Site Name: MOBIL SERVICE STATION #00LLR
Violation Date: 05-20-2019
Citation: 23 CCR 16 2716(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(f)
Violation Description: "Failure to maintain on-site, or off-site at a readily available location if approved by the UPA, copies of Designated Operator inspection records as follows: Designated operator monthly inspection records for inspections performed before October 1, 2018 must be kept for 12 months from the month of inspection. For inspections performed on or after October 1, 2018, copies of the ""Designated Underground Storage Tank Operator Visual Inspection Report"" must be kept for 36 months from the month of inspection. "
Violation Notes: Returned to compliance on 05/29/2019. OBSERVATION: Facility did not maintain copies of DO inspections completed before 10/1/18 for 12 months, or copies of those completed after 9/30/18 for 36 months. CORRECTIVE ACTION: Maintain copies of DO inspections for required time frames. *** Mr. Mehrdad, while on site 5-20-2019, Inspector Yoshihashi was unable to locate the Designated Operator Monthly Inspections for February 2019 and January 2019. Can you please explain this situation or submit proof that you completed these inspections. ***

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 05/20/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verification. *** Mr. Mehrdad, your Overfill Testing was due as of 10-13-2018. Please have your primary means of overfill tested and submit the test results to the LAFD CUPA. CORRECTED BY SERVICE TECHNICIAN PEYMAN NASIBI OF PACIFIC NOZZLE 3-18-2019. ***

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval General Type: Other/Unknown
Eval Date: 01-24-2019
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: "Second Notice of Violation Inspection Report Documents uploaded to CERS were reviewed. Indicated previously in this report are violations, originally issued on 12/19/19 that have not been resolved by the original COMPLY BY date. These violations have been re-issued and the violation class upgraded. Review and correct all violations indicated in this report, on or before the new COMPLY BY date associated with each violation. Failure to resolve these violations will result in this facility being subject to formal enforcement. New user instructions are provided below. The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a Hazardous Materials Business Plan into CERS is [Truncated]

Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by owner Michael Lee. Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to <https://cersbusiness2.calepa.ca.gov> to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/27/2021	Source: EPA
Date Data Arrived at EDR: 05/03/2021	Telephone: N/A

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2021

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/23/2021	Telephone: (415) 495-8895

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/23/2021	Telephone: (415) 495-8895

Number of Days to Update: 57	Next Scheduled EDR Contact: 10/04/2021
	Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/22/2021	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/23/2021	Telephone: (415) 495-8895

Number of Days to Update: 85	Next Scheduled EDR Contact: 09/06/2021
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/22/2021	Source: Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
J150	1/2 - 1 Mile NNW	Not Reported
152	1/2 - 1 Mile ENE	SW
169	1/2 - 1 Mile South	Not Reported
1G	1/2 - 1 Mile NNW	Not Reported
2G	1/2 - 1 Mile ENE	SW
3G	1/2 - 1 Mile South	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam
 gravelly - sandy loam
 silt loam
 clay
 fine sand
 gravelly - sand
 sand
 fine sandy loam

Surficial Soil Types: sandy loam
 gravelly - sandy loam
 silt loam
 clay
 fine sand
 gravelly - sand
 sand
 fine sandy loam

Shallow Soil Types: fine sandy loam
 gravelly - loam
 sandy clay
 sandy clay loam
 clay
 silty clay
 sand

Deeper Soil Types: gravelly - sandy loam
 sandy loam
 very gravelly - sandy loam
 stratified
 very fine sandy loam
 weathered bedrock
 sand
 gravelly - fine sandy loam
 silty clay loam
 clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Subject: Phase II, Supplemental Environmental Site Investigation
Address: 3377 Wilshire Boulevard
974-998 South Gramercy Drive
Los Angeles, CA 90019

Dear **Mr. Amy Lee**,

On behalf of **Bandus Holdings** (the client), Environ Phase Consulting Co. (EPC) completed a Phase II, Supplemental Environmental Site Investigation (ESI) at the above referenced site property in accordance with the scope of work presented in July 6, 2021 Phase II ESI proposal.

We appreciate the opportunity to assist you with this project. If you should have any questions or concerns regarding this report, or if we can be of any further service to you in the future, please do not hesitate to contact Jeff Lee at 213-250-0411.

Best Regards,

Allen Shim, P.E.

EXECUTIVE SUMMARY

The subject site is addressed as 3377 West Olympic Boulevard and 974-998 South Gramercy Drive in the City of Los Angeles, California. The subject site consists of three rectangular-shaped parcel lots (APNs: 5081-033-011, -014, & -022) totaling approximately 34,967 square-feet and is developed with a vacant commercial building and parking lot. The 6,625 square-foot commercial building is developed at the southern portion of the subject site.

The purpose of the Phase II Supplemental Environmental Site Investigation (ESI) activities was to investigate the potential for contaminants is impact to the subject site from a recognized environmental condition (REC) identified in a Phase I Environmental Site Assessment (ESA) Report prepared for the subject site by EPC. The following the recognized environmental conditions (RECs) were assessed during the Phase I ESA:

- Based on the report and attached documents, the full *Preliminary Site Characterization Report* prepared by WEECO on December 24, 1996 was not able to be found within the appendices of the Xarax's Phase I Environmental Site Assessment report. Therefore, EPC could not accurately assess the previous subsurface investigation conducted at the subject site. Information regarding the soil sampling location and depths are unknown. Therefore, EPC considers the former gasoline station at the subject site a recognized environmental condition (REC). Additionally, the east neighboring property, addressed as 3355 West Olympic Boulevard, was a former gasoline station from approximately 1942 to 1966 (~24 years) and an auto repair shop from 1970 to present-day (~51 years). Based on the close proximity to the subject site, a potential vapor encroachment condition (pVEC) exists at the subject site due to the former gasoline station and auto repair shop activities from the east neighboring property. EPC recommends a supplemental subsurface investigation be conducted at the subject site to verify the analytical results of the previous *Preliminary Site Characterization Report* prepared by WEECO in 1996 and to assess any subsurface impacts to the subject site from the former gasoline station and auto repair shop activities from the east neighboring property.
- Other Recommendations regarding **Non-CERCLA** (Comprehensive Environmental Response, Compensation, and Liability Act known as Superfund, USEPA, Dec 11, 1980):
 - According to the Los Angeles City Department of City Planning's property information online website (ZIMAS), the subject site, addressed as 3377 West Olympic Boulevard, is located within the *Methane Buffer Zone*. EPC recommended a methane survey at the subject site prior to any construction.
 - Based on the building built year in 1967, asbestos survey and lead based paint assessment reports are recommended prior to the subject building demolition.
 - Based on our visual site inspection, mold was found at the subject building. A safety and health plan should be prepared to protect construction workers during construction activities.

Review of the soil and soil vapor sample analytical results throughout the site indicated that there is no significant hazardous contamination at the subject site therefore; the site is "no

further action” from environmental engineering is merit for the subject site as following reasons:

- Former USTs: Based on the historical sources of the previous environmental site assessments, from 1942 to 1966, the subject site includes address at 3377 West Olympic Blvd. was redeveloped with a service station. In 1967, the present-day commercial building was developed at the southern portion of the subject site and mostly occupied by various restaurants. Currently, the commercial building is unoccupied and vacant.

Based on lack of the former UST removal records, a geophysical survey was performed at the site by Socal Locators. Geophysical survey using GPR is available to characterize the shallow subsurface conditions of soil excavation, UST, and associated piping locations. In this report, EPC summarized the result of the geophysical survey conducted on July 14, 2021 by Socal Locators. The geophysical survey did **not** find evidences of remaining USTs at the building and parking lot of the site (see [Appendix-1](#)).

- Preliminary Site Characterization Report (Weeco, 1996):
 - Based on the Preliminary Site Characterization Report (Weeco, 1996), six (6) soil borings were advanced in the area of the former gas station and eighteen (18) soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) and Volatile Organic Compounds (VOCs). Based on analytical results of the soil samples, all soil samples were determined to be none detected (ND) for any of the constituents tested. Based on the analytical results, the site was considered clean, in accordance with the California Water Resources Control Board “Maximum Soil Screening Levels for TPH and BTEX above Drinking Water Aquifers” (RWQCB-Region 4, Rev. 2005). The report concluded “based on these analytical results, no further subsurface investigation is necessary for the site.”
- Field evidences of petroleum hydrocarbon contaminations (i.e., visual, odorous, and/or PID readings) were not observed in this Supplemental ESI.
 - The soils beneath the subject site consist of sandy silt and sand to a maximum depth investigated 20 feet bgs. No groundwater was encountered during our soil borings (see [Appendix-2](#)). No wells such as producing, monitoring, vapor treatment wells are known to exist in the subject site. Depth to groundwater is expected below 50 feet bgs at the subject site.
 - A total of nine (9) soil samples were collected from six soil borings during this Supplemental ESI. Soil samples were analyzed for Total Petroleum Hydrocarbons as gasoline, diesel, and oil ranged organics (TPH-g/d/o), oxygenated/chlorinated VOCs, and total lead. Based on the soil analytical results of the subject site ([Appendix-3](#)), EPC concludes that no further investigation is warranted at this time. Review of the soil analytical results indicates the following: a) Oxygenated/chlorinated VOCs were not detected above report limits (RLs) in the soil samples; b) Detected concentrations of TPH-g (0.542 mg/kg) and TPH-d (4.82 mg/kg) did not excess their respective ESL Tier 1 (i.e., Environmental Screen

Levels, San Francisco Bay Regional Water Quality Control Board, 2019, Rev. 2); and c) analytical laboratory results of total lead were detected ranging from 2.77 to 7.02 mg/kg. The detected concentrations did not exceed its ESL Tier 1.

- A total of ten (10) soil vapor samples collected from six temporary soil vapor wells were analyzed for TPH-g and oxygenated/chlorinated VOCs via USEPA method 8260B by a state certified ELAP (see [Appendix-4](#)). Review of the soil vapor analytical results indicates the following: a) TPH-g was not detected above report limits (RLs) in the soil vapor samples; b) Oxygenated/chlorinated VOCs were not detected above RLs in the soil vapor samples; and c) Based on cancer risk equations as shown in Section 4.3, risk levels of Oxygenated/chlorinated VOCs were evaluated below the residential risk threshold of 1.0E-06 and Hazard Quotient for non-carcinogens (HQ) of 1.0. Vapor intrusions of oxygenated/chlorinated VOCs would likely not present threat to human health or environment. Thus, EPC concludes that no further investigation is warranted at this time.

1.0 BACKGROUND

1.1 Geographic Setting

The subject site is located at the northeast corner of the intersection of West Olympic Boulevard and South Gramercy Drive in the City of Los Angeles, California. The subject site's physical location is found employing a United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle (Quad) Map relevant to the subject property. The USGS 7.5 Minute Quad Map has an approximate scale of 1 inch to 2,000 feet, and shows physical features with environmental significances such as wetlands, water bodies, roadways, mines, and buildings. The subject site is located within 34° 3' 11.27" north latitude and 118° 18' 42.76" west longitude. Topographic map is presented in **Figure-1**.

1.2 Subject Site Description

The subject site is located at 3377 West Olympic Boulevard and 974-998 South Gramercy Drive, Los Angeles, California. Additional addresses include 972 South Gramercy Drive and 974-986 Gramercy Place. Prior to 1913, South Gramercy Drive was known as Gramercy Place. The subject site consists of three rectangular-shaped parcel lots (APNs: 5081-033-011, -014, & -022) totaling approximately 34,967 square-feet and is developed with a vacant commercial building and parking lot. The 6,625 square-foot commercial building was occupied for restaurant at the southern portion of the subject site. The interior of the former restaurant building appears to be have been abandoned with significant damages including fire damage and vandalism. The remaining portions of the subject site lot consist of an asphalt-paved parking lot and landscaping. See **Figure-2** for site configuration.

The immediately surrounding properties consist of Gramercy Drive to the west followed by Rotex Hotel; residential apartment to the north; Joy Auto Center and Wiz Island Preschool to the east; and Olympic Boulevard to the south followed by Woori America Bank.

1.3 Historic Uses

According to historical sources (e.g., building permit records, historical aerial photographs, historical fire insurance maps, historical tenant search, and etc.), from as early as 1907, the subject site was undeveloped. From 1909 to 1997, the northern portion of the subject site, addressed as 972 & 974 S. Gramercy Drive, was developed with a residential dwelling. Thereafter, the northern portion of the subject site was utilized as a parking lot. From 1908 to 1963, the central portion of the subject site, addressed as 980-986 S. Gramercy Drive, was developed with two residential dwellings. Thereafter, the central portion of the subject site was utilized as a parking lot. From 1921 to 1940, the southern portion of the subject site, addressed as 994-998 S. Gramercy Drive & 3377 W. Olympic Boulevard, was developed with a residential dwelling. Thereafter, from 1942 to 1966, the southern portion of the subject site was redeveloped with a service station. In 1967, the present-day commercial building was developed at the subject site and mostly occupied by various restaurants. Currently, the commercial building is unoccupied and vacant.

1.4 Previous Environmental Assessments

EPC has performed a Phase I Environmental Site Assessment (EPC, 2021) in conformance with the scope and limitations of ASTM Practice E1527-13 of the subject site on July 28, 2021. The subject site was likely recognized environmental conditions (RECs) as following reasons:

- On July 22, 2014, a Phase I Environmental Site Assessment was prepared by Xarax Environmental & Engineering Solutions, Inc. At that time, the subject site's commercial building was occupied by a restaurant under the name U2 Korean BBQ. The remaining portions of the subject site were improved with concrete-paved walkways and an asphalt-paved parking lot.

One historical recognized environmental condition (HREC) was identified for the subject property as follows: The subject property was utilized as a gas station from approximately 1948 to 1966. Xarax reviewed a Preliminary Site Characterization Report prepared by Western Environmental Engineers Company (WEECO) dated December 24, 1996. Based on the report, six (6) soil borings were advanced in the area of the former gas station and eighteen (18) soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) and Volatile Organic Compounds (VOCs). Based on analytical results of the soil samples, all soil samples were determined to be none detected (ND) for any of the constituents tested. Based on the analytical results, the site was considered clean, in accordance with the California Water Resources Control Board "Maximum Soil Screening Levels for TPH and BTEX above Drinking Water Aquifers." The report concluded "based on these analytical results, no further subsurface investigation is necessary for the site."

Based on investigation of the property for evidence of recognized environmental conditions and other environmental issues (i.e., de minimis environmental conditions, Business Environmental Risks (BERs), or Vapor Intrusion Conditions), Xarax recommended no further environmental investigations at that time.

EPC's Analysis of Xarax's Phase I Environmental Site Assessment:

Based on the report and attached documents, the full *Preliminary Site Characterization Report* prepared by WEECO on December 24, 1996 was not able to be found within the appendices of the Xarax's Phase I Environmental Site Assessment report. Therefore, EPC could not accurately assess the previous subsurface investigation conducted at the subject site. Information regarding the soil sampling location and depths are unknown. Therefore, EPC considers the former gasoline station at the subject site a recognized environmental condition (REC). Additionally, the east neighboring property, addressed as 3355 West Olympic Boulevard, was a former gasoline station from approximately 1942 to 1966 (~24 years) and an auto repair shop from 1970 to present-day (~51 years). Based on the close proximity to the subject site, a potential vapor encroachment condition (pVEC) exists at the subject site due to the former gasoline station and auto repair shop activities from the east neighboring property. EPC recommends a supplemental subsurface investigation be conducted at the subject site to verify the analytical results of the previous *Preliminary Site Characterization Report* prepared by WEECO in 1996 and to assess any subsurface impacts to the subject site from the former gasoline station and auto repair shop activities from the east neighboring property.

- Other Recommendations regarding Non-CERCLA:
 - According to the Los Angeles City Department of City Planning's property information online website (ZIMAS), the subject site, addressed as 3377 West Olympic Boulevard, is located within the *Methane Buffer Zone*. EPC recommended a methane survey at the subject site prior to any construction.
 - Based on the building built year in 1967, asbestos survey and lead based paint assessment reports are recommended prior to the subject building demolition.
 - Based on our visual site inspection, mold was found at the subject building. A safety and health plan should be prepared to protect construction workers during construction activities.
- EPC did **not** identify controlled recognized environmental conditions during the course of this assessment.

2.0 SCOPE OF THE SUBSURFACE INVESTIGATION

The purpose of the Phase II, Supplemental Environmental Site Investigation (ESI) activities was to investigate the potential for contaminants {i.e., chemicals of concern (COC) are petroleum hydrocarbons and oxygenated/chlorinated solvent associated VOCs} is impact to the subject site from the *recognized environmental condition* (REC) identified in June 1, 2021 Phase I Environmental Site Assessment (ESA) Report prepared for the subject site by EPC.

In summary, this Phase II ESI included the following elements:

- Dig Alert Notification
- Geophysical Survey
- Advancement of soil borings and the collection of soil samples.
- Laboratory chemical analysis of soil gas samples.
- Comparison of soil analytical results to ESL Tables {San Francisco Bay Regional Water Quality Control Board, 2019 (Rev. 2)}

2.1 Site-Specific Health & Safety Plan

A site specific health and safety plan was notified and reviewed by all persons involved with this subsurface investigation prior to the commencement of boring and sampling activities conducted at the subject site.

2.2 Pre-drilling Activities

- Site-specific Health and Safety Plan, Boring Plan, and Work-Schedule were prepared under the supervision of Mr. Allen Shim (Registered Civil Engineer).
- On July 9, 2021, EPC visited to verify existing conditions and pre-mark boring locations and notify Underground Service Alert (USA) of the intent to excavate or soil drill and use standard care to avoid potential damage to subsurface utilities: Dig Alert number is A211900454.
- On July 14, 2021, Socal Locators, who was hired as a subcontractor by EPC, conducted a geophysical survey using GSSI Utility Scan Ground Penetrating Radar (GPR) and Electro-Magnetic Transmitter & Receiver at the site. Also, all soil boring locations were confirmed using GPR survey prior to machine boring to protect underground utility lines. Per a geophysical survey by Socal Locators, the survey did **not** find evidences of remaining USTs at the building and parking lot of the site (see [Appendix-1](#)).

2.3 Field Investigation

Prior to advancing the borings, the property Owner/User, where drilling would be performed, was notified of the work schedule. A site-specific Health and Safety Plan was prepared and field safety meeting was held among field personnel and drilling crew prior to the start of drilling.

2.3.1 Soil Sampling Methodology

Soil samples were handled, visually inspected, screened, and preserved for laboratory analysis in accordance with industry standard practices as follows:

- On July 14, 2021, West End Environmental Sampling Company was attained by EPC to advance six soil borings to a maximum depth of 20 feet bgs using a direct push rig (Geo Probe). Then, soil samples were collected at 5-foot intervals beginning at 5 feet bgs. Geo Probe rigs will be driven extensions to insert a steel soil probe tip to the desired sampling depth. 5-foot interval soil samples collected from 3/4" diameter by 24" long plastic liners will be cut approximately 7~8 inch long. Then, both ends of the sample liners will be immediately sealed by Teflon film and capped. The first part was processed for laboratory analysis. The second part was placed into a plastic, sealable container for field headspace screening using a photoionization detector (PID). Based on PID readings, soil samples were analyzed for Total Petroleum Hydrocarbons as gas, diesel, and oil (TPH-g/d/o) by USEPA method 8015B and oxygenated/chlorinated Volatile Organic Compounds (VOCs) by USEPA method 8260B. Prior to sample screening, the PID was field-calibrated with a 100 parts per million isobutylene standard according to the manufacturer's specifications. Upon soil sampling, temporary soil vapor probes were installed in the boreholes. Soil boring locations are illustrated in Figure-2. A summary of the soil boring procedure is as follows:

Boring No.	Max. Depth to Boring	Location	Analysis Method	Sample Analysis Intervals
B1	20 ft	former USTs area	TPH-g/d/o by USEPA 8015B; VOCs by USEPA 8260B; & total lead by USEPA 6010B	Soil Sampling: soil samples collected at 5 foot intervals. Analysis: at least 2 samples Soil Vapor Probe Installation: @ 4 ft
B2	5 ft	east property border area	TPH-g/d/o by USEPA 8015B; VOCs by USEPA 8260B; & total lead by USEPA 6010B	Soil Sampling: @ 5 ft Analysis: 1 soil sample Soil Vapor Probe Installation: @ 4 ft
B3	5 ft	former USTs area	TPH-g/d/o by USEPA 8015B; VOCs by USEPA 8260B; & total lead by USEPA 6010B	Soil Sampling: @ 5 ft Analysis: 1 soil sample Soil Vapor Probe Installation: @ 4 ft
B4	5 ft	middle location of parking lot	TPH-g/d/o by USEPA 8015B; VOCs by USEPA 8260B; & total lead by USEPA 6010B	Soil Sampling: @ 5 ft Analysis: 1 soil sample Soil Vapor Probe Installation: @ 4 ft
B5	20 ft	north of the subject building	TPH-g/d/o by USEPA 8015B; VOCs by USEPA 8260B; & total lead by USEPA 6010B	Soil Sampling: @ 5 ft Analysis: 1 soil sample Soil Vapor Probe

		dispenser		Installation: @ 5, 10, & 20 ft
B6	20 ft	north portion of the parking lot	TPH-g/d/o by USEPA 8015B; VOCs by USEPA 8260B; & total lead by USEPA 6010B	Soil Sampling: @ 5 ft Analysis: 1 soil sample Soil Vapor Probe Installation: @ 5, 10, & 20 ft

- Following infield preservation, all soil samples were visually inspected in the field by an EPC engineer and classified according to color, texture, and relative moisture content. Visual evidences of staining and/or distinct odors were also noted if present. Results of the visual odorous examination were recorded on standard boring logs ([Appendix-2](#)).
- Samples were collected in accordance with ASTM D 6286 methodology. Sample tooling was decontaminated with an Alconox® detergent wash and tap water rinse before initiating investigative activities and prior to each sample interval. All samples were handled with minimum contact and gloved hands. New, disposable, vinyl gloves were used to handle each sample.
- Soil samples were immediately sealed, labeled, and placed into an insulated ice chest pending submission under chain-of-custody documentation to Positive Laboratory [i.e., certified lab by Environmental Laboratory Accreditation Program (ELAB)] for chemical analyses.

2.3.2 Grab Groundwater Sampling Methodology

Groundwater was not encountered at a maximum depth of 20 feet bgs. Thus, no groundwater sample was collected during this assessment.

2.3.3 Soil Vapor Probe Installation and Sampling

Soil vapor single and multi-vapor wells were constructed to meet general accordance with Advisory-Active Soil Gas Investigations (EPA, 2015) and Site Testing Standards for Methane [Los Angeles City Department of Building Safety (LADBS) bulletin No. P/BC 2002-101].

Upon soil sampling on July 14th, soil borings B1, B2, B3, and B4 were converted to temporary 4-foot single soil vapor probe wells. In addition, soil borings B5 and B6 were drilled to terminal depth of 20 feet bgs using direct push machine. Soil samples were collected at 5-ft intervals beginning at 5 feet bgs of the boreholes. Then, the borehole was converted to temporary 5 ft, 10 ft, and 20 ft multi-vapor wells as shown in boring logs (see Appendix-1). The single and multi-vapor well diagrams are illustrated in Figure-5, and Figure-6, respectively.

On July 16th, a total of ten soil vapor samples (i.e., SV-1-4, SV-2-4, SV-3-4, SV-4-4, SV5-5, SV-5-10, SV-5-20, SV-6-5, SV-6-10, and SV-6-20) were collected from six temporary soil vapor probes (points) by EPC.

Soil vapor probes were allowed to equilibrate for minimum 2 days after installation prior to sampling. Samples at each location were taken from exiting vapor probes using an air vacuum pump. The recommended time for vapor probe stabilization was allowed before any purging was done. Purging and sampling was performed using a pump set to draw 200 ml/min of soil vapor at a maximum vacuum of 100-inch of water. The pump was attached to the vapor probe with tubing and the soil vapor was drawn into a brand-new Tedlar bag. New tubing and Tedlar bag were used at each probe to prevent cross contamination. A material blank using ambient air was collected and tested to identify any background contamination. Leak tests were performed using 1, 1-Difluoroethane at each sample probe to determine if any leaks existed in the vapor probe. The presence of 1, 1-Difluoroethane at or above 0.150ug/l was reported in compliance with the Active Soil Gas Investigation Advisory, July 2015.

All sample probes produced adequate flow. The leak compound was not detected above the reporting limit in all soil vapor samples. Representative soil vapor samples were collected under the three air volume purging, tracer test, and shut-in test. A total of ten soil vapor samples were immediately delivered to Positive Laboratory (i.e., certified lab by Environmental Laboratory Accreditation Program). Then, the soil vapor samples were analyzed with a 6-hour Tedlar bag holding time. A summary of the installation procedure is as follows:

Soil Vapor #	Probe Depth (ft)	Matrix	Method	Sample Analysis Intervals
SV-1-4	4	air	TPHg & VOCs by USEPA 8260B	One soil vapor sample was analyzed.
SV-2-4	4	air	TPHg & VOCs by USEPA 8260B	One soil vapor sample was analyzed.
SV-3-4	4	air	TPHg & VOCs by USEPA 8260B	One soil vapor sample was analyzed.
SV-3-4	4	air	TPHg & VOCs by USEPA 8260B	One soil vapor sample was analyzed.
SV-5-5 SV-5-10 SV-5-20	5 10 20	air	TPHg & VOCs by USEPA 8260B	Three soil vapor samples were analyzed.
SV-6-5 SV-6-10 SV-6-20	5 10 20	air	TPHg & VOCs by USEPA 8260B	Three soil vapor samples were analyzed.

