REC 3 – Former Match Manufacturing. Prior to Public Storage, the Site was primarily used as a match manufacturing operation by Universal Match Company from the initial development in 1947 to the mid/late 1970s. In addition to the paraffin wax stored in the UST, other hazardous materials used and maintained on Site included phosphorus, glue, water-soluble dyes, sulfur, and inert materials such as sand, glass and clay. According to permits reviewed and research on historical match making processes, wooden sticks are often soaked in phosphate, which serves as a fire retardant; while the inert materials (sand, glass, and clay) are used on the tips of matches to increase the friction and control the burning rate. Materials such as sulfur were used to sustain combustion and water-soluble dyes were often added to give the match head a color such as red or blue. No specific information regarding the size and quantities, or the handling and disposal, of chemicals or hazardous material was found during our historical research.

A reviewed 1953 Industrial Waste Permit suggested that a sump was present, or planned to be installed, in each of the two boiler rooms, and that "sand, glass, clay and sulfur and phosphorus settle in sumps". No information has been reviewed indicating how the sumps were managed or if they were properly abandoned. Based on known manufacturing operations on-Site, solvents containing VOCs may have been used to clean equipment and dilute paraffin wax solutions. Wastewater containing these solvents may have been spilled or placed into former sumps.

Although the possibility of the former on-Site use of solvents could pose a potential vapor intrusion risk to future occupants, the former match manufacturing activities are not believed to have been solvent intensive. In addition, it is noted that proposed development plans for the Site include excavation to depths between 15 and 30 feet below surface in the area of the main building to accommodate parking and footings for future structures.

Identified Controlled RECs

Roux did not identify any cRECs in connection with the current and historical operations at the Site or adjacent properties.

Identified Historical RECs

Roux did not identify any hRECs in connection with the current and historical operations at the Site or adjacent properties.

Identified OEFs

Roux did not identify any OEFs in connection with the current and historical operations at the Site or adjacent properties.

1. Introduction

Roux Associates, Inc. (Roux) completed this Phase I Environmental Site Assessment (ESA) of the commercial property located at 3401 South La Cienega Boulevard, Los Angeles, California (the Site). The Site vicinity is shown in Figure 1 and the Site plan is shown in Figure 2. Roux performed this Phase I ESA in compliance with the scope and limitations of American Society for Testing Materials (ASTM) E1527-13 and the terms and conditions of Roux' proposal dated September 17, 2020. Roux conducted this Phase I ESA for the benefit of Lendlease Corporation (Lendlease, the User).

The following sections of this report present our Phase I ESA findings and conclusions. A glossary containing terms and definitions presented in ASTM E1527-13 is included in Appendix A – Glossary of Terms. Other appendices presented at the end of the report include historical topographic maps, historical aerial photographs, regulatory records review documentation, applicable historical records, and personnel qualifications.

1.1 Purpose

The purpose of this Phase I ESA is to identify and report, to the extent feasible, recognized environmental conditions (RECs) with respect to the Site. Performing a Phase I ESA in general compliance with ASTM E 1527-13 may enable a User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability. That is, the practice that constitutes one of the requirements for “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in 42 USC Section 9601(35) (B).

1.2 Scope of Services

The scope of services for this Phase I ESA included, but was not limited to, the activities listed below.

- A review of reasonably ascertainable and practicably reviewable topographic maps, historical aerial photographs, and city directories, if available, to investigate past Site conditions;
- A review of specific government lists pursuant to ASTM Standard E 1527-13 regarding environmental activities for the Site and local area properties;
- A review of recorded land title records, building, assessors, and fire department records, for permits, citations, and reports connected to the Site that were reasonably ascertainable, practicably reviewable, and publicly available within reasonable time and cost;
- An inspection by an environmental professional to investigate the current use of the Site and to identify environmental concerns including but not limited to, the presence of hazardous substances or petroleum products, wastes, underground storage tanks (USTs), aboveground storage tanks (ASTs), or other environmental concerns;
- Interviews with available representatives of the owner of the Site, occupants, and local government officials by an environmental professional; and
- Preparation of this Phase I ESA report.

Roux initiated this Phase I ESA pursuant to receipt of written authorization to proceed on September 30, 2020.

1.3 Standard of Care

Roux conducted this Phase I ESA using a defined scope of services considered appropriate and agreed upon by all parties on the date the service was authorized, unless the scope of services or the methods used were later modified, in writing, and accepted by all parties prior to performance. Roux conducted this Phase I ESA in accordance with generally accepted practices in a manner consistent with that level of care exercised by other members of our profession in the same locality and under similar conditions of time and accessibility of improvements and information. No other representations, expressed or implied, and no warranty or guarantee is included or intended to be part of this Phase I ESA.

Please note that the scope of services performed in execution of this assessment may not be appropriate to satisfy the needs of other parties. We, therefore, are not responsible for independent conclusions, opinions, or recommendations of others based on our assessment. Furthermore, this Phase I ESA relates to the environmental conditions of the Site and does not address issues raised in transactions such as business risk, purchase of business entities, or interests therein, or of their assets, that may well involve environmental liabilities pertaining to properties previously owned or operated or other offsite liabilities.

Additionally, the findings of this Phase I ESA are based on Roux' observations, inquiries, and historical research using reasonably ascertainable and practically reviewable information obtained within reasonable time and cost constraints. Roux does not represent that this Phase I ESA is an exhaustive investigation that reflects the findings of all of the information available for the Site, nor is it representative of future Site conditions. If additional information is generated from the Site, it should be provided to Roux so that we may evaluate its impact on our conclusions. As such, activities or episodes that transpire subsequent to this Phase I ESA are not considered in this assessment. It is not intended that a Phase I ESA in accordance with ASTM E1527-13 be an exhaustive assessment of a property nor can it wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property.

1.4 Assumptions

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux' investigation to identify the presence of *recognized environmental conditions* connected with the Site in accordance with ASTM E1527-13, as allowed by and consistent with the regulatory requirements of the All Appropriate Inquiry Rule, 40 CFR Part 312, Amendment to Standards and Practices for All Appropriate Inquiries Under CERCLA, Final Rule, published December 30, 2013 (AAI Rule). Specifically, the preamble to the amended AAI Rule states:

The Environmental Protection Agency (EPA) today is taking final action to amend the standards and practices for conducting all appropriate inquiries under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) to reference a standard practice recently made available by ASTM International, a widely recognized standards development organization. Specifically, this final rule amends the "All Appropriate Inquiries Rule" at 40 CFR Part 312 to reference ASTM International's E1527-13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site

Assessment Process” and make clear that persons conducting all appropriate inquiries may use the procedures included in this standard to comply with the All Appropriate Inquiries Rule¹.

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter “Prospective Purchaser”) defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended by the Superfund Amendments and Reauthorization Act of 1986, and the Small Business Liability Relief and Brownfields’ Revitalization Act of 2002, 42 U.S.C. 9601-9675 (collectively referred to hereafter as “CERCLA”) is that person must conduct all appropriate inquiries into the previous ownership and uses of the property in conformance with the AAI Rule (or the ASTM E1527-13) prior to acquisition of the property. The User has acknowledged that, under the AAI Rule, Roux’ performance of this Phase I ESA in accordance with ASTM E1527-13 will not alone result in the User satisfying all requirements of the AAI Rule and will not in itself provide a defense to CERCLA liability. The User has acknowledged that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. Accordingly, Roux makes no guarantees or warranties, expressed or implied, regarding this Phase I ESA, including without limitation, that this Phase I ESA will qualify the User for a defense to CERCLA liability.

Roux has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Rule requires, and the conclusions and recommendations stated herein represent, the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion based on the facts available to Roux and conditions at the time of the performance of this Phase I ESA. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

The User has agreed that Roux shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time this Phase I ESA was performed. To the extent practicable, Roux has identified data gaps, and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of this Phase I ESA. Implementation of the recommendations may not fully address the data gaps, and the information obtained from execution of those recommendations may alter and/or modify the interpretation of the Site conditions and conclusions, herein. This Phase I ESA does not include consideration of matters specifically excluded by ASTM E1527-13, including but not limited to, asbestos-containing building materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, and mold unless specifically identified herein.

Roux has not collected any soil and/or groundwater samples on the Site for Phase I purposes, and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

¹ Federal Register: December 30, 2013 (Volume 78, Number 250) Page 79319

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. This Phase I ESA was conducted with a reasonable degree of inquiry to identify *recognized environmental conditions*, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying *recognized environmental conditions*.

This Phase I ESA Report is not an appraisal or value judgment of the Site. The User has agreed that Roux shall not be liable for any use of this Phase I ESA Report as an appraisal or value judgment of the Site.

This Phase I ESA Report has been prepared for the exclusive use of the User for specific application to the Site covered by this Phase I ESA Report. The User has agreed that any third-party use of this Phase I ESA Report, upon disclosure by the User, is the sole responsibility and at the sole liability of the User.

1.5 User Reliance

No additional parties may use the information contained in this report without obtaining the written permission of Roux or the User. Roux' duties and obligations extend to the User and to no other party. Roux' duties and obligations to the User are not transferable to persons, corporations, or organizations without the express written consent of the User and Roux. The User may rely upon the information provided in this Phase I ESA report for a period of 180 days from the date of issue. After 180 days, this Phase I ESA should be updated in accordance with ASTM guidance. Roux will not be liable for any consequential damages arising from the use of this report for other than its intended purpose, for use of this report beyond 180 days of its issue date, or from unauthorized use by third parties.

This Phase I ESA report must be read and interpreted as a whole and can only be considered representative of the conditions of the Site as of the date of our site reconnaissance described herein. Roux makes no representation whatsoever concerning the condition of the Site beyond the date of our site reconnaissance described herein. Individual sections and appendices of this report are dependent on the balance of this report, and on the terms, conditions, and stipulations contained in the proposal and written amendments accepted by Roux.

2. Site Description

2.1 Site Location and Description

Site Information	
Street Address(es)	Primary and Current Address: 3401 South La Cienega Boulevard Former Associated Address: 5721 West Jefferson Boulevard
City	City of Los Angeles
County	Los Angeles County
State	California
Location	Southwest of the intersection between West Jefferson Boulevard and La Cienega Boulevard
Assessor's Parcel Number (APN)	4205-032-001
Site Acreage (per Los Angeles County Assessor Website)	3.6 acres
Site Occupant(s)	Public Storage - a self-storage company
Onsite Operations	Rental of storage units
Description of Onsite Structures	Nine structures: <ul style="list-style-type: none">• One two-story approximately 36,039 square foot original structure renovated for use as storage• One rectangular 2,081 square foot original structure currently utilized as the on-Site residential unit• Seven additional structures of various size and shapes, single story, solely used for self-storage
Site Paving	Paved asphalt in good to moderate condition
Site Grading	Graded to drain at a gentle slope in the general direction of the southwest corner of the Site. No drains were observed on-Site.
Site Vicinity	Mixed commercial, industrial and residential

Refer to Section 5.0 for a detailed description of the current condition of the Site and operations.

The Site is currently occupied by Public Storage for commercial usage. Onsite operations include the rental of storage units with an on-Site residence for the property manager. Figure 2 provides current building identifications.

2.2 Past Use of the Site

Roux performed a review of historical sources including topographic maps (Appendix B), aerial photographs (Appendix C), fire insurance Sanborn maps (Appendix D), and city directories (Appendix E) obtained from Environmental Data Resources, Inc. (EDR). Building permits from the City of Los Angeles and City of Los Angeles Fire Department – Hazardous Materials and Underground Storage Tanks Units were also reviewed.

Based on this review, the Site was initially undeveloped as early as 1884 and was first developed in 1946/1947 with a rectangular [single-story] structure in the center of the Site (referred to as the main building), two smaller structures situated to the east of the main building, and then at least four smaller structures to the west of the main building. A historical diagram for the Site (circa 1950), provided in Section 4.1, provides labels for the structures to the west of the main building as a *Mixing Room*, a *Storage Building*, and two *Boiler Rooms*.

Tenants listed for the Site included a nut processing facility (name not available) (1946-1948); Universal Match Corp (1948-1971); Ferguson Machine Co Roller Gear Drives (1962-1975); American Air Curtain Co-Division of Universal Match Corp; (1965); and Public Storage (1977-Present).

In 1977, the tenant at the Site became Public Storage and the Site was renovated with seven additional buildings utilized for storage. The main building and the office building to the east were the two original buildings that remained from previous operations. The main building was converted into a two-level storage space with an elevator in its central portion.

2.3 Physical Setting

Roux obtained and reviewed published, reasonably ascertainable information concerning the physical setting of the Site. The following is a summary of the information reviewed from those physical setting sources.

Physical Setting Summary	
United States Geological Survey (USGS) Topographic Map	Hollywood/Beverly Hills, California Quadrangle
Approximate Site Elevation / Source	103 feet above mean sea level (msl) / Beverly Hills, California (2012) 7.5-minute quadrangle topographic map published by the USGS
Nearest Surface Water Features / Approximate Distance	Ballona Creek, a concrete-lined channel / located approximately 300 feet west of the Site
Regional Geology / Source	Holocene alluvial and colluvial sediments to a depth of approximately 10 feet and the Pleistocene Lakewood Formation. North-west trending Inglewood Fault is located approximately 1,000 feet the southwest and the northernmost extension of the Baldwin Hills is located 3,000 feet to the south. / <i>Site Closure Request – Former Shell Service Station 3300 La Cienega Boulevard, Los Angeles</i> by Wayne Perry, Inc. 2010
Site Topography / Source	Generally flat with a gradual slope to the west / Site observation and USGS topographic map
Hydrogeological Region / Source	Located along the northwest margin of the Central Groundwater Basin, separated from the Santa Monica Basin by the Newport-Inglewood Structural Zone. The Bellflower Aquiclude in the Site area begins at approximately 80 feet and extends to 40 feet above mean sea level. / <i>Workplan for Additional Soil and Groundwater Investigation and Groundwater Monitoring Well Installation at 8534 W Washington Boulevard, Culver City</i> by The Reynold Group, 2019.
Depth to Groundwater / Source	Depth to groundwater at a nearby site, 3077-3243 La Cienega Boulevard located 1,200 feet north of the Site, reported depth to groundwater ranging between 7 and 28 feet bgs / <i>UST Case Closure Summary for La Cienega Creative Properties at 3007-3243 La Cienega Boulevard, Los Angeles, CA.</i> by State Water Quality Control Board (SWQCB), 2016

Physical Setting Summary	
Groundwater Gradient Direction / Source	South to south-west / <i>UST Case Closure Summary for La Cienega Creative Properties at 3007-3243 La Cienega Boulevard, Los Angeles, CA.</i> by SWQCB, 2016
Onsite Soil	No known subsurface investigations have been conducted on Site. Nearby subsurface investigations have documents interbedded layers of clay, fine-grained clayey sand, fine to coarse-grained gravelly sand and sand, fine-grained silty sand, sandy silt, and silt to a depth of 100 feet / <i>Site Closure Request – Former Shell Service Station 3300 La Cienega Boulevard, Los Angeles</i> by Wayne Perry, Inc. 2010

3. Sources of Information

Sources of information utilized in preparing this Phase I ESA report included historical topographic maps; historical aerial photographs; a walkover survey of the Site and adjoining properties; in-person discussions with User and tenant personnel; a review of records available at selected local and state regulatory agencies; a review of databases maintained by local, state, and federal government agencies; and other records available from commercial and online sources.

3.1 Historical Sources

To help understand the history of the Site and past land uses, historical sources were obtained from Environmental Data Resources, Inc. (EDR), of Shelton, Connecticut. The sources and locations within the Appendices are provided in the table below.

EDR Historical Sources		
Historical Range	Source	Appendix
1894 - 2018	U.S. Geological Survey Topographic Maps Nationwide Environmental Title Research LLC (NETR) Historical Aerials Database	B
1923 - 2016	EDR Aerial Photographs "Decade Package" NETR Historical Aerials Database	C
1969	EDR "Certified Sanborn® Map Report"	D
1920 - 2014	EDR "City Directory Image Report"	E

3.2 Government Databases

To document potential sources of contamination at or near the Site, a government records search was conducted by EDR. The search included local, state, and federal records for the Site and for other properties within ASTM-standard distances of the Site. The records search is summarized in Section 8.0 and a copy of "The EDR Radius Map™ Report with GeoCheck®," dated September 24, 2020, is included in its entirety as Appendix F. As recommended by ASTM, all but a few of the databases searched were "current," i.e., had been updated within 90 days prior to the search date.

3.3 Site Reconnaissance

On October 2, 2020, Roux personnel conducted a Site Reconnaissance, including the interiors of the main building (A, B and C on Figure 2) and the structure currently utilized as the on-Site residence for the property manager. The remaining seven structures are single level structures containing storage units and were not accessible to view the interior. During the Site Reconnaissance, Roux met with Joe and Betsy Terrazas (the current Site owners); Matthew Isken (the Client representative); and Peter Chang (surveyor for the Client). Additional access was provided by Ms. Tangela Jordan, the Public Storage property manager who resides on-Site. Mr. and Mrs. Terrazas provided limited information regarding recent and historical operations at the Site, which is referenced, as appropriate, throughout the remainder of this Report. Roux was granted permission to document the Site reconnaissance with photographs.

3.4 Regulatory Agencies

Roux contacted governmental agencies for reasonably ascertainable information concerning environmental conditions at the Site. Roux contacted or reviewed information from the agencies provided in the following table. Refer to Appendix G – Regulatory Records Documentation for copies of the records reviewed. A summary of the information gathered from the regulatory agencies is provided in the table and details regarding the records were incorporated into applicable sections as noted.

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
Federal				
U.S. Environmental Protection Agency (EPA) – FOIAonline	09/24/2020	09/29/2020	A response was received to search the MyProperty database. See below.	N/A
U.S EPA MyProperty Database	09/24/2020	N/A	No records were associated with the Site.	N/A
National Pipeline Mapping System (NPMS) Online Database	09/24/2020	N/A	An active crude oil pipeline (ID 31075) is located approximately 50 feet immediately east of the Site.	N/A
State				
State Water Resources Control Board (SWRCB): GeoTracker Online Database	09/24/2020	N/A	No cases were associated with Site. Three completed and closed cases were identified within 1,000 feet of the Site.	N/A

Agency	Date Requested / Accessed	Response Date	Description of Records	Section Discussed
City / Local				
City of Los Angeles Sanitation Bureau	09/24/2020	10/02/2020	Records associated with the Site included an application for an industrial waste permit, dated March 1970.	3.4.1
City of Los Angeles Department of Building and Safety	09/24/2020	N/A	Records associated with the Site included certificates of occupancy from 1948 through 1985 and applications for signs installation and elevator plan check.	3.4.2
City of Los Angeles Fire Department	09/24/2020	10/05/2020	No fire life safety violations were associated with the Site.	N/A
City of Los Angeles Fire Department Hazardous Materials Underground Storage Tank Unit	10/07/2020	10/19/2020	Records associated with the Site included a certificate of occupancy, dated December 1970; permit for an atmospheric tank, issued in May 1970; renewal of a permit for a 15,000-gallon crude scale was tank; and several Site plans.	3.4.3
City of Los Angeles Public Works: Bureau of Engineering	09/24/2020	10/21/2020	The public records request was forwarded to the Geotechnical Engineering Division and the Central Division. No records were associated with the Site.	N/A

3.4.1 Los Angeles City Sanitation Department

The City of Los Angeles Sanitation Department provided an Application for Industrial Waste Permit dated March 1953 that provides a listing of chemicals and associated processes used by Universal Match for match manufacturing on Site. This permit is provided in Appendix G.

The one-page permit notes that processes at the Site include, "Mixing water slurry of inert materials such as sand, ground glass, clay and glue with: Red Phosphorous to make match striker compound. Potassium chlorate, Sulphur [sic] and water soluble dyes to make match head compound". Based on a review of historical match making processes, the inert materials (sand, glass, and clay) were used on the tips of matches to increase the friction and control the burning rate; while materials such as sulfur were used to sustain combustion. The water-soluble dyes were often added to give the match head a color such as red or blue. The quantities, size of storage containers, and location(s) of these chemicals is unknown.

This permit also notes that waste discharge for the inert material such as "sand, glass, clay and sulfur and phosphorus settle in sumps" and that "dissolved potassium chlorate and glue and dyes pass out in water solution". Additional information in this permit suggests that a sump was present in each of the two boiler rooms.

The presence of sumps, along with the former chemicals used on Site in association with the former match manufacturing operations, are considered a REC in the context of this Phase I ESA. No information was reviewed indicating how the sumps were managed or if they were properly abandoned.

3.4.2 Los Angeles City Building Records

Roux reviewed available building records from the City of Los Angeles Department of Building and Safety. These permits are provided in Appendix G.

Contents of the reviewed records are as follows:

- 1946 permit for the construction of a factory, but no dimensions are provided. The address is 5721 West Jefferson Boulevard and the permit is issued to Liberty Plating Co. This is the only mention of Liberty Plating Co. that Roux reviewed in preparation of this Report.
- 1946 permit for the addition of a 27' by 27' and 10' by 10' buildings, located on the west side of the main factory building.
- 1947 permit for a 1-story, 10' by 10' cooling tower.
- 1946 Certificate of Occupancy for a 1-story, 100' by 120' nut factory. This size is equal to approximately one-third of the main building.
- 1948 Certificate of Occupancy for a 1-story 24' by 36' storage shed for combustible materials. The listed owner on this permit is Universal Match Co. No additional details are provided on the combustible materials.
- 1953 Certificate of Occupancy for a 1-story, 7' by 9' storage vault for flammables. The listed owner on this permit is Universal Match Corporation.
- 1955 Certificate of Occupancy for a 200' by 280' parking lot. The listed owner on this permit is Universal Match Company.

- 1970 Certificate of Occupancy for a one-story, 10' by 20' addition to an existing 120' by 300' structure referred to as a match factory. The listed owner on this permit is Universal Match.
- Nine Certificates of Occupancy from 1977 documenting the addition or renovation of structures to the current Site structures utilized by Public Storage. The listed owner on these permits is La Cienega Co.
- Ten Certificates of Occupancy from 1985 documenting the addition of 8' by 20' metal storage bins converted into storage buildings. The listed owner on these permits is La Cienega Properties.
- 2018 Application for Elevator Plan Check and Inspection. This permit correlates with information provided by Mr. and Mrs. Terrazas that the elevator was recently replaced.
- Three applications from 2014 and 2018 for the installation and inspection of signage for Public Storage.

3.4.3 City of Los Angeles Fire Department – Hazardous Materials and Underground Storage Tank Unit

The City of Los Angeles Fire Department – Hazardous Materials and Underground Storage Tanks Units provided a series of permits for the Site (provided in Appendix G), which are discussed herein:

- 1947 Permit for the installation of one 15,000-gallon UST with contents listed as “class 2 inflammable liquid called crude scale wax” and used in the connection with the “manufacturing of safety paper matches”. The owner/name on this permit is Universal Match Corp.
- An undated diagram of the Site (believed to be circa 1950), prepared by the Universal Match Corporation includes labels for Site building, the approximate location of the UST and notes a rail spur within the Site boundary to the north of the main building. This diagram refers to the UST as an “Underground Paraffin Storage Tank”. Paraffin wax is a flammable, soft, colorless semi-solid waxy substance consisting of a mixture of saturated hydrocarbons, and also referred to as crude scale wax.
- May 1970 permit package and diagram for the installation of a 15,000-gallon atmospheric tank issued to Universal Match Div. of UMC Industries. These documents are possibly a permit re-issue of the UST noted in the 1947 permit and discussed above.

3.5 User Provided Information

ASTM E1527-13 provides that the User perform certain tasks. The purpose of this section is to present select User-provided information that can assist in identifying possible *recognized environmental conditions* in connection with the Site. According to ASTM E1527-13, these tasks do not require the technical expertise of an environmental professional and the environmental professional generally does not perform these tasks. Roux administered a questionnaire (Appendix I) to the User at the beginning of this Phase I ESA to assist them with these tasks. The following sections outline the parts of the questionnaire that the User completed.

3.5.1 Environmental Liens or Activity and Use Limitations

The User indicated that they have no knowledge regarding environmental liens or activity and use limitations (engineering/institutional controls) with respect to the Site.

3.5.2 Specialized Knowledge

The User did not report any specialized knowledge related to the Site.

3.5.3 Valuation Reduction for Environmental Issues

The User indicated that they have no knowledge regarding valuation reduction for environmental issues.

3.5.4 Commonly Known or Reasonably Ascertainable Information

The User did not have any knowledge regarding commonly known or reasonable ascertainable information about the Site not already addressed in this report.

3.5.5 Obvious Indicators of the Presence or Likely Presence of Contamination of the Site

The User did not have any knowledge regarding obvious indicators of the presence or likely presence of contamination of the Site not otherwise addressed.

4. Site History

This section documents the history of the Site and describes current conditions and existing or former environmental features.

4.1 Site History

The history of the Site and, to a lesser extent, the surrounding area, including previous land use, has been compiled based on information from the exhaustive list of sources provided in Section 3.

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
Predevelopment History				
Pre-1900	1894	Historical Topographic Map: Los Angeles (15-minute)	The approximate location of the Site is undeveloped land.	Southern Pacific Railroad line, also referred to as the Pacific Electric Railroad, is present to the north, running east to west. Topographic features include the Baldwin Hills to the south and Ballona Creek to the west.
	1896	Historical Topographic Map: Santa Monica (15-minute)	Same as previous topographic map description.	Same as previous topographic map description.
	1898	Historical Topographic Map: Santa Monica (15-minute)	Same as previous topographic map description.	Same as previous topographic map description.
1900s	1900	Historical Topographic Map: Santa Monica (15-minute)	Same as previous topographic map description.	Same as previous topographic map description.
	1902	Historical Topographic Map: Santa Monica (15-minute)	Same as previous topographic map description.	Same as previous topographic map description.
1920s	1920	Historical Topographic Map: Santa Monica (15-minute)	The approximate Site location is undeveloped land.	The Southern Pacific Railroad line is present to the north, running east to west. Topographic features include the Baldwin Hills to the south and Ballona Creek to the west. There is a noted increase in mapped developed to the west and north of the Site.
	1921	Historical Topographic Map: Santa Monica (15-minute)	Same as previous topographic map description.	Same as previous topographic map description.

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
	1923	EDR Aerial Photograph	The approximate Site location is undeveloped land. The railroad line is visible north of the Site, traveling east to west, and there is a developed road, resembling present-day South La Cienega Boulevard.	The surrounding area is generally undeveloped land, with limited rural development to the northeast. Ballona Creek is visible to the west of the Site.
	1924	Historical Topographic Map: Hollywood (7.5-minute)	Same as previous topographic map description.	Same as previous description with a noted increase in mapped development to around the Site to the west, north and northeast.
	1926	Historical Topographic Map: Hollywood (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description.
	1928	EDR Aerial Photograph	This photograph is unclear based on poor image quality. The Site appears to have an unimproved road traveling west to nearby Ballona Creek and additional roads on the north and west side. No clear structures are distinguishable in the photograph.	Same as previous aerial photograph description.
1930s	1938	EDR Aerial Photograph	The Site is undeveloped with unimproved roads connecting to the present-day La Cienega Boulevard to the east and to the property to the west.	The nearby Ballona Creek is channelized. Development to the west, north and northwest are similar to previous descriptions.
Initial Site Development				
1940s	1946	LADBS Building Permits	<ul style="list-style-type: none"> Multiple building permits dated 1946 for the Site's former address, 5721 West Jefferson Boulevard, provide evidence of the construction of the main building, originally a one-story structure, as well as the two smaller structures located east of the main building and labeled as <i>Office</i> and <i>Vendor Bldg</i>. One 1946 building permit list the owner as <i>Liberty Plating Co.</i>, however; subsequent permits list the owner as <i>Universal Match Co.</i> A 1946 Certificate of Occupancy reports a 100' x 120' structure as <i>Nut</i> 	No details provided.

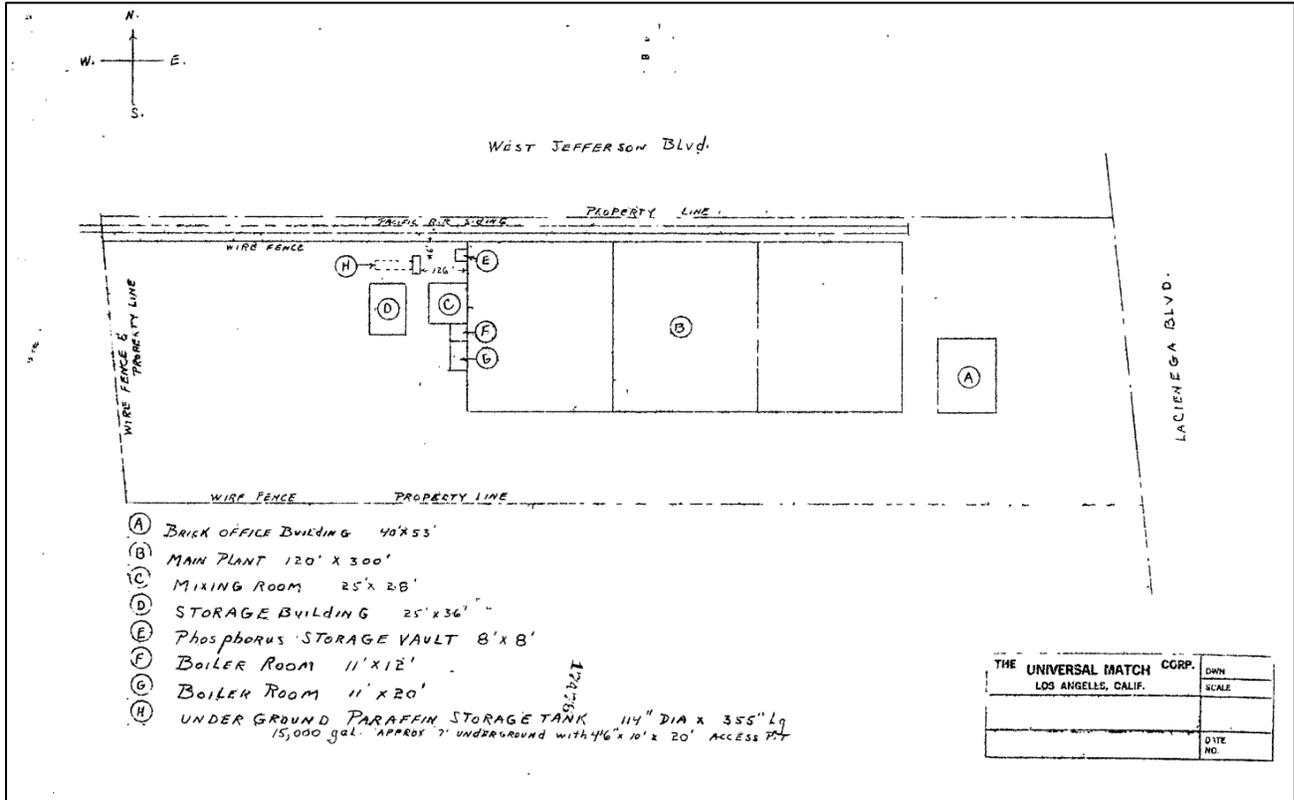

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
			<p><i>Factory.</i> The main building on Site appears to consist of three 100' x 120' segments, which are currently designated as A, B and C.</p>	
	1947	LADBS Building Permits	<ul style="list-style-type: none"> A 1947 Building Permit for the address 5721 W Jefferson Blvd provides evidence of the construction of 10' x 10' and 27' x 27' structures connected to the west side of the main building. A later diagram label these structures as a <i>Boiler Room</i> and <i>Mixing Room</i>, respectively. A 1947 Building Permit indicates the installation of a 15,000-gallon UST for storing class 2 inflammable liquid called crude scale wax. A later diagram calls the contents <i>Paraffin</i>, likely referring to paraffin wax. This UST is mapped to be located west of the main building. 	No details provided.
	1948	EDR Aerial Photograph	<p>Site is developed with the present-day main building and two smaller buildings to the east. Two small structures are connected to the west side of the main building. The remainder of the Site appears to be paved.</p>	<p>Adjacent properties to the west and south are developed with commercial buildings that resemble present-day structures. Adjacent property to the west are developed with present-day residential structures and a parking area directly east.</p>
	1948	LADBS Building Permits	<p>A 1948 Certificate of Occupancy for a 24' x 36' storage shed prepared for Universal Match Co.</p>	No details provided.
1950s	1950/1953	Historical Topographic Map: Hollywood/Beverly Hills (7.5-minute)	<p>There are two rail spurs stemming from the railroad line immediately north and one spur appears to enter the northernmost portion of the Site. No other features are marked for the Site.</p>	<p>This topographic map reflects the increase in development surrounding the Site vicinity. The Inglewood Oil Field is mapped approximately 0.5 miles south of the Site in the Baldwin Hills.</p>
	1952	EDR Aerial Photograph	<p>The Site contains the two structures previously described that resemble the present-day main building and smaller building the east. The railroad spurs mapped in the 1953 topographic map are present and</p>	<p>Same as previous description in the 1948 aerial photograph.</p>

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
			one appears to align with the main building and within the Site boundary. Features to the west of the main building, but on the Site, resemble those described in the diagram provided by the City of Los Angeles Fire Department and discussed below.	
	1953	LADBS Building Permits	A Certificate of Occupancy dated 7/30/1953 indicates a 7' x 9' storage vault for flammables located on the west end of the main building	No details provided.
	Date Unknown: Estimated 1950's	City of Los Angeles Fire Department - Hazardous Materials and Underground Storage Tanks Units	<p>An undated diagram, likely from the 1950's, provides labels of the structures at Site associated with the Universal Match Co. This diagram is provided below and identifies the location and dimensions of:</p> <ul style="list-style-type: none"> • The Main Plant building (referred to as main building in this Report); • A 15,000-gallon UST; • Two (2) boiler rooms; • A Phosphorus Storage Vault; • A storage building; and • A brick office building. <p>The diagram also shows the railroad spur within the property line to the north.</p>	No details provided.
1960s	1964	EDR Aerial Photographs	The Site contains structures previously identified, including the main building, the office building to the east, and the mixing room, storage building and boiler rooms on the west side of the main building. The eastern most structure, labeled as a <i>Vendor Bldg.</i> in a 1946 permit, is no longer visible. The eastern portion of the Site is utilized as parking.	No details provided.
	1966	Historical Topographic Map: Hollywood/Beverly Hills (7.5-minute)	Conditions previously described in the 1953 topographic map are consistent in 1966, except that only one railroad spur stemming from the rail line to the north is present.	Same as previous topographic map description.
1970s	1970	LADBS Building Permits	Certificate of occupancy issued 12/3/1970 for a one -story	No details provided.

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
			addition addressed to Universal Match	
	1972	Historical Topographic Map: Hollywood/Beverly Hills (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description.
	1972	EDR Aerial Photograph	Same as previous aerial photograph description.	Same as previous aerial photograph description.
Site Redevelopment				
1970s	1977	LADBS Building Permits	Multiple Certificates of Occupancy indicating the transition from past tenants to the Public Storage tenant, including the addition of multiple new structures. The listed owner on these certificates is La Cienega Co.	No details provided.
	1977	EDR Aerial Photograph	The Site has been redeveloped with present day structures. The Main building and the office building to the east are the only remnant structures from previous Site operations. To the east of the Main Building are four (4) rectangular structures; to the west are two (2) new rectangular structures; and to the south is one (1) long rectangular structure all resembling the present-day storage unit structures.	Same as previous aerial photograph description.
1980s	1983 and 1989	EDR Aerial Photographs	Conditions at the Site resemble those previously described. In the 1989 aerial photograph, there are 11 small rectangular structures, identified as metal storage bins, along the northern property boundary. According to the current property owner, Mrs. Betsy Terrazas, the former owner (her father) rented the property in the right-of-way north of the Site and rented out the metal storage units.	Conditions of the Site Vicinity are generally the same as previous descriptions; however, there is increased development on property north of the Site across Jefferson Boulevard.
	1985	LADBS Building Permits	Multiple Certificate of Occupancy for 8' x 20' metal storage bins "converted into a storage bldg."	No details provided.

Summary of Historical Sources				
Decade	Year	Source	Site Description	Vicinity Description
1990s	1991/1994	Historical Topographic Map: Beverly Hills / Hollywood (7.5-minute)	Same as previous topographic map description.	Same as previous topographic map description.
	1995	Historical Topographic Map: Beverly Hills (7.5-minute)	The Site is not depicted on this topographic map.	Same as previous topographic map description.
2000s	2002 and 2005	EDR Aerial Photographs	Same as previous aerial photograph description.	Same as previous aerial photograph description.
	2009	EDR Aerial Photograph	The majority of the Site resembles conditions previously described; however, the 11 storage units along the northern property line are no longer present. The property immediately north is undergoing development for the elevated Metro Expo Line.	Development of the elevated Metro Expo Line north of the Site has begun.
2010s	2012 and 2016	EDR Aerial Photographs	The Site resembles present day conditions.	The elevated Metro Expo Line is fully constructed to the north of the Site. Surrounding properties generally resemble present-day conditions, with the exception the of property to the north, which is currently under redevelopment.

Diagram of Site Conditions – Date Unknown

Source: City of Los Angeles Fire Department - Hazardous Materials and Underground Storage Tanks Units

5. Site Reconnaissance

A Roux representative conducted a reconnaissance of the Site and surrounding areas on October 2, 2020. During the Site visit, Roux representative Mr. Justin Allen met with Joe and Betsy Terrazas (the current Site owners); Matthew Isken (the Client representative); and Peter Chang (surveyor for the Client). Roux also visually and/or physically observed adjoining properties from reasonably accessible locations on the Site and public thoroughfares. During the Site reconnaissance, the weather was clear, and the temperature was approximately 78° Fahrenheit. The following sections summarize observations during the inspection. Roux was granted permission by Joe and Betsy Terrazas to document the Site Reconnaissance with photographs (Appendix H).

5.1 Current Site Condition and Limitations

As previously described, the Site is currently occupied by Public Storage and contains nine buildings, primarily utilized for renting of storage units. One structure, Building K, is utilized as a residence for the on-Site property manager. The majority of the Site is paved asphalt with driveways between the various structures. The pavement was recently re-sealed within the last 5 years.

Other Site improvements include commercial dumpsters located in the southwest corner, fire hydrants, and a utility pole located in the eastern portion of the Site.

Roux personnel was able to access the interior of the main building (A, B and C) and Building K, but did not open any of the storage units for any of the on-Site buildings. There are no commonly accessible interior areas for the remaining buildings, which consists entirely of storage units.

5.2 Phase I ESA Observations

During the Site reconnaissance, Roux personnel attempt to identify any environmental features that may be relevant in the context of the Phase I ESA. The features identified are summarized in the table below. Any such features are discussed in the following subsections.

Feature	Observed on the Site	Observed on an Adjacent Property
Areas of stressed vegetation		
Areas which receive flood or storm water from potentially contaminated areas		
Air Compressor Vent Discharges		
Drainage Swales and Culverts		
Discharge Areas		
Discolored or Spill Areas		
Drums (55 Gallons or Larger)		
Electrical Transformers	Y	
Former Agricultural Applied Pesticide Area		

Feature	Observed on the Site	Observed on an Adjacent Property
Hydraulic Lifts	Y	
Incinerators		
Landfills or Landfarms		
Loading and Unloading Areas	Y	
Non-Contact Cooling Water Discharge		
Oil-Water Separator(s)		
Open Areas Away from Production Areas		
Process Area Sinks and Piping		
Rail Cars/Railroad Spurs		Y
Septic Systems Leach Fields or Seepage Pits		
Silos		
Sprayfields		
Storm Sewer and Spill Containment Collection System		
Storm Water Detention Pond		
Surface Impoundments and Lagoons		
Underground / Aboveground Storage Tanks and Associated Piping	Y	
Vapor Intrusion		
Waste Piles		

5.2.1 Electrical Transformers

Located adjacent to the Building K is a power pole with a pole-mounted electrical transformer. Roux did not observe any labels indicating the transformer contained polychlorinated biphenyls (PCBs) and did not observe any staining or leaking from the transformer. Electrical lines from this pole are directed underground and power the remaining buildings of the Site.

5.2.2 Hydraulic Lifts

One hydraulic elevator was observed in Area B the two-story main building. The equipment appeared to be in good condition and no leaks, stains, or other signs of releases were observed. The elevator is not expected to represent a significant environmental concern based on the condition of the equipment, which was reportedly replaced in 2018.

5.2.3 Loading and Unloading Areas

Loading and unloading docks/ramps are located on the south side of the main building, and the drive aisles throughout the rest of the Site are de-facto loading and unloading areas for the storage units. While the asphalt paving was recently re-paved, there were numerous cracks observed throughout the Site and the limited staining observed is likely associated with vehicle usage.

5.2.4 Active and Historical Rail Ways

Historical records reviewed including aerial photographs, topographic maps, and the historical Site diagram, show a spur from the adjacent Southern Pacific Rail Road, also referred to as the Pacific Electric Railroad, present within the Site boundary north of the main building, see Figure 3. The main railroad line has been present north of the Site prior to 1900 and the first evidence of a spur branching off from the main line potentially onto the Site is the 1948 aerial photograph. Reviewed resources suggest this spur was present between at least 1948 through the late 1980s.

In the early 2010s, the elevated Metro Expo Line and La Cienega/Jefferson Station were constructed immediately north of the Site on a raised platform. Between the Site's northern boundary and the raised platform is a narrow bike/walk path. Any previous remnants of the railroad spur were not visible on-Site during the reconnaissance and it is unknown whether the lines, ballast or underlying structural base were removed from the Site.

During the Site reconnaissance, current Site owners Mr. Joe Terrazas and Mrs. Betsy Terrazas (daughter of the former owner) stated that the railroad spur was not located within the Site boundary.

Soils along railroads are often contaminated with levels of heavy metals, TPH, PCBs, and/or chlorinated pesticides and herbicides above regulatory limits. Due to the potential for soils contamination, the former railroad spur located is considered a REC.

5.2.5 Underground / Aboveground Storage Tanks and Associated Piping

Historical records indicated that a 15,000-gallon UST was installed at the Site in 1947 for the owner Universal Match Corp. Figure 3 provides an overlay of the undated historical diagram over the current Site Plan. Based on this overlay, the former UST area appears to have been situated beneath the north end of Building G. Although it is known that the UST was not used after the late 1970s, no records were found to indicate the UST was removed from the Site. The area of the UST, to the west of the main building, was redeveloped by Public Storage in the 1970s with Building G which appears to lie over top of the former UST cavity. Roux did not observe any evidence of the former UST during the Site reconnaissance.

The presence of this UST is considered a REC; particularly since it is unknown if the UST was removed from the Site and the length of time petroleum product (paraffin wax) was used on-Site (approximately 30 years).

5.2.6 Hazardous Material Usage

Historical operations on-Site, particularly match manufacturing, had documented use of chemicals or hazardous materials. A storage vault and former boiler rooms with sumps were reportedly located outside of the main building on the west side. However, those structures have been removed and no evidence of these former buildings was observed during the Site reconnaissance. Although Roux did not observe the use or storage of chemicals or hazardous materials during the Site reconnaissance, the historical use of chemicals or hazardous materials at the Site and the presence of historical sumps on-Site are considered a REC.

6. Adjoining and Nearby Properties

The facilities and improvements which are located immediately adjacent to the Site are provided in the following table. Selected adjoining and nearby properties are shown in Figure 2. Adjoining and nearby properties with potential environmental concerns are described in subsections below as needed.

Direction from Site	Improvements / Use (Addresses)	Environmental Concerns Identified
North	West Jefferson Boulevard and the elevated Metro Expo Line; followed by property being redeveloped 5735 West Jefferson Boulevard.	Metro Expo Line and historical Southern Pacific Railroad
Northeast	Commercial building at 3344 South La Cienega Boulevard	None
East	La Cienega Boulevard followed by a parking garage at 3410 South La Cienega Boulevard with multi-family residential at 5785 Corbett Street to the southeast.	None
Southeast	Multi-family residential at 5785 Corbett Street	None
South	See's Candies Chocolate shop and warehouse facility at 3423 & 3431 South La Cienega Boulevard.	Historical UST site
Southwest	ZEHNER ecommerce agency at 5766 West Jefferson Boulevard, National Research Group, Inc. at 5780 West Jefferson Boulevard, and Jukin Media at 5764 West Jefferson Boulevard	None
West	Praedicat, Inc. software at 5760 West Jefferson Boulevard	None
Northwest	Public Storage self-storage at 5741 West Jefferson	None

6.1 Adjoining Property

Adjacent North: Immediately north of the Site is the elevated Metro Expo Line and West Jefferson Boulevard. Property north of the Site has historically been a transportation right-of-way, for both a rail road (since pre-1900) and vehicle transportation, including a rail spur that entered the Site from at least 1948 through the 1980's.

Property immediately north of West Jefferson Boulevard and the Site are currently being redeveloped for commercial and industrial property and environmental concerns were not identified.

Adjacent South: Immediately south of the Site is a See's Candies chocolate shop that includes offices, manufacturing and delivery. This adjacent property is listed as historical UST facility, in addition to other database listings including CA CERS HAZ WASTE and HAZMAT. This nearby property reportedly has had six USTs ranging from 1,000- to 6,000-gallon capacity which formerly stored gasoline, diesel fuel, and unspecified waste and were installed in 1978 (Partner, 2020). Available records indicate that the Los Angeles County Fire Department issued permit violations, which primarily appear to be related to administrative and procedural in nature and do not indicate a documented release.

Based on the lack of reported releases or other information indicating significant environmental concern, this adjoining facility is not considered a significant environmental concern.

7. Summary of Key Previous Investigations

The following section provides a summary of previous environmental investigations at the Site.

7.1 Phase I Environmental Site Assessment Report (Partner, 2020)

Roux reviewed a Phase I ESA, prepared by Partner Engineering and Science, Inc. (Partner) and dated March 5, 2020. The report was prepared for Ms. Betsy Terrazas of La Cienega Properties Ltd, the current Site owner. This report did not identify any REC, cRECs or hRECs at the Site or in the immediate vicinity. Partner did identify that the “subject property was occupied by light industrial and/or commercial operations of limited potential environmental concern from at least 1957 to 1975” (Partner, 2020), noting the known occupants related to match manufacturing and possible manufacturing associated with Ferguson Machine Co Roller Gear Drives and American Air Curtain.

In the report, Partner acknowledged that “no regulatory records pertaining to significant hazardous substances use or storage were identified for the subject property”, but that a 15,000-gallon paraffin wax UST was installed in 1947. On this issue of former industrial/commercial operations at the Site, Partner stated that, “Although the potential exists for historical hazardous substances or petroleum products use at the property based on the nature of operations, due to the current use of the subject property for commercial operations and the lack of regulatory interactions to indicate significant releases or contamination, the historical use of the subject property is not anticipated to represent a significant environmental concern at this time.” Partner concluded that, “If the subject property is proposed for redevelopment for specifically residential purposes, further investigation of the past uses may be warranted” (Partner, 2020).

As a result, no further investigations or activities were recommended by Partner.

8. Records Review

8.1 Standard Environmental Record Sources

According to ASTM Standard E1527-13, the purpose of reviewing regulatory records is to obtain and review records that will help identify *recognized environmental conditions* in connection with the Site. In addition, some records to be reviewed pertain not only to the Site, but also to properties within an additional “approximate minimum search distance” in order to help assess the likelihood of problems from migrating hazardous substances or petroleum products. The basis of the “approximate minimum search distance” is the Site boundary.

Roux retained EDR of Shelton, Connecticut to provide an ASTM Radius Map Report (EDR Report) for this Site. This report is a computerized search of select state and federal environmental databases that identify various properties with a record of environmental activity. Roux reviewed the report and summarized the relevant findings in the following sections. A copy of the compiled EDR Report has been included as Appendix F. The EDR report includes a detailed description of each of the databases searched, providing a summary of the type of information provided by each. A summary of Roux’ review of the EDR Report listings is provided in Table 1.

The following section describes the findings of the database search. Roux used professional judgment in determining which EDR-listed sites to include in the narrative of this report. Facilities adjoining the Site were included due to their proximity to the Site and the potential for surface water discharges (e.g., storm water runoff, surface water effluent discharges) to enter the Site or through the migration of groundwater. Sites with listings indicative of a release (e.g., SHWS, LUST, RELEASE) are likewise discussed below. Nonadjacent facilities with database listings not necessarily indicative of a release (hazardous waste generator, FINDS, ECHO, NPDES, HAZNET, AST, or UST) will not be discussed unless considered potentially relevant in context of the Phase I ESA.

8.1.1 Site (Target Property)

The Site was listed on the RCRA NonGen/NLR, UST, HAZNET, HWTS and ECHO regulatory databases, under the 3401 South La Cienega Boulevard address. The historical address of 5721 West Jefferson Boulevard was not listed on any databases.

- The UST listing, identified only by the address, reports the status as *Historical* but does not provide any additional information. As previously discussed, reviewed documents indicate that a 15,000-gallon paraffin wax UST was installed to the west of main building in 1947. No records have been reviewed in the preparation of this Report that suggest the UST has been removed.
- Public Storage (also listed as Public Storage 69191) was listed on the RCRA NonGen/NLR, HAZNET, HWTS and ECHO databases. These listings suggest that the facility is designated as a handler of hazardous waste but does not generate hazardous waste. The following table provides a summary of the HAZNET listing information for the Site.

Year	CA Waste Code and Name	Quantity	Disposal Method
2019	221 – Waste oil and mixed oil	0.00000 tons	H039 – Other Recovery of Reclamation for Reuse Including Acid Regeneration
1997	551 – Laboratory Waste Chemicals	0.1726 tons	n/a
1993	551 – Laboratory Waste Chemicals	0.1726 tons	H01 – Transfer Station
1993	791 – Liquids with pH <= 2	0.0125 tons	T01 – Treatment, Tank
1993	343 – Unspecified organic liquid mixture	0.068 tons	R01 – Recycler

8.1.2 Adjoining and Nearby Properties

EDR identified the following properties located within one mile of the Site from the databases searched. Roux has reviewed each of the database listings with a focus on any property that experienced a release of hazardous or petroleum products with the potential to affect subsurface conditions at the Site. Properties where listings did not contain any information suggestive of a release with the potential to have impacted conditions at the Site have not included in this section.

Discussions of adjoining and nearby properties of potential environmental concern as noted in Table 1 are provided below.

- Apex Metal Polishing (5977 West Washington Boulevard)** – located approximately 2,090 feet north-northwest of the Site, this former metal polishing facility is listed as an active case on EnviroStor. DTSC issued an Imminent and Substantial Endangerment (ISE) Determination and Order and Remedial Action Order to investigate and remediate hazardous release at the facility. As a result of the facility’s historic operations, chlorinated solvents, namely PCE and TCE, and metals have been detected in soil, soil vapor, and groundwater. The facility has received several notices of non-compliance with the ISE order, as subsurface investigation and cleanup has not been performed. Based on the distance of the facility to the Site and its regulatory status, this nearby property is not considered an environmental concern.
- Alexander Machinery Co. Inc. (5840 Adams Boulevard)** – located approximately 2,160 feet north-northeast of the Site, this nearby facility is listed as an open LUST case. Based on the Monitoring Well Installation and Access Agreement Work Plan, dated January 13, 2020, the facility formerly housed a 2,000-gallon gasoline UST. TPH and BTEX compounds were detected in confirmation soil samples during UST removal. Additional subsurface investigations included soil vapor probe installations and sampling of soil vapor, soil, and groundwater, which indicated TPH and BTEX impacts. Previous remedial efforts at the facility included a soil vapor extraction (SVE) system and air sparge (AS) pilot testing. Proposed remedial efforts include additional groundwater monitoring wells and groundwater and soil sampling. Based on the distance of the facility to the Site and its regulatory status, this nearby property is not considered an environmental concern.
- Nick’s Auto Repair (8534 West Washington Boulevard)** – located approximately 2,170 feet northwest of the Site, this nearby facility is listed as an open LUST case. Based on the Workplan for Additional Soil and Groundwater Investigation and Groundwater Monitoring Well Installations, dated October 30, 2019, the facility formerly housed three 2,000-gallon USTs. TPH and BTEX compounds

were detected in confirmation soil samples during UST removal. Subsequent soil and groundwater investigation indicated gasoline, benzene, naphthalene, and other VOCs impacts. Recent site assessment activities include installation of groundwater monitoring wells installation and soil and groundwater sampling. The facility has received a notice of violation due to failure to submit the site investigation and well installation technical report and semi-annual groundwater monitoring report. Based on the distance of the facility to the Site and its regulatory status, this nearby property is not considered an environmental concern.

