a revised Historic Resources Assessment Report (HRAR), based on a prior report prepared by Heritage Architecture. On-site intensive pedestrian survey included photographic documentation of more than 100 buildings (exteriors and public interior spaces) and taking detailed field notes. Work included preparation of California DPR forms for historic district and individual eligibility.

Historic Resources Evaluation for Pedestrian Safety Improvement Project for Colorado Boulevard and Fair Oaks Intersection, Los Angeles County, CA

Architectural Historian

CLIENT: City of Pasadena

Reviewed historic resources adjacent to a proposed Caltrans project in the Old Pasadena Historic District to improve pedestrian safety at the intersection of Colorado and Fair Oaks by creating curb bulb-outs and relocating street lights. Prepared documentation in the form of a Historic Resources Standards Evaluation

Report and presented the project to the City of Pasadena Design Commission to ensure compliance with Secretary of the Interior's Standards and Section 106 for a project involving federal funds.

Cultural Resources Evaluation Reports for the Panattoni Logistics Centers IV and V Project Area, San Bernardino County, CA

Architectural Historian

CLIENT: Kimley-Horn and Associates

Prepared a cultural resources study as part of an addendum to the Renaissance Specific Plan. The study was conducted in advance of development of the parcels and included both historic and archaeological history surveys. The work was done in compliance with CEQA and included evaluation of two buildings for potential eligibility for listing in the CRHR.

Mountain Meadows Golf Course Historic Resources Evaluation, Los Angeles County, CA

Architectural Historian

CLIENT: County of Los Angeles

Conducted research, field survey, and historic evaluation of the Los Angeles County-owned Mountain Meadows Golf Course for CEQA compliance of a project to improve the Club House and Pro Shop. Included on-site intensive pedestrian survey, research, and preparation of an assessment report.

Wilshire Country Club Historic Resources Evaluation, Los Angeles County, CA

Architectural Historian

CLIENT: County of Los Angeles

Conducted research, field survey, and historic evaluation of the Wilshire Country Club located in Hancock Park, in the City of Los Angeles, for CEQA compliance of a project by the County of Los Angeles to improve drainage through the privately owned country club property. Included on-site intensive pedestrian survey, research, and preparation of an assessment report.

Knollwood Country Club and Golf Course, Los Angeles County, CA

Architectural Historian

CLIENT: County of Los Angeles

Conducted research, field survey, and historic evaluation of the Los Angeles County-owned Knollwood Country Club for CEQA compliance of a project to replace the golf cart barn, which had been destroyed by fire. Included on-site intensive pedestrian survey, research, and preparation of an assessment report.

Historic Structures Report and Design Reviews, Sierra Madre, Los Angeles County, CA

Architectural Historian

CLIENT: Cett Corporation

Prepared a Historic Structures Report for two nineteenth-century agricultural buildings at the Stonegate residential development. Work consisted of intensive pedestrian survey and on-site photographic documentation of the Carter Barn and the Macomber Cabin, properties that were constructed by pioneer settlers to the San Gabriel Valley. Proposed residential development for each of 21 parcels of the subdivision were reviewed for compliance with Secretary of the Interior's Standards.

Canyon Creek Resort Project, Norco, CA

Architectural Historian

CLIENT: Lansing Companies

Conducted an intensive pedestrian-level survey of historical resources within the proposed Canyon Creek Resort Project site in compliance with CEQA. The 430-acre site includes the former facilities of Wyle Laboratories, which operated beginning in 1957 as a commercial testing facility for a number of markets, including defense.

Cultural Resources Evaluation Report for the De Anza School Project, San Diego, CA

Architectural Historian

CLIENT: BRG Consulting

Surveyed and evaluated historical buildings on the campus of De Anza School. Methodology consisted of archival research and an intensive-level pedestrian survey of the campus.

Review of Vibration Monitoring Plan for Los Angeles Metro construction at Walt Disney Concert Hall, Los Angeles County, CA

Architectural Historian

CLIENT: AECOM

Reviewed the Vibration Monitoring Plan for the Regional Connector Transit Corridor Project as a means of avoiding impacts to 12 historic structures, as well as the Walt Disney Concert Hall and REDCAT theater. Although the Walt Disney Concert Hall and REDCAT are not historic buildings, they were treated as such in the Environmental Impact Statement/Environmental Impact Report (EIS/EIR) in acknowledgment of their significance and were included in the review.

177 Colorado Boulevard Fountain Historic Resource Assessment, Los Angeles County, CA

Architectural Historian

CLIENT: Arroyo Colorado LLC

Prepared a historic resource evaluation of a fountain designed as an integral element of the Pacific Bell Telephone complex at 177 E. Colorado Boulevard constructed 1971-1974. The complex is made up of a corporate office tower, parking structure, and landscaping including two plazas, requiring that the fountain be evaluated in the context of the complex and not as an individual element. The evaluation was conducted in advance of a project to demolish the Howard E. Troller-designed fountain in order to develop the plaza in compliance with CEQA. Conducted background research and site reconnaissance, and prepared an evaluation report and DPR forms.

Palm Springs Spa Hotel Historic Properties Inventory Report, Riverside County, CA

Architectural Historian

CLIENT: Agua Caliente Band of Cahuilla Indians

Documented and evaluated the Palm Springs Spa Hotel, a mid-century modern spa and hotel complex built on the site of the original Palm Springs hot mineral spring on lands owned by the Agua Caliente Band of Cahuilla Indians. The evaluation included development of a site-specific historic context statement, in-depth research and documentation of the property, and HABS-like photographic recordation.

Los Angeles Unified School District Historic Context Statement and Survey, Los Angeles County, CA

Architectural Historian

CLIENT: LAUSD Office of Environmental Health and Safety

Served as assistant project manager for the historic context for the Los Angeles Unified School District, which recently received preservation awards from the California Preservation Foundation and the L.A. Conservancy. Responsibilities included conducting background research, writing summary reports, contributing to intensive-level surveys of 56 post-war LAUSD campuses, and compiling evaluations and significance statements for California DPR forms for CEQA compliance.

Highlander Elementary School Historic Resources Evaluation, Los Angeles County, CA

Architectural Historian

CLIENT: LAUSD Office of Environmental Health and Safety

Conducted an intensive-level survey and prepared a historic resources evaluation for Highlander Elementary School, a postwar LAUSD campus located in the San Fernando Valley, in advance of demolition of the campus.

Historic Designed Gardens of Pasadena Historic Context, Los Angeles County, CA

Architectural Historian

CLIENT: City of Pasadena

Researched and wrote portions of historic context and contributed to the creation of National Register Multiple Property Documentation for Historic Designed Gardens in Pasadena, 1873-1975. Contexts developed include Gardens of Health and Pleasure: Early Resorts and Estate Gardens in Pasadena, 1873-1929; Bring the Outside Inside and the Inside Outside: Residential Garden Design in Pasadena, 1905-1968; Non-Residential Gardens in Pasadena, 1913-1989; and Municipal Parks and Recreational Facilities in Pasadena, 1902-1975. The historic context statement includes biographies of landscape architects known to have worked in the City of Pasadena during the periods of significance and documentation of both residential and non-residential properties.

SurveyLA, Los Angeles County, CA

Preservation Intern

CLIENT: City of Los Angeles

Contributed to writing the Historic Context Statement, significance statements, and survey reports for the Los Angeles Historic Resource Survey Project (SurveyLA), a citywide, multi-year initiative partially funded by the J.Paul Getty Trust with guidance from the Getty Conservation Institute, to survey more than 800,000 parcels in the City of Los Angeles. Conducted field surveys of two Community Plan Areas (CPA) within the City of Los Angeles: the West Los Angeles CPA and the South Los Angeles CPA.

Application for Landmark Status for the University Young Women's Christian Association, Alameda County, CA

Architectural Historian

CLIENT: Berkeley Architectural Heritage Association

Prepared a successful application for presentation to the City of Berkeley Landmarks Preservation Commission for landmark status of the University YWCA building. Designed by master architect Joseph Esherick, the building is a merging of two Bay Area architectural traditions: Arts and Crafts that thrived in the late nineteenth and early twentieth centuries, and Bay Area Modern, a form of Mid-Century Modernism particular to the region.