2.3.4 Methane Gas Survey

The subject site lies within the methane buffer zone as defined by the City of Los Angeles Department of Building and Safety (LADBS).

In accordance with the Los Angeles information bulletin P/BC 2002-101, a total of four shallow depth (4 feet bgs) and two multi-depth (5, 10, and 20 feet bgs) soil vapor wells were constructed at the site.

Methane Specialists, who was hired by EPC, monitored soil gas with a combustible gas monitoring meter and measured pressure with a magnehelic gauge to meet the requirement.

On July 16th and 17th, 2021, soil gas samples were collected by Methane Specialists in accordance with a minimum 24 hours interval between events during periods of falling barometric pressure. The methane gas survey report will be provided to the client, separately.

2.3.5 Decontamination

Gloves were changed after each sample, and all sampling equipments were washed in a non-phosphate detergent (Liquinox solution) and triple rinsed to prevent cross contamination of the soil vapor samples.

2.3.6 Backfill and Plug

Upon soil vapor sampling, all boreholes were grouted to the surface with 5% bentonite and cement grout in accordance with minimum standards for borehole abandonment (DWR, 1990). Thereafter, the surfaces of the borings were patched with asphalt/concrete pavement.

3.0 GEOLOGY & HYDROLOGY INFORMATION

The site is located within the Coastal Plain of Los Angeles Groundwater Basin, Central Subbasin. The Los Angeles Basin is an alluviated, coastal lowland plain bordered on the north, northeast, east, and southeast by mountains and hills, and transacted by numerous faults (Yerkes et al., 1965; Norris and Webb, 1976).

The site is located at an elevation of 198 feet above MSL, and the local topography slopes toward the southwest (Figure-1). Surface waters in the site vicinity drain as part of the watershed of 8th Street. No bodies of surface water are located within 1 mile of the site (Figure-1).

Soil in the site vicinity consists of Recent alluvium and Upper Pleistocene deposits of the Lakewood Formation to an estimated 150 feet below ground. The upper portion of the Lakewood Formation contains the regional Exposition Aquifer (CDWR, 1961).

Source:

California Department of Water Resources (DWR), 1961, Planned Utilization of the Ground Water Basins of the Coastal Plain of Los Angeles County Bulletin No. 104

Geology of California, 1975, Robert M. Norris and Robert W. Webb

Groundwater Information within 1-mile Radius Vicinity Area:

The nearest surface water in the vicinity of the subject property is the Los Angeles River located approximately 4.6 miles east of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

Based on the Geo Tracker GAMA of the State Water Resources Control Board database, a LUST site known as Mobil Service Station is found at approximately 700 feet east of the subject site. According to an environmental database at the Mobile Service Station, depths to groundwater measurements in perched zone monitoring wells ranged from 52.05 to 65.68 feet below top of well casings (Geo Tracker).

Subject Site:

Soil: The shallow subsurface stratigraphy of the site consisted of silty sand and sand interlayer from approximately 6 inches below of paving to 20 feet bgs of boring locations.

Groundwater: No wells such as producing, monitoring, vapor treatment wells are known to exist in the subject site. Depth to groundwater is expected below 50 feet bgs at the subject site. Groundwater was not encountered at a maximum boring depth of 20 feet bgs during this subsurface borings.

4.0 ANALYTICAL RESULTS & DATA ANALYSIS

4.1 Analytical Results of Soil Samples

A total of nine soil samples were collected from six soil borings. The samples were selected to assess the REC previously identified. Then, soil samples were analyzed for TPH-g/d/o, oxygenated/chlorinated VOCs, and total lead. Positive Lab reported the soil analytical results as shown in [Appendix-3](#). Analytical lab results are summarized in Table-1 and Figure-3 along with comparisons to Environmental Screening Levels (ESLs). Based on the soil analytical results of the subject site, EPC concludes that no further investigation is warranted at this time.

Review of the soil analytical results indicates the following:

- Oxygenated/chlorinated VOCs (e.g., BTEX, MTBE, ETBE, TBA, PCE, TCE, DCE, and etc.) were not detected above report limits (RLs) in the soil samples.
- Maximum concentrations of TPH-g and TPH-d were detected at 0.542 mg/kg in soil sample B5-20 and 4.82 mg/kg in soil sample B6-10, respectively. These detected concentrations of TPH-g/d did not exceed their respective ESL Tier 1 (i.e., Environmental Screen Levels, San Francisco Bay Regional Water Quality Control Board, 2019, Rev. 2).
- A total of six soil samples (B1-10, B2-5, B3-5, B4-5, B5-10, and B6-10) collected at 5 and 10 feet bgs of the each borehole were tested for total lead (pb). Analytical laboratory results of total lead were detected ranging from 2.77 to 7.02 mg/kg. The detected concentrations did not exceed its ESL Tier 1. Thus, no further action is recommended at the site.

4.2 Analytical Results of Soil Vapor Samples

A total of ten soil vapor samples collected from six temporary soil vapor wells were analyzed for TPH-g and oxygenated/chlorinated VOCs via USEPA method 8260B by a state certified ELAP (see [Appendix-4](#)). A summary of soil vapor sample analytical results is presented in Table-2 and Figure-4, along with comparisons to the San Francisco Bay Regional Water Quality Control Board (SFB-RWQCB) Environmental Screening Levels (ESLs) for Tier 1 and Commercial Soil Gas.

Review of the soil gas analytical results indicates the following:

- Concentrations of TPH-g and oxygenated/chlorinated VOCs were not detected above laboratory method detection limits (MDLs) in the soil vapor samples via USEPA method 8260B.

4.3 Soil Vapor Intrusion Risk Assessment

Source: Cal/EPA DTSC & Cal Water Resources Control Boards, Supplemental Guidance, Screening & Evaluating Vapor Intrusion, Feb 2020

The California Environmental Protection Agency (Cal/EPA) Department of Toxic Substances Control (DTSC), the San Francisco Bay Regional Water Quality Control Board (SFB Regional Water Board), and the State Water Resources Control Board (State Water Board) developed this Supplemental Guidance to promote state-wide standard practice and consistency for screening buildings for vapor intrusion and to establish appropriate sampling to protect building occupants from vapors off-gassing from contaminated sources. Addressing vapor intrusion is critical to protect people from exposures that may pose a risk of adverse health effects. A workgroup, consisting of members from the agencies listed above under the guidance of the Cal/EPA, prepared this document as a supplement to existing information, not a standalone document. The urgency to protect building occupants from the short-term exposure effects of trichloroethylene (TCE) at relatively low concentrations was part of the impetus that led to the formation of the Cal/EPA Workgroup. The Supplemental Guidance recommends a consistent approach to be used by practitioners and regulators when screening buildings for subsurface vapor risk to building occupants. It does not provide guidance on the sampling required for all media (soil, vapor, and groundwater) to determine the nature and extent of contamination in development of a conceptual site model. This Supplemental Guidance describes a framework for deciding when cleanup and/or mitigation is needed.

This Supplemental Guidance addresses assessment of VI risk from vapor forming chemicals (VFCs) but does not constitute complete guidance for the overall evaluation and management of VI. Practitioners should use this Supplemental Guidance in conjunction with existing California guidance (DTSC Vapor Intrusion Guidance [2011a], the DTSC Vapor Intrusion Mitigation Advisory [2011b], and the SF Bay Regional Water Board Interim Framework [2014]). Where there is conflict with the above-mentioned guidance documents, this Supplemental Guidance is recommended.

Attenuation Factor:

This Supplemental Guidance recommends the use of USEPA empirically-derived attenuation factors (AFs) (USEPA, 2015a) for the screening of sites in California. These AFs (i.e., vapor intrusion to indoor air) are protective of public health under most building occupancy scenarios and should be used for the initial screening of sites. Attenuation factors of soil gas and sub-slab soil gas are 0.03 as shown below summary Table.

Medium- Specific Attenuation Factor for VI to Indoor Air

Medium	Attenuation Factor
Crawl Space Gas	1
Sub-slab Soil Gas	0.03
Soil Gas	0.03
Groundwater	0.001

Vapor attenuation refers to the reduction in VFC concentrations that occurs during vapor migration in the subsurface, coupled with the dilution that can occur when the vapors enter a building and mix with indoor air (Johnson and Ettinger, 1991). The attenuation factor (AF) is a unitless number defined as the ratio between the indoor air concentration (C_{IA}) for a given VFC and its subsurface concentration as follows, using soil gas concentrations (C_{SG}) as an example: $AF = C_{IA} \div C_{SG}$

Equation-1)

$$C_{IA} = AF \times C_{SG}$$

Estimate Human Health Risk from Vapor Intrusion:

The incremental cancer risk and noncancer hazard associated with indoor air exposure to chemicals of potential concern through the VI pathway should be estimated from soil gas concentration data. Risk should be evaluated as follows:

- Estimate Potential Indoor Air Concentration: Estimate the potential indoor air concentration [C_{IA} in micrograms per cubic meter ($\mu\text{g}/\text{m}^3$)] using the maximum soil gas concentration (C_{SG} in $\mu\text{g}/\text{m}^3$) detected in samples located close to the building (or in areas where there is a potential for future buildings), using Equation-1. The default AF of 0.03 should be used to screen all buildings (see Attenuation Factor).
- Calculate the cancer risk and noncancer hazard quotient using the estimated C_{IA} from Equation-1. Select either the standard (Equations -2 and -3) or the simplified equations (Equations -4 and -5) as follows:
 - Standard Equations - Input the most current chemical-specific toxicity criteria consistent with the regulation “Toxicity Criteria for Human Health Risk Assessment” (California Code of Regulations, Title 22, Division 4.5, sections 68400.5, 69020-69022) and default receptor-specific exposure factors (DTSC Human Health Risk Assessment (HHRA) Note 1, 2019 or current SF Bay Regional Water Board’s ESLs). For a listing of both required and recommended toxicity criteria see the most current DTSC HHRA Note 10.

Equation-2)

$$\text{Cancer risk} = [C_{IA} \times IUR \times ET \times EF \times ED] \div [AT_c \times 365 \text{ d/y} \times 24\text{h/d}]$$

Equation-2 should be modified when appropriate to take into account increased sensitivity during childhood (USEPA, 2018; OEHHA, 2009).

Equation-3)

$$\text{Hazard Quotient} = [C_{IA} \times ET \times EF \times ED] \div [Rf_c \times AT_{nc} \times 365 \text{ d/y} \times 24\text{h/d}]$$

IUR = Inhalation Unit Risk [cubic meter per microgram ($\text{m}^3/\mu\text{g}$)]

RfC = Reference Concentration ($\mu\text{g}/\text{m}^3$)

ET = Exposure Time (hours per day)

EF = Exposure Frequency (days per year)

ED = Exposure Duration (years)

AT_c = Averaging Time for Carcinogens (years)

AT_{nc} = Averaging Time for Noncancer Toxic Effects (years), equal to ED

- Simplified Equations - Use indoor air (IA) screening levels (SLs) that are consistent with the site’s conceptual site model and exposure scenario. The appropriate

cancer and noncancer IA SLs recommended by the oversight agency should be used (DTSC HHRA Notes 3 through 5: 2018, 2016, 2014 or updates and the current SF Bay Regional Water Board ESLs). The CIA and IA SL inputs should have the same units (e.g., $\mu\text{g}/\text{m}^3$).

Equation-4)

$$\text{Cancer risk} = [\text{CIA} \times (1 \times 10^{-6})] \div [\text{IA Cancer SL}]$$

Equation-5)

$$\text{Hazard Quotient} = [\text{CIA} \times 1] \div [\text{IA Noncancer SL}]$$

Vapor Intrusion Risk Evaluation:

Residential land use scenarios

According to the USEPA, when evaluating estimated cancer risks or Incremental Lifetime Carcinogenic Risk (ILCR) associated with exposure to target contaminants in indoor space from subsurface vapor intrusion for decision-making purposes, an acceptable excess cancer risk is equal to or less than one-in-one million ($1.0\text{E}-06$) for unrestricted land use. This threshold is recognized as acceptable by the USEPA and represents a probability of one-in-one million that an individual could develop cancer from exposure to a carcinogen (or group of carcinogens) under various exposure assumptions. A calculated excess cancer risk falling between $1.0\text{E}-06$ and one-in-ten thousand ($1.0\text{E}-04$) is considered by the United States EPA to be a risk management range and where risk management decisions are made on a site-specific basis.

Commercial/industrial land use scenario

A one-in-one hundred thousand ($1.0\text{E}-05$) excess cancer risk is typically recognized by Federal and State agencies as acceptable in commercial/industrial scenarios. If risk exceeds one-in-ten thousand ($1.0\text{E}-04$), it is assumed to pose an adverse risk to human health, and source remediation and/or vapor intrusion mitigation may be considered warranted. In California, under the Proposition 65 program, the “no significant risk level” represents the daily intake level calculated to result in a cancer risk not exceeding one excess case of cancer in 100,000 individuals ($1\text{E}-05$) exposed over a 70-year period to warn the public of potential carcinogens in everyday products (Cal-EPA, 2013c). The results of this HHRA are interpreted within the context of the regulatory and public health perspective of acceptable cancer risks and non-cancer hazards from controllable sources of exposure.

When evaluating the hazard potential posed by chemicals for non-carcinogenic effects, a HI (or HQ for a single compound) less than 1.0 (unitless) is considered unlikely to pose significant non-carcinogenic adverse health effects to individuals under the exposure conditions, and a no further action response is supported. When the HI exceeds 1.0, further evaluation of the source and/or response action to mitigate the source and vapor intrusion may be needed.

According to DTSC, if risks are less than $1 \times 10\text{E}-6$ and the hazard index is less than or equal to one, no further action is required. For risks greater than $1 \times 10\text{E}-4$ or hazard indices greater than 1, response actions (i.e., mitigation and remediation) are needed. For risks between

1×10^{-6} and 1×10^{-4} , or a hazard index greater than 1, the need for actions (i.e., none, institutional controls, additional investigation, monitoring, refine risk assessment, and mitigation, remediation) is evaluated.

Comparison of soil vapor (gas) analytical results to human health risk level:

- Based on the soil vapor analytical results of the subject site, EPC concludes that no further investigation is warranted at this time.

5.0 CONCLUSIONS & RECOMMENDATION

Review of the soil and soil vapor sample analytical results throughout the site indicated that there is no significant hazardous contamination at the subject site therefore; the site is “no further action” from environmental engineering is merit for the subject site as following reasons:

- Former USTs: Based on the historical sources of the previous environmental site assessments, from 1942 to 1966, the subject site includes address at 3377 West Olympic Blvd. was redeveloped with a service station. In 1967, the present-day commercial building was developed at the southern portion of the subject site and mostly occupied by various restaurants. Currently, the commercial building is unoccupied and vacant.

Based on lack of the former UST removal records, a geophysical survey was performed at the site by Socal Locators. Geophysical survey using GPR is available to characterize the shallow subsurface conditions of soil excavation, UST, and associated piping locations. In this report, EPC summarized the result of the geophysical survey conducted on July 14, 2021 by Socal Locators. The geophysical survey did **not** find evidences of remaining USTs at the building and parking lot of the site (see [Appendix-1](#)).

- Preliminary Site Characterization Report (Weeco, 1996):
 - Based on the Preliminary Site Characterization Report (Weeco, 1996), six (6) soil borings were advanced in the area of the former gas station and eighteen (18) soil samples were collected and analyzed for Total Petroleum Hydrocarbons (TPH) and Volatile Organic Compounds (VOCs). Based on analytical results of the soil samples, all soil samples were determined to be none detected (ND) for any of the constituents tested. Based on the analytical results, the site was considered clean, in accordance with the California Water Resources Control Board “Maximum Soil Screening Levels for TPH and BTEX above Drinking Water Aquifers” (RWQCB-Region 4, Rev. 2005). The report concluded “based on these analytical results, no further subsurface investigation is necessary for the site.”
- Field evidences of petroleum hydrocarbon contaminations (i.e., visual, odorous, and/or PID readings) were not observed in this Supplemental ESI.
 - The soils beneath the subject site consist of sandy silt and sand to a maximum depth investigated 20 feet bgs. No groundwater was encountered during our soil borings (see [Appendix-2](#)). No wells such as producing, monitoring, vapor treatment wells are known to exist in the subject site. Depth to groundwater is expected below 50 feet bgs at the subject site.
 - A total of nine (9) soil samples were collected from six soil borings during this Supplemental ESI. Soil samples were analyzed for Total Petroleum Hydrocarbons as gasoline, diesel, and oil ranged organics (TPH-g/d/o), oxygenated/chlorinated VOCs, and total lead. Based on the soil analytical results of the subject site ([Appendix-3](#)), EPC concludes that no further investigation is warranted at this time.

Review of the soil analytical results indicates the following: a) Oxygenated/chlorinated VOCs were not detected above report limits (RLs) in the soil samples; b) Detected concentrations of TPH-g (0.542 mg/kg) and TPH-d (4.82 mg/kg) did not exceed their respective ESL Tier 1 (i.e., Environmental Screen Levels, San Francisco Bay Regional Water Quality Control Board, 2019, Rev. 2); and c) analytical laboratory results of total lead were detected ranging from 2.77 to 7.02 mg/kg. The detected concentrations did not exceed its ESL Tier 1.

- A total of ten (10) soil vapor samples collected from six temporary soil vapor wells were analyzed for TPH-g and oxygenated/chlorinated VOCs via USEPA method 8260B by a state certified ELAP (see [Appendix-4](#)). Review of the soil vapor analytical results indicates the following: a) TPH-g was not detected above report limits (RLs) in the soil vapor samples; b) Oxygenated/chlorinated VOCs were not detected above RLs in the soil vapor samples; and c) Based on cancer risk equations as shown in Section 4.3, risk levels of Oxygenated/chlorinated VOCs were evaluated below the residential risk threshold of 1.0E-06 and Hazard Quotient for non-carcinogens (HQ) of 1.0. Vapor intrusions of oxygenated/chlorinated VOCs would likely not present threat to human health or environment. Thus, EPC concludes that no further investigation is warranted at this time.

6.0 CERTIFICATION, LIMITATION, & STATEMENT OF INDEPENDENCE

Our investigation was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable geologist's and civil engineer's practicing or similar localities. No other warranty, expressed or implied, is made as to the conclusions and professional advice included in this report.

The samples taken and used for testing and the observations made are believed representative of the study area; however, soil gas samples can vary significantly between borings, test pits, and/or test sample locations.

The interpretations and conclusions contained in this report are based on the results of laboratory test and analyses intended to detect the presence and concentration of certain chemical constituents in samples taken from the subject property. An independent laboratory, which is certified by the State of Michigan to conduct such test analysis, has conducted such testing and analysis and which used methodologies mandated by the federal Environmental Protection Agency (EPA), State of Michigan Department of Environmental, Great Lakes, and Energy (EGLE), or the State of California EPA DTSC in the performance of such test and analysis. EPC has no involvement in, or control over, such testing and analysis and has non-laboratory means of confirming the accuracy of such laboratory results. Consultant, therefore, disclaims any responsibility for any inaccuracy in such laboratory results.

- Other Recommendations regarding Non-CERCLA:
 - Based on the building built year in 1967, asbestos survey and lead based paint assessment reports are recommended prior to the subject building demolition.
 - Based on our visual site inspection, mold was found at the subject building. A safety and health plan should be prepared to protect construction workers during construction activities.

EPC. "Phase I Environmental Site Assessment at 3377 W. Olympic Blvd., LA, CA". 7/28/2021.

Name: Allen Shim

Title: Senior Civil Engineer

Education

Bachelor of Science in Civil Engineering/Environmental Engineering - 1997

Professional Registration

California State Professional Engineer, C64024

Professional Experience

Mr. Allen Shim has 18 years of broad construction site experiences at military bases such as Vandenberg Air Force Base, Los Angeles Air Force Base, Port Hueneme, etc. to mitigate Underground Storage Tank (UST) Removal and underground utilities embedment projects.

He was quality control manager of soil sampling and testing for soil cement embankment project of Army Corps of Engineer in Corona, California.

He has worked for projects of environmental assessment (Phase I), Site Investigation (Phase II), and Remedial Actions (Phase III) in the department of transportation (Caltrans). He has knowledge of hydrocarbon and volatile organic compound (VOC) and environmental laws and regulations.

He reviewed the environmental impact reports, hazardous waste material and lead contaminated site assessment reports and site investigation reports of Caltrans projects.

Subject: SUBSURFACE INVESTIGATION
Commercial Property
3377 W. Olympic Blvd.
Los Angeles, CA 90019

Dear Mr. Morales,

With your request and authorization, SoCal Locators has prepared this "Subsurface Investigation Report" for the commercial property, located at 3377 W. Olympic Blvd., in the city of Los Angeles, California 90019. The enclosed report presents our findings, and conclusions regarding the utility locations.

Thank you for allowing "SCL" the opportunity to assist you with this project. Please do not hesitate to contact me at (909) 900-6504, should you have any questions or need additional information.

Best regards,

Rick Huerta
SoCal Locators

rick@socallocators.com

1. SITE LOCATION AND DESCRIPTION

The subject site located at 3377 W. Olympic Blvd., located in the city of Los Angeles, CA. The property is surrounded by commercial buildings.

Figure 1. Subject Site

14050 Cherry Ave., Suite R-172
Fontana, California 92337
Phone: (909) 900-6504
rick@socallocators.com

2. PURPOSE AND SCOPE

SoCal Locators to perform a "Subsurface Investigation", using electromagnetic and ground penetrating radar (GPR) equipment to located all known utilities in the provided project area(s) for 6 proposed boring locations and in an attempt to an "Underground Storage Tank (UST)". All found utilities and anomalies will be delineated using APWA color coded paint.

Figure 2. Site of Interest

Fontana, California 92337
Phone: (909) 900-6504
rick@socallocators.com

3. THE PROCESS

Our process began with the "Electro-Magnetic" locating equipment to identify pipes or utilities throughout the work scoped areas. We swept all areas with the RD receiver to detect live power or radio frequency signals followed by connecting to any visible riser(s) or tracer wire(s) that may be in the area(s) provided that there is an exposed metallic surface(s). Locations are then marked and delineated with APWA marking paints and or flags on the surface. Depths cannot always be provided or accurate due to various types of soils.

Initial "Ground Penetrating Radar (GRP)" scans were then collected, data was evaluated and equipment was calibrated to ensure findings were confirmed and accurate. Based on these findings, a scanning strategy is formed, typically consisting of scanning the entire area in a grid with 5' - 10' scan spacings to locate any potential utilities and "Underground Storage Tanks (UST's)" that were not found with the pipe locator. The GPR data is interpreted in real time and anomalies in the data are located and marked on the surface using spray paint, flags, etc.,. Depths are dependent on the dielectric of the materials being scanned so depth accuracy can vary throughout a site.

4. EQUIPMENT

The GSSI UtilityScan SIR 3000 Ground Penetrating Radar unit with 400MHz antenna sends a dielectric signal into the earth, which registers with the density of the soil that it is penetrating. Any other material of varied density will either speed up the signal creating an inverted hyperbola or slow it down leaving a hyperbola trail. This is similar to a rock in a creek. The water bends around the rock leaving a tail wake. The GPR signal is not bending; however, it is sending back a continuous signal of the curvature of the anomaly or buried feature it encounters.

14050 Cherry Ave., Suite R-172
Fontana, California 92337
Phone: (909) 900-6504
rick@socallocators.com

GPR findings are not always accurate due to certain site conditions such as soil lithology, moisture, and soil make-up. These can limit the depth to which the GPR antenna can penetrate to locate buried features.

The RD8100 Electro-Magnetic Transmitter & Receiver has Inductive & Conductive capability to locate buried conductive underground utilities, such as copper, steel and galvanized metal water pipes, electrical lines, power lines, tele-communication lines, metal and steel gas lines, and metal and steel pipelines.

The RD8100 features include multiple active frequencies to delineate actively the depth and location of the target utility or pipe. The RD8100 receiver has a peak and null gain feature that pinpoints the target utility or pipe in congested areas.

The audible signal to noise feature makes it easy for the locating technician to determine accurately the location of a directly connected utility or pipe by sound.

According to Radio Detection, the specifications of the RD8100 include...

Sensitivity: 6E-15 Tesla 5 μ A at 1 meter (33kHz)

Dynamic range: 140dB rms/ \sqrt Hz

Selectivity: 120dB/Hz

Depth measurement precision: \pm 3%

Locate accuracy: \pm 5% of depth

The Jameson Duct Hunter 300 Traceable Rodder uses the RD8100 transmitter to energize the rod which is pushed into underground pipe to emit signal that is picked up by the RD8100 receiver above ground. This allows an entire buried utility pipe to be traced and marked continuously from above ground by one man without digging. The rod's ferrule attaches to a 512 MHz sonde, roller guide, or pulling eye. 5/16" diameter rod has 6" bend radius and is recommended for 2"- 4" conduit.