- **Ken's Automotive (Former) (5787 West Adams Boulevard)** – located approximately 2,390 feet north-northeast of the Site, this nearby facility is listed as an open LUST case. Based on the Analysis of Environmental Information for Nearby Properties report, dated May 1, 2019, a total of 23 groundwater monitoring wells have been installed to delineate the hydrocarbon plume after a release was discovered during UST removal in 1996. Previous remedial efforts include free product removal via hand bailing, peristaltic pumps, vacuum trucks, and free product skimmers and SVE and dual-phase extraction (DPE) systems. Proposed remedial efforts include additional groundwater monitoring wells, continuous groundwater monitoring, SVE, AS extraction, and groundwater pump and treat. Based on the distance of the facility to the Site and its regulatory status, this nearby property is not considered an environmental concern.
- **La Cienega Creative Properties (3077 – 3243 La Cienega Boulevard)** – located approximately 2,400 feet northwest of the Site, this nearby facility is listed as an open LUST case. In March 2017, the facility was granted No Further Action for soil and soil vapor while groundwater investigation has been ongoing. Based on the Off-Site Groundwater Monitoring Well Installation and Fourth Quarter 2019 Groundwater Monitoring Report, dated January 19, 2020, soil and groundwater results indicate VOC contamination migrated from the east/northeast to the facility. Based on the distance of the facility to the Site and its regulatory status, this nearby property is not considered an environmental concern.

8.1.3 Orphan Sites

The EDR Report includes a section addressing “Orphan Sites.” Orphan sites are sites, which, due to incomplete geographic location data, incomplete address information or incorrect address information, cannot be plotted correctly. The database report identified nine unmapped facilities.

- **Inglewood Oil Field (Former) (Fairfax)** – This orphan site is listed on the CA CPS-SLIC database. The facility has a no further action required status. Based on this status, the Inglewood Oil Field facility does not represent a significant environmental concern.
- **Culver City Fairfax/Adam Cleanup (Fairfax)** - This orphan site is listed on the CA CPS-SLIC database. No other information is provided. Due to the lack of information indicative of a release, the Culver City Fairfax/Adam facility does not represent a significant environmental concern.
- **Culver City Dog Park (Jefferson + Duguesne Avenue)** – This orphan site is listed on the CA ENVIROSTOR database. The case has a “Refer: 1248 Local Agency” status with no other information provided. Due to the lack of information indicative of a release, the Culver City Fairfax/Adam facility does not represent a significant environmental concern.
- **La Cienega Creative Properties (3077 – 3243 La Cienega Boulevard)** – This orphan site is listed on the CA UST database (Case No. 900160370). No other information is provided. Due to the lack

of information indicative of a release, the La Cienega Creative Properties facility does not represent a significant environmental concern.

- **LA Cnty Line to Alondra (LA County Line to Alondra)** – This orphan site is listed on the CA CIWQS database. The facility was involved a storm water construction program, which was terminated in June 2000. Due to the lack of information indicative of a release, the LA Cnty Line to Alondra facility does not represent a significant environmental concern.
- **City of LA/BOS, Wastewater Coll Sys (3410 South La Cienega Perm Atf, At)** – This orphan site is listed on the CA EMI database. Emissions data are provided intermittently from 2006 through 2018. Due to the lack of information indicative of a release, the City of LA/BOS, Wastewater Coll Sys facility does not represent a significant environmental concern.
- **Baldwin Hills Conservancy Project (South La Cienega Boulevard)** – This orphan site is listed on the CA ENVIRSTOR and CA VCP databases. The facility is an active voluntary cleanup program as of April 2020 and has an active status on EnviroStor. A Phase I and Preliminary Endangerment Assessment Report is projected to be submitted in 2021. This property is located over 2.5 miles south of the Site and thus does not represent a significant environmental concern.
- **LA CO FD Fire Station #061 (20011 La Puente Road)** – This orphan site is listed on the CA RGA LUST database. No other information is provided. Due to the lack of information indicative of a release, the LA CO FD Fire Station #061 facility does not represent a significant environmental concern.
- **Reg. GW Monitor – LA River (LA River Watershed-Multi LOC)** – This orphan site is listed on the CA WDS database. It is an active facility that discharges non-hazardous solid waste. Due to the lack of information indicative of a release, the Reg. GW Monitor – LA River facility does not represent a significant environmental concern.

9. Findings

Roux has performed this Phase I ESA in general compliance with the scope and limitations of ASTM Standard Practice E1527-13. Roux separated the findings of this assessment into the following four categories: *recognized environmental conditions*, *controlled recognized environmental conditions*, *historical recognized environmental conditions* and *other environmental features*.

9.1 Data Gaps

During completion of this ESA, the following data gaps, as defined in ASTM Standard E1527-13 were identified:

- It is unknown whether or not the documented UST installed on Site has been removed based on the available information reviewed and personnel interviewed, including the current Site owners.
- Previous Site operators with direct knowledge of operations prior to Public Storage were not available for an interview. The ability to ask previous Site owners/operators who oversaw the transition from historical manufacturing to the current Public Storage could have provided additional information on chemical use at the Site, sumps that may have existed at the Site, and the former UST and whether or not it was removed from the Site.
- The majority of the structures on the Site are utilized for private storage. Roux did not view inside any of the storage units. The Client did provide an example Rental Agreement for tenants of Public Storage which states in Section 3.5, Restrictions on Use of Your Space, that “3.5.4... You will not store or permit the storage in Your Space of the Facility of any Hazardous Materials (including any hazardous or toxic chemical, gas, liquid, substance, material or waste, and in some jurisdictions, vehicle tires, that is regulated under any applicable law or regulation), flammable materials, explosives and other inherently dangerous materials, or property that would violate any law or regulation of any governmental authority”.

The above data gaps are not considered significant in the context of this Phase I ESA. Where appropriate (i.e., status of the UST and former on-Site activities/structures), recommendations for additional subsurface investigations have been made, as presented in Section 10.

9.2 Recognized Environmental Conditions

Based on the information obtained through the performance of this ESA, Roux identified the following RECs in connection with the current and historical operations at the Site or adjacent properties. To the extent possible, the locations of the RECs are shown in Figure 2. To avoid confusion, all RECs are numbered sequentially.

REC 1 – Underground Storage Tank (UST). Based on a review of historical permits, a 15,000-gallon UST was installed at the Site, likely in 1947 during the initial Site development, and was located immediately west of the northwest corner of the main on-Site building. The documented content of the UST was paraffin wax, which was used in the manufacturing of matches by the Universal Match Company. Paraffin wax is a flammable, soft, colorless semi-solid waxy substance consisting of a mixture of saturated hydrocarbons. Based on available information, the UST used until the mid to late 1970s (approximately 30 years) and it is unclear whether it was removed. The UST does not appear to have been used to store contents other than paraffin wax.

A historical diagram notes the UST was installed approximately seven feet underground with a 4'6" by 10' by 20' access pit to the west of the northwest corner of the main building. Figure 3 provides an overlay of the undated historical diagram (believed to be from circa 1950) over the current Site configuration. Based on this overlay, the former UST area appears to have been situated beneath the north end of Building G.

REC 2 – Railroad Spur. Based on reviewed records, including aerial photographs, topographic maps, and the historical diagram from circa 1950, a railroad spur existed on-Site to the immediate north of the main building. This railroad spur stemmed from the main line of the Southern Pacific Railroad that existed north of the Site. In approximately 2010, the right-of way for the railroad was converted into the present-day Metro Expo Line which is situated on platform raised approximately 15-20 feet above street level. Railroad spurs are known sources of shallow soil contamination from a variety of COPCs, including metals, TPH, VOCs, pesticides, and PCBs. It is unknown whether the railroad spur materials, such as the steel lines, ballast and underlying structural base, were fully removed from the Site during Site redevelopment.

REC 3 – Former Match Manufacturing. Prior to Public Storage, the Site was primarily used as a match manufacturing operation by Universal Match Company from the initial development in 1947 to the mid/late 1970s. In addition to the paraffin wax stored in the UST, other chemicals or hazardous materials used and maintained on Site included phosphorus, glue, water-soluble dyes, sulfur, and inert materials such as sand, glass and clay. According to permits reviewed and research on historical match making processes, wooden sticks are often soaked in phosphate, which serves as a fire retardant; while the inert materials (sand, glass, and clay) are used on the tips of matches to increase the friction and control the burning rate. Materials such as sulfur were used to sustain combustion and water-soluble dyes were often added to give the match head a color such as red or blue. No specific information regarding the size and quantities, or the handling and disposal, of chemicals or hazardous material was found during our historical research.

A reviewed 1953 Industrial Waste Permit suggested that a sump was present, or planned to be installed, in each of the two boiler rooms, and that “sand, glass, clay and sulfur and phosphorus settle in sumps”. No information has been reviewed indicating how the sumps were managed or if they were properly abandoned. Based on known manufacturing operations on-Site, solvents containing VOCs may have been used to clean equipment and dilute paraffin wax solutions. Wastewater containing these solvents may have been placed or spilled into former sumps.

Although the possibility of the former on-Site use of solvents could pose a potential vapor intrusion risk to future occupants, the former match manufacturing activities are not believed to have been solvent intensive. In addition, it is noted that proposed development plans for the Site include excavation to depths between 15 and 30 feet below surface in the area of the main building to accommodate parking and footings for future structures.

9.3 Controlled Recognized Environmental Conditions

Roux did not identify known or suspected cRECs in connection with the current and historical operations at the Site.

9.4 Historical Recognized Environmental Conditions

Roux did not identify known or suspected hRECs in connection with the current and historical operations at the Site or adjacent properties.

9.5 Other Environmental Features

Roux did not identify known or suspected OEFs in connection with the current and historical operations at the Site

10. Recommendations

This Phase I ESA has identified RECs associated with the Site. In order to investigate these RECs further, Roux recommends implementing a Phase II Subsurface Investigation, as described below:

REC 1 Recommendation – Underground Storage Tank

Roux recommends that a geophysical survey be conducted in and around the area of the former UST in an attempt to identify whether or not the UST and/or any associated piping or underground structures may be present at the Site. Further, Roux recommends that a Limited Phase II Subsurface Investigation be conducted adjacent to the suspected UST location to evaluate potential impacts to soil and soil vapor.

REC 2 Recommendation – Former On-Site Railroad Spur

Roux recommends that a geophysical survey be conducted along the area of the former railroad spur to the immediate north of the original on-Site building. The geophysical will aim to identify former ties and/or rails, that may have been left in place at the Site. Further, Roux recommends a Limited Phase II Subsurface Investigation to collect shallow soil samples at regular intervals along the approximately 550-foot length of the former railroad spur. Data from this investigation will inform whether soils in the area of the former railroad spur are acceptable for on-Site re-use or need to be removed from the Site.

REC 3 Recommendation – Former Match Manufacturing

Roux recommends a Limited Phase II Subsurface Investigation, with shallow soil vapor probes (approximately 5-feet below ground surface), at selected areas both inside and outside the main building used for former match manufacturing operations and the potential use of solvents on Site. The locations of these soil vapor probes would generally target areas for former chemical usage, such as the former boiler rooms where the sumps were reported to exist, and the main manufacturing building.

12. Signature of Environmental Professional

Roux performed this assessment in accordance with the generally accepted practices for environmental assessments at the time of implementation. Roux made a reasonable effort to ensure that the information presented in this report is materially complete and accurate.

Roux completed a Phase I ESA in general compliance with the scope and limitations of ASTM Practice E1527-13 of the commercial property located at 3401 South La Cienega Boulevard, Los Angeles, Los Angeles County, California.

“We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312” and,

“We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

Roux performed this Phase I ESA by, or under direct supervision of, the undersigned environmental professionals.

Respectfully Submitted,
ROUX ASSOCIATES, INC.

Justin Allen
Project Scientist

Mauricio H. Escobar, P.G.
Principal Geologist

Phase I Environmental Site Assessment
3401 South La Cienega Boulevard, Los Angeles, California

Glossary of Terms

GLOSSARY OF KEY TERMS

This appendix provides definitions, description of terms, and a list of acronyms for many of the words used in ASTM E 1527-13. These terms are an integral part of ASTM E 1527-13 and are critical to understanding ASTM E 1527-13 and its use.

DEFINITIONS:

Abandoned Property – *property* that can be presumed to be deserted, or an intent to relinquish possession or control can be inferred from the general disrepair or lack of activity thereon such that a reasonable person could believe that there was an intent on the part of the current *owner* to surrender rights to the *property*.

Activity and Use Limitations – Legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to *hazardous substances* or *petroleum products* in the soil, soil vapor, groundwater, and/or surface water on the *property*, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or *engineering controls*, are intended to prevent adverse impacts to individuals or populations that may be exposed to *hazardous substances* and *petroleum products* in the soil, soil vapor, groundwater, and/or surface water on the *property*.

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) – The list of sites compiled by EPA that EPA has investigated, or is currently investigating, for potential hazardous substance contamination for possible inclusion on the National Priorities List.

Construction debris – Concrete, brick, asphalt, and other such building materials discarded in the construction of a building or other improvement to property.

Contaminated public wells – Public wells used for drinking water that have been designated by a government entity as contaminated by toxic substances (for example, chlorinated solvents), or as having water unsafe to drink without treatment.

Contiguous Property Owner Liability Protection – a person may qualify for the *contiguous property owner liability protection* if, among other requirements, such person owns real *property* that is contiguous to, and that is or may be contaminated by *hazardous substances* from other real *property* that is not owned by that person. Furthermore, such person conducted *all appropriate inquiries* at the time of acquisition of the *property* and did not know or have reason to know that the *property* was or could be contaminated by a *release* or threatened *release* from the contiguous *property*. The *all appropriate inquiries* must not result in knowledge of contamination. If it does, then such person did “know” or “had reason to know” of contamination and would not be eligible for the *contiguous property owner liability protection*.

Controlled Recognized Environmental Condition – a *recognized environmental condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*).

CORRACTS list – a list maintained by EPA of *hazardous waste* treatment, storage, or disposal facilities and other RCRA-regulated facilities (due to past interim status or storage of *hazardous waste* beyond 90 days)

that have been notified by the U.S. Environmental Protection Agency to undertake corrective action under RCRA. The *CORRACTS list* is a subset of the EPA database that manages RCRA data.

Demolition debris – Concrete, brick, asphalt, and other such building materials discarded in the demolition of a building or other improvement to property.

Drum – A container (typically, but not necessarily, holding 55 gal (208 L) of liquid) that may be used to store *hazardous substances* or *petroleum products*.

Dry wells – Underground areas where soil have been removed and replaced with pea gravel, coarse sand, or large rocks. Dry wells are used for drainage, to control storm runoff, for the collection of spilled liquids (intentional and non-intentional), and wastewater disposal (often illegal).

Dwelling – Structure of portion thereof used for residential habitation.

Engineering controls – Physical modifications to a site or facility (for example, capping, slurry walls, or point of use water treatment) to reduce or eliminate the potential for exposure to contaminants in the soil or groundwater on the property.

Environmental lien – A charge, security, or encumbrance upon title to a *property* to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of *hazardous substances* or *petroleum products* upon a *property*, including (but not limited to) liens imposed pursuant to CERCLA 42 USC § 9607(1) and similar state or local laws.

ERNS list – EPA's emergency response notification system list of reported CERCLA hazardous substance releases or spills in quantities greater than the reportable quantity, as maintained at the National Response Center. Notification requirements for such releases or spills are codified in 40 CFR parts 302 and 355.

Federal Register (FR) – Publication of the United States government published daily (except for federal holidays and weekends) containing all proposed and final regulations and some other activities of the federal government. When regulations become final, they are included in the Code of Federal Regulations (CFR), as well as published in the Federal Register.

Fire insurance maps – Maps produced for private fire insurance map companies that indicate uses of properties at specified dates and that encompass the property. These maps are often available in local libraries, historical societies, private resellers, or from the map companies who produced them. See Question 23 of the transaction screen process in Practice E 1528 and 7.3.4.2 of this practice.

Hazardous substance – A substance defined as hazardous pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and the courts: “(A) any substance designated pursuant to section 1321(b)(2)(A) of Title 33, (B) any element, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Soil Waste Disposal Act (42 USC § 6921) (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 USC § 6901 *et seq.*) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 USC § 7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof, which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A)

through (F) of this paragraph; the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).”

Hazardous waste – Any hazardous waste having the characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (42 USC § 6921) (but not including any waste the regulation of which under the Solid Waste Disposal Act (42 USC § 6901 *et seq.*) has been suspended by Act of Congress). The Solid Waste Disposal Act of 1980 amended RCRA. RCRA defines hazardous waste, in 42 USC § 6903, as: “a solid waste, or combination of solid wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may – (A) cause, or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or (B) pose a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed.”

Institutional control – A legal or administrative restriction (e.g., deed restriction, restrictive zoning) on the use of, or access to, a site or facility to reduce or eliminate potential exposure to contaminants in the soil or groundwater on the property.

Landfill – A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term *solid waste disposal site* and is also known as a garbage dump, trash dump, or similar term.

Local street directories – Directories published by private (or sometimes government) sources that show ownership, occupancy, and/or use of sites by reference to street addresses. Often, local street directories are available at libraries of local governments, colleges or universities, or historical societies.

Material safety data sheet (MSDS) – Written or printed material concerning a hazardous substance which is prepared by chemical manufacturers, importers, and employers for hazardous chemicals pursuant to OSHA’s Hazard Communication Standard, 29, CFR 1910.1200.

National Contingency Plan (NCP) – The National Oil and Hazardous Substances Pollution Contingency Plan, found at 40 CFR § 300, that is the EPA’s blueprint on how hazardous substances are to be cleaned up pursuant to CERCLA.

National Priorities List (NPL) – List compiled by the EPA, pursuant to CERCLA 42 USC § 9605(a)(8)(B), of properties with the highest priority for cleanup pursuant to EPA’s Hazard Ranking System. See 40 CFR Part 300.

Occupants – Those tenants, subtenants, or other persons or entities using the *property* or a portion of the *property*.

Owner – Generally the fee owner of record for the *property*.

Petroleum exclusion – The exclusion from CERCLA liability provided in 42 USC § 9601(14), as interpreted by the courts and EPA: “The term (hazardous substance) does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas, natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas).”

Petroleum products – Those substances included within the meaning of the *petroleum exclusion* to CERCLA, 42 USC § 9601(14), as interpreted by the courts and EPA, that is: petroleum, including crude oil or any fraction thereof which is not otherwise specifically listed or designated as a hazardous substance under Subparagraphs (A) through (F) of 42 USC § 9601(14), natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas). (The word fraction refers to certain distillates of crude oil, including gasoline, kerosene, diesel oil, jet fuels, and fuel oil, pursuant to *Standard Definitions of Petroleum Statistics*¹.)

Phase I Environmental Site Assessment – The process described in this practice.

Pits, ponds, or lagoons – Man-made or natural depressions in the ground surface that are likely to hold liquids or sludge containing *hazardous substances* or *petroleum products*. The likelihood of such liquids or sludge being present is determined by evidence of factors associated with the pit, pond, or lagoon, including, but not limited to, discolored water, distressed vegetation, or the presence of an obvious wastewater discharge.

Property – The real property that is the subject of the *environmental site assessment* described in this practice. Real property includes buildings and other fixtures and improvement located on the property and affixed to the land.

Property tax files – The files kept for property tax purposes by the local jurisdiction where the property is located and includes records of past ownership, appraisals, maps, sketches, photos, or other information that is reasonable ascertainable and pertaining to the property.

RCRA generators – Those persons or entities that generate hazardous waste, as defined and regulated by RCRA.

RCRA generators list – List kept by the EPA of those persons or entities that generate hazardous wastes as defined and regulated by RCRA.

RCRA TSD facilities – Those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.

RCRA TSD facilities list – List kept by the EPA of those facilities at which treatment, storage, and/or disposal of hazardous wastes takes place, as defined and regulated by RCRA.

Recorded land title records – Records of fee ownership, leases, land contracts, easements, liens, and other encumbrances on or of the property recorded in the place where land title records are, by law or custom, recorded for the local jurisdiction in which the *property* is located. (Often such records are kept by a municipal or county recorder or clerk.) Such records may be obtained from title companies or directly from the local government agency. Information about the title to the property that is recorded in a U.S. district court or any place other than where land title records are, by law or custom, recorded for the local jurisdiction in which the property is located, are not considered part of recorded land title records.

Records of emergency release notifications (SARA § 304) – Section 304 of EPCRA or Title III of SARA requires operators of facilities to notify their local emergency planning committee (as defined in EPCRA) and the state emergency response commission (as defined in EPCRA) of any release beyond the facility's boundary of any reportable quantity of any extremely hazardous substance. Often the local fire department is the local emergency planning committee. Records of such notifications are "Records of Emergency Release Notifications" (SARA§ 304).

Report – The written record of a transaction screen process as required by Practice E 1528 or the written report prepared by the environmental professional and constituting part of a “Phase I Environmental Site Assessment,” as required by this practice.

Solid waste disposal site – A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term *landfill* and is also known as a garbage dump, trash dump, or similar term.

Solvent – A chemical compound that is capable of dissolving another substance and may itself be a *hazardous substance*, used in a number of manufacturing/industrial processes including, but not limited to, the manufacture of paints and coatings for industrial and household purposes, equipment clean-up, and surface degreasing in metal fabricating industries.

State registered USTs – State lists of underground storage tanks required to be registered under Subtitle I, Section 9002 of RCRA.

Sump – A pit, cistern, cesspool, or similar receptacle where liquids drain, collect, or are stored.

TSD facility – Treatment, storage, or disposal facility (*see RCRA TSD facilities*).

Underground storage tank (UST) - Any tank, including underground piping connected to the tank, that is or has been used to contain *hazardous substances* or *petroleum products* and the volume of which is 10% or more beneath the surface of the ground.

USGS 7.5 Minute Topographic Map – The map (if any) available from or produced by the United States Geological Survey, entitled “USGS 7.5 Minute Topographic Map,” and showing the property.

Wastewater – Water that (1) is or has been used in an industrial or manufacturing process, (2) conveys or has conveyed sewage, or (3) is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Wastewater does not include water originating on or passing through or adjacent to a site, such as storm water flows, that has not been used in industrial or manufacturing processes, has not been combined with sewage, or is not directly related to manufacturing, processing, or raw materials storage areas at an industrial plant.

Zoning/land use records – Those records of the local government in which the *property* is located, indicating the uses permitted by the local government in particular zones within its jurisdiction. The records may consist of maps and/or written records. They are often located in the planning department of a municipality or county.

DEFINITIONS SPECIFIC TO ASTM E 1527-13:

Actual knowledge – The knowledge actually possessed by an individual who is a real person, rather than an entity. Actual knowledge is to be distinguished from constructive knowledge that is knowledge imputed to an individual or entity.

Adjoining properties – Any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them.

Aerial photographs – Photographs taken from an airplane or helicopter (from a low enough altitude to allow identification of development and activities) of areas encompassing the property. Aerial photographs are often available from government agencies or private collections unique to a local area.

Appropriate inquiry – That inquiry constituting “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice” as defined in CERCLA, 42 USC § 9601(35)(B), that will give a party to a *commercial real estate* transaction the *innocent landowner defense* to the CERCLA liability (42 USC § 9601(A) and (B) and § 9607(b)(3)), assuming compliance with other elements of the defense. See Appendix X1.

Approximate minimum search distance – The area for which records must be obtained and reviewed pursuant to Section 7 subject to the limitations provided in that section. This may include areas outside the *property* and shall be measured from the nearest *property* boundary. This term is used in lieu of radius to include irregularly-shaped properties.

Building department records – Those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property. Often, building department records are located in the building department of a municipality or county.

Business environmental risk – A risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of *business environmental risk* issues may necessitate that an *environmental professional* address one or more non-scope considerations, some of which are identified in Section 12.

Commercial real estate – Any real property except a dwelling or property with no more than four dwelling units exclusively for residential use (except that a dwelling or property with no more than four dwelling units exclusively for residential use is included in this term when it has a commercial function, as in the building of such dwellings for profit). This term includes, but is not limited to, undeveloped real property and real property used for industrial, retail, office, agricultural, other commercial, medical, or educational purposes; property used for residential purposes that has more than four residential dwelling units; and any property with no more than four dwelling units for residential use when it has a commercial function, as in the building of such dwellings for profit.

Commercial real estate transaction – A transfer of title to or possession of real property or receipt of a security interest in real property, except that it does not include transfer of title to or possession of real property or the receipt of a security interest in real property with respect to an individual dwelling or building containing fewer than five dwelling units, nor does it include the purchase of a lot or lots to construct a dwelling for occupancy by a purchaser, but a commercial real estate transaction does include real property purchased or leased by persons or entities in the business of building or developing dwelling units.

Controlled Recognized Environmental Condition – a *recognized environmental condition* resulting from a past *release of hazardous substances or petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances or petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

Due diligence – The process of inquiring into the environmental characteristics of a parcel of *commercial real estate* or other conditions, usually in connection with a commercial real estate transaction. The degree and kind of due diligence vary for different properties and differing purposes.

Environmental audit – The investigative process to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations. This term should not be used to describe Practice E 1528 or this practice, although an environmental audit may include an *environmental site assessment* or, if prior audits are available, may be part of an environmental site assessment.

Environmental professional – A person possessing sufficient training and experience necessary to conduct a *site reconnaissance*, *interviews*, and other activities in accordance with this practice, and from the information generated by such activities, having the ability to develop opinions and conclusions regarding *recognized environmental conditions* in connection with the *property* in question. An individual's status as an environmental professional may be limited to the type of assessment to be performed or to specific segments of the assessment for which the professional is responsible. The person may be an independent contractor or an employee of the *user*.

Environmental site assessment (ESA) – The process by which a person or entity seeks to determine if a particular parcel of real *property* (including improvements) is subject to *recognized environmental conditions*. At the option of the *user*, an environmental site assessment may include more inquiry than that constituting *appropriate inquiry* or, if the user is not concerned about qualifying for the *innocent landowner defense*, less inquiry than that constituting *appropriate inquiry*. An environmental site assessment is both different from and less rigorous than an *environmental audit*.

Fill dirt – Dirt, soil, sand, or other earth, obtained off-site, that is used to fill holes or depressions, create mounds, or otherwise artificially change the grade or elevation of real property. It does not include material that is used in limited quantities for normal landscaping activities.

Hazardous waste/contaminated sites – Sites on which a release has occurred, or is suspected to have occurred, of any *hazardous substance*, *hazardous waste*, or *petroleum products*, and that release or suspected release has been reported to a government entity.

Historical Recognized Environmental Condition – a past *release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*). Before calling the past *release* a *historical recognized environmental condition*, the *environmental professional* must determine whether the past *release* is a *recognized environmental condition* at the time the *Phase I Environmental Site Assessment* is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past *release* to be a *recognized environmental condition* at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a *recognized environmental condition*.

Innocent landowner defense – That defense to CERCLA liability provided in 42 USC § 9601(35) and § 9607(b)(3). One of the requirements to qualify for this defense is that the party make “all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice.” There are additional requirements to qualify for this defense.

Interviews – Those portions of this practice that are contained in Section 9 and 10 thereof and address questions to be asked of *owners* and *occupants* of the *property* and questions to be asked of local government officials.

Key site manager – The person identified by the *owner* of a *property* as having good knowledge of the uses and physical characteristics of the property.

Local government agencies – Those agencies of municipal or county government having jurisdiction over the *property*. Municipal and county government agencies include, but are not limited to, cities, parishes, townships, and similar entities.

LUST sites – State lists of leaking underground storage tank sites. Section 9003 (h) of Subtitle I of RCRA gives EPA and states, under cooperative agreements with EPA, authority to clean up releases from UST systems or require owners and operators to do so.

Major occupants – Those tenants, subtenants, or other persons or entities each of which uses at least 40% of the leasable area of the *property* or any anchor tenant when the *property* is a shopping center.

Material threat – A physically observable or obvious threat which is reasonable likely to lead to a release that, in the opinion of the *environmental professional*, is threatening and might result in impact to human health and the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage. The damage would represent a material threat if it is deemed serious enough that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Obvious – That which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer while *visually* or *physically observing the property*.

Other historical sources – Any source or sources other than those designated in 7.3.4.1-7.3.4.8 that are credible to a reasonable person and that identify past uses of the property. The term includes, but is not limited to, miscellaneous maps, newspaper archives, and records in the files and/or personal knowledge of the *property owner* and/or *occupants*.

Physical setting sources – sources that provide information about the geologic, hydrogeologic, hydrologic, or topographic characteristics of a *property*.

Practically reviewable – Information that is practically reviewable means that the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to the *property* without the need for extraordinary analysis of irrelevant data. The form of the information shall be such that the user can review the records for a limited geographic area. Records that cannot be feasibly retrieved by reference to the location of the *property* or a geographic area in which the *property* is located are not generally *practically reviewable*. Most databases of public records are *practically reviewable* if they can be obtained from the source agency by the county, city, zip code, or other geographic area of the facilities listed in the record system. Records that are sorted, filed, organized, or maintained by the source agency only chronologically are not generally practically reviewable. Listings in publicly available records which do not have adequate address information to be located geographically are not generally considered practically reviewable. For large databases with numerous facility records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not *practically reviewable* unless they can be obtained from the source agency in the smaller geographic area of zip codes. Even when information is provided by zip code for some large databases, it is common for an unmanageable number of sites to be

identified within a given zip code. In these cases, it is not necessary to review the impact of all of the sites that are likely to be listed in any given zip code because that information would not be *practically reviewable*. In other words, then so much data is generated that it cannot be feasibly reviewed for its impact on the *property*, it is not *practically reviewable*.

Preparer – The person preparing the *transaction screen questionnaire* pursuant to Practice E 1528, who may be either the user or the person to whom the user has delegated the preparation of the *transaction screen questionnaire*.

Publicly available – Information that is publicly available means that the source of the information allows access to the information by anyone upon request.

Reasonably ascertainable – For purposes of both this practice and Practice E 1528, information that is (1) *publicly available*, (2) obtainable from its source within reasonable time and cost constraints, and (3) *practically reviewable*.

Recognized Environmental Conditions – the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to release to the environment; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. *De minimis conditions* are not *recognized environmental conditions*.

Records review – That part that is contained in Section 7 of this practice addresses which records shall or may be reviewed.

Site reconnaissance – That part that is contained in Section 8 of this practice and addresses what should be done in connection with the *site visit*. The site reconnaissance includes, but is not limited to, the *site visit* done in connection with such a Phase I Environmental Site Assessment.

Site visit – The visit to the property during which observations are made constituting the *site reconnaissance* section of this practice and the *site visit* requirement of Practice E 1528.

Standard environmental record sources – Those records specified in 7.2.1.1.

Standard historical sources – Those sources of information about the history of uses of the property specified in 7.3.4.

Standard physical setting source – A current USGS 7.5-minute topographic map (if any) showing the area on which the property is located.

Standard practice(s) – The activities set forth in either and both this practice and Practice E 1528.

Standard sources – Sources of environmental, physical setting, or historical records specified in Section 7 of this practice.

Transaction screen process – The process described in Practice E 1528.

Transaction screen questionnaire – The questionnaire provided in Section 6 of Practice E 1528.

User – The party seeking to use Practice E 1528 to perform an *environmental site assessment* of the *property*. A user may include, without limitation, a purchaser of *property*, a potential tenant of *property*, an *owner of property*, a lender, or a property manager.

Visually and/or physically observed – During a *site visit* pursuant to Practice E 1528, or pursuant to this practice, this term means observations made by vision while walking through a *property* and the structures located on it and observations made by the sense of smell, particularly observations of noxious or foul odors. The term “walking through” is not meant to imply that disabled persons who cannot physically walk may not conduct a *site visit*; they may do so by the means at their disposal for moving through the *property* and the structures located on it.

ACRONYMS:

CERCLA – Comprehensive Environmental Response, Compensation and Liability Act of 1980 (as amended, 42 USC § 9601 *et seq.*)

CERCLIS – Comprehensive Environmental Response, Compensation and Liability Information System (maintained by EPA)

CFR – Code of Federal Regulations

CORRACTS – Facilities subject to corrective action under RCRA

EPA – United States Environmental Protection Agency

EPCRA – Emergency Planning and Community Right to Know Act (also known as SARA Title III), 42 USC § 11001 *et seq.*)

ERNS – Emergency response notification system

ESA – Environmental site assessment (different than an *environmental audit*)

FOIA – U.S. Freedom of Information Act (5 USC 552 *et seq.*)

FR – Federal Register

LUST – Leaking underground storage tank

MSDS – Material safety data sheet

NCP – National Contingency Plan

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Roux Associates were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Roux Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Exclusive Recovered Govt. Archives

CA RGA LF.....	Recovered Government Archive Solid Waste Facilities List
CA RGA LUST.....	Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 10 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there is 1 CA SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 30 CA LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 20 CA UST sites within

EXECUTIVE SUMMARY

State and tribal voluntary cleanup sites

CA VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the CA VCP list, as provided by EDR, and dated 04/27/2020 has revealed that there is 1 CA VCP site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 16 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 18 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Violations:

Site ID: 112364
 Site Name: DONAHUE PRINTING CO, INC
 Violation Date: 10-13-2016
 Citation: 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31
 Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 11/15/2016. OBSERVATION: Observed ink/solvent stains on the floor next to the 7 colors " Heidelberg" off set printer . Facilities shall be maintained and operated to minimize the possibility of a fire, explosion, or release of hazardous waste to air, soil, or surface water which could threaten human health or the environment. CORRECTIVE ACTION: Immediately fix leak, and clean stains, and manage according to Title 22 hazardous waste regulations.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-15-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Permission to inspect granted by, Richard Greenwood, Jr., Business Owner. As per our discussion on site, Mr. Greenwood, was informed that State law mandates all regulated businesses electronically submit their Hazardous Materials Business Plan (HMBP) via the California Environmental Reporting System (CERS). Electronic submittal shall be completed within the next 30 days. In addition, HMBPG s need to be reviewed and certified annually, between January 1st and March 1st, for complete and accurate information. It is also mandatory to submit any substantial change in operation within 30 days.

Hazardous Waste Summary:

Waste Code: D001
 Waste Description: IGNITABLE WASTE

Waste Code: D035
 Waste Description: METHYL ETHYL KETONE

Waste Code: F005
 Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

inorganic salts and heavy metals) are included in this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/26/1997
Comments: The Phase I and II Site Assessments detected volatile organic compounds (VOCs) such as perchloroethylene (PCE), trichloro- ethene (TCE), and metals such as total chromium, nickel and lead. Additoinal sampling was conducted, and soils contami- nated with higher concentrations of contaminants were excavated and transported for off-site disposal.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 02/17/1997
Comments: DTSC and Household Finance Corp. signed a Voluntary Cleanup Agreement for a Preliminary Endangerment Assessment for the site. Household Finance is owner of the property by foreclosure.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 01-17-2020
Citation: 23 CCR 16 2641(h) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(h)

Violation Description: Failure to have an approved UST Monitoring Plan.

Violation Notes: OBSERVATION: In California Environmental Reporting System (CERS), facility did not submit the correct tank manufacturers. CORRECTIVE ACTION: Submit the proper tank manufacturer in California Environmental Reporting System. All three tank manufacturers should be Owens Corning. OBSERVATION: Tank #2 in CERS shows a 208 sensor for the piping sump. CORRECTIVE ACTION: Correct the sensor in Tank #2 to 352. OBSERVATION: Tank #1 in CERS (Regular Unleaded) states "No" for Fill Tube Shut-Off Valve. CORRECTIVE ACTION: Select "Yes" for Fill Tube Shut-Off Valve for Tank #1 in CERS.

Site ID: 87064
Site Name: Z&R CHEVRON
Violation Date: 01-17-2020
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: OBSERVATION: Diesel and Premium spill containers failed the spill container test. The diesel spill container has a bad gasket/cap. The Premium spill bucket had a bad drain valve. Both failures caused the testing water to into the fuel tanks. The Regular spill container was not tested with 5 gallons of water. CORRECTIVE ACTION: Repair the Diesel and Premium spill containers and retest. Retest Regular spill container with 5 gallons of water. This retest must be submitted into the LAFD CUPA notification process. The retest will be conducted in the presence of an LAFD CUPA Inspector.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

RB Case Number: 900160370
Local Agency: Not reported
File Location: Regional Board
Local Case Number: Not reported
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: The site was first developed in the 1940s and 1950s. A total of ~18 light industrial buildings exist at this ~7-acre property. Seven underground storage tank (UST) areas of concern (AOCs) and six non-UST environmental AOCs were identified in 2013, and both a UST Program case and a Site Cleanup Program (SCP) case have been regulated by the Regional Board. The seven UST AOCs (#1, #3, #6, #7, #9, #10, and #13) are planned for case closure in mid- or late-2016, while non-UST SCP AOCs continue being investigated under SCP case no. 1297 (see GeoTracker global ID T10000008600). Historical and recent uses of the various buildings have included wood working operations, custom cabinetry painting and lacquering, metal cutting operations and metal fabrication, nail manufacturing, spray-painting, sanding, varnishing, glass manufacturing, kitchen textile manufacturing, plastics manufacturing, heating/air conditioning/sheet metal shop, vehicle maintenance, automobile engine reconditioning, drum storage, washing and parking of catering vehicles, furniture finishing and sales, paint storage, camera manufacturing and photography, movie set production, and video editing.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

 Case Type: Cleanup Program Site
 Case Worker: SR
 Local Agency: Not reported
 RB Case Number: 142
 File Location: Regional Board
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
 Potential Contaminants of Concern: Not reported
 Site History: The Site consists of a 4.1-acre commercial property located within a mixed commercial and residential area of Los Angeles. The Site is currently developed with a single two-story warehouse building and an associated parking area immediately to the east (Figure 1). The building is occupied by multiple commercial tenants and used for office and warehouse space and operate various businesses including digital photo editing, computer software development and showrooms for flooring and HVAC equipment. From 1965 to 1990, the Site was used for manufacturing aerospace-related hydraulic test systems and commercial cookware appliances. Aerospace-related hydraulic test systems and commercial cookware appliances were manufactured. Former contaminant sources include: a concrete clarifier, sump, cooling tower, underground storage tanks (USTs) and three substructures of unknown use. The site is located on the northern flank of the Baldwin Hills along the eastern edge of the Santa Monica Groundwater Basin between the Overland and Inglewood Faults. The subsurface lithology consists of interbedded silty clay, sandy silt, and clayey/silty sand from the surface to a depth of 15-20 feet below ground surface (bgs). This unit is directly underlain by a 5-13 feet thick zone of coarse sand and gravelly sand. This coarse-grained unit is underlain by a deeper zone of silt and clay that extends to at least 37.5 feet, the maximum depth investigated. Perched groundwater occurs at 7 to 16 feet bgs within the sand/gravel unit and flows northwest. In August 2002, in accordance with a Regional Board-approved remedial action plan (RAP), Equipoise Corporation, Inc. conducted remedial excavation of petroleum hydrocarbon and VOCs-impacted fine-grained soil from the

S104564988

vadose zone near the southwestern corner of the site. Between September 2003 and February 2005, groundwater remediation involving Enhanced Anaerobic Biodegradation (EAB) via Hydrogen Release Compound (HRC) injection was implemented at the site. The Site has been characterized during multiple phases of investigation between 1989 and 2015. A total of 74 soil borings, 41 soil vapor probes, and 11 groundwater monitoring wells have been installed on or near the Site during these investigations. Results of these investigations show that former Site operations have impacted soil, soil vapor and groundwater with petroleum hydrocarbons including ethylbenzene, toluene and xylenes; and halogenated volatile organic compounds (VOCs), including 1,1,1-trichloroethane (1,1,1-TCA), trichloroethene (TCE), tetrachloroethylene (PCE), 1,1-dichloroethene (1,1-DCE), and cis-1,2-dichloroethene (cis-1,2-DCE). Groundwater is additionally impacted with chloroethane, vinyl chloride and 1,4-dioxane. These constituents are all considered to be chemicals of concern (COCs) for the Site. Groundwater has historically been monitored and sampled on a quarterly to semi-annual basis from October 1990 through December 2015, a total of 46 groundwater monitoring events. Groundwater occurs within a perched zone 7 to 16 feet bgs and consistently flows to the northwest. The perched groundwater occurs within a 5-15 foot thick permeable coarse sand/gravel zone in between low-permeability clay, silty clay and clayey silt zones that extend from the surface to at least 38 feet bgs. The perched groundwater zone pinches west of the Site based on a 2005 membrane interface probe groundwater investigation. Groundwater is currently monitored on a semi-annual to annual basis from a network of 11 monitoring wells and is analyzed for VOCs by USEPA Method 8260B, total petroleum hydrocarbons (TPH) as gasoline-, diesel- and oil-ranges by USEPA Method 8015M and 1,4-dioxane by USEPA Method 8270C. During the most recent sampling event in December 2015, the maximum COCs detected in groundwater included 6,300 micrograms per liter (g/L) TPH as diesel fuel (TPHd), 3,600 g/L TPH as gasoline (TPHg), 3,300 g/L TPH as motor oil (TPHm), 1,1-DCA (1,900 g/L), cis-1,2-DCE (1,800 g/L), chloroethane (1,300 g/L), vinyl chloride (1,100 g/L), 1,4-dioxane (980 g/L), 1,1,1-TCA (710 g/L), TCE (500 g/L), 1,1-DCE (320 g/L), and toluene (220 g/L). Relatively lower concentrations of total xylenes (78 g/L), ethylbenzene (14 g/L), trans-1,2-DCE (13 g/L), 1,2-DCA (5.8 g/L), and PCE (2.8 g/L) were also detected. With the exception of TPHd, TPHm, and TCE, the highest COCs concentrations are from MW-1, near the former source area. The highest concentration of TCE was from MW-10 and those of TPHd and TPHm were from MW-3. Groundwater COC impacts from the Site do not appear to extend much beyond well MW-7 based on the 2005 offsite investigation results. In August 2002, in accordance with a Regional Board-approved RAP, Equipoise conducted remedial excavation of petroleum hydrocarbon and VOCs-impacted fine-grained soil from the vadose zone near the southwestern corner of the site. In 2009, additional excavations were conducted in the Annex building and in the southwest corner of the main warehouse building (Figure 2). A total of 854 tons of VOC s- and petroleum hydrocarbon-impacted soil has been removed from the Site as a result of these excavations. Excavated areas were backfilled with a six-sack cement slurry material. Results of subsequent confirmation sampling indicate that the majority of secondary residual petroleum hydrocarbon and halogenated VOCs have been removed to the Regional Board's satisfaction. Between September 2003 and February 2005, groundwater remediation involving Enhanced Anaerobic Biodegradation (EAB) via HRC

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

DEAN ALCO (Continued)

S104564988

injection was implemented at the Site. Subsequent periodic evaluations of the EAB remediation indicate that enhanced biodegradation of the primary chemicals of concern has occurred in groundwater. Concentrations of primary VOCs have been reduced as follows: 1,1,1-TCA (14,000-710 g/L), TCE (6,200-500 g/L), and 1,1-DCE (4,600-320 g/L). However, due to the high residual concentrations of COCs in groundwater, additional groundwater remediation will be needed. Regional Board staff will require a new groundwater RAP to address this matter in a subsequent letter. Because residual soil gas concentrations exceeded respective commercial/industrial California Human Health Screening Levels, a human health risk assessment (HHRA) was conducted to evaluate the incremental risk/hazards posed to current and future building occupants due to potential exposure to VOCs via the vapor intrusion to indoor air inhalation exposure pathway. The risk evaluation was conducted using the California Department of Toxic Substances Control Johnson and Ettinger Screening Model for evaluating exposure point concentrations and cumulative risks/hazards from inhalation of VOCs in indoor air due to vapor intrusion from subsurface soil vapor beneath the building foundation. Results of HHRA calculations yielded risk estimates of 5.5×10^{-6} to 3.0×10^{-5} and hazard indices of 0.03 to 0.44. Based on the available data and the calculations, potential health risks inside the buildings are within the acceptable risk management range and are considered appropriate for current commercial/industrial land use. The HHRA should be re-evaluated if the building is changed or remodeled in the future. The Regional Board's oversight of activities at the Site has resulted in the cleanup or abatement of wastes to ensure the protection of groundwater and surface water quality at the Site for current and future beneficial uses. Based on our review of pertinent reports and available information in the file, the Regional Board recommends NFA for soil at the Site based upon the following criteria: " The primary sources of COCs (VOCs and TPH) in soil (clarifier, USTs) have been removed. " The extent of contamination has been adequately characterized in soil, soil vapor and groundwater. " Over 90% of residual VOCs and TPH in soil was removed by excavation in 2002 and 2009. o Further impacts to groundwater infiltration and leaching are significantly reduced; and o Further impacts to soil vapor via molecular diffusion are significantly reduced. " Residual concentrations in soil are either non-detect (ND) or below commercial/industrial screening levels, and are, therefore, not a threat to human health or the environment. " Some residual VOCs in soil vapor exceed commercial/industrial screening levels. o These VOCs are located primarily outside the building footprint in a paved area onsite. " Residual VOCs beneath the building footprint are either non-detect or below screening levels. " Residual VOCs in soil vapor pose minimal risks to human health and the environment. o Risk/hazard values range from 5.5×10^{-6} to 3.0×10^{-5} and 0.03 to 0.44. Groundwater monitoring will continue on a semi-annual basis. A groundwater remedial action plan will be required to address high VOCs in groundwater.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Address: 3077-3243 LA CIENEGA BLVD

City,State,Zip: LOS ANGELES, CA 90016

Region: STATE

Facility Status: Open - Site Assessment

Status Date: 03/18/2016

Global Id: T10000008600

Lead Agency: LOS ANGELES RWQCB (REGION 4)

Lead Agency Case Number: Not reported

Latitude: 34.029315745

Longitude: -118.37370787

Case Type: Cleanup Program Site

Case Worker: DMB

Local Agency: Not reported

RB Case Number: 1297

File Location: Regional Board

Potential Media Affected: Aquifer used for drinking water supply, Soil, Soil Vapor

Potential Contaminants of Concern: Dichloroethene (DCE), Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride

Site History: The site was first developed in the 1940s and 1950s. A total of ~18 light industrial buildings exist at this ~7-acre property. Seven underground storage tank (UST) areas of concern (AOCs) and six non-UST environmental AOCs were identified in 2013, and both a UST Program case and a Site Cleanup Program (SCP) case have been regulated by the Regional Board. A total of 18 AOCs have been investigated from 2007 through 2016, with seven UST AOCs closed by the SWRCB on August 25, 2016, while no further action (NFA) was granted for soil and soil vapor for non-UST SCP AOCs on March 3, 2017, with the groundwater investigation (AOC 14) ongoing. Historical and recent uses of the various buildings have included wood working operations, custom cabinetry painting and lacquering, metal cutting operations and metal fabrication, nail manufacturing, spray-painting, sanding, varnishing, glass manufacturing, kitchen textile manufacturing, plastics manufacturing, heating/air conditioning/sheet metal shop, vehicle maintenance, automobile engine reconditioning, drum storage, washing and parking of catering vehicles, furniture finishing and sales, paint storage, camera manufacturing and photography, movie set production, and video editing.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A
Date Made Active in Reports: 08/25/2020	Last EDR Contact: 09/03/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 10/12/2020
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A
Date Made Active in Reports: 08/25/2020	Last EDR Contact: 09/03/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 10/12/2020
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/29/2020

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/29/2020
Date Data Arrived at EDR: 08/03/2020

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Northwest Map:	5630733 BEVERLY HILLS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

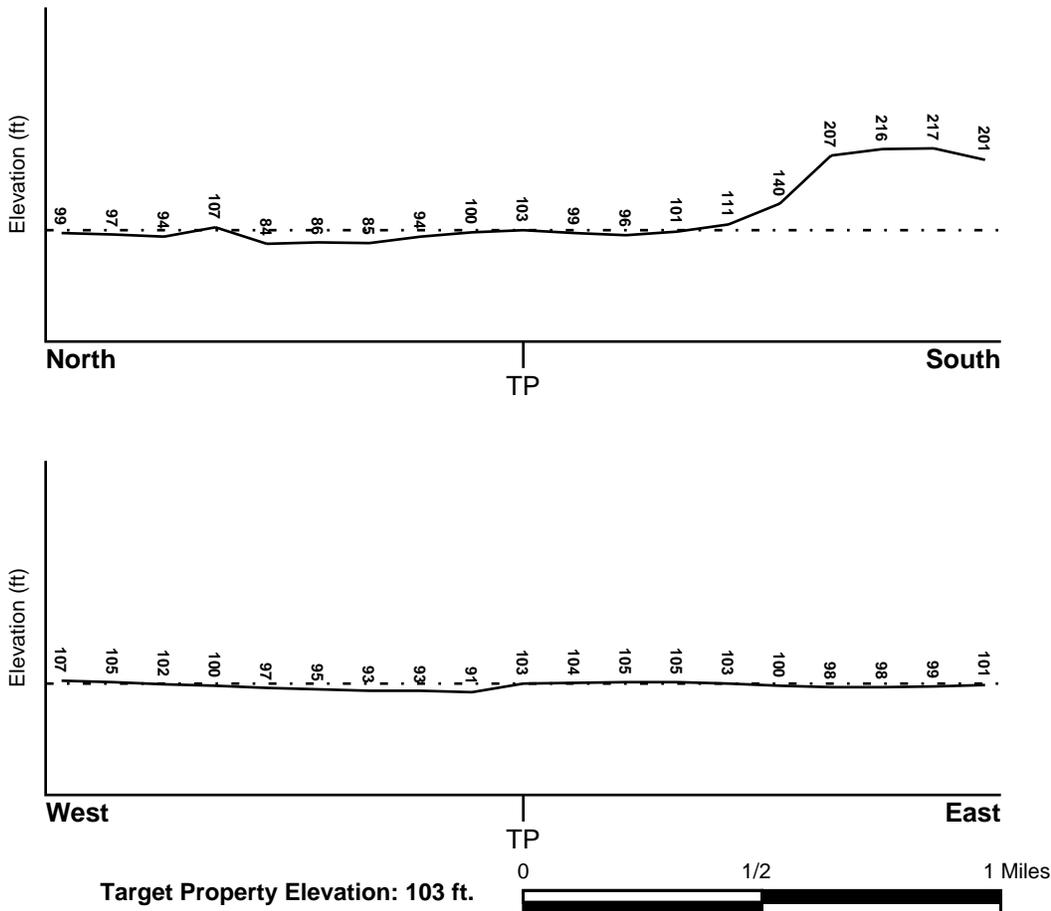

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1615F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06037C1595F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile WSW
Site Name:	KENNETH HAHN STATE RECREATION AREA
Site EPA ID Number:	CAD983673286
Groundwater Flow Direction:	NOT AVAILABLE.
Inferred Depth to Water:	likely to exceed 500 feet.
Hydraulic Connection:	The site is located in the Baldwin Hills, which form a barrier to ground water flow and are considered non-water-bearing.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Surficial Soil Types: loam
 clay
 silt loam
 loamy sand
 sandy loam
 fine sand
 clay loam
 gravelly - sandy loam
 coarse sand
 gravelly - sand
 sand

Shallow Soil Types: fine sandy loam
 gravelly - loam
 sand
 silty clay

Deeper Soil Types: stratified
 clay loam
 silty clay loam
 gravelly - sandy loam
 coarse sand
 sand
 weathered bedrock
 very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

REGARDING: Installation of 1 Atmospheric Tank for
Universal Match Division of UMC Industries
3401 South La Cienega Boulevard.

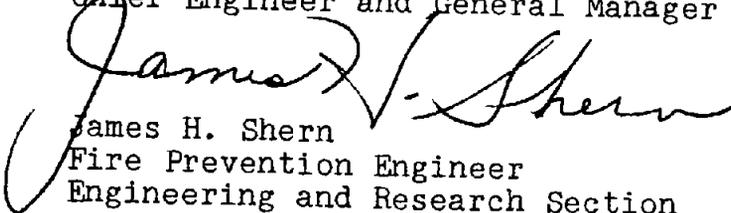

Permit No. 17476 authorizes you to make the above installation,
subject to the following conditions:

1. Field inspection by a member of this Department prior to covering of tanks and piping.
2. Pressure test of piping prior to covering. This must be done in the presence of the field inspector.
3. Final approval in writing shall be obtained from the field inspector before the installation may be placed in operation.

Section 57.04.03 requires that all auto fueling stations have a permit, which shall be secured from the City Clerk's Office, Room 1, City Hall.

Please contact Captain Maricich of our West Unit, telephone 776-2685, to make necessary arrangements for inspection.

H-23. View of the adjacent See's Candies factory located south of the Site.

H-24. View of the parking structure located east of the Site, across South La Cienega Boulevard.

User Questionnaire

ASTM E 1527-13 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the **User** (entities seeking to use the ASTM E1527-13 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. **Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.**

Site Name/Address: _____

Person Interviewed/Title: _____ Date: _____

If known, when was the property initially developed? _____

If different, when were the current building(s) on the property constructed? _____

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Did a search of *recorded land title records* (or judicial records where appropriate, see note 1 below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law?