Sherri Andrews, M.A., J.D., RPA

Senior Archaeologist

Firm Name: ASM Affiliates, Inc., Pasadena, California

Total Years of Experience: 23

Employment History:

2002-present Director/Senior Archaeologist/Technical Editor, ASM Affiliates, Pasadena, California
2001-2002 Associate Archaeologist/Laboratory Director, ASM Affiliates, Encinitas, California
2000-2001 Associate Archaeologist, ASM Affiliates, Encinitas, California
1997-2000 Field Technician, ASM Affiliates, Encinitas, California
1999 Laboratory Director, Northridge Center for Public Archaeology, California State University, Northridge Field School on San Clemente Island
1997-present Fishbone Analyst for ASM Affiliates, Bonner and Associates, Keith Companies, Applied Earthworks, various locations in California
1996-1997 Laboratory Assistant, Northridge Center for Public Archaeology, California State University, Northridge, California

Education:

J.D. 2012/Law/Concord Law School (honors)
M.A. 2000/Archaeology/California State University, Northridge (honors)
B.A. 1989/Anthropology/University of California, Los Angeles

Additional Training:

2019 Advanced CEQA Workshop, Association of Environmental Professionals
2012 NPI Seminar: Section 106 Review for Experienced Practitioners
2004/2009 CEQA Workshop, Association of Environmental Professionals
2002 Flintknapping Workshop, Zzyzx Desert Study Center
2002 Historic Bottle Identification, Society for California Archaeology
2001 Faunal Identification, Society for California Archaeology

Registrations:

2013-present State Bar of California #289037
2000-present Register of Professional Archaeologists

Professional Memberships:

1996-present Society for California Archaeology/member
1996-present Society for American Archaeology/member
2002-present Association of Environmental Professionals/member

Other Capabilities: MS Word, MS Excel, MS Access, WordPerfect

Awards/Commendations: Letter of Commendation from the Defense Advanced Research Projects Agency

Clearances: U.S. Fish and Wildlife Colorado River Endangered Fishes Recovery Permit

Citizenship: USA

Languages: N/A

Mr. James Shearer, Archaeologist, USDI Bureau of Land Management, Barstow Field Office, (760) 252-6034

Professional Profile:

Ms. Andrews earned a Juris Doctorate from Concord Law School in 2012, and has been a member of the State Bar of California since March 2013. She earned her Master of Arts degree in Anthropology with a specialization in Public Archaeology from California State University, Northridge (CSUN) in 2000, where her Master's thesis research dealt with sampling methodology as applied to the analysis of fish bone remains from the extensive and highly stratified Eel Point site on San Clemente Island. She has been listed on the Register of Professional Archaeologists since 2000. Having served as Principal Investigator, Co-Principal Investigator, and Field Director, Ms. Andrews has experience in all aspects of project management, ranging from records searches and fieldwork to report writing and preparation. She also has experience in laboratory management, including artifact analysis, cataloging and curation, and has served as laboratory director for three university-run field schools, including the San Clemente Island Eel Point site field school run by CSUN, and the San Elijo Lagoon project run by ASM and University of California, San Diego. She currently also acts as ASM's technical report editor, providing in-house quality assurance and control. Her research interests include both desert and island adaptations, site formation processes, resource utilization, landscape patterning, and faunal analysis focused on aquatic resources.

Selected Project Experience:

Cultural Resources Assessment, Victorville, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: The RCH Group

Managed an archaeological initial study for the development of a proposed storage facility on a currently vacant parcel. The study was conducted in order to address potential environmental impacts of the proposed project and to determine potential for significant subsurface resources on the property. Completed client coordination, records search, and literature review, an intensive pedestrian survey, and preparation of a final report. This project was completed in compliance with CEQA.

Archaeological Monitoring of Water Line Replacement Project, Chino Hills State Park, San Bernardino County, CA

Project Manager

CLIENT: California State Parks

Conducted all agency interaction, analyzed records searches, managed field work, and prepared summary of monitoring tasks conducted in support of water line replacement in proximity to historical resources within Chino Hills State Park.

Archaeological Monitoring of Water Line Replacement Project, Silverwood Lake State Recreation Area, Hesperia, San Bernardino County, CA
Project Manager

CLIENT: California State Parks

Conducted all agency interaction, analyzed records searches, managed field work, and prepared summary of monitoring tasks conducted in support of water line replacement in proximity to historical resources within Silverwood Lake State Recreation Area near Hesperia.

Class III Cultural Resources Inventory for the Rabbit Springs et al. Scrub Seal Project, Lucerne Valley, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: County of San Bernardino Department of Public Works

Conducted all agency interaction, analyzed records searches, managed and conducted field work, and prepared full site documentation and technical report for Class III intensive survey of selected road margins within Project area. As a result of the Class III inventory, ASM identified and documented one prehistoric archaeological resource and four historical resources. The newly documented prehistoric archaeological site is a type of rock feature sites unique to this part of the Mojave Desert; historic resources are primarily survey markers and refuse related to general road and desert travel.

Class III Cultural Resources Inventory for the Cedar Street et al. Chip Seal Project, Victorville and Hesperia, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: County of San Bernardino Department of Public Works

Conducted all agency interaction, analyzed records searches, managed and conducted field work, and prepared full site documentation and technical report for Class III intensive survey of selected road margins within Project area. No previously undocumented resources were encountered as a result of the survey.

Santa Rosa Island Main Ranch Monitoring, Channel Islands National Park, Santa Barbara County, CA

Senior Archaeologist/Project Manager

CLIENT: National Park Service

Conducted all agency interaction, analyzed prior site documentation, conducted field work, and prepared report for monitoring of ground disturbances related to soils testing near a known prehistoric archaeological site within the Main Ranch area. No previously undocumented resources were encountered during monitoring.

Santa Cruz Island Main Ranch Burn Survey, Channel Islands National Park, Santa Barbara County, CA

Senior Archaeologist/Project Manager

CLIENT: National Park Service

Conducted all agency interaction, analyzed prior site documentation, managed and conducted field work, and prepared full site documentation and technical report for Class III intensive survey of recently burned area in the Main Ranch area. As a result of the Class III inventory, ASM identified and documented three prehistoric archaeological sites and several isolated finds. The newly documented prehistoric archaeological sites are shell middens with associated artifact scatters. The identification of the sites allows for them to be protected during future fire and weed abatement efforts.

Summit View Apartments Project, Lake View Terrace, Los Angeles County, CA
Senior Archaeologist/Project Manager
CLIENT: City of Los Angeles

Conducted cultural resources assessment of the Project parcel, including analysis of records searches, field work, and preparation of technical report for Class III intensive survey in support of City compliance with Section 106 of the NHPA. No previously undocumented resources were encountered as a result of the survey.

Roosevelt High School Cultural Resources Technical Report, Los Angeles, Los Angeles County, CA

Senior Archaeologist/Project Manager
CLIENT: Los Angeles Unified School District

Performed archaeological component of cultural resources assessment of the Project parcel, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared portions of report for cultural resources inventory of the Roosevelt High School campus in the Boyle Heights area of the City of Los Angeles. No previously undocumented archaeological resources were encountered as a result of the study.

Army's Residential Communities Initiative, 2018-2022 Outyear Development Plan Cultural Resources Technical Report, Monterey and Seaside, Monterey County, CA

Senior Archaeologist
CLIENT: Potomac-Hudson Engineering, Inc.

Performed archaeological component of cultural resources assessment, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared portions of report for cultural resources inventory of portions of two military housing areas within the cities of Monterey and Seaside. No previously undocumented archaeological resources were encountered as a result of the study.

Santa Ana First Street Apartments / Santa Ana Elks Lodge, Santa Ana, Orange County, CA

Senior Archaeologist
CLIENT: Santa Ana First Street LLC

Performed archaeological component of cultural resources assessment, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared portions of report for cultural resources inventory of the Project parcel within the City of Santa Ana. No previously undocumented archaeological resources were encountered as a result of the study.

Rialto Drop Lot Cultural Resources Study, Rialto, San Bernardino County, CA

Senior Archaeologist/Project Manager
CLIENT: Kimley-Horn

Performed archaeological cultural resources assessment including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared report for cultural resources inventory of approximately 3.35 acres within the City of Rialto. No previously undocumented archaeological resources were encountered as a result of the study.

Hollenbeck Park Lake Literature Review Memorandum, Boyle Heights, Los Angeles County, CA

Senior Archaeologist
CLIENT: GLOBAL

Performed analysis of literature review, records search, and historical imagery and prepared memorandum to document previously conducted cultural resources inventories for the Project parcel located within the Boyle Heights community of the City of Los Angeles. No previously undocumented archaeological resources were encountered as a result of the study.

Meridian Trunk Sewer Cultural Resources Technical Report, City of Riverside, Riverside County, CA

Senior Archaeologist

CLIENT: Kimley-Horn

Performed archaeological component of cultural resources assessment of the Project area, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared portions of report for cultural resources inventory of linear project within the City of Riverside. No previously undocumented archaeological resources were encountered as a result of the study.

Maple Avenue and Vineyard Avenue Avenue/Rialto Annexation Island 4 Industrial Cultural Resources Evaluation Report, Rialto, San Bernardino County, CA

Senior Archaeologist

CLIENT: Kimley-Horn

Performed archaeological component of cultural resources assessment of the Project parcel, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared portions of report for cultural resources inventory of approximately 16 acres within the City of Rialto. No previously undocumented archaeological resources were encountered as a result of the study.

University High School Science Lab Safety Retrofit Monitoring

Senior Archaeologist/Project Manager

CLIENT: Prime Axis Construction / Los Angeles Unified School District

Managed archaeological and Native American monitoring during ground-disturbing activities in the vicinity of a previously documented archaeological site on the campus of University High School in West Los Angeles, supervised monitors, and provided end of project documentation.

Alameda Warehouse Cultural Resources Evaluation Report, Compton, Los Angeles County, CA

Senior Archaeologist/Project Manager

CLIENT: PlaceWorks / Compton Unified School District

Performed archaeological component of cultural resources assessment of the Project parcel, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared report for cultural resources inventory of approximately 5 acres within the City of Compton. No previously undocumented archaeological resources were encountered as a result of the study.

El Rivino (Rialto Fulfillment Center) Monitoring Project, Rialto, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: Kimley-Horn

Managed archaeological monitoring during ground-disturbing activities at a former golf course in the City of Rialto, supervised monitor, and provided end of project documentation.

Wedgeworth Elementary School Cultural Resources Evaluation Report, Hacienda Heights, Los Angeles County, CA

Senior Archaeologist/Project Manager

CLIENT: PlaceWorks / Hacienda-La Puente Unified School District

Performed archaeological cultural resources assessment of the Wedgeworth Elementary School campus, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared report for cultural resources inventory of approximately 20 acres within the community of Hacienda Heights. No previously undocumented archaeological resources were encountered as a result of the study.