14050 Cherry Ave., Suite R-172
Fontana, California 92337
Phone: (909) 900-6504
rick@socallocators.com

The Schonstedt GA-52Cx Magnetic Locator detects iron and steel objects underground, such as USTs, buried oil wells and buried metal monitoring well lids. The Schonstedt GA-52Cx Magnetometer provides audio detection signals with frequencies that vary with gradient field intensity. The signals peak in frequency when the locator tip is held directly over the target.

5. LIMITATIONS

Please keep in mind that there are limitations to any subsurface investigation. The equipment may not achieve maximum effectiveness due to soil conditions, above ground obstructions, reinforced concrete, and a variety of other factors. No subsurface investigation or equipment can provide a complete image of what lies below. Our results should always be used in conjunction with as many methods as possible including consulting existing plans and drawings, exploratory excavation or potholing, visual inspection of above ground features, and utilization of services as One Call/811.

14050 Cherry Ave., Suite R-172
Fontana, California 92337
Phone: (909) 900-6504
rick@socallocators.com

6. FINDINGS

Our technician performed a "Subsurface Investigation", using electromagnetic and ground penetrating radar (GPR) equipment to located all known utilities in the provided project area for 6 proposed boring locations and in an attempt to locate an attempt to locate an "Underground Storage Tank". All utilities were delineated using APWA color coded marking paint. All identified anomalies using GPR were delineated using APWA color coded paint. Approximate depth of utilities were provided.

Note: No evidence of an underground storage tank (UST) or related excavation was found onsite using ground penetrating radar.

July 21, 2021

Mr. Jeff Lee
Environ Phase Consulting Company (EPC)
1234 Wilshire Blvd., # 201
Los Angeles, CA 90017

Report No.: 2107110
Project Name: 3377 W. Olympic Blvd., Los Angeles

Dear Mr. Jeff Lee,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on July 14, 2021.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Report No.: 2107127
Project Name: 3377 W. Olympic Blvd., Los Angeles

Dear Mr. Jeff Lee,

This report contains the analytical results for the sample(s) received under chain of custody(s) by Positive Lab Service on July 16, 2021.

The test results in this report are performed in compliance with ELAP accreditation requirements for the certified parameters. The laboratory report may not be produced, except in full, without the written approval of the laboratory.

The issuance of the final Certificate of Analysis takes precedence over any previous Preliminary Report. Preliminary data should not be used for regulatory purposes. Authorized signature(s) is provided on final report only.

If you have any questions in reference to this report, please contact your Positive Lab Service coordinator.

Introduction

Project Background

This project is necessitated by planned improvements to the commercial properties at 3355-3377 Olympic Boulevard, and adjoining lots on St. Andrews Place and Gramercy Drive, in Los Angeles. The lot area is 51,050 square feet. The total square footage of the proposed structure is 303,350. The site inspection was performed on March 17, 2022.

The parking lot on Gramercy is vacant. The property on St. Andrews is used for day care. Half the site on Olympic is vacant and half for car repair. Eleven street trees are included, and wrap around three sides of the project. Fifteen other trees are included in this report, mostly jacarandas, as well as two elms and a Shamel ash in back, a couple floss silk trees, two Mt. Atlas cedars, one ficus, one California pepper, and one protected valley oak. The hedges north of the parking lot and the hedge south of the day care facility are not included. The one Mexican fan palm in the north hedge was also not included.

Assignment

Arborgate Consulting was retained to review and provide an arboricultural evaluation of 11 street trees' and 15 site trees' health and condition, provide professional opinions, and report as appropriate. All trees in and around the site are numbered, mapped, measured and evaluated for inclusion in this report for the City of Los Angeles Urban Forestry Division's review.

Purpose

The report is to satisfy the requirements of the Urban Forestry Division, specifically for the street trees, but also as information about the one protected tree on site. This report is also to help the designers, engineers, and architects in making decisions regarding preservation or removal of specific trees, and to make them aware of the health and defects found in them. Also, this report is to make the architects and landscape architects aware of what it will take to preserve any trees they want to retain. Being such a large building, it is unlikely any trees, other than street trees can be saved.

Brief Project Description

- Total 7 Story Mixed-Use (commercial & 153 units) with TOC incentives
- 5 story of Type III over double podiums of Type I with 2 level of subterranean parking
- Condominium conversion during construction

Summary

These 26 trees are in very poor to excellent health and very poor to good condition. Other than the smaller elm and the smaller cedar, most are in fair to good health, and most could probably survive at least another ten years if the whole site was not to be demolished and relandscaped.

There are no known historically significant or endangered tree species are involved in this project. The one protected tree is at the east end of the ficus hedge and is also competing with them. It is about one foot from a retaining wall running along the east side, and is grew under power lines. As a result, one side was headed back to keep it out of the wires and the other side sweeps out to the west. There is soil over much of the root crown, but the foliage seems adequately healthy. With a retaining wall and soil over one side of the roots, and the canopy weight swung out on the other side, stability is questionable.

Most of the street trees are Indian laurels. Along Olympic, between the Indian laurels, there are also two palo verdes. On Gramercy there are Indian laurels, a London plane tree, and a camphor. On St. Andrews there is one southern magnolia. The Indian laurels have been headed back severely in the past, and many of the cuts were flush. The same is true for the ones on Olympic. The magnolia on St. Andrews has good structure, but the foliage is sparse.

On the main site along Gramercy, the jacarandas are stunted and small. They seldom look very healthy this time of year. The floss silk and the cedar are mixed in the ficus hedge along the north end, and they are being out-competed by the ficus. Almost any tree growing in among ficus would be out-competed.

The five jacarandas are growing along a slope between a former parking lot and the street. Due to water runoff on the slope, and a long period without irrigation, they are probably drought stressed. They are also crowding the California pepper and ficus and the street trees, or vice-versa.

The large Mt. Atlas cedar is limbed up high, and the limbs are very long. The root zone is covered with artificial turf. The elms and ash tree are at both ends of the Syzygium hedge and inaccessible.

Most of the City street trees will need to be replaced in the next ten years, but the Urban Forestry Department will make that ultimate determination. Unless there were conditions of approval unknown to this consultant, mitigation for other site trees is not expected. Mitigation on a one-to-one or two-to-one basis may be required. Mitigation for the protected tree is four to one. The recommendations of this consultant are written subject to Urban Forestry's agreement.

Tree Map

↖ NORTH

Tree numbers are red.

Findings

General Conditions Affecting Tree Health and Condition

Protected Tree

The one protected oak tree on site is a medium size valley oak, *Quercus lobata*, with a trunk diameter of 21 inches. It is located about one foot from a retaining wall for the apartments located to the east. Power lines run over the wall and have required severe clearance pruning, which entailed heading back one side of the codominant trunk. The other side sweeps out to the west, and is moderately end heavy. The north edge of the site is sloped down to the north and the slope covers most of the root crown. The foliage appears adequately healthy and there is only minor dieback. Per ordinance # 186873, there are no other protected trees or shrubs. This consultant does not believe that either enough pruning can be done or enough fall zone can be provided to render this tree adequately safe.

Existing Parking Lot off Gramercy

The north edge of the parking lot site has a hedge of Indian laurels. The oak above is at the east corner of the hedge. In the middle is a healthy 50-foot-tall Mexican fan palm, not included in the matrix. Near the west end of the hedge is a struggling Mt. Atlas cedar, *Cedrus atlantica*. Its top is dead and the ends of two limbs are dead as well. It has not done well in competing with the ficus. In the corner of the ficus hedge is a small (11.2" DBH) floss silk tree, *Ceiba speciosa*. It has leaned

and grown out for light. Its health is fair, with no decline, but out on the west slope is another much larger floss silk (19.4" DBH) that has prospered. It is a beautiful specimen. The screening of the hedge has protected it from the wind.

The next tree down on the west slope is an unusual Ficus species, possibly *Ficus longifolia*. The trunk diameter is 16 inches at the narrowest point below the first limbs. The height and spread are about 35 feet. It has four main limbs, trimmed up to a spreading canopy. No pest damage or signs of past frost damage were seen.

The five jacarandas, *Jacaranda mimosifolia*, are in one row paralleling the street and edge of the parking area. Their average trunk diameter is a little less than 8 inches, and they range from about 20 to 25 feet high. All five are about the same size and condition. They have marginal health and structure, and are somewhat crowded. Being stunted, transplanting would not be very successful for any in this group.

At the south end of this row is a large California pepper, *Schinus molle*. Its trunk diameter is 16 inches, and it is about 45 feet tall. It is beginning to crowd the last jacaranda, and is being crowded by the camphor street tree. Its health is good, but the structure is marginal. There is a small homeless camp below it.

Street Trees on Gramercy

At the north end of the parkway is a large London plane tree, *Platanus x Hispanica*. The trunk diameter is 18.3 inches and it is at least 50 feet tall. The trunk leans out, is codominant, and there is a large crack in the main crotch. The Urban Forestry Division may want to remove this tree even before they finish reading this report. It is also lifting the sidewalk.

The next street tree to the south is a large camphor, *Cinnamomum camphora*. The trunk diameter is about 25 inches, but the homeless camp was too close to accurately measure the trunk. It is about 50 feet tall, and I paced it off at about 55 feet wide. There is a modest amount of dieback and the trunk is codominant.

There are three Indian laurels below that, ranging from 17 to 21-inch trunk diameter. Like those on Olympic the health is good, but the structure is poor, mostly due to poor, but aggressive pruning.

The community has benefitted from most of these street trees for 30 years or more, which is an adequate service compared to the 17-year average life expectancy quoted for Los Angeles by American Forest magazine.

Some of the street trees have almost outlived their usefulness and are gradually becoming hazardous. The shallow roots of ficus and other large trees are damaging the sidewalks and curb. If roots are cut for sidewalk repair, the combination of all

these factors is even more likely to lead to whole tree failures. Roots being cut at the sidewalk that provided mostly tension support for leaning trees, will mean greater chances of the trees falling toward the street. The size and condition of the above site trees and street trees are detailed in the matrix to follow.

Street Trees by the Commercial Site Along West Olympic

The businesses on the west half are vacant, except for homeless squatters. There are holes in the walls and a fire started on the inside. There are no *site* trees. There are five affected street trees, two of which are recently planted palo verdes, *Parkinsonia aculeata*, possibly ‘Desert Museum’, a popular thornless hybrid. Both have two trunks and are low branching, not a good trait for street trees, especially when there is a traffic lane next to the curb. Early pruning has not been very professional. Training them up for clearance of passing trucks and buses will be very difficult.

The other street trees on Olympic are Indian laurels, *Ficus microcarpa* ‘*Nitida*’. These have poor structure, including past heading, codominant trunks, with included bark and crowded main limbs. They are certainly healthy, but as is typical, their roots are lifting the sidewalk. Due to lack of professional training, their canopies are also too low for such clearance.

Near the east end of the block, there is one newly planted flame tree, *Brachychiton acerifolia*, a great species, but too large for its planting space. It is healthy now, but only has a two-inch trunk diameter. It is likely to be over-grown soon.

Wiz Island Child Care

There is a long hedge of brush cherry, *Syzygium paniculata*, running nearly the length of the south edge of the property. At the east end, near the sidewalk is a small Chinese elm, *Ulmus parvifolia*. It leans out for light and has a codominant trunk. A large growth of smilax is trying to cover it. There is a large amount of dieback. This tree looks more like a weed than a planted tree. At the other end of the hedge is a large Chinese elm and a Shamel ash, *Fraxinus uhdei*, all crowded together.

In the front artificial lawn there is a large Mt. Atlas cedar, *Cedrus atlantica*. It has a 24-inch diameter trunk and is about 60 feet tall. The limbs have removed up to almost half way. The limbs above that point are overly long. The root zone is covered with artificial grass, which prevents return of organic matter to the soil and a proper level of gaseous exchange. However, for now the health looks good. In addition, the area below such “grass” is leveled and compacted, which is also hard on the roots.

Wiz Island Street Tree

The only street tree for this location on St. Andrews affected by this project is a newly planted southern magnolia, *Magnolia grandiflora*. If it is a cultivar, the cultivar is not recognized. Southern magnolias are very large trees, with a disproportionately wide basal flare, and they are not drought tolerant, which may be the reason it is sparsely foliated. Otherwise, it has a good central leader and the structure is excellent. It is just the wrong tree with this parkway.

Matrix of Individual Findings

Abbreviations

BDK = basal decay

Cod = codominant

CrS = crowded scaffold limbs

cv = cultivar

DBH = diameter at breast height

Db = dieback

Dk = decay

DkR = decayed roots

DL = dogleg

DLT = dogleg trunk

epi = epicormic shoots

FC = flush cuts

Hd = headed

Inc = included bark

Lt = lion-tailed

Mb = mower blight

S = scaffold limbs

Sh = shallow roots

Sp = sparse

SW = sidewalk

T = trunk

TO = tear out

Topd = topped

WWgird = girdled by weed whips

Xing = crossing branches

Arboricultural terms are defined in the glossary.

*Trunk diameter was measured using calipers up to 8.1 inches, or a Biltmore stick for larger sizes. Height and width were estimated.

Discussion

Street Tree Replacement Decisions

This is a good time to decide whether or not to build larger parkways for better growth and longer life of street trees for the future. However, with a turf ground cover, almost any tree will be shallow rooted. Applying enough water for the turf, overwaters many tree species. Removing and replacing the turf with a good layer of coarse mulch, even tree chips will greatly improve the health of future trees and increase the root depth significantly. It will also eliminate the cause of root damage from lawn mowers and string trimmers. A five or six-foot wide parkway may be wide enough for many trees according to *Street Trees Recommended for Southern California, 2nd edition*, but it does not provide enough root space for a long lived, good size street tree, like Indian laurel or southern magnolia. The current edition stopped recommending minimum planting space requirements for trees. But under Indian laurels they say, “The extensive surface root system can fill a 20-foot wide parkway in 50 years.” This reference says of southern magnolias that they need 10-foot wide parkways, and “Potential for roots to cause pavement damage is high.” Trees that cross over and shade the whole street are what most urban foresters would like, but with Ficus and turf below, that is not likely.

If their roots spread out under the paving, it will be mostly just under the sidewalk. Then as those roots grow and expand the paving is lifted, causing greater likelihood of trip and fall accidents. If then the roots are cut to reconstruct the sidewalk, trees can be destabilized and/or reduced in health. As a result, more trees will have a short life span and end up in a landfill.

Root barriers, *properly installed* can reduce sidewalk damage, and the need for root cutting, but they also reduce the amount of root space. An American Forests magazine article said the average life span of Los Angeles urban street trees was 17 years. This is not sustainable, and provides few environmental benefits. Big trees provide exponentially more benefits. But how can we have bigger trees in an urban setting? Not with ficus or magnolias and turf.

Soil volume can be increased with a good, well-maintained mulch. However, just using root barriers limits the soil volume. Structural soils are too expensive for most applications. The most reasonably priced option is a combination of using well-chosen species, adequate spacing, mulching, root barriers, and appropriate training and maintenance.

The depth of the existing main root laterals is set and cannot be changed. Many of the street trees could have up to ten years of life remaining, if the sidewalks aren't considered. A few really need to be removed, but trying to start new trees between other large established trees is problematic, especially with the turf and limited soil improvement. Considering the structure of the trees along Gramercy, removal is necessary.

Ultimately the City of Los Angeles Urban Forestry Department will decide if the street trees must stay or not, how close roots can be cut, and what the mitigation ratio will be. The City will also specify the species of replacement trees for each street. Removal and replacement/mitigation decisions are dictated by the City Urban Forestry Division. Permits must be obtained for removal of *any* City street trees. A permit is also needed for sidewalk repair.

Site Tree Replacement Decisions

The planned construction requires all, or certainly most the trees, to be removed *on site*. There is only one protected oak tree on site, and it should be removed. Mitigation requirements call for 4 replacement protected trees. However, there will be little room on site for such trees. The applicant suggests payment into the City tree fund, or planting them on nearby City property.

Refreshing the streets with new trees will improve their appearance and longevity. Smaller species will last longer. Smaller trees will help allow closer spacing and thus meeting 2:1 replacement requirements.

Recommendations

General Recommendations

1. Remove and replace all street trees on Gramercy, after obtaining permits from the City Urban Forestry Division.
2. Remove and replace all street trees on West Olympic, after obtaining permits from the City Urban Forestry Division.
3. Remove and replace the magnolia street tree on St. Andrews, after obtaining permits from the City Urban Forestry Division.
4. For new street trees consider root barriers. Non-ribbed moisture barrier is less likely to direct roots down and under the barrier. And because it comes in rolls, there is less chance of connections failing.
5. Remove all site trees and mitigate the protected valley oak to Urban Forestry's satisfaction. It is unlikely to be, or remain, stable for long, but to satisfy the Urban Forestry Division's questions, a formal level 2 risk assessment may be necessary.
6. Protect any street trees to remain by placing chain-link fencing at the sidewalk and curb, or the dripline, whichever is required by Urban Forestry.
7. All future pruning must be in accord to ANSI A300, part 1 standards. Individual specifications for pruning must be prepared by a registered consulting arborist. The tree services selected must be properly licensed and insured, and supervised by at least a certified arborist. Do not prune street trees without a permit.

Mitigation

The Urban Forestry Division will determine mitigation requirements for the protected valley oak and the street trees to be removed, but no other mitigation is expected for the site trees, because they are not protected or heritage trees. But due to their size, the Urban Forestry Division may consider some to be “significant”. Unfortunately, there will be very few opportunities for planting on site in the new plan, except as mitigation for street trees removed.

Disclaimer

Good, current information on tree preservation has been applied. However, even when every tree is inspected, inspection involves sampling, therefore some additional areas of decay or weakness may be missed. The sidewalk was in place during my inspection and I could only interpret the root conditions based on sidewalk lift and the root flare. Therefore, exact root conditions are assumed based on these indications.

Other than the sidewalk itself, the homeless camp on Gramercy covered the root zones and trunks of the camphor and ficus #20 – 22.

The elm and ash, #24 and #26 were not accessible. Their trunk diameters were estimated.

A tree risk assessment was not requested or performed. Weather, winds and the magnitude and direction of storms are not predictable and some failures may still occur despite the best application of high professional standards. Construction and future tree maintenance will also affect the trees health and stability and are not under the supervision or scrutiny of this consultant. Continuing construction activity such as grading and trenching will also affect the health and safety, but are unknown and unsupervised by this consultant. This consultant does not assume liability for any tree failures involved with this property.

Registered Consulting Arborist #365

PROFESSIONAL REGISTRATIONS:

American Society of Consulting Arborists RCA #365
International Society of Arboriculture, Certified Arborist Number WE-0180a
International Society of Arboriculture, Tree Risk Assessment Qualified
American Society of Consulting Arborists, Tree and Plant Appraisal Qualified

EXPERIENCE:

Mr. Applegate is an independent consulting arborist. He has been in the horticulture field since 1963, providing professional arboricultural consulting since 1984 within both private and public sectors. His expertise includes appraisal, tree preservation, diagnosis of tree growth problems, construction impact mitigation, environmental assessment, expert witness testimony, hazard evaluation, pruning programs, species selection and tree health monitoring.

Mr. Applegate has consulted for insurance companies, schools, colleges, universities, developers, theme parks, homeowners' associations, landscape architects, contractors, property managers, attorneys and governmental bodies.

Notable projects on which he has consulted are: Disneyland, Disneyland Hotel, DisneySeas-Tokyo, Disney's Wild Animal Kingdom, the New Tomorrowland, Disney's California Adventure, Disney Hong Kong project, Knott's Berry Farm, J. Paul Getty Museums, LACMA, Tustin Ranch, Newport Coast, Crystal Court, Newport Fashion Island Palms, Bixby Ranch Country Club, Playa Vista, Laguna Canyon Road and Myford Road for The Irvine Company, Beverly Hilton Hotel, Huntington Langham Hotel, MWD-California Lakes, Loyola-Marymount campus, Cal Tech, Cal State Long Beach, Pierce College, The Irvine Concourse, UCI, USC, UCLA, LA City College, LA Trade Tech, Riverside City College, Crafton Hills College, MTA projects, and State of California review of the Landscape Architecture License exam (re: plant materials))

EDUCATION:

Bachelor of Science in Landscape Architecture, California State Polytechnic University, Pomona 1973
Arboricultural Consulting Academy (by ASCA) Arbor-Day Farm, Kansas City 1995
Continuing Education Courses in Arboriculture, required to maintain Certified Arborist status and for ASCA membership

PROFESSIONAL AFFILIATIONS:

California Landscape Architect Student Scholarship Fund-Chairman (1985)
International Society of Arboriculture-Examiner-tree worker certification (1990)
ASCA, Industry definitions committee and A3G committee (2009-2010)
American Institute of Landscape Architects (L.A.) Board of Directors (1980-1982)
Guest lecturer at UCLA, UCI, Cal Poly, Saddleback College, & Palomar Junior College

B. Glossary

ANSI-A300	American National Standards Institute performance standards for the care and maintenance of trees, shrubs and other woody plants. Copies are available from International Society of Arboriculture bookstore 888-ISA-TREE
Arboricultural	Pertaining to the awareness, care, evaluation, identification, growing, maintenance, management, planting, selection, treatment, understanding, valuation and so forth of trees and other woody plants and their growing environments, particularly in shade and ornamental (non-crop/commodity) settings.
Arboriculture	The selection, cultivation, and care of trees, vines, and shrubs.
Arborist	A person possessing the technical competence through experience and related training to provide for or supervise the management of trees or other woody plants in a landscape setting.
ASCA	The American Society of Consulting Arborists, Inc. a professional society, as described in its by-laws.
Bark	Tissue on the outside of the vascular cambium. Bark is usually divided into inner bark - active phloem and aging and dead crushed phloem - and outer bark.
Caliper	Diameter of a nursery-grown or small size tree trunk. Larger trees are usually measured at 4.5 feet (see DBH) Trees with calipers 4 inches and below are measured at 6 inches above grade(ANSI Z60-1-1990) Trees above 4 inches, but still transplantable are measured at 12 inches above grade.
Canopy	The live, foliage-bearing part of a tree.
Chlorotic	Lacking in chlorophyll, typically yellow or yellowish in color.
Compaction	(Soil Compaction) The compression of soil, causing a reduction of pore space and an increase in the bulk density of the soil. Tree roots cannot grow in compacted soil.
Crown	The upper portions of a tree or shrub, including the main limbs, branches, and twigs.
Cultivar	A cultivated variety, e.g. Platanus x Acerfolia cv. Maybe a field selection or a horticultural variety that has originated and persisted under cultivation. Usually enclosed in single quotes after the genus and species names.
DBH	Diameter of the trunk, measured at breast height or 54 inches above the average grade. See caliper.
Decay	Progressive deterioration of organic tissues, usually caused by fungal or bacterial organisms, resulting in loss of cell structure, strength, and function - in wood, the loss of structural strength.
Dieback	Progressive death of buds, twigs and branch tissues, on individual limbs, or throughout the canopy.

Dripline	A projected line on the ground that corresponds to the spread of branches in the canopy; the farthest spread of branches.
Epicormic	Epi - upon; cormic - stem. Branches that are upon the stem, i.e. sprouting from either dormant buds in the cambial zone, or from buds sprung anew from ray traces. Epicormic shoots are a sign that energy reserves have been lowered.
Fertilization	The process of adding nutrients to a tree or plant; usually done by incorporating the nutrients into the soil, but sometimes by foliar application or injection directly into living tissues.
Heading	Pruning techniques where the cut is made to a bud, weak lateral branch or stub.
Limb	A large lateral branch growing from the main trunk.
Lion-tailing	Pruning technique where internal foliage and branches are removed, leaving the latter concentrated at branch ends.
Root collar	The basal area of the tree; transition zone from trunk to root. Also sometimes called trunk flare.
Root crown	Area at the base of a tree where the roots and stem merge (synonym – root collar)
Root flare	Area at the base of a trunk where the roots attach and flare out.
Root system	The portion of the tree containing the root organs, including buttress roots, transport roots, and fine absorbing roots; all underground parts of the tree.
Root zone	The area and volume of soil around the tree in which roots are normally found. May extend to three or more times the branch spread of the tree, or several times the height of the tree.
Scaffold limb	Primary structural branch of the crown.
Street tree	A tree growing adjacent to dedicated roadways and within the city’s right of way.
Stress	“Stress is a potentially injurious, reversible condition, caused by energy drain, disruption, or blockage, or by life processes operating near the limits for which they were genetically programmed.” Alex Shigo
Topping	Pruning technique to reduce height - heading of large branches. Prohibited by State Government Code 53067
Trees	An arborescent woody plant, with a single or few trunks near the base
Vigor	Active, healthy growth of plants: ability to respond to stress factors.

C. Verification of Current Registration and Certifications

The International Society of Arboriculture

Hereby Announces That

Gregory W. Applegate

Has Earned the Credential

ISA Certified Arborist ®

By successfully meeting ISA Certified Arborist certification requirements through demonstrated attainment of relevant competencies as supported by the ISA Credentialing Council

Photographic Documentation

#1 Flame tree on Olympic – note small cutout.

#2 Indian laurel – note sidewalk lift.

#3 Palo verde & #4 Indian laurel, note sidewalk lift and crude pruning.

#4 Indian laurel and sidewalk lift.

#4 Indian laurel and sidewalk lift

#5 Palo verde – note lack of appropriate training.