Yes ___ No ___ If you answer yes, please include an explanation in the space provided below:

2. Activity and land use limitations that are in place on the *property* or that have been filed or recorded in a registry (40 CFR 312.26).

Did a search of *recorded land title records* (or judicial records where appropriate, see note 1 below) identify AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed against the *property* under federal, tribal, state, or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property). *Institutional Controls* are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Yes ___ No ___ If you answer yes, please include an explanation in the space provided below:

Note 1 - In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than land title records. In such cases judicial records must be searched for environmental liens and AULs.

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the *property* or nearby properties?

For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes ___ No ___ If you answer yes, please include an explanation in the space provided below:

4. Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?

Yes ___ No ___ If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the *property*?

5. Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *User*:

a. Do you know the past uses of the *property*?

Yes ___ No ___

b. Do you know of specific chemicals that are present or once were present at the *property*?

Yes ___ No ___

c. Do you know of spills or other chemical releases that have taken place at the *property*?

Yes ___ No ___

d. Do you know of any environmental cleanups that have taken place at the *property*?

Yes ___ No ___

If you answered yes to any of the questions above, please include an explanation in the space provided below:

6. The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

Yes ___ No ___ If you answer yes, please include an explanation in the space provided below:

Please provide the following property contact information:

Property Owner: _____

Phone Number: _____

Key Site Personnel: _____

Phone Number: _____

Past Owner: _____

Phone Number: _____

1. Introduction

Roux Associates, Inc. (Roux) has prepared this *Phase II Subsurface Investigation Report* (Report) for Lendlease Development, Inc. (Client) to summarize the findings of the Phase II Subsurface Investigation conducted at 3401 South La Cienega Boulevard, Los Angeles, California (the Site, Figure 1) between October 21, 2020 and October 30, 2020. Soil and soil vapor sampling were conducted in accordance with Roux's proposed scope of work provided to the Client in a series of emails between October 16 and October 20, 2020.

The Site consists of one irregularly shaped parcel, identified by Los Angeles County Assessor's Parcel Number (APN) 4205-032-001 encompassing approximately 3.6 acres. The Site is currently a Public Storage utilized as commercial self-storage. Client is considering acquisition of the Site for commercial and residential development.

1.1 Objective and Scope of the Investigation

The purpose of this investigation was to address, to the degree possible, the three Recognized Environmental Conditions (RECs) identified during a Phase I Environmental Site Assessment (Phase I ESA) prepared by Roux and dated November 17, 2020. The RECs identified included:

- **REC 1** – a former 15,000-gallon underground storage tank (UST), reportedly installed in 1947 and stored paraffin wax, a material used in the manufacturing of matches.
- **REC 2** – a former railroad spur situated along the northern portion of the Site, north of the main manufacturing building that was present between 1948 into the 1980's.
- **REC 3** – a former match manufacturing operation, as referenced above, that existed at the Site as the primary tenant from the original development in 1947/1948 to the mid/late 1970s.

Additional details regarding these RECs are provided in Section 2.3.2.

The subsurface investigation addressed RECs associated with the former railroad spur and former UST on Site (REC-1 and REC-2). To accomplish these objectives, Roux implemented the following scope of work:

- Conducted a geophysical survey in and around the area of the former UST in an attempt to identify whether or not the UST and/or any associated piping or underground structures were still present at the Site;
- Conducted a geophysical survey along the area of the former railroad spur to the immediate north of the original on-Site building in an attempt to identify former ties and/or rail, that may have been left in place;
- Collected shallow soil samples from 11 locations at nominal depths of 0.5 and 2 feet below ground surface (bgs) along the former on-Site railroad spur. The shallower (0.5 feet bgs) and some 2 feet bgs soil samples were analyzed for the presence of metals, total petroleum hydrocarbons (TPH), pesticides, herbicides, and polychlorinated biphenyl (PCBs).
- Collected soil samples from two locations adjacent to the former UST at nominal depths of 5, 10 and 15 feet bgs. All soil samples were analyzed for the presence of metals, TPH and volatile organic compounds (VOCs).

- Collected soil vapor samples from two locations adjacent to the former UST at nominal depths of 5 and 15 feet bgs. Soil vapor samples were analyzed for the presence of VOCs.

The complete scope of work for this project is summarized in Table 1. Soil and soil vapor sampling locations are shown on Figure 2.

2. Site Background

2.1 Site Description and Historical Use

The Site is located at 3401 South La Cienega Boulevard in the City of Los Angeles, California (Figures 1 and 2). The Site encompasses an area of approximately 3.6 acres and includes one irregularly shaped parcel (APN: 4205-032-001).

The Site is located southwest of the intersection between West Jefferson Boulevard and La Cienega Boulevard. Currently, the Site is occupied by a Public Storage facility for self-storage which was constructed in 1977. Site improvements include nine structures; eight of which are utilized for storage units and one of which is an on-Site residence for the property manager. Figure 2 provides current building identifications.

The Site was initially undeveloped as early as 1884 and was first developed in 1946/1947 with a rectangular, single-story structure in the center of the Site (referred to as main building and Building A, B C on Figure 2), two smaller structures situated to the east of the main building, and then at least four smaller structures to the west of the main building. Based on reviewed records, the primary historical tenant at the Site was a match manufacturing operation (known primarily as Universal Match Company) which operated from 1947 to the early 1970's.

Between approximately 1948 and the 1980's, a railroad spur from the adjacent Southern Pacific Railroad was present on-Site, north of the main building and parallel to the northern boundary.

2.2 Site and Vicinity General Characteristics

As depicted in the Beverly Hills, California (2012) 7.5-minute quadrangle topographic map published by the United States Geological Survey (USGS), the elevation of the Site is approximately 103 feet above mean sea level (amsl). Topographically, the Site is generally flat with a gradual slope to the west.

2.3 Previous Investigations

Aside from the findings presented in this Report, Roux is not aware of any intrusive investigations of environmental media within the Site boundary having been performed. In addition to the Roux Phase I ESA for the Client, another Phase I ESA was prepared by Partner Engineering and Science, Inc. (Partner) for the current Site owner. The sections below provide summaries of these previous reports:

2.3.1 Phase I Environmental Site Assessment Report (Partner, 2020)

Roux reviewed a Phase I ESA, prepared by Partner and dated March 5, 2020. The report was prepared for Ms. Betsy Terrazas of La Cienega Properties Ltd, the current Site owner. This report did not identify any REC, cRECs or hRECs at the Site or in the immediate vicinity. Partner did identify that the "subject property was occupied by light industrial and/or commercial operations of limited potential environmental concern from at least 1957 to 1975" (Partner, 2020), noting the known occupants related to match manufacturing and possible manufacturing associated with Ferguson Machine Co Roller Gear Drives and American Air Curtain.

In the report, Partner acknowledged that "no regulatory records pertaining to significant hazardous substances use or storage were identified for the subject property", but that a 15,000-gallon paraffin wax UST was installed in 1947. On this issue of former industrial/commercial operations at the Site, Partner stated that, "Although the potential exists for historical hazardous substances or petroleum products use at the

property based on the nature of operations, due to the current use of the subject property for commercial operations and the lack of regulatory interactions to indicate significant releases or contamination, the historical use of the subject property is not anticipated to represent a significant environmental concern at this time.” Partner concluded that, “If the subject property is proposed for redevelopment for specifically residential purposes, further investigation of the past uses may be warranted” (Partner, 2020).

As a result, no further investigations or activities were recommended by Partner.

2.3.2 Phase I Environmental Site Assessment Report (Roux, 2020)

In November 2020, Roux prepared a Phase I ESA for the Site as part of environmental due diligence for the potential acquisition of the Site. As previously discussed, the Phase I ESA prepared by Roux identified the following three RECs.

REC 1 – Underground Storage Tank. Based on a review of historical permits, a 15,000-gallon UST was installed at the Site, likely in 1947 during the initial Site development, and was located immediately west of the northwest corner of the main on-Site building. The documented content of the UST was paraffin wax, which was used in the manufacturing of matches by the Universal Match Company. Paraffin wax is a flammable, soft, colorless semi-solid waxy substance consisting of a mixture of saturated hydrocarbons. Based on available information, the UST used until the mid to late 1970s (approximately 30 years) and it is unclear whether it was removed. The UST does not appear to have been used to store contents other than paraffin wax.

A historical diagram notes the UST was installed approximately seven feet underground with a 4’6” by 10’ by 20’ access pit to the west of the northwest corner of the main building. Figure 3 provides an overlay of the undated historical diagram (believed to be from circa 1950) over the current Site configuration. Based on this overlay, the former UST area appears to have been situated beneath the north end of Building G.

REC 2 – Railroad Spur. Based on reviewed records, including aerial photographs, topographic maps, and the historical diagram from circa 1950, a railroad spur existed on-Site to the immediate north of the main building. This railroad spur stemmed from the main line of the Southern Pacific Railroad that existed north of the Site. In approximately 2010, the right-of way for the railroad was converted into the present-day Metro Expo Line which is situated on platform raised approximately 15-20 feet above street level. Railroad spurs are known sources of shallow soil contamination from a variety of chemicals of potential concern (COPCs), including metals, TPH, VOCs, pesticides, and PCBs. It is unknown whether the railroad spur materials, such as the steel lines, ballast and underlying structural base, were fully removed from the Site during Site redevelopment.

REC 3 – Former Match Manufacturing. Prior to Public Storage, the Site was primarily used as a match manufacturing operation by Universal Match Company from the initial development in 1947 to the mid/late 1970s. In addition to the paraffin wax stored in the UST, other hazardous materials used and maintained on Site included phosphorus, glue, water-soluble dyes, sulfur, and inert materials such as sand, glass and clay. According to permits reviewed and research on historical match making processes, wooden sticks are often soaked in phosphate, which serves as a fire retardant; while the inert materials (sand, glass, and clay) are used on the tips of matches to increase the friction and control the burning rate. Materials such as sulfur were used to sustain combustion and water-soluble dyes were often added to give the match head a color such as red or blue. No specific information regarding the size and

quantities, or the handling and disposal, of chemicals or hazardous material was found during our historical research.

A reviewed 1953 Industrial Waste Permit suggested that a sump was present, or planned to be installed, in each of the two boiler rooms, and that “sand, glass, clay and sulfur and phosphorus settle in sumps”. No information has been reviewed indicating how the sumps were managed or if they were properly abandoned. Based on known manufacturing operations on-Site, solvents containing VOCs may have been used to clean equipment and dilute paraffin wax solutions. Wastewater containing these solvents may have been spilled or placed into former sumps.

Although the possibility of the former on-Site use of solvents could pose a potential vapor intrusion risk to future occupants, the former match manufacturing activities are not believed to have been solvent intensive. In addition, it is noted that proposed development plans for the Site include excavation to depths between 15 and 30 feet below surface in the area of the main building to accommodate parking and footings for future structures.

In the Phase I ESA, Roux also provided recommendations for each of the three RECs. As discussed, the investigation activities in this Report attempted to address REC-1 and REC-2.

2.4 Physical Setting

The Site setting is relatively flat, with an elevation of approximately 103 feet above mean sea level (United States Geological Survey, Hollywood, California, 7.5 Minute Topographic Map, 2012). Site observations indicated a gradual slope to the west.

2.4.1 Regional and Local Geology

The Site is located within the Coastal Plain of Los Angeles County, California. The Coastal Plain is bounded by the Santa Monica and San Gabriel Mountains to the north; the Palos Verdes Hills and San Pedro Bay to the south, the Elysian, Repetto, Merced and Puente Hills to the east; the Orange County Coastal plain to the southeast; and Santa Monica Bay to the west. The Coastal Plain consists of Quaternary alluvial sediments overlying and/or surrounding by marine sediments, metavolcanics rocks, and crystalline bedrock, which form foothill and highland features (California Department of Water Resources [CDWR], Bulletin 104, June 1961).

The northwest trending Newport-Inglewood Fault is located approximately 1,000 feet to the southwest, and the northernmost extension of the Baldwin Hills is located approximately 3,000 feet to the south (Poland et al., and Bryant, 1988).

Based on a review of reports from nearby sites, the Site area is underlain by fill material and Holocene alluvial and colluvial sediments to a depth of approximately 10 feet and the Pleistocene Lakewood Formation (CDWR, 1961; and Wayne Perry Inc. [WPI], 2010). Based on data collected from previous assessments in the Site area, the Site area is underlain by interbedded layers of clay, fine-grained clayey sand, fine- to coarse-grained gravelly sand and sand, fine-grained silty sand, sandy silt, and silt to a depth of 100 feet (WPI, 2010).

2.4.2 Regional and Local Hydrogeology

The Site is located along the northwest margin of the Central Groundwater Basin, separated from the Santa Monica Basin by the Newport-Inglewood Structural Zone. The Bellflower Aquiclude in the Site area begins

at approximately 80 feet and extends to 40 feet above mean sea level. The Ballona Creek, located 300 feet west of the Site, is the dominant hydrologic features and drains surface waters to the Pacific Ocean (CDWR, 2004). The Ballona Creek drainage channel is approximately 10 feet in depth and has runoff water present most of the year. The principal hydrologic units present in the Site area include the clay-rich Bellflower Aquiclude and underlying gravels of the productive Ballona aquifer (CDWR, 1961 as cited in CDWR, 2004).

Available data from nearby sites with previous investigation reported a depth to groundwater ranging between 7 to 28 feet bgs with a direction of south to south-west. (State Water Resources Control Board [SWRCB], 2016). As noted in this investigation, two borings were driven on-Site to a depth of 15 feet bgs and groundwater was not encountered.

3. Subsurface Investigation

3.1 Pre-Field Activities

3.1.1 Health and Safety Plan

Prior to conducting any fieldwork at the Site, a Site-specific Health and Safety Plan (HASP) was prepared by Roux. All fieldwork associated with the investigation was performed in accordance with the HASP. Field workers acknowledged their familiarity with all safety procedures and indicated their intent to follow the HASP by signing the HASP after the tailgate safety meeting(s), which took place at the beginning of each field day.

3.1.2 Underground Service Alert

Roux marked the boundary of the Site in white paint and notified Underground Service Alert (USA) of Southern California (Ticket No. B202940332-00B) over 48 hours in advance of drilling activities to identify potential utilities situated within the bounds of the Site. Intended drilling locations were not modified based on the proximity to marked subsurface utilities

3.1.3 Geophysical Survey

On October 21, 2020, Roux contracted with SubSurface Surveys (SSS) of Carlsbad, California to evaluate the proposed boring locations and mitigate the risk of encountering buried utility lines or other subsurface features. As part of the geophysical investigation, SSS used a variety of techniques including ground-penetrating radar, metal detection, and utility location. Based on the results of the geophysical survey which indicated that no significant subsurface features were present in the vicinity of the proposed boring locations, the intended drilling locations were not significantly altered. The Geophysical Survey Report is provided as Appendix A.

The geophysical survey was also conducted to assess if former features such as the UST and associated piping or former railroad line materials were present on-Site. The results of the geophysical survey, as it pertains to these activities and the findings, are discussed in Sections 3.2.1 and 3.3.1.

3.2 Railroad Spur Investigation Field Work

To address REC-2, Roux conducted a geophysical survey to identify former ties and/or rails and collected shallow soil samples at 11 locations along the approximately 550-foot length of the former railroad spur.

3.2.1 Geophysical Survey

On October 21, 2020, SSS conducted a geophysical survey along the area of the former railroad spur to the immediate north of the original on-Site building (referred to as the main building). The geophysical survey did not identify any conclusive evidence of railroad materials such as rails or ties. At four isolated locations, the survey did identify anomalies described as “metal or junk debris”. There is no indication as to the specific nature of these detections.

3.2.2 Soil Boring Advancement

On October 23, 2020, under the direction of Roux, Rice General, Inc. (Rice) of Long Beach, California (CLSB #647294) cored the asphalt, between 3-5-inches thick, at all 11 proposed boring locations along the former railroad spur. Using hand auger equipment, Roux personnel then hand augered at each location to approximate terminal depths of 2-feet bgs.

3.2.3 Soil Sampling and Analysis

Shallow soil samples were collected by Roux at 0.5 and 2-foot bgs at all 11 locations (labeled R-1 through R-11) for analysis of metals by United States Environmental Protection Agency (USEPA) Method 6010B/7471A, TPH by USEPA Method 8015M, PCBs by USEPA Method 8082, pesticides by USEPA Method 8081A and herbicides by USEPA Method 8151A. The locations of the shallow soil borings are shown on Figure 2.

Soil samples were collected directly from the hand auger bucket into 8-oz laboratory provided glass jars. After sample collection, soil samples were placed on ice and transported under chain-of-custody to Enthalpy Analytical (Enthalpy) of Orange, California, a California-certified laboratory. Laboratory analytical reports are included in Appendix B.

3.2.4 Equipment Decontamination

Hand auger equipment was cleaned in a solution of laboratory-grade detergent and rinsed with distilled water prior to use at the next boring location. Jars used for sample collection were provided by the laboratory.

3.2.5 Investigation Derived Waste

Investigation Derived Waste (IDW) generated from drilling activities was placed in one labeled Department of Transportation (DOT)-rated 55-gallon drum. The handling of this IDW drum is further discussed in Section 3.3.6.

3.3 Former UST Investigation Field Work

To address REC-1, Roux conducted a geophysical survey and collected both soil and soil vapor samples at two locations located adjacent to the suspected UST location. Based on a historical diagram overlain with current Site development, the former UST area appears to have been situated beneath the northern end of Building G (See Figure 3).

3.3.1 Geophysical Survey

On October 21, 2020, SSS conducted a geophysical survey in the area of the former UST. The geophysical survey did not identify a UST or UST related infrastructure, such as associated piping or backfilled material, within the survey area. However, the suspected former UST location appears to have been beneath the northern end of Building G, which is inaccessible. Therefore, the presence or absence of a UST could not be definitely assessed.

3.3.2 Boring Advancement

On October 28, 2020, under the supervision of Roux, Strongarm Environmental Field Services, Inc. (Strongarm) of Fullerton, CA (C-57 #7776463) advanced two borings, B-1 and B-2 at locations adjacent to the suspected former UST area. Boring B-1 was placed to the immediate north of the suspected UST area and Boring B-2 was placed to the immediate west of the suspected UST area.

Both boring locations were pushed through the existing asphalt layer, approximately 4-inches thick. Each boring was then advanced to approximately five feet bgs via hand auger for utility clearance and then via direct push technology (DPT) to terminal depths of approximately 15.5 feet bgs.

3.3.3 Soil Sampling

On October 28, 2020, soil samples were collected from both borings at approximate depths of 5, 10 and 15 feet bgs. A duplicate sample was collected from boring B-1 at 5 feet. Soil samples were collected directly from the hand auger bucket at the 5-foot depths and then from the acetate sleeves at 10 and 15 feet bgs into glass jars. In addition to sample collection in glass jars, soil samples were prepared via USEPA method 5035 and collected into VOA vials for VOC analysis.

3.3.4 Installation of Temporary Soil Vapor Probes

Under the direction of Roux, Strongarm installed temporary dual-nested soil vapor probes in both borings, identified as SV-1 and SV-2, with sample ports at 5 and 15 feet bgs. Soil vapor probes were installed by placing ¼-inch nylon (Nyla flow) tubing and 1-inch long filter stone sampling tips into the boring to the desired depth. The probes were completed with a 12-inch bottom layer of #3 filter sand with the probe placed in the center of the sand layer, followed above by a 12-inch layer of dry bentonite chips, and then sealed close to the surface (or to the next probe depth) with hydrated bentonite. An approximate 12-inch layer of dry bentonite was installed below the sand packs of the shallow probes at 5 feet bgs.

After the installation of the soil vapor probes, a minimum 48-hour equilibration period was observed prior to sampling the probes. Equilibration times were consistent with those stipulated by the July 15 Advisory – Active Soil Gas Investigation authored by the California Environmental Protection Agency (Cal/EPA) and the Department of Toxic Substances Control (DTSC) October 2011 Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance) for hand-auger and DPT drilling methods.

3.3.5 Soil Vapor Sampling

On October 30, 2020, Roux conducted soil vapor sampling at the Site. Protocols and procedures utilized by Roux were in general accordance with the Cal/EPA Advisory Soil Gas Investigations and the DTSC Vapor Intrusion Guidance.

A 60-second shut-in test was conducted prior to purging and collecting a sample at each probe. After conducting the shut-in test, 1,1-Difluoroethane (1,1-DFA) gaseous leak check compound was applied to a clean rag and placed at the surface near the sample train connections and borehole opening. Where conditions allowed, three system volumes, including the probe inner-tubing, dry bentonite, and sand pack volumes, were purged from the probes at a rate not exceeding 200 milliliters per minute (mL/min) maintaining a vacuum below 100 inches of water using a vacuum pump and magnehelic vacuum gauge. Three system volumes were able to be purged at all four probes.

Soil vapor samples were collected in 1-liter evacuated SUMMA® canisters and were transported under proper chain of custody procedures to Enthalpy. Soil vapor samples were analyzed for VOCs via USEPA Method TO-15 Scan. Once sampled, soil vapor probes were abandoned by pulling the tubing and filling any void space in the probes with hydrated bentonite and patching in-kind at the surface with asphalt.

3.3.6 Investigation Derived Waste

IDW produced from the UST portion of this investigation was added the 55-gallon drum and IDW produced during the railroad spur investigation. A copy of the laboratory analytical report for an IDW soil sample was transmitted to American Integrated Services, Inc. (AIS) of Wilmington, California, for profiling purposes.

Based on the analytical results, the IDW was classified as non-hazardous waste and was removed from the Site by AIS on December 1, 2020 for off-site disposal.

4. Results

4.1 Lithology

At the 11 railroad spur locations, the lithology encountered generally consisted of dark brown (10YR/2/2), silt with sand and gravel material. Broken asphalt material and gravel were often encountered around 1.5 to 2 feet bgs indicating the likelihood of fill material.

At the two borings adjacent to the former UST, similar fill-like material was encountered down to 5 feet bgs. Material in the first 5 feet bgs is described as dark brown, moist, silt with sand and gravel. Brick and asphalt material difficult to hand auger was encounter at both borings, indicated the likelihood of fill material. Beyond 5 feet bgs, material was gravely silt with gravel or poorly graded sand. Boring logs for these two locations are provided as Appendix C.

4.2 Railroad Spur Soil Analytical Results

A total of 13 shallow soil samples (11 primary and two duplicate) were collected at a depth of 0.5 feet bgs and were analyzed for metals, TPH, pesticides, herbicides and PCBs. Another 12 soil samples (11 primary and one duplicate) from the same boring locations were collected at a depth of 2 feet bgs, and these samples were originally placed on laboratory hold pending analysis of the shallower samples. After receiving analytical results of the shallower samples, three 2-foot samples were analyzed for metals. Additionally, three of the shallower samples were reanalyzed using the Waste Extraction Test (WET) preparation method and USEPA Method 6010B.

4.2.1 Metals

A total of 13 shallow railroad samples (11 primary and two duplicates) were analyzed for Title 22 metals by USEPA Method 6010B/7471A. Based on the metals analysis results of the 0.5-foot samples collected from boring locations R-1, R-2, and R-11 samples collected at 2-feet bgs from these same borings also were analyzed for Title 22 Metals. As shown in Table 2, arsenic, barium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, vanadium, and zinc were reported at concentrations above their respective laboratory method reporting limits (MRLs).

Metal detections are summarized as follows:

- **Arsenic** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 4.1 milligrams per kilogram (mg/kg) (RR-11-0.5) to 20 mg/kg (R-1-0.5). Arsenic was also reported in the three 2-foot railroad samples at concentrations ranging from 2.8 mg/kg (R-2-2) to 5.1 mg/kg (RR-1-2).
- **Barium** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 89 mg/kg (RR-7-0.5) to 130 mg/kg (multiple locations). Barium was also reported in the three 2-foot railroad samples at concentrations ranging from 45 mg/kg (R-1-2) to 100 mg/kg (RR-11-2).
- **Cadmium** was reported in one of the 0.5-foot railroad samples (R-11-0.5) at a concentration of 0.52 mg/kg. Cadmium was also reported in one of the three 2-foot railroad samples (R-11-2) at a concentration of 0.57 mg/kg.

- **Chromium** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 15 mg/kg (multiple locations) to 30 mg/kg (R-11-0.5). Chromium was also reported in the three 2-foot railroad samples at concentrations ranging from 11 mg/kg (R-1-2) to 13 mg/kg (RR-2-2 and RR-11-2).
- **Cobalt** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 5.4 mg/kg (RR-1-0.5) to 9 mg/kg (R-11-0.5). Cobalt was also reported in the three 2-foot railroad samples at concentrations ranging from 4.5 mg/kg (R-1-2) to 7.1 mg/kg (RR-11-2).
- **Copper** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 16 mg/kg (RR-8-0.5) to 310 mg/kg (R-11-0.5). Copper was also reported in the three 2-foot railroad samples at concentrations ranging from 10 mg/kg (R-1-2) to 22 mg/kg (RR-11-2).
- **Lead** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 10 mg/kg (RR-5-0.5-DUP) to 250 mg/kg (R-11-0.5). Lead was also reported in the three 2-foot railroad samples at concentrations ranging from 10 mg/kg (R-2-2) to 40 mg/kg (RR-11-2).
- **Nickle** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 9.1 mg/kg (RR-1-0.5) to 30 mg/kg (R-7-0.5). Nickle was also reported in the three 2-foot railroad samples at concentrations ranging from 6.2 mg/kg (R-1-2) to 22 mg/kg (RR-11-2).
- **Vanadium** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 25 mg/kg (RR-1-0.5) to 32 mg/kg (multiple locations). Vanadium was also reported in the three 2-foot railroad samples at concentrations ranging from 25 mg/kg (R-1-2) to 40 mg/kg (RR-2-2).
- **Zinc** was reported in all 13 of the 0.5-foot railroad samples at concentrations ranging from 57 mg/kg (RR-5-0.5-DUP) to 220 mg/kg (R-11-0.5). Zinc was also reported in the three 2-foot railroad samples at concentrations ranging from 33 mg/kg (R-1-2) to 190 mg/kg (RR-11-2).
- **Mercury** was reported in one of the 0.5-foot railroad samples (R-2-0.5) at a concentration of 0.25 mg/kg. Mercury was not detected in any of the three 2-foot samples.

4.2.2 Metals – STLC and TCLP Analyses

Three shallow soil samples had lead concentrations above 50 mg/kg, which required Toxic Characteristic Leaching Procedure (TCLP) and/or Soluble Threshold Limit Concentration (STLC) analyses by Waste Extraction Test (WET) procedures to evaluate whether these soils would be characterized as hazardous for disposal purposes. Total lead concentrations of samples R-1-0.5, R-2-0.5, and R-11-0.5 were 250 mg/kg, 130 mg/kg, and 76 mg/kg, respectively. Reported lead concentrations were below the 5 milligrams per liter (mg/L) for all analyses.

The total copper concentration of sample R-11-0.5 (310 mg/kg) exceeded 250 mg/kg, which required TCLP and/or STLC analyses by WET procedures. The reported TCLP copper concentration was 5 mg/L, below the 25 mg/L threshold. Analytical results are provided in Table 3.

Based on the WET analysis results, soils with elevated metals concentrations identified as part of this investigation will be classified as non-hazardous waste for disposal purposes.

4.2.3 Total Petroleum Hydrocarbons

The 13 railroad samples (11 primary and two duplicate) collected at a depth of 0.5 feet were analyzed for TPH by USEPA Method 8015M. TPH detections were primarily in the heavier carbon range (C23-C44). The 2-foot samples were not analyzed for TPH.

Reported TPH concentrations are provided in Table 4 and are summarized as follows:

- **C23-C44** was reported in all 13 of the of the 0.5-foot railroad samples at concentrations ranging from 46 mg/kg (R-5-0.5-DUP) to 740 mg/kg (R-10-0.5).

4.2.4 Pesticides

The 13 railroad samples (11 primary and two duplicate) collected at a depth of 0.5 feet were analyzed for organochlorine pesticides (OCPs) by USEPA Method 8081A. No OCPs were reported above laboratory MRLs. The 2-foot samples were not analyzed for pesticides. Analytical results are shown in Table 5.

4.2.5 Herbicides

The 13 railroad samples (11 primary and two duplicate) collected at a depth of 0.5 feet were analyzed for herbicides by USEPA Method 8151A. No herbicides were reported above laboratory MRLs. The 2-foot samples were not analyzed for herbicides. Analytical results are shown in Table 6.

4.2.6 Polychlorinated Biphenyls

The 13 railroad samples (11 primary and two duplicate) collected at a depth of 0.5 feet were analyzed for PCBs by USEPA Method 8082. No PCBs were reported above laboratory MRLs. The 2-foot samples were not analyzed for PCBs. Analytical results are shown in Table 7.

4.3 Former UST Analytical Results

4.3.1 UST Soil Analytical Results

At borings B-1 and B-2 soil samples were collected at 5, 10 and 15 feet bgs, with one duplicate for a total of seven soil samples (six primary and one duplicate). All samples were analyzed for Title 22 metals, TPH, and VOCs via collection Method 5035.

4.3.1.1 Metals

All seven UST soil samples (six primary and one duplicate) were analyzed for Title 22 metals by USEPA Method 6010B/7471A. As shown in Table 2, arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium, and zinc were reported above laboratory MRLs.

Metal detections are summarized as follows:

- **Arsenic** was reported in all seven of the soil samples at concentrations ranging from 0.95 mg/kg (B-2-15) to 53 mg/kg (B-1-5).
- **Barium** was reported in all seven of the soil samples at concentrations ranging from 16 mg/kg (B-1-15) to 120 mg/kg (B-1-5).
- **Chromium** was reported in all seven of the soil samples at concentrations ranging from 9.8 mg/kg (B-2-5) to 24 (B-1-5-DUP).

- **Cobalt** was reported in all seven of the soil samples at concentrations ranging from 4.0 mg/kg (B-2-15) to 7.2 mg/kg (B-1-5).
- **Copper** was reported in all seven of the soil samples at concentrations ranging from 2.8 mg/kg (B-1-15) to 49 mg/kg (B-1-5).
- **Lead** was reported in all seven of the soil samples at concentrations ranging from 1.2 mg/kg (B-1-15) to 69 mg/kg (B-1-5-DUP).
- **Nickle** was reported in all seven of the soil samples at concentrations ranging from 5.8 mg/kg (B-2-5) to 15 mg/kg (B-2-10).
- **Vanadium** was reported in all seven of the soil samples at concentrations ranging from 15 mg/kg (B-1-15) to 32 mg/kg (B-1-5).
- **Zinc** was reported in all seven of the soil samples at concentrations ranging from 17 mg/kg (B-1-15) to 120 mg/kg (B-1-5 and B-1-10).

4.3.1.2 Metals – STLC Analysis

Two soil samples from the UST investigation had lead concentrations that exceeded 50 mg/kg, which required STLC analysis by WET procedures. Total lead concentrations of samples B-1-5 and B-1-5-DUP were 61 mg/kg at and 69 mg/kg, respectively. Results were below the 5 mg/L thresholds for both samples. Analytical results are provided in Table 3.

4.3.1.3 Total Petroleum Hydrocarbons

All seven UST soil samples (six primary and one duplicate) were analyzed for TPH by USEPA Method 8015M. TPH concentrations in the light (C6-C12), middle (C13-C22) and heavy carbon ranges (C23-44) were reported for the samples analyzed, as summarized below and presented in Table 4:

- **Light range TPH (C6-C12)** was reported in all seven of the soil samples at concentrations ranging from 19 mg/kg (B-2-5) to 130 mg/kg (B-1-15). The laboratory reported that the method blank had detections in the C6-C12 range and that the detections in the seven soil samples were primarily laboratory contamination from the hexane extraction solvent.
- **Middle range TPH (C13-C22)** was reported in two of the seven soil samples at concentrations ranging from 19 mg/kg (B-1-5) to 190 mg/kg (B-1-5-DUP).
- **Heavy range TPH (C23-C44)** was reported in five of the seven soil samples at concentrations ranging from 20 mg/kg (B-2-5) to 2,600 mg/kg (B-1-15).

4.3.1.4 Volatile Organic Compounds

All seven UST soil samples (six primary and one duplicate) were analyzed for VOCs by USEPA Method 8260B via collection Method 5035. As shown in Table 8, reported VOC concentrations were below the laboratory MRL with the exception of sample B-2-5, as summarized below:

- **Benzene** was reported in sample B-2-5 at a concentration of 4.9 micrograms per kilogram (µg/kg).

4.4 Soil Vapor Analytical Results

At borings B-1 and B-2 soil vapor samples were collected at 5 and 15 feet bgs, with one duplicate for a total of five soil vapor samples (four primary and one duplicate). All samples were analyzed for VOCs by USEPA Method TO-15.

4.4.1 Volatile Organic Compounds

Reported VOC concentrations for all samples are summarized below and provided in Table 9:

- **Benzene** was reported in four of the five soil vapor samples at concentrations ranging from 3.2 $\mu\text{g}/\text{m}^3$ (SV-2-5 and SV-2-5-DUP) to 63 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **Toluene** was reported in all five soil vapor samples at concentrations ranging from 2.8 $\mu\text{g}/\text{m}^3$ (SV-2-15) to 90 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **Ethylbenzene** was reported in three of the five soil vapor samples at concentrations ranging from 7.2 $\mu\text{g}/\text{m}^3$ (SV-2-5) to 17 $\mu\text{g}/\text{m}^3$ (SV-1-5)
- **m,p-Xylenes** was reported in four of the five soil vapor samples at concentrations ranging from 4.1 $\mu\text{g}/\text{m}^3$ (SV-1-15) to 57 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **o-Xylene** was reported in three of the five soil vapor samples at concentrations ranging from 9.6 $\mu\text{g}/\text{m}^3$ (SV-2-5) to 17 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **1,2,4-Trimethylbenzene** was reported in four of the five soil vapor samples at concentrations ranging from 2.7 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) (SV-1-15) to 16 $\mu\text{g}/\text{m}^3$ (SV-2-5-DUP).
- **1,3,5-Trimethylbenzene** was reported in three of the five soil vapor samples at concentrations ranging from 3.7 $\mu\text{g}/\text{m}^3$ (SV-2-5) to 7.5 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **4-Ethyltoluene** was reported in two of the five soil vapor samples at concentrations ranging from 2.9 $\mu\text{g}/\text{m}^3$ (SV-2-5-DUP) to 7.4 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **Tetrachloroethene (PCE)** was reported in all five soil vapor samples at concentrations ranging from 4.0 $\mu\text{g}/\text{m}^3$ (SV-1-15) to 12 $\mu\text{g}/\text{m}^3$ (SV-2-5).
- **Trichloroethene** was reported in one of the five soil vapor samples at a concentration of 5.9 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **cis-1,2-Dichloroethene** was reported in one of the five soil vapor samples at a concentration of 13 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **2-Butanone** was reported in all five soil vapor samples at concentrations ranging from 11 $\mu\text{g}/\text{m}^3$ (SV-2-15) to 100 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **Acetone** was reported in four of the five soil vapor samples at concentrations ranging from 40 $\mu\text{g}/\text{m}^3$ (SV-2-5) to 380 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **Carbon Disulfide** was reported in all five soil vapor samples at concentrations ranging from 4.8 $\mu\text{g}/\text{m}^3$ (SV-1-15) to 170 $\mu\text{g}/\text{m}^3$ (SV-1-5).
- **Chloroform** was reported in one of the five soil vapor samples at a concentration of 2.2 $\mu\text{g}/\text{m}^3$ (SV-1-5).

- **Cyclohexane** was reported in one of the five soil vapor samples at a concentration of 64 µg/m³ (SV-1-5).
- **Ethyl Acetate** was reported in two of the five soil vapor samples at concentrations ranging from 2.5 µg/m³ (SV-2-5-DUP) to 3.6 µg/m³ (SV-2-5).
- **Methylene Chloride** was reported in two of the five soil vapor samples at concentrations ranging from 3.0 µg/m³ (SV-2-5-DUP) to 5.5 µg/m³ (SV-1-5).
- **n-Heptane** was reported in four of the five soil vapor samples at concentrations ranging from 2.5 µg/m³ (SV-2-5) to 86 µg/m³ (SV-1-5).
- **n-Hexane** was reported in four of the five soil vapor samples at concentrations ranging from 3.0 µg/m³ (SV-2-5 and SV-2-5-DUP) to 180 µg/m³ (SV-1-5).
- **Propylene** was reported in one of the five soil vapor samples at a concentration of 75 µg/m³ (SV-1-5).
- **Styrene** was reported in three of the five soil vapor samples at concentrations ranging from 3.9 µg/m³ (SV-2-5-DUP) to 6.1 µg/m³ (SV-1-5).
- **1,1-DFA**, the leak check compound, was not reported above the RL in any of the samples analyzed.

5. Discussion & Conclusions

5.1 Railroad Spur Results Discussion

Reported soil concentrations for samples collected along the railroad spur were compared to both the residential and commercial/industrial screening levels established by USEPA (Regional Screening Levels [RSLs]); DTSC (Human and Ecological Risk Office [HERO] Human Health Risk Assessment [HHRA] Note Number 3) modified Screening Levels (SLs); California Regional Water Quality Control Board (RWQCB, Remediation Guidance's for Petroleum and VOC Impacted Site - Maximum Soil Screening Levels for Total Petroleum Hydrocarbons above Drinking Water Aquifers [20-150 feet above groundwater]); DTSC Determination of a Southern California Regional Background Arsenic Concentration in Soil; and Kearney Foundation Special Report, Background Concentrations of Trace and Major Elements in California Soils.

A summary of the soil exceedances of regulatory screening levels is presented below.

5.1.1 Metals in Soil

Of the 16 railroad spur soil samples collected and analyzed for metals during this investigation, all of them exceeded the applicable residential screening levels for arsenic, which are 0.68 mg/kg (USEPA RSL) and 0.11 mg/kg (HERO Note 3 SL). Further, all 16 soil samples exceeded at least one of the two commercial/industrial applicable regulatory screening levels for arsenic. All arsenic concentrations exceeded the HERO Note 3 SL for commercial/industrial soil of 0.36 mg/kg and 15 of the 16 soil samples analyzed exceeded the USEPA RSL of 3.0 mg/kg. Figure 4 shows notable metal detections at each sample location.

When compared with the typical California upper bound background concentration for arsenic of 12 mg/kg only two samples, RR-1-0.5 (20 mg/kg) and R-2-0.5 (13 mg/kg), exceeded. At both locations, the corresponding 2-foot samples had arsenic concentrations that exceeded the regulatory screening levels but did not exceed the typical California upper bound background concentration, indicating that elevated arsenic is likely limited to shallow soil depths at the locations sampled.

With the exception of arsenic discussed above, the only other metal that exceeded a residential or commercial/industrial applicable screening level or typical background concentration was lead. At locations R-1-0.5 and R-2-0.5, total lead concentrations exceeded the Hero Note 3 for residential land use of 80 mg/kg. In order to evaluate the waste characterization of these soils if they are hauled off-Site for disposal, the samples (along with sample R-11-0.5) were analyzed for STLC and/or TCLP leachability analysis. All reported leachability analysis concentrations for lead were below 5 mg/L; therefore, these soils would be classified as non-hazardous.

Finally, because the total copper concentration of sample R-11-0.5 exceeded 250 mg/kg, the sample was submitted for copper STLC analysis. The reported STLC analysis concentration for copper was below 25 mg/L; therefore, these soils would be classified as non-hazardous.

Conclusion: Shallow soil (0.5 feet) at soil sampling locations R-1 and R-2 have concentrations of arsenic, and lead that exceed residential SLs and/or typical background levels for California soils. Under a residential redevelopment scenario, these soils will need to be permanently removed from the Site.

5.1.2 TPH in Soil

Of the 13 soil samples collected and analyzed for TPH, detections were primarily in the heavy carbon range (C23-C44) and reported concentrations were generally low as compared with applicable screening levels. Specifically, none of the reported TPH concentrations exceeded 10,000 mg/kg from the May 1996 California Regional Water Quality Control Board *Remediation Guidance for Petroleum and VOC Impacted Sites*.

Conclusion: TPH is not considered a chemical of potential concern (COPC) for soils along the former railroad spur.

5.1.3 Pesticides in Soil

Of the 13 soil samples collected and analyzed for pesticides, none had reported concentrations of OCPs.

Conclusion: OCPs are not considered COPCs for soils along the former railroad spur.

5.1.4 Herbicides in Soil

Of the 13 soil samples collected and analyzed for herbicides, none had reported concentrations of herbicides.

Conclusion: Herbicides are not considered COPCs for soils along the former railroad spur.

5.1.5 PCBs in Soil

Of the 13 soil samples collected and analyzed for PCBs, none had reported concentrations of PCBs.

Conclusion: PCBs are not considered COPCs for soils along the former railroad spur.

5.2 UST Results Discussion

Reported soil concentrations for samples collected at the former on-Site UST were compared to both the residential and commercial/industrial screening levels established in the USEPA RSLs; the DTSC HERO HHRA Note 3 SLs, RWQCB Remediation Guidance's for Petroleum and VOC Impacted Site - Maximum Soil Screening Levels for Total Petroleum Hydrocarbons above Drinking Water Aquifers (20-150 feet above groundwater); DTSC Determination of a Southern California Regional Background Arsenic Concentration in Soil, and the Kearney Foundation Special Report; and Background Concentrations of Trace and Major Elements in California Soils.

There are no direct soil vapor screening levels provided by the DTSC or USEPA. As a result, soil vapor screening levels were calculated by taking the residential and commercial/industrial air screening levels from the DTSC HERO HHRA Note 3 SLs (June 2020) and Note 5 for TCE specific action levels and USEPA RSLs (May 2020) and applying a conservative attenuation factor of 0.03 per the Draft DTSC Supplemental Guidance, dated February 2020.

5.2.1 Metals in Soil

Of the seven UST soil samples collected and analyzed for metals during this investigation, all of them exceeded the applicable residential screening levels for arsenic, which are 0.68 mg/kg (USEPA RSL) and 0.11 mg/kg (HERO Note 3 SL). Further, all seven soil samples exceeded at least one of the two commercial/industrial applicable regulatory screening levels for arsenic. All seven arsenic concentrations

exceeded the HERO Note 3 SL for commercial/industrial soil of 0.36 mg/kg and three of the seven UST soil samples analyzed exceeded the USEPA RSL of 3.0 mg/kg.

When compared with the typical California upper bound background concentration for arsenic of 12 mg/kg, only two samples, B-1-5 (53 mg/kg) and B-1-5-DUP (53 mg/kg), exceeded. The corresponding 10- and 15-foot samples had arsenic concentrations that exceeded the regulatory screening levels but did not exceed the typical California upper bound background concentration, indicating that elevated arsenic is likely limited to shallow soil depths at the locations sampled.

With the exception of arsenic discussed above, no other metals exceeded a residential or commercial/industrial applicable screening level or typical background concentrations.

At samples B-1-5 and B-1-5-DUP, total lead concentrations exceeded the STLC trigger limit of 50 mg/kg. In order to evaluate the waste characterization of these soils if they are hauled off-Site for disposal, the samples were analyzed for STLC leachability analysis. All reported leachability analysis concentrations for lead were below 5 mg/L; therefore, these soils would be classified as non-hazardous.

Conclusions: Shallow soil (0.5 feet) at soil sampling location B-1-5 have concentrations of arsenic that exceed residential SLs and/or typical background levels for California soils. Under a residential redevelopment scenario, these soils will need to be permanently removed from the Site.

5.2.2 TPH in Soil

Of the seven UST soil samples, TPH detections were reported in all three of the carbon ranges. In general, none of the soil samples exceed screening levels from the May 1996 California Regional Water Quality Control Board *Remediation Guidance for Petroleum and VOC Impacted Sites*.

Reported TPH concentrations in the light carbon range (C6-C12) was due to laboratory contamination from the hexane extraction solvent and impacted all seven soil samples. Regardless, the detections were below the applicable screening level of 500 mg/kg.

Reported TPH concentrations in the middle carbon range (C13-C22) at samples B-1-5 and B-1-5-DUP were generally low and below the applicable screening level of 1,000 mg/kg.

TPH concentrations in the heavy carbon range (C23-C44) were reported at four of the six depths; however, these were generally low and below the applicable screening level of 10,000 mg/kg. It is noted that sample B-1-15 was collected to the immediate north of the former UST and had a reported concentration of 2,600 mg/kg which may suggest limited residual petroleum contamination from the former UST.

Conclusion: Based upon the results of soil sampling at the former UST, TPH is not considered a chemical of potential concern (COPC). However, it was not possible to collect soil samples directly at the former location of the UST because it underlies the northern end of current Building G.

5.2.3 VOCs in Soil

Of the seven UST soil samples analyzed for VOCs, there was only one detection above the laboratory MRL. Soil sample B-2-5 had a reported benzene concentration of 4.9 mg/kg, which is significantly below the applicable SLs of 1,400 mg/kg (DTSC SL) and 5,100 mg/kg (USEPA RSL). Figure 5 shows notable VOC detections at each sample location.

Conclusion: VOCs are not considered COPCs for soils sampled adjacent to the former UST.

5.2.4 VOCs in Soil Vapor

Of the five soil vapor samples collected from four probes and analyzed for VOCs, all reported concentrations for all constituents were below the industrial and residential screening levels for vapor intrusion, with the exception of benzene at B-1-5 ($63 \mu\text{g}/\text{m}^3$). Benzene at B-1-5 exceeds the calculated residential screening levels for USEPA ($12 \mu\text{g}/\text{m}^3$) and DTSC ($3.2 \mu\text{g}/\text{m}^3$) using an attenuation factor of 0.03. Figure 5 shows notable VOC detections at each sample location.

Conclusion: With the exception of benzene, VOCs are not considered COPCs for soil vapor sampled adjacent to the former UST. It is noted that future development plans include excavation and removal of soils to significant depths.

5.3 Geophysical Survey Discussion

The geophysical survey did not identify conclusive evidence of railroad materials such as rails or ties. At four isolated locations, the survey did identify anomalies described as “metal or junk debris”. There is no additional information as to the specific nature of these detections.

The geophysical survey did not detect a UST or UST related infrastructure, such as associated piping or backfilled material, within the survey area. However, the majority of the suspected former UST location is beneath the north end of Building G. Therefore, the geophysical survey should not be considered conclusive.

6. Recommendations

It is Roux's understanding that the Site is being considered for acquisition and residential/commercial development by Client. The proposed development includes a sub-terrain structure which requires excavation of a large portion of the Site to depths between 15 and 30 feet bgs.

Based on the future proposed plans for the Site and the results of this subsurface investigation, Roux recommends the following:

- Excavation and permanent removal of soils that exceed screening criteria for lead and arsenic.
- Preparation of a Soil Management Plan (SMP) to address the following:
 - Provide clear soil management procedures and protocols to be used at the Site during excavation in the area of the suspected former UST after the overlying structure is fully demolished.
 - Provide procedures and protocols for UST abandonment with the City of Los Angeles Fire Department, if necessary.
 - Provide clear soil management procedures and protocols to be used at the Site during excavation and construction earthwork activities.
 - Provide worker safety guidelines and soil management/handling protocols in the event that potentially contaminated soil is disturbed; and
 - Provide contingency procedures to address previously unexpected environmental conditions, if encountered.
 - Provide soil sampling and screening criteria for reuse of potentially impacted soils encountered during excavation and/or grading activities, including recommended laboratory analyses, stockpile management, and off-Site profiling and disposal options.
- Consistent with the recommendation provided in the Phase I ESA to address the former match manufacturing operations on Site, Roux recommends investigation of REC-3.

7. Closing

Roux is available to answer any questions regarding this Report. Please contact Justin Allen by telephone at (310) 879-4900 or email at jallen@rouxinc.com, or Mauricio Escobar by telephone at 310-879-4920 or email at mescobar@rouxinc.com.

Respectfully Submitted,
ROUX ASSOCIATES, INC.

Justin Allen
Project Scientist

Mauricio H. Escobar, P.G.
Principal Geologist

Notes:
 USEPA = United States Environmental Protection Agency
 bgs = below ground surface
 ug/m³ = micrograms per cubic meter
 USEPA RSLs = USA EPA Regional Screening Level for industrial air (EPA May 2020)
 DTSC SLs = DTSC HERO HHRA Screening Level for commercial/industrial air (DTSC June 2020).
 AF = Attenuation factor.
 An attenuation factor of 0.03 was applied to published indoor air screening levels to generate soil vapor screening levels.
 NS = No screening level currently established
Bold indicates detection above laboratory reporting limit (RL).
 <X = analyte not detected above laboratory RL
 Only detected analytes are included in the table. For full list of analytes, see laboratory report.

Re: Geophysical Investigation Report, 3401 South La Cienega Boulevard, Los Angeles, California 90016

This report is to present the results of our geophysical survey carried out at 3401 South La Cienega Boulevard, Los Angeles, California 90016 (Figure 1). The survey was performed on October 21, 2020, and its primary purpose was to detect and delineate, insofar as possible, underground fuel storage tanks (UST), backfilled excavation resulting from a former UST's removal, and any remaining UST-related pipes, conduits, or substructures still in place. A secondary purpose of the survey was to detect and delineate, insofar as possible, pipes, conduits, utilities, and other underground obstructions within the immediate vicinity of thirteen (13) proposed boreholes.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were brought to the field in anticipation of use. Utility locators with line tracing capabilities were also used where applicable.

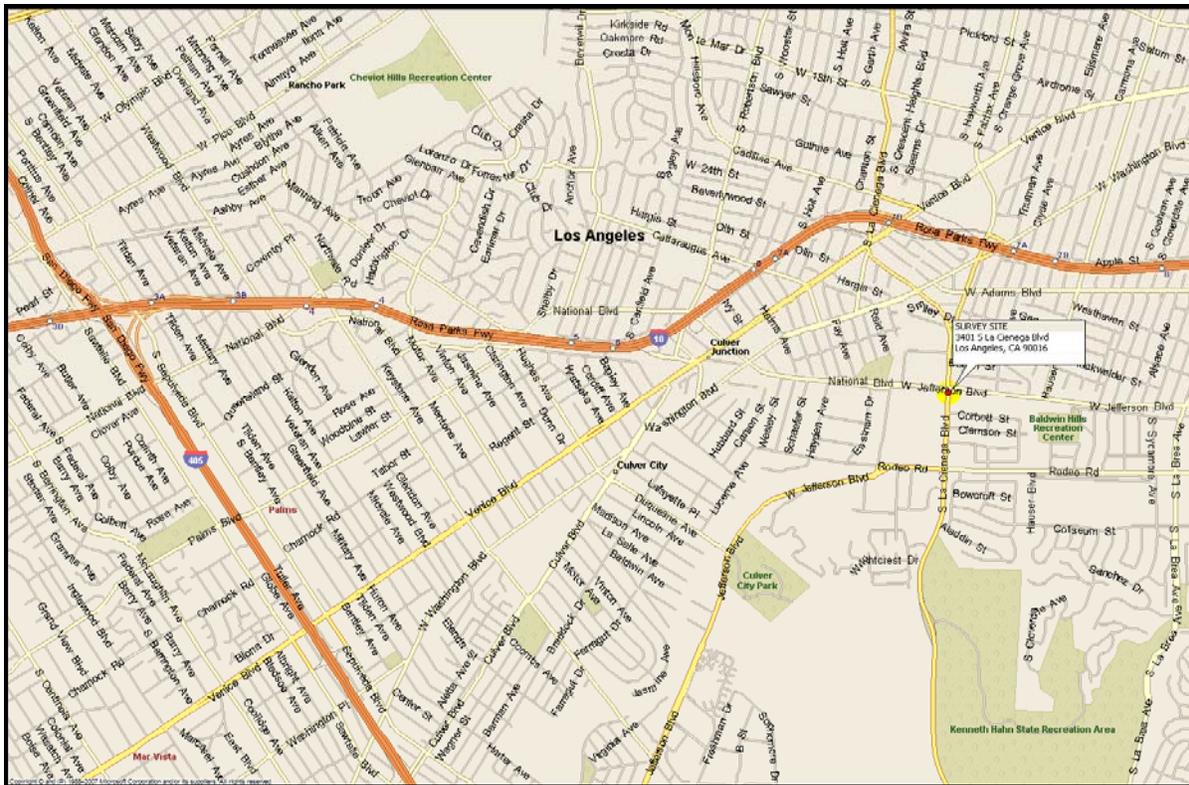

FIGURE 1. Site location map.

Survey Design – The area of investigation was indicated in the field by the client and included an area along the northern edge of the property excluding building interiors. The thirteen boreholes were located spread throughout the survey area with their exact locations indicated in the field by the client.