Del Rey Pointe Cultural Resources Evaluation Report, Los Angeles, Los Angeles County, CA
Senior Archaeologist/Project Manager
CLIENT: AHN & Associates, LLC

Performed archaeological cultural resources assessment including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared report for cultural resources inventory of approximately 3 acres along Ballona Creek within the City of Los Angeles. No previously undocumented archaeological resources were encountered as a result of the study.

Grandview Elementary School Cultural Resources Evaluation Report, Manhattan Beach, Los Angeles County, CA
Senior Archaeologist

CLIENT: PlaceWorks / Manhattan Beach Unified School District

Performed archaeological component of cultural resources assessment of the Project area, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared portions of report for cultural resources inventory of the combined school campuses within the City of Manhattan Beach. No previously undocumented archaeological resources were encountered as a result of the study.

13636 Nason Street Cultural Resources Evaluation Report, Moreno Valley, Riverside County, CA
Senior Archaeologist

CLIENT: PlaceWorks / Moreno Valley Unified School District

Performed archaeological component of cultural resources assessment of the Project parcel, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared portions of report for cultural resources inventory of approximately 9 acres within the City of Moreno Valley. No previously undocumented archaeological resources were encountered as a result of the study.

Ramona Young Acquisition Cultural Resources Evaluation Report, San Jacinto, Riverside County, CA
Senior Archaeologist

CLIENT: PlaceWorks / San Jacinto Unified School District

Performed archaeological component of cultural resources assessment of the Project parcel, including analysis of records search and historical imagery, completed an intensive pedestrian survey, and prepared portions of report for cultural resources inventory of approximately 2.3 acres within the City of San Jacinto. No previously undocumented archaeological resources were encountered as a result of the study.

Section 110 Archaeological Evaluation and Eligibility Investigation at the North Ranges Complex, Naval Air Weapons Station (NAWS) China Lake, Kern County, CA
Senior Archaeologist

CLIENT: Environmental Management and Planning Department, NAWS China Lake

Directed evaluation effort at two prehistoric archaeological sites on the North Range at NAWS China Lake in support of the Base's compliance with Section 110 of the National Historic Preservation Act (NHPA); reviewed and compiled records searches, conducted and managed all project logistics, prepared for field work and site documentation.

Class III Cultural Resources Inventory and Selected Site Evaluations for the Doble 33 kV Rebuild Project, San Bernardino County, CA
Senior Archaeologist/Project Manager

CLIENT: Jacobs Engineering / SCE

Charged with all client and agency interaction, analyzed records searches, developed work plan, managed and directed field work, and prepared full site documentation and technical report for Class III intensive survey and selected site evaluations along an approximately 15-mi.-long transmission line corridor within BLM lands in Lucerne Valley and the San Bernardino National Forest in San Bernardino County. Seventeen sites were newly recorded and 35 previously documented sites were revisited and updated. At the

conclusion of the inventory, 54 sites were evaluated for National Register of Historic Places (NRHP) eligibility; 10 sites were recommended as individually eligible, and 13 were recommended as potentially eligible as part of the Holcomb Valley Mining District or in relation to the Gold Mountain mining boom period.

**On-Call Monitoring for California State University at Long Beach (CSULB), Los Angeles County, CA
Senior Archaeologist/Project Manager**

CLIENT: CSULB

Managing ongoing on-call monitoring contract for all ground-disturbing construction activity on CSULB campus. Manage monitors, day-to-day scheduling, creation of monitoring summaries, responsible for all client interaction. Ten projects have been successfully completed; a number of projects are currently in progress.

Supplemental Archaeological Survey for Harvest at Limoneira (East Area One) Project, Ventura County, CA

Senior Archaeologist

CLIENT: Parkstone Companies

Conducted archaeological pedestrian survey of waterway areas within Project area under the jurisdiction of the U.S. Army Corps of Engineers. No previously undocumented resources were encountered as a result of the survey.

Determination of Effect Letters for Section 106 Undertakings within Military Housing Areas Managed by Lincoln Family Housing, Seal Beach Naval Weapons Station, Seal Beach, Orange and San Diego counties, CA

Senior Archaeologist

CLIENT: Lincoln Family Housing

Assessing undertakings on a project-by-project basis within and adjacent to NHRP-eligible prehistoric archaeological sites within the context of existing programmatic agreements to provide determinations of effect and assist in SHPO consultation, if required. Six determinations have been completed to date.

Class III Cultural Resources Inventory for the Eldorado–Lugo–Mohave Series Capacitor Project (Geotechnical Investigations), San Bernardino County, CA

Field Director

CLIENT: Insignia

Acted as field director for inventory of approximately 193 acres in the Mojave Desert, San Bernardino County. As a result of the Class III inventory, ASM identified and documented 12 archaeological resources and 26 isolated occurrences. Newly documented prehistoric archaeological sites include lithic scatters and two rock feature sites unique to this part of the Mojave Desert; historic sites are primarily refuse scatters related to the Union Pacific Railroad, National Old Trails Highway, and other desert travel.

**Lead Technical Services and Section 106 Historic Preservation Services, Los Angeles, CA
Project Manager / Senior Archaeologist**

CLIENT: City of Los Angeles Housing and Community Investment Department

Managing archaeological services under an on-call contract for the City of LA Housing and Community Investment Department. The purpose of the contract is to advise and assist the City of LA in conducting research, preparing all federal and state required documentation on the extent, condition, and status of potential historically-significant properties, and coordinate with the SHPO and ACHP. Under this contract, completing all archaeological records searches under a Memorandum of Understanding (MOU) with the local Information Center and Phase I cultural resources surveys.

Tract 18980 Cultural Resources Assessment, Victorville, San Bernardino County, CA

Senior Archaeologist

CLIENT: TMS Consortium

Managed an archaeological initial study for the development of 20 single-family homes. The study was conducted in order to address potential environmental impacts of the proposed project and to determine potential for significant subsurface resources on the property. Completed client coordination, records search, and literature review, an intensive pedestrian survey, and preparation of a final report. This project was completed in compliance with CEQA.

Tract 18940 Cultural Resources Assessment, Victorville, San Bernardino County, CA

Senior Archaeologist

CLIENT: TMS Consortium

Managed an archaeological initial study for the development of 20 single-family homes. The study was conducted in order to address potential environmental impacts of the proposed project and to determine potential for significant subsurface resources on the property. Completed client coordination, records search, and literature review, an intensive pedestrian survey, and preparation of a final report. This project was completed in compliance with CEQA.

Raymond Hotel Tunnel Peer Review, Los Angeles County, CA

Senior Archaeologist

CLIENT: Cherylpacgroup

Provided archeological review for proposed multi-family residential development; project included review of existing documentation related to location of an historically used tunnel associated with the former Raymond Hotel, documented as running beneath the proposed project location, and site visit.

Cultural Resource Study for the Panattoni Valley Boulevard Project, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: Kimley-Horn

Managed an archaeological initial study for the development of a warehouse distribution center. The study was conducted in order to address potential environmental impacts of the proposed project and to determine potential for significant subsurface resources on the property. Completed client coordination, records search, an intensive pedestrian survey of approximately 16.9 acres, documentation of one historic site, and preparation of site record and letter report. This project was completed in compliance with CEQA.

Phase I Cultural Resources Survey for PCH Intersection Improvement Project, Los Angeles County, CA

Project Manager

CLIENT: Schmitz & Associates

Managed the completion of a Phase I cultural resources survey for an intersection improvement project. The survey was completed in compliance with CEQA and Section 106 of the NHPA and included the completion of a records search and literature review, an intensive pedestrian survey and preparation of a final technical report.

Logistics III, IV, and V Archaeological Monitoring, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: Kimley-Horn

Managed archaeological monitoring on three industrial park development sites, supervising archaeological monitors, and providing end of project documentation.

Cultural Resource Study for the Euclid Avenue Center, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: Kimley-Horn

Conducted records search, completed an intensive pedestrian survey, and prepared letter report for cultural resources inventory of approximately 10 acres within the City of Chino. No resources were documented.

Cultural Resource Study for the 4th and Utica Avenue Warehouse Project, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: Kimley-Horn

Conducted records search, completed an intensive pedestrian survey, and prepared letter report for cultural resources inventory of approximately 14 acres within the City of Rancho Cucamonga. No resources were documented.

Cultural Resource Study for the Redlands Commerce Center, San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: Kimley-Horn

Conducted records search, completed field work, and prepared letter report for cultural resources inventory of approximately 8.45 acres adjacent the City of Redlands. One previously recorded landscape resource adjacent the project area is being evaluated to determine whether it is a CEQA historical resource.

Cultural Resource Study for the Pilot Flying J Industrial Center, Riverside County, CA

Senior Archaeologist/Project Manager

CLIENT: Kimley-Horn

Conducted records search, completed field work, and prepared letter report for cultural resources inventory of approximately 12 acres within the City of Jurupa Valley. No resources were documented.

Section 106 Archaeological Evaluation and Eligibility Investigations at the North and South Ranges Complexes, Naval Air Weapons Station (NAWS) China Lake, Kern, Inyo, and San Bernardino counties, CA

Senior Archaeologist

CLIENT: Environmental Management and Planning Department, NAWS China Lake

Directed evaluation efforts at 22 sites on the North Range complex and one on the South Range at NAWS China Lake; reviewed and compiled records searches, conducted and managed all project logistics, completed field work, and prepared site documentation. This project was conducted under Section 106 of the National Historic Preservation Act (NHPA). Of the 23 sites evaluated during this project, 18 are recommended as not eligible for NRHP listing, while five others are considered to possess information useful for addressing regional research issues and are, therefore, recommended as eligible for NRHP listing.