#2, 3 and 4 In front of 3377 W. Olympic

#6 Chinese elm – note dieback.

#7 Valley oak- note sweeping scaffold limb and wires at the right.

Indian laurel hedge along the north edge of the parking lot. #7 Valley oak at right, and #8 Mt. Atlas cedar on the left.

#8 Mt. Atlas cedar growing out of the Indian laurel hedge.

Mexican fan palm with #8 Mt. Atlas cedar on the left

West edge of the parking lot on Gramercy and trees #8 to 17 from right to left.

#9 Floss silk tree growing out of the Indian laurel hedge.

#10 Floss silk tree

#11 Ficus species

#12 Jacaranda – note leaning trunk and many epicormic shoots.

#13 Jacaranda

#14 Jacaranda

#15 Jacaranda

#16 Jacaranda

#17 California pepper over homeless camp.

#18 London plane tree.

#18 London plane tree – note crack in the main crotch.

#19 Camphor over homeless camp – note minor dieback.

#19 Camphor - note large wound and decay cavities.

#20 Indian laurel over homeless camp.

#20 Indian laurel – trunk is enclosed and covered by tents.

#21 Indian laurel base

#21 Indian laurel – note crossing limbs

#22 Indian laurel with crossing limbs and flush cuts.

#22 Indian laurel - note "recent "pruning"
#23 Mt. Atlas cedar – note artificial turf over root zone >

#24 Chinese elm and #26 Shamel ash in back corner of Wiz Island.

Same viewed from Olympic

#25 Southern magnolia in narrow turn parkway, means it will be a short lived tree.

APPLICATIONS:

DEPARTMENT OF CITY PLANNING APPLICATION

THIS BOX FOR CITY PLANNING STAFF USE ONLY

Case Number _____

Env. Case Number _____

Application Type _____

Case Filed With (Print Name) _____ Date Filed _____

Application includes letter requesting:

Waived hearing Concurrent hearing Hearing not be scheduled on a specific date (e.g. vacation hold)

Related Case Number _____

Provide all information requested. Missing, incomplete or inconsistent information will cause delays.

All terms in this document are applicable to the singular as well as the plural forms of such terms.
Detailed filing instructions are found on form CP-7810

1. PROJECT LOCATION

Street Address¹ PLEASE SEE ATTACHED EXHIBIT A _____ Unit/Space Number _____

Legal Description² (Lot, Block, Tract) PLEASE SEE ATTACHED EXHIBIT A _____

Assessor Parcel Number PLEASE SEE ATTACHED EXHIBIT A _____ Total Lot Area 51,050 SF

2. PROJECT DESCRIPTION

Present Use NON-OPERATING RESTAURANT ESTABLISHMENT, AUTO SERVICES, NURSERY SCHOOL _____

Proposed Use MIXED USE RETAIL AND RESIDENTIAL _____

Project Name (if applicable) 3377 OLYMPIC MIXED USE _____

Describe in detail the characteristics, scope and/or operation of the proposed project _____

PLEASE SEE ATTACHED EXHIBIT A _____

Additional information attached YES NO

Complete and check all that apply:

Existing Site Conditions

- | | |
|--|--|
| <input checked="" type="checkbox"/> Site is undeveloped or unimproved (i.e. vacant) | <input type="checkbox"/> Site is located within 500 feet of a freeway or railroad |
| <input checked="" type="checkbox"/> Site has existing buildings (provide copies of building permits) | <input type="checkbox"/> Site is located within 500 feet of a sensitive use (e.g. school, park) |
| <input checked="" type="checkbox"/> Site is/was developed with use that could release hazardous materials on soil and/or groundwater (e.g. dry cleaning, gas station, auto repair, industrial) | <input type="checkbox"/> Site has special designation (e.g. National Historic Register, Survey LA) |

¹ Street Addresses must include all addresses on the subject/application site (as identified in ZIMAS—<http://zimas.lacity.org>)

² Legal Description must include all contiguously owned properties (even if they are not a part of the proposed project site)

Proposed Project Information

(Check all that apply or could apply)

- Demolition of existing buildings/structures
- Relocation of existing buildings/structures
- Interior tenant improvement
- Additions to existing buildings
- Grading
- Removal of any on-site tree
- Removal of any street tree

- Removal of protected trees on site or in the public right of way
- New construction: 174,857 square feet
- Accessory use (fence, sign, wireless, carport, etc.)
- Exterior renovation or alteration
- Change of use and/or hours of operation
- Haul Route
- Uses or structures in public right-of-way
- Phased project

Housing Component Information

Number of Residential Units: Existing 0 – Demolish(ed)³ 0 + Adding _____ = Total _____

Number of Affordable Units⁴ Existing 0 – Demolish(ed) 0 + Adding 16 = Total 16

Number of Market Rate Units Existing 0 – Demolish(ed) 0 + Adding 137 = Total 137

Mixed Use Projects, Amount of Non-Residential Floor Area: _____ 4,700 square feet

Public Right-of-Way Information

Have you submitted the Planning Case Referral Form to BOE? (required) YES NO

Is your project required to dedicate land to the public right-of-way? YES NO

If so, what is/are your dedication requirement(s)? 5 / 3 ft.

If you have dedication requirements on multiple streets, please indicate: 5' ON OLYMPIC / 3' ON ST ANDREWS PL

3. ACTION(S) REQUESTED REQUEST #01

Provide the Los Angeles Municipal Code (LAMC) Section that authorizes the request and (if applicable) the LAMC Section or the Specific Plan/Overlay Section from which relief is sought; follow with a description of the requested action.

Does the project include Multiple Approval Requests per LAMC 12.36? YES NO

Authorizing Code Section LAMC 12.22 (A) 31

Code Section from which relief is requested (if any): LAMC 12.10 & LAMC 12.14

Action Requested, Narrative: _____

TRANSIT ORIENTED COMMUNITIES AFFORDABLE HOUSING INCENTIVE PROGRAM TO ALLOW ELIGIBLE HOUSING DEVELOPMENT TO BE GRANTED AN INCREASE IN RESIDENTIAL DENSITY, FLOOR AREA RATIO (FAR), A DECREASE IN PARKING REQUIREMENTS AND TO REQUEST ADDITIONAL INCENTIVE TO REDUCE OPEN SPACE REQUIREMENT; INCREASE ZONING HEIGHT IN R3 ZONE; AND IMPLEMENT AVERAGING OF FAR, DENSITY, PARKING, OPEN SPACE AND VEHICULAR ACCESS.

Additional Requests Attached YES NO

³ Number of units to be demolished and/or which have been demolished within the last five (5) years.

⁴ As determined by the Housing and Community Investment Department

4. RELATED DEPARTMENT OF CITY PLANNING CASES

Are there previous or pending cases/decisions/environmental clearances on the project site? YES NO

If YES, list all case number(s) _____

If the application/project is directly related to one of the above cases, list the pertinent case numbers below and complete/check all that apply (provide copy).

Case No. _____ Ordinance No.: _____

- | | |
|---|--|
| <input type="checkbox"/> Condition compliance review | <input type="checkbox"/> Clarification of Q (Qualified) classification |
| <input type="checkbox"/> Modification of conditions | <input type="checkbox"/> Clarification of D (Development Limitations) classification |
| <input type="checkbox"/> Revision of approved plans | <input type="checkbox"/> Amendment to T (Tentative) classification |
| <input type="checkbox"/> Renewal of entitlement | |
| <input type="checkbox"/> Plan Approval subsequent to Master Conditional Use | |

For purposes of environmental (CEQA) analysis, is there intent to develop a larger project? YES NO

Have you filed, or is there intent to file, a Subdivision with this project? YES NO

If YES, to either of the above, describe the other parts of the projects or the larger project below, whether or not currently filed with the City:

5. RELATED DOCUMENTS / REFERRALS

To help assigned staff coordinate with other Departments that may have a role in the proposed project, please provide a copy of any applicable form and reference number if known.

- a. Specialized Requirement Form _____
- b. Geographic Project Planning Referral _____
- c. Citywide Design Guidelines Compliance Review Form SEE ATTACHED
- d. Affordable Housing Referral Form _____

Name HYEUNG SEOK KANG
Company/Firm ANDMORE PARTNERS
Address: 3530 WILSHIRE BLVD Unit/Space Number 1830
City LOS ANGELES State CA Zip Code: 90010
Telephone (213) 788-1175 E-mail: HKANG@A-N-D-M-O-R-E.COM

Primary Contact for Project Information (select only one) Owner Applicant
 Agent/Representative Other

To ensure notification of any public hearing as well as decisions on the project, make sure to include an individual mailing label for each member of the project team in both the Property Owners List, and the Abutting Property Owners List.

⁵ An applicant is a person with a lasting interest in the completed project such as the property owner or a lessee/user of a project. An applicant is not someone filing the case on behalf of a client (i.e. usually not the agent/representative).

PROPERTY OWNER #01

7. PROPERTY OWNER AFFIDAVIT. Before the application can be accepted, the owner of each property involved must provide a notarized signature to verify the application is being filed with their knowledge. Staff will confirm ownership based on the records of the City Engineer or County Assessor. In the case of partnerships, corporations, LLCs or trusts the agent for service of process or an officer of the ownership entity so authorized may sign as stipulated below.

- **Ownership Disclosure.** If the property is owned by a partnership, corporation, LLC or trust, a disclosure identifying the agent for service or process or an officer of the ownership entity must be submitted. The disclosure must list the names and addresses of the principal owners (25% interest or greater). The signatory must appear in this list of names. A letter of authorization, as described below, may be submitted provided the signatory of the letter is included in the Ownership Disclosure. Include a copy of the current partnership agreement, corporate articles, or trust document as applicable.
 - **Letter of Authorization (LOA).** A LOA from a property owner granting someone else permission to sign the application form may be provided if the property is owned by a partnership, corporation, LLC or trust or in rare circumstances when an individual property owner is unable to sign the application form. To be considered for acceptance, the LOA must indicate the name of the person being authorized to file, their relationship to the owner or project, the site address, a general description of the type of application being filed and must also include the language in items A-D below. In the case of partnerships, corporations, LLCs or trusts the LOA must be signed and notarized by the authorized signatory as shown on the Ownership Disclosure or in the case of private ownership by the property owner. Proof of Ownership for the signatory of the LOA must be submitted with said letter.
 - **Grant Deed.** Provide a Copy of the Grant Deed If the ownership of the property does not match City Records and/or if the application is for a Coastal Development Permit. The Deed must correspond exactly with the ownership listed on the application.
 - **Multiple Owners.** If the property is owned by more than one individual (e.g. John and Jane Doe or Mary Smith and Mark Jones) notarized signatures are required of all owners.
- a. I hereby certify that I am the owner of record of the herein previously described property located in the City of Los Angeles which is involved in this application or have been empowered to sign as the owner on behalf of a partnership, corporation, LLC or trust as evidenced by the documents attached hereto.
- b. I hereby consent to the filing of this application on my property for processing by the Department of City Planning.
- c. I understand if the application is approved, as a part of the process the City will apply conditions of approval which may be my responsibility to satisfy including, but not limited to, recording the decision and all conditions in the County Deed Records for the property.
- d. By my signature below, I declare under penalty of perjury under the laws of the State of California that the foregoing statements are true and correct.

*Property Owner's signatures must be signed/notarized in the presence of a Notary Public.
The City requires an original signature from the property owner with the "wet" notary stamp.
A Notary Acknowledgement is available for your convenience on following page.*

APPLICANT

8. **APPLICANT DECLARATION.** A separate signature from the applicant, whether they are the property owner or not, attesting to the following, is required before the application can be accepted.
- a. I hereby certify that the information provided in this application, including plans and other attachments, is accurate and correct to the best of my knowledge. Furthermore, should the stated information be found false or insufficient to fulfill the requirements of the Department of City Planning, I agree to revise the information as appropriate.
 - b. I hereby certify that I have fully informed the City of the nature of the project for purposes of the California Environmental Quality Act (CEQA) and have not submitted this application with the intention of segmenting a larger project in violation of CEQA. I understand that should the City determine that the project is part of a larger project for purposes of CEQA, the City may revoke any approvals and/or stay any subsequent entitlements or permits (including certificates of occupancy) until a full and complete CEQA analysis is reviewed and appropriate CEQA clearance is adopted or certified.
 - c. I understand that the environmental review associated with this application is preliminary, and that after further evaluation, additional reports, studies, applications and/or fees may be required.
 - d. I understand and agree that any report, study, map or other information submitted to the City in furtherance of this application will be treated by the City as public records which may be reviewed by any person and if requested, that a copy will be provided by the City to any person upon the payment of its direct costs of duplication.
 - e. I understand that the burden of proof to substantiate the request is the responsibility of the applicant. Additionally, I understand that planning staff are not permitted to assist the applicant or opponents of the project in preparing arguments for or against a request.
 - f. I understand that there is no guarantee, expressed or implied, that any permit or application will be granted. I understand that each matter must be carefully evaluated and that the resulting recommendation or decision may be contrary to a position taken or implied in any preliminary discussions.
 - g. I understand that if this application is denied, there is no refund of fees paid.
 - i. I understand and agree to defend, indemnify, and hold harmless, the City, its officers, agents, employees, and volunteers (collectively "City"), from any and all legal actions, claims, or proceedings (including administrative or alternative dispute resolution (collectively "actions"), arising out of any City process or approval prompted by this Action, either in whole or in part. Such actions include but are not limited to: actions to attack, set aside, void, or otherwise modify, an entitlement approval, environmental review, or subsequent permit decision; actions for personal or property damage; actions based on an allegation of an unlawful pattern and practice; inverse condemnation actions; and civil rights or an action based on the protected status of the petitioner or claimant under state or federal law (e.g. ADA or Unruh Act). I understand and agree to reimburse the City for any and all costs incurred in defense of such actions. This includes, but it not limited to, the payment of all court costs and attorneys' fees, all judgments or awards, damages, and settlement costs. The indemnity language in this paragraph is intended to be interpreted to the broadest extent permitted by law and shall be in addition to any other indemnification language agreed to by the applicant.
 - i. By my signature below, I declare under penalty of perjury, under the laws of the State of California, that all statements contained in this application and any accompanying documents are true and correct, with full knowledge that all statements made in this application are subject to investigation and that any false or dishonest answer to any question may be grounds for denial or subsequent revocation of license or permit.

The City requires an original signature from the applicant. The applicant's signature below does not need to be notarized.

1 INTRODUCTION

This Soil Management Plan (SMP) was prepared on behalf of Andmore Partners, Inc. (API) for the subject Property located at 3399 W. Olympic Blvd. in Los Angeles, California (hereinafter referred to as either the Site or subject Property). This property consists of several parcels as described in Section 2.1 of this document.

1.1 Purpose and Objectives

The purpose of the Soil Management Plan (SMP) is to establish procedures and protocols for monitoring soil movement activities at the Site during redevelopment to ensure the protection of human health and the environment. These activities may include backfill of existing excavations and grading of the Site.

The objectives of this SMP are:

- To establish procedures for documenting the decision-making process prior to performing disturbance activities;
- To establish procedures for management and disposal of contaminated material which may be generated during disturbance activities;
- To establish proper notification procedures to appropriate local and State agencies;
- To protect personnel from potential and uncontrolled exposure to contaminated material while performing disturbance activities or other routine work activities;
- To ensure that disturbance activities are conducted and contaminated material is managed in accordance with the SMP and all applicable federal, state and local laws, regulations and requirements; and,
- To maintain the integrity of designed engineering controls.

2 BACKGROUND

The following subsections describe the Site location, previous environmental investigations and their results, and the nature and extent of contamination found on Site.

2.1 Project Description Dimensions and Estimated Volumes

The subject Property consists of multiple parcels located on the north side of West Olympic Boulevard between Gramercy Dr. on the west and St. Andrews Place on the east, in the city of Los Angeles, CA (see **Figure 1** and **Figure 2**).

Parcels Associated with the Project

Assessor Parcel No.	Associated Address	Approx. Area (sf [acre])
5081-033-010	3355 W. Olympic Blvd 3363 W. Olympic Blvd 3365 W. Olympic Blvd 991 S. St. Andrews Pl.	6762 sf / 0.155 ac
5081-033-009	989 S. St. Andrews Pl.	9,375 sf / 0.215 ac
5081-033-011	3377 W. Olympic Blvd "U" 998 S. Gramercy Dr. "U" 996 S. Gramercy Dr.	6800 sf / 0.156 ac
5081-033-022	"U" 986 S. Gramercy Dr. "U" 984 S. Gramercy Dr. "U" 980 S. Gramercy Dr.	18,750 sf / 0.430 ac
5081-033-014	974 S. Gramercy Dr.	9,375 sf / 0.215 ac
		51,062 sf / 1.172 ac

It is the intent of the property owner/developer to construct a 7-story mixed-use building over two levels of basement area. In preparation for the installation of underground parking beneath the building, soil will be removed to depths ranging from 23 to 31.5 feet below ground surface beneath the building footprint. According to Pacific Geotech, Inc. an estimated 46,020 cubic yards of soil will be excavated and hauled off-site during this grading operation (see Page C-8, Grading Plan in **Attachment-A**).

2.2 Environmental Setting

According to the Los Angeles Bureau of Engineering, Department of Public Works (as reported on their Navigate LA website, <https://navigatela.lacity.org/navigatela/>), the subject Property is:

- NOT in an Alquist-Priolo Fault Zone
- NOT in a Flood Hazard Zone
- NOT in an Earthquake-Induced Landslide area
- NOT in an Earthquake-induced Liquefaction Area
- NOT in a Hillside Grading Area or Hillside Ordinance Area
- NOT in an Airport Hazard Area
- NOT in an Environmentally Sensitive Area
- NOT in a Methane Hazard Area
- NOT in an Oil Well Area

2.3 Previous Environmental Investigations

Several Phase II Environmental Site Assessments (ESAs) were performed by various consultants for the parcels identified as 3355 W. Olympic Blvd and 989 S. St. Andrews Place (APNs 5081-033-009 and -010). The following is a summary of environmental conditions and previous investigations as documented in Environ Phase Consultants (EPC) Supplemental Environmental Site Investigation (SSI) report of August

2021. At the time, these parcels were occupied by an auto repair shop (Joy Auto Center, 3355 W. Olympic Blvd.) and Wiz Island Nursery School (989 S. St. Andrews Place). These two properties are shown on **Figure 3**.

Historically, the parcel 5081-033-009 (989 S. St. Andrews Place) was reportedly first developed circa 1923 as a residential building and garage. In 1988, the residence was converted to use as a daycare and preschool, which continued to operate until at least 2021.

Historically, the parcel 5081-033-010 (3355 W. Olympic Blvd) was first developed circa 1913 as a residential dwelling and garage. In 1940, the buildings were demolished and redeveloped as a gasoline station. In 1968, the gasoline station was demolished, the three underground gasoline storage tanks (USTs) (two 1,000-gallon and one 1,500-gallon gasoline USTs) were removed, and the property redeveloped with a 2,760 sf automotive commercial building that was present in 2021. In 2021, the building maintained six auto bays, five (inactive) in-ground hydraulic lifts and three aboveground hydraulic lifts.

- Western Environmental Engineers Company (WEECO) performed a limited Phase II ESA in 2006, and later performed a Phase I ESA in 2018, for the parcel identified as 3355 W. Olympic Blvd. and 991 S. St. Andrews Place. A copy of the 2006 Phase II ESA and/or associated soil boring logs, a boring location map, and laboratory reports were not included in their 2018 Phase I ESA, however they did indicate the former USTs were considered an historical Recognized Environmental Condition (HREC). At the time, WEECO recommended No Further Action of the parcels.
- EBI, 2020. EBI Consulting performed an Indoor Air and Soil Vapor Assessment for the property located at 3355 W. Olympic Blvd and 989 S. St. Andrews Place. The objective was to evaluate the potential impact to indoor air from the auto repair activities and possible use of solvents and petroleum products. EBI installed and sampled three (3) interior sub-slab vapor probes (SV-01, SV-02, and SV-3) in the basement of the day care facility, and two (2) interior sub-slab vapor probes (SV-4 and SV-5) in the floor of the smaller classroom building of 989 S. St. Andrews Place. Vapor samples were collected from each of these locations, along with five indoor air samples (IA-1 through IA-5) and one outdoor ambient air sample (AA-1). The vapor samples were analyzed for volatile organic compounds (VOCs) using EPA Method TO-15. EBI sample locations are shown on **Figure 4**.

Laboratory results for the vapor samples indicated only one chemical compound was detected: tetrachloroethene (PCE). PCE was detected in 3 of the 5 sub-slab vapor samples at concentrations up to 13 micrograms per cubic meter (ug/m^3) which is below the California Department of Toxic Substances Control's (DTSC) Screening Levels (SL) under a residential scenario ($15 \text{ ug}/\text{m}^3$) and commercial scenario ($67 \text{ ug}/\text{m}^3$), respectively. Laboratory results indicate VOCs were Not Detected above laboratory method detection limits in any of the indoor air samples (IA-1 through IA-5). Chemical results for these vapor/air samples are included on **Figure 5**.

Based on the aforementioned results, EBI concluded (a) intrusion of PCE vapors (detected in some sub-slab locations) to indoor air did not appear to be occurring; and (b) significant

subsurface impacts related to the historical use of chlorinated solvents at the former auto repair facility were not identified beneath the 989 S. St. Andrews Place address.

- EPC, August, 2021. EPC performed a Phase I Environmental Site Assessment (ESA) and Supplemental ESA at both 3355 W. Olympic Blvd and 989 S. St. Andrews Place. Upon review of the previous investigations, EPC concluded
 - (a) soil samples collected by WEECO in 2006 were collected outside, in the parking area of 3355 W. Olympic Blvd. EPC found a Site Map drawing, attached to the UST removal building permit from June 1968, that suggested the former USTs were located beneath what was in 2006 the interior of the western portion of the auto repair shop. EPC recommended supplemental environmental site investigation of this previously un-investigated area;
 - (b) No vapor samples or indoor air samples were collected by EBI in the former auto repair shop. EPC recommended soil vapor samples be collected in this area during the supplemental site assessment.

In 2021, EPC contracted a geophysical survey contractor to confirm the location of the former UST tank pit (based on the drawing attached to the aforementioned permit) in preparation for environmental sampling; advanced five soil borings (B1 through B5) to various depths ranging from 20 to 30 feet bgs; and, installed three soil vapor probes to 5 feet bgs. Boring locations are shown on **Figures 5 and 6**. Borings B1 and B2, were advanced and sampled to 30 feet bgs, amongst the inactive underground hydraulic hoists; borings B3 and B4 were advanced and sampled to 20 feet bgs in the former UST locations; and boring B5 was advanced and sampled to 20 feet bgs just outside the building south of the former UST tank pit. Soil samples were analyzed for total petroleum hydrocarbons (TPH) in the oil (TPH-o), diesel (TPH-d) and gasoline (TPH-g) ranges, for VOCs, total lead, and polychlorinated biphenyls (PCBs). The three soil vapor probes were installed to 5 feet bgs (SV1-5', SV2-5' and SV3-5') inside the auto-repair building, and later sampled. Vapor samples were collected in Tedlar bags and submitted for chemical analysis for VOCs, under a 6-hour sample holding time limit. Chemical results for soil gas and air samples are included on **Figure 5**.

Chemical results for soil samples collected (see **Figure 6**) from borings B3 and B4 (inside the former UST tank pit) indicate:

- TPH-g, benzene, toluene, ethylbenzene and total xylenes (BTEX) were not detected in any of the soil samples collected at 5, 10 and 20 feet bgs.
- Hydrocarbons in the diesel and oil-range were detected (at 5 and 10 feet bgs) at concentrations ranging from 4.18 to 255 milligrams per kilogram (mg/kg). TPH-d and TPH-o were Not Detected in the soil samples from 20 feet bgs.
- Trace amounts of lead were detected in the 5-foot soil samples from B3 and B4, however were not detected in the samples from 10 or 20 feet bgs.
- PCE and PCBs were not detected in any of the soil samples collected from this area.

Chemical results for soil samples collected from borings B1 and B2, located amongst the in-ground hydraulic hoists indicate:

- Small amounts of the mid- to heavier-range hydrocarbons (TPH-d and TPH-o) were detected at 5 and 10 feet bgs, but were not detected at 20 feet bgs or 30 feet bgs. Concentrations of TPH-g ranged from 2.33 to 6.03 milligrams per kilogram (mg/kg); TPH-d ranged from 1.61 to 1,870 mg/kg; and, TPH-o ranged from 2,110 to 23,200 mg/kg. The highest concentrations were detected at 10 feet bgs, decreasing with depth to Not Detected at 30 feet bgs in boring B2, and to Not Detected at 15 feet bgs in nearby borings. The vertical and lateral extent of TPH have been defined.
- Concentrations of BTEX were detected only in soil samples from 10 and 15 feet bgs in boring B2. BTEX was not detected in any other soil sample collected during the investigation. Concentrations of benzene ranged from 9.4 to 22.7 micrograms per kilogram (ug/kg). Toluene was detected at concentrations of 77.8 to 497 ug/kg. Ethylbenzene was detected at 89.1 and 547 ug/kg. Xylenes were detected at 756 and 4,080 ug/kg. The highest concentrations were detected at 10 feet bgs, decreasing to Not Detected by 30 feet.
- Concentrations of total lead were only analyzed for in the 5-foot soil samples in B1, B2, B3, B4 and B5. Concentrations ranged from 4.66 to 23.3 mg/kg, with the highest concentration in boring B4 (in the former UST pit). The Total Threshold Limit Concentration (TTL) for total lead in soil is 1,000 mg/kg. The Soluble Threshold Limit Concentration (STCL) (in leachate) for total lead is 5 milligrams per liter (mg/l). As total lead concentrations are less than the TTL, they are not considered (by the Feds) as hazardous. As the total lead concentrations are less than 10x STCL, they are not likely to have leachable lead at concentrations exceeding STCL, and as such are not likely to be defined as California Non-RCRA Hazardous.