For all survey objectives, the best use of time was achieved by systematically free-traversing with the instruments while monitoring them manually, continuously, and in real-time to determine which responses were significant and due to true subsurface targets, and which were due to other non-target or above-ground features and must be ignored (an example being nearby fencing and metal rollup doors). In these situations, the free-traversing method is advantageous in that it allows for immediate detection of anomalous objects and facilitates the opportunity to investigate them further despite the obstructions and without the need to first download data. Where space was available for traversing, the EM devices, magnetic gradiometer, and GPR were traversed systematically over the survey areas in multiple, organized directions. Other traverses were taken for detailing and confirmation where anomalous conditions were found.

In addition, the line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals found in active electrical and communication lines.

A Geonic's model EM61 and a Fischer M-Scope was used for the EM sampling. A Sensors & Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied – The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response as anomalous conditions. The strength of the secondary field is a function of the conductivity of the object; say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet below ground surface (bgs) for the M-Scope are sensed. The device is also somewhat focused; that is, it is more sensitive to conductors below the instrument than they are to conductors off to the side.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the

subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

Interpretation and Conclusions – The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover at the site with spray chalk, reported directly to the client, and are further documented with a site map (Figure 2) and site photographs of notable findings and proposed boreholes (Figures 3-16).

Detected items were painted out on site and are additionally highlighted in all accompanying graphics in coordinated colors including red for electric yellow for gas, and white for unknown lines. Additionally, orange was used to mark out the extent of a detected backfilled excavation and yellow was used to mark out shallow soil disturbances. Please review the site photographs for the locations and orientations of all detected items.

No UST or UST related infrastructure was detected within the survey area. Additionally no backfilled excavations resulting from the removal of a UST was detected within the survey area.

A soil disturbance was detected within the survey area measuring approximately 16 feet by 6 feet and extending under an existing building (Figures 2-3). This disturbance is most likely the result of the removal of a "Phosphorus Storage Vault" whose former location was indicated by the client in the field and was not the result of a UST removal.

The thirteen proposed boreholes were either clear as where originally positioned by the client or were moved slightly to better avoid detected obstructions. In their final locations all were marked in white with a yellow "SSS" to indicate that each had been checked by company personnel.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which such might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to,

rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limited GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing or vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

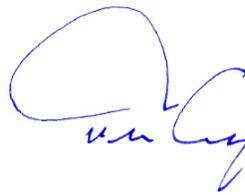

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data generated on this project are in confidential file in this office, and are available for review by authorized persons at any time. The opportunity to participate in this investigation is very much appreciated. Please call, if there are questions.

Flag Status: Flagged

Hi Ranjit,

We would like to run the following analysis from our sample under Lab ID: 435383

- 1) Run the STLC/TCLP analysis on three samples previously analyzed:
 - R-1-0.5
 - R-2-0.5
 - and R-11-0.5
- 2) Run metals analysis on samples previously held:
 - R-1-2
 - R-2-2
 - and R-11-2

Understanding the STLC/TCLP takes 48-72 hours, we would like all of this all on a 2-DAY rush, if possible. I've attached the sample acknowledgment email for reference.

Please advise if that TAT can work or if you have any questions.

Thank you

Justin Allen | Project Scientist

Case Narrative

The following "Sample Received" Section summarizes the samples received and associated analyses requested as specified on the enclosed chain of custody.

Results as reported by the laboratory apply only to 1) the items tested, 2) as the samples are received, and 3) the accuracy of information provided. Information supplied by the customer that may affect validity of results and may be contained in this report include Project Name/Number, Site Location, Sample Locations, Sampling Dates/Times, Sample ID, Sample Preservation, Sample Matrix, Sample Properties, Field Blanks, Field Duplicates, Field Spikes, and Site Historical Data.

Accreditation applies only to the test methods listed on each scope of accreditation held by the laboratory; certifications held by the laboratory may not apply to results supplied in this report.

Unless otherwise noted, all results of soil and solid samples are based on wet weight.

No analytical non-conformances were encountered.

Qualifiers are noted in the report.

Qualifiers and Definitions

ITEM	Qualifiers
M	The spike recovery for this QC sample is outside of established control limits possibly due to sample matrix interference. Laboratory Control Samples(LCS/LCSD) recovery were acceptable.
R	The RPD was outside of QC acceptance limits due to possible matrix interference.
S6	Surrogate recovery is outside control limits due to matrix interference.

ITEM	Definitions
% wt	Percent Weight
%REC	Percent Recovery
°C	Degrees Celsius
AETL	American Environmental Testing Laboratory, LLC
C	Carbon
CARB	California Air Resources Board
COC	Chain of Custody
DRO	Diesel Range Organics
Dup	Duplicate
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
GRO	Gasoline Range Organics
HC	Hydrocarbon
LACSD	Los Angeles County Sanitation Districts
LCS	Laboratory Control Sample - A sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes.
LCSD	Laboratory Control Sample Duplicate - A replicate of Laboratory Control Sample.
LOQ	Limit of Quantitation
MDL	Method Detection Limit - The minimum measured concentration of a substance that can be reported with 99% confidence. MDL is statistically derived number which is specific for each instrument, each method and each compound.
mg/kg	Miligrams per Kilogram
mg/L	Miligrams per Liter
MRO	Motor oil Range Organics
MS	Matrix Spike - A sample prepared, taken through all sample preparation and analytical steps of the procedure and analyzed as an independent test results.
MSD	Matrix Spike Duplicate - A replicate of Matrix Spike Sample.
N	No
ND	Analyte is not detected below Method Detection Limit.
ng/m3	Nanograms per cubic meter
NIOSH	National Institute for Occupational Safety and Health
nL/L	Nanoliters per Liter
NTU	Nephelometric Turbidity Units

Justin Allen

Lab Job Number: 435539
Location: Lendlease - 3401 S. La Cienega Blvd.
Date Received: 10/28/20

This data package contains sample and QC results for seven soil samples, requested for the above referenced project on 10/28/20. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):

High surrogate recovery was observed for n-triacontane in B-1-5-DUP (lab # 435539-002). TPH (C6-C12) was detected above the RL in the method blank for batch 255268. Since most of the sample hits for that carbon range are around that level, the hits can most likely be due to lab contamination. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

Methylene chloride was detected above the RL in the method blank for batch 255383; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for antimony in the MS/MSD of B-1-5 (lab # 435539-001); the LCS was within limits, and the associated RPD was within limits. Low recovery was observed for mercury in the MSD of B-1-5 (lab # 435539-001); the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

Attachments: Revised_435539_COC_11102020_JA.pdf

Flag Status: Flagged

Hi Ranjit

I would like to run the WET analysis on the following samples for lead:

- B-1-5
- B-1-5-DUP

I have marked up the original COC to reflect these request.

What would be the standard TAT for this analysis?

Thank you

MITIGATION MONITORING AND REPORTING PROGRAM

A. INTRODUCTION

This Mitigation Monitoring and Reporting Program (“MMRP”) has been prepared pursuant to Public Resources Code Section 21081.6, which requires a Lead Agency to adopt a “reporting or monitoring program for changes to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment.” In addition, Section 15097(a) of the *State CEQA Guidelines* requires that a public agency adopt a program for monitoring or reporting mitigation measures and project revisions, which it has required to mitigate or avoid significant environmental effects. This MMRP has been prepared in compliance with the requirements of CEQA, Public Resources Code Section 21081.6 and Section 15097 of the *CEQA Guidelines*.

The City of Los Angeles is the Lead Agency for the Project and therefore is responsible for administering and implementing the MMRP. A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity that accepts the delegation; however, until mitigation measures have been completed, the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program.

A Sustainable Communities Environmental Assessment (SCEA) has been prepared to address the potential environmental impacts of the Project. The evaluation of the Project’s impacts takes into consideration project design features and identifies mitigation measures to avoid or reduce potentially significant environmental impacts. This MMRP is designed to monitor implementation of the project design features and mitigation measures identified for the Project.

B. ORGANIZATION

As shown on the following pages, each required project design feature and mitigation measure for the proposed Project is listed and categorized by impact area, with an accompanying identification of the following:

- **Monitoring Phase:** The phase of the proposed Project during which the project designfeature or mitigation measure shall be monitored;

- **Enforcement Agency:** The agency with the power to enforce the project design feature or mitigation measure;
- **Monitoring Agency:** The agency to which reports involving feasibility, compliance, implementation and development are made;
- **Monitoring Frequency:** The frequency at which the project design feature or mitigation measure shall be monitored; and
- **Action Indicating Compliance:** The action of which the Enforcement or Monitoring Agency indicates that compliance with the required project design feature or mitigation measure has been implemented.

C. ADMINISTRATIVE PROCEDURES AND ENFORCEMENT

This MMRP shall be enforced throughout all phases of the Project. The Applicant shall be responsible for implementing each project design feature and mitigation measure and shall be obligated to provide verification, as identified below, to the appropriate monitoring and enforcement agencies that each project design feature and mitigation measure has been implemented. The Applicant shall maintain records demonstrating compliance with each project design feature and mitigation measure listed below. Such records shall be made available to the City upon request.

During the construction phase and prior to the issuance of building permits, the applicant shall retain an independent Construction Monitor (either via the City or through a third-party consultant), approved by the City of Los Angeles Department of City Planning, who shall be responsible for monitoring implementation of project design features and mitigation measures during construction activities consistent with the monitoring phase and frequency set forth in this MMRP.

The Construction Monitor shall also prepare documentation of the Applicant's compliance with the project design features and mitigation measures during construction every 90 days in a form satisfactory to the Department of City Planning. The documentation must be signed by the Applicant and Construction Monitor and be included as part of the Applicant's Compliance Report. The Construction Monitor shall be obligated to immediately report to the Enforcement Agency any non-compliance with mitigation measures and project design features within two business days if the Applicant does not correct the non-compliance within a reasonable time of notification

to the Applicant by the monitor or if the non-compliance is repeated. Such non-compliance shall be appropriately addressed by the Enforcement Agency.

D. PROGRAM MODIFICATION

The Project shall be in substantial conformance with the project design features and mitigation measures contained in this MMRP. The enforcing departments or agencies may determine substantial conformance with project design features and mitigation measures in the MMRP in their reasonable discretion. If the department or agency cannot find substantial conformance, a project design feature or mitigation measure may be modified or deleted as follows: the enforcing department or agency, or the decision maker for a subsequent discretionary project related approval, complies with *CEQA Guidelines* Sections 15162 and 15164, including by preparing an addendum or subsequent environmental clearance to analyze the impacts from the modifications to or deletion of the project design features or mitigation measures. Any addendum or subsequent CEQA clearance shall explain why the project design feature or mitigation measure is no longer needed, not feasible, or the other basis for modifying or deleting the project design feature or mitigation measure. Under this process, the modification or deletion of a project design feature or mitigation measure shall not require a modification to any project discretionary approval unless the Director of Planning also finds that the change to the project design features or mitigation measures results in a substantial change to the Project or the non-environmental conditions of approval.

E. MITIGATION MONITORING PROGRAM

1. Aesthetics

Project Design Features

No specific project design features with regards to aesthetics are identified in the Draft SCEA.

Mitigation Measures

AE2: As a condition of approval for any Discretionary or “Active Change Area Project” as defined in Section 3.4 of the Project Description, the City shall require that all lighting be directed and/or shielded to minimize lighting spillover effects onto adjacent and nearby properties.

Monitoring Phase: Pre-Construction; Operation

Enforcement Agency: Department of City Planning (approval of measures and performance standards; Department of Building and Safety (operation)

Monitoring Agency: Department of City Planning (approval of measures and performance standards; Department of Building and Safety (operation)

Monitoring Frequency: Once at plan check prior to issuance of grading permit; Annually during operation

Action Indicating Compliance: Plan approval and issuance of Building Permit (Pre-construction); Annual compliance certification report submitted by Application (Operation)

AE3:

As a condition of approval for any Discretionary or “Active Change Area Project”, as defined in Section 3.4 of the Project Description, the City shall require that glare effects be limited by using non-reflective building and construction materials, such as concrete, wood, and stucco. This shall include, but not be limited to, art installations, fencing material, and recreational equipment.

Monitoring Phase: Pre-construction of subsequent development approvals / Issuance of building permits

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of building permit

Action Indicating Compliance: Plan approval and issuance of building permit

2. Agriculture

Project Design Features

No specific project design features with regards to agriculture are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to agriculture are identified in the Draft SCEA.

3. Air Quality

Project Design Features

AQ-PDF-1: The following sustainable features aimed at reducing air quality and GHG emissions will be incorporated into the project design:

- Entirely electric buildings – no natural gas (residential and commercial building)
- ENERGY STAR appliances for both residential and commercial buildings
- LED lighting for both residential and commercial buildings
- Intend to purchase 100% green power from the Los Angeles Department of Water and Power grid²⁷
- Variable Air Volume (VAV) heating, ventilating, and air conditioning (HVAC) system in the Commercial Building with MERV 13-15 filter
- 100 Electric vehicle (EV) parking spaces
- Exploring on-site photovoltaic (PV) and battery storage
- Bike showers, lockers, and storage
- Rainwater collection cistern for stormwater management for reuse in landscaping on site

- Landscape with drought tolerant plants
- Commitment to using SCAQMD super-compliant low-VOC paint

Monitoring Phase: Pre-Construction; Operation

Enforcement Agency: Department of City Planning (approval of measures and performance standards; Department of Building and Safety (operation)

Monitoring Agency: Department of City Planning (approval of measures and performance standards; Department of Building and Safety (operation)

Monitoring Frequency: Once at plan check prior to issuance of grading permit; Annually during operation

Action Indicating Compliance: Plan approval and issuance of Building Permit (Pre-construction); Annual compliance certification report submitted by Application (Operation)

Mitigation Measures

AQ1: As a condition of approval for any Discretionary or “Active Change Area Project”, as defined in Section 3.4 of the Project Description, the City shall require all contractors to include the following best management practices in contract specifications:

- Use properly tuned and maintained equipment.
- Contractors shall enforce the idling limit of five minutes as set forth in the California Code of Regulations.
- Use diesel-fueled construction equipment to be retrofitted with after treatment products (e.g., engine catalysts) to the extent they are readily available and feasible.
- Use heavy duty diesel-fueled equipment that uses low NOX diesel fuel to the extent it is readily available and feasible.

- Use construction equipment that uses low polluting fuels (i.e., compressed natural gas, liquid petroleum gas, and unleaded gasoline) to the extent available and feasible.
- Maintain construction equipment in good operating condition to minimize air pollutants.
- All off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards, where available. In addition, all construction equipment shall be
 - outfitted with Best Available Control Technologies devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less
 - than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.
- Construction contractors shall use electricity from power poles rather than temporary gasoline or diesel power generators, as feasible.
- Use building materials, paints, sealants, mechanical equipment, and other materials that yield low air pollutants and are nontoxic.
- Construction contractors shall utilize super-compliant architectural coatings as defined by the South Coast Air Quality Management District (VOC standard of less than ten grams per liter).
- Construction contractors shall utilize materials that do not require painting, as feasible.
- Construction contractors shall use pre-painted construction materials, as feasible.
- Construction contractors shall provide temporary traffic controls such as a flag person, during all phases of construction to maintain smooth traffic flow.

- Construction contractors shall provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, as feasible
- Construction contractors shall reroute construction trucks away from congested streets or sensitive receptor areas, as feasible.
- Construction contractors shall appoint a construction relations officer to act as a community liaison concerning on-site construction activity including resolution of issues related to PM10 generation.

Monitoring Phase: Pre-Construction; Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of grading permit; ongoing monitoring during construction

Action Indicating Compliance: Plan approval and issuance of Building Permit; Compliance certification report submitted by project contractor

4. Biological Resources

Project Design Features

No specific project design features with regards to biological resources are identified in the Draft SCEA.

Mitigation Measures

BR1: As a condition of approval for any Discretionary or “Active Change Area Project”, as defined in Section 3.4 of the Project Description, the City shall require that in order to prevent the disturbance of nesting native and/or migratory bird species, all clearing of a project site should take place between September 1 and February 14. If construction is scheduled or ongoing during bird nesting season (February 15 to

August 31), qualified biologists shall survey the area within 200 feet (or up to 300 feet, depending on topography or other factors, and 500 feet for raptors) of the construction activity to determine if construction would disturb nesting birds. If nesting activity is being compromised, construction shall be suspended in the vicinity of the nest until fledging is complete. This mitigation measure shall be implemented by a qualified biologist under contract with the project applicant(s). The project biologist should prepare a report detailing the results of the construction monitoring efforts. The report should be submitted to the California Department of Fish and Game (CDFG) within two months of the completion of the monitoring activities.

Monitoring Phase: Pre-Construction

Enforcement Agency: Department of Building and Safety; CDFW

Monitoring Agency: Department of Building and Safety; CDFW

Monitoring Frequency: Once at plan check prior to issuance of building permit

Action Indicating Compliance: Issuance of building permit of subsequent development approvals; Preparation of a bird nesting survey by a qualified biologist; preparation of report by qualified biologist; submission of report to CDFW

5. Cultural Resources- Historic Resources

Project Design Features

No specific project design features with regards to historic resources are identified in the DraftSCEA.

Mitigation Measures

No specific mitigation measures with regards to historic resources are identified in the DraftSCEA.

6. Cultural Resources- Archaeological Resources

Project Design Features

No specific project design features with regards to archaeological resources are identified in the Draft SCEA.

Mitigation Measures

CR5: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that prior to excavation and construction on a proposed Project Site, the prime construction contractor and any subcontractor(s) shall be cautioned on the legal and/or regulatory implications of knowingly destroying cultural resources or removing artifacts, human remains, bottles, and other cultural materials from the Proposed Project Site.

Monitoring Phase: Pre-Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of grading permit

Action Indicating Compliance: Inclusion in grading permit specifications

CR6: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that if during any phase of project construction any cultural materials are encountered, construction activities within a 50-meter radius shall be halted immediately, and the project applicant shall notify the City. A qualified prehistoric archaeologist (as approved by the City) shall be retained by the project applicant and shall be allowed to conduct a more detailed inspection and examination of the exposed cultural materials. During this time, excavation and construction would not be allowed in the immediate vicinity of the find. However, those activities could continue in other areas of the Project

Site.

Monitoring Phase: Pre-Construction; Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of building permit; ongoing during construction

Action Indicating Compliance: Inclusion in building permit specifications; inspection of exposed cultural materials by a qualified prehistoric archaeologist and stop of work during inspection

CR7: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that if any find were determined to be significant by the archaeologist, the City and the archaeologist would meet to determine the appropriate course of action.

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Ongoing during construction

Action Indicating Compliance: Inclusion in grading permit specifications; inspection of exposed cultural materials by a qualified prehistoric archaeologist

CR8: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that all cultural materials recovered from the site would be subject to scientific analysis, professional museum curation, and a report prepared according to current professional standards.

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Ongoing during construction

Action Indicating Compliance: Inclusion in building permit specifications; Receipt of a report prepared according to current professional standards if needed

CR10:

Any approval of a Discretionary project or “Active Change Area Project” shall ensure that if human remains are unearthed at a project site during construction, work at the specific construction site at which the remains have been uncovered shall be suspended, and the City of Los Angeles Public Works Department and County coroner shall be immediately notified. No further disturbance shall occur until the Los Angeles County Coroner has made the necessary findings as to origin and disposition in accordance with California Health and Safety Code Section 7050.5. If the remains are determined to be those of a Native American, the Native American Heritage Commission (NAHC) in Sacramento shall be contacted before the remains are removed in accordance with Section 21083.2 of the California Public Resources Code.

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Ongoing during construction

Action Indicating Compliance: Inclusion in building permit specifications; Notification the City of Los Angeles Department of Public Works and County Corner

7. Cultural Resources- Paleontological Resources/ Geologic Features

Project Design Features

No specific project design features with regards to paleontological resources are identified in the Draft SCEA.

Mitigation Measures

CR9: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that during excavation and grading, if paleontological resources are uncovered, all work in that area shall cease and be diverted so as to allow for a determination of the value of the resource. Construction activities in that area may commence once the uncovered resources are collected by a paleontologist and properly processed. Any paleontological remains and/or reports and surveys shall be submitted to the Los Angeles County Natural History Museum.

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Ongoing during construction

Action Indicating Compliance: Inclusion in grading permit specifications; Submittal of paleontological remains, reports and surveys to the Los Angeles County Natural History Museum

8. Geology and Soils

Project Design Features

No specific project design features with regards to geology and soils are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to geology and soils are identified in

the DraftSCEA.

9. Greenhouse Gas Emissions

Project Design Features

No specific project design features with regards to greenhouse gas emissions are identified inthe Draft SCEA.

Mitigation Measures

GHG1: Any approval of a Discretionary project or “Active Change Area Project” shall ensure that the following greenhouse gas reduction measures are incorporated into the project design”

- Install energy efficient lighting (e.g., light emitting diodes), heating and cooling systems, appliances, equipment, and control systems
- Install light colored “cool” roofs and cool pavements
- Create water-efficient landscapes
- Install water-efficient fixtures and appliances

Monitoring Phase: Pre-Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of building permit;

Action Indicating Compliance: Review and approval of design and building plans and issuance of building permit

10. Hazards and Hazardous Materials

Project Design Features

No specific project design features with regards to hazards and hazardous materials areidentified in the Draft SCEA.

Mitigation Measures

HAZ-1: In accordance with the recommendations of the Phase II ESA, prior to Project construction, the Applicant shall develop a plan to ensure proper excavation and permanent removal of soils that exceed screening criteria for lead and arsenic. The Applicant shall prepare a Soil Management Plan (SMP) to address the following:

- Provide clear soil management procedures and protocols to be used at the Site during excavation and construction earthwork activities in the area of the suspected former UST after the overlying structure is fully demolished and other areas where COPCs may be present.
- Provide procedures and protocols for UST abandonment with the City of Los Angeles Fire Department, if necessary.
- Provide worker safety guidelines and soil management/handling protocols in the event that potentially contaminated soil is disturbed; and
- Provide contingency procedures to address previously unexpected environmental conditions, if encountered.
- Provide soil sampling and screening criteria for reuse of potentially impacted soils encountered during excavation and/or grading activities, including recommended laboratory analyses, stockpile management, and off-Site profiling and disposal options.

Monitoring Phase: Pre-Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of building permit

Action Indicating Compliance: Plan approval and issuance of

building permit (Pre-construction); Preparation of Phase I Environmental Site Assessment, investigation by REA and remediation; further studies and remediation as necessary by qualified contractors

11. Hydrology and Water Quality

Project Design Features

No specific project design features with regards to hydrology and water quality are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to hydrology and water quality are identified in the Draft SCEA.

12. Land Use and Planning

Project Design Features

No specific project design features with regards to land use and planning are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to land use and planning are identified in the Draft SCEA.

13. Mineral Resources

Project Design Features

No specific project design features with regards to mineral resources are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to mineral resources are identified in the Draft SCEA.

14. Noise

Project Design Features

No specific project design features with regards to noise are identified in the Draft SCEA.

Mitigation Measures

MM NOI-1: During the construction phase, along the southern and western property line, the Proposed Project shall employ construction control measures to reduce increases in ambient noise at the closest receptors by a minimum of 13 decibel Leq. Examples of employable measures include use of mufflers, sound barriers and reducing the time construction equipment is used, as well as ensuring equipment is turned off when not in use. This specification shall be included on all construction documents to ensure compliance.

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Periodic field Inspections

Action Indicating Compliance: Field Inspection Sign-Off

N2: Prior to any approval of a Discretionary project or “Active Change Area Project” that is adjacent to buildings listed or determined eligible for listing in the National Register of Historic Places or the California Register of Historical Resources, designated as a Historic-Cultural Monument by the City of Los Angeles, or within a Historic Preservation Overlay Zone (“historic buildings”), the City shall ensure all of the following requirements are or will be met:

- Historic buildings adjacent to the project’s construction zones are identified.
- A Vibration Control Plan is prepared and approved by the City

- The Vibration Control Plan shall be completed by a qualified structural engineer.
- The Vibration Control Plan shall include a pre-construction survey letter establishing baseline conditions at potentially affected buildings. The survey letter shall provide a shoring design to protect the identified land uses from potential damage. The structural engineer may recommend alternative procedures that produce lower vibration levels such as sonic pile driving or caisson drilling instead of impact pile driving.

At the conclusion of vibration causing activities, the qualified structural engineer shall issue a follow-up letter describing damage, if any, to impacted buildings. The letter shall include recommendations for any repair, as may be necessary, in conformance with the Secretary of the Interior Standards. Repairs shall be undertaken and completed in conformance with all applicable codes including the California Historical Building Code (Part 8 of Title 24).

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Periodic field inspections

Action Indicating Compliance: Inclusion in grading permit specifications; Field Inspection Sign-Off

15. Population and Housing

Project Design Features

No specific project design features with regards to population and housing are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to population and housing are identified

in the Draft SCEA.

16. Public Services- Fire Protection

Project Design Features

No specific project design features with regards to fire protection are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to fire protection are identified in the Draft SCEA.

17. Public Services- Police Protection

Project Design Features

No specific project design features with regards to police protection are identified in the Draft SCEA.

Mitigation Measures

PS1: Discretionary projects in the CPIO or the Crenshaw Corridor Specific Plan shall be reviewed at the discretion of the Los Angeles Police Department (LAPD). Per department standards, the LAPD will determine if any additional crime prevention and security features would be available that are consistent with the development standards as applied to the design of the project. Any additional design features identified by the LAPD shall be incorporated into the project's final design and to the satisfaction of LAPD, prior to issuance of a Certificate of Occupancy for the project.

Monitoring Phase: Construction

Enforcement Agency: Department of City Planning; Los Angeles Police Department

Monitoring Agency: Department of City Planning; Los Angeles Police Department

Monitoring Frequency: Periodic field inspections

Action Indicating Compliance: Field Inspection Sign-Off; Department of City Planning; Los Angeles Police Department

18. Public Services- Schools

Project Design Features

No specific project design features with regards to schools are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to schools are identified in the Draft SCEA.

19. Public Services- Parks

Project Design Features

No specific project design features with regards to parks are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to parks are identified in the Draft SCEA.

20. Recreation

Project Design Features

No specific project design features with regards to recreation are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to recreation are identified in the Draft SCEA.

21. Transportation

Project Design Features

No specific project design features with regards to transportation and traffic are identified in the Draft SCEA.

Mitigation Measures

MM TR1: Commute Trip Reductions: Ride Share Program. The project applicant shall implement a ride share program that involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride-share vehicles, and a website or message board to connect riders and coordinate rides in order to increase vehicle occupancy. The Ride Share Program shall be implemented in year one following the issuance of the final certificate of occupancy for the commercial building. The project applicant shall maintain proof of implementation of the rideshare program to provide to LA DOT upon request.

Monitoring Phase: Operation

Enforcement Agency: Department of Planning; Department of Transportation

Monitoring Agency: Department of Planning; Department of Transportation

Monitoring Frequency: Once prior to issuance of building permit; once prior to issuance of Certificate of Occupancy; Periodic field inspections during operation

Action Indicating Compliance: Approval of Ride Share Program from the Department of City Planning and Department of Transportation prior to issuance of building permit; Issuance of Certificate of Occupancy

22. Tribal Cultural Resources

Project Design Features

No specific project design features with regards to tribal cultural resources are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to tribal cultural resources are identified in the Draft SCEA.

23. Utilities

Project Design Features

No specific project design features with regards to utilities are identified in the Draft SCEA.

Mitigation Measures

No specific mitigation measures with regards to utilities are identified in the Draft SCEA.

CITY OF LOS ANGELES
INTERDEPARTMENTAL CORRESPONDENCE

Date: November 05, 2021

To: Vincent P. Bertoni, Director
Department of City Planning
Attention: Deputy Advisory Agency

From:  for
Bertram Moklebust, Principal Civil Engineer
Permit Case Management Division
Bureau of Engineering

Subject: Vesting Tentative Tract Map No. 83550

Transmitted is a print of vesting tentative map of Tract Map No. 83550 stamp-dated September 14, 2021 located at 3401 South La Cienega Boulevard in Council District No. 10.

This map has been filed for a subdivision into one (1) ground lot and four (4) airspace lots for a mixed-use development and a waiver of the required 2-foot dedication along La Cienega Boulevard.

The subdivision layout is generally satisfactory as submitted except for the additional dedication that is required to comply with City adopted street standards.

There are existing sewers available in the street adjoining the subdivision. This tract will connect to the public sewer system and will not result in violation of the California Water Code. I therefore recommend that you make the necessary determination.

In the event you approve the tentative map of Tract No. 83550 then please include the engineering standard conditions issued by your department and the following special conditions:

1. That a 2-foot wide strip of land be dedicated along La Cienega Boulevard adjoining the subdivision to complete a 52-foot wide half right-of-way in accordance with **Modified Boulevard II** Standards of LA Mobility Plan.
2. That the existing public sanitary sewer easement along Corbett Street (private street) be properly shown on the final map.

3. That the subdivider make a request to the Central District Office of the Bureau of Engineering to determine the capacity of existing sewers in this area.
4. That all tract boundary lines be properly established in accordance with Section 17.07D of the Los Angeles Municipal Code prior to recordation of the final map satisfactory to the City Engineer.
5. That a set of drawings for airspace lots be submitted to the City Engineer showing the followings:
 - a. Plan view at different elevations.
 - b. Isometric views.
 - c. Elevation views.
 - d. Section cuts at all locations where air space lot boundaries change.
6. That the owners of the property record an agreement satisfactory to the City Engineer stating that they will grant the necessary private easements for ingress and egress purposes to serve proposed airspace lots to use upon the sale of the respective lots and they will maintain the private easements free and clear of obstructions and in safe conditions for use at all times.
7. That the following improvements be either constructed prior to recordation of the final map or that the construction be suitably guaranteed:
 - a) Improve La Cienega Boulevard being dedicated adjoining the subdivision with the reconstruction of concrete curb, gutter, concrete bus pad and a full-width concrete sidewalk with tree wells including any necessary removal and reconstruction of existing improvements.
 - b) Construct any necessary on-site mainline and house connection sewers satisfactory to the City Engineer.

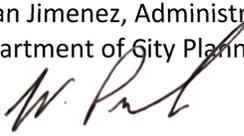

Note: This project is located near the Metro Right-of-way Project Area. Consultation with the Los Angeles County Metropolitan Transportation Authority (Metro) may be required prior to the issuance of any building permit for projects within 100 feet of Metro-owned Rail or Bus Rapid Transit (BRT) right-of-way (ROW) to ensure safe access to, and operations of, transportation services and facilities (213) 922-2785.

Any questions regarding this report should be directed to Quyen Phan of the Permit Case Management Division located at 201 N. Figueroa Street, Suite 290 or by calling (213) 808-8604.

From: Wes Pringle, Transportation Engineer
Department of Transportation

Subject: **TRANSPORTATION ASSESSMENT FOR THE PROPOSED MIXED-USE PROJECT LOCATED AT 3401 SOUTH LA CIENEGA BOULEVARD**

The Los Angeles Department of Transportation (LADOT) has reviewed the transportation assessment prepared by Linscott, Law & Greenspan, Engineers (LLG), dated October 1, 2021, for the proposed mixed-use project located at 3401 South La Cienega Boulevard within the South Los Angeles Area Planning Commission (APC). In compliance with Senate Bill (SB) 743 and the California Environmental Quality Act (CEQA), a vehicle miles traveled (VMT) analysis is required to identify the project's ability to promote the reduction of green-house gas emissions, the access to diverse land uses, and the development of multi-modal networks. The significance of a project's impact in this regard is measured against the VMT thresholds established in LADOT's Transportation Assessment Guidelines (TAG), as described below.

DISCUSSION AND FINDINGS

A. Project Description

The project proposes the construction of a mixed-use development within two separate buildings. The western side of the project site will contain 238 multi-family housing units and 22 dwelling units of affordable housing. The eastern side of the project site will contain 227,543 gross square feet of office space and 2,869 square feet of ground floor retail space. The project will provide a total of 785 parking spaces on-site and a total of 222 bicycle spaces (36 short-term spaces and 186 long-term spaces). Currently, vehicular access is provided via one driveway along South La Cienega Boulevard and will be retained as part of the proposed project. The secondary, one-way exit is planned to be provided via a 20-foot strip of land connecting the project site to Corbett Street to the south. Corbett Street is a 40-foot private roadway located south of the project site and extends between Jefferson Boulevard to the west and South La Cienega Boulevard to the east. A residential vehicle drop-off area is planned to be provided at the southeast corner of the residential building. A vehicular drop-off area for the commercial uses is planned to be provided at the southwest corner of the commercial building. Both proposed drop-off areas will be accessed from the vehicular driveway on South La Cienega. The project site plan is illustrated in **Attachment A**. The project is expected to be completed by 2025.

B. Freeway Safety Analysis

Per the Interim Guidance for Freeway Safety Analysis memorandum issued by LADOT on May 1, 2020 to address Caltrans safety concerns on freeways, the study addresses the project's effects on vehicle queuing on freeway off-ramps. Such an evaluation measures the project's potential to lengthen a forecasted off-ramp queue and create speed differentials between vehicles exiting the freeway off-ramps and vehicles operating on the freeway mainline.

The evaluation identified the number of project trips expected to be added to nearby freeway off-ramps serving the project site. It was determined that project traffic at any freeway off-ramp will not exceed 25 peak hour trips. Therefore, a freeway ramp analysis is not required.

C. CEQA Screening Threshold

Prior to accounting for trip reductions resulting from the application of Transportation Demand Management (TDM) Strategies, a trip generation analysis was conducted to determine if the project would exceed the net 250 daily vehicle trips screening threshold. Using the City of Los Angeles VMT Calculator tool, which draws upon trip rate estimates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition as well as applying trip generation adjustments when applicable, based on sociodemographic data and the built environment factors of the project's surroundings, it was determined that the project **does** exceed the net 250 daily vehicle trips threshold.

Additionally, the analysis included further discussion of the transportation impact thresholds:

- T-1 Conflicting with plans, programs, ordinances, or policies
- T-2.1 Causing substantial vehicle miles traveled
- T-3 Substantially increasing hazards due to a geometric design feature or incompatible use.

The assessment determined that the project would **not** have a significant transportation impact under Thresholds T-1 and T-3. A project's impacts per Threshold T-2.1 is determined by using the VMT calculator and is discussed further below. A copy of the VMT Calculator summary report is provided as **Attachment B** to this report.

D. Transportation Impacts

On July 30, 2019, pursuant to SB 743 and the recent changes to Section 15064.03 of the State's CEQA Guidelines, the City of Los Angeles adopted VMT as criteria in determining transportation impacts under CEQA. The LADOT TAG provide instructions on preparing transportation assessments for land use proposals and defines the significant impact thresholds.

The LADOT VMT Calculator tool measures project impact in terms of Household VMT per Capita, and Work VMT per Employee. LADOT identified distinct thresholds for significant VMT impacts for each of the seven APC areas in the City. For the South Los Angeles APC area, in which the project is located, the following thresholds have been established:

- Household VMT per Capita: 6.0
- Work VMT per Employee: 11.6

As cited in the VMT Analysis report, prepared by LLG, the project proposes to incorporate the TDM strategies of Promotions and Marketing, Bike Parking Per LAMC, Bike Parking and Showers, and Pedestrian Network Improvements as project design features per TDM Ordinance. With the application of these TDM measures, the proposed project is projected to have a Household VMT of 6.0 and a Work VMT of 12.3. Therefore, it is concluded that implementation of the proposed project would result in a significant VMT impact.

To mitigate this impact, the project proposes to implement the TDM strategy of Ride Share

Program. By implementing this strategy, the Work VMT will be reduced to 10.4 which is less than significant. A copy of the VMT Calculator summary report is provided as **Attachment B**.

E. Access and Circulation

During preparation of the new CEQA guidelines, the State's Office of Planning and Research stressed that lead agencies can continue to apply traditional operational analysis requirements to inform land use decisions provided that such analyses were outside of the CEQA process. The authority for requiring non-CEQA transportation analysis and requiring improvements to address potential circulation deficiencies, lies in the City of Los Angeles' Site Plan Review authority as established in Section 16.05 of the LAMC. Therefore, LADOT methodology that indicates that the trips generated by the proposed development **will potentially** result in several adverse increase in delays or queueing at three signalized study intersections. A copy of the circulation analysis table that summarizes these potential deficiencies is provided as **Attachment C** to this report.

PROJECT REQUIREMENTS

A. CEQA-Related Requirements

Per the transportation analysis, the applicant will implement the following TDM measures:

- Ride-Share Program – This strategy involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride share vehicles, and a website or message board to connect riders and coordinate rides in order to increase vehicle occupancy. The Project assumes that every employee would be eligible for the ride-share program.

B. Non-CEQA-Related Requirements and Considerations

To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

1. Transportation Systems Management (TSM) Improvements

LADOT's goal is to improve the efficiency of the study intersections, by optimally allocating green time to different modes and in different directions and provide the capability to remotely monitor and adjust signal timing in real-time to respond to specific traffic conditions or occurrences. The following Automated Traffic Surveillance and Control system (ATSAC) improvements will maximize intersection throughput or manage queues and improve system performance:

The project would contribute up to approximately \$80,000 to \$90,000 toward TSM improvements within the project area that may be considered to better accommodate intersection operations and increase network capacity throughout the study area.

LADOT's ATSAC Section has identified the improvement of approximately 12,000 feet of fiber optic cable from National Boulevard/Jefferson Boulevard to the hub located at La Brea Avenue and Washington Boulevard.

The installation of the fiber optic cables would improve the network capacity and the TSM improvement provides a system wide benefit by reducing delays experienced by motorists within the project area.

Should the project be approved, then a final determination on how to implement the ATSAC improvements listed above will be made by DOT prior to the issuance of the first building permit. These improvements will be implemented either by the applicant through the B-Permit process of the Bureau of Engineering (BOE), or through a direct payment to DOT to fund the cost of the upgrades and improvements. If the upgrades and improvements are implemented by the applicant through the B-Permit process, then these improvements must be guaranteed prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the event of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

All proposed street improvements within the City of Los Angeles must be guaranteed through BOE's B-Permit process, prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy. Prior to setting the bond amount, BOE shall require that the developer's engineer or contractor contact LADOT's B-Permit Coordinator, ladot.planprocessing@lacity.org, to arrange a pre-design meeting to finalize the proposed design.

2. Parking Requirements

The project would provide parking for 785 vehicle parking spaces and 222 bicycle parking spaces (36 short-term spaces and 186 long-term spaces). The applicant should check with the Departments of Building and Safety and City Planning on the number of parking spaces required for this project.

3. Highway Dedication and Street Widening Requirements

Per the new Mobility Element of the General Plan, **La Cienega Boulevard**, has been designated a Modified Boulevard II, which would require a 40-foot half-width roadway within a 52-foot half-width right-of-way and **Jefferson Boulevard**, has been designated a Modified Avenue II, which would require a 30-foot half-width roadway within a 45-foot half-width right-of-way. For all applicable highway dedication, street widening and/or sidewalk requirements of the project, the applicant should check with the Bureau of Engineering's Land Development Group.

4. Highway Dedication and Street Widening Requirements

The conceptual site plan for the project (see **Attachment A**) is acceptable to LADOT. As indicated previously, vehicular access will be provided via one driveway on South La Cienega Boulevard and a secondary, one-way exit, via a 20-foot strip of land connecting the project site to Corbett Street. Review of this study does not constitute approval of the dimensions for any new proposed driveway. Review and approval of a new driveway should be coordinated with LADOT's Citywide Planning Coordination Section (201 North Figueroa Street, 5th Floor, Room 550, at 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact LADOT for driveway width and internal circulation requirements prior to the commencement of building or parking layout design. The applicant should check with City Planning regarding the project's vehicular access and design.

5. Worksite Traffic Control Requirements

LADOT recommends that a construction work site traffic control plan be submitted to LADOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to

<http://ladot.lacity.org/businesses/temporary-traffic-control-plans> to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. LADOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

6. Development Review Fees

Section 19.15 of the LAMC identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Kevin Arucan at (213) 972-4970.

Conceptual Site Plan

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3

Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: 3401 South La Cienega Boulevard
 Scenario:
 Address: 3401 S LA CIENEGA BLVD, 90016

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

Yes No

Existing Land Use

Land Use Type	Value	Unit
Industrial Warehousing/Self-Storage	86.9	ksf <input checked="" type="checkbox"/>
Industrial Warehousing/Self-Storage	86.9	ksf

Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Housing Multi-Family	238	DU <input checked="" type="checkbox"/>
Housing Multi-Family	238	DU
Retail High-Turnover Sit-Down Restaurant	2,869	ksf
Office General Office	227,543	ksf
Housing Affordable Housing - Family	22	DU

Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
188 Daily Vehicle Trips	3,445 Daily Vehicle Trips
1,582 Daily VMT	29,743 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station.

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	3,257 Net Daily Trips
The net increase in daily VMT ≤ 0	28,161 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	2,869 ksf

The proposed project is required to perform VMT analysis.

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3

Project Information

Project: 3401 South La Cienega Boulevard
Scenario: 3401 S LA CIENEGA BLVD, 90016
Address:

Proposed Project Land Use Type	Value	Unit
Housing Multi-Family	238	DU
Retail High-Turnover Sit-Down Restaurant	2,869	ksf

[1] Pursuant to LADOT's *Transportation Assessment Guidelines*, July 2020, the Highway Capacity Manual (HCM) methodology for signalized intersections was utilized to calculate vehicle queuing.

[2] The 95th percentile queue is the maximum back of queue with 95th percentile traffic volumes. The HCM 6th Edition methodology worksheets report queues in number of vehicles per lane, however an average vehicle length of 25 feet was assumed for analysis purposes. The reported queues therefore represent the calculated maximum back of queue in feet per lane.

[3] Represents the change in calculated maximum back of queue (in feet per lane) due to the addition of project-related traffic.

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

November 12, 2021

TO: Vincent Bertoni, AICP, Director of Planning
Department of City Planning
Attention: Kyle Winston

FROM: Los Angeles Fire Department

SUBJECT: **CITY PLANNING CASE: CPC-2021-6877-DB-SPR-SUB**
(3401 S. La Cienega Blvd.)

Submit plot plans for Fire Department approval and review prior to recordation of City Planning Case.

RECOMMENDATIONS:

During demolition, the Fire Department access will remain clear and unobstructed.

Access for Fire Department apparatus and personnel to and into all structures shall be required.

One or more Knox Boxes will be required to be installed for LAFD access to the project. Location and number to be determined by LAFD Field Inspector. (Refer to FPB Req # 75).

505.1 Address identification. New and existing buildings shall have approved building identification placed in a position that is plainly legible and visible from the street or road fronting the property.

Where above ground floors are used for residential purposes, the access requirement shall be interpreted as being the horizontal travel distance from the street, driveway, alley, or designated fire lane to the main entrance of individual units.

No building or portion of a building shall be constructed more than 150 feet from the edge of a roadway of an improved street, access road, or designated fire lane.

The Fire Department may require additional vehicular access where buildings exceed 28 feet in height.

2014 CITY OF LOS ANGELES FIRE CODE, SECTION 503.1.4 (EXCEPTION)

- a. When this exception is applied to a fully fire sprinklered residential building equipped with a wet standpipe outlet inside an exit stairway with at least a 2 hour rating the distance from the wet standpipe outlet in the stairway to the entry door of any dwelling unit or guest room shall not exceed 150 feet of horizontal travel AND the distance from the edge of the roadway of an improved street or approved fire lane to the door into the same exit stairway directly from outside the building shall not exceed 150 feet of horizontal travel.
- b. It is the intent of this policy that in no case will the maximum travel distance exceed 150 feet inside the structure and 150 feet outside the structure. The term "horizontal travel" refers to the actual path of travel to be taken by a person responding to an emergency in the building.
- c. This policy does not apply to single-family dwellings or to non-residential buildings.

Building designs for multi-storied residential buildings shall incorporate at least one access stairwell off the main lobby of the building; But, in no case greater than 150ft horizontal travel distance from the edge of the public street, private street or Fire Lane. This stairwell shall extend onto the roof.

Entrance to the main lobby shall be located off the address side of the building.

Any required Fire Annunciator panel or Fire Control Room shall be located within a 20ft visual line of sight of the main entrance stairwell or to the satisfaction of the Fire Department.

Adequate off-site public and on-site private fire hydrants may be required. Their number and location to be determined after the Fire Department's review of the plot plan.

The Fire Department may require additional roof access via parapet access roof ladders where buildings exceed 28 feet in height, and when overhead wires or other obstructions block aerial ladder access.

FPB #105

5101.1 Emergency responder radio coverage in new buildings. All new buildings shall have approved radio coverage for emergency responders within the building based upon the existing coverage levels of the public safety communication systems of the jurisdiction at the exterior of the building. This section shall not require improvement of the existing public safety communication

The applicant is further advised that all subsequent contact regarding these conditions must be with the Hydrant and Access Unit. This would include clarification, verification of condition compliance and plans or building permit applications, etc., and shall be accomplished **BY APPOINTMENT ONLY**, in order to assure that you receive service with a minimum amount of waiting please email **lafdhhydrants@lacity.org**. You should advise any consultant representing you of this requirement as well.

SOILS REPORT REVIEW LETTER

September 23, 2021

LOG # 118744
SOILS/GEOLOGY FILE - 2
LIQ

To: Vincent P. Bertoni, AICP, Deputy Advisory Agency
Department of City Planning
200 N. Spring Street, 7th Floor, Room 750

From: Jesus Adolfo Acosta, Grading Division Chief
Department of Building and Safety

TENTATIVE TRACT: VTT-83550

Current Legal Description:

TRACT: SUBDIVISION OF THE SOUTHERN PORTION OF THE RANCHO RINCON
DE LOS BUEYES (M R 53-25)
LOT(S): 12 (Arb 17) PT
LOCATION: 3401 S La Cienega Blvd.

<u>CURRENT REFERENCE</u> <u>REPORT/LETTER(S)</u>	<u>REPORT</u> <u>No.</u>	<u>DATE OF</u> <u>DOCUMENT</u>	<u>PREPARED BY</u>
Soils Report	700088301	05/17/2021	Langan

The Grading Division of the Department of Building and Safety has reviewed the Tentative Tract VTT-83550 with Los Angeles Department of City Planning receipt stamp dated 09/02/2021 and the referenced report that provides recommendations for the proposed demolition of all existing structures and the construct of two (2) buildings. One building will be a commercial building with office and rental spaces. The second will be a 12-story apartment. Two subterranean levels are also proposed. Subsurface exploration performed by the soils engineer consisted of two hollow stem auger borings to a maximum depth of 101.5 feet. The earth materials at the subsurface exploration locations consist of up to 5 feet of uncertified fill underlain by native.

The site is located in a designated liquefaction hazard zone as shown on the Seismic Hazard Zones map issued by the State of California.

The review of the subject report cannot be completed at this time and will be continued upon submittal of an addendum to the report which shall include, but not be limited to, the following:

(Note: Numbers in parenthesis () refer to applicable sections of the 2020 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. Provide a complete geotechnical engineering report per the Department requirements and LABC with appropriate design recommendations and supporting engineering analyses. (P/BC 2014-044, P/BC 2014-049, P/BC 2014-068, P/BC 2014-113)
2. Provide liquefaction analysis in conformance with the most recent version of CGS Special Publication 117 (i.e. SP 117A), Guidelines for Evaluating and Mitigating Seismic Hazards in California (1803.7), and with Information Bulletin P/BC 2020-151.

3401 S La Cienega Blvd.

3. Provide a copy of the City approval letter for the existing fill, which was placed after April 25, 1963.
4. Provide a complete laboratory testing report prepared by a City of Los Angeles approved testing agency. The report shall be signed and stamped by the engineer in responsible charge of the testing and shall include the testing descriptions and procedures. P/BC 2020-113
5. Provide design calculations and recommendations for temporary excavations and permanent walls for a minimum factor of safety of 1.25 and 1.5 respectively.

Notes: Calculations shall be determined using the limit equilibrium method (free-body-diagram, and vectors) and with tension cracks. Basement walls and other walls in which horizontal movement is restricted at the top shall be designed for at-rest pressure in accordance to the Jaky formula and Section 1610.1 of the 2020 LABC. For walls over 6 feet, lateral earth pressure due to earthquake motions shall be considered, as required by section 1803.5.12 of the Los Angeles Building Code. For restrained walls, the higher value obtained for at-rest pressure and using the limit equilibrium method shall be recommended for design.

The soils engineer shall prepare a report containing an itemized response to the review items indicated in this letter. If clarification concerning the review letter is necessary, the report review engineer may be contacted. Two copies of the response report, including one unbound wet-signed original for archiving purposes, a pdf-copy of the complete report in a CD or flash drive, and the appropriate fees will be required for submittal.

Mr. Vince Bertoni
Department of City Planning
200 North Spring Street, Room 721
Los Angeles, California 90012

Dear Mr. Bertoni:

Subject: Tract No. 83550
West of La Cienega Boulevard and South Jefferson Boulevard

This is in reply to your letter dated September 21, 2021. This tract can be supplied with water from the municipal system subject to the Los Angeles Department of Water and Power's (LADWP) Water System Rules and upon payment of regular service connection charges. All required water mains have been installed.

On the basis of the map submitted with your form letter, the LADWP's Water Services Organization (WSO) will not object to the recording of the subdivision map.

Questions regarding WSO clearance should be directed to LADWP, Water Distribution Engineering, P.O. Box 51111, Room 1425, Los Angeles, California 90051-5700 or (213) 367-1225.

Sincerely,

Edgar Mercado, P.E.
Engineer of Western District
Water Distribution Engineering

Land Developing and Mapping Division
District Engineer
Map Nos. 120, 122-174

Irvine & Associates, Inc.
Los Angeles City Fire Department
Water Service Representative

ITEMS CHECKED APPLY TO THIS SUBDIVISION

DEVELOPER SHALL COMPLETE THE FOLLOWING FINANCIAL AND ENGINEERING ARRANGEMENTS AS CONDITIONS OF MAP CLEARANCE:

LAFD-related Requirements

- 1. New hydrants shall be installed. _____
- 2. Existing hydrant tops shall be changed. _____
- 3. New water mains shall be installed to serve new hydrants. _____
- 4. Contact LAFD for private fire hydrant requirement X

DWP-WS Requirements

- 5. Acreage supply charges shall be paid. _____
- 6. Water main charges shall be paid. _____
- 7. Existing facilities shall be relocated or abandoned. _____
- 8. Street/sewer/storm drain plans shall be submitted. X

DEVELOPER SHALL COMPLETE THE FOLLOWING FINANCIAL AND ENGINEERING ARRANGEMENTS AS CONDITIONS OF SERVICE (BUT NOT CONDITIONS OF MAP CLEARANCE):

- 9. New water mains shall be installed. _____
- 10. New services & meters shall be installed. _____
- 11. Street/sewer/storm drain plans shall be submitted. _____
- 12. Water Service Elevation Agreements will be required, as the minimum pressure is less than 35 PSI. _____
- 13. The Bureau of Engineering may not allow large service vaults to be installed in the sidewalk or parkway. In this case, space should be made available on the private property adjacent to the property line for the large service vault and backflow prevention device (if required). Full access by LADWP for maintenance must be provided. _____

OTHER PERTINENT INFORMATION APPLICABLE TO THIS SUBDIVISION:

- 14. On January 1, 2018, LADWP implemented a new policy regarding water service for multi-unit residential structures. If a development allows LADWP to install an individual meter in front of each house and the water main serving that development fronts the property and is in a public right-of-way, then this is a conventional installation and LADWP will provide individual meters. However, X

if the small lot is completely and within private property and the request is for a manifold type installation of consecutive meters in a coffin-type configuration, LADWP can provide up to five meters in that manifold-setting. LADWP can provide a master meter if the number of meters required is greater than five.

**DEPARTMENT OF RECREATION AND PARKS REPORT AND RECOMMENDATIONS
RELATIVE TO VTT-83550-CN**

Dear Mr. Ibarra:

The City of Los Angeles Department of Recreation and Parks (RAP) has prepared the following report and recommendations in response to your request for comments relative to VTT-83550-CN (project), a proposed residential subdivision over fifty (50) units.

RAP's report and recommendation(s) regarding the proposed project are as follows:

General Comments:

The applicant is requesting approval of the proposed project, a development dwelling units. Los Angeles Municipal Code (LAMC) 12.33.C requires most residential projects that create new dwelling units or joint living and work quarters to dedicate land or pay a fee for the purpose of developing park and recreational facilities and LAMC 12.33.D specifies how those dedications are to be calculated.

Pursuant to LAMC 17.04, the Department of Recreation and Parks (RAP) is to submit a Report to the Advisory Agency for each application for subdivision map approval and that Report "shall contain recommendations, approved by the Board of Recreation and Parks Commissioners (Board), specifying the land to be dedicated, the payment of fees in lieu thereof, or a combination of both..."