Section 110 Archaeological Evaluation and Eligibility Investigations at the North Ranges Complex, Naval Air Weapons Station (NAWS) China Lake, Kern and Inyo counties, CA

Senior Archaeologist

CLIENT: Environmental Management and Planning Department, NAWS China Lake

Directed evaluation efforts at 26 sites on the North Range complex at NAWS China Lake; reviewed and compiled records searches, conducted and managed all project logistics, completed field work, and prepared site documentation. This project was conducted under Section 110 of the National Historic Preservation Act (NHPA). Of the 26 sites evaluated during this project, 15 are recommended as not eligible for NRHP listing, while 11 others are considered to possess information useful for addressing regional research issues and are, therefore, recommended as eligible for NRHP listing.

Class III Cultural Resource Inventory for Intor Resources Corporation's Proposed Clayton NE, Gemini, and Jackson Wash (JW-007 and JW-009) Mineral Exploration Test Drilling, Esmeralda County, NV

Field Director

CLIENT: Intor Resources Corp.

Acted as field director for inventory of 18 drill sites and overland access routes for proposed mineral exploration, encompassing a total of approximately 13 acres of BLM-administered land in Clayton Valley and Jackson Wash, Esmeralda County. Three historic isolates were documented as a result of the survey.

Cultural Resource Study for the IPT I-215 Distribution Center II (Georgia Project), San Bernardino County, CA

Senior Archaeologist/Project Manager

CLIENT: Kimley-Horn

Conducted records search, completed field work, and prepared letter report for intensive survey of approximately 8 acres within the City of San Bernardino. No resources were documented as a result of the inventory.

Cultural Resource Evaluation Report for the Mt. San Antonio College (Mt. SAC) SEIR for 2015 Facilities Master Plan Update and Physical Education Projects, Los Angeles County, CA

Senior Archaeologist

CLIENT: Mt. SAC Facilities Planning and Management

Conducted records search review, completed field work, and contributed to cultural resource inventory in support of the Mt. SAC Master Plan Update.

Archaeological Inventory of 3,000 Acres, Naval Air Weapons Station (NAWS) China Lake, San Bernardino County, CA

Senior Archaeologist

CLIENT: Environmental Management and Planning Department, NAWS China Lake

Conducted records searches, completed field work, and prepared full site documentation and technical report for Class III intensive survey of approximately 3,000 acres on the North Range complex at NAWS China Lake. This project was conducted under Section 110 of the National Historic Preservation Act (NHPA) and was intended to satisfy baseline cultural resources inventory requirements for the installation. A total of 100 sites was newly documented as a result of the project, including 98 prehistoric resources and two historical water development locations.

Waterman Industrial Park Initial Study and AB52 Consultation Coordination, San Bernardino, CA

Senior Archaeologist

CLIENT: Kimley-Horn

Managed an archaeological initial study and AB52 consultation coordination for the development of an industrial park. The study was conducted in order to address potential environmental impacts of the proposed project and to determine potential for significant sub-surface resources on the property. Completed client coordination, records search and literature review, an intensive pedestrian survey, AB52 consultation coordination and preparation of a final report. This project was completed in compliance with CEQA.

Cultural Resources Evaluation for the Panattoni Logistics Center IV, San Bernardino County, CA

Senior Archaeologist

CLIENT: Kimley-Horn

Conducted records search review, completed field work, and contributed to cultural resource inventory of approximately 18 acres within the City of Rialto. No new resources were encountered.

Cultural Resources Evaluation for the Panattoni Logistics Center V, San Bernardino County, CA

Senior Archaeologist

CLIENT: Kimley-Horn

Conducted records search review, completed field work, and contributed to cultural resource inventory of approximately 9 acres within the City of Rialto. One previously undocumented historical site was recorded.

**Site Condition Assessment for Harvest at Limoneira (East Area One) Project, Ventura County, CA
Senior Archaeologist**

CLIENT: Parkstone Companies

Conducted site condition assessment of all five previously documented sites (one prehistoric and four historic) sites within the Project area in support of a Supplemental Environmental Impact Report to evaluate an amendment to the East Area One Specific Plan, updated site records, and wrote letter report providing summary of findings.

Site Recording of Archaeological Sites on Northern San Clemente Island, Naval Auxiliary Landing Field (NALF) San Clemente Island (SCI), Los Angeles County, CA

Senior Archaeologist/Project Manager

CLIENT: Naval Facilities Engineering Command, Southwest

Conducted recordation project encompassing approximately 380 archaeological sites on NALF SCI; this included relocation of all known sites, creating primary documentation of undocumented and known-but-undocumented sites, evaluation of documentation for previously recorded site records, and re-documentation of inadequately recorded sites. The Project supports the Naval Base Coronado/SCISCI Cultural Resources Management Program (CRMP) for compliance with Section 110 of the National Historic Preservation Act (NHPA) through completing documentation of identified prehistoric archaeological properties.

Archaeological Site Protective Signage Maintenance Project, Naval Auxiliary Landing Field (NALF) San Clemente Island (SCI), Los Angeles County, CA

Senior Archaeologist/Project Manager

CLIENT: Naval Facilities Engineering Command, Southwest

Responsible for installation, replacement, or removal of protective site signs on approximately 900 selected archaeological sites aboard NALF SCI. Sites requiring new signage are located along roadways and across the operational training landscape of northern and central SCI.

Class III Inventory of 1,339 Acres, and Condition Assessment and Re-Evaluation of NRHP Eligibility, Palo Verde Point, Imperial County, CA

Senior Archaeologist

CLIENT: Bureau of Reclamation, Lower Colorado Regional Office

Conducted a 1,339-acre Class III inventory and condition assessment and re-evaluation of National Register of Historic Places (NRHP) eligibility of the Palo Verde Point, located in Imperial County, California for the Bureau of Reclamation (Reclamation), Lower Colorado Regional Office. This inventory was conducted to provide Reclamation with cultural resource site information for compliance with Section 110 of the National Historic Preservation Act. The project identified over 40 previously undocumented ground stone material procurement sites.

Cultural Resources Inventory of the Southern California Edison Company Mesa Substation 500 Kilovolt Project, Los Angeles County, CA

Senior Archaeologist

CLIENT: Southern California Edison Company

Conducted records search, completed field work, and contributed to historic properties/historical resources inventory in support of modification of an existing 500 kV substation. Seven resources within the project area, including six transmission lines and the Mesa Substation itself, were found to be in the same condition as originally documented; all have been determined to not eligible. No new resources were encountered.

Archaeological Inventory of Historical and Contemporary Road Segments, Naval Air Weapons Station (NAWS), Kern and San Bernardino counties, CA

Senior Archaeologist

CLIENT: Environmental Management and Planning Department, NAWS China Lake

Conducted records searches, completed field work, and prepared technical report for Class III intensive survey of 21.61 linear miles of historical and contemporary road segments on the North and South Range

complexes at NAWA China Lake, encompassing portions of three counties and situated at the northern edge of the Mojave Desert. This project was conducted under Section 110 of the National Historic Preservation Act (NHPA) and was intended to satisfy baseline cultural resources inventory requirements for the installation. Three sites were newly documented as a result of the project, including one prehistoric resource and two historical refuse deposits.

Santa Monica City Hall Seismic Retrofit and Adaptive Reuse Monitoring Project, Los Angeles County, CA

Senior Archaeologist

CLIENT: Department of Civil Engineering, City of Santa Monica

Coordinated monitoring efforts, conducted monitoring activities, and prepared summary report for archaeological monitoring undertaken during ground-disturbing activities related to seismic retrofitting and use conversions at the Santa Monica City Hall. The work was conducted in compliance with Section VIII of the Section 106 Memorandum of Agreement (MOA) prepared for the project, which was funded by both the Federal Emergency Management Agency (FEMA) and the City of Santa Monica. No prehistoric or historic resources were encountered during the course of the monitoring program.

Silurian Valley West Solar Project Class III Inventory, San Bernardino County, CA

Field Director

CLIENT: Iberdrola Renewables (IBR)

Coordinated field personnel, and conducted part of a Class III intensive pedestrian survey of approx. 4,000 acres of BLM-managed land in the Silurian Valley. IBR is proposing to construct and operate the Silurian Valley Solar Project in the Mojave Desert, north of the town of Baker. This Class III cultural resource inventory was conducted to identify cultural resources that are eligible or are potentially eligible for listing on the National Register of Historic Places (NRHP).

Site Evaluations in Section 8D (T32S/R24E), Kern County, CA

Senior Archaeologist

CLIENT: Occidental of Elk Hills, Inc.

Conducted several site evaluations and prepared technical report for evaluations of 44 historical oil industry-related sites for their eligibility for listing on the National Register of Historic Places (NRHP).

Stewart South Mountain Wells, Vintage Petroleum, Ventura County, CA

Senior Archaeologist

CLIENT: Vintage Petroleum

Conducted field work and prepared technical report for intensive Class III survey of proposed oil well locations in the South Mountain Oil Field, located north of Santa Paula in eastern Ventura County.

Cultural Resources Survey for the Metrolink CTO-31 Project, Los Angeles County, CA

Senior Archaeologist

CLIENT: HDR Engineering, Inc.

Conducted records searches, field work, and prepared technical report for a cultural resources survey of approx. 7.4 miles of the Union Pacific Railroad, located in the communities of Chatsworth, Northridge, and Van Nuys, in the San Fernando Valley. The survey was conducted in compliance with NEPA and Section 106 of the NHPA in advance of proposed track additions and station upgrades. No cultural resources had been previously recorded within the project area, and none were identified as a result of the survey.