2.4 Nature and Extent of Contamination

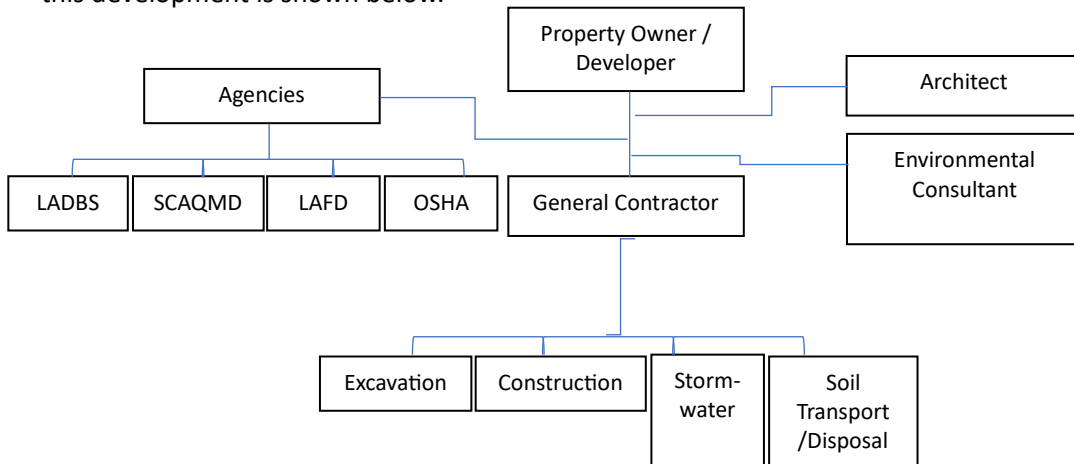

There appear to be appear three sources of contamination at the parcels identified as 3355 W. Olympic Blvd and 989 S. St. Andrews Place:

- a) An unidentified source resulting in PCE in soil gas (PCE was not detected in any of the soil matrix samples). Concentrations were identified only on 989 S. St. Andrews Pl.
- b) Hydraulic oil from in-ground hydraulic automobile lifts. These concentrations appear to originate in/near **boring B2**, reducing in concentrations radially outward, and limited in depth to between 20 to 30 feet bgs in B2, and between 15 and 20 feet bgs in borings B3, B4 and B5.
- c) Concentrations of TPH-g, TPH-d and minor amounts of BTEX – it was not uncommon to use gasoline or diesel as a parts cleaner, or for washing down oil from the floor. Concentrations of BTEX were detected only in boring B2, at depths of 10 and 15 feet bgs; BTEX does not extend to 30 feet; and do not appear to extend more than 10- to 15 feet radially – BTEX was not detected in any of the soil samples from borings B1 to the east, B3 to the west, or

B5 to the southwest. The distribution of chemicals detected in soil and soil gas in 2021 are shown on **Figures 5 and 6**. Based on the soil analytical results, hydrocarbon contaminated area is estimated at B1 and B2, approximately 40-ft by 25-ft by 15-ft (see **Figure 6**).

3 PARTICIPANTS AND RESPONSIBILITIES

This section identifies the SMP participants and their respective responsibilities. A business structure for this development is shown below.

3.1 Program Participants

3.1.1 *Property Owner's Participants*

Mr. Jae Seung Lee Representing

Bando Dela2, LLC
 3530 Wilshire Blvd. Suite1850
 Los Angeles, CA 90010
 Office #: 213-788-1175
 email: jslee@bandodela.com

3.1.2 *General Contractor*

John Choi Representing
 Peninsula E&C Corporation
 3530 Wilshire Blvd., Suite 1850
 Los Angeles, CA 90010
 email:
 jslee@peninsulaenc.com

3.1.3 *Geotechnical Engineering*

Mr. Jirayus Pukkiasut, PE #73728
Pacific Geotech, Inc.
1424 Rolling Hills Drive
Fullerton, CA 92835
Office # 626-675-1254
email: info@pgisoil.com

3.1.4 *Environmental Contractor Representative*

Mr. Jeff Lee and Mr. Allan Shim, P.E #C64024
Environ Phase Consultants, Inc. (EPC)
5313 Bihr Court
Whittier, CA 90601
Office #213-250-0411
email: epc4epc@gmail.com

3.1.5 Los Angeles City Department of Building & Safety Representative

Mr. Aaln Dang, Structural Engineer
LADBS
201 N. Figueroa St.
Los Angeles, CA 90012
Office: 213-482-0480

3.1.6 South Coast Air Quality Management District

21865 Copley Dr.
Diamond Bar, CA 91765
Office #909-396-2000

3.1.7 Local Environmental Oversight Agency (LOA) Representative

Los Angeles Fire Department – Certified Unified Program Agency (LAFD-CUPA),
Underground Storage Tanks, Environmental Unit
200 N. Main Street, Suite 1780
Los Angeles, CA 90012
office # 213-978-3680

3.2 Individual / Agency Responsibilities

The responsibilities of the individuals and/or agency representatives associated with this Project are presented in the following subsections. Based on the information provided in Section 2 of this SMP, **no** significant impacted soils are expected to be encountered during grading activities. Section 5.7 presents the procedures to address possible "unknown environmental concerns" encountered during grading operations, and to present a sampling protocol for possible import soils to the site, if needed. Profiling of soil for export, if necessary, will be subject to the needs of the receiving facility.

3.2.1 *SMP Field Coordinator*

The SMP Field Coordinator shall be responsible for the following:

- Periodically monitoring field activities to assess potential unknown environmental concerns, if encountered;
- Supervising activities related to unknown environmental concerns (and other environmental conditions) as directed and after having been permitted (if required);
- Collecting soil samples if and when needed, and arrange for laboratory analyses; and,
- Maintaining records of soil sample locations and documenting field conditions.

3.2.2 *SMP Program Manager*

The SMP Program Manager (SMPPM) shall be responsible for the following:

- Monitoring the work of the SMP Field Coordinator;
- Communicating field activities for the Owner's Project Director;
- Notifying the Owner's Project Director and LOA of unknown environmental concerns encountered during redevelopment activities;
- Communicating with regulatory agencies to investigate unknown environmental concerns and other environmental conditions;
- Consulting with regulatory agencies to characterize and delineate the proper management of unknown environmental concerns and other unknown environmental conditions; and
- Prepare reports of field activities.;

3.2.3 *General Contractor Project Manager*

The GC Project Manager (GCPM) or Project Site Superintendent (Super) shall be responsible for the following:

- The GCPM will monitor grading operations for fugitive dust in accordance with South Coast Air Quality Management District (SCAQMD) guidelines and will take such measures, as necessary, to properly manage dust and soil from leaving the Site;
- Reporting suspected unknown environmental concerns to the SMP Field Coordinator who will notify the SMP Program manager and/or the Owner's Project Director. The SMP Program Manager or Owner's Project Director will contact the LOP, when applicable; and
- If an unknown environmental concern is encountered, the SMP Field Coordinator will direct the GCPM to stop grading activities in the area of the feature and delineate the area with "Caution" tape, delineators, or fencing, prior to characterization and/or remediation.

EPC personnel working at the site will have current HAZWOPR health and safety training. As presented in Section 6, EPC will implement a Health and Safety Plan (HSP) that covers EPC's employees and subcontractors. A copy of the HSP is presented in Attachment B. EPC's scope of work for this project does not include health and safety monitoring for the GC or Grading Contractor's personnel and

subcontractors as part of their daily work activities or during any soil excavation activities. The GC and subcontractors will provide their own HSP.

4 APPLICABLE REGULATORY REQUIREMENTS AND SCREENING LEVELS

Several regulatory agencies have published screening levels for soil. The screening level(s) applied must be relevant to the route of exposure of the chemicals of concern. The routes of exposure to chemicals of concern during Site development include:

- Inhalation of dust - dust is generated by vehicles, during excavation and grading operations, and during loading and off-loading of soil. The regulatory agency responsible for issuing screening levels for exposure through dust is the South Coast Air Quality Management District.
- Ingestion and absorption through direct contact - screening levels protective of exposure through direct contact are risk-based, and governed by DTSC's Human and Ecological Risk Office (HERO). Alternatively, the San Francisco Regional Water Quality Control Board (SFRWQCB) published screening levels for soil for construction workers, residents, and employees.

A summary of appropriate screening levels for each of these routes of exposure are presented below.

4.1 South Coast Air Quality Management District (SCAQMD)

The SCAQMD is responsible for the air quality related issues associated with the escape of VOCs to the atmosphere and dust to air. Three SCAQMD rules govern emissions of VOCs and dust to the atmosphere at construction sites: Rules 1166, 402 and 403.

Rule 1166 sets requirements to control the emissions of VOCs as a result of excavation, grading, handling, and/or treatment of VOC-impacted soil as a result of leakage from storage or transfer operations, accidental spillage, or other deposition.

Rule 402 sets requirements for monitoring to prevent discharge from any source whatsoever of quantities of air contaminants or other material which may cause injury, detriment, nuisance, or annoyance to any persons or the public (nuisance). The purpose of Rule 403 is to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic fugitive dust sources by requiring actions to prevent, reduce or mitigate fugitive dust emissions (PM10). Copies of these rules are incorporated in this document as **Attachment B**.

Excavation, grading, stockpiling, or backfilling of soil impacted by VOCs must be monitored for VOC emissions using a PID in accordance with Rule 1166. Mitigation measures may be required based on results of monitoring. Monitoring and control measures under Rule 1166 are discussed in more detail in Sections 5.1.4 and 5.5 of this document.

Similarly, dust generation resulting from soil movement activities are covered under Rules 402 and 403. Dust monitoring and mitigation measures are discussed in more detail in Sections 5.1.5 and 5.5 of this document.

4.2 DTSC and RWQCB- Soil Screening Levels (SLs)

Chemical compounds detected in soil samples at the subject Property during previous investigations include trace amounts of benzene, toluene, ethylbenzene and total xylenes (BTEX), and petroleum hydrocarbons spanning the C6 to C40 (gasoline, diesel and oil ranges). The highest petroleum hydrocarbon concentrations were in automotive lift/repair area amongst the in-ground hydraulic hoists. It is likely the hydrocarbons in the oil-range are from hydraulic oil. It is possible and likely that hydrocarbons in the gasoline and diesel ranges (and BTEX) are from using gasoline for degreasing and cleaning; and diesel for parts cleaning. These chemicals are considered Chemicals of Potential Concern (COPC).

Oversight agencies that have promulgated (the most current acceptable) soil screening levels include the California Department of Toxic Substances Control (DTSC's) Human and Ecological Risk Office (HERO); and, the San Francisco Regional Water Quality Control Board (SFRWQCB). DTSC developed modified screening levels based on the U.S Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) for use in the human health risk assessment process at hazardous waste sites and permitted facilities. HERO Note 3, 2016 provides the latest in screening levels for tap water, air and soil. Table 1 summarize screening levels for soil. Of the COPCs, HERO Note 3 lists only benzene.

The SFRWQCB created the Environmental Screening Levels (ESLs) for all the COPCs.

TABLE SOIL SCREENING LEVELS

COPCs	HERO SL (1)	SF ESL (2)	SF ESL (3)
	(mg/kg)	(mg/kg)	(mg/kg)
TPH-g	NL	100	1800
TPH-d	NL	2600	1100
TPH-o	NL	1600	54000
Benzene	0.33	0.025	33
Toluene	NL	3.2	4700
Ethylbenzene	NL	0.43	540
xylenes	NL	2.1	2400

Notes:

Sources (1) HERO Note 3; (2) SF ESL Tier 1 Commercial Soil; (3) SF ESL Soil –

Direct Exposure (Construction)

mg/kg - milligrams per kilogram

NL – not listed

5 SOIL MANAGEMENT PLAN PROCEDURES FOR FIELD ACTIVITIES

During construction, activities that may generate dust or where VOCs may be generated include:

- Ingress/Egress from the Site;
- Soil grading (cut and fill);

- Import of soil (for grading or backfill)(unloading of soil from trucks)
- Export of soil (soil waste disposal, removal of excess soil, loading of soil into trucks)
- Stockpiling of soil
- Backfill of excavations
- Period of inactivity - while this is not an activity in itself, unfavorable weather conditions may generate dust or unfavorable runoff conditions.

The following procedures and protocols will be implemented during the various phases of construction to minimize the generation of dust and exposure to VOCs.

5.1 Pre-Grading Activities

Pre-grading activities will be performed to minimize down time and interruptions of grading activities in the event an unknown environmental concern is encountered. Pre-grading activities are intended for health and safety issues and preparing and coordinating site individuals with their respective responsibilities.

5.1.1 Health & Safety Plan (HSP)

EPC has prepared a HSP to protect EPC workers from chemicals of concern that might be encountered. A copy of the HSP is provided in **Attachment B**.

5.1.2 Pre-Grading Meeting

A pre-grading meeting will be attended by the SMP Field Coordinator, the GCPM/Super and the Owner's Project Director. The agenda of the meeting will include an oversight of the historical land use, environmental investigations, COPCs, worker safety requirements, and dust control measures. Figures will be reviewed showing where hydrocarbon and VOC-impacted soil were located, and the procedures to be performed to direct the excavation contractor in removing the known impacted areas. The meeting will also be held to discuss possible unknown environmental concerns that might be encountered. The SMP Program Manager will present and review the information provided in this SMP, including individual's responsibilities and emergency phone numbers.

5.1.3 Preparing for Ingress / Egress

In accordance with SCAQMD Rules 402 and 403, at least one of the following control measures will be in place at each designated vehicle egress point from the Site to a paved public road:

- Installation of a pad consisting of washed gravel (minimum-size: one inch) maintained in a clean condition to a depth of at least six inches and extending at least 30 feet wide and at least 50 feet long into the property;
- Utilizing a wheel shaker/wheel spreading device consisting of raised dividers (rails, pipe, or grates) (aka rumble plate) at least 24 feet long and 10 feet wide to remove bulk material from tires and vehicle under carriages before vehicles exit the Site;
- Setup and utilization of a pre-exit staging area where truck and equipment operators can remove bulk materials from tires and vehicle under carriages before exiting the Site.
- Street sweeping and/or vacuuming will be performed at points of egress, as necessary.

All other (non-designated) vehicle access points will be chain-locked.

5.1.4 Air Monitoring Procedures for VOCs

Ambient air monitoring will be performed to protect the health and safety of the on-site workers and the local public, and to dictate the level of workers' personal protective equipment (PPE). Monitoring of disturbed soil will allow for the SMP Field Coordinator to evaluate the need for active mitigation of VOCs, odors, and dust through soil segregation, vapor and dust suppression, and containing and covering impacted soil.

For worker health and safety, air monitoring will be performed by a qualified field technician (or equivalent) within the site worker's breathing zones at regular time intervals and the readings recorded. Additional air monitoring will be conducted at the property perimeters to evaluate the potential for vapor migration off the Site into public areas and neighboring properties. Wind direction and relative strength will be monitored using flags or socks placed above the Site. Wind parameters will be recorded with the air monitoring results. Monitoring frequency and vapor concentration thresholds for use of an air-purifying respirator or other appropriate PPE will be performed per the site-HSP.

If a high level of vapors and/or odor is recorded at a property boundary, vapor mitigation measures will be applied at the working area and a check for vapors and odors outside the Site perimeter will be performed. Additionally, if complaints are received from a member of the public, fieldwork will be temporarily stopped while the cause of the complaint is identified and mitigated.

5.1.5 SCAQMD Air Monitoring- Public Nuisance Monitoring and Controls

Public nuisance can be generated by odors and/or dust. Rules 402 and 403 address public nuisance and dust. In accordance with Rule 402, chemicals potentially released to the air due to the proposed construction activities will be monitored and controlled as discussed herein.

Depending on the type of top soil, dust can be generated in inactive disturbed areas as well as areas where active earth-moving activities occur. Special procedures are required if the Site is a "medium operation" or a "large operation". **Medium operations** are active operations on property which contains between 50 to 100 acres of disturbed surface area or any earth-moving with daily earth-moving between 5,000 cy and 10,000 cy during any 365 day period. The Site is less than 50 acres and, therefore the Site does not qualify as even a "medium operation".

Top soil at the site consists of silty and clayey soil, which can be susceptible to dust flurries when dry. The GC, Super, and Field Coordinator shall perform monitoring and mitigation procedures outlined in Rule 403:

- A person shall not cause or allow PM10 levels to exceed 50 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) when determined, by simultaneous sampling, as the difference between upwind and downwind samples collected on high-volume particulate matter samplers, or other US EPA-approved equivalent method of PM10 monitoring.
- A wind sock will be installed on Site and wind direction monitored periodically throughout each day of operations.
- If sampling is performed, samplers shall be:
 - Operated, maintained, and calibrated per 40CFR Part 50, Attachment J;
 - Reasonably placed upwind and downwind of key activity areas and as close to the property line as feasible, such that other sources of fugitive dust between the sampler and the property line are minimized.

- GC shall employ strategies to prevent or remove (within one hour) the bulk of material onto public paved roadways as a result of their operations
- GC shall employ dust suppression practices on all on-Site travel pathways, in particular during activity days as well as during non-active days. Dust suppression practices may include spraying water and/or use of ground cover.

In accordance with Rule 1166: "If the owner or operator is served with a Notice of Violation for creating a public nuisance, the owner or operator shall suspend operation until the public nuisance is mitigated to the satisfaction of the Executive Officer."

In the event that the Developer is notified by the SCAQMD that a public nuisance has occurred, the Site operations manager will immediately cease all activities and implement mitigation controls as discussed herein. Construction activities will not resume operation until the nuisance has been mitigated and the Executive Director has authorized the operations to recommence.

5.2 Soil Screening and Delineation

Soil screening is the process of (a) screening the soil prior to excavating, or (b) screening each bucket of soil for VOCs as it is excavated. Screening prior to excavation consists of creating a small-diameter hole to a depth of 1 to 2 feet bgs, inserting the tip of the photoionization detector (PID) into the hole, and recording the concentration. By gridding the work area, the SMP Field Coordinator can direct the excavating operator how to segregate the impacted soil, if any. This process can be repeated for each level excavated.

Alternatively, the excavator will bring each scoop up to the SMP Field Coordinator to monitor with the PID. The SMP Field Coordinator will then direct the excavator operator where to place the excavated soil.

5.3 Soil Excavation, Segregation and Management

Field screening of soil is reliant on the PID readings. PID readings can be influenced by soil moisture content. Excess moisture also depress odors (which is one of the reasons water is used to depress dust and odors). EPC recommends segregating out soil that exhibit PID readings in excess of 50 parts per million by volume (ppmv). Stockpiled impacted soil should be labeled. All stockpiled soil should be periodically sprayed to reduce dust, and covered at the end of each day with tarp or Visqueen until transported.

During excavation operations of an area identified as having been impacted by VOCs, a qualified field technician (or equivalent) will continuously monitor the active excavation and the disturbed soil for the presence of VOCs in compliance with the SCAQMD's strict Rule 1166 protocol. Excavated soil will be screened with calibrated field instruments such as a PID per Rule 1166 requirements. Screening will be performed approximately 3-inches above the removed soil. The SCAQMD screening level requiring some level of action is 50 ppmv. Screening levels and appropriate mitigation efforts are further discussed below.

Excavated soil will initially be segregated based on relative vapor concentrations measured with a PID under SCAQMD's Rule 1166 guidelines. Segregation thresholds may be modified based on site-specific

results, if a correlation between soil-vapor readings and analytical VOC concentrations in soil is established. Initial segregation guidelines are:

- VOC readings of 0 to 50 ppmv: Soil will be stockpiled and covered with plastic sheeting. Plastic sheeting will be inspected every morning to ensure the integrity of the covering.
- VOC readings of 50 to 1,000 ppmv: Reading at 50 ppmv or greater, SCAQMD notification is required within 24 hours. Excavated soil should be sprayed with water or an approved suppressant to mitigate VOCs and odors. Soil will be stockpiled and covered with plastic sheeting.
- VOC readings of >1,000 ppmv: Reading at 1,000 ppmv or greater, SCAQMD notification is required within one hour. Excavated soil and work area should be sprayed with water or an approved suppressant to mitigate VOCs and odors. Soil will be transferred directly to a SCAQMD-approved, sealed container (e.g., covered bin).

5.4 Stockpiling (VOC-Impacted) Soil and Mitigation Measures

Temporary stockpiling or containment of excavated (VOC-impacted) soil will be conducted in preparation for waste characterization and transport off site to an appropriate treatment/disposal facility. Possible VOCs, odors, and dust emissions occurring during soil excavation, handling, and transfer will be mitigated to eliminate health, safety and nuisance concerns.

The following procedures will be adhered to for stockpiled soils with VOCs:

- Water spray and/or commercial vapor suppressants will be applied to the stockpiles and the excavation work area as needed to minimize vapor emissions and potential fugitive dust.
- Individual stockpiles containing VOCs will be limited to 400 cubic yards (cy) (eg 24ft wide base, 6ft high, 100ft long) of soil or the volume specified in the SCAQMD Rule 1166 permit.
- All stockpiled soil (<1,000 ppmv) will be covered with 10-mil Visqueen.
- Soil with VOCs greater than 1,000 ppmv will be loaded directly into roll-off bins and covered per Rule 1166 requirements. If roll-off bins are not immediately available, the soil will be stockpiled on and covered by Visqueen, and then covered in 3 inches of clean soil until roll-off bins are available.
- Soil that was previously characterized and profiled (such as a listed-waste) may be loaded directly into roll-off bins or trucks, covered, and transported to the designated disposal facility.
- Uncovered stockpiles will be visually monitored for fugitive dust and odors to be suppressed with water as needed. All stockpiled soil must be covered at the end of each day; and
- All stockpiles will be covered with 10-mil Visqueen with a minimum 24-inch overlap and secured to minimize VOC, odor, and dust emissions and to withstand winds after the stockpiling is concluded and sampling is completed, and at the completion of daily work.
- All stockpiled soil must be either removed or treatment initiated within 30 days from time of excavation.

5.5 Confirmation Sampling and Soil Profiling for Disposal

Soil samples will be collected from the excavation, test pits, and stockpiles using a backhoe bucket, hand auger, or clean spade as appropriate.

Soil samples for confirmation (collected along the walls and base of the excavation) will be collected in 2-inch diameter by 3-inch long brass sleeves, capped with Teflon sheets and plastic end caps; and using EPA 5035 protocols for VOCs.

Soil samples for profiling of stockpiled soil will be placed into 4-ounce glass jars supplied by the laboratory or stainless steel rings with PVC end caps per the laboratory requirements. Soil sampling will be conducted under the supervision of a State-Professional Geologist from GSA.

Confirmation soil samples will be analyzed for TPH-full scan using modified EPA Method 8015; and for VOCs using EPA Method 8260B. Soil samples for stockpile profiling will be chemically analyzed for total petroleum hydrocarbons; for VOC analysis using EPA 8260B; and for metals using EPA Method 6010/7000. Should specific metal concentrations exceed ten times their respective soluble threshold limit concentration (STLC), leachable metal concentrations will be analyzed using a Waste Extraction Test (WET)(for California) and Toxicity Characteristic Leaching Procedure (TCLP)(for Federal).

The soil samples retained for chemical analyses will be placed in Ziploc bags and stored in an ice chest cooled, using ice, to a temperature of approximately 2-3 degrees Celsius. The samples will be delivered to a State-certified environmental laboratory within 24 hours of collection. Sample handling, transport, and delivery to the laboratory will be documented using chain-of-custody procedures, including the use of chain-of-custody forms.

5.6 Loading/Off-Loading Soil

When loading materials for transport from the Site, the GC Super and Field Coordinator will ensure:

- Equipment will be pre-watered prior to loading;
- Truck freeboard shall not be less than six inches;
- The operator shall empty the loader bucket such that no visible dust plumes are created;
- The operator shall ensure that the loader bucket is close to the truck to minimize drop height while loading;
- No excavated material may extend above the sides or rear of the truck.
- Trucks will be completely tarped/covered to prevent particulate emissions to the atmosphere.
- The exterior of the trucks shall be cleaned off prior to leaving the Site.
- Transport to an approved Class III landfill or appropriate facility for recycling or disposal;

When off-loading materials brought to the Site the GC Super and Field Coordinator will ensure:

- Soil will be misted during off-loading to minimize dust generation;
- Stockpiled soil will be maintained as indicated under the section on stockpiled soil.

5.7 Discovery of Previously Unidentified Contaminated Soil

If unknown environmental concerns are discovered during redevelopment activities, EPC will prepare workplans, facilitate obtaining permits, and provide reports as needed to manage the unknown environmental concerns and to expedite review so as not to delay grading or redevelopment activities. EPC will notify the LARWQB if regulated or unregulated features are discovered, and may request oversight during site characterization and remediation, if needed.