On December 16, 2021, the RAP Board approved Board Report 21-215 which recommends that the Advisory Agency require the proposed project to provide the in-lieu fee payment under provisions of LAMC 12.33.

RAP Recommendation:

The applicant is requesting approval of a subdivision that will contain residential dwelling units. Therefore, pursuant to Los Angeles Municipal Code sections 12.33.D, RAP recommends the following be added as a condition of the approval of the proposed project:

That the Park Fee paid to the Department of Recreation and Parks be calculated as a Subdivision (Quimby in-lieu) fee.

Thank you for the opportunity to provide information relative to recreation and park issues related to this proposed project. Please provide the RAP contact listed below with any and all agendas, notices, and staff reports for the Advisory Agency actions and/or hearings related to this application.

If you have any questions or comments regarding this information please feel free to contact Park Fees Staff at, (213) 202-2682 or rap.parkfees@lacity.org, at your convenience.

Sincerely,

DARRYL FORD
Superintendent

From: 
Gil De La Cruz, P.E.
Case Management Supervisor
Private Development Division
Bureau of Street Lighting

SUBJECT: STREET LIGHTING REQUIREMENTS FOR DISCRETIONARY ACTIONS

CITY PLANNING CASE No.: TRACT 83550 CN
3401 S LA CIENEGA BLVD

The Bureau of Street Lighting's recommended condition of approval for the subject city planning case is as follows: (Improvement condition added to S-3 (c) where applicable.)

IMPROVEMENT CONDITION: No street lighting improvements if no street widening per BOE improvement conditions. Otherwise relocate and upgrade street lights; three (3) on La Cienega Blvd. and two (2) pedestrian lights on La Cienega Blvd.

NOTES:

The quantity of street lights identified may be modified slightly during the plan check process based on illumination calculations and equipment selection.

Conditions set: 1) in compliance with a Specific Plan, 2) by LADOT, or 3) by other legal instrument excluding the Bureau of Engineering conditions, requiring an improvement that will change the geometrics of the public roadway or driveway apron may require additional or the reconstruction of street lighting improvements as part of that condition.

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

DATE: October 8, 2021

TO: Sergio Ibarra, City Planner
Department of City Planning

FROM:  Hector Banuelos, Street Tree Superintendent I
Bureau of Street Services, Urban Forestry Division

SUBJECT: VTT – 83550 and CPC-2021-6877-DB-SPR-SUB –
3401 S. La Cienega Blvd.

In regard to your request for review of this case regarding Urban Forestry requirements, it is our recommendation that:

1. STREET TREES

- a. Project shall preserve all healthy mature street trees whenever possible. All feasible alternatives in project design should be considered and implemented to retain healthy mature street trees. A permit is required for the removal of any street tree and shall be replaced 2:1 as approved by the Board of Public Works and Urban Forestry Division.
- b. Plant street trees at all feasible planting locations within dedicated streets as directed and required by the Bureau of Street Services, Urban Forestry Division. All tree plantings shall be installed to current tree planting standards when the City has previously been paid for tree plantings. The subdivider or contractor shall notify the Urban Forestry Division at: (213) 847-3077 upon completion of construction for tree planting direction and instructions.

Note: Removal of street trees requires approval from the Board of Public Works. All projects must have environmental (CEQA) documents that appropriately address any removal and replacement of street trees. Contact Urban Forestry Division at: (213) 847-3077 for tree removal permit information.

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

DATE: October 14, 2021

TO: Sergio Ibarra, Deputy Advisory Agency
200 N. Spring Street, Room 721
Department of City Planning

FROM: Eric Wong, Subdivision Review
Chad Doi, Zoning Engineer
201 N. Figueroa Street, Room 1030
Department of Building and Safety

SUBJECT: **TRACT MAP NO. 83550 - CN - Vesting**
3401 S La Cienega Blvd.

The Department of Building and Safety Zoning Section has reviewed the above Subdivision Map, date stamped on September 14, 2021 by the Department of City Planning. The site is designated as being in a CM-2D-CPIO Zone. A clearance letter will be issued stating that no Building or Zoning Code violations exist relating to the subdivision on the subject site once the following items have been satisfied.

- a. Obtain permits for the demolition or removal of all existing structures on the site and no building shall straddle over the exiting property line. Accessory structures and uses are not permitted to remain on lots without a main structure or use. Provide copies of the demolition permits and signed inspection cards to show completion of the demolition work.
- b. Provide a copy of D condition(s). Show compliance with the above condition(s) as applicable or Department of City Planning approval is required.
- c. Provide a copy of affidavit AFF-55742, AFF-56043 and AFF-58293. Show compliance with all the conditions/requirements of the above affidavit(s) as applicable. Termination of above affidavit(s) may be required after the Map has been recorded. Obtain approval from the Department, on the termination form, prior to recording.
- d. Provide a copy of CPC case CPC-2021-6877-DB-SPR-CUB. Show compliance with all the conditions/requirements of the CPC case as applicable.
- e. Show all street dedication(s) as required by Bureau of Engineering and provide net lot area after all dedication. "Area" requirements shall be re-checked as per net lot area after street dedication. Front yard requirements

shall be required to comply with current code as measured from new property lines after dedication.

- f. The submitted Map does not comply with the and maximum density (800 s.f. of lot area/dwelling unit) requirement of the CM-2D-CPIO Zone. Revise the Map to show compliance with the above requirement or obtain approval from the Department of City Planning.
- g. Record a Covenant and Agreement to treat the buildings and structures located in an Air Space Subdivision as if they were within a single lot.

Notes:

Each Air Space lot shall have access to a street by one or more easements or other entitlements to use in a form satisfactory to the Advisory Agency and the City Engineer.

This Proposed Project is subject to Density Bonus Ordinance to increase the maximum allowed density.

This property is located in a Liquefaction Zone.

The submitted Map may not comply with the number of parking spaces required by Section 12.21 A.4(a) based on number of habitable rooms in each unit. If there are insufficient numbers of parking spaces, obtain approval from the Department of City Planning.

The submitted Map may not comply with the number of guest parking spaces required by the Advisory Agency.

The existing or proposed building plans have not been checked for and shall comply with Building and Zoning Code requirements. With the exception of revised health or safety standards, the subdivider shall have a vested right to proceed with the proposed development in substantial compliance with the ordinances, policies, and standards in effect at the time the subdivision application was deemed complete. Plan check will be required before any construction, occupancy or change of use.

If the proposed development does not comply with the current Zoning Code, all zoning violations shall be indicated on the Map.

An appointment is required for the issuance of a clearance letter from the Department of Building and Safety. The applicant is asked to contact Eric Wong at (213) 482-6876 to schedule an appointment.

cc: Maria Reyes

MEMORANDUM

To: Kyle Winston, City Planning Associate **Job No.** 1346.001
From: Jessica Kirchner Flores, AICP, Managing Principal
Impact Sciences, Inc.
Subject: Responses to Comments on the SCEA for the 3401 S. La Cienega
Boulevard Project
Date: March 10, 2022

This memo was prepared by Impact Sciences and LLG Engineers in response to comments received on the Sustainable Communities Environmental Assessment (SCEA) for the 3401 S. La Cienega Project (Proposed Project). In reviewing the comments, none of the comments offers any new evidence or any evidence that any fact, analysis, or determination in the Draft SCEA is incorrect or not supported with substantial evidence.

The City received the following letters on the SCEA for the Proposed Project.

Comment No.	Comment Date	Commenter
01	02/09/2022	Caltrans
02	02/22/2022	Lozeau Drury LLP
03	02/22/2022	Mitchell M. Tsai
04	02/01/2022	Nadine Angele
05	02/22/2022	Nadine Angele

MASTER RESPONSES TO COMMENTS

In reviewing the comments, two areas of concern were raised most often by commenters. To address these comments, Impact Sciences prepared Master Responses on the following topics:

- **Master Response 1:** Applicability of a SCEA
- **Master Response 2:** Need for Mitigation Measures in a SCEA

These Master Responses do not alter the analysis or conclusions of the SCEA and do not involve any new significant impacts or add "significant new information" that would require recirculation of the SCEA pursuant to *CEQA Guidelines* § 15088.5(a) and (b). The Master Responses are intended to provide the decisionmakers with clarifications regarding the issues raised by the commenters.

Master Response 1: Applicability of a SCEA

As provided in Chapter III, Sustainable Communities Environmental Assessment Eligibility, of the SCEA, the Proposed Project is a transit priority project that clearly meets the intent of both Senate Bill (SB) 375 and the Southern California Association of Government's (SCAG) Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS). The purpose of SB 375 was to revise CEQA to encourage projects "that will help the state achieve its climate goals under Assembly Bill (AB) 32, assist in the achievement of state and federal air quality standards, and increase petroleum conservation" (see SB 375, Section 1(f)). To meet the state's AB 32 climate goals, SB 375 requires all metropolitan transportation organizations, including SCAG, to prepare a SCS that integrates transportation and land use planning in a manner that results in reduced vehicle miles traveled (VMT) and, as a result, reduced greenhouse gas (GHG) emissions. The Proposed Project is an infill development in that it will occupy a previously developed site adjacent to urban uses. The Proposed Project contains a mix of uses (residential, office, and retail) and is located within a half-mile of an existing major transit stop, with the La Cienega/Jefferson Metro stop located less than 100 feet from the Project Site. Furthermore, the Proposed Project is served by Metro Bus Lines 105, which has a frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. For these reasons, the Proposed Project qualifies for streamlined review under a SCEA.

Due to the transit facilities in the vicinity, the Project area qualifies as a "High Quality Transit Area" (HQTA). A continually reoccurring theme in the RTP/SCS is to focus new growth around transit, particularly within QTAs. The RTP/SCS further demonstrates that QTAs may include high-density development, support pedestrian and bike infrastructure, reduce parking requirements, and retain affordable housing near transit. The Proposed Project promotes these goals by developing affordable and workforce housing immediately adjacent to multiple transit options and encouraging pedestrian activity and bicycling activity by providing access to the existing bike path to the north, as well as integrated bicycle facilities on the Proposed Project site.

In addition to the Proposed Project's overall consistency with the RTP/SCS and the Proposed Project's fulfillment of the overarching goals of integrating land use and transportation, Section III, Transit Priority Projects Consistency Analysis, provides a detailed analysis of the Proposed Project's consistency with the RTP/SCS, including consistency with land use designation, density, building intensity and applicable policies, as required by SB 375.

Public Resources Code § 21155.2 states that a transit priority project that has incorporated all feasible mitigation measures, performance standards, or criteria set forth in the prior applicable environmental impact reports (EIRs) and adopted in findings made pursuant to Public Resources Code § 21081 may be reviewed through a SCEA. In preparing the SCEA, cumulative effects that have been addressed and

mitigated in a prior environmental document need not be treated as cumulatively considerable, and growth-inducing impacts need not be addressed. Also, project-specific or cumulative impacts from car and light-duty truck trips, as well as aesthetic and parking impacts, need not be addressed. As demonstrated in Chapter III, Sustainable Communities Environmental Assessment Eligibility, the Proposed Project is consistent with the two applicable plans: The West Adams Community Plan and the SCAG RTP/SCS. Relevant mitigation measures from both plans were reviewed and where applicable applied to the Proposed Project.

As such, a SCEA provides an appropriate and adequate level of environmental review under CEQA.

Master Response 2: Need for Mitigation Measures Under CEQA

Comment Letters No. 2 and No. 3 assert that the SCEA must incorporate “all” feasible mitigation measures and performance standards or criteria from prior applicable EIRs. Contrary to these comments, CEQA only requires, and a SCEA need only incorporate, relevant, applicable mitigation measures from prior EIRs where those measures are needed to mitigate significant or potentially significant impacts identified by the SCEA. (See Public Resources Code §§ 21002, 21155.2(b)(2), 21155.2(b)(5)(i), 21159.28(a); *CEQA Guidelines* §§ 15002, 15021, 15126(f), 15126.4(a)(3), (4)). Consistent with CEQA, the RTP/SCS EIR mitigation monitoring and reporting program (MMRP) itself states that the Lead Agency should consider imposing the listed mitigation measures when needed “to reduce substantial adverse effects” (emphasis added). The Initial Study and SCEA concluded that the Project would not cause significant air quality or GHG impacts, and therefore, no mitigation was required.

In addition, mitigation can only be incorporated when it is relevant and applicable to a project. Mitigation measures in the RTP/SCS EIR that are within the purview of SCAG (see, e.g., SMM AES-1, SMM AG-3) are neither relevant, nor applicable to the Proposed Project. Other measures simply do not apply to this urban, infill location because the subject conditions do not exist on the Proposed Project site (see, e.g., PMM AG-1, PMM BIO-1(c)).

Nevertheless, though not required by CEQA for the reasons explained above, the SCEA does include mitigation to address the specific concerns raised by the commenters regarding air quality and GHG impacts. AQ1 and GHG1 from the West Adams-Baldwin Hills-Leimert Community Plan EIR (Community Plan EIR) MMRP (see SCEA, pp. III-79-80, III-85) have been incorporated into the Proposed Project to address the potential air quality and GHG impacts that may arise from construction and operation. Moreover, these measures, which are similar to PMM AQ-1 and PMM GHG-1 from the RTP/SCS MMRP, are more specifically tailored to the Community Plan area than the measures included in the RTP/SCS. Further, as explained in **Response to Comment 3-11** and **Response to Comment 3-12**, below, the Proposed

Project already incorporates many of the measures suggested by PMM AQ-1 and PMM GHG-1 as design features, including compliance with the CALGreen Code; implementation of all applicable Southern California Air Quality Management District (SCAQMD) rules; adoption of transportation demand management (TDM) measures; inclusion of bicycle/pedestrian amenities; and a net increase of 80 trees, all of which are being applied to this transit-oriented, infill development Proposed Project.

The SCEA fully and adequately analyzed the Project's potentially significant impacts, and it included all feasible mitigation measures from prior certified EIRs where mitigation was needed to address a potentially significant impact. The comments, therefore, do not raise any issues that alter the analysis or conclusions of the SCEA and do not involve any new significant impacts or add "significant new information" that would require recirculation of the SCEA.

Letter 1: State of California Department of Transportation (Caltrans)

Response to Comment 1-1

The comment confirms the City's inclusion of Caltrans in the Project's environmental review process and restates the Project's basic characteristics. No further response is required.

Response to Comment 1-2

The comment expresses acknowledgement and support for mixed-use and infill projects that prioritize alternative modes of travel. The comments related to the Proposed Project being in alignment with Caltrans' goal to reduce the amount of automobile trips, reduce GHG emissions and support alternative modes of travel are noted. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 1-3

The Proposed Project Applicant intends to comply with the City's parking standards. The detailed architectural and parking plans will be submitted to the City of Los Angeles Department of Building & Safety (LADBS) for final determination/approval prior to issuance of any building permits for the Proposed Project.

Per the City of Los Angeles Ordinance 179681, Los Angeles Municipal Code (LAMC) Section 12.22-A.25(d), required parking in a Housing Development Project that qualifies as a Density Bonus Law (DBL) development may be sold or rented separately from the dwelling units, so that buyers and tenants have the option of purchasing or renting a unit without a parking space. Because the Project is a DBL project, the Project is permitted to have unbundled parking.

Pursuant to Government Code Section 65915(f)(3) and LAMC Section 12.22-A.25, the Project Entitlements include a DBL off-menu incentive to waive the West Adams – Baldwin Hills – Leimert Park Community Plan Implementation Overlay (CPIO) restriction on parking stalls in order to construct up to 785 parking spaces, 413 of which are to be unassigned. The DBL renders the CPIO's parking limitation inapplicable to the Project. As the CPIO's parking limitation does not apply to the Project, the Project's parking count is consistent with the CPIO for CEQA purposes.

Response to Comment 1-4

The commenter supports the incorporation of trees into the design of the Proposed Project. As described in the SCEA (Chapter IV, Section 6, Energy), the Proposed Project is proposing a net increase of 80 trees as part of the approximately one acre of landscaped areas which would lower the overall temperature on the Project Site. The Proposed Project also includes numerous other energy efficient and sustainable features which are incorporated as PDF 1. (Refer to page IV-38 of the SCEA for the full list of features.)

Letter 2: Lozeau Drury, LLP

Response to Comment 2-1

Comment 2-1 is a summary of the more detailed comments set forth in Comment Letter No. 2, which are addressed below. No further response is necessary.

Response to Comment 2-2

See **Master Response 2** regarding the Need for Mitigation Measures under CEQA.

Response to Comment 2-3

See **Master Response 2** regarding the Need for Mitigation Measures under CEQA.

Response to Comment 2-4

See **Master Response 2** regarding the Need for Mitigation Measures under CEQA.

Response to Comment 2-5

The comment asserts that the SCEA's conclusions as to the Proposed Project's air quality impacts are not supported by substantial evidence. To the contrary, the SCEA properly evaluated all relevant air quality impacts associated with the Proposed Project's construction and operation in accordance with all California Air Resources Board (CARB), SCAQMD, California Office of Environmental Health Hazard Assessment

(OEHHA), and City protocols for the implementation of CEQA for land use development projects. Refer to Chapter IV, Section 3, Air Quality, pages IV-17 through IV-44 of the SCEA as well as SCEA Appendix B Air Quality and Greenhouse Gas Technical Study.

The comment also asserts that the SCEA should have specifically addressed indoor air quality impacts associated with the release of formaldehyde from building materials. There is no requirement from the CARB, OEHHA, or SCAQMD to evaluate indoor formaldehyde emissions from commonly used, and heavily regulated, common building materials and practices, nor have those agencies provided guidance on how to evaluate such emissions or thresholds of significance.

The commenter assumes—without presenting any facts to confirm—that the Project’s building materials would include composite wood products manufactured with urea-formaldehyde resins that would cause a significant impact on indoor air quality by emissions that would exceed the SCAQMD CEQA significance threshold for airborne cancer risk. The City requires, and the developer is legally obligated to ensure, that all new construction complies with all applicable building code and other legal requirements. Therefore, the developer will ensure that all building materials utilized will comply with all California requirements applicable to formaldehyde in newly constructed buildings including the applicable 2019 California Green Building Standards (CALGreen) Code (California Code of Regulations, Title 24, Part 11) for formaldehyde in composite wood products (as specified in the CARB Air Toxic Control Measure for Composite Wood – 17 CCR 93120 et seq.). CARB, the state’s leading authoritative agency on air quality, has stated that the control measures it has approved for reducing emissions, including formaldehyde, from composite wood products provide a level of control that protects health and safety. CARB makes this point by stating directly in its Frequently Asked Questions for Consumers on Reducing Emissions from Composite Wood Products that, from a public health standpoint, the CWP Regulation’s emission standards are set at low levels intended to protect public health.¹

The study that the commenter relied upon to purport that indoor carcinogenic risks to future residents would exceed the SCAQMD threshold of 10 excess cancers per million does not provide substantial evidence to support the claim for several reasons. First, the Healthy Efficient New Gas Home (HENGH) study was performed with the intent of evaluating the effects of the 2008 Title 24 Building Standards requirements for ventilation on indoor air quality within single family homes containing natural gas appliances and outfitted with mechanical ventilation systems. The purpose of the study was not to analyze formaldehyde emission rates or resulting concentrations from composite wood products. The single-family homes evaluated in the HENGH study were built between 2011–2017 and only required to meet 2008 Title

¹ CARB, https://ww3.arb.ca.gov/toxics/compwood/consumer_faq.pdf?_ga=2.32900281.682464648.1573169874-1026610208.1565143819, accessed March 6, 2022.

24 building standards for mechanical ventilation and building envelope leakage/air infiltration. The Title 24 standards and methodology for residential ventilation requirements were updated in 2016 and refined in 2019, and therefore homes included in the HENGH sample that would not have met the 2019 ventilation standards are not reliable for comparative purposes. Homes evaluated in the original 2007 California New Home Study (CNHS)—which the HENGH study used as a benchmark for pre-2008 ventilation conditions—are also not comparable to the proposed multi-family units that comprise the Project with regards to ventilation and infiltration standards, which greatly influence indoor air quality.

Second, the commenter used inappropriate exposure parameters and methodology to calculate the estimated risk to future residents based on the results of the HENGH study and the 2007 CNHS. The 2015 OEHHA risk assessment guidelines recommend a 30-year exposure for residential health risk assessments. The commenter used the obsolete 70-year residential exposure period assuming continuous (100 percent of time spent at home) exposure to arrive at the estimated cancer risk of 120 per million based on the HENGH study and 180 per million based on the CNHS analysis. The 2015 OEHHA guidelines recommend the use of a fraction of time at home value of 0.73 for adults and 0.72 for children. When the exposure duration is reduced from 70 years to 30 years and a time-at-home fraction of 0.75 is applied, the assumed risk based on the median HENGH study formaldehyde concentration of 24.1 µg/m³ would be 38.6 per million. This estimated risk is less than one-third of the risk claimed by the commenter (120 per million), reflecting some of the flawed methodology employed to estimate possible carcinogenic risks from formaldehyde exposure. However, it is likely that this reduced carcinogenic risk is still a substantial overestimation of potential formaldehyde concentrations and exposures in proposed project dwelling units.

All additional comments that the SCEA must evaluate formaldehyde contributions to existing and future cumulative air quality conditions are unfounded based on the lack of credibility and applicability of the reports cited by the commenter, and the lack of any regulatory guidance or precedence to conduct such an analysis for a development project's CEQA analysis. And such analysis would be highly speculative and beyond the scope of CEQA documentation for an infill development project that will be constructed in accordance with all applicable, current building and safety codes.

The comment alleges that the SCEA failed to evaluate health risks from diesel particulate matter (DPM). Contrary to the assertion, the SCEA appropriately and fully evaluated health risks from DPM (see SCEA, page IV-44) and concluded the Project would not cause significant impacts with regard to DPM.

The comment claims that a health risk analysis (HRA) should have been conducted for the Proposed Project based on OEHHA 2015 guidance. The intent of the OEHHA 2015 guidance is to provide HRA procedures for use in the Air Toxics Hot Spots Program or for the permitting of existing, new, or modified stationary

sources. As the Project is not part of the Air Toxics Hot Spots Program and is considered an urban infill mixed-use development consisting primarily of mobile and area sources (i.e., non-stationary sources), the OEHHA 2015 guidance is not directly applicable. OEHHA 2015 offers limited information on conducting a short-term HRA, but the guidance acknowledges the many inherent uncertainties that may occur, and it does not identify the types of short-term projects or non-stationary projects subject thereto. Moreover, OEHHA 2015 does *not* impose requirements for the Proposed Project to conduct a HRA nor does OEHHA 2015 indicate a HRA should be conducted for the Proposed Project. Further, the SCAQMD has not opined on the application of OEHHA 2015 guidance to development projects such as the Proposed Project, and it would be speculative to conduct an analysis without SCAQMD's necessary oversight.

Response to Comment 2-6

See **Response to Comment 2-5**.

Response to Comment 2-7

Response to Comment 2-8

See **Response to Comment 2-5**.

Response to Comment 2-9

See **Response to Comment 2-5**.

Response to Comment 2-10

See **Response to Comment 2-5**.

Response to Comment 2-11

See **Response to Comment 2-5**.

Response to Comment 2-12

This comment states that the SCEA failed to include a quantified HRA to address construction and operational air quality health risk impacts. The SCEA appropriately evaluated air quality impacts and correctly determined the Proposed Project's construction and operational health risk impacts would be less

than significant. The requested analyses are not applicable, appropriate, nor required to determine the Proposed Project's air quality impacts.

With respect to construction, the SCEA appropriately evaluated health risks from DPM (see page IV-44) and the SCAQMD has not published guidance or methodology to conduct a construction-related HRA for development projects.

With respect to operations, the comment incorrectly states the Proposed Project's anticipated volume of daily vehicle trips and claims that the SCEA does not disclose or discuss the concentrations at which such pollutants would trigger adverse health effects. Operation of the Proposed Project would result in 3,061 daily vehicle trips. Appendix B to the SCEA provides a thorough disclosure and discussion of air pollutants and associated potential adverse health effects from criteria pollutants and TACs, including DPM. Additionally, the Proposed Project is considered an urban in-fill mixed-use development. Appendix A to the SCEA illustrates more than 90% of the Proposed Project's vehicle trips would be comprised of light and medium duty vehicles (i.e., not heavy-duty diesel trucks), and any Proposed Project-related increases to DPM would therefore be nominal. No further analysis is required to support the SCEA's determination of less-than-significant impacts upon air quality during construction and operation.

Also see **Response to Comment 2-5**.

Response to Comment 2-13

See **Response to Comment 2-5**.

Response to Comment 2-14

See **Response to Comment 2-5** and **Response to Comment 2-12**.

Moreover, the SWAPE analysis attached to the comment is inaccurate and inapplicable for several reasons. First, the analysis significantly overestimates the amount of DPM emissions during construction and operation of the Proposed Project. SWAPE appears to classify all PM10 (particulate matter 10 microns in diameter) exhaust emissions from the Proposed Project's CalEEMod output sheets as the amount of DPM emissions. However, according to CARB, DPM is considered an ultrafine particulate, as more than 90% of DPM is less than one micron in diameter.² CARB considers DPM a subset of PM2.5, and thus, to characterize all of the Proposed Project's construction and operational PM10 exhaust emissions as DPM emissions is an overestimation. Second, SWAPE's HRA inaccurately modeled all Proposed Project-related construction and operation DPM emissions on-site as area sources. This assumption is not representative

² CARB, <https://ww2.arb.ca.gov/resources/overview-diesel-exhaust-and-health>; accessed March 7, 2022.

of the Proposed Project's sources, as many construction related emissions would occur off-site (and as mobile sources) and the majority of operational emissions would occur off-site over large areas during motor-vehicle travel. To assume that all Proposed Project DPM emissions would occur from on-site area sources with near ground-level release heights significantly overestimates nearby pollutant concentrations and is therefore not representative of the Proposed Project's characteristics. Lastly, SWAPE's modeling did not utilize local meteorological or terrain data specific to the Proposed Project's location. As a result, the comment's claims that the maximum exposed individual resident is located approximately 75 meters downwind cannot be substantiated without including local wind, weather, and topographical factors associated with the Project Site's location. By utilizing inappropriate modeling assumptions that are not specific to the Project and its location, the comment's assertion is unfounded and does not constitute substantial evidence that the Project may have a substantial adverse effect on the environment.

Response to Comment 2-15

This comment summarizes the prior comments made in this comment letter and therefore no additional response is needed. See **Master Response 2** regarding the Need for Mitigation Measures under CEQA. See **Responses to Comments 2-5 through 2-14** regarding the SCEA's Air Quality analysis.

Letter 3: Mitchell M. Tsai

Response to Comment 3-1

The City acknowledges that the Southwest Regional Council of Carpenters (SWRCC) may submit supplemental comments prior to the final hearing on the Proposed Project. As a commenter on the SCEA, SWRCC will receive future notices on the Proposed Project.

Response to Comment 3-2

The comment encourages the use of local hire provisions for construction projects. Inclusion of local hire or skilled labor unions is not a CEQA issue. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

The comment cites to a May 2021 SCAQMD rule that supports local hire programs to reduce air pollutant emissions. The referenced SCAQMD rule only applies to warehouse and distribution centers and is, therefore, not applicable to the Proposed Project, which contains neither a warehouse nor a distribution

center. Further, as demonstrated in the SCEA, the Proposed Project would not have any significant air quality or GHG impacts which would require the application of mitigation measures.

Response to Comment 3-3

See **Response to Comment 3-2**. The comment suggests the City require the Proposed Project be built to standards exceeding the current 2019 California Green Building Code. As explained in the SCEA, the Proposed Project will exceed the 2019 Cal Green Code as it will be built to a minimum LEED Gold standard, as outlined in PDF-1 of the SCEA (Refer to page IV-64).

Response to Comment 3-4

The comment provides general guidance regarding CEQA. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 3-5

The comment recommends that the City adopt measures to mitigate public health risks from the Proposed Project's construction due to the Covid 19 pandemic. Health risks related to the transmission of viruses are not a CEQA issue, and no specific response is required. Notwithstanding that this topic is outside the scope of CEQA, the City and the State of California, through California Division of Occupational Safety and Health (OSHA), have clear requirements regarding worker safety at construction sites. The Proposed Project shall comply with all requirements regarding worker safety that are in place during the time of Proposed Project construction. Further, the Covid 19 pandemic is an ongoing health crisis, and throughout the pandemic, health and safety protocols have changed repeatedly and rapidly. Project construction is not intended to begin in late 2022 or early 2023, At this time, it would therefore be premature for the Proposed Project Applicant to commit to specific measures regarding Covid 19.

Response to Comment 3-6

The comment provides general guidance regarding SCEAs. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 3-7

See **Master Response 2**.

Response to Comment 3-8

The comment provides general guidance regarding SCEAs. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 3-9

The comment states the SCEA fails to consider performance-based goals such as CARB's regional target to decrease VMT or SCAG's GHG per capita emissions target. The comment misconstrues how CARB and SCAG reduction targets are applied.

CARB targets are not intended to be used as project-specific targets. Rather they apply at a regional level and only reflect transportation sector emissions. Other sectors such as building energy, construction, and water use, as well as regional emissions for non-vehicle uses (i.e., ships, trains) are not accounted for within SCAG's target. As such, the regional targets are not applicable to the Proposed Project.

For instance, SB 375 requires CARB to develop regional GHG emission reduction targets for *cars and light-duty trucks* for 2020 and 2035 for each of the state MPOs on a per capita basis. Each MPO is required to prepare a SCS to meet these GHG emissions reduction targets and align transportation, land use, and housing strategies. For SCAG, the targets are to reduce per capita GHG emissions by 8 percent below 2005 levels by 2020 and 19 percent below 2005 levels by 2035. SCAG has demonstrated compliance with both targets in the most recent RTP/SCS. Determining the per capita carbon dioxide (CO₂) emissions requires modeling VMT by passenger vehicles and light trucks that emit CO₂ and dividing the number by the total population. However, because these regional totals do not account for emissions other than cars and light duty trucks, they are not appropriate to use at the project level.

Moreover, the Proposed Project is consistent with SB 375's mandate to reduce GHG emissions. As stated in SCAG's Program EIR (Section 3.8, Greenhouse Gas), SB 375 seeks to coordinate land use planning, housing planning, regional transportation planning, and GHG reductions. By coordinating these efforts, it is envisioned that vehicle congestion and travel can be reduced, resulting in a corresponding reduction in emissions. SB 375 directed CARB to set regional targets to reduce emissions and regional transportation plans are required to identify how they will meet these targets. SB 375 has three major components:

- Using the regional transportation planning process to achieve reductions in emissions consistent with AB 32's goals.
- Offering CEQA incentives to encourage projects that are consistent with a regional plan that achieves emissions reductions.
- Coordinating the Regional Housing Needs Assessment (RHNA) process with the regional transportation process while maintaining local authority over land use decisions.

Further, SB 375 expressly encourages development such as the Proposed Project, which combines jobs and housing in transit rich areas. These types of projects are inherently considered GHG emissions reduction projects as they represent good land use planning and help the region reduce VMT emissions. As a result, SB 375 included measures designed to specifically streamline CEQA review of developments like the Proposed Project.

In addition, as part of the SCEA determination checklist (see Section III, Sustainable Communities Environmental Assessment Eligibility), mitigation measures from the RTP/SCS EIR were reviewed to determine their applicability to the Project. As described in **Master Response 2**, the Proposed Project did not identify significant impacts related to air quality or greenhouse gas emissions that would require mitigation, therefore, none of the SCAG measures were applicable to the Proposed Project.

Response to Comment 3-10

See **Master Response 2**.

Response to Comment 3-11

The Proposed Project would be developed on a site that is currently in use as a public storage facility. The entire Project Site is paved and/or improved with buildings or other uses. While minimizing land disturbance during construction has the ability to leave more land available for carbon sequestration, this particular measure is not applicable to the Proposed Project. The Project Site is entirely paved, therefore leaving parts of the site undisturbed would not increase opportunities for carbon capture. Further, the Proposed Project will increase open space on the site but adding approximately one acre of open space and adding a net increase of 80 trees. These improvements would be far more beneficial from a carbon capture perspective than leaving any portion of the site as a vacant paved lot.

See **Master Response 2**.

The Proposed Project will be required to implement Mitigation Measure AQ1 from the Community Plan EIR. Mitigation Measure AQ1 (See Table III-3, West Adams – Baldwin Hills -Leimert CPA EIR Applicable Mitigation Measures) includes the following best management practices, which are consistent with SCAG PMM-AQ-1:

- Use properly tuned and maintained equipment.
- Contractors shall enforce the idling limit of five minutes as set forth in the California Code of Regulations.
- Use diesel-fueled construction equipment to be retrofitted with after treatment products (e.g., engine catalysts) to the extent they are readily available and feasible.
- Use heavy duty diesel-fueled equipment that uses low NOX diesel fuel to the extent it is readily available and feasible.
- Use construction equipment that uses low polluting fuels (i.e., compressed natural gas, liquid petroleum gas, and unleaded gasoline) to the extent available and feasible.
- Maintain construction equipment in good operating condition to minimize air pollutants.
- All off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technologies devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.
- Construction contractors shall use electricity from power poles rather than temporary gasoline or diesel power generators, as feasible.

Response to Comment 3-12

See **Master Response 2**. The Proposed Project will be subject to and required to comply with SCAQMD Rule 403 (Fugitive Dust), which is consistent with PMM-AQ-1. Rule 403. This rule requires fugitive dust sources to implement Best Available Control Measures (BACT) for all sources, and all forms of visible particulate matter are prohibited from crossing any property line. This rule is intended to reduce PM10 emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM10 suppression techniques are summarized below.

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
- All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported off-site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the workday to remove soil tracked onto the paved surface.

Response to Comment 3-21

See **Master Response 2**.

Consistent with PMM-AQ-1, a detailed Construction Staging and Traffic Management Plan (CSTMP), which would include any applicable street/lane/sidewalk closure information, a detour plan, haul route(s), and a staging plan, will be prepared for the Proposed Project consistent with City of Los Angeles Department of Transportation's (LADOT's) recommendations and requirements. As noted on page 10 of the Transportation Assessment Report (TAR) prepared by LLG Engineers (October 1, 2021), and included as Appendix F of the SCEA, the plan would be based on the nature and timing of the Project's specific construction activities and would consider other projects under construction in the immediate vicinity of the Project Site. The CSTMP would also include features such as notification to adjacent project owners and occupants of upcoming construction activities, advance notification regarding any temporary transit stop relocations, and limitation of any potential roadway lane closure(s) to off-peak travel periods, to the extent feasible. In addition, a construction work site traffic control plan would be submitted to LADOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of construction activity should any lane closure/s be proposed.

Response to Comment 3-22

See **Master Response 2** and **Responses to Comments 3-11** and **3-12**.

Response to Comment 3-23

See **Master Response 2** and **Responses to Comments 3-11** and **3-12**.

Response to Comment 3-24

See **Master Response 2**.

The Proposed Project is a mixed use, transit-oriented project, which inherently is designed to minimize GHG emissions, consistent with the intent of PMM-GHG-1. As explained in the SCEA, numerous energy saving and sustainable features have been incorporated throughout the Proposed Project. The Project would be designed to meet Cal Green and Title 24 Building Standards Code (CALGreen Code). The Proposed Project's infill location would promote the concentration of development in an urban location

with extensive infrastructure. The Proposed Project's proximity to public transportation and services would aid in reducing VMT for residents and employees.

To promote sustainability, the Proposed Project would be aligned with Americas Residential Partnership's Responsible Property Investment Strategy & Roadmap to Net Zero Carbon. To achieve that goal, the multifamily building would incorporate:

- Net Zero Carbon from 2020 for Scope 1 & 2 in construction, and Scope 1, 2 & 3 in operation³
- Leadership in Energy and Environmental Design (LEED) Gold minimum
- Operational performance rating, such as FitWel

The Commercial Building is targeting:

- Net Zero Carbon from 2025 for Scope 1 & 2
- Absolute Zero by 2040 for Scopes 1, 2 & 3
- Leadership in Energy and Environmental Design (LEED) Gold minimum
- Operational performance rating, such as FitWel

Strategies that support these targets and that are included in the Proposed Project include:

- Designing for energy and water efficiency as a priority
- Both buildings will be entirely electric buildings (no natural gas or wood burning stoves or fireplaces in either building)
- ENERGY STAR Appliances
- LED lighting
- Intend to purchase 100% green power from the LADWP grid
- Variable Air Volume — HVAC (heating, ventilation, and air conditioning) system in the commercial building with MERV 13 - 15 filter + recycles outdoor air
- 100 Electric Vehicle parking spaces

³ Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers.

- Includes on-site Photovoltaic (PV) & exploring battery storage
- Bike showers, lockers, and storage
- Stormwater Recapture
- Use of permeable paving where feasible
- Use of drought tolerant plants for landscaping
- Undertaking a Life Cycle Assessment of embodied carbon in materials to engage supply chain in achieving lower carbon material substitutions
- Construction waste diversion
- Use of low carbon concrete and rebar construction materials where feasible

The buildings will be sustainably designed to meet and/or exceed all current City building code and Title 24 requirements. Specifically, the Proposed Project will incorporate eco-friendly building materials, systems, and features wherever feasible, including Energy Star appliances, water saving/low flow fixtures, non-volatile organic compound (VOC) paints/adhesives, drought tolerant planting, and high-performance building envelopment.

The Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking by including improvements along the existing Class I bicycle facility (i.e., dedicated path) located immediately adjacent to the site to the north between the south side of Jefferson Boulevard and the Proposed Project Site, ground floor dining options, and nearly one acre of landscaped public space on the ground level that connects to the directly adjacent Metro “E” Line La Cienega/Jefferson light rail station.

The location of the Proposed Project encourages a variety of transportation options. As noted on page 10 of the TAR and included in Appendix F of the SCEA, the Proposed Project would incorporate 222 bicycle parking spaces, including 36 short-term spaces and 186 long-term spaces. The bicycle spaces will be provided in a readily accessible location or locations and appropriate lighting will be provided to increase safety and provide theft deterrent during night-time parking. The Proposed Project will comply with LAMC Section 91.6307 with respect to the required on-site showers for bicyclists. In addition, the existing chain link fence, which currently separates the Proposed Project site from the existing Class I bicycle facility directly adjacent to the north, will be removed, thus providing even greater accessibility.

Response to Comment 3-25

See **Master Response 2** and **Response to Comment 3-24**. Appendix F of the *CEQA Guidelines* relates to wasteful and inefficient use of energy. The SCEA addresses Energy using the Appendix F questions and determined impacts would be less than significant. Refer to Section IV, 6. Energy, page IV-64 of the SCEA.

The Proposed Project would result in the development of multi-family residential and affordable units, office space, and ground floor commercial uses within a HQTAs as defined by SCAG and a Transit Priority Area as defined by SB 375. The Proposed Project Site is located less than one-quarter mile from the Metro “E” Line La Cienega/Jefferson light rail station platform. In fact, the station platform is located immediately across South La Cienega Boulevard to the east (i.e., at the southeast corner of the South La Cienega Boulevard/Jefferson Boulevard intersection). Furthermore, the site is located less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. As noted on page 25 of the TAR and included in Appendix F of the SCEA, Section 3.2 describes the existing bus transit network. As shown on Table 3-1, page 27 of the TAR, the Project site is served by Metro Bus Transit Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekends only). Therefore, the Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. The location of the Proposed Project encourages a variety of transportation options and access and is expected to result in less emissions than would otherwise be expected to occur.

Response to Comment 3-26

See **Master Response 2**.

Response to Comment 3-27

See **Master Response 2** and **Response to Comment 3-24**.

Response to Comment 3-28

See **Master Response 2**. As described in more detail in the SCEA and below, the Proposed Project design incorporates many of the features in this section of PMM-GHG-1, including integrating green building measures consistent with CALGreen, implementation of project design features, use of BACT during design and construction, measures that encourage transit, carpooling, bike-share and car-share, incorporation of bicycle and pedestrian facilities, improving access to transit, use of/incentives for carpool, designating rideshare, land use siting and design to reduce GHG measures including through developing on an infill site.

Refer to **Response to Comment 3-24**. The Proposed Project has purposely been sited to be in close proximity to transit (bus transit and rail transit), bicycle and pedestrian facilities to encourage alternative modes of transit.

Refer to **Response to Comment 1-3**. The Proposed Project will include 100 electric vehicle (EV) parking spaces (see PDF-1 on page IV-67 of the SCEA); affordable housing, including 22 very low-income units, 7 workforce housing units (see SCEA Section II, Project Description, page II-1; public open space (Section 15(a)(iv) of the SCEA); and the following TDM measures (see page IV-176 of the SCEA):

- **Education and Encouragement: Promotions and Marketing.** This strategy involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices. This strategy includes passive educational and promotional materials, such as posters, info boards, or a website with information that a traveler could choose to read at their own leisure. For the purposes of the analysis, it is assumed that every employee would be eligible for passive marketing and promotional materials.
- **Bicycle Infrastructure: Include Bike Parking Per LAMC.** This strategy involves the implementation of short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Projects providing short-term and long-term bicycle parking in accordance with LAMC Section 12.21A.16 qualify for this measure. The Applicant has indicated that the Proposed Project will comply with the short-term and long-term bicycle parking requirements of the Los Angeles Municipal Code.
- **Bicycle Infrastructure: Include Secure Bike Parking and Showers.** This strategy involves implementation of additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel by providing amenities at destinations. Projects providing long-term bicycle parking secured from the general public in accordance with LAMC Section 12.21A.16(d)(2) and showers in accordance with LAMC Section 91.6307 qualify for this measure. The Applicant has indicated that the Proposed Project will comply with the requirements of the Los Angeles Municipal Code and provide showers, lockers, and bicycle storage with bicycle repair equipment, and 36 short term and 186 long term bicycle parking spaces.
- **Neighborhood Enhancement: Pedestrian Network Improvements.** This strategy involves implementation of pedestrian network improvements throughout and around the Project Site that encourage people to walk. This includes internally linking all uses within the Project Site with pedestrian facilities such as pathways and walkways and connecting the Project Site to the surrounding pedestrian network. It also includes the elimination of barriers such as walls, landscaping, and slopes

that impede pedestrian circulation. The Proposed Project includes pedestrian infrastructure to connect facilities within the site and the surrounding street system. Proposed Project features include landscaped and lighted pedestrian walkways connecting facilities within the site, as well as connections with the adjacent public sidewalks on the South La Cienega Boulevard and Jefferson Boulevard project frontages. In addition, the Proposed Project will have approximately one acre of ground level landscaping, open space, and interactive features including a new public plaza connecting with the bicycle path, Metro station, and surrounding neighborhood as well as a landscaped semi-public plaza located between the two buildings that stretch parallel to the bicycle path. Street trees and streetscape plantings should be introduced along the same public frontages in accordance with the City's standards. In addition, Project signage could include general ground level and wayfinding pedestrian signage around the perimeter of the Project Site, building identification signs, and other sign types.

In addition, to mitigate the Proposed Project's potential impacts from employee VMT, the SCEA recommends Mitigation Measure TR1, which requires the implementation of a ride share program to reduce VMT to a less than significant level. This strategy involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride-share vehicles, and a website or message board to connect riders and coordinate rides in order to increase vehicle occupancy. As noted on page 56 of the TAR and included as Appendix F of the SCEA, every employee would be eligible for the ride-share program.

Response to Comment 3-33

Refer to **Responses to Comments 3-9** through **3-32**.

Response to Comment 3-34

The comment suggests that the Project's impacts need to be analyzed without considering the Project's design. This is contrary to CEQA. CEQA requires that an environmental document's Project Description include a project's technical, economic, and environmental characteristics relevant to the CEQA analysis (14 Cal. Code Regs. § 15124). Mitigation is only needed when a project, taking into account all elements of that project's design, causes a significant or potentially significant impact (14 Cal. Code Regs. §§ 15021, 15126.4(a)(3), (4)). When a project is designed at the outset to include features that result in a less than significant impact, mitigation is unnecessary and cannot be imposed through CEQA.

Here, the SCEA properly analyzes the Proposed Project as designed, finding that, in most cases, the Proposed Project will have less than significant impacts. For those areas where potentially significant impacts were identified, mitigation measures have been recommended.

The comment also suggests that the SCEA concludes there will be less than significant impacts for specific topics in reliance on project design features (PDFs), which the comment alleges are not fully enforceable. As explained below, the comment is incorrect as the subject PDFs are fully enforceable.

Degradation of Visual Character

See Section IV-C.1 of the SCEA. The SCEA is not required to analyze aesthetic impacts because the Proposed Project is a mixed-use residential project located on an infill site within a transit priority area (Public Resources Code § 21099(d)(1)). Nonetheless, Section IV of the SCEA explains how the Proposed Project, as designed, will have a less than significant impact on aesthetics.

Net Increases of Criteria Air Pollutants

See IV-C.3.b of the SCEA. While the Proposed Project includes sustainable features in the form of PDF 1 and construction best management practices in the form of MM AQ1 from the Community Plan EIR, the SCEA's conclusion that the Proposed Project will have a less than significant impact regarding criteria pollutants does not rely on PDF 1 or MM AQ1. Instead, the Proposed Project will have a less than significant impact on criteria air pollutants because operational and construction emissions would not exceed the SCAQMD's thresholds. The enforceability of PDF 1 is therefore not relevant to the impacts analysis.

Tree Removal

See p. IV-47 of the SCEA. There are no PDFs or mitigation measures related to the removal of the only two existing trees onsite, both of which are non-native, non-protected, in poor condition, and less than 8" in diameter. Therefore, the enforceability of PDFs is irrelevant to this issue. Further, the Proposed Project will comply with the City's Code requirements for provision of onsite trees per LAMC 12.21 G.2.(a).(3.) and will include a minimum of 65 trees onsite as required by City Code; however, the Project Applicant intends to provide a net increase of 80 trees onsite.

Nesting Native Birds

See pp. III-80 and IV-47 of the SCEA. The Proposed Project incorporates MM BR1 from the Community Plan EIR to address potential impacts to nesting native and migratory birds. In addition, the Proposed Project is required, as a matter of federal law, to comply with the U.S. Fish and Wildlife Service's regulations regarding migratory birds.

Inadvertent Discovery of Cultural Resources and Human Remains / Paleontological Resources

See pp. III-83, 84, and IV-63, 64, 81, 82, and 181 to 184 of the SCEA. The SCEA imposes mitigation measures CR5 through CR10 from the Community Plan EIR to address the potential discovery of cultural resources and human remains during construction, even though the SCEA found inadvertent discovery to be unlikely. The SCEA also calls for a condition of approval (which City staff has proposed as Condition of Approval 25 to the Vesting Tentative Tract Map) to protect tribal cultural resources in the event of inadvertent discovery during construction.

Erosion

See pp. IV-78, 79 of the SCEA. As discussed in the SCEA, the Proposed Project site's natural features make erosion impacts unlikely. Nonetheless, the Proposed Project will be required to comply with numerous federal, state and local laws that are designed to ensure erosion impacts remain less than significant, including the City's grading permit requirements overseen by the City's Department of Building and Safety; the City's Municipal Code; SCAQMD Rule 402; the State Water Resources Control Board (SWRCB) Construction General Permit; and a Stormwater Pollution Prevention Plan (SWPPP) that must comply with the National Pollution Discharge Elimination System (NPDES) permitting regulations.

Greenhouse Gas Emissions

See pp. IV-82 to IV-99 of the SCEA. The SCEA's GHG analysis is a qualitative analysis of the Proposed Project's consistency with CARB's 2017 Scoping Plan, SCAG's 2020-2045 RTP/SCS, the City's General Plan,

and the City's Green New Deal. These applicable plans call on projects to implement qualitative measures rather than meet specific thresholds. In this instance, the Proposed Project must comply with CALGreen Building Standards and Title 24, which directly address GHG emissions reductions; the Proposed Project must include EV parking, bicycle spaces, and trees per the City's Code and the specific TDM measures that are required as conditions of approval; and the Proposed Project must include a minimum percentage of affordable housing, which will be in close proximity to jobs and transit given the Proposed Project site location. Therefore, the SCEA's GHG analysis is adequate.

Refer to **Master Response 1, Responses to Comments 3-9, 3-24, and 3-28.**

Public Hazards Related to Asbestos, Methane, and Accidental Release of Hazardous Materials

See pp. IV-101 to 104 of the SCEA. The SCEA acknowledges that hazardous impacts are potentially significant without mitigation. For that reason, the SCEA imposes mitigation measure HAZ-1 to ensure proper excavation and permanent removal of impacted soils, if any. The Proposed Project would be required to comply with all local, state, and federal regulations concerning the potential release of hazardous materials, as explained in the SCEA.

Impact on Water Quality Standards and Groundwater

See pp. IV-107 to 110 of the SCEA. As explained in the SCEA, the Proposed Project is required to comply with all federal, state, and local laws relating to the protection of water quality and groundwater, including the NPDES permitting regulations, the Proposed Project's SWPPP, the Standard Urban Storm Water Mitigation Plan governed by the SWRCB, and the City's Low Impact Development (LID) Ordinance (No. 181899).

Moreover, the Proposed Project is unlikely to cause impacts to groundwater as the Proposed Project Site is not a source of groundwater recharge because of its location in an urbanized area completely developed with impervious surfaces.

Noise Impacts

See pp. IV-138 to 145 of the SCEA. The SCEA acknowledges that the Proposed Project has the potential to cause significant construction noise impacts unless mitigation is incorporated. For that reason, the SCEA imposed mitigation measure NOI-1 to achieve sufficient noise attenuation to reduce noise impacts to less than significant.

The SCEA found that the Proposed Project will not cause significant operational noise impacts because the level of noise generated during operations and trip generation would not exceed the City's CEQA Thresholds.

Impacts on Public Services

See pp. IV-150 to 162 of the SCEA. As explained in the SCEA, the Proposed Project would have a less than significant impact on public services, because the Proposed Project would be required to comply with state and local laws regulating construction activities, including a CSTMP, the City's Building and Fire Codes, and the Proposed Project's payment of school impact fees as required by state law. The conclusion also was based on the fact that the Proposed Project is in close proximity to adequate fire, police, and other emergency services. Finally, the SCEA imposes mitigation measure PS1 from the Community Plan EIR, which requires the incorporation of all crime prevention features recommended by the LAPD.

Refer to **Responses to Comments 3-21** and **3-37**.

Impacts on Neighborhood and Regional Recreational Facilities

See pp. IV-159 to 161 of the SCEA. As explained in the SCEA, the Proposed Project will have a less than significant impact on recreational facilities because the Proposed Project will, as required by the City's Code, incorporate private and public open space and pay applicable park mitigation fees.

VMT-related Impacts

See pp. IV-176 to 179. As explained in the SCEA, the Project incorporates TDM measures that are required by LADOT and which are imposed on the Project via the City's Code requirements relating to bicycle infrastructure, parking and showers, as well as open space. In addition, the SCEA acknowledges that the Project will still have potentially significant impacts to work VMT without mitigation. For that reason, the SCEA imposes mitigation measure TR1 requiring the implementation of a ride share program, which, once implemented, will reduce the Project's work VMT to below the threshold of significance.

Refer to **Master Response 1**, **Responses to Comments 3-9**, **3-24**, and **3-28**.

Impacts on Public Utilities

See pp. IV-184 to 194 of the SCEA. As explained in the SCEA, the Proposed Project will have a less than significant impact on water supply, sewer infrastructure, electricity, and telecommunications because the City's existing infrastructure has sufficient capacity to accommodate the Proposed Project. The Proposed Project will include sustainable and other features to reduce the demand on these resources, including

compliance with CALGreen Building Code, but the SCEA's less than significant impact conclusions do not rely on these Proposed Project features.

Regarding stormwater, the Proposed Project is required to comply with all federal, state, and local laws relating to the protection of water quality, including the NPDES permitting regulations, the Project's SWPPP, the Standard Urban Storm Water Mitigation Plan governed by the SWRCB, and the City's LID Ordinance (No. 181899), all of which regulate the treatment of stormwater.

Response to Comment 3-35

The comment provides general guidance regarding mitigation under CEQA. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 3-36

The comment refers to MM-BIO-1. There is no such mitigation measure included within the SCEA and therefore a response cannot be provided.

The Proposed Project does incorporate Mitigation Measure BR1 from the Community Plan EIR, which states:

As a condition of approval for any Discretionary or "Active Change Area Project", as defined in Section 3.4 of the Project Description, the City shall require that in order to prevent the disturbance of nesting native and/or migratory bird species, all clearing of a project site should take place between September 1 and February 14. If construction is scheduled or ongoing during bird nesting season (February 15 to August 31), qualified biologists shall survey the area within 200 feet (or up to 300 feet, depending on topography or other factors, and 500 feet for raptors) of the construction activity to determine if construction would disturb nesting birds. If nesting activity is being compromised, construction shall be suspended in the vicinity of the nest until fledging is complete. This mitigation measure shall be implemented by a qualified biologist under contract with the project applicant(s). The project biologist should prepare a report detailing the results of the construction monitoring efforts. The report should be submitted to the California Department of Fish and Game (CDFG) within two months of the completion of the monitoring activities.