Cultural Resources Survey for the Metrolink Bridge 427.70 Project, Ventura County, CA

Senior Archaeologist

CLIENT: HDR Engineering, Inc.

Conducted records searches, field work, and prepared technical report for the cultural resources survey of Metrolink Bridge 427.7, located across the Arroyo Simi in Moorpark, eastern Ventura County. The project was conducted in advance of flood control activities in the area of the bridge within the river bed. No cultural

resources had been previously recorded within the project area, and none were identified as a result of the survey.

Class III Inventory of Portions of Sections 14 and 23 (T27S/R27E), Kern County, CA

Senior Archaeologist

CLIENT: Berry Petroleum Company

Coordinated crew, conducted field work, and prepared technical report for block survey within operational oil fields in the western San Joaquin Valley. The 560-acre area includes over 100 active and inactive oil wells; the project area was an intensively industrialized zone, with more than half of the ground surface having experienced previous disturbance. One newly recorded historical cultural resource, a house and corral compound, is present within the study area and is recommended as not NRHP eligible.

Phase I/Class III Inventory of 1,280 Acres in Sections 11Z and 12Z (T30S/R22E), Kern County, CA

Senior Archaeologist

CLIENT: Occidental of Elk Hills, Inc.

Coordinated crew, conducted field work and prepared technical report for block survey within operational oil fields in the western San Joaquin Valley. The survey resulted in the identification and recording of two new cultural resources, a sparse historical refuse scatter and an abandoned wellhead with associated brick concentrations.

Cultural Resource Construction Monitoring and Discovery Plan for the LADPW SSRP Project, Los Angeles County, CA

Senior Archaeologist

CLIENT: Matthew and Stewart Company

Prepared a Construction Monitoring and Discovery Plan for the Secondary Sewer Renewal Project (SSRP) in the Pacific Palisades area. The plan was prepared to comply with the requirements of Note 57 (Construction Archaeological Monitoring) of the SSRP C08A and C08B work plans issued by the Los Angeles Department of Public Works (LADPW) Engineering Division.

Class III Inventory of 4,510 Acres in Sections 6R, 26Z, 6B, 22B, and 34B, 12C, and 7D, 9D, and 14D, Kern County, CA

Senior Archaeologist

CLIENT: Occidental of Elk Hills, Inc.

Coordinated crew, conducted field work, and prepared technical report for large block survey within operational oil fields in the western San Joaquin Valley. The survey resulted in the identification and recording of 51 new cultural resources. These include 21 oil wells, 20 refuse or debris sites, and 10 oil-related feature sites. Sixteen isolates were also documented, all of which are historic. The locations of 40 previously recorded resources were also assessed; 27 of these resources were relocated in the field.

Archaeological Re-survey and Site Testing for Naval Air Field (NAF) El Centro Target 101, Imperial County, CA

Senior Archaeologist

CLIENT: Naval Facilities Engineering Command, Southwest

Supervised and conducted survey of approximately 640 acres on NAF El Centro's Target 101, situated on Imperial County's West Mesa. Over 40 previously unrecorded archaeological sites were documented, many of which are associated with ancient Lake Cahuilla. The project also included testing of 60 fire-affected rock (FAR) features for the purpose of determining the use, temporal range, and origin of these features that are ubiquitous in the area, but previously not systematically tested. Prepared site records and authored technical report.

Silurian Valley Wind Project Class II Inventory, San Bernardino County, CA**Field Director****CLIENT: Iberdrola Renewables (IBR)**

Coordinated two field crews and conducted a Class II 10-percent intensive pedestrian survey of 4,693 acres of BLM-managed land in the Silurian Valley. IBR is proposing to construct and operate the Silurian Valley Wind Project in the Mojave Desert, north of the town of Baker. This Class II inventory was conducted to identify sites that are eligible or are potentially eligible for the NRHP. In all, ASM identified and documented 22 resources during the Class II sample survey, all of which date to the historic period and are primarily related to historic mining and railroad activity within the Silurian Valley dating as early as 1880 with continued occupation and use of the area until the 1940s. Historic period resources identified and documented include refuse deposits, the Old Spanish Trail, the Tonopah & Tidewater Railroad, Riggs Siding, Silver Lake Siding, and a two documented historic period roads.

Existing Conditions Cultural Resource Survey for the Metrolink Eastern Maintenance Facility, San Bernardino County, CA**Senior Archaeologist****CLIENT: HDR Engineering, Inc.**

Conducted records search and field survey of maintenance facility to determine existing conditions and presence or absence of cultural resources within the yard, and prepared report.

Granite Wind Telecommunication Lines Project, San Bernardino County, CA**Field Director****CLIENT: Bureau of Land Management, Barstow Field Office**

Conducted and coordinated a Class III inventory of approximately 80 miles of telecommunication line corridor, and co-authored resulting technical report. As a result of the survey, 19 new cultural resource sites were identified and documented, five of which were determined to be NRHP-eligible, comprising prehistoric opportunistic quarries, lithic scatters, and rock features, and several historic refuse scatters. Additionally, 12 previously recorded sites were encountered and updated, including three historic structures along the Apple Valley and Jasper Substations Corridor, the Newberry Springs site, National Old Trails Highway – Route 66, three Southern California Edison transmission line corridors and a substation, Hector Road, a multi-component site, and an extensive prehistoric lithic scatter with rock features.

Copper Mountain North Solar Project, Clark County, NV**Field Director****CLIENT: Bureau of Land Management, Las Vegas Field Office**

Class III inventory of approximately 2,500 acres, coordinated field crews and co-authored resulting report. In all, ASM identified and documented five new cultural resource sites as a result of the inventory, consisting of three NRHP-eligible prehistoric campsites, a prehistoric lithic scatter, and a historic refuse scatter.

Tejon Ranch Headquarters Archaeological Inventory, Kern County, CA**Senior Archaeologist****CLIENT: Tejon Mountain Village**

Supervised and conducted an intensive Class III archaeological inventory an approximately 410-acre study area located in the Headquarters area of the Tejon Ranch. The study was undertaken to assist with compliance with the NHPA of 1966, as amended, with regard to the U.S. Fish and Wildlife Service Tehachapi Upland Multi-Species Habitat Conservation Plan (MSHCP) project. Intensive pedestrian coverage of the study area resulted in the discovery of two previously unidentified cultural resources. One resource, TJ-1, is a prehistoric bedrock milling site, situated at the south end of the project area. The other deposit identified, TJ-2, appears to represent remains of the original Fort Tejon complex; although recorded only on the west side of Interstate 5, the original fort complex was actually situated on both sides of the modern highway.

Third Party Review of Class III Cultural Resources Survey for Imperial Solar West and Imperial Solar South, Imperial County, CA

Senior Archaeologist

CLIENT: BRG Consulting

Supervised and conducted spot-checking and field-proofing of prehistoric archaeological sites recorded by another firm during a Class III survey for the Imperial South and Imperial West solar projects in the West Mesa area of Imperial Valley. Updated existing documentation to provide more accurate data for use in resources management by BLM.

Archaeological Survey of Four Solar LLC Solar Farm Projects, Imperial County, CA

Senior Archaeologist

CLIENT: Environmental Management Associates

Conducted survey, recorded historical irrigation canal elements, and prepared four technical reports for proposed solar farm project sited in agricultural lands.

Beaumont Cherry Valley Recycled Waterline Project, Riverside County, CA

Senior Archaeologist

CLIENT: Dudek Environmental Services

Conducted a records search and survey of the proposed pipeline alignment and provided letter report of project results.

Class III Inventory of the Kern River Pipeline Lateral Access Roads, San Bernardino County, CA

Senior Archaeologist

CLIENT: Ecology and Environment, Inc.

Completed a Class III cultural resources inventory for eight proposed access roads, an addendum to the Kern River Mountain Pass Lateral Pipeline Project. The purpose of the project was to address potential access road modifications as may be required during construction, associated cultural resource clearances and compliance, and provide the agencies with this information prior to the Federal Energy Regulatory Commission (FERC) issuing a Certificate of Public Convenience and Necessity and BLM issuing a Grant of Right-of-Way (ROW) for this project. The study area and Area of Potential Effect (APE) for the project consisted of eight designated access roads located on BLM-managed lands, which total approximately 24.5 miles; 0.18 miles in Nevada and the remainder in California. Four sites were newly recorded and 11 previously recorded sites were field-checked and updated.

California Valley Solar Ranch (CVSR) Testing Project, San Luis Obispo County, CA

Senior Archaeologist

CLIENT: Ecology and Environment, Inc.

Supervised and conducted an archaeological evaluation of prehistoric site CVSR BRM-1 to determine its significance and provide recommendations for its potential eligibility to the NRHP and California Register of Historical Resources (CRHR). Site evaluation included site mapping, the collection of surface artifacts, the recording of surface features, and the hand excavation of five 1-x-1-m test pits and 10 shovel test pits (STPs). The site consists of 10 bedrock mortar (BRM) features in natural sandstone outcrops, and a shallow subsurface archaeological deposit.

Class III Inventory of the Kern River Pipeline Lateral to Mountain Pass, San Bernardino County, CA

Senior Archaeologist

CLIENT: Ecology and Environment, Inc.

Supervised and conducted survey of approximately 315 acres of land held by the BLM and Molycorp LLC Mining Company in the Ivanpah Valley and Clark Mountains of eastern California, near the Nevada border. Recorded one previously unrecorded historical archaeological site provided proper documentation for two other mining sites previously known only as map points, and discovered and recorded a previously unrecorded portion of an historic transmission line. Prepared site records and co-authored technical report.