"Unknown environmental concerns" are defined as regulated features (e.g. underground storage tanks [USTs], septic pit, clarifier, etc.) or other unregulated features (e.g. stained or odorous soil, or soil exceeding 50 parts per million [ppm] as measured with a photoionization detector [PID]) discovered during grading. If unknown environmental concerns are discovered during grading procedures, EPC will direct and oversee the characterization and remediation activities. Cleanup activities will be completed to the satisfaction of a regulatory agency or to the standards proposed in Section 4. Groundwater is not expected to be encountered during construction activities.

6 REPORTING

A report documenting excavation monitoring, collection of and chemical results for confirmation samples, and final disposition for excavated material will be prepared by EPC within 60 days of final soil-removal procedures. The document will include field monitoring sheets, soil sampling logs, laboratory reports, and soil transport manifests.

Subject: Soil Management Plan
Address: 3399 W. Olympic Blvd.
Los Angeles, CA 90021

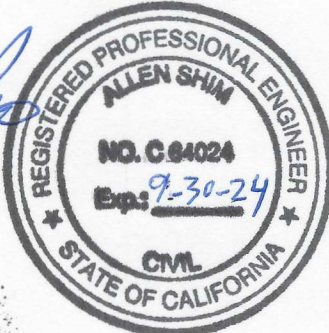

Dear Heagi Kang,

On behalf of Andmore Partners, Inc. (the client), Environ Phase Consulting Co. (EPC) completed a soil management plan (SMP) at the above referenced site property in accordance with the recommendation presented in August 12, 2021 Phase II ESA report (EPC, 2021).

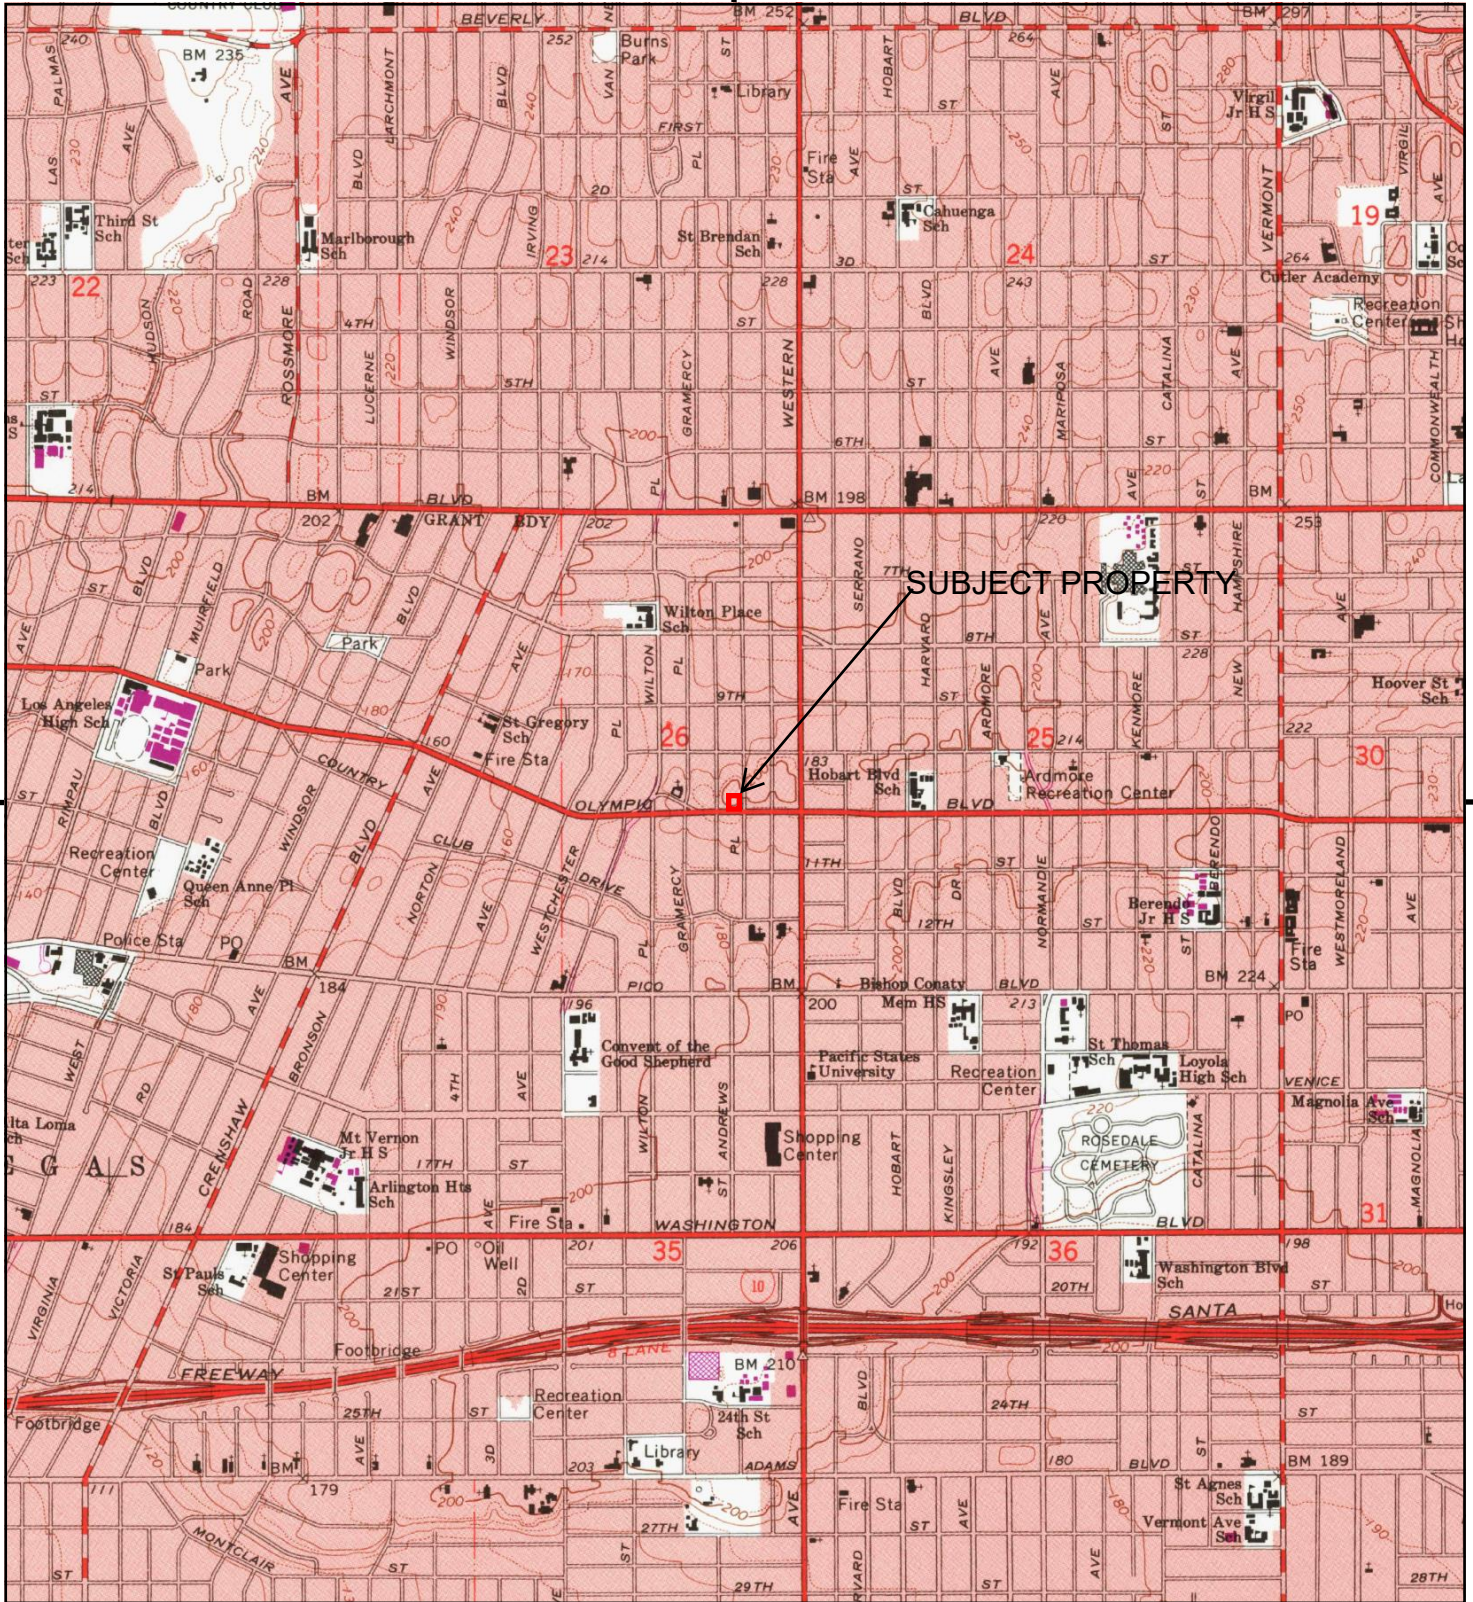

We appreciate the opportunity to assist you with this project. If you should have any questions or concerns regarding this report, or if we can be of any further service to you in the future, please do not hesitate to contact Jeff Lee at 213-250-0411.

Best Regards,

Allen Shim, P.E.
Senior Engineer

C. HEALTH & SAFETY PLAN

1. Subject Site Information

This site safety plan sets forth the recognized safety requirements that will be in place for the proposed groundwater monitoring and soil sampling work at **3399 W. Olympic Blvd in the City of LA, California**. Environ Phase Consulting Company (EPC) and any subcontractors employed will be responsible for the field of work in the soil boring and soil sampling phase. These requirements set forth herein will be followed by them.

2. Description of Proposed Work

This document presents a “Site Assessment Workplan” to define lateral and vertical extent of petroleum hydrocarbons contamination derived from gas station activities. This workplan includes the following field works:

- Perform site visit to verify existing conditions and pre-mark boring locations and notify Underground Service Alert (USA) of the intent to excavate or drill and use standard care to avoid potential damage to subsurface utilities.
- Notification: Prior to advancing the borings, the Site representative, property owner and tenants of business units where drilling would be performed will be notified of the work schedule.
- Health & Safety Meeting: Field safety meeting will be held among field personnel and drilling crew prior to the start of drilling and sampling.
- Soil Excavation: Based on the grading plan of the property owner/developer, a 7-story mixed-use building over two levels of basement will be constructed. In preparation for the installation of underground parking beneath the building, soil will be removed to depths ranging from 23 to 31.5 feet below ground surface beneath the building footprint. According to Pacific Geotech, Inc. an estimated 46,020 cubic yards of soil will be excavated and hauled off-site during this grading operation (see Page C-8, Grading Plan in **Attachment-A**). Based on the soil analytical results, hydrocarbon contaminated area is estimated at soil boring locations B1 and B2, approximately 40-ft by 25-ft by 15-ft (see **Figure 6**).
- Decontamination: All sampling equipment and sampling tubes were decontaminated prior to each sampling by repeated washing using a brush and Liquinox solution, a tap water rinse, and finally a de-ionized water rinse. The sampler and sampling tubes were either air-dried or dried with a clean towel. Clean augers were used for each boring. Gloves were changed after each sample and all sampling equipment were washed in a non-phosphate detergent and triple rinsed to prevent cross contamination of the soil samples.
- Soil Sampling: Soil samples collected from the proposed hydrocarbon contaminated area will be delivered to a state certified laboratory (i.e., Positive Lab or Chemtek Environmental Lab).

3. Key Personnel & Management

EPC maintains a policy of providing its employees, subcontractors, and authorized visitors with information and procedures in order to protect them and the adjacent community from the adverse effects that might result from the work at the job site involving potentially hazardous substances. All EPC personnel will read and agree to comply with the health and safety procedures set forth in this manual. Visitors will not be admitted to the site unless they have also read and agreed to these procedures.

3.1 Area Operation Manager

EPC designates an Area Operations Manager (AOM) who implements and enforces project safety programs and procedures. The AOM will ensure that the daily safety meetings are held and will interface as required with other site representatives. The AOM takes the following action(s) when appropriate:

- Orders the immediate shut down on site activities in the case of a medical emergency or unsafe practice.
- Ensures protective clothing and equipment are properly used, maintained and stored.
- Restricts visitors from areas of potential exposure to harmful substances.

A safety log will be kept for all EPC activities. This log will include air-monitoring information, first aid administered, visits of all outside personnel and any incidents of a health and safety nature.

The AOM has responsibility for implementing and enforcing the safety program and procedures. He will oversee any personnel monitoring and will decide when action levels have been reached which require more stringent protection. The AOM establishes and enforces the protective equipment to be used for the site activities and will maintain contact with the EPC **Safety Administrator (Allen Shim Civil P.E)**. Safety administrator takes charge health & safety plan correction and addition for the specific site.

Jeff Lee of EPC, shall act as the Area Operation Manager (AOM) for this project.

3.2 Field Project Manager

The Field Project Manager (FPM) has responsibility for all field activities and enforces safe work practices by all crew members. He watches for any ill effects on any of the crew members, especially those symptoms caused by exposure of petroleum product. The FPM oversees the safety of anyone who enters the site and maintains communication with EPC AOM.

Daniel Morales, project manager of EPC, shall act as the Field Project Manager (FPM) for this project.

4. Equipment Operator

A general contractor, which is hired as a state licensed contractor by the Property Owner, will be responsible for the maintenance, inspection and safe operation of soil excavator, loader, and others.

5. Employee Safety Responsibility

Although the employer is responsible for providing a safe and healthful work place, each employee is responsible for his/her supervisor. All personnel will follow the policies set forth in the EPC Safety and Health Manual.

6. OSHA Records

Required recording including, but not limited to, OSHA 200 logs are maintained in the Santa Ana Office:

Environ Phase Consultant Company
5313 Bihl Court
Whittier, CA 90601

An OSHA 200 log for individual projects will be maintained on-site along with other required records.

7. Job Hazard Analysis

7.1 Chemical Hazards

Chemical: Benzene (C₆H₆)

Exposure Routes: Inhalation and skin contact

PEL: 1 ppm

Highest Concentration Present in Soil (mg/kg): ND (LE, 2001)

Effect of overexposure:

- a) Acute; At high concentrations (>1,000 ppm) there is an acute effect on the central nervous system causing headache, dizziness, drowsiness, unconsciousness, and death.
- b) Chronic; Effects on bone marrow (leukemia)
- c) Repeated skin contact leads to irritant contact dermatitis (rash)
- d) Irritating to eyes and mucous membranes
- e) Flammable / dangerous fire risk
- f) Explosive limits in air 1.5 to 8% by volume

Personal protective measures:

- a) In area where benzene is present, workers should wear impenetrable protective clothing,
- b) Respirators with organic vapor canisters, and
- c) Supplied air when entering enclosed spaces.

Chemical: Toluene (C₆H₅CH₃)

Exposure Routes: Inhalation and skin contact

PEL: 100 ppm

Highest Concentration Present in Soil (mg/kg): 18.3 (LE, 2001)

Effect of overexposure:

- a) Irritation of the eyes, skin and respiratory tract
- b) Drying and cracking of the skin
- c) Exposure can occur through inhalation and skin contact
- d) Flammable limits 1.2 – 7.1%

Personal protective measures:

- a) Respirator with organic vapor cartridge if PEL is exceeded,
- b) Avoid skin contact
- c) Wear impervious clothing, gloves and face shield.

Chemical: Xylene (C₆H₄)

Exposure Routes: Inhalation and skin contact

PEL: 100 ppm

Highest Concentration Present in Soil (mg/kg): 236.3 (LE, 2001)

Effect of overexposure:

- a) Exposure can occur by inhalation and skin contact
- b) Irritation of the eyes, nose, throat. Breathing may be difficult.

- c) Repeated exposures can cause skin rash.
- d) Flammable limits 1.1 – 7.0%

Personal protective measures:

- a) Respirator with organic vapor cartridge, or supplied air
- b) Avoid skin contact
- c) Wear chemically resistant clothing gloves and a face shield

Chemical: MTBE (C₅H₁₂O)

Exposure Routes: Inhalation and skin contact

PEL: 100 ppm

Highest Concentration Present in Soil (mg/kg): 3.45 (LE, 2001)

Effect of overexposure:

- a) Exposure can occur by inhalation and skin contact
- b) Irritation of the eyes, nose, throat. Breathing may be difficult.
- c) Repeated exposures can cause skin rash.

Personal protective measures:

- a) Respirator with organic vapor cartridge, or supplied air
- b) Avoid skin contact
- c) Wear chemically resistant clothing gloves and a face shield

For this project at site the exposure limit will be constantly monitored within the soil boring zone and laboratory zone, as well as the peripheral of those zones. EPC FPM as well as all the personnel working in the vicinity will monitor the air quality for the current PEL according to each chemical component.

Reducing Exposure

Even though the site is in a parking space and in the public street so that the concentration of the petroleum hydrocarbons may be reduced by mixing with the ambient air present, preventing the overexposure is important. To prevent the overexposure or exposure at the least, the following methods of reducing exposure limit will be adopted by all of EPC personnel.

Engineering Control: Other control methods include changing work practices, changing the work process, and installing ventilation. Tight-fitting caps should be tightly covered to prevent evaporation. Some work processes can be isolated, enclosed or automated to reduce exposures.

Personal Protective Equipment: If, although highly unlikely for this project, the exposure limit was not able to be reduced down to PEL, a respirator shall be worn by all the personnel within the affected zone. The respiratory protection program shall be as outlined by Cal/OSHA regulations (GISO 5144). The respiratory equipment shall be NIOSH-approved air purifying respirator with organic vapor cartridges or canisters.

7.2 Physical Hazards

In order to minimize physical hazards, EPC has developed standard safety protocols, which will be

followed at all times. Failure to follow safety protocols or continued negligence of these policies will result in disciplinary action up to and including termination.

All EPC personnel are familiar with the scope of work and field activities that will be conducted at the subject site. They are trained to work safely under various field conditions. In addition, the FPM will observe the general work practices of each crew member and equipment operator, and enforce safe procedures to minimize physical hazards. Hard hats, safety glasses or goggles and leather shoes or boots will be required at the site.

7.3 Environmental Hazards

7.3.1 Heat Stress

An action level for heat stress has been established. At 75°F ambient temperature, the FPM will become aware of the effects of heat stress on the field crew, and will alert the crew to become aware of any symptoms.

Heat stroke, cramps, and exhaustion are covered in detail during our 40-hour OSHA 29 CFR 1919.120 approved course. Workers are encouraged to increase consumption of water or electrolyte-containing beverages such as Gatorade during warm weather.

At a minimum, workers will break every 4 hours for 15-minute rest periods. In addition, workers are encouraged to take rests whenever they feel any adverse effects, especially those effects that may be heat-related. The frequency of breaks may need to be increased upon worker recommendation to the FPM.

7.3.2 Hearing Conservation Program

Hearing protection such as ear plugs will be made available to all employees. Noise levels from hydraulic punches for drilling machine and concrete coring or asphalt breaking will be monitored and prevented from exceeding allowable limit of a time weighted average (TWA) of 85 dbA (decibels, A scale).

8. Protective Equipments

8.1 Exclusion Zone

Exclusion zone will consist of areas where inhalation, oral contact or dermal contact with contaminants will be possible. For soil boring work at the subject site, the exclusion zone is 50 feet radius area of the boring location B-1. The exclusion zone will be demarcated with caution tape.

The list of protective equipment will be as follows:

- EPA Level: D

- Respiratory Protection: Dependent on the monitored air quality
- Head: Hard Hat
- Hands: Protective gloves
- Suit: Work pants and shirt.
- Boots: Leather shoes or boots.
- Face: N/A
- Eye: Safety glasses (Safety goggles when needed)
- Hearing: Earplugs, if noise level exceeds the allowable limit.

8.2 Implementation for Level C

In the event the air quality reading rises above 50 ppm in the work zone, removing workers from area and allowing area to ventilate to below action level as an alternative to upgrading to Level C.

Level C consists of the following requirements:

1. Half face air respirators (North 7700 series or equal) with appropriate cartridges
2. Tyvek coveralls
3. Neoprene gloves
4. Rubber Boots

8.3 Implementation for Upper Level

If the concentration exceeds 1,000 parts per million (ppm), removing workers from area and allowing area to ventilate to below action level as an alternative to upgrading to Level A or B. In the event that the air quality data shows that air supplied respiratory protection must be needed, then EPC personnel will be equipped with the respiratory protection. For this soil boring work at the site the required respiratory protection shall be made available to the working crews at the site.

8.4 Cartridge Changes

All cartridges will be changed as necessary. However, water saturation of the filter or dust conditions may necessitate frequent inspections. Changes will occur when personnel begin to experience increased inhalation resistance, or breakthrough of a chemical warning property.

8.5 Inspection & Cleaning

Respirators are checked periodically by the FPM or the AOM and inspected before each use by the wearer. All respirators and associated equipment will be decontaminated and hygienically cleaned after each use.

9.0 Decontamination Procedures

This section describes the procedures necessary to ensure that the equipments are free from contamination when leaving from the work site. All liquids and disposable clothing will be treated as contaminated waste and disposed of properly. All heavy equipment will be water washed or steam cleaned prior to leaving the site and after each use. For this site assessment project at the subject site, the decontamination will follow each boring.

10.0 Emergency Response

Prior to beginning the field activities, the FRP shall plan emergency egress routes and discuss them with all personnel who will be conducting the field work. Initial planning includes establishing emergency warning signals and evacuation routes in case of an emergency.

10.1 Emergency Services

A tested system shall exist for the rapid and clear distress communication. All personnel shall be provided concise and clear directions and accessible transportation to local emergency services. A map outlining directions to the nearest hospital will be posted on site.

The following emergency equipment shall be present on the site throughout the assessment:

- Fire extinguishers
- Industrial First Aid kit

10.2 First Aid

A set of industrial first aid kit will be available at the site. The first aid kit shall only be used for treating minor and temporary medical assistance. Once the injury has been stabilized by using the first aid kit, the injured personnel will be transported immediately to the nearest medical facility as shown in the map in the attachment. The map showing emergency route will be posted at the job site all the time.

10.3 Emergency Actions

If actual or suspected serious injury occurs, these steps shall be followed:

- Remove the exposed or injured person(s) from immediate danger.
- Render first aid if necessary. Decontaminate affected personnel after critical first aid is given.
- Obtain paramedic services or ambulance transport to local hospital. This procedure shall be followed even if there is no visible injury.
- Other personnel in the work area shall be evacuated to a safe distance until the FPM determines doubt regarding the condition of the area.
- Work shall not commence until all hazard control issues are resolved.
- Notify client of incident.

10.4 General Evacuation Plan

In the general case of a toxic vapor release, a site evacuation shall be ordered and all the personnel shall follow these steps:

- Evaluate the immediate situation and downwind direction.
- All personnel will evacuate in the upwind direction.
- All personnel will assemble in an upwind area when the situation permits, a head count will be taken.
- Determine the extent of the problem.