This mitigation measure clearly provides methods for compliance and benchmarks for performance and identifies the responsible parties. As a result, the SCEA has not improperly deferred the formulation of mitigation.

Response to Comment 3-37

The comment relates to payment of fees to mitigate impacts to schools. Pursuant to the California Government Code Section 65995, the Proposed Project Applicant would be required to pay school fees established by LAUSD, payment of which in accordance with existing rules and regulations regarding the calculation and payment of such fees would, by law, provide full and complete mitigation for any potential direct and indirect impacts to schools as a result of the Proposed Project. The methods and timing for compliance are governed by and set forth in state law. As a result, the SCEA has not deferred the formulation of mitigation.

Response to Comment 3-38

Refer to **Responses to Comments 3-36** and **3-37**.

Response to Comment 3-39

The comment asserts that the SCEA is not consistent with CARB's scoping plan and that the SCEA cannot rely on consistency with the Scoping Plan in support of its finding the Proposed Project will result in less than significant GHG impacts.

Contrary to the comment, the SCEA does demonstrate the Proposed Project's consistency with CARB's scoping plan. The comment correctly asserts CARB's scoping plan and measures within the Scoping Plan are not intended to be applied at the project level. However, consistent with best practice for determining GHG impacts, SCEA Table IV-11, Proposed Project Consistency with CARB 2017 Scoping Plan Greenhouse Gas Emission Reduction Strategies, identifies strategies from the scoping plan and explains how the Proposed Project is consistent with each strategy (where applicable). For example, where the measure is to increase the Renewables Portfolio Standard to 50% of retail sales by 2030, the SCEA finds that – although the measure is not intended for development projects – the Proposed Project would still support implementation of this measure through its commitment to purchase green power from the Los Angeles Department of Water and Power grid. As a result, the Proposed Project would be consistent with the Scoping Plan.

Regardless, the SCEA does not rely exclusively on the Proposed Project's consistency with the Scoping Plan for its finding of less than significant GHG impacts. The SCEA concludes the Proposed Project is consistent with SB 32, the RTP/SCS, the City's General Plan, and the City's Green New Deal, as well as the Scoping Plan. As explained in the SCEA, the Proposed Project's consistency with these plans collectively, as well as the Proposed Project's design, implementation of PDF-1 and incorporation of energy-efficient and

sustainable design features described throughout the SCEA, ensures the Proposed Project will have a less than significant GHG impact.

Response to Comment 3-40

Refer to **Response to Comment 3-39.**

Many of the measures listed in the comment do not apply to the Proposed Project. For instance, the comment calls on the Proposed Project to provide electrical outlets on public/quasi-public lands, but the Proposed Project is a private development. The comment also calls for installation of gas outlets in residential backyards, but the Project is a high rise without individual backyards and the Proposed Project is entirely electric. Nonetheless, the Proposed Project does incorporate many of the items discussed in the comment. See **Responses to Comments 3-3, 3-9, 3-11, 3-12, 3-21, 3-24, and 3-28.**

The Proposed Project would add a net increase of 80 trees to the Project Site, including 3 street trees and parking would be primarily underground rather than at surface level.

Response to Comment 3-63

Refer to **Response to Comment 3-40**.

The Proposed Project will be Net Zero Carbon from 2020 for Scope 1 & 2 in construction, and Scope 1, 2 & 3 in operation⁴ The Proposed Project would not exceed any GHG emissions thresholds for which offsets would be required.

Response to Comment 3-64

Refer to **Response to Comment 3-63**.

⁴ Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers.

Response to Comment 3-65

Refer to **Response to Comment 3-63**.

Response to Comment 3-66

Refer to **Responses to Comments 3-39 through 3-65**.

Response to Comment 3-67

The comments do not raise any issues that alter the analysis or conclusions of the SCEA and do not involve any new significant impacts or add "significant new information" that would require recirculation of the SCEA.

Letter 4: Email from Nadine Angele (2-1-2022)

Response to Comment 4-1

The comment's expressed opinion regarding the Proposed Project and overall level of traffic volumes in the vicinity will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

No specific comment has been raised with respect to the validity of the analyses contained within the SCEA. Nevertheless, with regard to the comments pertaining to increased traffic volumes in the vicinity caused by development projects, a full TAR was prepared by LLG Engineers in compliance with LADOT's latest guidelines. The TAR was cleared by LADOT as noted in LADOT's March 8, 2022, Interdepartmental clearance letter to City Planning.

The TAR concluded that the Proposed Project will not result in significant CEQA-related transportation impacts based on an assessment of VMT after implementation of Mitigation Measure TR1. In addition, the TAR also disclosed existing and future intersection volumes and operations/vehicle queuing as part of the "Non-CEQA" analysis. That assessment reflects the inclusion of related/cumulative project traffic within a half-mile radius (i.e., from 16 other development projects) as well as regional growth (refer to Section 3.5, beginning on page 34 of the TAR (included in Appendix F of the SCEA), for a full discussion of cumulative/related projects and the ambient growth in traffic factor employed in the assessment). The traffic expected to be generated by nearby projects, including the project referenced by the commenter as the "Carmel" project (i.e., identified as the Cumulus project [L6] on Table 3-3, page 37 of LLG's TAR), has been included in the assessment. Future intersection volumes and operations have thus been disclosed and the Jefferson Boulevard corridor was also assessed in terms of corridor operations and turn lane vehicle

queuing in close proximity to the project site. This reflects the current and future traffic distribution patterns in the vicinity.

Based on the conclusions of the non-CEQA assessment, which summarized overall traffic operations and turn lane vehicle queuing at a total of seven (7) locations, the Proposed Project Applicant will be required to contribute funds to Transportation System Management (TSM) improvements as outlined further in LADOT's March 8, 2022, Interdepartmental clearance letter to City Planning.

Response to Comment 4-2

Refer to **Response to Comment 3-34**.

Letter 5: Email from Nadine Angele (2-22-2022)

Response to Comment 5-1

Refer to **Response to Comment 4-1**.

Response to Comment 5-2

Refer to **Response to Comment 3-34**.

With respect to cumulative noise effects, the SCEA adequately addressed the Proposed Project's consistency with the Community Plan EIR and SCS/RTP EIR. Both the SCAG EIR and the West Adams EIR indicate that project specific noise analysis should be undertaken, as was done with the Proposed Project. As a result of the analysis, project-specific noise mitigation was included. **Mitigation Measure NOI-1** would require the use of mufflers, sound barriers, or other suitable noise reduction devices capable of achieving attenuation of at least 13 dBA along the Project's southern and western boundaries during construction.

Mitigation Measures

MM NOI-1: During the construction phase, along the southern and western property line, the Proposed Project shall employ construction control measures to reduce increases in ambient noise at the closest receptors by a minimum of 13 decibel Leq. Examples of employable measures include use of mufflers, sound barriers and reducing the time construction equipment is used, as well as ensuring equipment is turned off when not in use. This specification shall be included on all construction documents to ensure compliance.

Additionally, the Proposed Project, all related projects and associated patrons would be subject to the City's Noise Ordinance, which ensures implementation of noise-related objectives, goals, and policies of the City's General Plan.

Response to Comment 5-3

The comment expresses a general opinion regarding the size of the Proposed Project and anticipated neighborhood impacts, which will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Refer to **Master Responses 1 and 2**, **Response to Comment 3-24**, and **Response to Comment 3-34**.

FINDINGS OF FACT (CEQA)

Introduction

Senate Bill 375 (SB 375) enacted on September 30, 2008, created a Sustainable Communities Environmental Assessment (SCEA) process for environmental review under the California Environmental Quality Act (CEQA) for some transit priority projects meeting rigorous requirements. A transit priority project is defined by Public Resources Code (PRC) Section 21155(b) as a project that (1) contains at least 50 percent residential use, based on total building square footage and a floor area ratio of not less than 0.75; (2) provide a minimum net density of at least 20 dwelling units per acre; and (3) is located within one-half mile of a major transit stop or high-quality transit corridor included in a regional transportation plan. Specifically, when a project in the City of Los Angeles (City) meets the definition of a transit priority project and is consistent with the general use designation, density, building intensity and applicable policies specific for the project area in the Southern California Association of Governments Regional Transportation Plan/Sustainable Communities Strategy, the City may review the environmental impacts of the project with a SCEA. The City prepares an initial study for the SCEA that identifies all potentially significant effects of the project, with the exception of growth-inducing impacts and project-specific or cumulative impacts from cars and light trucks on global warming or the regional transportation network. The initial study must contain mitigation measures that reduce or avoid all the potentially significant impacts identified in the initial study to a level of less than significance and it must incorporate all applicable mitigation measures from prior relevant environmental impacts reports (EIRs).

After circulation for public comments, and a public hearing, the City may approve the SCEA for the project if it finds that all potentially significant effects have been identified and analyzed, and that all potentially significant impacts have been mitigated to a level of insignificance by either the City, as Lead Agency, or another agency with the responsibility and authority to implement the mitigation measure.

Findings

The City, having independently reviewed the SCEA for the 3401 La Cienega Project (Project) including the initial study and technical reports, and considered all public comments and all other matters in the administrative record, hereby determines and finds, that based on the whole of the administrative record:

1. The Project is a mixed-use project including 260 residential units, with approximately 15 percent of the total units (22 units) reserved for Very-Low Income households and seven total units (7 units) reserved for Workforce households. The 260 residential units would consist of 26 studios, 143 one-bedroom units, 78 two-bedroom units, and 13 three-bedroom units, with a range of unit sizes from approximately 440 to 1,436 square feet. The Project also includes 460,824 square feet of floor area with a FAR of 3:1, made up of 230,412 square feet for the residential component and 230,412 square feet for the commercial office and restaurant component.
2. The Project is consistent with the general land use designation, density and building intensity in the Southern California Association of Government's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020-2045 RTP/SCS).
3. The Project is a transit priority project in that it: (a) contains approximately 50 percent residential use, which is equivalent to the minimum requirement of at least 50 percent

residential use; (b) provides a net density of 74 units per acre which is greater than the minimum required at least 20 dwelling units per acre; and, (c) is located less than 500 feet from the Metro E Line Jefferson/La Cienega Station and is, therefore, located less than one-half mile from a major transit stop, and the Project is also located within an existing high quality transit corridor as shown in the 2020-2045 RTP/SCS.

4. Pursuant to PRC Section 21155.2, the Project has incorporated all feasible mitigation measures, performance standards, or criteria set forth in three prior applicable EIRs: the 2020-2045 RTP/SCS Program EIR, the West Adams-Baldwin Hills-Leimert Community Plan EIR, and the Community Redevelopment Agency of the City of Los Angeles (CRA/LA) Mid-City Redevelopment Plan EIR.
5. An initial study has been prepared for the Project that identifies all significant or potentially significant impacts of the Project, other than those that do not need to be reviewed pursuant to PRC Section 21155.2(b), based on substantial evidence in light of the whole record. The initial study identifies cumulative effects that have been adequately addressed and mitigated in the prior applicable certified EIRs. Cumulative effects have been found to be adequately addressed and mitigated in the prior applicable certified EIRs and are not considered cumulatively considerable for the purposes of the SCEA.
6. The SCEA includes measures that either avoid or mitigate to a level of insignificance all potentially significant or significant effects of the Project required to be identified in the initial study.
7. The SCEA was completed, noticed and circulated in accordance with the requirements of the CEQA, the State CEQA Guidelines and the City's procedures as follows:
 - a. On January 20, 2022 a Notice of Availability (NOA) and Notice of Intent to Adopt (NOI) were issued for the Draft SCEA dated January 2022 that was circulated for public comments for 30 days. The NOI was sent to those public agencies that have jurisdiction by law with respect to the Project and to other interested parties and agencies, including property owners within 500 feet of the boundaries of the Project and the comments of such persons and agencies were sought.
 - b. On January 20, 2022 the NOI was published in the Daily Journal, a newspaper of general circulation, and the NOI was posted with the Office of Planning and Research.
8. The City has reviewed and considered the information contained in the SCEA, including the initial study, the mitigation measures and conditions incorporated into the Project, and the comments received during the public review process and the hearing on the Project and, based on that review and consideration, the City has determined that the SCEA constitutes an adequate, accurate, objective and complete review of the environmental effects of the Project.
9. Based on its review of the SCEA and on the basis of the whole record, the City finds that all potentially significant or significant effects required to be identified in the initial study have been identified and analyzed, and with respect to each significant effect on the environment required to be identified in the initial study, changes or alterations,

including mitigation measures, have been required in or incorporated into the Project that avoid or mitigate the significant effects to a level of insignificance.

10. Based on its review of the SCEA and on the basis of the whole record, the City finds that the SCEA reflects the City Council's independent judgment and analysis and that there is no substantial evidence that the Project will have a significant effect on the environment.
11. Based on its review of the SCEA and on the basis of the whole record, the City finds that the Project complies with the requirements of CEQA for using a SCEA as authorized pursuant to PRC Section 21155.2(b).

Based on its review of the SCEA and on the basis of the whole record, the City finds that the Mitigation and Monitoring Program for the Project requires all reasonably feasible mitigation measures, including mitigation measures from the three prior applicable EIRs, as appropriate, and that those mitigation measures will be implemented by means of Project conditions, agreements, or other measures, as set forth in the Mitigation Monitoring Program.

FINDINGS OF FACT (SUBDIVISION MAP ACT)

In connection with the approval of Vesting Tentative Tract Map No. VTT-83550-CN, the Advisory Agency of the City of Los Angeles, pursuant to Sections 66473.1, 66474.60, .61 and .63 of the State of California Government Code (the Subdivision Map Act), makes the prescribed findings as follows:

- (a) **THE PROPOSED MAP IS CONSISTENT WITH APPLICABLE GENERAL AND SPECIFIC PLANS.**

The site is zoned CM-2D-CPIO. The property is currently developed with a Public Storage facility proposed to be demolished as a part of the project and is located within the West Adams - Baldwin Hills - Leimert Community Plan, which designates the site for Hybrid Industrial land uses. The proposed project is to subdivide one (1) lot, totaling 153,720 square-feet into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential condominium units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil. The subdivision will be for the construction, use and maintenance of a new 460,824 square-foot mixed-use residential and commercial development, including one Residential Building and one Commercial Building on a site totaling approximately 3.59 acres. The approximately 230,412 square-foot Residential Building contains 260 residential units for rent; 22 units are reserved for "very low income" households and 7 units are reserved for workforce housing within a 149'-6"-tall Residential Building up to 13 stories high on the western portion of the Project Site. The approximately 230,412 square-foot Commercial Building includes 2,869 square-feet of ground floor retail within a 92-foot-tall Commercial Building (office and ground floor retail) up to six stories high on the eastern end of the Project Site. The Project proposes up to 785 parking spaces, including 130 residential and 242 commercial parking spaces. The 413 remaining spaces would be unassigned and available for residential or commercial uses.

Although designated and zoned for Hybrid Industrial uses, the subject site is located within a unique area of the City known as the Jefferson/ La Cienega TOD. While the Community

Plan encourages the protection of industrially zoned properties, it recognizes that due to the location of the site, there may be more appropriate uses for the site. The Community Plan “advances the creation of an employment destination outside of the City Center where a mix of uses that feature emerging and innovative commercial, office, and other high-tech uses can locate in proximity to existing and future residences within a medium to high intensity transit hub.”

Adjoining the Project Site, South La Cienega Boulevard is a “Modified Boulevard II” per the Mobility Plan 2035. Because it is a “modified” classification, none of the BOE’s Standard Street Dimensions apply to this stretch of La Cienega. BOE’s NavigateLA identifies a “Right-of-Way Width (Designated)” of 104 feet and a “Roadway Width (Designated)” of 80 feet. According to NavigateLA and ZIMAS, the existing roadway is greater than 80-foot wide adjoining the Project Site. Therefore, the existing roadway appears to be over-dedicated per current classification. Also, the existing dedicated right-of-way is already 107 feet, 3 feet wider than required by the Modified Boulevard II classification, along most of the Project Site.

CPIO Section V-2.D.1.a. requires that the project provide no more than a 2-foot setback along the Primary Frontage. The Project has been designed to provide no more than a 2’ setback along La Cienega Blvd, from the 2nd floor and above, to honor this provision. However, the Project is set back 5’ at the ground floor along La Cienega Blvd and the 2nd floor cantilevers out to create a Pedestrian Amenity of a covered pedestrian “arcade” along the Primary Frontage. This is consistent with CPIO Section V-2.D.1.b, which provides that the maximum Primary Frontage setback may be exceeded up to 20 feet if the street facing façade is accessible to the public and incorporates Pedestrian Amenities into that area. This Pedestrian Amenity will be improved as an extension of the publicly accessible sidewalk and further setback near the adjoining Metro transit plaza to provide an expanded plaza and gathering space. The Project design incorporated the intent of the full 52-foot half right-of-way requirements in designing the setback, structure, and improvements. As designed, no portion of the proposed structures would encroach into that 2-foot setback on the ground level. Additionally, pursuant to Condition 21.g of this report, a minimum 2-foot-wide private pedestrian walk easement shall be provided along La Cienega Boulevard adjoining the tract and shall be open for public use. This pedestrian walk shall be kept open at all times and any structures within the easement walk area shall be reviewed and approved by the Department of Building and Safety. The subdivider shall be responsible for maintenance and security of the private easement. Therefore, as designed and conditioned, the project achieves the purpose of the Mobility Plan 2035.

In addition, the southerly adjoining parcel (3431 S. La Cienega Blvd) contains a See’s Candies manufacturing facility dating from 1946. The iconic Southern California candy company was founded in Los Angeles in 1921. The See’s Candies factory is listed as an historic resource on the City of LA’s Historic Places LA. Due to the historic significance of the neighboring site, it is doubtful that portions of La Cienega south of the property will ever be dedicated to the full designated width. Mobility Plan 2035 Policy 2.17 requires staff to “carefully consider the overall implications of widening a street before requiring the widening,” citing the “often unique nature of a street segment where widening could change the character of a street in an undesirable way, proved unnecessarily expensive relative to the resulting benefits, or result in other adverse changes. Dedication at the Project Site would create an occurrence of discontinuous, intermittent dedications that may create a negative impact to the urban form and pedestrian experience of the Project with no identifiable benefit to the City.

As proposed, The Project is consistent with the General Plan, including the General Plan Framework, the West Adams-Baldwin Hills-Leimert Community Plan, the Mobility Plan 2035, and the West Adams-Baldwin Hills-Leimert CPIO. The Property is not located within a Specific Plan. As set forth above in Section IV, the Project complies with the Property's zoning and applicable development standards, including those imposed by the LAMC and CPIO, as permitted to be modified by the State Density Bonus Law and the City's implementing ordinance. The Project's proposed mixed-use residential, creative office, and retail uses are consistent with, and expressly advanced by, the Property's General Plan Hybrid Industrial designation, which calls for "creative industry, office, or mixed use."

While 100-percent residential developments are prohibited by the West Adams – Baldwin Hills – Leimert CPIO, the residential component of Mixed-Use Projects are allowed to occupy a maximum of 50-percent of the Project's total floor area. The proposed Project includes 460,824 total square feet. The residential component is approximately 230,412 square feet, therefore in compliance with the CPIO. The Project also substantially conforms with the objectives, policies and provisions of the General Plan Framework, set forth as follows.

General Plan Framework: Land Use (Chapter 3)

Goal 3A: A physically balanced distribution of land uses that contributes towards and facilitates the City's long-term fiscal and economic viability, revitalization of economically depressed areas, conservation of existing residential neighborhoods, equitable distribution of public resources, conservation of natural resources, provision of adequate infrastructure and public services, reduction of traffic congestion and improvement of air quality, enhancement of recreation and open space opportunities, assurance of environmental justice and a healthful living environment, and achievement of the vision for a more livable city.

The Project's redevelopment of a low-intensity self-storage use into a vibrant mix of residential, commercial and retail uses and verdant landscaped areas that collocate jobs, housing and retail services and the Project's encouragement of public transit and other active modes of transportation will contribute to the City's long-term fiscal and economic viability, facilitate the ongoing transformation of the West Adams and Baldwin Hills neighborhoods, and foster a more livable community for the existing residents and businesses.

The Project's proposed new 227,543 square feet of office use, 2,869 square feet of ground floor retail space, 260 residential units (including 22 units for Very Low-Income households and 7 units for workforce housing), 34,214 square feet of publicly available open space amenities, and pedestrian activated streetscape revitalize a 3.53-acre property that is currently underutilized with aging masonry buildings primarily used for low-intensity storage and warehousing uses. The Project's landscaped, pedestrian-oriented open space, such as the Crossings plaza and tree-lined Cienega Square, and neighborhood-serving retail will improve and beautify the Jefferson/La Cienega Metro station and existing bicycle path, thereby activating the streetscape for pedestrians and further encouraging walking, biking, and use of public transit by the community at large. The existing self-storage use provides no pedestrian amenities or public access and does not utilize the adjacent Metro or other public transportation options. The Property is therefore an infill

opportunity to revitalize this key commercial and transit corridor, providing a healthful living environment.

The Project is centrally and ideally located along La Cienega Boulevard, a designated Modified Boulevard II and transit corridor in West Adams and is adjacent to the La Cienega & Jefferson Metro Station E (Expo) Line and near multiple bus lines. Like the Property, the West Adams neighborhood is undergoing a transformation from light industrial to a thriving mixed use center bringing jobs, housing, and lifestyle together. West of the Property along the Metro E Line rail are the communities of Culver City, West Los Angeles and Santa Monica, containing high population and access to other employment hubs. The Project Site also has convenient access to Downtown Los Angeles and other destinations within the Regional Commercial Center areas of Los Angeles.

This access is facilitated by the Metro E Line which is adjacent to the Property and has a local connection to the Metro B (Red) Line, Metro D (Purple) Line and Metro A (Blue) Line. This mass transit infrastructure enhances connectivity to the Downtown Los Angeles, the Wilshire Center Koreatown and the Long Beach business hubs. These Metro Lines further connect to other points throughout the City and the Greater Los Angeles area.

Additionally, the Los Angeles Metropolitan Authority (MTA) routes a number of bus lines with stops conveniently located near the Property. The Metro Bus system provides local service along S. La Cienega Blvd. and Jefferson Blvd. Route 105 travels north/south along S. La Cienega Blvd. The southeastern bound route begins at Santa Monica Blvd. and San Vicente Blvd., adjacent to the City of West Hollywood, and travels through Beverly Hills, Los Angeles, and Leimert Park, with a final stop at Pacific Blvd. and Santa Fe Ave. in the City of Vernon. The Metro Route 105 runs approximately every 10 minutes, 7 days a week. Route 38 travels east/west along Jefferson Blvd. The westbound route begins at Spring St. and 7th St. in Downtown Los Angeles and travels through the Mid-City area with a loop layover at Jefferson Blvd. and 11th Ave. The Metro Route 38 runs approximately every 30 minutes, 7 days a week. Route 217 travels north/east along S. La Cienega Blvd. The northeastern route begins at the La Cienega Station Terminal near the project site and travels through Beverly Hills, West Hollywood and Los Angeles, with a final stop at the Hollywood/Vine Station. The Metro Route 217 runs approximately every 20 minutes, 7 days a week.

The Project's introduction of additional first class office space, residential serving retail, hundreds of new units for a variety of income levels, and well-designed open space into this transit rich corridor will foster the growing push in the West Adams area and surrounding communities towards transit, pedestrian travel, and other active modes of transportation, which in turn would reduce vehicle use, vehicles miles traveled, and congestion, and contribute to the goals of improving air quality and creating a healthier, supportive living environment for the Project's future users and community.

Objective 3.1: Accommodate a diversity of uses that support the needs of the City's existing and future residents, businesses, and visitors.

Objective 3.2: Provide for the spatial distribution of development that promotes an improved quality of life by facilitating a reduction of vehicular trips, vehicle miles traveled, and air pollution.

Objective 3.4: Encourage new multi-family residential, retail commercial, and office development in the City's neighborhood districts, community, regional, and downtown centers as well as along primary transit corridors/boulevards, while at the same time conserving existing neighborhoods and related districts.

The Project includes 231 market rate, 22 Very Low Income restricted affordable units, 7 workforce units, approximately 227,543 SF of office, 2,869 SF of retail, most likely food and beverage, and 34,214 SF of publicly accessible landscaped plazas and paseos that will activate the streetscape along Jefferson Blvd. and enhance access to and use of the bicycle path and Metro station. As noted above and below, the mixed-use and mixed-income nature of the Project will promote the ongoing revitalization of West Adams and an improved quality of life for the Project's future residents and tenants and community at large.

The Project's vibrant mix of uses and amenities will provide a supportive, resilient community for the Project's future residents and tenants and will also support the needs of the existing community by introducing new housing for a variety of income levels, job opportunities, and neighborhood-serving retail. The City's need for market rate and affordable housing is identified in the City's Housing Element (adopted by the Los Angeles City Council on December 3, 2013 and approved by the State of California Department of Housing and Community Development on April 2, 2014). The amount of housing needed to accommodate citywide growth is estimated to be 82,002 dwelling units (through 2021) of which 46,590 units (57%) need to be for Very Low Income and Low-Income households. Further, according to Mayor Eric Garcetti's 2015 Sustainable City pLAN (issued April 2015), "if we do not act to increase in supply of housing units, the Department of Planning estimates that Los Angeles could have a backlog of over 100,000 units by 2021."

Project users will also be served by the Project's abundant publicly accessible open space providing seating and extensive shading and landscaping that will provide much needed contrast from the bustle and dense, urban landscape of the Jefferson/La Cienega intersection and Metro station. The mix of residential and retail uses would further facilitate pedestrian activity in this neighborhood on the evenings and weekends, creating a more vibrant and livable community. The Project's landscaped, pedestrian-oriented Crossings plaza and the Project's tree-lined Cienega Square will improve and beautify the Jefferson/La Cienega Metro station and existing bicycle path, encouraging active modes of transportation for the community at large.

The Project is centrally and ideally located at the heart of the transit rich La Cienega/Jefferson corridor, directly adjacent to the La Cienega & Jefferson Metro Station E (Expo) Line, and close to multiple bus lines. By locating jobs, housing, retail and neighborhood amenities at this transit-rich location, the need to travel by car for these opportunities will be reduced, with a corresponding decrease in vehicle miles traveled and air pollution. The Project will also provide hundreds of bicycle parking spaces per LAMC § 12.21-A.16 and end-of-trip facilities to encourage bicycle commuting, including secure bicycle storage with bicycle repair equipment, and showers. The Project's supportive mix of uses and landscaped open spaces will also elevate the pedestrian experience. These bicycle and pedestrian amenities further encourage less reliance on vehicle travel.

Multi-Family Residential (Chapter 3)

Goal 3C: Multi-family neighborhoods that enhance the quality of life for the City's existing and future residents.

Objective 3.7: Provide for the stability and enhancement of multi-family residential neighborhoods and allow for growth in areas where there is sufficient public infrastructure and services, and the residents' quality of life can be maintained or improved.

As discussed above, the Project will improve the quality of life for future and existing West Adams residents and workers by removing a low-intensity self-storage facility completely fenced off from the public to provide in its place new housing for a variety of income levels, job opportunities, and neighborhood-serving retail, as well as ample green open space in an otherwise dense, urban landscape.

The Project is ideally situated for its future residents and tenants to take advantage of the multitude of public transit options in the immediate vicinity, resulting in a reduction in vehicles miles traveled, congestion, and air pollution and corresponding improvement in the quality of life for existing residents. West of the Project Site along the Metro E Line rail are the densely populated communities of Culver City, West Los Angeles, and Santa Monica containing other employment hubs for the Project's future residents. The adjacent Metro will provide the Project convenient access to Downtown Los Angeles and other destinations within the Regional Commercial Center areas of Los Angeles.

The Project's location in the existing and expanding commercial, multifamily residential neighborhood along La Cienega Boulevard is adequately served by public infrastructure and services to meet the Project's demand. The Project would include numerous measures to reduce its demand on infrastructure and services, including measures such as water, energy conservation and security plans.

Housing Element (Chapter 6)

Goal 1: A City where housing production results in an ample supply of housing to create more equitable and affordable options that meet existing and projected needs.

Objective 1.2: Facilitate the production of housing, especially projects that include Affordable Housing and/or meet Citywide Housing Priorities.

Policy 1.3.1 Prioritize housing capacity, resources, policies and incentives to include Affordable Housing in residential development, particularly near transit, jobs, and in Higher Opportunity Areas.

Policy 3.2.2: Promote new multi-family housing, particularly Affordable and mixed-income housing, in areas near transit, jobs and Higher Opportunity Areas, in order to facilitate a better jobs-housing balance, help shorten commutes, and reduce greenhouse gas emissions.

The proposed Project will provide both market rate and affordable housing for Very Low-Income and workforce households, thus offering a range of housing opportunities by type

and cost which would be accessible to City residents of various income levels. In addition, to provide a range of housing opportunities by type and cost, the Project would include a mix of unit types - 26 studio apartments, 143 one-bedroom apartments, 78 two-bedroom apartments and 13 three-bedroom apartments.

The Project would provide needed housing on a major transportation corridor (La Cienega Blvd) in close proximity to entertainment and job opportunities and in an area well-served by public transportation, including Metro E Line and several MTA Bus Lines. According to the City of Los Angeles Housing Element, the population of the City of Los Angeles will grow by over 140,000 persons between 2014 and 2021. The amount of housing needed to accommodate citywide growth is estimated to be 82,002 dwelling units (through 2021) of which 46,590 units (57%) need to be for Very Low- and Low-Income households. The Project's proposed 260 residential apartment dwelling units (including 22 Very Low-Income restricted affordable units and 7 workforce units) would help to alleviate this current severe housing deficit in Los Angeles.

In addition to LAMC Section 17.06 B, Section 17.05 C requires that the Vesting Tentative Tract map be designed in compliance with the zoning regulations applicable to the subject property. The Land Use Element of the General Plan consists of the 35 Community Plans within the City of Los Angeles. The Community Plans establish goals, objectives, and policies for future developments at a neighborhood level. Additionally, through the Land Use Map, the Community Plan designates parcels with a land use designation and zone. The Land Use Element is further implemented through the LAMC. The zoning regulations contained within the LAMC regulates, but is not limited to, the maximum permitted density, height, parking, and the subdivision of land.

The proposed merger and re-subdivision of the Project Site into a ground lot and airspace lots for a mixed-use development with multi-family residential, and commercial uses, would be consistent with these regulations. The project is consistent with the General Plan and demonstrates compliance with Sections 17.06 of the Los Angeles Municipal Code as well as with the intent and purpose of the General Plan, with regard to lot size, height, density and use. Therefore, as conditioned, the proposed parcel map is consistent with the intent and purpose of the applicable General Plan.

The CPIO's Jefferson/La Cienega TOD Subarea is intended to "advance the creation of an employment destination outside of the City Center where a mix of uses that feature emerging and innovative commercial, office, 'clean-tech,' 'information technology,' and other 'high tech' uses can locate in proximity to existing and future residences within a medium to high intensity transit hub." The intent of the Jefferson/La Cienega TOD is to "facilitate revitalization of properties that can capitalize upon proximity to the La Cienega Station of the Metro Expo Line." The Project's proposed creative office, apartments, and retail uses immediately adjacent to the La Cienega/Jefferson Metro station and multiple bus lines squarely align with this intent.

The Project is also consistent with and promotes the following purposes of the West Adams-Baldwin Hills-Leimert CPIO set forth in CPIO Section 3:

Purpose C: To foster revitalization of properties along the commercial corridors and at major intersection nodes throughout the Community Plan Area.

- Purpose D:** To promote and facilitate revitalization of properties that can capitalize upon close proximity to the La Brea, Farmdale, La Cienega and Culver City stations along the MidCity Exposition Light Rail Transit Corridor (Expo Line).
- Purpose I:** To encourage the creation of pedestrian-friendly, multi-modal transit villages where jobs, housing, goods and services, as well as access to open space, are all located within walking distance of the station area.
- Purpose S:** To support transit-oriented business districts outside of the City Center where emerging and innovative commercial, office, and “clean-tech” uses can locate within contextually appropriate medium intensity transit hubs.

The Property’s current low-intensity self-storage use provides no pedestrian amenities, no public access, and does not utilize the adjacent Metro or other public transportation options. The mixed-use, transit-oriented Project is therefore an ideal infill opportunity to revitalize this key commercial and transit corridor.

The Project will promote its central location and proximity to transit, by dominating the Property’s approximately 707-foot length along Jefferson Blvd. with pedestrian, bicycle, and transit activity. The Project’s plazas along Jefferson Blvd. will connect directly to the existing bicycle path, which itself connects to the Ballona Creek Bike Path that runs to the ocean. The Crossings plaza seamlessly transitions into the Jefferson/La Cienega Metro station and light rail system. The Project’s abundant landscaping will include shade trees lining the bicycle path creating a paseo affect. These landscaping, open space and streetscape improvements activate the Project’s ground floor, encourage bicycle and transit use, and celebrate the pedestrian experience, thus reducing the necessity of automobile travel.

The Project will also provide an inclusive development that is consistent with, and will support the needs of, the existing community. The Project will provide much needed affordable housing, including very-low income and workforce, in furtherance of the City’s Housing Element goals, and will provide high quality job opportunities and neighborhood-serving retail. The Project is proposing 22,836 square feet of open space in addition to the 28,925 square feet of open space required by LAMC Section 12.21.G. for a total of 51,761 square feet of open space. The Project’s abundant publicly accessible open space with seating and extensive shading and landscaping will contrast with and provide much needed relief from the bustle and the dense urban landscape of the Jefferson/La Cienega intersection and Metro station. The Project’s plazas, paseos, and ground floor retail will activate the streetscape along Jefferson Blvd. along a stretch that is currently completely fenced off from public access. The mix of residential and retail uses would also increase pedestrian activity in this neighborhood on the evenings and weekends, creating a more vibrant and livable community. The landscaped, pedestrian-oriented Crossings Plaza and the Project’s tree-lined Cienega Square will improve and beautify the Jefferson/La Cienega Metro station and existing bicycle path, encouraging active modes of transportation for the community at large. Bringing jobs, housing, and lifestyle amenities to one site and community will greatly reduce vehicle miles traveled and congestion and improve air quality and promote the overall health and sustainability of the existing West Adams residents.

- (b) THE DESIGN OR IMPROVEMENT OF THE PROPOSED SUBDIVISION IS CONSISTENT WITH APPLICABLE GENERAL AND SPECIFIC PLANS.

For the purposes of a subdivision, “design” and “improvement” is defined by Subdivision Map Act Section 66418, 66427, and LAMC Section 17.02. Pursuant to Section 66418 of the Map Act, “design” of a map refers to street alignments, grades and widths; drainage and sanitary facilities and utilities, including alignments and grades thereof; location and size of all required easements and rights-of-way; fire roads and firebreaks; lot size and configuration; traffic access; grading; land to be dedicated for park or recreational purposes; and other such specific physical requirements in the plan and configuration of the entire subdivision as may be necessary to ensure consistency with, or implementation of, the general plan or any applicable specific plan. In addition, Section 66427 of the Map Act expressly states that the “design and location of buildings are not part of the map review process” for subdivisions. Improvements, as defined by the Map Act and Section 17.02 refers to the infrastructure facilities serving the subdivision.

The subject site is zoned CM-2D-CPIO, which would permit a maximum of 192 dwelling units and a maximum height of 75 feet on the approximately 153,720 square-foot site. The proposed project is for a new 460,824 square-foot mixed-use residential and commercial development, including one Residential Building and one Commercial Building on a site totaling approximately 3.53 acres. The approximately 230,412 square-foot Residential Building contains 260 residential units for rent; 22 units are reserved for “very low income” households and 7 units are reserved for workforce housing within a 149'-6”-tall Residential Building up to 13 stories high on the western portion of the Project Site and the approximately 230,412 square-foot Commercial Building includes 2,869 square-feet of ground floor retail within a 92-foot-tall Commercial Building (office and ground floor retail) up to six stories high on the eastern end of the Project Site, are consistent with the density and height permitted by the Density Bonus Incentives pursuant to LAMC Section 12.22.A.25, and subject to condition 21.a of this report. Access is provided along La Cienega Boulevard through a shared driveway and via the private street Corbett Street, south of the subject site.

In addition, LAMC Section 17.05.C enumerates design standards for subdivisions and requires that each subdivision map be designed in conformance with the Street Design Standards and the General Plan. The design and layout of the tract map are consistent with the design standards established by the Subdivision Map Act and Division of Land Regulations of the LAMC. The Vesting Tentative Tract map was distributed to the various departments and bureaus of the Subdivision Committee for review, and their comments and conditions are included herein.

The Bureau of Engineering has reviewed the proposed subdivision and found the subdivision layout generally satisfactory with existing sewers in the streets adjoining the subdivision and will not result in violation of the California Water Code. The Bureau of Sanitation reviewed the sewer/storm drain lines serving the proposed subdivision and found no potential problems to their structures or potential maintenance problems.

Therefore, as conditioned, the proposed map is substantially consistent with the applicable General and Specific Plans affecting the project site, and demonstrates compliance with LAMC Sections 17.01, 17.05 C, and 12.22.C.27.

- (c) THE SITE IS PHYSICALLY SUITABLE FOR THE TYPE OF DEVELOPMENT.

The project site consists of one lot totaling approximately 153,719 square feet in area. The site has approximately 200 feet of frontage along the west side of South La Cienega Boulevard. The site is zoned CM-2D-CPIO. The property is currently developed with a Public Storage facility proposed to be demolished as a part of the project and is located within the West Adams – Baldwin Hills – Leimert Community Plan, which designates the site for Hybrid Industrial. The existing topography is relatively flat, with slight change in elevation from the front of the property to the rear.

In addition, the environmental analysis conducted for the Project found that the tract map and development of the Project would not result in any significant impacts in terms of geological or seismic impacts, hazards and hazardous materials, and safety. In general, compliance with existing regulations, tract map conditions, and mitigation measures identified in the SCEA ensure that proposed development could be feasibly and safely constructed and operated on the site. Therefore, the Project Site is physically suitable for the proposed type of development.

The Vesting Tentative Tract map was distributed to the various departments and bureaus of the Subdivision Committee for review. Their comments are incorporated into the project's conditions of approval. The Grading Division of the Department of Building and Safety has reviewed the subject Vesting Tentative Tract Map No. VTT-83550-CN and the associated soils report determined the Liquefaction study included as part of the report dated September 23, 2021 demonstrates that the site is located in a designated liquefaction hazard zone as shown on the Seismic Hazard Zones map issued by the State of California. However, the settlement magnitudes are considered by the Department of Building and Safety Grading Division to be within acceptable levels. As such, the requirements of the 2020 City of Los Angeles Building Code have been satisfied per the Department of Building and Safety. The property is located outside of a City of Los Angeles Hillside Area; is exempt or located outside of a fault-rupture hazard zone. A supplemental report shall be submitted to the Grading Division of the Department containing recommendations for shoring, underpinning, and sequence of construction in the event that any excavation would remove lateral support to the public way, adjacent property, or adjacent structures (3307.3). A plot plan and cross-section(s) showing the construction type, number of stories, and location of the structures adjacent to the excavation shall be part of the excavation plans (7006.2).

Therefore, the project site is physically suitable for the proposed type of development.

(d) **THE SITE IS PHYSICALLY SUITABLE FOR THE PROPOSED DENSITY OF DEVELOPMENT.**

The General Plan identifies, through its Community and Specific Plans, geographic locations where planned and anticipated densities are permitted. Zoning standards for density are applied to sites throughout the city and are allocated based on the type of land use, physical suitability, and future population growth expected to occur.

The Vesting Tentative Tract map design includes the merger and re-subdivision of an approximately 3.59-acre (153,719 square feet) project site. The Project site is zoned CM-2D-CPIO, which permits a maximum FAR of 3:1 for mixed-use projects, and a maximum density of 800 square feet per dwelling unit. The Project site is 153,719 square feet which allows for a density of 192 units. The Project is proposing 260 units, which complies with

the maximum permitted density through the Density Bonus Incentives pursuant to LAMC Section 12.22.A.25. The total floor area proposed for both buildings is approximately 460,824 square feet, which results in an FAR for the Project of 3:1, which complies with the 3:1 maximum FAR allowed pursuant to the CPIO.

Upon approval of the entitlement requests, and as conditioned therein per Condition 21.a of this report, the project's proposed density is consistent with the general provisions and area requirements of the Planning and Zoning Code. The area is easily accessible via improved streets, highways, and transit systems. The environmental review conducted by the Department of City Planning (Case No. ENV-2021-6879-SCEA), establishes that the physical characteristics of the site and the proposed density of development are generally consistent with existing development and urban character of the surrounding community. Therefore, the Project Site is physically suitable for the proposed density of development.

- (e) THE DESIGN OF THE SUBDIVISION OR THE PROPOSED IMPROVEMENTS ARE NOT LIKELY TO CAUSE SUBSTANTIAL ENVIRONMENTAL DAMAGE OR SUBSTANTIALLY AND AVOIDABLY INJURE FISH OR WILDLIFE OR THEIR HABITAT.

The Project proposes an infill development within an area designated for Hybrid Industrial land use, which also allows for commercial, medium and high-medium density residential uses within the West Adams-Baldwin Hills-Leimert Community Plan area in the City of Los Angeles. The vesting tentative tract map design includes the merger and re-subdivision of the project site, into one ground lot and 4 airspace lots for a mixed-use development and a haul route for the export of soil, and a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard.

The subdivision design and improvements are consistent with the existing urban development of the area. There are no habitat conservation plans or natural community conservation plans which presently govern any portion of the Project Site or vicinity.

The SCEA prepared for the Project identifies no potential adverse impacts on fish or wildlife resources. The Project Site vicinity is highly urbanized and generally built out and does not contain riparian or other sensitive natural community, and does not provide a natural habitat for either fish or wildlife. No water bodies or federally protected wetlands as defined by Section 404 of the Clean Water Act exist on the Project Site. The Project Site does not contain any natural open spaces, act as a wildlife corridor, contain riparian habitat, wetland habitat, migratory corridors, conflict with a Habitat Conservation Plan, nor possess any areas of significant biological resource value.

Because of the urban nature of the project site and surrounding area, the project would not interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native nursery sites. There are no trees located on the subject site. Therefore, the Project would not have an adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. With regard to nesting birds, the Project would comply with the Migratory Bird Treaty Act, which prohibits the take, possession, import, export, transport, sell, purchase, barter, or offer for sale, purchase, or barter, any migratory bird, or the parts, nests, or eggs of such a bird except under the terms of a valid permit issued pursuant to federal regulations.

The Project would not conflict with any protected tree ordinance or Habitat Conservation Plan, nor possess any areas of significant biological resource value. Therefore, the design of the subdivision would not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

- (f) THE DESIGN OF THE SUBDIVISION OR TYPE OF IMPROVEMENTS IS NOT LIKELY TO CAUSE SERIOUS PUBLIC HEALTH PROBLEMS.

There appear to be no potential public health problems caused by the design or improvement of the proposed subdivision.

The development is required to be connected to the City's sanitary sewer system, where the sewage will be directed to the LA Hyperion Treatment Plant, which has been upgraded to meet statewide ocean discharge standards. The Bureau of Engineering has reported that the proposed subdivision does not violate the existing California Water Code because the subdivision will be connected to the public sewer system and will have only a minor incremental impact on the quality of the effluent from the Hyperion Treatment Plant.

The Department of Water and Power's (LADWP) has stated the parcel can be supplied with water from the municipal system subject to the conditioned requirements.

- (g) THE DESIGN OF THE SUBDIVISION OR THE TYPE OF IMPROVEMENTS WILL NOT CONFLICT WITH EASEMENTS, ACQUIRED BY THE PUBLIC AT LARGE, FOR ACCESS THROUGH OR USE OF PROPERTY WITHIN THE PROPOSED SUBDIVISION.

No such easements are known to exist. Easements will be recorded with the development for community driveways. Needed public access for roads and utilities will be acquired by the City prior to the recordation of the proposed parcel.

- (h) THE DESIGN OF THE PROPOSED SUBDIVISION SHALL PROVIDE, TO THE EXTENT FEASIBLE, FOR FUTURE PASSIVE OR NATURAL HEATING OR COOLING OPPORTUNITIES IN THE SUBDIVISION. (REF. SECTION 66473.1)

In assessing the feasibility of passive or natural heating or cooling opportunities in the proposed subdivision design, the applicant has prepared and submitted materials which consider the local climate, contours, configuration of the parcel(s) to be subdivided and other design and improvement requirements. Providing for passive or natural heating or cooling opportunities will not result in reducing allowable densities or the percentage of a lot which may be occupied by a building or structure under applicable planning and zoning in effect at the time the parcel map was filed.

The lot layout of the subdivision has taken into consideration the maximizing of the north/south orientation. The topography of the site has been considered in the maximization of passive or natural heating and cooling opportunities. In addition, prior to obtaining a building permit, the subdivider shall consider building construction techniques, such as overhanging eaves, location of windows, insulation, exhaust fans; planting of trees for shade purposes and the height of the buildings on the site in relation to adjacent development.

These findings shall apply to both the Vesting Tentative Tract and final maps for VTT-83550-CN.

CONDITIONS OF APPROVAL

In accordance with provisions of Section 17.03 and Section 12.22.C.27 of the Los Angeles Municipal Code (LAMC), the Advisory Agency determined based on the whole of the administrative record that the project is exempt from CEQA pursuant to California Public Resource Code Section 21155.2, the Sustainable Communities Environmental Assessment prepared for this project (ENV-2021-6879-SCEA) dated January 2022, as well as the whole of the administrative record, and approved Vesting Tentative Tract No. VTT-83550-CN located at 3401 South La Cienega Boulevard, to subdivide one (1) lot, totaling 153,608 square-feet into one (1) ground lot and four (4) airspace lots with one of the airspace lots to have up to 260 residential condominium units, along with a waiver of the required 2-foot dedication for sidewalk widening purposes along South La Cienega Boulevard; and a Haul Route for the export of approximately 170,000 cubic yard of soil in the CM-2D-CPIO zone, pursuant to the Los Angeles Municipal Code (LAMC) Sections 17.06 and 17.15, as shown on map stamp-dated September 14, 2021 in the West Adams - Baldwin Hills - Leimert Community Plan. (The subdivider is hereby advised that the LAMC may not permit this maximum approved density. Therefore, verification should be obtained from the Department of Building and Safety which will legally interpret the Zoning Code as it applies to this particular property.) For an appointment with the Development Services Center call (213) 482-7077 or (818) 374-5050. The Advisory Agency's approval is subject to the following conditions:

Note on clearing conditions: When two or more **agencies** must clear a condition, subdivider should follow the sequence indicated in the condition. For the benefit of the applicant, subdivider shall maintain record of all conditions cleared, including all material supporting clearances and be prepared to present copies of the clearances to each reviewing agency as may be required by its staff at the time of its review.

BUREAU OF ENGINEERING - SPECIFIC CONDITIONS

1. That the existing public sanitary sewer easement along Corbett Street (private street) be properly shown on the final map.
2. That the subdivider make a request to the Central District Office of the Bureau of Engineering to determine the capacity of existing sewers in this area.
3. That all tract boundary lines be properly established in accordance with Section 17.07D of the Los Angeles Municipal Code prior to recordation of the final map satisfactory to the City Engineer.
4. That a set of drawings for airspace lots be submitted to the City Engineer showing the followings:
 - a. Plan view at different elevations.
 - b. Isometric views.
 - c. Elevation views.
 - d. Section cuts at all locations where air space lot boundaries change.
5. That the owners of the property record an agreement satisfactory to the City Engineer stating that they will grant the necessary private easements for ingress and egress purposes to serve proposed airspace lots to use upon the sale of the respective lots and they will maintain the private easements free and clear of obstructions and in safe conditions for use at all times.

DEPARTMENT OF BUILDING AND SAFETY, GRADING DIVISION

6. Provide a complete geotechnical engineering report per the Department requirements and LABC with appropriate design recommendations and supporting engineering analyses. (P/BC 2014-044, P/BC 2014-049, P/BC 2014-068, P/BC 2014-113).
7. Provide liquefaction analysis in conformance with the most recent version of CGS Special Publication 117 (i.e. SP 117 A), Guidelines for Evaluating and Mitigating Seismic Hazards in California (1803. 7), and with Information Bulletin P/BC 2020-151.
8. Provide a copy of the City approval letter for the existing fill, which was placed after April 25, 1963.
9. Provide a complete laboratory testing report prepared by a City of Los Angeles approved testing agency. The report shall be signed and stamped by the engineer in responsible charge of the testing and shall include the testing descriptions and procedures. P/BC 2020-113.
10. Provide design calculations and recommendations for temporary excavations and permanent walls for a minimum factor of safety of 1.25 and 1.5 respectively.

Notes: Calculations shall be determined using the limit equilibrium method (free-body-diagram, and vectors) and with tension cracks. Basement walls and other walls in which horizontal movement is restricted at the top shall be designed for at-rest pressure in accordance to the Jaky formula and Section 1610.1 of the 2020 LABC. For walls over 6 feet, lateral earth pressure due to earthquake motions shall be considered, as required by section 1803.5.12 of the Los Angeles Building Code. For restrained walls, the higher value obtained for at-rest pressure and using the limit equilibrium method shall be recommended for design.

DEPARTMENT OF BUILDING AND SAFETY, ZONING DIVISION

11. Prior to recordation of the final map, the Department of Building and Safety, Zoning Division, shall issue a clearance letter stating that no Building or Zoning Code violations existing relating to the subdivision on the subject site once the following items have been satisfied:
 - a. Obtain permits for the demolition or removal of all existing structures on the site and no building shall straddle over the exiting property line. Accessory structures and uses are not permitted to remain on lots without a main structure or use. Provide copies of the demolition permits and signed inspection cards to show completion of the demolition work.
 - b. Provide a copy of D condition(s). Show compliance with the above condition(s) as applicable or Department of City Planning approval is required.
 - c. Provide a copy of affidavit AFF-55742, AFF-56043 and AFF-58293. Show compliance with all the conditions/requirements of the above affidavit(s) as applicable. Termination of above affidavit(s) may be required after the Map has been recorded. Obtain approval from the Department, on the termination form, prior to recording.
 - d. Provide a copy of CPC case CPC-2021-6877-DB-SPR-CUB. Show compliance with

all the conditions/requirements of the CPC case as applicable.

- e. Show all street dedication(s) as required by Bureau of Engineering and provide net lot area after all dedication. "Area" requirements shall be re-checked as per net lot area after street dedication. Front yard requirements shall be required to comply with current code as measured from new property lines after dedication.
- f. The submitted Map does not comply with the and maximum density (800 s.f. of lot area/dwelling unit) requirement of the CM-2D-CPIO Zone. Revise the Map to show compliance with the above requirement or obtain approval from the Department of City Planning.
- g. Record a Covenant and Agreement to treat the buildings and structures located in an Air Space Subdivision as if they were within a single lot.

Note:

Each Air Space lot shall have access to a street by one or more easements or other entitlements to use in a form satisfactory to the Advisory Agency and the City Engineer.

This Proposed Project is subject to Density Bonus Ordinance to increase the maximum allowed density.

This property is located in a Liquefaction Zone.

The submitted Map may not comply with the number of parking spaces required by Section 12.21 A.4(a) based on number of habitable rooms in each unit. If there are insufficient numbers of parking spaces, obtain approval from the Department of City Planning.

The submitted Map may not comply with the number of guest parking spaces required by the Advisory Agency.

The existing or proposed building plans have not been checked for and shall comply with Building and Zoning Code requirements. With the exception of revised health or safety standards, the subdivider shall have a vested right to proceed with the proposed development in substantial compliance with the ordinances, policies, and standards in effect at the time the subdivision application was deemed complete. Plan check will be required before any construction, occupancy or change of use.

If the proposed development does not comply with the current Zoning Code, all zoning violations shall be indicated on the Map.

An appointment is required for the issuance of a clearance letter from the Department of Building and Safety. The applicant is asked to contact Eric Wong at (213) 482-6876 to schedule an appointment.

DEPARTMENT OF TRANSPORTATION

12. A. CEQA-Related Requirements

Per the transportation analysis, the applicant will implement the following TDM measures:

- Ride-Share Program – This strategy involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride share vehicles, and a website or message board to connect riders and coordinate rides in order to increase vehicle occupancy. The Project assumes that every employee would be eligible for the ride-share program.