Archaeological Survey for the Fort Yuma Healthcare Center, Imperial County, CA**Senior Archaeologist****CLIENT: DOWL HKM**

Conducted a records search and pedestrian survey of the Quechan Tribe's Fort Yuma Healthcare Center, located on Indian Hill and adjacent the Tribal Headquarters. During this site visit, the ASM staff was led on a tour of the campus by a member of the maintenance staff at the hospital. A reconnaissance survey was also conducted for the other buildings within the National Historic Landmark (NHL) district on Indian Hill. Although these buildings are not part of the study, a general overview of the entire district was needed to evaluate impacts of the demolition of the buildings in the historic district as a whole, particularly Building 215. Conducted a meeting with the Quechan Tribe Cultural Committee to discuss and consult on the nine subject buildings and any other cultural concerns with regard to the hill in general.

Naval Air Field (NAF) El Centro Target 68 Archaeological Survey, Imperial County, CA**Senior Archaeologist****CLIENT: Naval Facilities Engineering Command, Southwest**

Supervised and conducted survey of approximately 3,240 acres within Target 68, located on East Mesa. Recorded 24 newly identified archaeological sites and 57 isolates, several of which appear to relate to a dunes passage route utilized in the 1920s or 1930s. Prepared site records and authored technical report.

Naval Air Field (NAF) El Centro Targets 101 and 103 Archaeological Survey, Imperial County, CA**Senior Archaeologist****CLIENT: Naval Facilities Engineering Command, Southwest**

Supervised and conducted survey on the west ranges of NAF El Centro, situated on Imperial County's West Mesa. Survey covered approximately 1,200 acres in Target 101, and resulted in the recording of 52 previously unrecorded archaeological sites and 30 isolates, many of which are likely to be associated with ancient Lake Cahuilla. An additional 2,100 acres were surveyed in Target 103, resulting in the recording of eight previously unrecorded sites and 39 isolates. Prepared site records and authored report.

Naval Air Field (NAF) El Centro Parachute Landing Zone Testing, Imperial County, CA**Senior Archaeologist****CLIENT: Cultural Resources Management Program, Naval Facilities Engineering Command, Southwest**

Supervised and conducted testing and evaluation of four previously recorded Lake Cahuilla shoreline sites. Prepared site record updates and authored technical report.

Archaeological Survey of Naval Air Field (NAF) El Centro Target 95, Imperial County, CA**Senior Archaeologist****CLIENT: Naval Facilities Engineering Command, Southwest**

Supervised and conducted survey of the entire range, encompassing approximately 6,029 acres on the northern of the two east ranges of NAF El Centro, situated on Imperial Valley's East Mesa. Recorded 74 previously unrecorded archaeological sites and 130 isolates, many of which are associated with the relic shoreline of ancient Lake Cahuilla. Documented a large number of ceramic sites unprecedented in number and density in one portion of the range. Prepared site records and authored technical report.

Survey for Navy Seals, Navy Special Warfare Group One, Chocolate Mountains Desert Warfare Training Facility (DWTF), Imperial County, CA**Project Archaeologist****CLIENT: Naval Facilities Engineering Command, Southwest**

Participated in survey of selected portions of the SWAT-4 area of the Navy Seals DWTF on the Chocolate Mountain Aerial Gunnery Range (CMAGR).

Barry M. Goldwater Range (BMGR) West Training Areas Survey, Yuma County, AZ
Senior Archaeologist

CLIENT: Naval Facilities Engineering Command, Southwest

Supervised and conducted surveys of over 7,000 acres on BMGR West in support of the MV-22 EIS. Recorded nine previously undocumented sites and 119 isolates. Authored technical report.

Coles Flat Survey, NAVAIR, Naval Air Weapons Station (NAWS) China Lake, Inyo County, CA
Field Director

CLIENT: NAWS China Lake

Supervised 10-person crew in survey of approximately 3,500 acres on the North Range. Recorded 20 previously unrecorded archaeological sites.

CRFWLS Survey, Bureau of Reclamation, Imperial County, CA and Yuma County, AZ
Senior Archaeologist

CLIENT: Bureau of Reclamation

Supervised and conducted surveys along the Lower Colorado River in support of Reclamation stabilization programs. Coordinated with and conducted survey on land managed by the Colorado River Indian Tribes, and recorded 15 previously undocumented sites on lands south of the Palo Verde Dam.

BLM Roads Restoration Survey, Imperial County, CA
Senior Archaeologist

CLIENT: Bureau of Land Management, El Centro Field Office

Supervised and conducted records searches and surveys of approximately 400 acres of land impacted by off-highway vehicle activities on both East and West Mesas, including the DeAnza/Shellbed area of the Yuha Desert. Recorded one site and five isolates in the survey area, and seven sites, two isolates, and an update for the multicomponent Yuha Well site. Prepared site records and authored technical report.

Cable Creek Levee Restoration Survey, San Bernardino County, CA
Survey Participant

CLIENT: HDR Engineering, Inc.

Participated in survey of 200 acres and a 1.72-mile roadway segment. Resulted in the recordation of two sites.

Naval Auxiliary Landing Field (NALF) San Clemente Island SWATs Survey, Los Angeles County, CA
Principal Investigator and Field Director

CLIENT: Naval Facilities Engineering Command, Southwest

Supervised and conducted a 1,500-acre field survey at NALF San Clemente Island (SCLI). Identified and documented over 600 sites, and prepared technical report.

Naval Auxiliary Landing Field (NALF) San Clemente Island Infantry Operations Area Survey, Los Angeles County, CA
Principal Investigator and Field Director

CLIENT: Naval Facilities Engineering Command, Southwest

CLIENT: Naval Facilities Engineering Command, Southwest

Managed a 3,500-acre field survey. Identified and documented over 200 sites, and prepared technical report.

Caltrans District 7 TEA Rural Roads Inventory, Los Angeles and Ventura counties, CA
Project Archaeologist and Field Director

CLIENT: Caltrans District 7

Coordinated and conducted fieldwork in tandem with prime contractor personnel. Prepared post-field notes and site records. As Field Director, conducted field surveys and inventories within Caltrans ROW along rural highways.

Cultural Resources Survey of Access Roads in the Chocolate Mountain Aerial Gunnery Range (CMAGR), Imperial County, CA
Project Archaeologist

CLIENT: Naval Facilities Engineering Command, Southwest

Conducted an intensive Class III pedestrian survey of approximately 1,000 acres, encompassing 100-ft. widths on either side of selected roads, to assist CMAGR in its compliance with Section 110 of NHPA. This survey was part of a continuing program of archaeological inventory for Section 106 and Section 110 compliance by Marine Corps Air Station (MCAS) Yuma.

Yucaipa Brineline Due Diligence Records Search and Survey, San Bernardino County, CA
Senior Archaeologist

CLIENT: Dudek

Conducted records search, managed field survey, and wrote report that summarized cultural resources that have been recorded along a linear proposed brineline route.

Phase I Survey of 8,100 Acres on Edwards Air Force Base (EAFB), Kern County, CA
Crew Chief

CLIENT: U.S. Army Corps of Engineers

Supervised survey and site recording of selected areas within an 8,100-acre project area on EAFB.

Phase I and II Survey of 2,500 Acres and Evaluation of 50 Sites on Edwards Air Force Base (EAFB), Kern County, CA
Crew Chief

CLIENT: U.S. Army Corps of Engineers

Supervised survey and site recording of selected areas within 2,500-acre project area on EAFB.

CalPortland Cement Mojave Survey, Kern County, CA
Field Director

CLIENT: Enviroscientists Inc.

Conducted survey of approximately 2,000-acre project area to assess the presence or absence of potentially significant prehistoric and historic sites.

Flint Canyon Trail Improvement Project Survey, Los Angeles County, CA
Project Archaeologist

CLIENT: City of La Cañada Flintridge

Directed field survey and authored report for small survey conducted in support of a pedestrian and equine trail improvement project.

Hollywood Hills Emergency Watershed Protection Survey, Los Angeles County, CA
Project Archaeologist

CLIENT: USDA Natural Resources Conservation Service

Coordinated with client, managed records search, field survey, and prepared report for a small survey conducted in support of landslide repair project along the historic Lake Hollywood Reservoir.

Arboretum Specific Plan Survey, San Bernardino County, CA
Field Director

CLIENT: David Evans and Associates

Supervised field survey, recording and evaluation of five historic sites, and prepared technical report for 485-acre survey within historic Grapeland Irrigation District for multi-use development project north of City of Fontana.

Archaeological Survey of the Fortuna Mine Complex, Marine Corps Air Station (MCAS) Yuma, Yuma County, AZ

Field Director

CLIENT: Naval Facilities Engineering Command, Southwest

Supervised three crew members and co-authored report for this large-scale inventory of the historic Fortuna gold mining district in the Barry M. Goldwater Range.

Archaeological Survey of 40 Acres for the Bounce Strip Improvements Project on Naval Air Weapons Station (NAWS) China Lake, San Bernardino County, CA

Field Director

CLIENT: NAWS China Lake

Managed archaeological survey of 40 acres, recorded seven archaeological sites, and prepared report for a proposed bounce strip improvements project at NAWS China Lake.

Met Towers Survey Project, Imperial County, CA

Project Archaeologist

CLIENT: GH Energy Ltd

Directed field survey to identify locations devoid of archaeological resources to be used for the construction of wind testing towers on lands administered by BLM.