11.0 Training Requirement

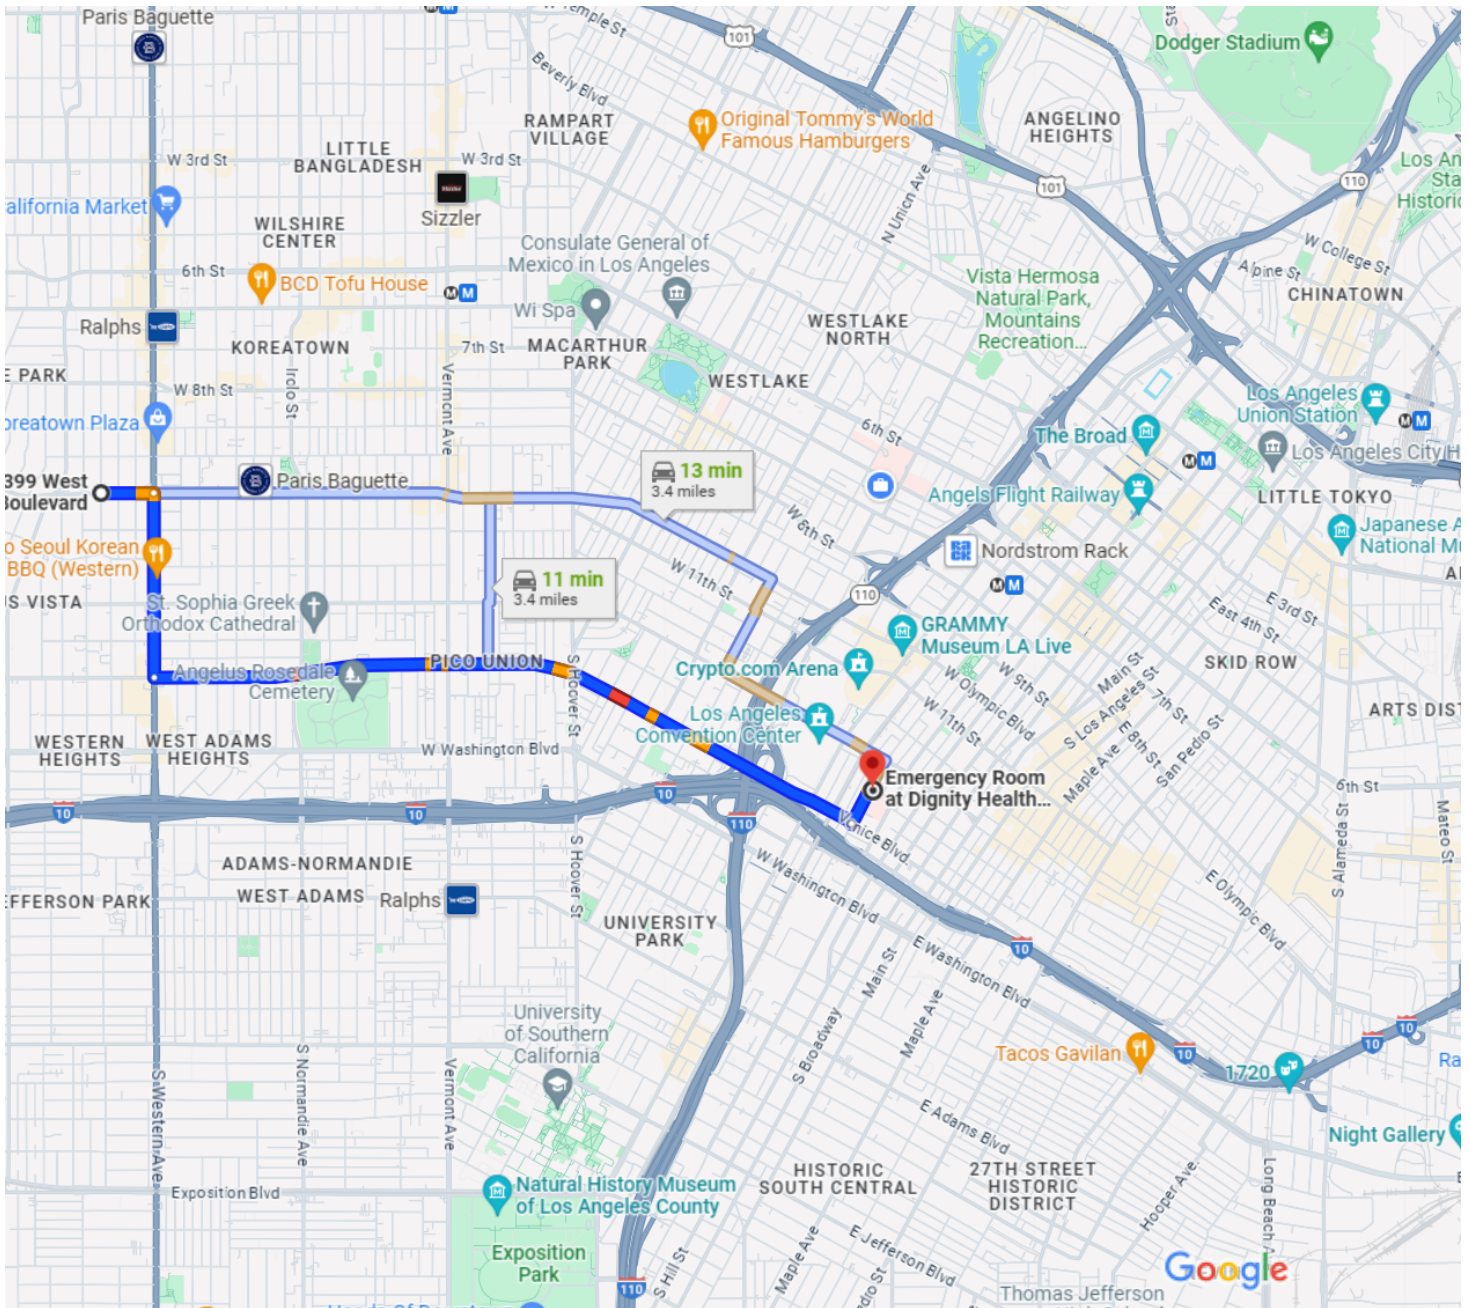

As a condition of employment at EPC, field employees are required to attend a 40-hour training class or 8-hour refresher course and a written examination as soon as possible after their probation period has been completed (12 months). This training is comprehensive and covers all forms of personal

protective equipment. In addition, this course covers toxicological effects of various chemicals including all the chemical constituents in the gasoline.

Each employee is also required to have three days of on-the-job training with his/her supervisor. Supervisors are required to have an additional 8-hour class. All employees receive an annual 8-hour refresher course in addition to their regular briefing prior to every project.

All personnel entering an exclusion zone will be trained in the details of the project (*i.e.* chemical hazards of the petroleum products, preventive measures necessary for the safety, and emergency route to the nearest medical facility).

1.0 INTRODUCTION

This Noise Technical Report describes the potential for noise impacts resulting from implementation of the Bora 3399 Project (the “Project”) in the City of Los Angeles (City). This report includes an evaluation of potential impacts associated with changes in ambient noise levels in the vicinity of the Project Site due to excessive noise caused by Project construction and operation; and whether exposure is in excess of standards established in the City’s General Plan or Noise Ordinance would be caused by the Project. This report has been prepared by Impact Sciences, Inc., in support of the environmental documentation being prepared pursuant to the California Environmental Quality Act (CEQA).

1.1 PROJECT LOCATION

The City of Los Angeles (City) is an incorporated municipality located within the southern portion of Los Angeles County. The 51,124 square foot (1.17-acre) Project Site consists of four parcels and is located at 3355 – 3377 W. Olympic Boulevard within the Wilshire Community Plan area of the City. See **Figure 1, Aerial Photograph of the Project Site**. According to the City’s General Plan, the Project Site is designated as General Commercial and Medium Residential. The surrounding properties are designated as Medium Residential to the north, west, and east and General Commercial to the south. The Project Site is zoned Commercial (C2-1) and Residential (R-3-1). The surrounding properties are zoned as R3-1 to the north, east and west and C2-1 to the south. The Project Site is generally bound by residential uses to the north and west, Olympic Boulevard to the south, St. Andrews Place to the east and Gramercy Drive to the west. The Project Site currently consists of an operational auto care facility and vacant (non-operational) restaurant and nursery facilities.

1.2 PROJECT DESCRIPTION

The Project includes demolition of the existing buildings on site to construct a new 7-story 153-unit mixed use apartment building consisting of 5,000 square feet of commercial space with two levels of subterranean parking. See **Figure 2, Project Site Plan**.

2.0 ENVIRONMENTAL SETTING

2.1 FUNDAMENTALS OF NOISE

Noise

Noise is usually defined as unwanted sound that is an undesirable byproduct of society's normal day-to-day activities. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, and/or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). The human ear does not respond uniformly to sounds at all frequencies. For example, the human ear is less sensitive to low and high frequencies than medium frequencies, which more closely correspond with human speech. In response to the sensitivity of the human ear to different frequencies, the A-weighted noise level (or scale), which corresponds better with people's subjective judgment of sound levels, has been developed. This A-weighted sound level, referenced in units of dB(A), is measured on a logarithmic scale such that a doubling of sound energy results in a 3 dB(A) increase in noise level. Typically, changes in a community noise level of less than 3 dB(A) are not noticed by the human ear.¹ Changes from 3 to 5 dB(A) may be noticed by some individuals who are sensitive to changes in noise. A greater than 5 dB(A) increase is readily noticeable, while the human ear perceives a 10 dB(A) increase in sound level to be a doubling of sound.

On the A-weighted scale, the range of human hearing extends from approximately 3 to 140 dB(A). **Table 1, A-Weighted Decibel Scale**, provides examples of A-weighted noise levels from common sources. Noise sources occur in two forms: (1) point sources, such as stationary equipment or individual motor vehicles; and (2) line sources, such as a roadway with a large number of point sources (motor vehicles). Sound generated by a point source typically diminishes (attenuates) at a rate of 6 dB(A) for each doubling of distance from the source to the receptor at acoustically "hard" sites and 7.5 dB(A) at acoustically "soft" sites.² For example, if a noise source produces a noise level of 89 dB(A) at a reference distance of 50 feet, the noise level would be 83 dB(A) at a distance of 100 feet from the noise source, 77 dB(A) at a distance of 200 feet, and so on. Noise generated by a mobile source will decrease by approximately 3 dB(A) over hard surfaces and 4.5 dB(A) over soft surfaces for each doubling of distance.

² Federal Highway Administration, *Highway Noise Fundamentals*, (1980) 97. Examples of "hard" or reflective sites include asphalt, concrete, and hard and sparsely vegetated soils. Examples of acoustically "soft" or absorptive sites include soft, sand, plowed farmland, grass, crops, heavy ground cover, etc.

Table 1
A-Weighted Decibel Scale

Typical A-Weighted Sound Levels	Sound Level (dB(A), Leq)
Threshold of Pain	140
Jet Takeoff at 100 Meters	125
Jackhammer at 15 Meters	95
Heavy Diesel Truck at 15 Meters	85
Conversation at 1 Meter	60
Soft Whisper at 2 Meters	35

Source: United States Occupational Safety & Health Administration, *Noise and Hearing Conservation Technical Manual*, 1999.

Sound levels also can be attenuated by man-made or natural barriers (e.g., sound walls, berms, and ridges), as well as elevational differences. Noise is most audible when traveling by direct line-of-sight, an interrupted visual path between the noise source and noise receptor. Barriers, such as walls or buildings that break the line-of-sight between the source and the receiver, can greatly reduce noise levels from the source since sound can only reach the receiver by diffraction. However, if a barrier is not high or long enough to break the line-of-sight from the source to the receiver, its effectiveness is greatly reduced.

Solid walls and berms may reduce noise levels by 5 to 10 dB(A) depending on their height and distance relative to the noise source and the noise receptor.³ Sound levels may also be attenuated 3 dB(A) by a first row of houses and 1.5 dB(A) for each additional row of houses.⁴ The minimum noise attenuation provided by typical structures in California is provided in **Table 2, Building Noise Reduction Factors**.

Sound Rating Scales

Various rating scales approximate the human subjective assessment to the “loudness” or “noisiness” of a sound. Noise metrics have been developed to account for additional parameters, such as duration and cumulative effect of multiple events. Noise metrics are categorized as single event metrics and cumulative metrics, as summarized below.

In order to simplify the measurement and computation of sound loudness levels, frequency weighted networks have obtained wide acceptance. The A-weighted scale, discussed above, has become the most prominent of these scales and is widely used in community noise analysis. Its advantages are that it has shown good correlation with community response and is easily measured. The metrics used in this analysis are all based upon the dB(A) scale.

Equivalent Noise Level

Equivalent Noise Level (Leq) is the sound level corresponding to a steady-state A-weighted sound level containing the same total energy as several single event noise exposure level events during a given sample period. Leq is the “acoustic energy” average noise level during the period of the sample. It is based on the observation that the potential for noise annoyance is dependent on the total acoustical energy content of the noise. The equivalent noise level is expressed in units of dB(A). Leq can be measured for any period, but is typically measured for 15 minutes, 1 hour, or 24 hours. Leq for a 1-hour period is used by the Federal Highway Administration (FHWA) for assessing highway noise impacts. Leq for 1 hour is referred to as the Hourly Noise Level (HNL) in the California Airport Noise Regulations and is used to develop Community Noise Equivalent Level values for aircraft operations. Construction noise levels and ambient noise

measurements in this section use the Leq scale. The City of Los Angeles Noise Ordinance calls for ambient noise to be averaged over a period of at least 15 minutes. (Los Angeles Municipal Code, section 111.01(a).)

Community Noise Equivalent Level

Community Noise Equivalent Level (CNEL) is a 24-hour, time-weighted energy average noise level based on the A-weighted decibel. It is a measure of the overall noise experienced during an entire day. The term “time-weighted” refers to the penalties attached to noise events occurring during certain sensitive periods. In the CNEL scale, 5 decibels (dB) are added to measured noise levels occurring between the hours of 7 P.M. and 10 P.M. For measured noise levels occurring between the hours of 10 P.M. and 7 A.M., 10 dB are added. These decibel adjustments are an attempt to account for the higher sensitivity to noise in the evening and nighttime hours and the expected lower ambient noise levels during these periods. Existing and projected future traffic noise levels in this section use the CNEL scale.

Day-Night Average Noise Level

The day-night average sound level (Ldn) is another average noise level over a 24-hour period. Noise levels occurring between the hours of 10 P.M. and 7 A.M. are increased by 10 dB. This noise is weighted to take into account the decrease in community background noise of 10 dB(A) during this period. Noise levels measured using the Ldn scale are typically similar to CNEL measurements.

Adverse Effects of Noise Exposure

Noise is known to have several adverse effects on humans, which has led to laws and standards being set to protect public health and safety, and to ensure compatibility between land uses and activities. Adverse effects of noise on people include hearing loss, communication interference, sleep interference, physiological responses, and annoyance. Each of these potential noise impacts on people is briefly discussed in the following narrative.

Hearing Loss

Hearing loss is generally not a community noise concern, even near a major airport or a major freeway. The potential for noise-induced hearing loss is more commonly associated with occupational noise exposures in heavy industry, very noisy work environments with long-term exposure, or certain very loud recreational activities (e.g., target shooting and motorcycle or car racing). The Occupational Safety and Health Administration (OSHA) identifies a noise exposure limit of 90 dB(A) for 8 hours per day to protect from hearing loss (higher limits are allowed for shorter duration exposures). Noise levels in neighborhoods, even in very noisy neighborhoods, are not sufficiently loud enough to cause hearing loss.

Communication Interference

Communication interference is one of the primary concerns in environmental noise. Communication interference includes speech disturbance and intrusion with activities such as watching television. Noise can also interfere with communications such as within school classrooms. Normal conversational speech is in the range of 60 to 65 dB(A) and any noise in this range or louder may interfere with speech.

Sleep Interference

Noise can make it difficult to fall asleep, create momentary disturbances of natural sleep patterns by causing shifts from deep to lighter stages, and cause awakening. Noise may even cause awakening that a person may or may not be able to recall.

Physiological Responses

Physiological responses are those measurable effects of noise on people that are realized as changes in pulse rate, blood pressure, and other physical changes. Studies to determine whether exposure to high noise levels can adversely affect human health have concluded that, while a relationship between noise and health effects seems plausible, there is no empirical evidence of the relationship.

Annoyance

Annoyance is an individual characteristic and can vary widely from person to person. Noise that one person considers tolerable can be unbearable to another of equal hearing capability. The level of annoyance depends both on the characteristics of the noise (including loudness, frequency, time, and duration), and how much activity interference (such as speech interference and sleep interference) results from the noise. However, the level of annoyance is also a function of the attitude of the receiver. Attitudes may also be affected by the relationship between the person affected and the source of noise, and whether attempts have been made to abate the noise.

2.2 NOISE SENSITIVE RECEPTORS

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as parks, historic sites, cemeteries, and recreation areas are considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses. The closest noise-sensitive receptors to the Project Site are: 1)

residences to the north and east (15 feet); 2) residences to the east, across St. Andrews Place (50 feet); 3) residences and a hotel to the west, across Gramercy Drive (55 feet); and 4) residences to the south, across Olympic Boulevard (188 feet).⁵ See **Figure 3, Noise Monitoring and Sensitive Receptor Location Map.**

⁵ It is noted that Trinity Church is located approximately 400 feet to west of the Project Site. But, due to this distance, intervening structures, and prohibited days of construction activity (i.e., no construction on Sundays), this receptor would not be adversely impacted by the Project.

FIGURE 3

Noise Monitoring and Sensitive Receptor Location Map

2.3 EXISTING CONDITIONS

Measured Ambient Noise Levels

To establish baseline noise conditions, existing noise levels were monitored at three locations in the vicinity of the Project Site. The locations of where the noise measurements were taken are depicted in **Figure 3, Noise Monitoring and Sensitive Receptor Location Map**. The noise survey was conducted in June 2024 using the Larson Davis SoundTrack LxT (Type 1) sound level meter, which conforms to industry standards set forth in ANSI S1.4-1983 (R2006) – Specification for Sound Level Meters/Type 1. This instrument was calibrated and operated according to the manufacturer’s written specifications. At the measurement sites, the microphone was placed at a height of approximately five feet above grade. The results of the measurements are summarized in **Table 3, Existing Noise Levels in the Vicinity of the Project Site**. As shown in **Table 3**, the ambient noise levels ranged from 49.3 dB(A) Leq to 75.8 dB(A) Leq in the vicinity the Project Site. The existing ambient noise level on the Project Site fronting Olympic Boulevard (Noise Monitoring Location 1) is estimated to be 77.1 dB(A) CNEL. See **Appendix A** to this report.

Table 3
Existing Noise Levels in the Vicinity of the Project Site

Noise Monitoring Locations	Primary Noise Sources	Noise Levels [dB(A)]		
		Leq	Lmin	Lmax
Daytime (7AM – 7 PM)				
1. Project Site	Vehicle Traffic, Emergency Response Vehicle Noise	66.4	45.5	80.6
2. Residences north of Olympic Blvd.	Vehicle Traffic, Neighborhood Activity	54.9	37.3	76.5
3. Residences south of Olympic Blvd.	Vehicle Traffic, Neighborhood Activity	49.3	36.4	68.6
Evening (7PM -10PM)				
1. Project Site	Vehicle Traffic, Neighborhood Activity	75.8	53.9	101.1
Night (10PM – 7AM)				
1. Project Site	Vehicle Traffic, Neighborhood Activity	69.6	52.1	78.7

Source: Impact Sciences, Inc., June 2024. See **Appendix A, Noise Data**. As shown therein, 15-minute Leq data was collected for all locations.

3.0 REGULATORY FRAMEWORK

3.1 REGULATORY FRAMEWORK

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding noise and vibration at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Occupational Safety and Health Act of 1970
- Noise Control Act of 1972
- Federal Transit Administration Vibration Standards
- Office of Planning and Research Guidelines for Noise Compatible Land Use
- Caltrans Vibration/Groundborne Noise Standards
- City of Los Angeles Municipal Code

Federal

Occupational Safety and Health Act of 1970

Under the Occupational Safety and Health Act of 1970 (29 U.S.C. §1919 et seq.), the Occupational Safety and Health Administration (OSHA) has adopted regulations designed to protect workers against the effects of occupational noise exposure. These regulations list permissible noise level exposure as a function of the amount of time during which the worker is exposed. The regulations further specify a hearing conservation program that involves monitoring noise to which workers are exposed, ensuring that workers are made aware of overexposure to noise, and periodically testing the workers' hearing to detect any degradation.⁶

Noise Control Act of 1972

Under the authority of the Noise Control Act of 1972, the United States Environmental Protection Agency (U.S. EPA) established noise emission criteria and testing methods published in Parts 201 through 205 of Title 40 of the Code of Federal Regulations (CFR) that apply to some transportation equipment (e.g., interstate rail carriers, medium trucks, and heavy trucks) and construction equipment. In 1974, U.S. EPA issued guidance levels for the protection of public health and welfare in residential areas of an outdoor L_{dn} of 55 dBA and an indoor L_{dn} of 45 dBA. These guidance levels are not standards or regulations and were

⁶ United States Department of Labor. OSH Act of 1970. <https://www.osha.gov/laws-regs/oshact/completeoshact>. Accessed May 2024.

developed without consideration of technical or economic feasibility. There are no federal noise standards that directly regulate environmental noise related to the construction or operation of the Project. Moreover, the federal noise standards are not reflective of urban environments that range by land use, density, proximity to commercial or industrial centers, etc. As such, for purposes of determining acceptable sound levels to determine and evaluate intrusive noise sources and increases, this document utilizes the City of Los Angeles Noise Regulations, discussed below.

State

Office of Planning and Research Guidelines for Noise Compatible Land Use

The State of California has not adopted statewide standards for environmental noise, but the Governor's Office of Planning and Research (OPR) has established guidelines for evaluating the compatibility of various land uses as a function of community noise exposure. The City has developed its own compatibility guidelines in the Noise Element of the General Plan based in part on OPR Guidelines, see **Table 4**, below. California Government Code Section 65302 requires each county and city in the State to prepare and adopt a comprehensive long-range general plan for its physical development, with Section 65302(f) requiring a noise element to be included in the general plan. The noise element must: (1) identify and appraise noise problems in the community; (2) recognize Office of Noise Control guidelines; and (3) analyze and quantify current and projected noise levels.

Local

City of Los Angeles General Plan Noise Element

The Noise Element of the City's General Plan policies include the CNEL guidelines for land use compatibility as shown in **Table 4** and includes a number of goals, objectives, and policies for land use planning purposes. The overall purpose of the Noise Element is to guide policymakers in making land use determinations and in preparing noise ordinances that would limit exposure of citizens to excessive noise levels.⁷

⁷ City of Los Angeles, *General Plan, Noise Element*, adopted February 3, 1999, Pages 1.1-2.4, available online at: https://planning.lacity.org/odocument/b49a8631-19b2-4477-8c7f-08b48093cddd/Noise_Element.pdf, accessed June 20, 2024.

Office Buildings, Business and Professional Commercial	50-65	65-75	Above 75	--
Agriculture, Industrial, Manufacturing, Utilities	50-70	70-75	Above 75	--

¹ Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

² New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

³ New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

⁴ New construction or development should generally not be undertaken.

Source: Los Angeles General Plan Noise Element, 1999

The following policies and objectives from the Noise Element apply to the Project.

Objective 2 (Non-airport): Reduce or eliminate non-airport related intrusive noise, especially relative to noise sensitive uses.

Policy 2.2: Enforce and/or implement applicable city, state, and federal regulations intended to mitigate proposed noise producing activities, reduce intrusive noise and alleviate noise that is deemed a public nuisance.

Objective 3 (Land Use Development): Reduce or eliminate noise impact associated with proposed development of land and changes in land use.

Policy 3.1: Develop land use policies and programs that will reduce or eliminate potential and existing noise impacts.

The Noise Element of the City’s General Plan policies include the CNEL guidelines for land use compatibility, as shown in **Table 4**. The Noise Element also addresses noise mitigation regulations, strategies, and programs, and delineates the authority of federal, State, and City bodies in regulating automotive, rail, aircraft, and nuisance noise.

City of Los Angeles Municipal Code

The City of Los Angeles Municipal Code (LAMC) provides two types of noise standards that are relevant to this analysis: 1) construction noise standards, and 2) general noise ordinance standards. The construction noise standards apply only to construction activities, while the general noise ordinance standards apply to noise generated by land use activities.

Construction Noise Standards

The LAMC has established noise regulations for both short-term construction activities and long-term operation of a project. The LAMC regulates noise from any powered equipment or powered hand tool in a residential zone (or within 500 feet) at a distance of 50 feet between 7:00 AM and 10:00 PM to the following:

- 75 dB(A) for construction, industrial, and agricultural machinery including crawler-tractors, dozers, rotary drills and augers, loaders, power shovels, cranes, derricks, motor graders, paving machines, off-highway trucks, ditchers, trenchers, compactors, scrapers, wagons, pavement breakers, compressors and pneumatic or other powered equipment;
- 75 dB(A) for powered equipment of 20 horse-power or less intended for infrequent use in residential areas, including chain saws, log chippers and powered hand tools; and
- 65 dB(A) for powered equipment intended for repetitive use in residential areas, including lawn mowers, backpack blowers, small lawn and garden tools.⁸

These noise limits do not apply where compliance is deemed technically infeasible. Specifically, such activities are allowed when it is demonstrated that compliance is not possible “despite the use of mufflers,

⁸ City of Los Angeles, Municipal Code Chapter XI-Noise Regulation (Section 112.05), 1986.

shields, sound barriers, and/or other noise reduction device or techniques during the operation of the equipment.”⁹

Section 41.40 of the LAMC also prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, and between 6:00 PM and 8:00 AM on Saturday.¹⁰ This is intended to protect persons occupying sleeping quarters in any hotel, apartment, or other place of residence. Construction noise intruding onto property zoned for manufacturing or industrial uses is exempt from these standards.

General Noise Ordinance

LAMC Chapter XI, “Noise Regulation,” regulates noise from non-transportation noise sources such as commercial or industrial operations, mechanical equipment or residential activities. Although these regulations do not apply to vehicles operating on public rights-of-way, the regulations do apply to noise generated by vehicles on private property, such as truck operations at commercial or industrial facilities. The exact noise standards vary depending on the type of noise source, but the allowable noise levels are generally determined relative to the existing ambient noise levels at the affected location. LAMC Section 111.01 (a) defines the ambient noise as “the composite of noise from all sources near and far in a given environment, exclusive of occasional and transient intrusive noise sources and of the particular noise source or sources to be measured. Ambient noise shall be averaged over a period of at least 15 minutes.”

Section 112.01 of the LAMC would prohibit any amplified noises, especially those from outdoor sources (e.g., outdoor speakers and stereo systems) from exceeding the ambient noise levels of adjacent properties by more than 5 dB(A). Amplified noises would also be prohibited from being audible at any distance greater than 150 feet from the project’s property line.

LAMC Section 112.02 (a) would prevent project HVAC systems and other mechanical equipment from elevating noise levels at neighboring residences by more than 5 dB(A).