B. Non-CEQA-Related Requirements and Considerations

To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

1. Transportation Systems Management (TSM) Improvements

LADOT's goal is to improve the efficiency of the study intersections, by optimally allocating green time to different modes and in different directions and provide the capability to remotely monitor and adjust signal timing in real-time to respond to specific traffic conditions or occurrences. The following Automated Traffic Surveillance and Control system (ATSAC) improvements will maximize intersection throughput or manage queues and improve system performance:

The project would contribute up to approximately \$80,000 to \$90,000 toward TSM improvements within the project area that may be considered to better accommodate intersection operations and increase network capacity throughout the study area.

LADOT's ATSAC Section has identified the improvement of approximately 12,000 feet of fiber optic cable from National Boulevard/Jefferson Boulevard to the hub located at La Brea Avenue and Washington Boulevard.

The installation of the fiber optic cables would improve the network capacity and the TSM improvement provides a system wide benefit by reducing delays experienced by motorists within the project area.

Should the project be approved, then a final determination on how to implement the ATSAC improvements listed above will be made by DOT prior to the issuance of the first building permit. These improvements will be implemented either by the applicant through the B-Permit process of the Bureau of Engineering (BOE), or through a direct payment to DOT to fund the cost of the upgrades and improvements. If the upgrades and improvements are implemented by the applicant through the B-Permit process, then these improvements must be guaranteed prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the event of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

All proposed street improvements within the City of Los Angeles must be guaranteed through BOE's B-Permit process, prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy. Prior to setting the bond amount, BOE shall require that the developer's engineer or

contractor contact LADOT's B-Permit Coordinator, ladot.planprocessing@lacity.org, to arrange a pre-design meeting to finalize the proposed design.

2. Parking Requirements

The project would provide parking for 785 vehicle parking spaces and 222 bicycle parking spaces (36 short-term spaces and 186 long-term spaces). The applicant should check with the Departments of Building and Safety and City Planning on the number of parking spaces required for this project.

3. Highway Dedication and Street Widening Requirements

Per the new Mobility Element of the General Plan, **La Cienega Boulevard**, has been designated a Modified Boulevard II, which would require a 40-foot half-width roadway within a 52-foot half-width right-of-way and **Jefferson Boulevard**, has been designated a Modified Avenue II, which would require a 30-foot half-width roadway within a 45-foot half-width right-of-way. For all applicable highway dedication, street widening and/or sidewalk requirements of the project, the applicant should check with the Bureau of Engineering's Land Development Group.

4. Highway Dedication and Street Widening Requirements

The conceptual site plan for the project (see **Attachment A**) is acceptable to LADOT. As indicated previously, vehicular access will be provided via one driveway on South La Cienega Boulevard and a secondary, one-way exit, via a 20-foot strip of land connecting the project site to Corbett Street. Review of this study does not constitute approval of the dimensions for any new proposed driveway. Review and approval of a new driveway should be coordinated with LADOT's Citywide Planning Coordination Section (201 North Figueroa Street, 5th Floor, Room 550, at 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact LADOT for driveway width and internal circulation requirements prior to the commencement of building or parking layout design. The applicant should check with City Planning regarding the project's vehicular access and design.

5. Worksite Traffic Control Requirements

LADOT recommends that a construction work site traffic control plan be submitted to LADOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to <http://ladot.lacity.org/businesses/temporary-traffic-control-plans> to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. LADOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

6. Development Review Fees

Section 19.15 of the LAMC identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Kevin Arucan at (213) 972-4970.

DEPARTMENT OF RECREATION AND PARKS

Pursuant to Los Angeles Municipal Code sections 12.33.E and 19.17, Recreation and Parks recommends the following be added as a condition of the approval of AA-2021-1147-PMLA-SL-HCA:

13. That the Park Fee paid to the Department of Recreation and Parks be calculated as a Subdivision (Quimby in-lieu) fee.

DEPARTMENT OF WATER AND POWER

14. Contact LAFD for private fire hydrant requirement.
15. Street/sewer/storm drain plans shall be submitted.

Note: On January 1, 2018, LADWP implemented a new policy regarding water services for multi-unit residential structures. If a development allows LADWP to install an individual meter in front of each house and the water main serving that development fronts the property and is in a public right-of-way, then this is a conventional installation and LADWP will provide individual meters. However, if the small lot is completely and within private property and the request is for a manifold type installation of consecutive meters in a coffin-type configuration, LADWP can provide up to five meters in that manifold setting. LADWP can provide a master meter if the number of meters required is greater than five.

BUREAU OF STREET LIGHTING

16. The Bureau of Street Lighting's recommended condition of approval for the subject city planning case is as follows: (Improvement condition added to S-3 (c) where applicable.)

Note: The quantity of streetlights identified may be modified slightly during the plan check process based on illumination calculations and equipment selection.

Conditions set: 1) in compliance with a Specific Plan, 2) by LADOT, or 3) by other legal instrument excluding the Bureau of Engineering conditions, requiring an improvement that will change the geometrics of the public roadway or driveway apron may require additional or the reconstruction of street lighting improvements as part of that condition.

BUREAU OF STREET SERVICES – URBAN FORESTRY

17. a. Project shall preserve all healthy mature street trees whenever possible. All feasible alternatives in project design should be considered and implemented to retain healthy mature street trees. A permit is required for the removal of any street tree and shall be replaced 2: 1 as approved by the Board of Public Works and Urban Forestry Division.
- b. Plant street trees at all feasible planting locations within dedicated streets as directed and required by the Bureau of Street Services, Urban Forestry Division. All tree plantings shall be installed to current tree planting standards when the City has previously

been paid for tree plantings. The sub divider or contractor shall notify the Urban Forestry Division at: (213) 847- 3077 upon completion of construction for tree planting direction and instructions.

Note: Removal of street trees requires approval from the Board of Public Works. All projects must have environmental (CEQA) documents that appropriately address any removal and replacement of street trees. Contact Urban Forestry Division at: (213) 847-3077 for tree removal permit information.

FIRE DEPARTMENT

18. That prior to the recordation of the final map, a suitable arrangement shall be made satisfactory to the Fire Department, binding the subdivider and all successors to the following:
 - a. During demolition, the Fire Department access will remain clear and unobstructed.
 - b. Access for Fire Department apparatus and personnel to and into all structures shall be required.
 - c. One or more Knox Boxes will be required to be installed for LAFD access to the project. Location and number to be determined by LAFD Field Inspector. (Refer to FPB Req # 75).
 - d. 505.1 Address identification. New and existing buildings shall have approved building identification placed in a position that is plainly legible and visible from the street or road fronting the property.
 - e. Where above ground floors are used for residential purposes, the access requirement shall be interpreted as being the horizontal travel distance from the street, driveway, alley, or designated fire lane to the main entrance of individual units.
 - f. No building or portion of a building shall be constructed more than 150 feet from the edge of a roadway of an improved street, access road, or designated fire lane.
 - g. The Fire Department may require additional vehicular access where buildings exceed 28 feet in height.
 - h. 2014 CITY OF LOS ANGELES FIRE CODE, SECTION 503.1.4 (EXCEPTION)
 - i. When this exception is applied to a fully fire sprinklered residential building equipped with a wet standpipe outlet inside an exit stairway with at least a 2 hour rating the distance from the wet standpipe outlet in the stairway to the entry door of any dwelling unit or guest room shall not exceed 150 feet of horizontal travel AND the distance from the edge of the roadway of an improved street or approved fire lane to the door into the same exit stairway directly from outside the building shall not exceed 150 feet of horizontal travel.
 - ii. It is the intent of this policy that in no case will the maximum travel distance exceed 150 feet inside the structure and 150 feet outside the structure. The term

“horizontal travel” refers to the actual path of travel to be taken by a person responding to an emergency in the building.

- iii. This policy does not apply to single-family dwellings or to non-residential buildings.
- i. Building designs for multi-storied residential buildings shall incorporate at least one access stairwell off the main lobby of the building; But, in no case greater than 150ft horizontal travel distance from the edge of the public street, private street or Fire Lane. This stairwell shall extend onto the roof.
- j. Entrance to the main lobby shall be located off the address side of the building.
- k. Any required Fire Annunciator panel or Fire Control Room shall be located within a 20ft visual line of sight of the main entrance stairwell or to the satisfaction of the Fire Department.
- l. Adequate off-site public and on-site private fire hydrants may be required. Their number and location to be determined after the Fire Department’s review of the plot plan.
- m. The Fire Department may require additional roof access via parapet access roof ladders where buildings exceed 28 feet in height, and when overhead wires or other obstructions block aerial ladder access.
- n. **FPB #105**
5101.1 Emergency responder radio coverage in new buildings. All new buildings shall have approved radio coverage for emergency responders within the building based upon the existing coverage levels of the public safety communication systems of the jurisdiction at the exterior of the building. This section shall not require improvement of the existing public safety communication

The applicant is further advised that all subsequent contact regarding these conditions must be with the Hydrant and Access Unit. This would include clarification, verification of condition compliance and plans or building permit applications, etc., and shall be accomplished by appointment only, in order to assure that you receive service with a minimum amount of waiting please email lafdhydrants@lacity.org. You should advise any consultant representing you of this requirement as well.

BUREAU OF SANITATION

- 19. Bureau of Sanitation has reviewed the sewer/storm drain lines serving the subject parcels/areas, and found no potential problems to our structures and/or potential maintenance issues.

Note: This Approval is for the Tract Map only and represents the office of LA Sanitation/CWCDs. The applicant may be required to obtain other necessary Clearances/Permits from LA Sanitation and appropriate District office of the Bureau of Engineering. If you have any questions, please contact Rafael Yanez at (323) 342-1563.

DEPARTMENT OF CITY PLANNING – SITE SPECIFIC CONDITIONS

20. Prior to the recordation of the final map, the subdivider shall prepare and execute a Covenant and Agreement (Planning Department General Form CP-6770) in a manner satisfactory to the Planning Department, binding the subdivider and all successors to the following:

- a. Limit the proposed development to one (1) ground lot and four (4) airspace lots including a maximum of 230,412 square feet of residential space with a maximum of 260 residential units, and 230,412 square feet of commercial space. This density is only allowed per the approval and requirements of Case No. CPC-2021-6877-DB-SPR-CUB. In the event that Case No. CPC-2021-6877-DB-SPR-CUB is not approved, the project shall comply with Ordinance No. 184,794.
- b. Off-street parking for residential and commercial uses shall comply with the requirements of Case No. CPC-2021-6877-DB-SPR-CUB. In the event that Case No. CPC-2021-6877-DB-SPR-CUB is not approved, the project shall comply with Ordinance No. 184,794 and LAMC Section 12.21-A,4.

Directions to guest parking spaces shall be clearly posted. Tandem parking spaces shall not be used for guest parking.

In addition, prior to issuance of a building permit, a parking plan showing off-street parking spaces, as required by the Advisory Agency, be submitted for review and approval by the Department of City Planning (221 North Figueroa Street, Suite 1350).

- c. That a solar access report shall be submitted to the satisfaction of the Advisory Agency prior to obtaining a grading permit.
 - d. That the subdivider consider the use of natural gas and/or solar energy and consult with the Department of Water and Power and Southern California Gas Company regarding feasible energy conservation measures.
 - e. Recycling bins shall be provided at appropriate locations to promote recycling of paper, metal, glass, and other recyclable material.
 - f. Outdoor lighting shall be designed and installed with shielding, such that the light source cannot be seen from adjacent properties or the public right-of-way.
 - g. A 2-foot wide private pedestrian walk easement shall be provided along La Cienega Boulevard adjoining the tract and shall be open for public use. This pedestrian walk shall be kept open at all times, from the ground plane up to the first 10 feet of the ground floor, and any structures within the easement walk area shall be reviewed and approved by the Department of Building and Safety. The subdivider shall be responsible for maintenance and security of the private easement. The property's Floor Area, Buildable Area, Lot Area, yards, and other applicable standards in the Municipal Code shall continue to be calculated and determined in the same manner they were prior to granting the easement.
22. Prior to the issuance of a grading permit, the subdivider shall record and execute a

Covenant and Agreement (Planning Department General Form CP-6770), binding the subdivider to the following haul route conditions:

Haul Route General Conditions

- a. The owner or contractor shall keep the construction area sufficiently dampened to control dust caused by grading and hauling, and at all times shall provide reasonable control of dust caused by wind, at the sole discretion of the grading inspector.
- b. Hauling and grading equipment shall be kept in good operating condition and muffled as required by law.
- c. The Emergency Operations Division, Specialized Enforcement Section of the Los Angeles Police Department shall be notified at least 24 hours prior to the start of hauling, (213) 486-0777.
- d. Loads shall be secured by trimming or watering or may be covered to prevent the spilling or blowing of the earth material. If the load, where it contacts the sides, front, and back of the truck cargo container area, remains six inches from the upper edge of the container area, and if the load does not extend, at its peak, above any part of the upper edge of the cargo container area, the load is not required to be covered, pursuant to California Vehicle Code Section 23114 (e) (4).
- e. Trucks and loads are to be watered at the import site to prevent blowing dirt and are to be cleaned of loose earth at the import site to prevent spilling.
- f. Streets shall be cleaned of spilled materials during grading and hauling, and at the termination of each workday.
- g. The owner/contractor shall be in conformance with the State of California, Department of Transportation policy regarding movements of reducible loads.
- h. The owner/contractor shall comply with all regulations set forth by the State of California Department of Motor Vehicles pertaining to the hauling of earth.
- i. A copy of the approval letter from the City, the approved haul route and the approved grading plans shall be available on the job site at all times.
- j. The owner/contractor shall notify the Street Services Investigation and Enforcement Division, (213) 847-6000, at least 72 hours prior to the beginning of hauling operations and shall also notify the Division immediately upon completion of hauling operations. Any change to the prescribed routes, staging and/or hours of operation must be approved by the concerned governmental agencies. Contact the Street Services Investigation and Enforcement Division prior to effecting any change.
- k. Hauling vehicles shall not stage on any streets adjacent to the project, unless specifically approved as a special condition in this report.
- l. Hauling vehicles shall be spaced so as to discourage a convoy affect.
- m. This approval pertains only to the City of Los Angeles streets. Those segments of the haul route outside the jurisdiction of the City of Los Angeles may be subject to permit requirements and to the approval of other municipal or governmental agencies and appropriate clearances or permits is the responsibility of the contractor.

Haul Route Specific Conditions

- n. Loaded haul vehicles traveling from the project site shall travel to Hansen Aggregates, exiting the site on La Cienega, head south, right turn onto Obama Blvd, right turn onto Jefferson, stay right on Jefferson Blvd, turn left onto La Cienega, slight right onto Fairfax, right onto Washington, right onto I-10, take CA-60 to I-605 N, take exit 24 for Lower Azusa Rd/Los Angeles St.
- o. Empty haul vehicles traveling to the project site facility shall head east onto Graham Access Road, turn left onto Live Oak Ave, turn left to merge onto I-605 S, right onto I-10 W, take exit 7B for Washington towards Fairfax Ave, turn left onto Washington Blvd,

- turn left onto Fairfax Ave, turn left onto La Cienega Blvd.
- p. Hauling hours of operation are restricted to the hours between 7:00 A.M. and 6:00 P.M., Monday through Saturday with no hauling on Sundays or holidays.
 - q. An average of approximately 130 truck trips per day will occur over an estimated 3 years of hauling.
 - r. Haul vehicles are bottom dump trucks with 18 wheels, carrying 14 cubic yards per truck, and a maximum gross weight of 80,000 pounds.
 - s. There shall be no staging or parking of construction vehicles, including vehicles to transport workers on any adjacent residential streets.
 - t. Total net export of material is approximately 170,000 cubic yards.
 - u. "Truck Crossing" warning signs shall be placed 300 feet in advance of the exit in each direction.
 - v. A minimum of two flag attendants, each with two-way radios, will be required during hauling hours to assist with staging and getting trucks in and out of the project area. Additional flag attendants may be required by the LADBS Inspector, LADOT, or BOSS to mitigate a hazardous situation (e.g. blind curves, uncontrolled intersections, narrow portions of roads or where obstacles are present). Flag attendants and warning signs shall be in compliance with Part II of the latest Edition of "Work Area Traffic Control Handbook."
 - w. A surety or cash bond shall be posted in an amount satisfactory to the City Engineer for maintenance of haul route streets. The forms for the bond will be issued by the Central District Engineering Office, 100 S. Main Street 9th Floor, Los Angeles, CA, 90012. Further information regarding the bond may be obtained by calling 213-972-4990.
23. Prior to the issuance of the building permit or the recordation of the final map, a copy of CPC-2021-6877-DB-SPR-CUB shall be submitted to the satisfaction of the Advisory Agency. In the event CPC-2021-6877-DB-SPR-CUB is not approved, the subdivider shall submit a tract modification.
24. Paleontological Resources Inadvertent Discovery. In the event an unanticipated paleontological resource is uncovered during earthwork or construction, all work shall cease within a minimum distance of 50 feet from the find until a Qualified Paleontologist (1. Paleontologist who meets the Society of Vertebrate Paleontology standards for a Principal Investigator or Project Paleontologist; 2. Has demonstrated competence in field techniques, preparation, identification, curation, and reporting and/or a graduate degree in paleontology or geology or a publication record in peer reviewed journals; 3. At least two years professional experience with administration and project management experience; 4. Proficiency in recognizing fossils in the field and determining their significance; expertise in local geology, stratigraphy, and biostratigraphy; and 5. Experience collecting vertebrate fossils in the field) has been retained by the applicant to evaluate the find in accordance with the Society of Vertebrate Paleontology's Standard Procedures for the Assessment and Mitigation of Adverse Impacts to Paleontological Resources. The Qualified Paleontologist may adjust this avoidance area, ensuring appropriate temporary protection measures of the find are taken while also considering ongoing construction needs in the surrounding area. Temporary staking and delineation of the avoidance area shall be installed around the find in order to avoid any disturbance from construction equipment. Any paleontological materials that are uncovered shall not be moved or collected by anyone other than a Qualified Paleontologist or his/her designated representative such as a Paleontological Monitor (1. A paleontologist who has a minimum of a bachelor's or equivalent degree in geology or paleontology; 2. No less than one year of experience performing paleontological monitoring and salvaging fossil

materials in the relevant geologic province; or 3. An equivalent degree in biology or pursuit of a degree in geology or paleontology and no less than two years of comparable experience). If cleared by the Qualified Paleontologist, Ground Disturbance Activities may continue unimpeded on other portions of the site. The found deposit(s) shall be treated in accordance with the Society of Vertebrate Paleontology's Standard Procedures. Ground Disturbance Activities in the area where resource(s) were found may recommence once the identified resources are properly assessed and processed by a Qualified Paleontologist. A report that describes the resource and its disposition, as well as the assessment methodology, shall be prepared by the Qualified Paleontologist according to current professional standards for submittal to the Department of City Planning. If appropriate, the report should also contain the Qualified Paleontologist's recommendations for the preservation, conservation, and curation of the resource at a suitable repository, such as the Natural History Museum of Los Angeles County, with which the Applicant or Owner must comply.

25. Tribal Cultural Resource Inadvertent Discovery. In the event that objects or artifacts that may be tribal cultural resources are encountered during the course of any ground disturbance activities¹, all such activities shall temporarily cease on the project site until the potential tribal cultural resources are properly assessed and addressed pursuant to the process set forth below:
- a. Upon a discovery of a potential tribal cultural resource, the Applicant, or its successor, shall immediately stop all ground disturbance activities and contact the following: (1) all California Native American tribes that have informed the City they are traditionally and culturally affiliated with the geographic area of the proposed project; (2) and OHR.
 - b. If OHR determines, pursuant to Public Resources Code Section 21074 (a)(2), that the object or artifact appears to be a tribal cultural resource in its discretion and supported by substantial evidence, the City shall provide any affected tribe a reasonable period of time, not less than 14 days, to conduct a site visit and make recommendations to the Applicant, or its successor, and the City regarding the monitoring of future ground disturbance activities, as well as the treatment and disposition of any discovered tribal cultural resources.
 - c. The Applicant, or its successor, shall implement the tribe's recommendations if a qualified archaeologist retained by the City and paid for by the Applicant, or its successor, in consultation with the tribal monitor, reasonably conclude that the tribe's recommendations are reasonable and feasible.
 - d. In addition to any recommendations from the applicable tribe(s), a qualified archeologist shall develop a list of actions that shall be taken to avoid or minimize impacts to the identified tribal cultural resources substantially consistent with best practices identified by the Native American Heritage Commission and in compliance with any applicable federal, state or local law, rule or regulation.
 - e. If the Applicant, or its successor, does not accept a particular recommendation determined to be reasonable and feasible by the qualified archaeologist or qualified tribal monitor, the Applicant, or its successor, may request mediation by a mediator agreed to by the Applicant, or its successor, and the City. The mediator must have the requisite professional qualifications and experience to mediate such a dispute. The City shall make the determination as to whether the mediator is at least minimally qualified to mediate the dispute. After making a reasonable effort to mediate this particular dispute, the City may (1) require the recommendation be implemented as originally proposed by the archaeologist or tribal monitor; (2) require the recommendation, as modified by the City, be implemented as it is at

least as equally effective to mitigate a potentially significant impact; (3) require a substitute recommendation be implemented that is at least as equally effective to mitigate a potentially significant impact to a tribal cultural resource; or (4) not require the recommendation be implemented because it is not necessary to mitigate an significant impacts to tribal cultural resources. The Applicant, or its successor, shall pay all costs and fees associated with the mediation.

- f. The Applicant, or its successor, may recommence ground disturbance activities outside of a specified radius of the discovery site, so long as this radius has been reviewed by both the qualified archaeologist and qualified tribal monitor and determined to be reasonable and appropriate.
- g. The Applicant, or its successor, may recommence ground disturbance activities inside of the specified radius of the discovery site only after it has complied with all of the recommendations developed and approved pursuant to the process set forth in paragraphs 2 through 5 above.
- h. Copies of any subsequent prehistoric archaeological study, tribal cultural resources study or report, detailing the nature of any significant tribal cultural resources, remedial actions taken, and disposition of any significant tribal cultural resources shall be submitted to the South Central Coastal Information Center (SCCIC) at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File.
- i. Notwithstanding paragraph 8 above, any information that the Department of City Planning, in consultation with the City Attorney's Office, determines to be confidential in nature shall be excluded from submission to the SCCIC or provided to the public under the applicable provisions of the California Public Records Act, California Public Resources Code, section 6254(r), and handled in compliance with the City's AB 52 Confidentiality Protocols.

26. INDEMNIFICATION AND REIMBURSEMENT OF LITIGATION COSTS.

Applicant shall do all of the following:

- (i) Defend, indemnify and hold harmless the City from any and all actions against the City relating to or arising out of, in whole or in part, the City's processing and approval of this entitlement, including but not limited to, an action to attack, challenge, set aside, void or otherwise modify or annul the approval of the entitlement, the environmental review of the entitlement, or the approval of subsequent permit decisions, or to claim personal property damage, including from inverse condemnation or any other constitutional claim.
- (ii) Reimburse the City for any and all costs incurred in defense of an action related to or arising out of, in whole or in part, the City's processing and approval of the entitlement, including but not limited to payment of all court costs and attorney's fees, costs of any judgments or awards against the City (including an award of attorney's fees), damages, and/or settlement costs.
- (iii) Submit an initial deposit for the City's litigation costs to the City within 10 days' notice of the City tendering defense to the Applicant and requesting a deposit. The initial deposit shall be in an amount set by the City Attorney's Office, in its sole discretion, based on the nature and scope of action, but in no event shall the initial deposit be less than \$50,000. The City's failure to notice or collect the deposit does not relieve the Applicant

- from responsibility to reimburse the City pursuant to the requirement in paragraph (ii).
- (iv) Submit supplemental deposits upon notice by the City. Supplemental deposits may be required in an increased amount from the initial deposit if found necessary by the City to protect the City's interests. The City's failure to notice or collect the deposit does not relieve the Applicant from responsibility to reimburse the City pursuant to the requirement in paragraph (ii).
 - (v) If the City determines it necessary to protect the City's interest, execute an indemnity and reimbursement agreement with the City under terms consistent with the requirements of this condition.

The City shall notify the applicant within a reasonable period of time of its receipt of any action and the City shall cooperate in the defense. If the City fails to notify the applicant of any claim, action, or proceeding in a reasonable time, or if the City fails to reasonably cooperate in the defense, the applicant shall not thereafter be responsible to defend, indemnify or hold harmless the City.

The City shall have the sole right to choose its counsel, including the City Attorney's office or outside counsel. At its sole discretion, the City may participate at its own expense in the defense of any action, but such participation shall not relieve the applicant of any obligation imposed by this condition. In the event the Applicant fails to comply with this condition, in whole or in part, the City may withdraw its defense of the action, void its approval of the entitlement, or take any other action. The City retains the right to make all decisions with respect to its representations in any legal proceeding, including its inherent right to abandon or settle litigation.

For purposes of this condition, the following definitions apply:

"City" shall be defined to include the City, its agents, officers, boards, commissions, committees, employees, and volunteers.

"Action" shall be defined to include suits, proceedings (including those held under alternative dispute resolution procedures), claims, or lawsuits. Action includes actions, as defined herein, alleging failure to comply with any federal, state or local law.

Nothing in the definitions included in this paragraph are intended to limit the rights of the City or the obligations of the Applicant otherwise created by this condition.

DEPARTMENT OF CITY PLANNING-ENVIRONMENTAL MITIGATION MEASURES

27. Implementation. The Mitigation Monitoring Program (MMP), that is part of the case file (Exhibit B), shall be enforced throughout all phases of the Project. The Applicant shall be responsible for implementing each Project Design Features (PDF) and Mitigation Measure (MM) and shall be obligated to provide certification, as identified below, to the appropriate monitoring and enforcement agencies that each PDF and MM has been implemented. The Applicant shall maintain records demonstrating compliance with each PDF and MM. Such records shall be made available to the City upon request.

28. Construction Monitor. During the construction phase and prior to the issuance of building permits, the Applicant shall retain an independent Construction Monitor (either via the City or through a third-party consultant), approved by the Department of City Planning, who shall be responsible for monitoring implementation of PDFs and MMs during construction activities consistent with the monitoring phase and frequency set forth in this MMP.

The Construction Monitor shall also prepare documentation of the Applicant's compliance with the PDFs and MMs during construction every 90 days in a form satisfactory to the Department of City Planning. The documentation must be signed by the Applicant and Construction Monitor and be included as part of the Applicant's Compliance Report. The Construction Monitor shall be obligated to immediately report to the Enforcement Agency any non-compliance with the MMs and PDFs within two businesses days if the Applicant does not correct the non-compliance within a reasonable time of notification to the Applicant by the monitor or if the non-compliance is repeated. Such non-compliance shall be appropriately addressed by the Enforcement Agency.

29. Substantial Conformance and Modification. After review and approval of the final MMP by the Lead Agency, minor changes and modifications to the MMP are permitted, but can only be made subject to City approval. The Lead Agency, in conjunction with any appropriate agencies or departments, will determine the adequacy of any proposed change or modification. This flexibility is necessary in light of the nature of the MMP and the need to protect the environment. No changes will be permitted unless the MMP continues to satisfy the requirements of CEQA, as determined by the Lead Agency.

The Project shall be in substantial conformance with the PDFs and MMs contained in this MMP. The enforcing departments or agencies may determine substantial conformance with PDFs and MMs in the MMP in their reasonable discretion. If the department or agency cannot find substantial conformance, a PDF or MM may be modified or deleted as follows: the enforcing department or agency, or the decision maker for a subsequent discretionary project related approval finds that the modification or deletion complies with CEQA, including CEQA Guidelines Sections 15162 and 15164, which could include the preparation of an addendum or subsequent environmental clearance, if necessary, to analyze the impacts from the modifications to or deletion of the PDFs or MMs. Any addendum or subsequent CEQA clearance shall explain why the PDF or MM is no longer needed, not feasible, or the other basis for modifying or deleting the PDF or MM, and that the modification will not result in a new significant impact consistent with the requirements of CEQA. Under this process, the modification or deletion of a PDF or MM shall not, in and of itself, require a modification to any Project discretionary approval unless the Director of Planning also finds that the change to the PDF or MM results in a substantial change to the Project or the non-environmental conditions of approval.

BUREAU OF ENGINEERING - STANDARD CONDITIONS

- S-1. (a) That the sewerage facilities charge be deposited prior to recordation of the final map over all of the parcel in conformance with Section 64.11.2 of the Los Angeles Municipal Code (LAMC).
- (b) That survey boundary monuments be established in the field in a manner satisfactory to the City Engineer and located within the California Coordinate System prior to recordation of the final map. Any alternative measure approved by

the City Engineer would require prior submission of complete field notes in support of the boundary survey.

- (c) That satisfactory arrangements be made with both the Water System and the Power System of the Department of Water and Power with respect to water mains, fire hydrants, service connections and public utility easements.
 - (d) That any necessary sewer, street, drainage and street lighting easements be dedicated. In the event it is necessary to obtain off-site easements by separate instruments, records of the Bureau of Right-of-Way and Land shall verify that such easements have been obtained. The above requirements do not apply to easements of off-site sewers to be provided by the City.
 - (e) That drainage matters be taken care of satisfactory to the City Engineer.
 - (f) That satisfactory street, sewer and drainage plans and profiles as required, together with a lot grading plan of the parcel and any necessary topography of adjoining areas be submitted to the City Engineer.
 - (g) That any required slope easements be dedicated by the final map.
 - (h) That each lot in the parcel comply with the width and area requirements of the Zoning Ordinance.
 - (i) That 1-foot future streets and/or alleys be shown along the outside of incomplete public dedications and across the termini of all dedications abutting un-subdivided property. The 1-foot dedications on the map shall include a restriction against their use of access purposes until such time as they are accepted for public use.
 - (j) That any 1-foot future street and/or alley adjoining the parcel be dedicated for public use by the parcel, or that a suitable resolution of acceptance be transmitted to the City Council with the final map.
 - (k) That no public street grade exceeds 15%.
 - (l) That any necessary additional street dedications be provided to comply with the Americans with Disabilities Act (ADA) of 1990.
- S-2. That the following provisions be accomplished in conformity with the improvements constructed herein:
- (a) Survey monuments shall be placed and permanently referenced to the satisfaction of the City Engineer. A set of approved field notes shall be furnished, or such work shall be suitably guaranteed, except where the setting of boundary monuments requires that other procedures be followed.
 - (b) Make satisfactory arrangements with the Department of Traffic with respect to street name, warning, regulatory and guide signs.

- (c) All grading done on private property outside the parcel boundaries in connection with public improvements shall be performed within dedicated slope easements or by grants of satisfactory rights of entry by the affected property owners.
- (d) All improvements within public streets, private streets, alleys and easements shall be constructed under permit in conformity with plans and specifications approved by the Bureau of Engineering.
- (e) Any required bonded sewer fees shall be paid prior to recordation of the final map.

S-3. That the following improvements be either constructed prior to recordation of the final map or that the construction be suitably guaranteed:

- (a) Construct on-site sewers to serve the parcel as determined by the City Engineer.
- (b) Construct any necessary drainage facilities.
- (c) No street lighting improvements if no street widening per BOE improvement conditions. Otherwise relocate and upgrade street lights; three (3) on La Cienega Blvd. and two (2) pedestrian lights on La Cienega Blvd.
- (d) Plant street trees and remove any existing trees within dedicated streets or proposed dedicated streets as required by the Street Tree Division of the Bureau of Street Maintenance. All street tree plantings shall be brought up to current standards. When the City has previously been paid for tree planting, the subdivider or conparcelor shall notify the Urban Forestry Division ((213) 847-3077) upon completion of construction to expedite tree planting.
- (e) Repair or replace any off-grade or broken curb, gutter and sidewalk satisfactory to the City Engineer.
- (f) Construct access ramps for the handicapped as required by the City Engineer.
- (g) Close any unused driveways satisfactory to the City Engineer.
- (h) Construct any necessary additional street improvements to comply with the Americans with Disabilities Act (ADA) of 1990.
- (i) 1. Construct any necessary on-site mainline and house connection sewers satisfactory to the City Engineer.

Note: This project is located near the Metro Right-of-way Project Area. Consultation with the Los Angeles County Metropolitan Transportation Authority (Metro) may be required prior to the issuance of any building permit for projects within 100 feet of Metro-owned Rail or Bus Rapid Transit (BRT) right-of-way (ROW) to ensure safe access to, and operations of, transportation services and facilities (213) 922-2785. Any questions regarding this report should be directed to Quyen Phan of the Permit Case Management Division located at 201 N. Figueroa Street, Suite 290 or by calling (213) 808-8604.

Notes: The Advisory Agency approval is the maximum number of units permitted under the parcel action. However the existing or proposed zoning may not permit this number of units. This vesting map does not constitute approval of any variations from the Los Angeles Municipal Code (LAMC), unless approved specifically for this project under separate conditions.

Any removal of the existing street trees shall require Board of Public Works approval.

Satisfactory arrangements shall be made with the Los Angeles Department of Water and Power, Power System, to pay for removal, relocation, replacement or adjustment of power facilities due to this development. The subdivider must make arrangements for the underground installation of all new utility lines in conformance with Section 17.05-N of the LAMC.

The final map must be recorded within 36 months of this approval, unless a time extension is granted before the end of such period.

The Advisory Agency hereby finds that this parcel conforms to the California Water Code, as required by the Subdivision Map Act.

The subdivider should consult the Department of Water and Power to obtain energy saving design features which can be incorporated into the final building plans for the subject development. As part of the Total Energy Management Program of the Department of Water and Power, this no-cost consultation service will be provided to the subdivider upon his request.

INITIAL SUBMISSIONS

The following submissions by the public are in compliance with the Commission Rules and Operating Procedures (ROPs), Rule 4.3a. The Commission's ROPs can be accessed at <http://planning.lacity.org>, by selecting "Commissions, Boards & Hearings" and selecting the specific Commission.

The following submissions are not integrated or addressed in the Staff Report but have been distributed to the Commission.

Material which does not comply with the submission rules is not distributed to the Commission.

Honorable Planning Commission
City of Los Angeles
200 N. Spring Street
Los Angeles, CA 90012

**Re: Proposed Mixed-Use Residential and Office Project (“Project”) at
3401 South La Cienega Boulevard (“Property”)**

Dear Honorable Commissioners:

On behalf of La Cienega Owner LLC (“**Applicant**”), we submit this letter in support of the Project and to respond to the appeal (“**Appeal**”) filed by Supporters Alliance for Environmental Responsibility (“**SAFER**”) to the Advisory Agency’s March 31, 2022 adoption of the Sustainable Communities Environmental Assessment (“**SCEA**”) (ENV-2021-6879-SCEA) and approval of the Project’s Vesting Tentative Tract Map No. VTT-83550-CN (“**VTTM**”).

The Advisory Agency properly determined, for the reasons set forth in detail in its March 31, 2022 Letter of Determination (“**LOD**”), that the Project – a proposed infill, transit-oriented development consisting of 260 new residential units, including 22 very-low income units and 7 workforce housing units, 227,543 square feet of Class A office space, and 2,869 square feet of neighborhood-serving ground floor retail – is an opportunity to revitalize a key commercial and transit corridor, contribute to the City’s long-term and economic viability, and foster a more livable community for the existing residents and businesses, and importantly, the Project will not cause significant environmental impacts.

As explained below, the arguments raised in the Appeal do not have any basis in law or fact and therefore do not undermine the Advisory Agency’s conclusions or require that the SCEA be revised or recirculated. Accordingly, the Planning Commission should deny the Appeal, sustain the Advisory Agency’s adoption of the SCEA and approval of the VTTM, and adopt the balance of the Project’s entitlements.

Honorable Chair and Planning Commission
May 2, 2022
Page 2

1. The City Fully Complied with CEQA Prior to Approving the VTTM

SAFER first alleges in the Appeal that the approval of the VTTM was in error because the City did not comply with the California Environmental Quality Act (“CEQA”). SAFER does not provide any basis for this claim, and as explained below, there is no basis for it.

Senate Bill 375 adopted in September 2008, provides that, in lieu of a mitigated negative declaration (“MND”) or environmental impact report (“EIR”), “Transit Priority Projects” (“TPP”) that meet rigorous standards may comply with CEQA by a SCEA. (Pub. Res. Code § 21155.5(b).) A TPP is one that is consistent with the land use planning standards and policies specified in 2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy (“2020-2045 RTP/SCS”), which was prepared by the Southern California Association of Governments (“SCAG”) to expand transportation options, improve air quality, and bolster Southern California’s long-term economic viability and which the California Air Resources Board (“CARB”) has agreed will, if implemented, achieve CARB’s greenhouse gas (“GHG”) reduction targets.¹

As set forth in the LOD and the SCEA, the Project is the perfect example of a TPP. The Project is a mixed-use, transit-oriented residential and commercial development that is consistent with the land use designations, density, building intensity, and policies prescribed by the 2020-2045 RTP/SCS. The Project furthers the City’s, SCAG’s and CARB’s goals to reduce GHG emissions with, among many others, sustainable features exceeding the CALGreen (Title 24 of the California Building Standards Code), such as LEED Gold and Platinum certification, all-electric buildings, pedestrian and bicycle amenities, and proximity to transit. The SCEA evaluated all topics required by CEQA and included accompanying comprehensive technical studies. Also as required by CEQA, the City considered and incorporated all applicable, feasible mitigation measures and performance standards from prior applicable EIRs, including the 2020-2045 RTP/SCS Program EIR and the West Adams-Baldwin Hills-Leimert Community Plan EIR (“Community Plan EIR”), as well as beneficial project design features, including those related to traffic demand management and energy efficiency, that either avoid or mitigate all potentially significant effects to less than significant.

As required, the City circulated the SCEA for a 30-day public comment period beginning on January 20, 2022, and sent to public agencies with jurisdiction related to the Project and other interested parties and agencies. Since the close of the public comment period, the Project’s CEQA consultant, Impact Sciences, although not required by CEQA, has evaluated and responded to all comments received, including each and every comment received from SAFER dated February 22, 2022 which SAFER has now attached as the justification for the Appeal. Based on the foregoing, the Advisory Agency appropriately determined that the SCEA satisfied CEQA’s requirements and that the Project will not cause any significant, adverse environmental impacts.

¹ See CARB Executive Order G-20-239, October 30, 2020

As evidenced above, and explained in more detail in the LOD and SCEA, the City fully complied with CEQA prior to approving the VTTM. The Appeal does not present any evidentiary or legal basis demonstrating otherwise. The Planning Commission should deny it.

2. The SCEA's Conclusions Are Supported by Substantial Evidence and No Revisions Are Needed

SAFER next alleges that the City erroneously approved the VTTM because of alleged SCEA deficiencies, requiring revising and recirculating the SCEA. This claim also has no merit.

Due to the rigorous requirements to qualify as a TPP, a SCEA is reviewed, like an EIR, under the substantial evidence standard. "Substantial evidence" means that the City had "enough relevant information and reasonable inferences from this information that a fair argument can be made to support a conclusion, even though other conclusions might also be reached." (Cal. Code Regs, tit. 14 ("CEQA Guidelines"), §15384(a); *Laurel Heights Improvement Ass'n v Regents of Univ. of Cal.* (1988) 47 Cal.3d 376, 393. Under the substantial evidence standard, the lead agency's decisions are given substantial deference and presumed correct; reasonable doubts are resolved in favor of the administrative findings and determination. (*Sierra Club v. County of Napa* (2004) 121 Cal.App.4th 1490, 1497.) A project challenger carries the burden to describe the evidence favorable to the lead agency and show why it is lacking; a failure to do so is fatal to its challenge. (*California Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal.App.4th 603, 626.)

The analysis and conclusions in the SCEA were based on a comprehensive evaluation of the Project and technical studies and modeling for air quality and greenhouse gases ("GHG"), hazardous materials, trees, historic and cultural resources, geotechnical engineering feasibility, noise and vibration, and transportation. Based on this extensive investigation, the Advisory Agency found that the Project would have no impact or a less than significant impact for all but three CEQA-study areas.² Where the SCEA identified potentially significant impacts, the Advisory Agency adopted appropriate mitigation measures, including, as applicable, from prior EIRs – including the 2020-2045 RTP/SCS Program EIR and the Community Plan EIR – which will mitigate such impacts to less than significant.³

The issues raised by SAFER in its Appeal fail to overcome the substantial evidence supporting the Advisory Agency's approval of the SCEA. The Appeal relies entirely on SAFER's letter dated February 22, 2022 previously submitted to the City during the public comment period for the SCEA. The City reviewed and fully responded to SAFER's comment letter (and all others) in advance of the Advisory Agency's February 24, 2022 public hearing, demonstrating why each comment had no factual or legal basis for questioning the SCEA's sufficiency. The Advisory

² The three areas where the SCEA identified potentially significant impacts are Hazards & Hazardous Materials, Noise, and Transportation. For all three, the SCEA incorporated mitigation measures to ensure the impacts were to reduced to less than significant.

³ See SCEA, MM-HAZ-1, MM-NOI-1, and MM-TR-1.

Agency thus had the full benefit of complete responses to SAFER's contentions prior to issuing the LOD in which it adopted the SCEA and approved the VTTM. The Advisory Agency appropriately determined that SAFER's objections did not require revising or recirculating the SCEA.

We concur with and enclose the City's responses to comments and the Advisory Agency's findings, for the Planning Commission's convenience. We summarize as follows these responses – without repeating each one – and our views showing why SAFER's contentions lack merit.

a. The SCEA need only incorporate applicable mitigation measures where the Project's potential impacts are significant.

The Appeal asserts the SCEA should have incorporated all mitigation measures from the 2020-2045 RTP/SCS Program EIR, and criticizes the SCEA for omitting that EIR's mitigation measures PMM AQ-1 and PMM GHG-1 to address air quality and GHG. SAFER's proposition would go far beyond CEQA's scope and would not meaningfully address a project's impacts on the environment. CEQA requires mitigation measures only where they are applicable and needed to address a project's *significant* environmental impacts. (*See, e.g.*, Pub. Res. Code § 21002 [CEQA's purpose is to “assist public agencies in systematically identifying both the *significant* effects of proposed projects and the feasible alternatives or feasible *mitigation measures which will avoid or substantially lessen such significant effects.*” (emphasis added)]; CEQA Guidelines § 15002(a) [the basic purposes of CEQA include “[i]nform[ing] governmental decision makers and the public about the potential, *significant* environmental effects of proposed activities” and “prevent[ing] *significant*, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures.” (emphasis added)].⁴ Consistent with CEQA, the project-specific mitigation measures proposed in the 2020-2045 RTP/SCS Program EIR each state that the lead agency should consider their incorporation “as applicable and feasible” and to “reduce *substantial* adverse effects” (emphasis added).⁵ As noted above, the Project will not cause potentially significant impacts except in three limited topic areas (none of which are air quality or GHG). The SCEA thus need only incorporate mitigation for those three areas, which it did.

In addition to not being required by CEQA, incorporating all mitigation measures from the 2020-2045 RTP/SCS Program EIR would not meaningfully address the Project's potential environmental impacts, thus rendering CEQA a fruitless exercise. For instance, PMM AG-5 requires projects that propose to convert farmland to manage project operations to minimize the introduction of invasive species or weeds which may affect agricultural production on adjacent land.⁶ This measure obviously does not apply or serve any purpose for a non-agricultural, highly urbanized infill project such as the Project which has been fully paved and developed with industrial uses for decades. SAFER's proposition would thus result in CEQA imposing unnecessary and

⁴ *See, also*, Pub. Res. Code §§ 21155.2(b)(2), 21155.2(b)(5)(i), 21159.28(a); CEQA Guidelines §§ 15021, 15126(f), 15126.4(a)(3), (4)

⁵ *See, e.g.*, 2020-2045 RTP/SCS Program EIR, Exhibit A – MMRP: PMM AG-3, PMM AQ-1, PMM BIO-1

⁶ 2020-2045 RTP/SCS Program EIR, Exhibit A – MMRP: PMM AG-5

overly burdensome hurdles on development without addressing the Project's actual environmental impacts.

Though mitigation is only required when significant impacts will occur, the Applicant has nonetheless incorporated measures to address air quality and GHG, which the SAFER Appeal particularly focuses on. To clarify, the SCEA concluded that the Project will not cause air quality or GHG impacts and thus mitigation is not required.⁷ Nevertheless, the West Adams-Baldwin Hills-Leimert Community Plan requires each project in the Community Plan area to incorporate the mitigation measures proposed by the Community Plan EIR, which is another applicable EIR more specifically tailored to the Project vicinity than the 2020-2045 RTS/SCS Program EIR. Two of the measures required by the Community Plan EIR are AQ1 and GHG1, which the Project incorporates along with numerous sustainable design features that collectively are substantially equivalent to and achieve the same goals as PMM AQ-1 and PMM GHG-1 that SAFER contends should have been incorporated from the 2020-2045 RTS/SCS Program EIR.⁸ Therefore, not only are PMM AQ-1 and PMM GHG-1 not required to be incorporated into the SCEA, but they are redundant because the SCEA already achieves their purpose.

b. The SCEA is not deficient for omitting an analysis of indoor emissions from formaldehyde.

SAFER incorrectly contends that the SCEA should have evaluated the Project's creation of formaldehyde in indoor air. No regulatory basis or guidance exists for doing so. Neither CARB, the Southern California Air Quality Management District ("SCAQMD"), nor the California Office of Environmental Health Hazard Assessment ("OEHHA"), which are the agencies charged with regulating air quality, require agencies or developers to evaluate formaldehyde emissions caused by development projects or provide guidance on how such an evaluation might be undertaken. Moreover, SAFER ignores the current 2019 California Green Building Standards Code (Title 24) that regulates formaldehyde in composite wood products in new construction to, according to CARB, levels protective of public health and safety, and the Project must comply with these standards.⁹ SAFER does not provide any legal requirement or regulatory guidance for a formaldehyde analysis, nor an explanation why the current regulatory requirements do not address their concerns. Instead, by attaching their same February 22, 2022 comment letter as the justification for the Appeal, SAFER repeats its reliance on an inapplicable, outdated study of indoor air quality within single family homes, not multi-family apartments. As the City's responses to comments explain in more detail, the study SAFER relies on applied the prior version of Title 24

⁷ See, Pub. Res. Code §§ 21002, 21155.2(b)(2), 21155.2(b)(5)(i), 21159.28(a); CEQA Guidelines §§ 15002(a), 15021, 15126(f), 15126.4(a)(3), (4)

⁸ See, SCEA, pp. IV-33, IV-38, III-85; LOD Conditions of Approval 27-29 requiring implementation of all mitigation measures and project design features set forth in the SCEA.

⁹ See, SCEA, pp. II-15, III-7, III-73, IV-66, IV-91; LOD Conditions of Approval 27-29 requiring implementation of all mitigation measures and project design features set forth in the SCEA.

from 2008, which required now outdated ventilation and infiltration standards, and exposure parameters that are inconsistent with current OEHHA guidance for these types of studies.

c. The Appeal incorrectly claims that the SCEA fails to analyze diesel particulate matter.

Likewise, SAFER incorrectly claims that the SCEA fails to analyze the impacts of diesel particulate matter (“DPM”). In fact the SCEA fully evaluated the potential health risks from DPM and concluded the Project would not cause significant impacts in this area.¹⁰

d. The City was not required to conduct a health risk analysis based on OEHHA 2015 guidance.

SAFER wrongly asserts that the SCEA should have included a health risk analysis (“HRA”) based on OEHHA’s 2015 guidance. OEHHA’s 2015 guidance is intended for use in the Air Toxics Hot Spots Program, which does not apply to the Project, and for stationary sources of air pollution (e.g., factories, refineries, boilers, and power plants), which the Project is not. The OEHHA 2015 guidance does not state how or when HRA’s should be conducted for developments like the Project, and SCAQMD has not provided such guidance. The OEHHA 2015 guidance is therefore not applicable.

The sample HRA that SAFER offers does not support its misguided posture. As detailed in the City’s responses to comments, that HRA significantly inflates the Project’s DPM emissions by inaccurately classifying DPM emissions and ignoring the Property’s meteorological and topographical conditions. Based on such faulty modeling assumptions, SAFER’s HRA is not representative of the Project and does not undermine the SCEA’s air quality analysis.

3. The City Did Not Err in Determining the Project Qualified for Public Resources Code Section 21155.2

SAFER lastly claims that the Advisory Agency erred in stating that the Project was “exempt” from CEQA pursuant to Public Resources Code section 21155.2. Public Resources Code section 21155.2 is *not* a CEQA exemption provision, and the Advisory Agency did *not* determine the Project was “exempt” from CEQA. For the reasons below, this argument is, therefore, a meaningless quibble over the LOD’s use of the word “exempt” and does nothing to undermine the substance of the CEQA process conducted by the City.

Public Resources Code section 21155.2 authorizes the lead agency to prepare a SCEA for Transit Priority Projects in lieu of an EIR or MND. A SCEA is *not* a CEQA exemption. When a project is “exempt” from CEQA, the project is not required to undertake an initial study, or prepare

¹⁰ See SCEA, p. IV-35, IV-36, IV-42, IV-43, and Appendix B.

a ND, MND, SCEA, EIR or any other type of CEQA-specific environmental document.¹¹ By contrast, a SCEA is a robust environmental document that studies all of the same topics that CEQA requires for MNDs or EIRs except for a few narrow topics (described below), and all potentially significant impacts must be mitigated to less than significant.¹² Because projects must meet stringent requirements to qualify for a SCEA, including consistency with the RTP/SCS, SCEAs do not have to include an analysis of: (a) growth inducing impacts, (b) project specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network, and (c) other cumulative effects *if* they were already adequately addressed and mitigated into a prior applicable EIR that is incorporated into the SCEA (which, in this case, they were in the 2020-2045 RTP/SCS and the Community Plan EIR).¹³ As such, aside from those three narrow topics, the SCEA is no less in depth than more traditional forms of CEQA review, and it is not a CEQA exemption.

Importantly, this Project was not treated by the Advisory Agency as exempt from CEQA. As described above and detailed in the SCEA and its associated technical studies, a SCEA was prepared, which engaged in an extensive analysis of the Project's potential environmental impacts in full compliance with Public Resources Code section 21155.2.

As such, SAFER's critique of the Advisory Agency's use of the word "exemption" to describe the SCEA exalts form over substance and is of no legal or empirical consequence. It should be dismissed.

4. Conclusion

As summarized above and demonstrated by the robust record for the Project, the Advisory Agency's approval of the VTTM and adoption of the SCEA was based on substantial evidence. For the reasons above, SAFER's Appeal does not undermine the Advisory Agency's findings and conclusions, and therefore this Planning Commission should deny the Appeal, uphold the Advisory

Enclosure 1
City's Responses to Public Comments on SCEA

MEMORANDUM

To: Kyle Winston, City Planning Associate **Job No.** 1346.001
From: Jessica Kirchner Flores, AICP, Managing Principal
Impact Sciences, Inc.
Subject: Responses to Comments on the SCEA for the 3401 S. La Cienega
Boulevard Project
Date: March 10, 2022

This memo was prepared by Impact Sciences and LLG Engineers in response to comments received on the Sustainable Communities Environmental Assessment (SCEA) for the 3401 S. La Cienega Project (Proposed Project). In reviewing the comments, none of the comments offers any new evidence or any evidence that any fact, analysis, or determination in the Draft SCEA is incorrect or not supported with substantial evidence.

The City received the following letters on the SCEA for the Proposed Project.

Comment No.	Comment Date	Commenter
01	02/09/2022	Caltrans
02	02/22/2022	Lozeau Drury LLP
03	02/22/2022	Mitchell M. Tsai
04	02/01/2022	Nadine Angele
05	02/22/2022	Nadine Angele

MASTER RESPONSES TO COMMENTS

In reviewing the comments, two areas of concern were raised most often by commenters. To address these comments, Impact Sciences prepared Master Responses on the following topics:

- **Master Response 1:** Applicability of a SCEA
- **Master Response 2:** Need for Mitigation Measures in a SCEA

These Master Responses do not alter the analysis or conclusions of the SCEA and do not involve any new significant impacts or add "significant new information" that would require recirculation of the SCEA pursuant to *CEQA Guidelines* § 15088.5(a) and (b). The Master Responses are intended to provide the decisionmakers with clarifications regarding the issues raised by the commenters.

Master Response 1: Applicability of a SCEA

As provided in Chapter III, Sustainable Communities Environmental Assessment Eligibility, of the SCEA, the Proposed Project is a transit priority project that clearly meets the intent of both Senate Bill (SB) 375 and the Southern California Association of Government's (SCAG) Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS). The purpose of SB 375 was to revise CEQA to encourage projects "that will help the state achieve its climate goals under Assembly Bill (AB) 32, assist in the achievement of state and federal air quality standards, and increase petroleum conservation" (see SB 375, Section 1(f)). To meet the state's AB 32 climate goals, SB 375 requires all metropolitan transportation organizations, including SCAG, to prepare a SCS that integrates transportation and land use planning in a manner that results in reduced vehicle miles traveled (VMT) and, as a result, reduced greenhouse gas (GHG) emissions. The Proposed Project is an infill development in that it will occupy a previously developed site adjacent to urban uses. The Proposed Project contains a mix of uses (residential, office, and retail) and is located within a half-mile of an existing major transit stop, with the La Cienega/Jefferson Metro stop located less than 100 feet from the Project Site. Furthermore, the Proposed Project is served by Metro Bus Lines 105, which has a frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. For these reasons, the Proposed Project qualifies for streamlined review under a SCEA.