Lavic Lake Testing Project, Marine Corps Air Ground Combat Center (MCAGCC) Twentynine Palms, San Bernardino County, CA

Field Director

CLIENT: MCAGCC Twentynine Palms

Supervised crews undertaking Phase II testing and evaluation of lithic and habitation sites in the Lavic Lake Training Area on MCAGCC Twentynine Palms.

Canyon Trails Survey Project, Riverside County, CA

Project Archaeologist

CLIENT: T&B Planning

Directed field survey, site recording, and prepared report for cultural resources inventory for proposed residential development project in Hemet.

Boulder Ridge Survey Project, Riverside County, CA

Project Archaeologist

CLIENT: T&B Planning

Directed field survey, site recording, and prepared report for cultural resources inventory for proposed development project in Moreno Valley.

Laguna Dam Survey, Imperial County, CA and Yuma County, AZ

Field Director

CLIENT: USDI Bureau of Reclamation, Lower Colorado Region

Supervised a cultural resources inventory and evaluation for the Laguna Dam Restoration Project.

Palo Verde Dam Survey, Riverside County, CA and La Paz County, AZ

Field Director

CLIENT: USDI Bureau of Reclamation, Lower Colorado Region

Supervised a cultural resources inventory and evaluation for the Palo Verde Dam Bank Stabilization and River Control Project.

Drop 2 Reservoir Survey, Imperial County, CA

Field Director

CLIENT: USDI Bureau of Reclamation, Lower Colorado Region

Supervised a cultural resources inventory and evaluation for a proposed inlet canal and reservoir project on the north side of the All-American Canal.

South Range Survey, Naval Air Weapons Station (NAWS) China Lake, San Bernardino County, CA

Field Director

CLIENT: Epsilon Systems Solutions

Supervised field survey, site recording, and co-authored report for a large-scale survey of the South Range area of NAWS China Lake.

Phase I Cultural Resource Survey of the Armitage Airfield and Weapons Survivability Areas, Naval Air Weapons Station (NAWS) China Lake, Inyo County, CA

Field Director

CLIENT: Epsilon Systems Solutions

Conducted and supervised the survey of 220 acres in a developed portion of the North Range at NAWS China Lake. The survey identified two archaeological sites, a prehistoric lithic scatter and a historic ranching/agricultural facility, and seven prehistoric isolates.

Quackenbush Evaluation, Marine Corps Air Ground Combat Center (MCAGCC) Twentynine Palms, San Bernardino County, CA

Field Director

CLIENT: MCAGCC, Twentynine Palms

Supervised field crews undertaking Phase II testing and evaluation of lithic sites in the Quackenbush Training Area on MCAGCC Twentynine Palms.

Duncan Canyon Survey, San Bernardino County, CA

Field Director

CLIENT: David Evans and Associates

Managed survey, site recording, and prepared report for an 85-acre survey within historic Grapeland Irrigation District for multi-use development project north of the City of Fontana.

Jurupa Avenue Road Widening Project, San Bernardino County, CA

Project Archaeologist

CLIENT: David Evans and Associates

Managed records search, field survey, and prepared report for survey of a 6-mile-long portion of Jurupa Avenue in Fontana for a proposed road widening and annexation project.

Dominguez Channel Widening Project, Los Angeles County, CA

Project Archaeologist

CLIENT: City of Carson

Conducted records search and field survey, and prepared report for survey of a portion of Sepulveda Boulevard and the Dominguez Channel Bridge for proposed road and bridge widening project.

200 North Sunrise Survey, Riverside County, CA

Project Archaeologist

CLIENT: Liberty Escrow

Conducted field survey and prepared report for 0.9-acre survey within Palm Springs.

All-American Canal Lining Project Survey, Imperial County, CA

Field Director

CLIENTS: USDI Bureau of Reclamation, Lower Colorado Region

Supervised two crew chiefs and six crew members, and co-authored report for this large-scale Class II and III inventory and random sample survey. Managed complete survey of the 4,200-acre right-of-way along approximately 23 mi. of the All-American Canal, and a 10-percent random sample survey that encompassed an additional 743 acres. This project was undertaken for use in planning the placement of quarrying and staging areas for the proposed canal lining project.

Thompson Ranch Survey, Riverside County, CA

Field Director

CLIENT: Encore Land Partners

Managed two crew members and authored report for this 201-acre survey during which three previously unrecorded prehistoric sites were found.

Lot 11 Business Park, Riverside County, CA

Project Archaeologist

CLIENT: NuWays Unlimited

Coordinated with client, conducted records search, field survey, and prepared report for 5-acre proposed business park in Temecula.

Jurupa Hills Survey, Riverside County, CA

Field Director

CLIENT: Helix Environmental

Managed survey of a parcel near the community of Sunnyside. Recorded three historical sites associated with a citrus growing and packing business that operated on the property between the 1920s and the 1950s: the site of the original packing plant; a concrete-lined reservoir; and a small cobble-lined cistern. Prepared technical report.

Seal Beach Sprinkler Installation Monitoring, Naval Weapons Station (NWS) Seal Beach, Orange County, CA

Archaeological Monitor

CLIENT: NWS Seal Beach

Coordinated with the base archaeologist and monitored the installation of a sprinkler system through and near a large National Register-eligible prehistoric site on NWS Seal Beach.

Camino del Diablo Survey, Marine Corps Air Station (MCAS) Yuma, Yuma County, AZ, 2004

Field Director

CLIENT: Naval Facilities Engineering Command Southwest

Supervised three crew members and wrote sections of the report for this large-scale inventory along approximately 40 miles of historic Camino del Diablo and other trails in the Barry M. Goldwater Range for use in base land use planning.

Coachella Canal Data Recovery, Riverside County, CA

Field Director

CLIENT: USDI Bureau of Reclamation, Lower Colorado Region

Supervised three crew members, co-authored report, and analyzed fish bone recovered from data recovery on two prehistoric fish camp sites located on the relic shoreline of ancient Lake Cahuilla that were expected to be impacted by the Coachella Canal Lining Project.

Coachella Canal Supplemental Survey, Imperial and Riverside counties, CA

Field Director

CLIENT: USDI Bureau of Reclamation, Lower Colorado Region

Supervised two crew members and co-authored report for intensive pedestrian survey of areas added to the APE of a proposed project to line or redirect the Coachella Canal.

Extended Phase I Study of State Route 76, San Diego County, CA

Field Director

CLIENT: Caltrans District 11

Performed shell identification and analysis for a testing project in support of proposed widening of State Route 76.

Naval Weapons Station (NWS) Seal Beach Demolition Monitoring, Orange County, CA

Project Coordinator

CLIENT: NWS Seal Beach and Clauss Construction

Authored discovery plan and technical report for this project, which involved the monitoring of demolition of a building adjacent a large National Register-eligible prehistoric site on NWS Seal Beach.

Testing of Chula Vista Village 7, San Diego County, CA

Field Director

CLIENT: David Evans and Associates

Managed one crew member and prepared report for testing of small prehistoric archaeological site CA-SDI-12279 in Chula Vista.

Santa Monica Mountains Land Exchange, Los Angeles County, CA

Field Director

CLIENT: Ultrasystems

Conducted survey and prepared report for proposed land transfer of less than 1 acre in Beverly Hills.

Mountain Gate II, Century Homes, Riverside County, CA

Field Director

CLIENT: Century Vintage Homes

Conducted survey, identified one prehistoric and two historic sites, and prepared site records and report for 40-acre pre-development survey in Palm Springs.

Inventory for Barstow Phase IA, San Bernardino County, CA

Project Manager

CLIENT: David Evans and Associates

Conducted records search, field reconnaissance and cultural resource inventory, and prepared report for proposed industrial park building site near Barstow.

Walnut Avenue Survey, San Bernardino County, CA

Field Director

CLIENT: David Evans and Associates

Conducted records search, survey, and cultural resource inventory, and prepared report for proposed road widening and storm drain improvement project in Fontana.

Survey for Yucaipa Water District, San Bernardino and Riverside counties, CA

Field Director

CLIENT: Dudek and Associates

Conducted field survey and prepared report for cultural resource inventory of proposed alignment for improvements to the Yucaipa Water District delivery system in rural and urban portions of Yucaipa and Calimesa.

Survey for Morongo Creek Blowsand Project, Riverside County, CA

Principal Investigator

CLIENT: David Evans and Associates

Served as Field Director for survey with one crew person and prepared report for proposed blowsand mitigation project between Cathedral City and Palm Springs.

**Defense Advanced Research Projects Agency (DARPA) Drone Survey, San Bernardino County, CA
Co-Principal Investigator and Field Director**

CLIENT: Booz Allen Hamilton

Prepared report for field reconnaissance and cultural resource inventory of proposed routes for the DARPA Grand Challenge event through the Mojave Desert. Received letter of commendation from the DARPA for work on the project.

MWD Yorba Linda Survey, Orange County, CA

Field Director

CLIENT: Metropolitan Water District of Southern California

Conducted records search and field survey, and prepared report for cultural resource inventory within MWD's Diemer Filtration Plant in Yorba Linda.

Papa One Survey and Small Sites Testing, Marine Corps Base (MCB) Camp Pendleton, San Diego County, CA

Field Director

CLIENT: Naval Facilities Engineering Command Southwest

Supervised six crew members and prepared reports for intensive pedestrian survey of portions of the Papa One training area and testing of 10 small lithic sites in the Papa One and Three training areas on Camp Pendleton.

**City of San Diego Metropolitan Wastewater Department (MWWD) Otay River Pump Station (ORPS)
Data Recovery, San Diego County, CA**

Co-Principal Investigator

CLIENT: MWWD

Coordinated all field operations, served as Field Director coordinating five crew members and drilling crew, prepared report, supervised on-site wet-screening operation and conducted special analyses on shellfish and fish bone derived from extensive midden deposits recovered in geoarchaeological coring project at the Otay River Pump Station.