For a project’s operational impacts:

- The ambient noise level measured at the property line of affected uses to increase by 3 dB(A) in CNEL to or within the “normally unacceptable” or “clearly unacceptable” category.
- Any 5 dB(A) or greater noise increase.

⁹ *Ibid.*

¹⁰ City of Los Angeles, Municipal Code Chapter IV-Public Welfare (Section 41.40), 1984.

These “normally unacceptable” and “clearly unacceptable” categories refer to those outlined by the noise and land-use compatibility chart, shown in **Table 4**.

4.0 NOISE ANALYSIS

4.1 THRESHOLDS OF SIGNIFICANCE

In accordance with Appendix G of the *California Environmental Quality Act (CEQA) Guidelines*, the Project may cause a significant noise impact if it would result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project Site in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies; and
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels.

The City of Los Angeles has also recently published revised proposed thresholds of significance and methodology for construction noise analyses.¹¹ As stated therein, the proposed thresholds are intended to be suited to the generally urban nature of the City, while still recognizing the importance of human health, including sleep disruption. The proposed thresholds are intended to account for reasonable expectations regarding construction noise during daytime and nighttime hours within an urban environment, and also include absolute maximum noise levels that are intended to protect human health. These thresholds have been proposed based on input from Technical Advisory Committee noise experts, as well as a review of noise thresholds used by other state and local agencies. The City has elected to utilize the revised proposed thresholds and methodology for the Project, which has been determined to be particularly appropriate in the highly urbanized environment in which the Project is located. The adopted thresholds for the Project are as follows:

- For construction activities that occur between 7:00 a.m. and 7:00 p.m. Monday through Friday, and between 8:00 a.m. and 6:00 p.m. on Saturdays, no numerical threshold above ambient noise levels is proposed.
- On- and off-site construction noise during daytime hours (7:00 a.m. and 7:00 p.m. Monday through Friday, and 8:00 a.m. to 6:00 p.m. on Saturdays) would be limited to a maximum 80 dBA Leq (8-

¹¹ Construction Noise and Vibration, Proposed Updates to Thresholds and Methodology, Department of City Planning, December 2023. <https://planning.lacity.gov/odocument/fba26ae5-ca95-48c3-aace-ae3bf0cb43b1/Construction%20Noise%20and%20Vibration%20%20Proposed%20Updates%20to%20Thresholds%20and%20Methodology%20%20Attachments.pdf>

hour) absolute threshold at sensitive uses (at the property line with outdoor uses or at the exterior of the building), including outdoor public recreational areas.

- This threshold applies to residential uses (at the property line with outdoor uses or at the exterior of the building); including expansive upper-level deck/open spaces areas that provide for the recreational use of residents. Examples include large patios or decks that are the primary outdoor use area in an apartment complex. However, this standard does not apply to private residential balconies which may or may not extend past the exterior of a building.

4.2 METHODOLOGY

Noise levels associated with Project-related construction activities were calculated using the FHWA Roadway Construction Noise Model (RCNM). Noise levels were also compared to the City's noise ordinance, which includes provisions regarding construction noise levels. Specifically, LAMC Section 41.40 prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, and between 6:00 PM and 8:00 AM on Saturday.¹² The LAMC has also established noise regulations for both short-term construction activities and long-term operation of a project. LAMC Section 112.05 states that between the hours of 7:00 a.m. and 10:00 p.m., in any residential zone of the City or within 500 feet thereof, no person shall operate or cause to be operated any powered equipment or powered hand tool that produces a maximum noise level exceeding the following noise limits at a distance of 50 feet therefrom:

- 75 dB(A) for construction, industrial, and agricultural machinery including crawler-tractors, dozers, rotary drills and augers, loaders, power shovels, cranes, derricks, motor graders, paving machines, off-highway trucks, ditchers, trenchers, compactors, scrapers, wagons, pavement breakers, compressors and pneumatic or other powered equipment;
- 75 dB(A) for powered equipment of 20 horse-power or less intended for infrequent use in residential areas, including chain saws, log chippers and powered hand tools; and
- 65 dB(A) for powered equipment intended for repetitive use in residential areas, including lawn mowers, backpack blowers, small lawn and garden tools.¹³

These noise limits do not apply where compliance is deemed technically infeasible. Specifically, such activities are allowed when it is demonstrated that compliance is not possible “despite the use of mufflers,

¹² City of Los Angeles, Municipal Code Chapter IV-Public Welfare (Section 41.40), 1984.

¹³ City of Los Angeles, Municipal Code Chapter XI-Noise Regulation (Section 112.05), 1986.

shields, sound barriers, and/or other noise reduction device or techniques during the operation of the equipment.”¹⁴

Construction noise levels were calculated with the RCNM and based on the guidance in the City’s published updates to thresholds and methodology for construction noise analyses.¹⁵ Construction equipment utilized herein was based on the assumptions outlined in the Project’s Air Quality Study.¹⁶

An analysis of traffic noise was conducted to determine if the Project would have a perceptible increase in traffic-related noise. Studies have shown that a 3 dB(A) increase in sound level pressure is barely detectable by the human ear. A 3 dB(A) increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.¹⁷

The Project’s potential to result in significant noise impacts from on-site operational noise sources was assessed by identifying sources of on-site noise sources and considering the impact that they could produce given the nature of the source (i.e., loudness and whether noise would be produced during daytime or more-sensitive nighttime hours), distances to nearby sensitive receptors, surrounding ambient noise levels, the presence of similar noise sources in the vicinity, and maximum allowable noise levels permitted by the LAMC.

4.3 IMPACT ANALYSIS

Impact NOI-1 **Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? (*Less than Significant*).**

Construction Impacts (LAMC Standards)

Construction of the Project would require the use of heavy equipment during demolition, grading/site preparation, installation of utilities, building fabrication, and finishing. Construction activities would also involve the use of smaller power tools, generators, and other sources of noise. During each stage of

¹⁴ *Ibid.*

construction, several types of equipment potentially could be operating concurrently, and noise levels would vary based on the amount of equipment in operation and the location of the activity. As shown in **Table 5**, the FHWA RCNM has compiled data regarding the noise-generating characteristics of specific types of construction equipment.

Source: FHWA Roadway Construction Noise Model User's Guide, 2006.

As discussed previously, the Project would be subject to LAMC Sections 41.40 and 112.05. The Project would conduct construction activities in a manner consistent with LAMC Section 41.40, which prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, between 6:00 PM and 8:00 AM on Saturday or any national holiday, and at any time on Sunday. With respect to LAMC Section 112.05, **Table 5** indicates that noise levels at 50 feet from construction equipment could reach 90 dBA (Lmax), which exceeds the 75 dBA (Lmax) limitation. However, this noise limitation does not apply where compliance is technically infeasible. Technically infeasible means that the above noise limitation cannot be complied with despite the use of mufflers, shields, sound barriers and/or any other noise reduction device or techniques during the operation of the equipment. It should be noted that given the nature of the Project's multi-level construction activities adjacent to sensitive uses and the dynamics inherent with urban construction, the noise limitations established in the LAMC would, at certain times, not be applicable due to technical infeasibility.

Nevertheless, because the estimated construction-related noise levels associated with the Project could exceed the noise standard of 75 dBA (Lmax) at 50 feet from the noise source as outlined in LAMC Section 112.05, the Project is required to implement all technically feasible noise reduction measures, including, without limitation, the use of mufflers, shields, or sound barriers. Specifically, the use of sound barriers such as plywood structures or flexible sound control curtains could reduce line-of-sight noise levels by approximately 10-15 dBA.¹⁸ Therefore, as required by LAMC Section 112.05, the Project shall implement Regulatory Compliance Measure (RCM) NOI-1, as follows:

RCM NOI-1: Barriers, such as plywood structures or flexible sound control curtains shall be erected along the northern/eastern perimeter of the construction site, and around stationary equipment as feasible (i.e., generators, air compressors, etc.) to minimize the amount of noise during construction on nearby noise-sensitive uses. Specifically, a sound barrier shall be located along the northern/eastern property lines of the Project Site. Perimeter barriers shall be at least eight (8) feet in height and constructed of materials achieving a Transmission Loss (TL) value of at least 15 dB(A), such as ½ inch plywood.¹⁹

¹⁸ Based on a review of Table 4 of the FHWA Noise Barrier Design Handbook (July 14, 2011), the design feasibility of a sound barrier that reduces noise by 5 dBA is considered "simple" and a reduction of up to 10 dBA as "attainable." And, reductions of 15 and 20 dBA are considered "very difficult" and "nearly impossible," respectively.

¹⁹ Based on the FHWA Noise Barrier Design Handbook, Table 3, Approximate sound transmission loss values for common materials, February 2000, updated August 24, 2017.

Implementation of **RCM NOI-1** would have the potential to reduce construction noise levels by up to approximately 15 dBA, which could reduce noise levels from the loudest pieces of equipment identified in **Table 5** from 90 dBA (Lmax) at 50 feet to 75 dBA (Lmax) at 50 feet. Thus, with the incorporation of noise reduction techniques required by the Noise Ordinance, construction noise levels would not exceed the noise limits for powered equipment or hand tools established in LAMC Section 112.05. The Project would also implement additional techniques to reduce construction noise levels as required by the LAMC. For example, compliance with applicable Noise Ordinance requirements would include construction activities being scheduled so as to minimize operating several pieces of equipment simultaneously, which reduces noise levels. Further, noise-generating construction activities whose specific location on the site are flexible (e.g., operation of compressors or generators, cement mixing, and general truck idling) will be conducted as far as possible from the nearest noise-sensitive land uses. However, given the fluid dynamics of an urban construction site, this analysis conservatively does not take any quantified reduction associated with these additional regulatory compliance techniques. Nevertheless, with the implementation of **RCM NOI-1**, the Project would be consistent with the standards established in LAMC Section 112.05.

Construction Impacts (City Threshold)

With the use of the FHWA RCNM, as described in the Methodology Section and detailed in **Appendix A** to this report, the construction noise levels (dBA Leq-8 hour) forecasted for the sensitive receptors are presented in **Table 6, Estimated Exterior Construction Noise at Sensitive Receptors**.²⁰ Noise levels would generally diminish notably with distance from the construction site at a rate of 6 dB(A) per doubling of distance (noise from stationary or point sources is reduced by about 6 dB(A) for every doubling of distance at acoustically hard locations). For example, a noise level of 86 dB(A) Leq measured at 50 feet from the noise source to the receptor would decline to 80 dB(A) Leq at 100 feet from the source to the receptor and fall by another 6 dB(A) Leq to 74 dB(A) Leq at 200 feet from the source to the receptor. These noise attenuation rates assume a flat and unobstructed distance between the noise generator and the receptor, which is a conservative assumption in a dense urban environment marked by built features that buffer noise. In addition, the construction noise experienced at sensitive receptors during the initial periods of construction (i.e., demolition and site preparation/grading/foundations) typically would be reduced in the later construction periods (i.e., interior building construction) because the earlier phases involve the use of heavier construction equipment compared to later stages. It should also be noted that the estimated construction noise levels for Sensitive Receptor No. 1 account for the noise reduction benefits associated with the required implementation of **RCM NOI-1** (see above).²¹ While construction activity would increase

²⁰ Project construction noise levels were calculated based on the Project's anticipated mix of construction equipment with the FHWA RCNM Version 1.1.

²¹ While the data suggests RCM NOI-1 may feasibly reduce construction noise levels by up to 15 dBA, this calculation conservatively applies a 10 dBA reduction.

noise levels in the vicinity of the Project Site (see **Table 6**), the Project's construction activities would not exceed the City's 80 dBA Leq (8-hour) absolute threshold at sensitive uses. As such, construction noise impacts would be less than significant.

Table 6
Estimated Exterior Construction Noise at Sensitive Receptors

Sensitive Land Uses ^a	Distance to Project Site (feet)	Construction Noise [dB(A) Leq-8hr] ^b	Exceed 80 dB(A) Leq-8hr Threshold?
1. Residences to the north and east	15	76.5	No
2. Residences to the east	50	76.9	No
3. Residences/Hotel to the west	55	78.7	No
4. Residences to the south	188	72.6	No

^a See *Figure 3* for location of sensitive receptors.

^b See *Appendix A* to this report.

Operational Impacts

Traffic Noise

Operational noise level increases would be considered significant if the Project causes ambient noise levels measured at the property line of affected uses to increase by 3 dBA if the total ambient noise levels without the Project exceed the City's General Plan exterior noise standards as shown in **Table 4, Guidelines for Noise Compatible Land Use (CNEL)**, or any 5 dBA or greater noise increase.

Studies have shown that a 3 dB(A) increase in sound level pressure is barely detectable by the human ear. A 3 dB(A) increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.²²

As discussed in the Project's Transportation Assessment,²³ the Project would generate a maximum net increase of 701 daily trips, including 11 in the a.m. peak hour and 56 in the p.m. peak hour. Also shown therein, Olympic Boulevard (between St. Andrews Place and Gramercy Drive) carries approximately 37,300

²² California Department of Transportation. 2013. Technical Noise Supplement to the Traffic Noise Analysis Protocol. Available online at: <https://dot.ca.gov/-/media/dot-media/programs/environmental-analysis/documents/env/tens-sep2013-a11y.pdf>, accessed June 24, 2024.

²³ 3355 – 3377 W. Olympic Boulevard, Transportation Assessment, prepared by Overland Traffic Consultants, February 2022.

existing daily trips, including 4,329 in the a.m. peak hour and 3,131 in the p.m. peak hour.²⁴ Since it would take a doubling (i.e., a 100% increase) of roadway traffic volume to increase noise levels by 3 dBA, the Project's addition of 701 daily trips would not increase traffic to levels capable of producing a 3 dBA ambient noise increase. As such, operational traffic noise impacts would be less than significant.

Parking Noise

Various noise events would occur periodically from the Project's parking garage. Such periodic events would include activation of car alarms, sounding of car horns, slamming of car doors, engine revs, and tire squeals. Automobile movements would comprise the most continuous noise source and would generate a noise level of approximately 65 dB(A) at a distance of 25 feet. Car alarm and horn noise events generate sound levels as high as 75 dB(A) at a reference distance of 25 feet, however these noise sources would be sporadic.

Parking would be provided in an enclosed parking garage, and parking would be provided on the ground level and two subterranean levels. As such, parking-related noise sources would not be visible from off-site locations. It should also be noted that the existing urban environment of the Project Site currently generates noise levels associated with parking and vehicular noise sources identified above. Although the Project would increase the number of vehicles parking in the area, the types of noise associated with vehicles accessing the parking garage would be similar to those currently occurring in the vicinity of the Project Site. While periodic noise levels from car alarms, horns, slamming of doors, etc., would increase as a result of the Project, these events would not occur consistently over a 24-hour period and thus would not have the potential to increase ambient noise levels at off-site locations by 3 dB(A) CNEL or more, nor exceed the City's exterior noise standards at off-site locations. As such, operational noise impacts from the parking areas would be less than significant.

Stationary Noise Sources

As part of the Project, new mechanical equipment, HVAC units, and exhaust fans could be installed within the structure, on the roof, or near the proposed structure. Based on the Project's plan set, proposed mechanical equipment would be enclosed within the ground floor level and noise from these sources would be imperceptible at off-site locations. Furthermore, the Project would be subject to compliance with LAMC Section 112.02 (a), which would prevent project HVAC systems and other mechanical equipment from elevating noise levels at neighboring residences by more than 5 dB(A). And, as the Project is an infill

²⁴ 3355 – 3377 W. Olympic Boulevard, Transportation Assessment, prepared by Overland Traffic Consultants, February 2022; based on data from Figure 5 and Figure 6. Assumes peak hour traffic represents 10% of average daily traffic.

development surrounded by existing urban uses, HVAC and mechanical noise from the Project would be substantially similar to existing conditions in the Project area. As such, operational noise from stationary sources would be less than significant.

Land Use Compatibility

While agencies subject to CEQA are generally not required to analyze or mitigate the impact of existing environmental conditions on a project's future users or residents, the following discussion associated with the placement of future residences on the Project Site is included for informational purposes. As discussed previously, based on the measurement data collected at Location 1 (located immediately adjacent to Olympic Boulevard), existing on-site noise levels reach up to 77.1 dBA CNEL. It should be noted that noise levels at the center of the Project Site after Project construction would likely be lower. Nevertheless, future residences at the Project Site may experience exterior noise levels that are considered unacceptable per the City's Noise Element (see **Table 4** previously). According to the City's Noise Element, a detailed analysis of the noise reduction requirements must be made and noise insulation features included in the design. With respect to acceptable interior noise levels, consistent with State and City standards, all habitable spaces associated with the residential component of the Project would be required to provide indoor noise levels of 45 dBA CNEL or less. Exterior-to-interior noise reduction of newer buildings can reach 35 dBA or more, depending on the type of building materials and methods used. This is based in part on mandatory compliance with CCR Title 24 Part 6: California's Energy Efficiency Standards for Residential Buildings, which requires substantial building insulation, improving exterior-to-interior noise reductions.²⁵ Specifically, as detailed in the Project's plan set (see Window Schedule, see Sheet No. A8.01), all exterior windows will have a minimum sound transmission class (STC) rating of 40. The STC-40 rating requires exterior windows to have a transmission loss (TL) value of at least 40 dB. TL is defined as the loss in sound energy, expressed in decibels, as sound passes through a barrier.²⁶ Thus, it is reasonable the Project's building construction could achieve exterior-to-interior noise reduction of 35 dBA, or more. As existing on-site noise levels reach up to 77.1 dBA CNEL at a worst-case location, the Project's construction methods and materials would reduce residential interior noise levels to approximately 42.1 dBA CNEL, ensuring the Project is consistent with interior noise level standards.

²⁵ See also *Federal Highway Administration, Highway Traffic Noise Analysis and Abatement Guidance, December 2011*, which states light frame buildings with single-glazed windows can reduce exterior noise transmission by approximately 25 dBA, and double-glazed windows by approximately 35 dBA.

²⁶ FHWA Noise Barrier Design Handbook, Terminology, July 14, 2011.

Impact NOI-2 For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels? (No Impact).

The Project Site is not in the vicinity of a private airstrip or airport land use plan. Likewise, the Project Site is not located within an airport land use plan or within two miles of a public airport or public use airport. The closest airport is the Santa Monica Airport, which is located 10.3 miles from the Project Site. As such, the Project would not expose people residing or working in the project area to excessive airport-related noise levels. No impact would occur.

NOISE MONITORING FIELD REPORT

Site Map

Project Name: Olympic Boulevard

Monitoring Location: *Residences to the North*

Date: *6/12/24* Site Number: *2*

Measured By: Annalie Sarrieddine

Measurement Start Time: *10:53 AM*

Measurement End Time: *11:08 AM*

Total Measurement Time: 15 min.

Noise Meter Model: Larson Davis Soundtrack LxT

Calibration: 94.0 (dBA)

Meter Setting: A-Weighted Sound Level (SLOW)

Session File Name: *LxT_Data_025*

Primary Noise Sources: *Vehicle Traffic, Neighborhood Activity*

Data Summary

Noise Scale	Noise Level (dBA)
<i>Leq</i>	<i>54.9</i>
<i>L_{max}</i>	<i>76.5</i>
<i>L_{min}</i>	<i>37.3</i>

Other Noise Sources During Monitoring

1. _____ Time: _____
2. _____ Time: _____
3. _____ Time: _____
4. _____ Time: _____
5. _____ Time: _____

Additional Notes:

Pedestrians walking along sidewalk, unhoused activity along project site boundary

Justification/Reason for Appeal

3363 Olympic Boulevard

(DIR-2022-2825-TOC-SPR-HCA, ENV-2022-2826-CE)

I. REASON FOR THE APPEAL

Supporters Alliance for Environmental Responsibility (“SAFER”) appeals the approval by the Director of City Planning of the Site Plan Review entitlements for 3363 Olympic Boulevard (DIR-2022-2825-TOC-SPR-HCA, ENV-2022-2826-CE) (“Project”). The Site Plan Review approvals are invalid because they are based on incorrect findings. Specifically, the Planning Director’s finding that the project is exempt from the California Environmental Quality Act (“CEQA”) pursuant to Section 15332 of the CEQA Guidelines (“Infill Exemption”) is incorrect.

II. SPECIFICALLY THE POINTS AT ISSUE

Specifically, the Planning Director’s finding that the Project is exempt from CEQA pursuant to Section 15332 of the CEQA Guidelines is in error because the Project does not meet the terms of the exemption. Because the Infill Exemption prepared for the Project fails to comply with CEQA, the Planning Director’s approval of the Project’s Site Plan Review entitlement is invalid. Proper CEQA review must be complete *before* the City approves the Project’s entitlements (*Orinda Ass’n. v. Bd. of Supervisors* (1986) 182 Cal.App.3d 1145, 1171 [“No agency may approve a project subject to CEQA until the entire CEQA process is completed and the overall project is lawfully approved”]).

Because the Project does not qualify for an infill exemption, the Planning Director’s Project approvals are based upon incorrect findings. The City must fully comply with CEQA prior to any approvals in furtherance of the Project. Since the Project is not exempt from CEQA, the City must prepare an initial study and determine the appropriate level of review required under CEQA prior to *any approvals* in furtherance of the Project.

III. HOW YOU ARE AGGRIEVED BY THE DECISION

Members of appellant Supporters Alliance for Environmental Responsibility (“SAFER”) live and/or work in the vicinity of the proposed Project. They breathe the air, suffer traffic congestion, and will suffer other environmental impacts of the Project unless it is properly mitigated.

IV. WHY YOU BELIEVE THE DECISION-MAKER ERRED OR ABUSED THEIR DISCRETION

The Planning Director approved the Site Plan Review entitlement and an Infill Exemption for the project pursuant to Section 15332 of the CEQA Guidelines, despite a lack of substantial evidence in the record that the Project met the requirements for the Infill Exemption. Rather than exempt the Project from CEQA, the City should have prepared an initial study followed by an EIR or negative declaration in accordance with CEQA prior to consideration of approvals for the Project. The City is not permitted to approve the Project’s entitlements until proper CEQA review has been completed.

Dear Ricardo Vasquez,

I hope this message finds you well. My name is Feras Irikat, and I currently reside at [970 South Saint Andrews Place, Los Angeles, CA 90019](#). I am contacting you on behalf of my neighbors and me regarding a matter of grave concern.

We are deeply troubled by the ongoing situation surrounding the property located at [989 S St Andrews Pl](#), where a homeless encampment has become a hub for criminal activities, posing a significant threat to the safety and well-being of our community, especially our children. The continuous presence of gangsters in the area has created a hostile and dangerous environment that has left us all feeling vulnerable and unsafe in our own homes.

Despite efforts from the sanitation department to clean the streets, the root of the problem persists as the gangsters remain on private property, unchecked and undeterred. Numerous incidents of violence, drug dealing, property theft, and environmental hazards have been reported, yet the authorities have been unable to address the situation effectively.

We can no longer ignore the escalating dangers we face daily. It is imperative that action be taken promptly to address this pressing issue. We urge you to consider approving the demolition of the buildings on the site for case number DIR-2022-2825-TOC-SPR-HCA-1A as a vital step towards restoring peace and security in our neighborhood.

Your assistance in facilitating the development project on this site would provide much-needed relief and reassurance to our community, allowing us to once again feel at ease within our surroundings.

Thank you for your attention to this matter.

Warm regards,

Feras Irikat

Dear Mr. Ricardo Vasquez

My name is Younghee Kim and I am a current resident of 970 S. St Andres Pl. #402 Los Angeles, CA 90019, emailing you on behalf of myself and my neighbors, emailing you on behalf of myself and my neighbors. I am contacting you in a desperate plea to approve the demolition of the buildings for case number DIR-2022-2825-TOC-SPR-HCA-1A to remove the gangster encampment that has been terrorizing our neighborhood surrounding Olympic and S St Andrews for the past three years, presenting a danger to us and our children. We are in the constant presence of drug dealers and shootings, which prevent us from feeling safe in our own homes.

The property located at [989 S St Andrews Pl](#) has a homeless encampment with gangsters who create a violent and hazardous environment for us and our children. Here is a short list of routine events that keep our entire neighborhood from sleeping at night:

- 1) The gangsters in the encampment have semi-automatic guns, and 2 weeks ago there was a shooting.
- 2) We have witnessed the gangsters using and selling drugs. Cars stop by to buy drugs from these individuals periodically.
- 3) We witnessed the gangsters in the encampment break into our properties in broad daylight. They constantly follow us into the parking garage to break into our cars.
- 4) They leave unleashed, aggressive dogs to roam around in our streets.
- 5) They constantly start fires causing air pollution in the area, threatening our health. In fact, one such fire burned down the daycare located in the same location.
- 6) They steal water from our water sources.
- 7) As the gangsters are threatening, residents are afraid to walk in the neighborhood. Children are constantly in danger.

While we thank the sanitation department from periodically cleaning out the streets, the issue has not been solved. The sanitation district cannot evict the gangsters living in the empty lot, which is private property. The developer of the property, Bando Dela Corp, has repeatedly contacted the police to arrest the trespassing individuals, but the police have not acted. In fact, police cars pass by the encampment without even a second thought. These gangsters are becoming bolder by the day, even picking fights with the residents.

The only solution is to get this area developed as soon as possible. We desperately plead with you to approve the development project on the site so we may sleep peacefully each day.

Sincerely,

Younghee Kim