Due to the transit facilities in the vicinity, the Project area qualifies as a "High Quality Transit Area" (HQTA). A continually reoccurring theme in the RTP/SCS is to focus new growth around transit, particularly within HQTAs. The RTP/SCS further demonstrates that HQTAs may include high-density development, support pedestrian and bike infrastructure, reduce parking requirements, and retain affordable housing near transit. The Proposed Project promotes these goals by developing affordable and workforce housing immediately adjacent to multiple transit options and encouraging pedestrian activity and bicycling activity by providing access to the existing bike path to the north, as well as integrated bicycle facilities on the Proposed Project site.

In addition to the Proposed Project's overall consistency with the RTP/SCS and the Proposed Project's fulfillment of the overarching goals of integrating land use and transportation, Section III, Transit Priority Projects Consistency Analysis, provides a detailed analysis of the Proposed Project's consistency with the RTP/SCS, including consistency with land use designation, density, building intensity and applicable policies, as required by SB 375.

Public Resources Code § 21155.2 states that a transit priority project that has incorporated all feasible mitigation measures, performance standards, or criteria set forth in the prior applicable environmental impact reports (EIRs) and adopted in findings made pursuant to Public Resources Code § 21081 may be reviewed through a SCEA. In preparing the SCEA, cumulative effects that have been addressed and

mitigated in a prior environmental document need not be treated as cumulatively considerable, and growth-inducing impacts need not be addressed. Also, project-specific or cumulative impacts from car and light-duty truck trips, as well as aesthetic and parking impacts, need not be addressed. As demonstrated in Chapter III, Sustainable Communities Environmental Assessment Eligibility, the Proposed Project is consistent with the two applicable plans: The West Adams Community Plan and the SCAG RTP/SCS. Relevant mitigation measures from both plans were reviewed and where applicable applied to the Proposed Project.

As such, a SCEA provides an appropriate and adequate level of environmental review under CEQA.

Master Response 2: Need for Mitigation Measures Under CEQA

Comment Letters No. 2 and No. 3 assert that the SCEA must incorporate “all” feasible mitigation measures and performance standards or criteria from prior applicable EIRs. Contrary to these comments, CEQA only requires, and a SCEA need only incorporate, relevant, applicable mitigation measures from prior EIRs where those measures are needed to mitigate significant or potentially significant impacts identified by the SCEA. (See Public Resources Code §§ 21002, 21155.2(b)(2), 21155.2(b)(5)(i), 21159.28(a); *CEQA Guidelines* §§ 15002, 15021, 15126(f), 15126.4(a)(3), (4)). Consistent with CEQA, the RTP/SCS EIR mitigation monitoring and reporting program (MMRP) itself states that the Lead Agency should consider imposing the listed mitigation measures when needed “to reduce substantial adverse effects” (emphasis added). The Initial Study and SCEA concluded that the Project would not cause significant air quality or GHG impacts, and therefore, no mitigation was required.

In addition, mitigation can only be incorporated when it is relevant and applicable to a project. Mitigation measures in the RTP/SCS EIR that are within the purview of SCAG (see, e.g., SMM AES-1, SMM AG-3) are neither relevant, nor applicable to the Proposed Project. Other measures simply do not apply to this urban, infill location because the subject conditions do not exist on the Proposed Project site (see, e.g., PMM AG-1, PMM BIO-1(c)).

Nevertheless, though not required by CEQA for the reasons explained above, the SCEA does include mitigation to address the specific concerns raised by the commenters regarding air quality and GHG impacts. AQ1 and GHG1 from the West Adams-Baldwin Hills-Leimert Community Plan EIR (Community Plan EIR) MMRP (see SCEA, pp. III-79-80, III-85) have been incorporated into the Proposed Project to address the potential air quality and GHG impacts that may arise from construction and operation. Moreover, these measures, which are similar to PMM AQ-1 and PMM GHG-1 from the RTP/SCS MMRP, are more specifically tailored to the Community Plan area than the measures included in the RTP/SCS. Further, as explained in **Response to Comment 3-11** and **Response to Comment 3-12**, below, the Proposed

Project already incorporates many of the measures suggested by PMM AQ-1 and PMM GHG-1 as design features, including compliance with the CALGreen Code; implementation of all applicable Southern California Air Quality Management District (SCAQMD) rules; adoption of transportation demand management (TDM) measures; inclusion of bicycle/pedestrian amenities; and a net increase of 80 trees, all of which are being applied to this transit-oriented, infill development Proposed Project.

The SCEA fully and adequately analyzed the Project's potentially significant impacts, and it included all feasible mitigation measures from prior certified EIRs where mitigation was needed to address a potentially significant impact. The comments, therefore, do not raise any issues that alter the analysis or conclusions of the SCEA and do not involve any new significant impacts or add "significant new information" that would require recirculation of the SCEA.

Letter 1: State of California Department of Transportation (Caltrans)

Response to Comment 1-1

The comment confirms the City's inclusion of Caltrans in the Project's environmental review process and restates the Project's basic characteristics. No further response is required.

Response to Comment 1-2

The comment expresses acknowledgement and support for mixed-use and infill projects that prioritize alternative modes of travel. The comments related to the Proposed Project being in alignment with Caltrans' goal to reduce the amount of automobile trips, reduce GHG emissions and support alternative modes of travel are noted. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 1-3

The Proposed Project Applicant intends to comply with the City's parking standards. The detailed architectural and parking plans will be submitted to the City of Los Angeles Department of Building & Safety (LADBS) for final determination/approval prior to issuance of any building permits for the Proposed Project.

Per the City of Los Angeles Ordinance 179681, Los Angeles Municipal Code (LAMC) Section 12.22-A.25(d), required parking in a Housing Development Project that qualifies as a Density Bonus Law (DBL) development may be sold or rented separately from the dwelling units, so that buyers and tenants have the option of purchasing or renting a unit without a parking space. Because the Project is a DBL project, the Project is permitted to have unbundled parking.

Pursuant to Government Code Section 65915(f)(3) and LAMC Section 12.22-A.25, the Project Entitlements include a DBL off-menu incentive to waive the West Adams – Baldwin Hills – Leimert Park Community Plan Implementation Overlay (CPIO) restriction on parking stalls in order to construct up to 785 parking spaces, 413 of which are to be unassigned. The DBL renders the CPIO's parking limitation inapplicable to the Project. As the CPIO's parking limitation does not apply to the Project, the Project's parking count is consistent with the CPIO for CEQA purposes.

Response to Comment 1-4

The commenter supports the incorporation of trees into the design of the Proposed Project. As described in the SCEA (Chapter IV, Section 6, Energy), the Proposed Project is proposing a net increase of 80 trees as part of the approximately one acre of landscaped areas which would lower the overall temperature on the Project Site. The Proposed Project also includes numerous other energy efficient and sustainable features which are incorporated as PDF 1. (Refer to page IV-38 of the SCEA for the full list of features.)

Letter 2: Lozeau Drury, LLP

Response to Comment 2-1

Comment 2-1 is a summary of the more detailed comments set forth in Comment Letter No. 2, which are addressed below. No further response is necessary.

Response to Comment 2-2

See **Master Response 2** regarding the Need for Mitigation Measures under CEQA.

Response to Comment 2-3

See **Master Response 2** regarding the Need for Mitigation Measures under CEQA.

Response to Comment 2-4

See **Master Response 2** regarding the Need for Mitigation Measures under CEQA.

Response to Comment 2-5

The comment asserts that the SCEA's conclusions as to the Proposed Project's air quality impacts are not supported by substantial evidence. To the contrary, the SCEA properly evaluated all relevant air quality impacts associated with the Proposed Project's construction and operation in accordance with all California Air Resources Board (CARB), SCAQMD, California Office of Environmental Health Hazard Assessment

(OEHHA), and City protocols for the implementation of CEQA for land use development projects. Refer to Chapter IV, Section 3, Air Quality, pages IV-17 through IV-44 of the SCEA as well as SCEA Appendix B Air Quality and Greenhouse Gas Technical Study.

The comment also asserts that the SCEA should have specifically addressed indoor air quality impacts associated with the release of formaldehyde from building materials. There is no requirement from the CARB, OEHHA, or SCAQMD to evaluate indoor formaldehyde emissions from commonly used, and heavily regulated, common building materials and practices, nor have those agencies provided guidance on how to evaluate such emissions or thresholds of significance.

The commenter assumes—without presenting any facts to confirm—that the Project’s building materials would include composite wood products manufactured with urea-formaldehyde resins that would cause a significant impact on indoor air quality by emissions that would exceed the SCAQMD CEQA significance threshold for airborne cancer risk. The City requires, and the developer is legally obligated to ensure, that all new construction complies with all applicable building code and other legal requirements. Therefore, the developer will ensure that all building materials utilized will comply with all California requirements applicable to formaldehyde in newly constructed buildings including the applicable 2019 California Green Building Standards (CALGreen) Code (California Code of Regulations, Title 24, Part 11) for formaldehyde in composite wood products (as specified in the CARB Air Toxic Control Measure for Composite Wood – 17 CCR 93120 et seq.). CARB, the state’s leading authoritative agency on air quality, has stated that the control measures it has approved for reducing emissions, including formaldehyde, from composite wood products provide a level of control that protects health and safety. CARB makes this point by stating directly in its Frequently Asked Questions for Consumers on Reducing Emissions from Composite Wood Products that, from a public health standpoint, the CWP Regulation’s emission standards are set at low levels intended to protect public health.¹

The study that the commenter relied upon to purport that indoor carcinogenic risks to future residents would exceed the SCAQMD threshold of 10 excess cancers per million does not provide substantial evidence to support the claim for several reasons. First, the Healthy Efficient New Gas Home (HENGH) study was performed with the intent of evaluating the effects of the 2008 Title 24 Building Standards requirements for ventilation on indoor air quality within single family homes containing natural gas appliances and outfitted with mechanical ventilation systems. The purpose of the study was not to analyze formaldehyde emission rates or resulting concentrations from composite wood products. The single-family homes evaluated in the HENGH study were built between 2011–2017 and only required to meet 2008 Title

¹ CARB, https://ww3.arb.ca.gov/toxics/compwood/consumer_faq.pdf?_ga=2.32900281.682464648.1573169874-1026610208.1565143819, accessed March 6, 2022.

24 building standards for mechanical ventilation and building envelope leakage/air infiltration. The Title 24 standards and methodology for residential ventilation requirements were updated in 2016 and refined in 2019, and therefore homes included in the HENGH sample that would not have met the 2019 ventilation standards are not reliable for comparative purposes. Homes evaluated in the original 2007 California New Home Study (CNHS)—which the HENGH study used as a benchmark for pre-2008 ventilation conditions—are also not comparable to the proposed multi-family units that comprise the Project with regards to ventilation and infiltration standards, which greatly influence indoor air quality.

Second, the commenter used inappropriate exposure parameters and methodology to calculate the estimated risk to future residents based on the results of the HENGH study and the 2007 CNHS. The 2015 OEHHA risk assessment guidelines recommend a 30-year exposure for residential health risk assessments. The commenter used the obsolete 70-year residential exposure period assuming continuous (100 percent of time spent at home) exposure to arrive at the estimated cancer risk of 120 per million based on the HENGH study and 180 per million based on the CNHS analysis. The 2015 OEHHA guidelines recommend the use of a fraction of time at home value of 0.73 for adults and 0.72 for children. When the exposure duration is reduced from 70 years to 30 years and a time-at-home fraction of 0.75 is applied, the assumed risk based on the median HENGH study formaldehyde concentration of 24.1 µg/m³ would be 38.6 per million. This estimated risk is less than one-third of the risk claimed by the commenter (120 per million), reflecting some of the flawed methodology employed to estimate possible carcinogenic risks from formaldehyde exposure. However, it is likely that this reduced carcinogenic risk is still a substantial overestimation of potential formaldehyde concentrations and exposures in proposed project dwelling units.

All additional comments that the SCEA must evaluate formaldehyde contributions to existing and future cumulative air quality conditions are unfounded based on the lack of credibility and applicability of the reports cited by the commenter, and the lack of any regulatory guidance or precedence to conduct such an analysis for a development project's CEQA analysis. And such analysis would be highly speculative and beyond the scope of CEQA documentation for an infill development project that will be constructed in accordance with all applicable, current building and safety codes.

The comment alleges that the SCEA failed to evaluate health risks from diesel particulate matter (DPM). Contrary to the assertion, the SCEA appropriately and fully evaluated health risks from DPM (see SCEA, page IV-44) and concluded the Project would not cause significant impacts with regard to DPM.

The comment claims that a health risk analysis (HRA) should have been conducted for the Proposed Project based on OEHHA 2015 guidance. The intent of the OEHHA 2015 guidance is to provide HRA procedures for use in the Air Toxics Hot Spots Program or for the permitting of existing, new, or modified stationary

sources. As the Project is not part of the Air Toxics Hot Spots Program and is considered an urban infill mixed-use development consisting primarily of mobile and area sources (i.e., non-stationary sources), the OEHHA 2015 guidance is not directly applicable. OEHHA 2015 offers limited information on conducting a short-term HRA, but the guidance acknowledges the many inherent uncertainties that may occur, and it does not identify the types of short-term projects or non-stationary projects subject thereto. Moreover, OEHHA 2015 does *not* impose requirements for the Proposed Project to conduct a HRA nor does OEHHA 2015 indicate a HRA should be conducted for the Proposed Project. Further, the SCAQMD has not opined on the application of OEHHA 2015 guidance to development projects such as the Proposed Project, and it would be speculative to conduct an analysis without SCAQMD's necessary oversight.

Response to Comment 2-11

See **Response to Comment 2-5**.

Response to Comment 2-12

This comment states that the SCEA failed to include a quantified HRA to address construction and operational air quality health risk impacts. The SCEA appropriately evaluated air quality impacts and correctly determined the Proposed Project's construction and operational health risk impacts would be less

than significant. The requested analyses are not applicable, appropriate, nor required to determine the Proposed Project's air quality impacts.

With respect to construction, the SCEA appropriately evaluated health risks from DPM (see page IV-44) and the SCAQMD has not published guidance or methodology to conduct a construction-related HRA for development projects.

With respect to operations, the comment incorrectly states the Proposed Project's anticipated volume of daily vehicle trips and claims that the SCEA does not disclose or discuss the concentrations at which such pollutants would trigger adverse health effects. Operation of the Proposed Project would result in 3,061 daily vehicle trips. Appendix B to the SCEA provides a thorough disclosure and discussion of air pollutants and associated potential adverse health effects from criteria pollutants and TACs, including DPM. Additionally, the Proposed Project is considered an urban in-fill mixed-use development. Appendix A to the SCEA illustrates more than 90% of the Proposed Project's vehicle trips would be comprised of light and medium duty vehicles (i.e., not heavy-duty diesel trucks), and any Proposed Project-related increases to DPM would therefore be nominal. No further analysis is required to support the SCEA's determination of less-than-significant impacts upon air quality during construction and operation.

Also see **Response to Comment 2-5**.

Response to Comment 2-13

See **Response to Comment 2-5**.

Response to Comment 2-14

See **Response to Comment 2-5** and **Response to Comment 2-12**.

Moreover, the SWAPE analysis attached to the comment is inaccurate and inapplicable for several reasons. First, the analysis significantly overestimates the amount of DPM emissions during construction and operation of the Proposed Project. SWAPE appears to classify all PM₁₀ (particulate matter 10 microns in diameter) exhaust emissions from the Proposed Project's CalEEMod output sheets as the amount of DPM emissions. However, according to CARB, DPM is considered an ultrafine particulate, as more than 90% of DPM is less than one micron in diameter.² CARB considers DPM a subset of PM_{2.5}, and thus, to characterize all of the Proposed Project's construction and operational PM₁₀ exhaust emissions as DPM emissions is an overestimation. Second, SWAPE's HRA inaccurately modeled all Proposed Project-related construction and operation DPM emissions on-site as area sources. This assumption is not representative

² CARB, <https://ww2.arb.ca.gov/resources/overview-diesel-exhaust-and-health>; accessed March 7, 2022.

of the Proposed Project's sources, as many construction related emissions would occur off-site (and as mobile sources) and the majority of operational emissions would occur off-site over large areas during motor-vehicle travel. To assume that all Proposed Project DPM emissions would occur from on-site area sources with near ground-level release heights significantly overestimates nearby pollutant concentrations and is therefore not representative of the Proposed Project's characteristics. Lastly, SWAPE's modeling did not utilize local meteorological or terrain data specific to the Proposed Project's location. As a result, the comment's claims that the maximum exposed individual resident is located approximately 75 meters downwind cannot be substantiated without including local wind, weather, and topographical factors associated with the Project Site's location. By utilizing inappropriate modeling assumptions that are not specific to the Project and its location, the comment's assertion is unfounded and does not constitute substantial evidence that the Project may have a substantial adverse effect on the environment.

Response to Comment 2-15

This comment summarizes the prior comments made in this comment letter and therefore no additional response is needed. See **Master Response 2** regarding the Need for Mitigation Measures under CEQA. See **Responses to Comments 2-5 through 2-14** regarding the SCEA's Air Quality analysis.

Letter 3: Mitchell M. Tsai

Response to Comment 3-1

The City acknowledges that the Southwest Regional Council of Carpenters (SWRCC) may submit supplemental comments prior to the final hearing on the Proposed Project. As a commenter on the SCEA, SWRCC will receive future notices on the Proposed Project.

Response to Comment 3-2

The comment encourages the use of local hire provisions for construction projects. Inclusion of local hire or skilled labor unions is not a CEQA issue. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

The comment cites to a May 2021 SCAQMD rule that supports local hire programs to reduce air pollutant emissions. The referenced SCAQMD rule only applies to warehouse and distribution centers and is, therefore, not applicable to the Proposed Project, which contains neither a warehouse nor a distribution

center. Further, as demonstrated in the SCEA, the Proposed Project would not have any significant air quality or GHG impacts which would require the application of mitigation measures.

Response to Comment 3-3

See **Response to Comment 3-2**. The comment suggests the City require the Proposed Project be built to standards exceeding the current 2019 California Green Building Code. As explained in the SCEA, the Proposed Project will exceed the 2019 Cal Green Code as it will be built to a minimum LEED Gold standard, as outlined in PDF-1 of the SCEA (Refer to page IV-64).

Response to Comment 3-4

The comment provides general guidance regarding CEQA. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 3-5

The comment recommends that the City adopt measures to mitigate public health risks from the Proposed Project's construction due to the Covid 19 pandemic. Health risks related to the transmission of viruses are not a CEQA issue, and no specific response is required. Notwithstanding that this topic is outside the scope of CEQA, the City and the State of California, through California Division of Occupational Safety and Health (OSHA), have clear requirements regarding worker safety at construction sites. The Proposed Project shall comply with all requirements regarding worker safety that are in place during the time of Proposed Project construction. Further, the Covid 19 pandemic is an ongoing health crisis, and throughout the pandemic, health and safety protocols have changed repeatedly and rapidly. Project construction is not intended to begin in late 2022 or early 2023, At this time, it would therefore be premature for the Proposed Project Applicant to commit to specific measures regarding Covid 19.

Response to Comment 3-6

The comment provides general guidance regarding SCEAs. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 3-7

See **Master Response 2**.

Response to Comment 3-8

The comment provides general guidance regarding SCEAs. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 3-9

The comment states the SCEA fails to consider performance-based goals such as CARB's regional target to decrease VMT or SCAG's GHG per capita emissions target. The comment misconstrues how CARB and SCAG reduction targets are applied.

CARB targets are not intended to be used as project-specific targets. Rather they apply at a regional level and only reflect transportation sector emissions. Other sectors such as building energy, construction, and water use, as well as regional emissions for non-vehicle uses (i.e., ships, trains) are not accounted for within SCAG's target. As such, the regional targets are not applicable to the Proposed Project.

For instance, SB 375 requires CARB to develop regional GHG emission reduction targets for *cars and light-duty trucks* for 2020 and 2035 for each of the state MPOs on a per capita basis. Each MPO is required to prepare a SCS to meet these GHG emissions reduction targets and align transportation, land use, and housing strategies. For SCAG, the targets are to reduce per capita GHG emissions by 8 percent below 2005 levels by 2020 and 19 percent below 2005 levels by 2035. SCAG has demonstrated compliance with both targets in the most recent RTP/SCS. Determining the per capita carbon dioxide (CO₂) emissions requires modeling VMT by passenger vehicles and light trucks that emit CO₂ and dividing the number by the total population. However, because these regional totals do not account for emissions other than cars and light duty trucks, they are not appropriate to use at the project level.

Moreover, the Proposed Project is consistent with SB 375's mandate to reduce GHG emissions. As stated in SCAG's Program EIR (Section 3.8, Greenhouse Gas), SB 375 seeks to coordinate land use planning, housing planning, regional transportation planning, and GHG reductions. By coordinating these efforts, it is envisioned that vehicle congestion and travel can be reduced, resulting in a corresponding reduction in emissions. SB 375 directed CARB to set regional targets to reduce emissions and regional transportation plans are required to identify how they will meet these targets. SB 375 has three major components:

- Using the regional transportation planning process to achieve reductions in emissions consistent with AB 32's goals.
- Offering CEQA incentives to encourage projects that are consistent with a regional plan that achieves emissions reductions.
- Coordinating the Regional Housing Needs Assessment (RHNA) process with the regional transportation process while maintaining local authority over land use decisions.

Further, SB 375 expressly encourages development such as the Proposed Project, which combines jobs and housing in transit rich areas. These types of projects are inherently considered GHG emissions reduction projects as they represent good land use planning and help the region reduce VMT emissions. As a result, SB 375 included measures designed to specifically streamline CEQA review of developments like the Proposed Project.

In addition, as part of the SCEA determination checklist (see Section III, Sustainable Communities Environmental Assessment Eligibility), mitigation measures from the RTP/SCS EIR were reviewed to determine their applicability to the Project. As described in **Master Response 2**, the Proposed Project did not identify significant impacts related to air quality or greenhouse gas emissions that would require mitigation, therefore, none of the SCAG measures were applicable to the Proposed Project.

Response to Comment 3-10

See **Master Response 2**.

Response to Comment 3-11

The Proposed Project would be developed on a site that is currently in use as a public storage facility. The entire Project Site is paved and/or improved with buildings or other uses. While minimizing land disturbance during construction has the ability to leave more land available for carbon sequestration, this particular measure is not applicable to the Proposed Project. The Project Site is entirely paved, therefore leaving parts of the site undisturbed would not increase opportunities for carbon capture. Further, the Proposed Project will increase open space on the site but adding approximately one acre of open space and adding a net increase of 80 trees. These improvements would be far more beneficial from a carbon capture perspective than leaving any portion of the site as a vacant paved lot.

See **Master Response 2**.

The Proposed Project will be required to implement Mitigation Measure AQ1 from the Community Plan EIR. Mitigation Measure AQ1 (See Table III-3, West Adams – Baldwin Hills -Leimert CPA EIR Applicable Mitigation Measures) includes the following best management practices, which are consistent with SCAG PMM-AQ-1:

- Use properly tuned and maintained equipment.
- Contractors shall enforce the idling limit of five minutes as set forth in the California Code of Regulations.
- Use diesel-fueled construction equipment to be retrofitted with after treatment products (e.g., engine catalysts) to the extent they are readily available and feasible.
- Use heavy duty diesel-fueled equipment that uses low NOX diesel fuel to the extent it is readily available and feasible.
- Use construction equipment that uses low polluting fuels (i.e., compressed natural gas, liquid petroleum gas, and unleaded gasoline) to the extent available and feasible.
- Maintain construction equipment in good operating condition to minimize air pollutants.
- All off-road diesel-powered construction equipment greater than 50 horsepower shall meet the Tier 4 emission standards, where available. In addition, all construction equipment shall be outfitted with Best Available Control Technologies devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.
- Construction contractors shall use electricity from power poles rather than temporary gasoline or diesel power generators, as feasible.

Response to Comment 3-12

See **Master Response 2**. The Proposed Project will be subject to and required to comply with SCAQMD Rule 403 (Fugitive Dust), which is consistent with PMM-AQ-1. Rule 403. This rule requires fugitive dust sources to implement Best Available Control Measures (BACT) for all sources, and all forms of visible particulate matter are prohibited from crossing any property line. This rule is intended to reduce PM10 emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust. PM10 suppression techniques are summarized below.

- Portions of a construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized.
- All on-site roads will be paved as soon as feasible or watered periodically or chemically stabilized.
- All material transported off-site will be either sufficiently watered or securely covered to prevent excessive amounts of dust.
- The area disturbed by clearing, grading, earthmoving, or excavation operations will be minimized at all times.
- Where vehicles leave a construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the workday to remove soil tracked onto the paved surface.

Response to Comment 3-21

See **Master Response 2**.

Consistent with PMM-AQ-1, a detailed Construction Staging and Traffic Management Plan (CSTMP), which would include any applicable street/lane/sidewalk closure information, a detour plan, haul route(s), and a staging plan, will be prepared for the Proposed Project consistent with City of Los Angeles Department of Transportation's (LADOT's) recommendations and requirements. As noted on page 10 of the Transportation Assessment Report (TAR) prepared by LLG Engineers (October 1, 2021), and included as Appendix F of the SCEA, the plan would be based on the nature and timing of the Project's specific construction activities and would consider other projects under construction in the immediate vicinity of the Project Site. The CSTMP would also include features such as notification to adjacent project owners and occupants of upcoming construction activities, advance notification regarding any temporary transit stop relocations, and limitation of any potential roadway lane closure(s) to off-peak travel periods, to the extent feasible. In addition, a construction work site traffic control plan would be submitted to LADOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of construction activity should any lane closure/s be proposed.

Response to Comment 3-22

See **Master Response 2** and **Responses to Comments 3-11** and **3-12**.

Response to Comment 3-23

See **Master Response 2** and **Responses to Comments 3-11** and **3-12**.

Response to Comment 3-24

See **Master Response 2**.

The Proposed Project is a mixed use, transit-oriented project, which inherently is designed to minimize GHG emissions, consistent with the intent of PMM-GHG-1. As explained in the SCEA, numerous energy saving and sustainable features have been incorporated throughout the Proposed Project. The Project would be designed to meet Cal Green and Title 24 Building Standards Code (CALGreen Code). The Proposed Project's infill location would promote the concentration of development in an urban location

with extensive infrastructure. The Proposed Project's proximity to public transportation and services would aid in reducing VMT for residents and employees.

To promote sustainability, the Proposed Project would be aligned with Americas Residential Partnership's Responsible Property Investment Strategy & Roadmap to Net Zero Carbon. To achieve that goal, the multifamily building would incorporate:

- Net Zero Carbon from 2020 for Scope 1 & 2 in construction, and Scope 1, 2 & 3 in operation³
- Leadership in Energy and Environmental Design (LEED) Gold minimum
- Operational performance rating, such as FitWel

The Commercial Building is targeting:

- Net Zero Carbon from 2025 for Scope 1 & 2
- Absolute Zero by 2040 for Scopes 1, 2 & 3
- Leadership in Energy and Environmental Design (LEED) Gold minimum
- Operational performance rating, such as FitWel

Strategies that support these targets and that are included in the Proposed Project include:

- Designing for energy and water efficiency as a priority
- Both buildings will be entirely electric buildings (no natural gas or wood burning stoves or fireplaces in either building)
- ENERGY STAR Appliances
- LED lighting
- Intend to purchase 100% green power from the LADWP grid
- Variable Air Volume — HVAC (heating, ventilation, and air conditioning) system in the commercial building with MERV 13 - 15 filter + recycles outdoor air
- 100 Electric Vehicle parking spaces

³ Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers.

- Includes on-site Photovoltaic (PV) & exploring battery storage
- Bike showers, lockers, and storage
- Stormwater Recapture
- Use of permeable paving where feasible
- Use of drought tolerant plants for landscaping
- Undertaking a Life Cycle Assessment of embodied carbon in materials to engage supply chain in achieving lower carbon material substitutions
- Construction waste diversion
- Use of low carbon concrete and rebar construction materials where feasible

The buildings will be sustainably designed to meet and/or exceed all current City building code and Title 24 requirements. Specifically, the Proposed Project will incorporate eco-friendly building materials, systems, and features wherever feasible, including Energy Star appliances, water saving/low flow fixtures, non-volatile organic compound (VOC) paints/adhesives, drought tolerant planting, and high-performance building envelopment.

The Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking by including improvements along the existing Class I bicycle facility (i.e., dedicated path) located immediately adjacent to the site to the north between the south side of Jefferson Boulevard and the Proposed Project Site, ground floor dining options, and nearly one acre of landscaped public space on the ground level that connects to the directly adjacent Metro “E” Line La Cienega/Jefferson light rail station.

The location of the Proposed Project encourages a variety of transportation options. As noted on page 10 of the TAR and included in Appendix F of the SCEA, the Proposed Project would incorporate 222 bicycle parking spaces, including 36 short-term spaces and 186 long-term spaces. The bicycle spaces will be provided in a readily accessible location or locations and appropriate lighting will be provided to increase safety and provide theft deterrent during night-time parking. The Proposed Project will comply with LAMC Section 91.6307 with respect to the required on-site showers for bicyclists. In addition, the existing chain link fence, which currently separates the Proposed Project site from the existing Class I bicycle facility directly adjacent to the north, will be removed, thus providing even greater accessibility.

Response to Comment 3-25

See **Master Response 2** and **Response to Comment 3-24**. Appendix F of the *CEQA Guidelines* relates to wasteful and inefficient use of energy. The SCEA addresses Energy using the Appendix F questions and determined impacts would be less than significant. Refer to Section IV, 6. Energy, page IV-64 of the SCEA.

The Proposed Project would result in the development of multi-family residential and affordable units, office space, and ground floor commercial uses within a HQTAs as defined by SCAG and a Transit Priority Area as defined by SB 375. The Proposed Project Site is located less than one-quarter mile from the Metro “E” Line La Cienega/Jefferson light rail station platform. In fact, the station platform is located immediately across South La Cienega Boulevard to the east (i.e., at the southeast corner of the South La Cienega Boulevard/Jefferson Boulevard intersection). Furthermore, the site is located less than one-half mile from Metro bus lines with frequency of service intervals of 15 minutes or less during the morning and afternoon peak commute periods. As noted on page 25 of the TAR and included in Appendix F of the SCEA, Section 3.2 describes the existing bus transit network. As shown on Table 3-1, page 27 of the TAR, the Project site is served by Metro Bus Transit Lines 38, 105, Culver City Bus Line 4, and County of Los Angeles Baldwin Hills Parklands Shuttle (weekends only). Therefore, the Proposed Project would provide residents, employees, and visitors with convenient access to public transit and opportunities for walking and biking. The location of the Proposed Project encourages a variety of transportation options and access and is expected to result in less emissions than would otherwise be expected to occur.

Response to Comment 3-26

See **Master Response 2**.

Response to Comment 3-27

See **Master Response 2** and **Response to Comment 3-24**.

Response to Comment 3-28

See **Master Response 2**. As described in more detail in the SCEA and below, the Proposed Project design incorporates many of the features in this section of PMM-GHG-1, including integrating green building measures consistent with CALGreen, implementation of project design features, use of BACT during design and construction, measures that encourage transit, carpooling, bike-share and car-share, incorporation of bicycle and pedestrian facilities, improving access to transit, use of/incentives for carpool, designating rideshare, land use siting and design to reduce GHG measures including through developing on an infill site.

Refer to **Response to Comment 3-24**. The Proposed Project has purposely been sited to be in close proximity to transit (bus transit and rail transit), bicycle and pedestrian facilities to encourage alternative modes of transit.

Refer to **Response to Comment 1-3**. The Proposed Project will include 100 electric vehicle (EV) parking spaces (see PDF-1 on page IV-67 of the SCEA); affordable housing, including 22 very low-income units, 7 workforce housing units (see SCEA Section II, Project Description, page II-1; public open space (Section 15(a)(iv) of the SCEA); and the following TDM measures (see page IV-176 of the SCEA):

- **Education and Encouragement: Promotions and Marketing.** This strategy involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices. This strategy includes passive educational and promotional materials, such as posters, info boards, or a website with information that a traveler could choose to read at their own leisure. For the purposes of the analysis, it is assumed that every employee would be eligible for passive marketing and promotional materials.
- **Bicycle Infrastructure: Include Bike Parking Per LAMC.** This strategy involves the implementation of short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations. Projects providing short-term and long-term bicycle parking in accordance with LAMC Section 12.21A.16 qualify for this measure. The Applicant has indicated that the Proposed Project will comply with the short-term and long-term bicycle parking requirements of the Los Angeles Municipal Code.
- **Bicycle Infrastructure: Include Secure Bike Parking and Showers.** This strategy involves implementation of additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel by providing amenities at destinations. Projects providing long-term bicycle parking secured from the general public in accordance with LAMC Section 12.21A.16(d)(2) and showers in accordance with LAMC Section 91.6307 qualify for this measure. The Applicant has indicated that the Proposed Project will comply with the requirements of the Los Angeles Municipal Code and provide showers, lockers, and bicycle storage with bicycle repair equipment, and 36 short term and 186 long term bicycle parking spaces.
- **Neighborhood Enhancement: Pedestrian Network Improvements.** This strategy involves implementation of pedestrian network improvements throughout and around the Project Site that encourage people to walk. This includes internally linking all uses within the Project Site with pedestrian facilities such as pathways and walkways and connecting the Project Site to the surrounding pedestrian network. It also includes the elimination of barriers such as walls, landscaping, and slopes

that impede pedestrian circulation. The Proposed Project includes pedestrian infrastructure to connect facilities within the site and the surrounding street system. Proposed Project features include landscaped and lighted pedestrian walkways connecting facilities within the site, as well as connections with the adjacent public sidewalks on the South La Cienega Boulevard and Jefferson Boulevard project frontages. In addition, the Proposed Project will have approximately one acre of ground level landscaping, open space, and interactive features including a new public plaza connecting with the bicycle path, Metro station, and surrounding neighborhood as well as a landscaped semi-public plaza located between the two buildings that stretch parallel to the bicycle path. Street trees and streetscape plantings should be introduced along the same public frontages in accordance with the City's standards. In addition, Project signage could include general ground level and wayfinding pedestrian signage around the perimeter of the Project Site, building identification signs, and other sign types.

In addition, to mitigate the Proposed Project's potential impacts from employee VMT, the SCEA recommends Mitigation Measure TR1, which requires the implementation of a ride share program to reduce VMT to a less than significant level. This strategy involves the use of ride-share matching services, designated preferred parking for ride-share participants, adequate passenger loading/unloading and waiting areas for ride-share vehicles, and a website or message board to connect riders and coordinate rides in order to increase vehicle occupancy. As noted on page 56 of the TAR and included as Appendix F of the SCEA, every employee would be eligible for the ride-share program.

Response to Comment 3-33

Refer to **Responses to Comments 3-9** through **3-32**.

Response to Comment 3-34

The comment suggests that the Project's impacts need to be analyzed without considering the Project's design. This is contrary to CEQA. CEQA requires that an environmental document's Project Description include a project's technical, economic, and environmental characteristics relevant to the CEQA analysis (14 Cal. Code Regs. § 15124). Mitigation is only needed when a project, taking into account all elements of that project's design, causes a significant or potentially significant impact (14 Cal. Code Regs. §§ 15021, 15126.4(a)(3), (4)). When a project is designed at the outset to include features that result in a less than significant impact, mitigation is unnecessary and cannot be imposed through CEQA.

Here, the SCEA properly analyzes the Proposed Project as designed, finding that, in most cases, the Proposed Project will have less than significant impacts. For those areas where potentially significant impacts were identified, mitigation measures have been recommended.

The comment also suggests that the SCEA concludes there will be less than significant impacts for specific topics in reliance on project design features (PDFs), which the comment alleges are not fully enforceable. As explained below, the comment is incorrect as the subject PDFs are fully enforceable.

Degradation of Visual Character

See Section IV-C.1 of the SCEA. The SCEA is not required to analyze aesthetic impacts because the Proposed Project is a mixed-use residential project located on an infill site within a transit priority area (Public Resources Code § 21099(d)(1)). Nonetheless, Section IV of the SCEA explains how the Proposed Project, as designed, will have a less than significant impact on aesthetics.

Net Increases of Criteria Air Pollutants

See IV-C.3.b of the SCEA. While the Proposed Project includes sustainable features in the form of PDF 1 and construction best management practices in the form of MM AQ1 from the Community Plan EIR, the SCEA's conclusion that the Proposed Project will have a less than significant impact regarding criteria pollutants does not rely on PDF 1 or MM AQ1. Instead, the Proposed Project will have a less than significant impact on criteria air pollutants because operational and construction emissions would not exceed the SCAQMD's thresholds. The enforceability of PDF 1 is therefore not relevant to the impacts analysis.

Tree Removal

See p. IV-47 of the SCEA. There are no PDFs or mitigation measures related to the removal of the only two existing trees onsite, both of which are non-native, non-protected, in poor condition, and less than 8" in diameter. Therefore, the enforceability of PDFs is irrelevant to this issue. Further, the Proposed Project will comply with the City's Code requirements for provision of onsite trees per LAMC 12.21 G.2.(a).(3.) and will include a minimum of 65 trees onsite as required by City Code; however, the Project Applicant intends to provide a net increase of 80 trees onsite.

Nesting Native Birds

See pp. III-80 and IV-47 of the SCEA. The Proposed Project incorporates MM BR1 from the Community Plan EIR to address potential impacts to nesting native and migratory birds. In addition, the Proposed Project is required, as a matter of federal law, to comply with the U.S. Fish and Wildlife Service's regulations regarding migratory birds.

Inadvertent Discovery of Cultural Resources and Human Remains / Paleontological Resources

See pp. III-83, 84, and IV-63, 64, 81, 82, and 181 to 184 of the SCEA. The SCEA imposes mitigation measures CR5 through CR10 from the Community Plan EIR to address the potential discovery of cultural resources and human remains during construction, even though the SCEA found inadvertent discovery to be unlikely. The SCEA also calls for a condition of approval (which City staff has proposed as Condition of Approval 25 to the Vesting Tentative Tract Map) to protect tribal cultural resources in the event of inadvertent discovery during construction.

Erosion

See pp. IV-78, 79 of the SCEA. As discussed in the SCEA, the Proposed Project site's natural features make erosion impacts unlikely. Nonetheless, the Proposed Project will be required to comply with numerous federal, state and local laws that are designed to ensure erosion impacts remain less than significant, including the City's grading permit requirements overseen by the City's Department of Building and Safety; the City's Municipal Code; SCAQMD Rule 402; the State Water Resources Control Board (SWRCB) Construction General Permit; and a Stormwater Pollution Prevention Plan (SWPPP) that must comply with the National Pollution Discharge Elimination System (NPDES) permitting regulations.

Greenhouse Gas Emissions

See pp. IV-82 to IV-99 of the SCEA. The SCEA's GHG analysis is a qualitative analysis of the Proposed Project's consistency with CARB's 2017 Scoping Plan, SCAG's 2020-2045 RTP/SCS, the City's General Plan,

and the City's Green New Deal. These applicable plans call on projects to implement qualitative measures rather than meet specific thresholds. In this instance, the Proposed Project must comply with CALGreen Building Standards and Title 24, which directly address GHG emissions reductions; the Proposed Project must include EV parking, bicycle spaces, and trees per the City's Code and the specific TDM measures that are required as conditions of approval; and the Proposed Project must include a minimum percentage of affordable housing, which will be in close proximity to jobs and transit given the Proposed Project site location. Therefore, the SCEA's GHG analysis is adequate.

Refer to **Master Response 1, Responses to Comments 3-9, 3-24, and 3-28.**

Public Hazards Related to Asbestos, Methane, and Accidental Release of Hazardous Materials

See pp. IV-101 to 104 of the SCEA. The SCEA acknowledges that hazardous impacts are potentially significant without mitigation. For that reason, the SCEA imposes mitigation measure HAZ-1 to ensure proper excavation and permanent removal of impacted soils, if any. The Proposed Project would be required to comply with all local, state, and federal regulations concerning the potential release of hazardous materials, as explained in the SCEA.

Impact on Water Quality Standards and Groundwater

See pp. IV-107 to 110 of the SCEA. As explained in the SCEA, the Proposed Project is required to comply with all federal, state, and local laws relating to the protection of water quality and groundwater, including the NPDES permitting regulations, the Proposed Project's SWPPP, the Standard Urban Storm Water Mitigation Plan governed by the SWRCB, and the City's Low Impact Development (LID) Ordinance (No. 181899).

Moreover, the Proposed Project is unlikely to cause impacts to groundwater as the Proposed Project Site is not a source of groundwater recharge because of its location in an urbanized area completely developed with impervious surfaces.

Noise Impacts

See pp. IV-138 to 145 of the SCEA. The SCEA acknowledges that the Proposed Project has the potential to cause significant construction noise impacts unless mitigation is incorporated. For that reason, the SCEA imposed mitigation measure NOI-1 to achieve sufficient noise attenuation to reduce noise impacts to less than significant.

The SCEA found that the Proposed Project will not cause significant operational noise impacts because the level of noise generated during operations and trip generation would not exceed the City's CEQA Thresholds.

Impacts on Public Services

See pp. IV-150 to 162 of the SCEA. As explained in the SCEA, the Proposed Project would have a less than significant impact on public services, because the Proposed Project would be required to comply with state and local laws regulating construction activities, including a CSTMP, the City's Building and Fire Codes, and the Proposed Project's payment of school impact fees as required by state law. The conclusion also was based on the fact that the Proposed Project is in close proximity to adequate fire, police, and other emergency services. Finally, the SCEA imposes mitigation measure PS1 from the Community Plan EIR, which requires the incorporation of all crime prevention features recommended by the LAPD.

Refer to **Responses to Comments 3-21** and **3-37**.

Impacts on Neighborhood and Regional Recreational Facilities

See pp. IV-159 to 161 of the SCEA. As explained in the SCEA, the Proposed Project will have a less than significant impact on recreational facilities because the Proposed Project will, as required by the City's Code, incorporate private and public open space and pay applicable park mitigation fees.

VMT-related Impacts

See pp. IV-176 to 179. As explained in the SCEA, the Project incorporates TDM measures that are required by LADOT and which are imposed on the Project via the City's Code requirements relating to bicycle infrastructure, parking and showers, as well as open space. In addition, the SCEA acknowledges that the Project will still have potentially significant impacts to work VMT without mitigation. For that reason, the SCEA imposes mitigation measure TR1 requiring the implementation of a ride share program, which, once implemented, will reduce the Project's work VMT to below the threshold of significance.

Refer to **Master Response 1**, **Responses to Comments 3-9**, **3-24**, and **3-28**.

Impacts on Public Utilities

See pp. IV-184 to 194 of the SCEA. As explained in the SCEA, the Proposed Project will have a less than significant impact on water supply, sewer infrastructure, electricity, and telecommunications because the City's existing infrastructure has sufficient capacity to accommodate the Proposed Project. The Proposed Project will include sustainable and other features to reduce the demand on these resources, including

compliance with CALGreen Building Code, but the SCEA's less than significant impact conclusions do not rely on these Proposed Project features.

Regarding stormwater, the Proposed Project is required to comply with all federal, state, and local laws relating to the protection of water quality, including the NPDES permitting regulations, the Project's SWPPP, the Standard Urban Storm Water Mitigation Plan governed by the SWRCB, and the City's LID Ordinance (No. 181899), all of which regulate the treatment of stormwater.

Response to Comment 3-35

The comment provides general guidance regarding mitigation under CEQA. The comment presents no environmental issues within the meaning of CEQA, and no specific response is required. The comment will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Response to Comment 3-36

The comment refers to MM-BIO-1. There is no such mitigation measure included within the SCEA and therefore a response cannot be provided.

The Proposed Project does incorporate Mitigation Measure BR1 from the Community Plan EIR, which states:

As a condition of approval for any Discretionary or "Active Change Area Project", as defined in Section 3.4 of the Project Description, the City shall require that in order to prevent the disturbance of nesting native and/or migratory bird species, all clearing of a project site should take place between September 1 and February 14. If construction is scheduled or ongoing during bird nesting season (February 15 to August 31), qualified biologists shall survey the area within 200 feet (or up to 300 feet, depending on topography or other factors, and 500 feet for raptors) of the construction activity to determine if construction would disturb nesting birds. If nesting activity is being compromised, construction shall be suspended in the vicinity of the nest until fledging is complete. This mitigation measure shall be implemented by a qualified biologist under contract with the project applicant(s). The project biologist should prepare a report detailing the results of the construction monitoring efforts. The report should be submitted to the California Department of Fish and Game (CDFG) within two months of the completion of the monitoring activities.

This mitigation measure clearly provides methods for compliance and benchmarks for performance and identifies the responsible parties. As a result, the SCEA has not improperly deferred the formulation of mitigation.

Response to Comment 3-37

The comment relates to payment of fees to mitigate impacts to schools. Pursuant to the California Government Code Section 65995, the Proposed Project Applicant would be required to pay school fees established by LAUSD, payment of which in accordance with existing rules and regulations regarding the calculation and payment of such fees would, by law, provide full and complete mitigation for any potential direct and indirect impacts to schools as a result of the Proposed Project. The methods and timing for compliance are governed by and set forth in state law. As a result, the SCEA has not deferred the formulation of mitigation.

Response to Comment 3-38

Refer to **Responses to Comments 3-36** and **3-37**.

Response to Comment 3-39

The comment asserts that the SCEA is not consistent with CARB's scoping plan and that the SCEA cannot rely on consistency with the Scoping Plan in support of its finding the Proposed Project will result in less than significant GHG impacts.

Contrary to the comment, the SCEA does demonstrate the Proposed Project's consistency with CARB's scoping plan. The comment correctly asserts CARB's scoping plan and measures within the Scoping Plan are not intended to be applied at the project level. However, consistent with best practice for determining GHG impacts, SCEA Table IV-11, Proposed Project Consistency with CARB 2017 Scoping Plan Greenhouse Gas Emission Reduction Strategies, identifies strategies from the scoping plan and explains how the Proposed Project is consistent with each strategy (where applicable). For example, where the measure is to increase the Renewables Portfolio Standard to 50% of retail sales by 2030, the SCEA finds that – although the measure is not intended for development projects – the Proposed Project would still support implementation of this measure through its commitment to purchase green power from the Los Angeles Department of Water and Power grid. As a result, the Proposed Project would be consistent with the Scoping Plan.

Regardless, the SCEA does not rely exclusively on the Proposed Project's consistency with the Scoping Plan for its finding of less than significant GHG impacts. The SCEA concludes the Proposed Project is consistent with SB 32, the RTP/SCS, the City's General Plan, and the City's Green New Deal, as well as the Scoping Plan. As explained in the SCEA, the Proposed Project's consistency with these plans collectively, as well as the Proposed Project's design, implementation of PDF-1 and incorporation of energy-efficient and

sustainable design features described throughout the SCEA, ensures the Proposed Project will have a less than significant GHG impact.

Refer to **Master Response 1, Responses to Comments 3-9, 3-24, 3-28, and 3-34.**

Response to Comment 3-40

Refer to **Response to Comment 3-39.**

Many of the measures listed in the comment do not apply to the Proposed Project. For instance, the comment calls on the Proposed Project to provide electrical outlets on public/quasi-public lands, but the Proposed Project is a private development. The comment also calls for installation of gas outlets in residential backyards, but the Project is a high rise without individual backyards and the Proposed Project is entirely electric. Nonetheless, the Proposed Project does incorporate many of the items discussed in the comment. See **Responses to Comments 3-3, 3-9, 3-11, 3-12, 3-21, 3-24, and 3-28.**

The Proposed Project would add a net increase of 80 trees to the Project Site, including 3 street trees and parking would be primarily underground rather than at surface level.

Response to Comment 3-63

Refer to **Response to Comment 3-40**.

The Proposed Project will be Net Zero Carbon from 2020 for Scope 1 & 2 in construction, and Scope 1, 2 & 3 in operation⁴ The Proposed Project would not exceed any GHG emissions thresholds for which offsets would be required.

Response to Comment 3-64

Refer to **Response to Comment 3-63**.

⁴ Scope 1 covers direct emissions from owned or controlled sources. Scope 2 covers indirect emissions from the generation of purchased electricity, steam, heating, and cooling. Scope 3 includes all other indirect emissions within the supply chain or in a company, such as business travel, purchased goods and services, or transportation tied to suppliers and customers.

Response to Comment 3-65

Refer to **Response to Comment 3-63**.

Response to Comment 3-66

Refer to **Responses to Comments 3-39 through 3-65**.

Response to Comment 3-67

The comments do not raise any issues that alter the analysis or conclusions of the SCEA and do not involve any new significant impacts or add "significant new information" that would require recirculation of the SCEA.

Letter 4: Email from Nadine Angele (2-1-2022)

Response to Comment 4-1

The comment's expressed opinion regarding the Proposed Project and overall level of traffic volumes in the vicinity will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

No specific comment has been raised with respect to the validity of the analyses contained within the SCEA. Nevertheless, with regard to the comments pertaining to increased traffic volumes in the vicinity caused by development projects, a full TAR was prepared by LLG Engineers in compliance with LADOT's latest guidelines. The TAR was cleared by LADOT as noted in LADOT's March 8, 2022, Interdepartmental clearance letter to City Planning.

The TAR concluded that the Proposed Project will not result in significant CEQA-related transportation impacts based on an assessment of VMT after implementation of Mitigation Measure TR1. In addition, the TAR also disclosed existing and future intersection volumes and operations/vehicle queuing as part of the "Non-CEQA" analysis. That assessment reflects the inclusion of related/cumulative project traffic within a half-mile radius (i.e., from 16 other development projects) as well as regional growth (refer to Section 3.5, beginning on page 34 of the TAR (included in Appendix F of the SCEA), for a full discussion of cumulative/related projects and the ambient growth in traffic factor employed in the assessment). The traffic expected to be generated by nearby projects, including the project referenced by the commenter as the "Carmel" project (i.e., identified as the Cumulus project [L6] on Table 3-3, page 37 of LLG's TAR), has been included in the assessment. Future intersection volumes and operations have thus been disclosed and the Jefferson Boulevard corridor was also assessed in terms of corridor operations and turn lane vehicle

queuing in close proximity to the project site. This reflects the current and future traffic distribution patterns in the vicinity.

Based on the conclusions of the non-CEQA assessment, which summarized overall traffic operations and turn lane vehicle queuing at a total of seven (7) locations, the Proposed Project Applicant will be required to contribute funds to Transportation System Management (TSM) improvements as outlined further in LADOT's March 8, 2022, Interdepartmental clearance letter to City Planning.

Response to Comment 4-2

Refer to **Response to Comment 3-34**.

Letter 5: Email from Nadine Angele (2-22-2022)

Response to Comment 5-1

Refer to **Response to Comment 4-1**.

Response to Comment 5-2

Refer to **Response to Comment 3-34**.

With respect to cumulative noise effects, the SCEA adequately addressed the Proposed Project's consistency with the Community Plan EIR and SCS/RTP EIR. Both the SCAG EIR and the West Adams EIR indicate that project specific noise analysis should be undertaken, as was done with the Proposed Project. As a result of the analysis, project-specific noise mitigation was included. **Mitigation Measure NOI-1** would require the use of mufflers, sound barriers, or other suitable noise reduction devices capable of achieving attenuation of at least 13 dBA along the Project's southern and western boundaries during construction.

Mitigation Measures

MM NOI-1: During the construction phase, along the southern and western property line, the Proposed Project shall employ construction control measures to reduce increases in ambient noise at the closest receptors by a minimum of 13 decibel Leq. Examples of employable measures include use of mufflers, sound barriers and reducing the time construction equipment is used, as well as ensuring equipment is turned off when not in use. This specification shall be included on all construction documents to ensure compliance.

Additionally, the Proposed Project, all related projects and associated patrons would be subject to the City's Noise Ordinance, which ensures implementation of noise-related objectives, goals, and policies of the City's General Plan.

Response to Comment 5-3

The comment expresses a general opinion regarding the size of the Proposed Project and anticipated neighborhood impacts, which will be included as part of the record and forwarded to the decision-makers for their review and consideration prior to any action being taken on the Proposed Project.

Refer to **Master Responses 1 and 2**, **Response to Comment 3-24**, and **Response to Comment 3-34**.