Coachella Canal Survey, Imperial and Riverside counties, CA

Field Director

CLIENT: USDI Bureau of Reclamation, Lower Colorado Region

Supervised three crew members for intensive pedestrian survey of the APE of a proposed project to line or redirect the Coachella Canal, and conducted analysis of fish remains found during survey.

Testing for Agua Caliente Tribal Building, Riverside County, CA

Field Director

CLIENT: Agua Caliente Band of Cahuilla Indians

Supervised three crew members for testing of proposed building site for the Agua Caliente Tribal Building in Palm Springs.

SCLI Protective Signing, Commander, Los Angeles County, CA

Co-Field Director

CLIENT: Navy Region Southwest

Managed emplacement of archaeological site protective signing project on San Clemente Island.

CA-FRE-3219 Testing, Caltrans Central Region, Fresno County, CA

Field Director

CLIENT: Caltrans Central California Cultural Resources Branch

Coordinated backhoe trenching and participation of geomorphologist, and prepared report for Extended Phase I subsurface testing for buried site components at prehistoric archaeological site CA-FRE-3219 that may be impacted by proposed State Route 41 highway widening project in Fresno County.

CA-SDI-811 Coring, Marine Corps Base (MCB) Camp Pendleton, San Diego County, CA

Field Director

CLIENT: Naval Facilities Engineering Command Southwest

Supervised six crew members and coring crew for extensive coring, testing, and data recovery project at prehistoric shell midden site CA-SDI-811 along the coastal margin of Camp Pendleton.

San Elijo Lagoon Testing Project, San Diego County, CA

Instructor, Field Supervisor, and Laboratory Director

CLIENT: National Science Foundation

Conducted for two university-sponsored archaeological field schools at San Elijo Lagoon, San Diego County. Directed students in field and laboratory procedures, analyzed artifacts and ecofacts recovered from excavation, directed flotation, prepared portions of report, and conducted fish bone analysis.

Survey of State Route 905, San Diego County, CA

Field Director

CLIENT: Caltrans District 11

Managed survey and site recording within the right-of-way of proposed alignment for State Route 905.

Roblar Road Testing of Five Midden Sites, Marine Corps Base (MCB) Camp Pendleton, San Diego County, CA, 2005

Field Director and Laboratory Director

CLIENT: Naval Facilities Engineering Command Southwest

Supervised testing of five prehistoric midden sites on Camp Pendleton, supervised excavation, column sampling, site and feature recording, directed processing, analysis and curation of artifacts, and prepared portions of report.

Lemon Tank Testing, San Clemente Island, Los Angeles County, CA

Field and Laboratory Director

CLIENT: Navy Region Southwest

Supervised testing and excavation at four prehistoric archaeological sites in the Lemon Tank area of San Clemente Island.

DeLuz Survey, Marine Corps Base (MCB) Camp Pendleton, San Diego County, CA

Field Director

CLIENT: U.S. Army Corps of Engineers

Supervised six-person field crew for intensive pedestrian survey in the DeLuz area of Camp Pendleton.

CA-SDI-7296 Testing, San Diego County, CA

Field Director

CLIENT: Caltrans District 11

Supervised excavation and column sampling. As Laboratory Director, managed all laboratory processing, conducted analysis of artifacts and ecofacts, and prepared portions of report for testing program conducted at shell midden site CA-SDI-7296 along Interstate 5.

Old Airfield Site Testing, San Clemente Island, Los Angeles County, CA

Field and Laboratory Director

CLIENT: Navy Region Southwest

Supervised testing and excavation at five prehistoric archaeological sites in the Old Airfield area of San Clemente Island. Managed processing and curation of artifact collections.

Ridge Road Survey, San Clemente Island, Los Angeles County, CA

Field Director

CLIENT: Navy Region Southwest

Supervised pedestrian survey and site recording along the margins of Ridge Road in the central portion of San Clemente Island.

Survey for PF.Net Fiber Optics, Imperial County, CA

Field Director

CLIENT: Foster Wheeler Environmental

Supervised pedestrian survey and testing of five prehistoric archaeological sites in Imperial Valley.

LVTA Expansion Survey, San Clemente Island, Los Angeles County, CA

Field Director

CLIENT: Navy Region Southwest

Supervised pedestrian survey and site recording for the proposed LVTA road expansion in the central portion of San Clemente Island.

Executive Summary

This Executive Summary provides a brief overview of the findings of this Phase I Environmental Site Assessment (ESA). Although the Executive Summary is an integral part of a report, it does not substitute for reading the entire report or the appended or referenced documents in order to fully understand the findings and potential environmental concerns associated with the Site.

Lendlease Corporation (Lendlease, the User) retained Roux Associates, Inc. (Roux) to perform a Phase I ESA of the property located at 3401 South La Cienega Boulevard, Los Angeles, California (the Site). Roux performed this Phase I ESA in general accordance with the American Society for Testing Materials (ASTM) *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13) in an effort to identify, to the extent feasible, the presence of recognized environmental conditions (RECs) with respect to the Site as defined in ASTM E1527-13. Exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

The Site is an irregularly shaped property located in the Baldwin Hills neighborhood of the City of Los Angeles California (Figure 1). The Site is comprised of one parcel identified by Los Angeles County Assessor' Parcel Number (APN) 4205-032-001 encompassing approximately 3.6 acres. The Site is bounded by South La Cienega Boulevard to the east, commercial property to the south and west, and West Jefferson Boulevard and the Metro Expo Line elevated railway and La Cienega/Jefferson Station to the north. As depicted in the Hollywood/Beverly Hills, California (2012) 7.5-minute quadrangle topographic map published by the United States Geological Survey (USGS), the elevation of the Site is approximately 103 feet above mean sea level (amsl). The topography of the Site and surrounding area is generally flat with a gentle slope toward the west.

On October 2, 2020, Roux visually assessed the Site during the site reconnaissance for potential RECs, including, but not limited to, potential underground storage tanks (USTs), aboveground storage tanks (ASTs), polychlorinated biphenyl (PCB)-containing equipment, hazardous materials storage or handling areas, containerized or bulk wastes, and visual indications of impacted soil.

At the time of the reconnaissance, the Site was occupied nine buildings utilized by Public Storage for commercial self-storage. Onsite operations include the rental of storage units with an on-Site residence for the property manager. Site improvements include the nine buildings, asphalt paved drive aisles and parking, refuse enclosures, and fire hydrants. Figure 2 provides a Site Plan with current building layout and identifications.

Roux also performed a records review in an effort to identify RECs in connection with the Site. This records review addressed the Site and surrounding properties. Roux reviewed commercially available records associated with the Site and nearby properties to assess potential concerns associated with the migration of hazardous substances. The records review also included reasonably ascertainable historical data, which can be helpful in identifying the past uses of the Site and surrounding areas, as it may relate to the environmental condition of the Site.

Roux performed interviews and/or file reviews with various government agencies and other parties with possible knowledge of the Site and surrounding properties in an effort to identify current and past uses of the Site and surrounding areas, as they may relate to the environmental condition of the Site.

ASTM E 1527-13 defines a Recognized Environmental Condition (REC) as:

“The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

A Controlled Recognized Environmental Condition (cREC) as:

“A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

And a Historical Recognized Environmental Condition (hREC) as:

“A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a *recognized* environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.”

The term recognized environmental condition is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

This Executive Summary provides a brief overview of the findings of this Phase I ESA. Although the Executive Summary is an integral part of a report, it does not substitute for reading the entire report or the appended or referenced documents in order to fully understand the findings and potential environmental concerns associated with the Site.

Based on the information obtained through the performance of this ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the RECs are shown in Figure 2. To avoid confusion, all RECs, cRECs, hRECs, and OEFs are numbered sequentially.

Identified RECs

REC 1 – Underground Storage Tank (UST). Based on a review of historical permits, a 15,000-gallon UST was installed at the Site, likely in 1947 during the initial Site development, and was located immediately west of the northwest corner of the main on-Site building. The documented content of the

UST was paraffin wax, which was used in the manufacturing of matches by the Universal Match Company. Paraffin wax is a flammable, soft, colorless semi-solid waxy substance consisting of a mixture of saturated hydrocarbons. Based on available information, the UST used until the mid to late 1970s (approximately 30 years) and it is unclear whether it was removed. The UST does not appear to have been used to store contents other than paraffin wax.

A historical diagram notes the UST was installed approximately seven feet underground with a 4'6" by 10' by 20' access pit to the west of the northwest corner of the main building. Figure 3 provides an overlay of the undated historical diagram (believed to be from circa 1950) over the current Site configuration. Based on this overlay, the former UST area appears to have been situated beneath the north end of Building G.

REC 2 – Railroad Spur. Based on reviewed records, including aerial photographs, topographic maps, and the historical diagram from circa 1950, a railroad spur existed on-Site to the immediate north of the main building. This railroad spur stemmed from the main line of the Southern Pacific Railroad that existed north of the Site. In approximately 2010, the right-of way for the railroad was converted into the present-day Metro Expo Line which is situated on platform raised approximately 15-20 feet above street level. Railroad spurs are known sources of shallow soil contamination from a variety of chemicals of potential concern (COPCs), including metals, total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), pesticides, and polychlorinated biphenyls (PCBs). It is unknown whether the railroad spur materials, such as the steel lines, ballast and underlying structural base, were fully removed from the Site during Site redevelopment.
